its advocates, that "a definite evolution passes over the individual forms in a definite succession of stages by a natural necessity." The doctrine of organic selection is that the adaptation of the individual organism to its environment during its own lifetime is, or may be, antecedent to the production (in accordance with the principle of the survival of the fittest) of structural adjustments for bringing it about. While they do not believe that the effects of the activities of organisms, such as use and disuse, and the direct effects of the conditions of life (or what are commonly called *acquired characters*) are inherited, its advocates hold, nevertheless, that these activities are, on the average and in the long run, beneficial prior to selection, and that they thus enable the individual organisms to adjust themselves to new conditions, to acquire new useful habits, to escape from competitors, and to elude enemies in new ways, independently of or prior to the presence of hereditary structural adjustments for securing these useful ends. If hereditary modifications which serve the same purpose now make their appearance and accomplish the same end, they are perpetuated according to the principle of the survival of the fittest, and they thus become permanent additions to the characteristics of the species, because, it is held, they fit the species for a mode of life which its individuals have already assumed without hereditary fitness for it. The doctrine of organic selection is held by its advocates to be a compromise between Lamarck's view of the origin of species and natural selection, because, while abandoning the contention that acquired characters are inherited, it does not abandon the contention that the individual members of a species may, by their own activity, become fitted for new conditions before the species as a whole becomes structurally adjusted to these conditions through natural selection. Before organic selection can be accepted as precedent to natural selection, or as a compromise between it and Lamarckism, its advocates must show that living beings can do things for which they have no organic machinery, or else they must show that constitutional fitness for the performance of adaptive acts may arise in some other way than through the struggle for existence and the survival of the fittest.

Organic selection . . . if it has no limitations, brings about a very unexpected harmony between the Lamarckian and Darwinian aspects of evolution, by mutual concessions upon the part of the essential positions of both theories. *H. F. Osborn*, in Science, Oct. 15, 1897, p. 584.

Periodic selection, the failure of certain individual organisms and their ultimate extermination, together with the survival of others, because of failure or success at some recurring period in the life-history of each.

Pearson believes that "if a race has been long under the same environment it is probable that only *periodic selection* is at work, maintaining its stability."

T. H. Morgan, Evol. and Adapt., p. 267.

Physiological selection, a hypothesis advanced as preliminary to natural selection, and founded on the fact that there may be infertility or absolute sterility between two individuals of a species each of which is perfectly fertile with others, independently of any differences of form, color, markings, or structure. According to the hypothesis, this incompatibility may run through a whole race or strain, all the individuals of which are fertile with individuals of their own strain while sterile with individuals of another strain, which, on their part, are mutually fertile among themselves. Physiological selection is the interbreeding and multiplication of those members of a species which are mutually fertile, and it is held that any variation in the direction of the mutual infertility of different strains must be preserved, and thus give rise in time to new specific types, independently of and prior to natural selection. The facts that are adduced in support of this hypothesis show that there is often some degree of infertility between the hybrid offspring of races or incipient species, but they do not show, as the hypothesis requires, that there is any sterility between the pure-blooded members of these incipient species.

Hence we should not expect to find any constant infertility in the first crosses between the distinct strains or varieties that formed the starting point of the new species, but only a slight amount of infertility in their mongrel offspring. It follows that . . . *Physiological Selection*—which assumes sterility or infertility between first crosses as the fundamental fact in the origin of species—does not accord with the general phenomena of hybridism in nature.

A. R. Wallace, Darwinism, p. 181, note.

Reproductive selection, a change in the type of a species through the survival of the descendants of the individuals with a correlation between fertility and some feature of difference from the mode.

This selection by relative reproductivity, I have ventured to term *reproductive selection*, or acting on a suggestion from Mr. Francis Galton, genetic selection.

K. Pearson, Grammar of Sci., p. 439.

Secular selection, the rapid modification of species through the extermination of the relatively unfit and the survival of the fittest in the struggle for existence when periods of relative stability in the environment and in species alternate with periods when the environment is changing rapidly in climate, or in the relative elevation of land or water, or in any other way.—**Selection method** or **system.** See *single* ★*tree method*.—**Selection value,** usefulness great enough to be preservative of life in the struggle for existence. Darwin holds that all qualities that are useful, even in the slightest degree, contribute to determine the result of natural selection; but one of the oldest and most persistent objections to his view of the origin of species is that the raw material for natural selection must be supplied from other sources, since it is held to fail to account for the conservation and development of the minute and rudimentary incipient stages of useful properties when the value of these incipient stages is too slight to be preservative of life, and since it is also held to fail to account for the existence of reflex mechanism for the performance of adaptive acts which may also be performed consciously and voluntarily, because the time that is saved by the automatic mechanism is too slight to contribute to success in the struggle for existence. These objections to natural selection seem to have arisen through failure to perceive the difference between selection by man and natural selection. The breeder of domesticated animals and cultivated plants for points of excellence cannot select any point of excellence which eludes his observation, and the method of the breeder is usually the sudden and complete destruction of the discarded; but the process of extermination may go on so slowly in nature that a decadent stock may not come to an end, and fail to leave successors, for many generations. During this long period any useful property, however slight, if it be in any degree profitable to the individuals of a species, in their infinitely complex relations to other organic beings and to their physical conditions of life, will tend to the preservation of such individuals; for a living being is not a package of separate and independent points of excellence, but a coördinated whole which may fail in the struggle for existence if it fall short of its competitors and enemies in coördination.

In order that any adaptive structure or instinct should be seized upon and accumulated by natural selection, it must from the very first have had an adaptive value sufficiently great to have constituted its presence a matter of life and death in the struggle for existence. Such structures or instincts must not only have always presented some measure of adaptive value, but this must have always been sufficiently great to reach what I have elsewhere called *selection value*.

G. J. Romanes, Darwin and after Darwin, II. 62.

Social selection, selection by means of any social relation or activity, in distinction from *natural selection*. *Baldwin*, Dict. of Philos. and Psychol., II. 540.

selectionist (sē-lek′shọn-ist), *n.* and *a.* [*selection* + *-ist.*] **I.** *n.* One who advocates a theory of selection.

It can not be said, however, that the evidence adduced by the author from the botanical field in favor of Lamarckianism is more apt to carry conviction to the minds of *Selectionists* than much that has already been presented. *Science*, March 6, 1903, p. 382.

II. *a.* Pertaining to or according to the theories or principles of selectionists.

selection-time (sẹ̄-lek′shọn-tīm), *n.* In *psychophys.*: (*a*) The duration of the selective reaction (discriminative or cognitive type).

In this case a choice must be introduced in addition to the distinction or recognition; accordingly the reaction-time becomes still greater and is designated as the "*selection-time*."

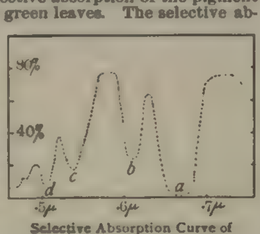
T. Ziehen (trans.), Introd. to Physiol. Psychol., p. 255.

(*b*) The duration of the selective reaction, minus the duration of the discriminative or cognitive reaction.

Selective absorption. It is the absorption of radiation by substances whose coefficient of absorption varies with the wave-length,—absorption which affects certain wave-lengths or regions of the spectrum more than others. It is an important optical property upon which the reflecting power, refracting power, dispersion, color, radiating power, and luminescence of substances depend. All bodies exhibit the phenomenon of selective absorption, no known substance transmitting all wave-lengths of the spectrum equally. Many substances, as glass, quartz, alum, and rock-salt, are transparent to the rays of the visible spectrum but opaque to portions of the infra-red or ultra-violet regions of the spectrum. Other substances, as lampblack, are opaque to the visible rays, but transmit the longer wave-lengths of the infra-red. Those portions of the absorption-spectrum of a body for which the coefficient of absorption is large are called *absorption-bands* (which see, under *absorption*). Absorption-bands are sometimes very wide, covering a considerable portion of the spectrum, glass, for example, having an absorption-band in the infra-red which covers all wave-lengths beyond 3.μ and another in the ultra-violet which includes all known wave-lengths shorter than about .2μ. In other cases the region of absorption is narrow, as in the case of the salts of didymium, which are opaque to certain limited portions of the visible spectrum. The dependence of the color of objects upon absorption is due to the fact that the color is produced by the loss of certain portions of the light penetrating the body and reflected back to the eye from its interior. The color of foliage, for example, is caused by the selective absorption of the pigment chlorophyl contained in green leaves. The selective absorption of this coloring-matter is shown by means of the curve in the accompanying figure, which indicates the percentage of light of the various wave-lengths of the visible spectrum transmitted by an alcoholic solution from green leaves one centimeter in thickness. It will be seen that this liquid, which is quite transparent in the extreme red, beyond .7μ, becomes almost opaque in the region (*a*) .66μ, and that there are at least three other narrow absorption-bands, *b*, *c*, and *d*. While selective absorption is not always accompanied by fluorescence, fluorescence occurs only in the case of bodies having an absorption-band; and the position of this band in the spectrum is definitely related to the position of the fluorescence spectrum. The well-known red fluorescence of chlorophyl, for example, is due to the absorption-band *a* shown in the figure. The reflecting power of a substance and its index of refraction are definite functions of its coefficient of absorption, the relation being expressed by the equation

$$R = \frac{n^2(1+k^2)+1-2n}{n^2(1+k^2)+1+2n},$$

where R is the reflecting power, k the coefficient of absorption, and n the index of refraction. In the case of metals, for example, which are nearly opaque, k has large values, and $n^2(1+k)^2$ is very large compared with $2n$, so that R is almost equal to unity. The reflecting power of such substances is therefore very large compared with that of transparent media. Since k, where selective absorption occurs, may vary greatly for different colors, the reflected light from the surface of many metals, such as copper, is strongly colored. The dependence of the index of refraction, n, upon the value of k explains the anomalous dispersion of substances having strong absorption-bands. See *anomalous* ★*dispersion*.—**Selective action, emission, mating, reaction.** See ★*action*, etc.



Selective Absorption Curve of Chlorophyl.

selectivity (sē-lek-tiv′i-ti), *n.* [*selective* + *-ity.*] In *elect.*, the property of a circuit by virtue of which it responds to electric oscillations of a given frequency.

The system of *selectivity* devised by Sir Oliver [Lodge] was the outcome of a series of classical experiments based upon his syntonic Leyden jars in which one jar is caused to discharge through a circuit by the sparks of another jar, provided the two circuits are of equal electrical dimensions. *Elect. World and Engin.*, Aug. 1, 1903, p. 173.

selector, *n.* **3.** An automatic switch used in telephone exchanges. See *selector* ★*switch*.

Selenaspis (sel-ẹ̄-nas′pis), *n.* [NL., < Gr. σελήνη, the moon, + ἀσπίς, shield.] A genus of catfishes found in tropical American seas.

selenhydric (sel-en-hī′drik), *a.* Noting an acid, same as *hydroselenic acid*.

seleniasis (sel-ẹ̄-nī′ạ-sis), *n.* [NL., < Gr. σελήνη, the moon, + *-iasis.*] Mental derangement formerly thought to be caused by sleeping in the full light of a tropical moon.

selenio-. In *chem.*, a prefix to the name of a substance, signifying the presence of selenium as a constituent.

selenion (sē-lē′ni-on), *n.* [NL.] Same as *selenium*. The termination *-on* is to be preferred, since the names of metals are made to end in *-um*, and selenion is much more closely related to the non-metallic elements.

Selenium eye, resistance. See ★*eye*1, ★*resistance*.—**Vitreous selenium,** one of several allotropic forms of the element, obtained by fusing it and allowing it to cool rapidly. It appears as a brownish-black translucent, amorphous, brittle mass, which becomes crystalline by reheating and gradual cooling. If the element is fused and raised to about 250° C., and then slowly cooled, the structure becomes coarsely crystalline or granular, and in this condition the conductivity for electricity is most affected by light. See *resistance*, 3, and *photophone*.

seleno-. Same as ★*selenio-*.

selenoplegia (sẹ̄-lē-nọ̄-plē′ji-ạ̈), *n.* [NL., < Gr. σελήνη, the moon, + πληγή, stroke.] Same as ★*selenoplexia*.

selenoplexia (sẹ̄-lē-nọ̄-plek′si-ạ̈), *n.* [NL., < Gr. σελήνη, the moon, + πλῆξις, stroke.] A morbid state, occurring in the tropics, formerly supposed to be due to the action of the moon's rays.

selenous (sẹ̄-lē′nus), *a.* Same as *selenious*.

selenyl (sel′ẹ̄-nil), *n.* [*selen*(*ium*) + *-yl.*] An atom of selenium and one of oxygen together appearing as a compound radical, as in selenyl chlorid, ($SeOCl_2$).

Seleucid, *n.* **II.** *a.* Pertaining to Seleucus or the royal dynasty of the Seleucids in Syria: as, a *Seleucid* coin.

self, *n.*—**Divided self, divided will,** in *psychol.*, the self or will of a person whose mental attitudes in internal discourse ('saying to oneself,' 'thinking to oneself') represent radically and even irreconcilably different views of life; the self or will of one whose successive feelings and impulses are so discrepant as to prevent his leading a consistent life.

Augustine's psychological genius has given an account of the trouble of having a *divided self* which has never been surpassed.

W. James, Var. of Religious Exper., p. 172.

Subliminal self, a supposed subconscious self or personality, usually dormant, but manifesting itself in hysteria, hypnosis, 'double personality,' etc., by means of speech, behavior, writing, etc., of a kind foreign to the normal character and, oftentimes, indicative of knowledge and experience which the normal self does not consciously possess.

He [Myers] took a lot of scattered phenomena, . . . and bound them together in a system by his bold inclusive conception of the *Subliminal Self*.

W. James, in Proc. Soc. Psychical Research, May, 1901, [p. 16.

self-actor (self-ak′tọr), *n.* An automatic machine, as a cotton-spinning mule.

self-adaptation (self″ad-ap-tā′shọn), *n.* The response of an organism to new conditions by changes that are adapted to those conditions. The improvement or strengthening of a muscle by exercise is an example of self-adaptation. The construction of a muscle and the structure and arrangement of its blood-vessels and nerves are such that normal use strengthens it, and most self-adaptations are effected by organic machinery for bringing them about under normal use, while abnormal or unnatural use is usually destructive instead of adaptive.

What the Rev. Dr. Henslow has termed '*self-adaptation*,' is in itself a result of natural selection.

H. F. Osborn, in J. M. Baldwin, Development and Evolu- [tion, p. 341.

self-alining (self-a̤-lī′ning), *a.* Alining automatically.—**Self-alining bearings**, bearings so constructed as to adjust themselves to an angular variation in position of the center-line of the shaft which they support. Such bearings diminish cramping, heating, and cutting of the bearing surfaces when rigidity is impossible or undesirable.

> Where the ends of the polar axis are supported on separate piers the bearings can be made *self-aligning*.
> *C. D. Perrine*, in Science, Jan. 29, 1904, p. 164.

self-amputation (self-am-pṳ-tā′sho̤n), *n.* Autotomy.

> Miss Monk's studies on Phataria, a star-fish remarkable even among its close allies within the family Linckiidæ, for the variability in the number of its rays, and the readiness with which it parts with them and then regenerates them, led to the following results: 1. The observations proved conclusively that the casting off of the rays is, in most cases at least, not accidental, but a true *self-amputation*. *Science*, Jan. 10, 1902, p. 62.

self-cocking (self-kok′ing), *a.* Cocking automatically: said of a pistol in which the hammer is cocked and released by simply pulling the trigger.

Self-constituted manifold. See ★*manifold*.

self-differentiation (self″dif-e̤-ren-shi-ā′sho̤n), *n.* In *embryol.*, the kind of differentiation shown in structures which in their development have a high degree of independence of neighboring structures.

self-digestion (self-di-jes′tyo̤n), *n.* Same as ★*autodigestion*.

self-dissociation (self-di-sō-shi-ā′sho̤n), *n.* In *phys. chem.*, the dissociation of a pure solvent itself, which is assumed in order to explain the fact that it conducts electricity slightly, even when carefully freed from all dissolved electrolytes.

> The conductivity of the pure solvents is explained by assuming "*self-dissociation*" and considerable space is devoted to mere speculation as to what the composition of the ions might be in the various individual cases.
> *Jour. Phys. Chem.*, Feb., 1905, p. 178.

self-docking (self-dok′ing), *a.* Having the ability to dock its parts on other parts so that all the sections can be examined above water successively: said of a floating dock. See ★*dock*3, 1.

> An important feature of the dock is the arrangement by which any portion of it can be examined, cleaned, and painted. Each pontoon can in turn be detached, lifted, and hung on the side walls, where any necessary work can be done upon it. The underneath portion of the walls may be exposed for cleaning and painting by careening the structure. It is this quality that gives the dock the name of *self-docking*. *Sci. Amer.*, Oct. 29, 1898, p. 280.

self-estrangement (self-es-trānj′me̤nt), *n.* See ★*absorption*, 2.

self-excitation (self″ek-si-tā′sho̤n), *n.* In *elect.*, the excitation of the field of a dynamo-electric machine by currents taken from the armature of the same machine.

self-excited (self-ek-sī′ted), *p. a.* In *elect.*, said of a generator having no source of magnetic induction other than that of its own residual field to bring it into function, and which, when started, is supplied by the current of its own armature-circuit: distinguished from *separately excited*.

self-exciting (self-ek-sī′ting), *p. a.* In *elect.*, capable of actuation by its own residual field and of providing its own magnetizing currents when once started: said of generators that are not separately excited.

self-feeling (self-fē′ling), *n.* In *psychol.*, egoistic feeling or emotion.

> The *self-feeling* . . . (selbstgefühl, amour propre) . . . may translate itself in two forms: in a negative form as a feeling of powerlessness and debility, and in a positive form as a feeling of strength and audacity.
> *Ribot* (trans.), Psychol. of Emotions, p. 15.

self-fermentation (self″fėr-men-tā′sho̤n), *n.* Fermentation referable to the action of enzyms, which have not been introduced from without. See ★*autolysis*.

self-hypnosis (self-hip-nō′sis), *n.* Auto-hypnosis; hypnosis by autosuggestion.

> This sort of *self-hypnosis* may lead even to an identification of the individual with the ideal form that absorbs his mind.
> *H. B. Woolston*, in Amer. Jour. Psychol., XIII. 71.

self-imitation (self″im-i-tā′sho̤n), *n.* The imitative repetition of one's own movements, characteristic of a certain stage of childhood. See the extract.

> That young children do go through a stage of intense interest in the sensations resulting from their own movements is a fact made clear from many observations. The curious period of "*self-imitation*" in the child when it repeats for an indefinite period the same movement or sound, over and over again, is very likely a period of vivid attention to movement sensations.
> *M. F. Washburn*, The Animal Mind, p. 283.

self-induced (self-in-dūst′), *p. a.* Induced or brought on by itself; specifically, in *elect.*, set up by the inductive action of a fluctuating current in the same circuit: as, a *self-induced* current.

self-inductance (self-in-duk′ta̤ns), *n.* **1.** Inductance due to interlinkage of an electric circuit with the lines of force of a current flowing in the same circuit: distinguished from *mutual inductance*, where the interlinkage is with lines of a current in a second circuit. See ★*inductance*.—**2.** The numerical value of self-induction; the coefficient of self-induction. See ★*inductance* and ★*unit of inductance*.

> In 1898 Rowland published a brief description of some twenty-six methods for the measurement and comparison of *self-inductance*, capacity and mutual inductance. These methods are mostly of the Wheatstone Bridge type and depend upon the use of an alternating current and an electrodynamometer.
> *Elect. World and Engin.*, Feb. 18, 1905, p. 354.

self-induction, *n.*—**Coefficient of self-induction.** See ★*coefficient*.

self-interrupting (self-in-te̤-rup′ting), *a.* Interrupting automatically: said of an instrument which automatically breaks and remakes an electric circuit, as, for instance, of the electrically driven tuning-fork. *Scripture*, Exper. Phonetics, p. 15.

self-luminosity (self″lū-mi-nos′i̤-ti), *n.* Luminosity due to the spontaneous vibratory motions of the particles of the luminous body. All bodies heated above red heat are self-luminous, whereas in most cases of luminescence the light emitted is due to excitation from without. The glowing of radium, and of other radioactive substances, is an instance of self-luminosity and it is in describing this phenomenon that the term is usually employed.

self-mate (self-māt′), *n.* A position in a chess problem such that the fact that white or black is to move compels black or white to effect a mate after a stated number of moves. The more modern term for such problems is *sui-mate*.

self-sense (self′sens), *n.* The sense of one's own personality: a more inclusive term than 'self-respect' and broader than 'self-consciousness.' *E. A. Ross*, Social Control, p. 241.

self-sown (self-sōn′), *a.* Disseminated without the intervention of human or animal agency; in common usage, sown by any agency other than man.

self-yew (self′yö), *n.* In *archery*, a self-bow made of yew. See *self-bow*, under *bow*2.

seligmannite (sā′lig-män-īt), *n.* [After Gustav *Seligmann* of Koblenz.] A rare mineral found in the dolomite of the Binnenthal, Switzerland. It is near bournonite in form and is probably a sulpharsenite of lead.

seliha (se-lē′ċhä̤), *n.*; pl. *selihot* (-ċhōt). [Heb. *seliḥah*, < *sālaḥ*, forgive, pardon.] Among the Jews, a collection of penitential prayers forming a prayer-book for fast-days, that is, for the week preceding the Jewish New Year, the ten days between New Year's Day and the Day of Atonement, etc. Most of the poems and prayers included under this name have been composed by medieval gaonim (see *gaon*) and Sephardi rabbis. The selihot are acrostically arranged, many containing not only the alphabet but also the names of the composer and his father.

sell1, *n.*—**To work a sell on**, to play a practical joke on; deceive. [Slang.]

> That I *work a sell on* you, that you 'll remember for the rest of your days. *R. Kipling*, Indian Tales, p. 142.

sell-out (sel′out), *n.* **1.** The act of selling out, literally or figuratively. [Colloq.]

> The Tariff Act . . . was an ungodly and unblushing *sell-out* to the Sugar Trust, the Standard Oil Trust, the steel and iron men, the greedy manufacturing interests generally. *Tom Watson's Mag.*, Jan., 1906, p. 362.

2. See *auction-pitch*, under *pitch*1.

selva (sel′vä̤), *n.* [Pg. *selva*, < L. *silva*, a forest.] In *phys. geog.*, naturally forested lands; especially, a forested plain in torrid South America.

> In the north [Northern Nyassa] the surface consists of rolling *selvas*, well watered, and fairly fertile, with peaks bearing dwindling tufts of primeval forests.
> *Geog. Jour.* (R. G. S.), XV. 534.

selvage, *n.* **6.** In the making of tin-plate or galvanized iron, a thin ridge or list of the coating metal at the lower edge of the plate where capillary action resists the draining action when the sheet is on edge to allow the excess of fluid coating to run off.—**Center selvage**, a selvage in the center of a loom when two or more widths of cloth are being woven side by side.

selvyt (sel′vit), *n.* [Trade-name.] A velveteen made in squares of eighteen or twenty inches, used in shops for polishing or dusting.

> The backs of guards are best renewed by polishing threads fixed at one end to the work-bench and held in the hand at the other extremity, the article being rubbed lightly backwards and forwards over them. A chamois-leather or piece of "*selvyt*" with a touch of rouge, gives the whole frame a bright appearance quite out of proportion to the few minutes spent in the operation.
> *Optical Jour.*, June 16, 1904, p. 53.

sem. An abbreviation (*a*) of *seminary*; (*b*) [*cap.*] of *Semitic*.

semantics (sē-man′tiks), *n.* [Gr. *σημαντικός*, significant, < *σημαντός*, emphatic, < *σημαίνειν*, show by a sign, indicate, signify, < *σῆμα*, a mark, sign: see *sematic*.] That branch of philology which is concerned with the meanings of words and the development of meanings; semasiology.

> The second of the recent additions to the domain of Philology — the study of meaning — presents fewer difficulties, but until recent years has been equally neglected. . . . The only attempt to deal with it on a large scale in M. Bréal's Essai de Sémantique (1897), now translated into English under the title of Semantics (1900), with a valuable introduction and appendix by Dr. Postgate.
> *Encyc. Brit.*, XXXI. 677.

semantology (sē-man-tol′ọ̄-ji), *n.* Same as *sematology*.

semaphore (sem′a̤-fōr), *v. i.*; pret. and pp. *semaphored*, ppr. *semaphoring*. To signal with a semaphore; humorously, wave one's arms and signal like a semaphore.

> Man dead ahead, . . . *semaphorin'* like the flagship in a fit!
> *R. Kipling*, Steam Tactics, in Traffics and Discoveries, [p. 176.

Sematic character, any characteristic of an organism, in form, color, or marking, which, when displayed, serves to alarm enemies or to bring together individuals of the species for their welfare. Sematic characters that warn enemies are termed *aposematic* or *warning*; those that serve to bring individuals of the species together are termed *episematic* or *signaling*.—**Sematic coloring.** See ★*coloring*.

sembling (sem′bling), *n.* [*semble*2, *v.*] The attraction of male insects to a captive female.

semeiological, *a.* See *semiological*.

semelincident (sem-el-in′si-de̤nt), *a.* [L. *semel*, once, + *incidens*, incident.] Occurring but once: noting a disease, such as smallpox, one attack of which confers immunity against subsequent infection.

> While the mass of evidence is against such a hypothesis, it is conceivable that the three erythematous diseases are variants of the same infection, which is not so strictly *semelincident* as has been supposed and that, analogously, chicken pox is a mitigated variola.
> *Medical Times*, Jan., 1908, p. 18.

semeniferous (sē-me-nif′e̤-rus), *a.* Same as *seminiferous*.

semestria (sẹ̄-mes′tri-ä̤), *n. pl.* [L. neut. pl. of *semestris*, semiannual.] In *civil law*, the semiannual collections of the decisions of the Roman emperors in their councils.

semi-aircooled (sem-i-ãr′köld), *a.* Partially but not entirely cooled by the air; having some means for cooling besides radiation to the air: said of the cylinders of internal-combustion engines.

semianna, *n.* See ★*shamiana*.

semiarc (sem′i-ärk), *n.* In *astrol.*, half the arc described by any celestial body between its rising and its setting, or vice versa.

semiarid (sem-i-ar′id), *a.* See the extract.

> The broad distinction between arid, *semiarid*, and humid regions lies in the ability of such regions to produce crops annually with or without the artificial application of water. The arid region, as a whole, may be said to lie between the western boundary of the Mississippi valley and the Pacific coast. Between the arid and the humid regions is a broad intermediate belt known as the *semiarid* or subhumid region. It has no clear-cut boundary, but shifts from season to season, backward and forward, over a vast range of country, extending practically from the ninety-seventh to the one hundred and fourth degree of west longitude. It is a region of plains and foothills, the former, commonly called the Great plains, extending across both the northern and southern boundaries of the United States.
> *Dept. Com. and Labor*, Bur. of Census, Bulletin 16, Irrig. [in U. S., 1902, p. 10.

semi-automatic (sem″i-â-tọ̄-mat′ik), *a.* Partly automatic: used in describing many machines for the manufacture of duplicate articles in which the will and action of the human attendant is brought into play in the process. Such are turret-lathes and some screw-and-bolt and nut-machines. The cutting-tools may be automatic so far as action and sizing are concerned, but they are brought into action at the discretion of the operator. The locomotive and motor-car are semi-automatic in this sense. The full automatics perform their functions when supplied with stock and started, no human intervention being required to start the successive operations.

semi-axis (sem-i-ak'sis), *n.* Half an axis, as of a hyperbola.—**Imaginary semi-axis of a hyperbola.** See ★*hyperbola.*

semic (sē'mik), *a.* [Gr. *σῆμα*, a mark, + *-ic.* See *semeion.*] **1.** Relating to or of the nature of a mark or sign.—**2.** Pertaining to or of the nature of a semeion.

semicarbazin (sem-i-kär'ba̤-zin), *n.* A colorless base, $NH_2CONHNH_2$, formed by the action of the hydrate of hydrazine on potassium cyanate. It melts at 96° C. It is used to form condensation-products with ketones and aldehydes for the purpose of characterizing and identifying these compounds.

semicarbazone (sem-i-kär'ba̤-zōn), *n.* A compound formed by the action of semicarbazin on an aldehyde or a ketone, as the semicarbazone of acetaldehyde, $CH_3CH:NNHCONH_2$. Such compounds are usually crystalline and are used to isolate or identify aldehydes or ketones.

semicha (se-mē'kä̤), *n.* [Lit. leaning, < *sāmak*, lean, lay, support.] Jewish ordination by competent rabbis, when the candidate receives his diploma stating his qualifications to officiate as a rabbi.

semicircle, *n.* **4.** In *meteor.*, one half of the area covered by a cyclonic storm. In the northern hemisphere the dangerous semicircle for navigation is that on the right-hand side as one advances along the path of the center of a progressive storm: the manageable, or navigable, or safer semicircle is that on the left-hand side.—**Barred semicircle.** See ★*barred.*—**Semicircle balk.** See *the D.* under ★*d.*

semicircumference (sem″i-sėr-kum'fe̤-re̤ns), *n.* Half a circumference or circle.

semiclassic (sem-i-klas'ik), *a.* Half classic; in the arts of design, based on classic motives; similar to classic motives.

semiconsonant (sem-i-kon'sọ-na̤nt), *a.* and *n.* **I.** *a.* Half or partly consonant in character.

II. *n.* A sound (vowel) having a partly consonantal character, as *y* in *you* or *loyal;* a semivowel viewed as a consonant.

semicontinuum (sem″i-kọn-tin'ụ̄-um), *n.*; pl. *semicontinua* (-ä̤). In *math.*, a cohesive but not perfect set; the continuum with its ends cut off. *G. Cantor.*

semiconvergence (sem″i-kọn-vėr'je̤ns), *n.* The convergence of a semiconvergent series.

semideaf (sem'i-def), *a.* Not entirely deaf: noting specifically a deaf-mute in whom the power of hearing is not entirely absent.

semidecussation (sem-i-dē-ku-sā'shọn), *n.* Partial decussation. noting particularly the course of the nerve-fibers in the optic chiasm. *Buck*, Med. Handbook, II. 444.

semidiagrammatic (sem″i-dī-a̤-gra-mat'ik), *a.* Partly diagrammatic; partly true to nature: noting a drawing. *Buck*, Med. Handbook, II. 1.

semidiameter (sem″i-dī-am'e-tėr), *n.* One half the diameter: especially, in *astron.*, one half the angular diameter of the sun, moon, or other object showing a disk; the radius.

semidigitigrade (sem-i-dij'i-ti-grād), *a.* Said of that type of mammalian foot in which the heel does not rest on the ground in walking, though not raised so high as in the digitigrade foot. Intermediate in character between the plantigrade and digitigrade foot.

The pes is pentadactyl and, except in the glyptodonts, is plantigrade, while in the latter group it is *semidigitigrade.*
Science, June 5, 1903, p. 902.

semidine (sem'i-din), *n.* An ortho- or par-amino derivative of diphenylamine, as $C_6H_5NHC_6H_4NH_2$. Such compounds are formed by the rearrangement of hydrazo compounds under the influence of dilute acids.—**Semidine rearrangement,** the molecular rearrangement which gives rise to the formation of a semidine.

Semidiurnal tide. See ★*tide*^{1}.

semi-elliptic (sem″i-e-lip'tik), *a.* Same as *semi-elliptical.*

semiferal (sem-i-fē'ra̤l), *a.* Partly wild; feral to some extent.

The *semiferal* Pigs of New Granada.
Flower and Lydekker, Mammals, p. 285.

semifluctuating (sem-i-fluk'ṭū-ā-ting), *a.* In *pathol.*, giving a sensation of elasticity and transmitting faintly the impact of a tap on one side: noting a semisolid tumor.

The parts affected increase in size and are tense and hard, or soft and *semifluctuating.*
Buck, Med. Handbook, IV. 507.

semifusa (sem-i-fū'sä̤), *n.* [ML.] In *medieval music*, same as *semiquaver*, or, less commonly, as *quaver*, 4.

semifusion (sem-i-fū'zhọn), *n.* A process of partial fusion or softening, or rendering plastic, which, if carried further or to a higher temperature, would cause complete liquefaction or fusion.

This mixture is calcined at a temperature that will produce *semifusion* and the resulting clinker is ground to a fine powder.
S. F. Peckham, in Pop. Sci. Mo., Dec., 1901, p. 147.

semiglazed (sem'i-glāzd), *a.* Slightly glazed or covered with a thin gloss. See ★*smear-glaze.*

semiglobular (sem-i-glob'ụ̄-lä̤r), *a.* Same as *semiglobose.*

semiglutin (sem-i-glö'tin), *n.* An albumose derived from gelatin by boiling for thirty hours in feebly acid solution. Insoluble in 70–80 per cent. alcohol.

semihardy (sem-i-här'di), *a.* Half hardy; hardy if protected from severe cold: said of plants.

Then, again, *semihardy* sorts may be tipped over by cutting the roots on one side, bending the branches close to the soil, pinning them down, and then covering the whole plant with matting and earth or a straw thatch and earth. *Yearbook U. S. Dept. Agr.*, 1901, p. 439.

semihyaline (sem-i-hī'a̤-lin), *a.* Partly hyaline; half hyaline.

semi-hypsodont (sem-i-hip'sọ-dont), *a.* Having teeth with rather long crowns, intermediate in character between the brachydont and hypsodont types. *Proc. Zool. Soc. London*, 1893, p. 180.

semi-hypsodonty (sem-i-hip'sọ-don-ti), *n.* [*semi-hypsodont* + *-y.*] The fact or condition of teeth with moderately long crowns. *Proc. Zool. Soc. London*, 1893, p. 180.

semi-infinite, *a.* **2.** Bounded by an infinite plane: said of a medium whose only boundary is a plane surface.

The paper treats of the propagation of vibrations over the surface of a "*semi-infinite*" isotropic elastic solid, i.e. a solid bounded only by a plane.
Nature, July 9, 1903, p. 237.

semi-lichen (sem-i-lī'ken), *n* Same as ★*half-lichen.*

semilocular (sem-i-lok'ū-lä̤r), *a.* In *bot.*, having incomplete dissepiments between the cells, as a fruit, so as to be virtually unilocular.

semilune (sem'i-lūn), *n.* Half a lune.

semimasculus (sem-i-mas'kụ̄-lus), *n.*; pl. *semimasculi* (-lī). [NL., < L. *semi*, half, + *masculus*, male.] Same as *eunuch.*

Seminal filament. See ★*filament.*—**Seminal variation.** Same as ★*seed variation.*

seminase (sem'i-nās), *n.* [L. *semen* (*semin-*), seed, + *-ase.*] A ferment occurring in alfalfa (lucerne) which has the power of producing mannose and galactose from the mannans and galactans of certain leguminous seeds.

seminormal (sem-i-nôr'ma̤l), *a.* In *phys. chem.*, having half the concentration of a normal solution, or containing half a gram-molecule (or gram-equivalent) of dissolved substance in one liter of solution. See ★*concentration* (*c*) (4).

seminose (sem'i-nōs), *n.* [L. *semen* (*semin-*), seed, + *-ose.*] Same as ★*mannose.*

semioccasional (sem-i-ọ-kā'zhọn-a̤l), *a.* Occurring once in a while: as, a *semioccasional* visit. [Colloq.]

semioccasionally (sem-i-ọ-kā'zhọn-a̤l-i), *adv.* At odd times; at semioccasional intervals. [Colloq.]

Semiophorus (sē-mi-of'ọ̄-rus), *n.* [NL., < Gr. *σημειοφόρος*, a sign-bearer, < *σημεῖον*, sign, + *φέρειν*, bear.] A genus of extinct fishes allied to the living horse-mackerel, with a very large dorsal fin, compressed trunk, and conical teeth: found in the Upper Eocene rocks.

semioxygenated (sem-i-ok'si-je-nā'ted), *a.* Incompletely combined with oxygen; literally, combined with half as much oxygen as might be taken up.

semiparameter (sem″i-pa-ram'e-tėr), *n.* In *math.*, half a parameter.

semiparasitic (sem″i-par-a̤-sit'ik), *a.* Partly parasitic: said, for example, of the capsules of mosses which are supported partly by the leafy haplogamic part of the plant and partly by their own vegetative tissues. *Cook and Swingle.*

semiparasitism (sem-i-par'a̤-si-tizm), *n.* Incomplete or partial parasitism.

semipermeable (sem-i-pėr'mẹ̄-a̤-bl), *a.* Capable of permitting the passage of certain molecules and of impeding that of others; said of membranes or septa which are permeable to the molecules of a solvent such as water, but which prevent the diffusion of the molecules of the dissolved substance.

When a substance is dissolved in a large quantity of a solvent its molecules are separated from each other to a distance comparable with that which obtains in gases. They are, therefore, capable of independent action and when placed in a vessel the walls of which are permeable to the solvent, but not to the dissolved substance ("*semipermeable* membrane"), the imprisoned molecules of the latter exert pressure on the interior surface of these walls as if they were gaseous.
W. Ramsay, in Smithsonian Rep., 1900, p. 253.

semipestis (sem-i-pes'tis), *n.* [NL., < L. *semi-*, half, + *pestis*, plague.] An old term for typhus fever.

semiplegia (sem-i-plē'ji-ä̤), *n.* [L. *semi-*, half, + Gr. *πληγή*, a stroke.] Same as *hemiplegia.*

semiporcelain (sem-i-pôrs'la̤n), *n.* An inferior grade of porcelain.

Semi-Porcelain, also known as Paris Granite or "P.G.," Opaque China, and by various other names, is much the color of French china, and the best brands are so nearly akin to porcelain as to show translucency in the very thin parts. It is largely wrought into the finer grades of articles for family service, and decorated for dinner, tea, and toilet sets, often in an elaborate manner.
E. A. Barber, Pottery and Porcelain of the U. S., p. 19.

semiprecious (sem-i-presh'us), *a.* Valuable, but less so than the most highly prized objects of similar nature.—**Semiprecious stone.** See ★*stone.*

semiprone (sem-i-prōn'), *a.* Neither on the side nor wholly prone, but in a position between the two. *Buck*, Med. Handbook, III. 740.

semipyramidal (sem″i-pi-ram'i-da̤l), *a.* Having the form of a pyramid of three, four, or more sides, vertically bisected.

semirecumbent (sem″i-rẹ̄-kum'be̤nt), *a.* In a reclining position, but not completely recumbent. *Buck*, Med. Handbook, I. 253.

semis, *n.* **2.** A coin of half the value of the coin called the solidus, which circulated widely in medieval Europe in imitation of the imperial gold piece so called.

semispheroidal (sem″i-sfẹ̄-roi'da̤l), *a.* Having the figure of a half-spheroid; hemispheroidal.

semistuporous (sem-i-stū'pọ̈r-us), *a.* In a partial stupor.

semivolcanic (sem″i-vol-kan'ik), *a.* Characterized by explosive volcanic outbreaks without the emission of lava.

semoule (sẹ-möl'), *n.* [F., < It. *semola*: see *semola.*] Flour containing a large proportion of vegetable albumen. Semoule flour is used in making macaroni.

semper (sem'pėr), *n.* Same as *samphire.*—**Rock-semper,** the samphire, *Crithmum maritimum.*

sempervirid (sem-pėr-vir'id), *a.* Same as *sempervirent.*

semsem (sem'sem), *n.* [Egypt.] Same as *sesame.* *Geog. Jour.* (R. G. S.), XIII. 411.

sen^3 (sen), *n.* The name given in Hindustan (*a*) to a unit of weight equal to one kilogram; (*b*) to a unit of volume equal to the liter. These units and their multiples were legalized in 1871, mainly for use by the railways.

Sen. An abbreviation (*b*) [*cap.*] of *Senate* or *Senator.*

senaite (sā'nä-īt), *n.* [Named after Prof. Joachin da Costa *Sena* of Ouro Preto, Brazil.] An iron-lead titanate related in form and probably in composition to ilmenite: found in the diamantiferous sands of Diamantina, Brazil.

send, *v. t.*—**To send back.** See ★*back*^{1}, *adv.*—**To send up.** (*c*) In *lumbering*, to raise (logs) up skids with cant-hooks, or by steam- or horse-power, in loading.

senda (sän'dä), *n.* [Sp.] A path; a foot-path. [Philippine Is.]

sender, *n.*—**Zinc sender,** in *telegraphy*, a transmitting device used on cables, and so arranged as to send a reversed current after each signaling impulse. This tends to neutralize the charge of the cables and increases the speed of signaling.

sending, *n.* **3.** That which is sent.

Specimens of plants were lent to a large number of persons, the principal *sendings* having been to the Gray Herbarium, at Cambridge, etc.
Smithsonian Rep. (*Nat. Mus.*), 1900, p. 66.

4. Specifically, a revenge or punishment supposed to be sent by a wizard at the request of an injured party.

A *sending* . . . is a Thing sent by a wizard, and it may take any form, but, most generally wanders about the land . . . till it finds the sendee, and him it kills by changing into the form of a horse, or a cat, or a man without a face, . . . a modified *Sending* could . . . be arranged for

> —such a *Sending* as should make a man's life a burden to him, and yet do him no harm . . . "Cats, and cats, and cats! Never was such a *Sending*. A hundred of cats."
> *R. Kipling*, The Sending of Dana Da, in Indian Tales, [p. 280.

Senegal tick. See ★*tick*^{2}.

senega-root (sen′ẹ̄-gä̤-röt), *n.* Same as *senega.*

seng (seng), *n.* An abbreviation of *ginseng.* [Local, U. S.]

senile, *a.* **2.** In *phys. geog.*, exhibiting features of old age in the geographical cycle: said of worn-down land-forms.—**Senile cataract, chorea, coxitis, degeneration, river.** See ★*cataract*, etc.

senilism (sē′nil-izm), *n.* [*senile* + *-ism.*] A state of premature senility.

senn (sen), *n.* [G. *senne*, a herdsman.] An Alpine herdsman.

> 'Twas night upon the Alps.—The *Senn's* wild horn,
> Like a wind's voice, had poured its last long tone.
> *Felicia D. Hemans*, The League of the Alps, st. 1.

senna, *n.*—**Coffee senna,** *Cassia occidentalis*, a common strong-smelling tropical weed, native of South America but naturalized in many parts of the world. See *Cassia*, 1, and *negro coffee* (under *coffee*).—**Compound infusion of senna,** a laxative draft made by macerating senna and fennel with boiling water, straining, and adding manna and magnesium sulphate. Also called *black-draught.*—**European wild senna,** *Globularia Alypum*, an Old World plant with strong purgative properties. See *Globularia*, 1, and *gutwort.*—**Low senna,** *Cassia Tora*, a plant of very wide distribution, ranging from Pennsylvania to Missouri and south to Florida and Mexico, and extending thence throughout tropical America. It occurs also in the warmer parts of the Old World. It is low compared with the wild senna and coffee senna, and has leaves with 2–4 pairs of obovate, mucronate leaflets. The pods are very narrow, long, and sickle-shaped, giving to it also the name of *sickle-senna.*—**Prairie senna,** the larger sensitive pea or partridge-pea, *Cassia Chamæcrista.*—**Sickle-senna.** Same as *low* ★*senna.*

sennacrol (sen′ạ-krol), *n.* [NL. *senna*, senna, + L. *acer* (*acr-*), sharp, + *-ol.*] A compound, soluble in ether, contained in the leaves of senna.

sennapicrin (sen-ạ-pik′rin), *n.* [NL. *senna*, senna, + Gr. *πικρός*, bitter, + *-in*^{2}.] A compound, insoluble in ether, contained in the leaves of senna.

sennegraes (sen′e-grãs), *n.* [Scandinavian.] An arctic sedge, *Carex vesicaria*, used by Nansen and his party to put in their shoes to keep their feet warm and dry.

> Inside the "finsko" we used . . . this "*sennegraes*" (Carex vesicaria), of which we had taken a supply.
> *Nansen*, Farthest North, II. 117.

sennet^3 (sen′et), *n.* The European barracuda. *Jordan and Evermann*, Fishes of N. and M. Amer., p. 826.

sennit^1, *n.*—**Common sennit,** sennit with simple plaiting with five or seven strands: also called *flat sennit.*—**Round sennit,** sennit formed by plaiting even numbers of strands in twos about a small rope which is used to form a heart.—**Square sennit,** sennit made of an even number of strands, and having a heart or core.

señorita, *n.* **3.** A Californian fish, *Halichæres semicinctus.*

sensate, *a.* **II.** *n.* That which is sensed; the object or contents of sensation.

> We may now . . . talk of Sensation as a phenomenon of consciousness, and we may call that which is sensed the *sensate.* *S. S. Laurie*, Institutes of Education, p. 63.

sensation, *n.*—**Articular sensation,** the sensation proceeding from the sense-organs of the surfaces of the joints or articular surfaces.—**Brightness-sensation,** a colorless visual sensation; a sensation of the black-white series; a black, white, or gray sensation.—**Circulational sensations, circulatory sensations,** in *psychol.*, sensations the adequate stimuli of which are changes in the circulation of the blood. Circulational components are probably contained in the sense-complexes of tickling, itching, tingling, 'pins and needles,' feverishness, etc.—**Concomitant sensation,** in *psychol.*, a secondary sensation which appears, without special stimulation, as the attendant of a primary sensation, regularly stimulated; the associated term in a synæsthesia.

> The *concomitant sensations* observed after stimulation of some part of the skin are nearly always referred to cutaneous regions on the same side of the body.
> *W. Wundt* (trans.), Physiol. Psychol., I. 162.

Cutaneous sensation, in *psychol.*, a sensation set up by stimulation of the skin, without affection of any deeper-lying tissue.

> We are apt to speak of 'sensations' of touch, resistance, impact, tickling, etc. . . . In reality, these processes are all mixtures of *cutaneous* and organic *sensations.* *E. B. Titchener*, Outlines of Psychol., p. 64.

Dermal sensation, cutaneous sensation; skin sensation.—**Hering's theory of temperature-sensations or of the temperature-sense,** in *physiol.* and *psychol.*, the theory, propounded by E. Hering, that there is a single nervous organ for the sensations of warmth and cold, the physiological processes corresponding to the two sensations being antagonistic, as (on Hering's theory) in the case of complementary visual sensations.

> According to *Hering's theory of the temperature sense*, two opposed processes, assimilation and dissimilation, run their course in the sensitive nervous substance. If they are in equilibrium, they cancel one another; . . . the sensation of cold corresponds to assimilation.
> *O. Külpe* (trans.), Outlines of Psychol., p. 95.

Joint-motion sensation. See *joint-pressure* ★*sensation.*—**Joint-pressure sensation,** in *psychol.*, the articular sensation when concerned in the perception of resistance: opposed to *joint-motion sensation*, the articular sensation when concerned in the perception of the movement of a limb or segment of a limb. The term was proposed by A. Goldscheider to characterize the part played by the articular surfaces in the illusory perception of resistance obtained when one slackens an elastic band held taut between the fingers and thumbs of the two hands, or after one has slowly lowered to the floor a weight held at the end of a string. There is, however, no introspective difference between the articular sensations observed in these experiments and in experiments upon active and passive movement. *E. C Sanford*, Exper. Psychol., p. 34.—**Marginal sensation.** See *marginal* ★*process.*—**Negative sensation,** in *psychol.*: (*a*) The one arbitrarily chosen term of a sensational opposition.

> When we speak of *negative sensations*, we ordinarily understand by the term sensations which are opposite in direction to other sensations which we call positive. Cold, e.g., is a *negative sensation* as opposed to hot. But it would be equally correct to call cold positive, and to make hot a *negative sensation.*
> *W. Wundt* (trans.), Human and Animal Psychol., p. 43.

(*b*) A hypothetical intensity of sensation which exists below the stimulus limen.

> We are surely justified in taking as the zero-point of our sensation-scale the point where sensation becomes just noticeable. That settled, we shall naturally call the noticeable sensations, to the right of that point, positive; the unnoticeable *sensations*, to the left of it, *negative.*
> *W Wundt* (trans.), Human and Animal Psychol., p. 45.

(*c*) A sense-distance or sense-interval, traversed in the direction opposite to that which has been chosen as the positive. Thus, if S_m and S_n are two points upon the scale of brightness qualities such that the distance S_m-S_n represents a just noticeable increase of brightness (positive), then the distance S_n-S_m may be considered negative in regard to S_m-S_n.—**Objective sensation,** any impression made upon one of the sense-organs by an object external to that organ.—**Positive sensation,** in *psychol.*: (*a*) A quality of sensation introspectively or psychophysically opposed to another quality which is arbitrarily termed 'negative.' Thus, warmth may be termed a positive, cold a negative sensation of temperature; or red may be termed a positive and green a negative visual sensation. *W. Wundt* (trans.), Human and Animal Psychol., p. 43. (*b*) A sensation which lies to the right of the zero-point of the sensation-scale, that is, which belongs to the group of noticeable (as opposed to unnoticeable) sensations. *W. Wundt* (trans.), Human and Animal Psychol., p. 45. (*c*) A sense-step or sense-distance regarded as traversed in the opposite direction to that taken as negative. Thus, if the sense-distance S_n-S_m be looked upon as negative, then the sense-distance S_m-S_n is positive.—**Pressure sensation,** in *psychol.*, the sensation aroused by adequate stimulation of the pressure-spots of the skin or of the organs of articular sensitivity. *W. Wundt* (trans.), Human and Animal Psychol., p. 32.—**Pure sensation,** in *psychol.*, the sensation considered as a mental element, in abstraction from accompanying sensations or affective processes.

> The concept "*pure sensation*" . . . is the product of a two-fold abstraction: 1) from the ideas in which the sensation appears, and 2) from the simple feelings with which it is united.
> *W. Wundt* (trans.), Outlines of Psychol., p. 38.

Reflected sensation, in *psychol.*, a sensation occasioned not by the stimulation of its own sensory nerve, but by that of some other. Same as *concomitant* ★*sensation.*

> There can, indeed, be no manner of doubt as to the existence of *reflected sensations.* . . . Normally, it is true, they are very weak; and it is only in conditions of pathologically increased excitability that they attain to a more considerable intensity.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 124.

Secondary sensation, in *psychol.*, a concomitant sensation or reflected sensation; especially, the unstimulated sensation in synæsthesia.

> In the case of *secondary sensations* the primary sensation directly imparts another sensation.
> *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 224

Sensation circle, sensory circle. See ★*circle.*—**Sensation coloring,** in *psychol.*, the specific character of a sense-feeling, sense-fusion, etc., which is dependent upon the nature of the peripheral organ or organs involved.

> In intermittent pains there are times when sensation is present which cannot be called painful; and during these intermissions the peculiar *sensation-colouring* which gives its special character to the ensuing pain is usually not at all affected.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 216.

Sensation-fusion, in *psychol.*, an intimate and unitary connection or blend of sensations, best illustrated by the musical tone (compound tone or clang).

> The clang-idea presents to us a simple and typical example of a psychological process which we shall frequently meet with, for the most part in a more complex form,—the process of *sensation-fusion.*
> *W. Wundt* (trans.), Human and Animal Psychol., p. 74.

Sensation of double contact. See ★*contact*^{1}.—**Sensation-scale,** in *psychol.*, a linear arrangement of intensities or qualities of sensation, the units of which represent equal sense distances or differences. The intensive sensation scale ranges from zero to the terminal sensation; the qualitative (for instance, the tonal) scale covers the whole range of sensible qualities (for instance, extends from the lowest to the highest audible tone).

> If we connect the upper ends of the perpendiculars drawn upon our [intensive] *sensation-scale* to represent stimulus-magnitudes, we obtain a curved line ascending more steeply as we approach the higher values of the *scale.*
> *W. Wundt* (trans.), Human and Animal Psychol., p. 36.

Sensation-unit, in *psychol.*, the unit chosen for the sensation-scale, intensive or qualitative; especially, the Fechnerian unit for the measurement of sensation intensity, the just noticeable difference.

> If we have once established a *sensation-unit*, we can easily determine by comparison with it the magnitude of any other sensation whatever.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 34.

Static sensation, in *psychol.*: (*a*) Generally, any sensation which may form an integral part of the perception of bodily position. In this meaning, visual and kinesthetic sensations may, on occasion, be termed static sensations. (*b*) Specifically, the sensations of dizziness furnished, in all probability, by the semicircular canals of the internal ear. *J. M. Baldwin*, Dict. of Philos. and Psychol., II. 218.—**Tendinous sensation,** in *psychol.*, a sensation derived from the sensory nerve-endings in tendon, and possessing in all probability the quality of strain.

> If we are working analytically, it is best . . . to speak of 'muscular sensation,' '*tendinous sensation*,' 'articular sensation,' as we speak of sight, hearing, cutaneous sensation, etc. *E. B. Titchener*, Exper. Psychol., I. ii. 144.

Tendon sensation. Same as *tendinous* ★*sensation.* *J. M. Baldwin*, Dict. Philos. and Psychol., II. 674.—**Weight sensation,** in *psychol.*, a term wrongly applied to the complex of kinesthetic sensations which mediates the perception of lifting or of supporting a weight.

> *Weight sensation* . . . is probably a compound of tendon sensation, muscle sensation, and pressure sensation.
> *J. M. Baldwin*, Dict. of Philos. and Psychol., II. 812.

> Even less tenable is the point of view which makes sensations the psychological symbols of objective facts or processes, and leads to their classification as *sensations* of 'movement,' '*weight*,' 'time,' 'space,' and so on.
> *O. Külpe* (trans.), Outlines of Psychol., p. 36.

sensational, *a.*—**Principle of sensational relativity.** See ★*relativity.*

sensation-cell (sen-sā′shọn-sel), *n.* In *physiol.* and *anat.*, a cortical cell which receives peripheral excitations by direct conduction, and is therefore supposed to be the seat of sensation: opposed to ★*memory-cell.*

> It thus becomes necessary to posit the existence of two sorts of cortical cells: *sensation cells* and idea cells.
> *W. Wundt* (trans.), Physiol. Psychol., I. 289.

> He has lost the acoustic memory-cells, but retained the acoustic *sensation-cells.*
> *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 160.

sensation-circle (sen-sā′shọn-sėr″kl), *n.* In *psychol.*, an area of the skin or of the retina within which two spatially distinct stimuli, simultaneously applied, evoke but a single sensation. The term was introduced by E. H. Weber, who regarded the skin as divided up into a large number of overlapping circular areas, each of these representing the area of distribution of the terminal fibrils of a single nerve fiber. So long as the two points of the esthesiometer were set down within a sensation-circle, the observer received but one sensation of pressure; as soon as the one point traveled into a second sensation-circle, the two impressions were sensed as two. The word has tended to fall into disuse, partly because the circles proved to be anything but circular and partly because the limen of dual impression was found to depend upon many other factors besides the structural conditions of the sense-organ. It may, however, be retained for historical reasons, if we abstract from Weber's theoretical views and have in mind rather these peripheral conditions than the general psychophysical or psychological factors which help to determine the magnitude of the limen.

> Within the area of a single "*sensation-circle*," therefore, the local signs and the associated ideas of motion are not sufficient to render two sensations distinguishable when they are caused by like stimuli.
> *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 82.

sensatory (sen′sạ̄-tō-ri), *a.* [*sensate* + *-ory.*] Of or pertaining to sensation; sensible; sensational. [Rare.]

sense^1, *n.* **11.** In *geom.*, one of two directly opposite ways in which a construct may be generated, described, or thought.

> On a given straightest OA, the two rays OO′, from O to its opposite O′, are distinguished as of opposite *sense.*
> *Halsted*, Rational Geom., p. 217.

Dermal sense, one of the senses of the skin, as a sense of pressure, of temperature, or of cutaneous pain. *E. C. Sanford*, Exper. Psychol., p. 1.—**Distance sense,** in *psychol.*, the power possessed by blind persons of perceiving a resisting object, as a wall, at some distance, without direct contact.

> The so-called "*distance sense* of the blind' . . . is made up of two factors: a very weak tactual stimulation of the forehead by the atmospheric resistance, and a change in the sound of the step.
> *W. Wundt* (trans.), Outlines of Psychol., p. 113.

General sense, in *psychol.*, a collective term for the sensations derived from the external skin, with the adjoining areas of mucous membrane, and from the sensory nerve-endings in joint, muscle, tendon, and bone.

> In point of time, the *general sense* is that which precedes all others and therefore belongs to all beings endowed with mind. In its spatial attributes, the *general sense* is distinguished from the particular senses in having the most extensive sensory surface exposed to stimuli.
> *W. Wundt* (trans.), Outlines of Psychol., p. 45.

Mechanical sense, in *psychol.*, a sense of which the terminal organ is adequately stimulated by mechanical means: opposed to *chemical sense.*

> With the *mechanical senses* may probably be reckoned (besides hearing) that of cutaneous pressure.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 111.

Sense-feeling, in *psychol.*: (*a*) The affective tone of sensation; the affection attaching to a sensation.

> The *sense-feeling* may in this way be considered as an integral element of the sensation itself; and for that reason it is also termed the affective tone of sensation.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 212.

(*b*) The simplest type of concrete affective experience; a complex of a sensation (or a well-defined group of sensations) and an affective process: such a feeling as hunger, or drowsiness: opposed to *emotion* and *sentiment*.

Sense-modality, in *psychol.*, a department of sense; a modal group or division of sensations.

> Wherever there occurs a quantitative apprehension of sensations, . . . the individual sensation is estimated by the relation in which it stands to other sensations of the same *sense-modality*.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 119.

Static sense, in *psychol.*: (*a*) Generally, any sense which can furnish data for the perception of bodily position (orientation, equilibration). (*b*) Specifically, the sense whose organ is the semicircular canals and vestibule of the internal ear, the portion of the internal ear supplied by the vestibular branch of the acoustic nerve. For the most part, this organ appears to function reflexly, that is, is not an organ of sense; but it undoubtedly gives us the sensation of dizziness or giddiness, and some authors refer this sensation to the ampullæ of the canals, and ascribe to the vestibule a second sensation, that of pressure.

> The literature of the *static sense* is large. An appreciation of theories . . . might be assigned . . . to an interested student.
> *E. B. Titchener*, Exper. Psychol., I. ii. 143.

sense-hair (sens'hãr), *n.* A hair arising over a nerve-cell or nerve-termination and having the function of a sense-organ: common in arthropods.

sense-idea (sens'ī-dē"ạ̈), *n.* [Trans. G. *sinnesvorstellung.*] In *psychol.*, a presentational idea; a perception.

> The instantaneous production of transitory *sense-ideas* . . . has proved a method of widening our knowledge of a large number of important mental phenomena.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 258.

sense-organ, *n.* 2. Specifically, a collection of nerve-cells which receive impressions from without (peripheral sense-organ), such as one of the taste-bulbs or tactile corpuscles; also a collection of nerve-cells in the cerebrospinal centers which translate such impressions into conscious sensation or reflex movement (central sense-organ).

sense-organule (sens'ôr"gạn-ūl), *n.* A modified epithelial cell in which a sensory nerve-fiber terminates; a sensilla.

sense-process (sens'pros"es), *n.* In *psychol.*, a sensation or a group of sensations, regarded not as states of consciousness but as mental processes.

> Attention is a state of consciousness; manifesting itself outwardly in attitudes and movements which . . . set up certain *sense-processes*.
> *E. B. Titchener*, Exper. Psychol., I. i. 110.

sense-vesicle (sens'ves"i-kl), *n.* In *embryol.*, the vesicular rudiment of a sense-organ, such as the optic and otic vesicles in vertebrates.

senshaw (sen'shâ), *n.* [Of Chinese origin.] A textile fabric worn by the Chinese.

sensibility, *n.*—**Absolute sensibility.** See ★*absolute*.

sensibilizator (sen'si-bi-li-zā"tọ̈r), *n.* [*sensibilize* + *-ator*.] Same as ★*amboceptor*.

sensibilize (sen'si-bl-īz), *v. t.*; pret. and pp. *sensibilized*, ppr. *sensibilizing*. [L. *sensibilis*, sensible, + *-ize*.] To render sensitive or sensible.—**Sensibilizing substance.** Same as ★*amboceptor*: so called because it renders the cell-receptors sensitive to the action of the complement. See also ★*sensitizing substance*.

> It is for this reason that the amboceptor is called by Bordet, Metschnikoff, and others the *sensibilizing substance* (substance sensibilisatrice) or the fixative (fixateur).
> *Med. Record*, Feb. 14, 1903, p. 249.

sensibilizer (sen'si-bl-ī"zėr), *n.* 1. Same as ★*amboceptor*. The term has reference to the action of the amboceptor in rendering the cell-receptor sensitive to the action of the complement.—2. In *photog.*, a sensitizing agent or substance applied to the photographic film.

> After having been in the dark for many weeks, the platinum selenium surface was covered, at a red illumination, with a sheet of silver bromide jelly to which a *sensibiliser* absorbing the yellow and green rays was added, an aluminium strip bent at right angles being interposed.
> *Knowledge*, May, 1904, p. 98.

sensible, *n.* 4. In *music*, same as *sensible note*. See *leading tone*.

sensilla (sen-sil'ạ̈), *n.*; pl. *sensillæ* (-ē). [NL., < L. *sensus*, sense, + dim. *-illa*.] A simple or elementary sense-organ represented by a single epithelial cell at the end of a sensory nerve-fiber.

sensitive-active (sen'si-tiv-ak"tiv), *a.* In *psychol.*, a mixed type of normal character distinguished by Ribot, including in its lowest degree those who have an egoistic craving for enjoyment and action, and in its highest forms martyrs, enthusiasts, revolutionists, and such artists as Cellini and Michelangelo. *Ribot* (trans.), Psychol. of Emotions, p. 400.

sensitiveness, *n.*—**Curve of sensitiveness.** See ★*curve*.

sensitive-plant, *n.* 2. The narrow-leaved sensitive-brier, *Leptoglottis angustata* (*Schrankia angustata* of Torrey and Gray), found from Virginia to Florida and west to Tennessee and Texas.—**Bastard sensitive-plant.** (*b*) The sensitive joint-vetch, *Æschynomene Virginica*.

sensitivity, *n.*—**Absolute sensitivity.** See ★*absolute*.—**Liminal sensitivity**, in *psychophys.*, the lower limit of sensitivity of a sense-organ: represented by the stimulus limen (qualitative, intensive, etc.). Thus the qualitative liminal sensitivity in the sphere of tonal hearing is reached with a stimulus of about 12 vibrations in one second.—**Modal sensitivity**, in *psychophys.*, a collective name for the total range of sensitivity of a sense-organ, that is, for the liminal and terminal sensitivities. Thus the qualitative modal sensitivity in the sphere of tonal hearing is represented by stimuli of about 12 to 50,000 vibrations in the one second.

sensitize, *v. t.*—**Sensitizing substance.** Same as ★*amboceptor*. The substance sensitizes, or renders sensitive, the cell-receptors to the action of the complements.

sensitizer, *n.* 2. Same as ★*amboceptor*.

> The *sensitisers* of the tubercle bacillus.
> *Nature*, Aug. 13, 1903, p. 360.

sensitometer, *n.*—**Color sensitometer**, a device for testing the color-screens or -filters used in photography.

sensitometric (sen"si-tọ̄-met'rik), *a.* Of or pertaining to sensitometry.

> The colour *sensitometric* methods that Sir William Abney has done so much to perfect are often employed for this purpose. A series of small pieces of suitably coloured material are arranged in such a manner that when the plate is exposed through its screen and this sensitometer a definite and easily recognisable result will be obtained if the plate and screen are mutually correct.
> *C. Jones*, in Nature, Oct. 6, 1904, p. 555.

sensitometry (sen-si-tom'e-tri), *n.* [*sensit*(*ive*) + Gr. *-μετρια*, < *μέτρον*, measure.] The measurement of the sensitiveness of photographic plates. *Scientific Abstracts*, VI., Section A, p. 74.

sensoriglandular (sen"sọ̄-ri-glan'dụ̄-lạ̈r), *a.* Relating to modifications of glandular secretion by sensory stimuli. *Baldwin*, Dict. of Philos. and Psychol., II. 436.

sensorimetabolic (sen"sọ̄-ri-met-ạ̈-bol'ik), *a.* Relating to metabolic processes induced, modified, or arrested by a sensory stimulus. *Baldwin*, Dict. of Philos. and Psychol., II. 436.

Sensorimotor action. See *psychomotor* ★*action*.—**Sensorimotor arc**, in *physiol.*, the functional unit of the nervous system; the path or circuit by which the nervous impulse is conveyed from sense-organ to muscle, consisting in the higher animals and man of at least two neurones, a sensory or afferent and a motor or efferent, joined end to end.

> This description of the nervous system as consisting of *sensori-motor arcs* of three principal levels is of course a very much simplified schematic view.
> *W. McDougall*, Physiol. Psychol., p. 23.

sensorimuscular (sen"sọ̄-ri-mus'kụ̄-lạ̈r), *a.* [NL. *sensorius* (see *sensory*) + E. *muscular*.] Relating to muscular contractions following sensation. *Baldwin*, Dict. of Philos. and Psychol., II. 436.

sensorivascular (sen"sọ̄-ri-vas'kụ̄-lạ̈r), *a.* [NL. *sensorius* (see *sensory*) + E. *vascular*.] Relating to changes in caliber of the blood-vessels induced by sensory stimuli. *Baldwin*, Dict. of Philos. and Psychol., II. 436.

sensorivasomotor (sen"sọ̄-ri-vas-ọ̄-mō'tọ̈r), *a.* [NL. *sensorius* (see *sensory*) + E. *vasomotor*.] Same as ★*sensorivascular*. *Buck*, Med. Handbook, VI. 275.

Sensory canal, cells, circle. See ★*canal*1, etc.—**Sensory crossway**, part of the internal capsule of the brain (approximately the posterior third) through which pass various nerve-fibers of special and general sensation.—**Sensory epithelium, ganglia.** See ★*epithelium*, ★*ganglion*.

sent1, *n.* and *v.* 2. An amended and former spelling of *scent*.

sentence, *n.* 7. (*b*) A brief response or antiphon sung by the choir in a church service.—**Declarative sentence**, a sentence which embodies a declaration or statement of fact.

sentiate (sen'shi-āt), *v. t.*; pret. and pp. *sentiated*, ppr. *sentiating*. To perceive; give the sense of. [Rare.]

> Pantagruel by the Way related to them, from point to point, the manner of [Judge] Bridlegoose's *sentiating* Differences at Law.
> *Urquhart and Motteux*, tr. of Rabelais, Gargantua [Pantagruel, iii. 43.

sentience, *n.* 2. Specifically, in *psychol.*, presentation regarded as immediate experience, without reference to its significance for thought.

> Presentation considered as having an existence relatively independent of thought may be called *sentience*, or anoetic consciousness. Thought and *sentience* are fundamentally distinct mental functions.
> *G. F. Stout*, Anal. Psychol., I. 50.

sentimental, *a.* 3. Of or pertaining to sentimentalism.

> It is one of the most curious features of the *sentimental* ailment, that, while it shuns the contact of men, it courts publicity.
> *Lowell*, Among My Books, 1st ser., p. 378.

sentry1, *n.*—**Flying sentry**, a sentry on temporary duty.

> An officer of one of the Guards Battalions . . . was found bathing in the Modder by a *flying sentry* stationed there to prevent the men from bathing.
> *L. James*, in War's Brighter Side, xix.

Sentry go. (*b*) Duty as a sentry on post.

> I turned out at 2 a.m. and did *sentry-go* till daybreak.
> *Geog. Jour.* (R. G. S.), XVI. 145.

sep. An abbreviation (*b*) of *separate*; (*c*) [*cap.*] of *September*; (*d*) [*cap.*] of *Septuagint*.

separate, *v. i.*—**Separating power.** See ★*power*1.

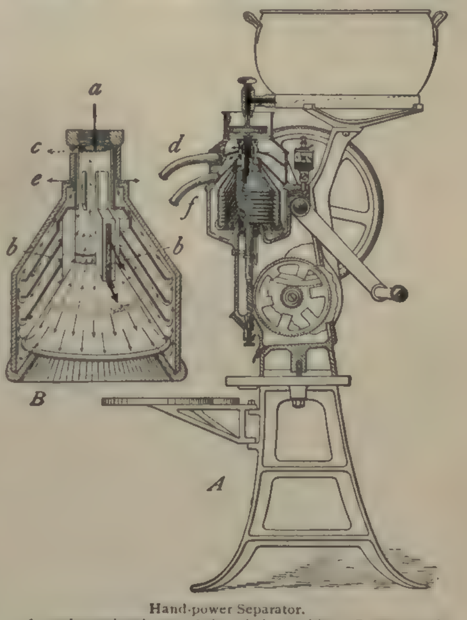
separated (sep'ạ̈-rā-ted), *p. a.* Affected by the action denoted by the verb *separate*; specifically, obtained (as milk or cream) by the ★centrifugal method (which see).

Separately excited, having, as a generator or motor, the field coils supplied with current from an outside source.

separating-chamber (sep'ạ̈-rā-ting-chām"bėr), *n.* 1. An enlargement in a flue or passage made in order that the velocity of flow through it may be reduced and time be given for dust or other solid matter in suspension to settle.—2. A space in which water may be allowed or compelled to separate from a current of steam, leaving the latter to move out of it dry and free from suspended water.—3. A chamber or device by which or in which oil moving in a current of steam or water may be caught and separated from it.

separation, *n.* 7. In *astrol.*, the condition when two significators have lately been in aspect and the aspect is just over.—8. In *hort.*, the method of propagating plants by means of naturally separable parts, as offsets, small bulbs that spring from a mother bulb, or detachable buds. *L. H. Bailey*.

separator, *n.* 2. (*e*) A machine for extracting cream from milk. It is essentially a centrifugal machine, allied in principle to the laundry centrifugal drier. By centrifugal action, set up in a rapidly revolving vessel containing fresh milk, the cream is driven out of the milk and escapes by a suitable spout, the milk being delivered through another. Separators are driven at high speed, the larger by steam or other mechanical power, the smaller by hand. A number of different types are in use in dairies and creameries, all of high efficiency. See ★*centrifugal*, 3.



Hand-power Separator.

A, partly sectional view of the whole machine; *B*, cross-section of the separator-bowl with cones, the dotted-line and full-line arrows showing the routes of the cream and the skim-milk respectively. The whole milk enters at the point *a*, and passes into the spaces between the revolving cones through the openings *bb* of the tubular shaft. The centrifugal action caused by the revolving cones immediately separates the cream from the skim-milk. The cream, being the lighter, is driven upward along the surface of the cones and, passing on the outside of the tubular shaft, is discharged through the outlet *c* into the upper chamber connecting with the spout *d*. The heavier skim-milk is driven downward toward the wall of the separator-bowl, where it is forced upward and discharged through the outlet *e* into the lower chamber connecting with the spout *f*. The separator cones are made of heavily tinned sheet-steel about one thirty-second of an inch in thickness, placed one upon the other about one sixteenth of an inch apart.

> Centrifugal *separators* are operated in ordinary practice so as to leave less than 0.1 of 1 per cent of fat in the skim milk; sometimes as little as 0.01 of 1 per cent.
> *Yearbook U. S. Dept. Agr.*, 1897, p. 511.

(*f*) A device for separating water from steam: usually a vessel, placed in the steam-line, having deflectors so arranged as to throw the water against metallic surfaces to which it will cling. (*g*) An insulating grid or plate of glass, vulcanite or other nonconducting material placed between the plates of a storage cell. *Elect. World and Engin.*, Jan. 30, 1904, p. 224.

3. A piece of metal placed between two ad-

jacent beams to hold them at a fixed distance apart.—4. A device on a ring-spinning machine designed to prevent interference between the yarns of adjacent spindles. Also called *antiballooner*.—5. An instrument for separating the membranes from the brain in a post-mortem examination.—6. An instrument for widening the jaw and effecting separation of the crowded teeth.—7. An appliance for obtaining the urine secreted by one kidney unmixed with that from the other kidney.—8. A device used in a type-setting machine to permit only one character to pass through at a time.

> A switch deflects the type from the disk to a flat traveling belt which runs parallel with the disk at this point, and which conveys the type to the "*separator*"—two rolls with just enough space between to permit the passage of a single type, so that if the operator has played two types which are traveling side by side they are separated before proceeding farther.
> *Census Bulletin* 216, June 28, 1902, p. 61.

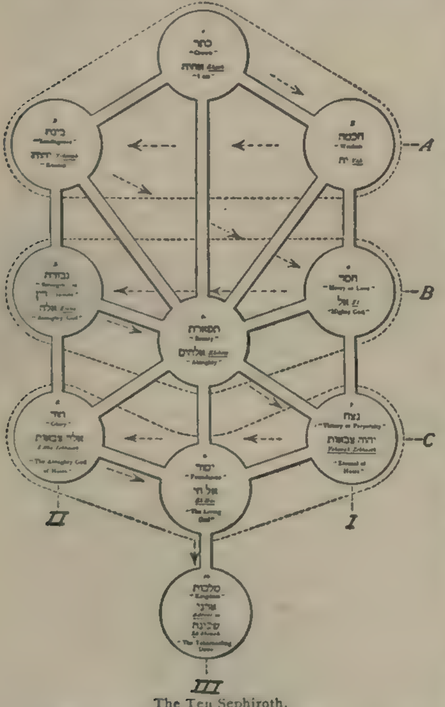
9. In *elect.*, a device by means of which a single line may be used simultaneously for telephony and telegraphic signaling or for two distinct sets of telegraphic signals. It depends upon the operation, in branch circuits, of two sets of receiving instruments, such as a relay in one branch and a telephone in the other, without interference. The signaling currents differ in frequency, and the inductance and capacity of the two branch circuits are so adjusted that the instrument in each is affected only by the current intended for it. *Elect. World and Engin.*, April 2, 1904, p. 663.—**Electrostatic separator**, a device for removing native gold and silver from crushed ores by the action of an electrostatic field. The particles become charged and cling to the surface of a revolving metal drum, but the metallic particles lose their charge more promptly than the non-conducting material, drop from the drum, and are thus separated.—**Magnetic separator.** (*a*) A magnetic machine, invented by Edison, used for the separation of magnetic iron ore of low quality. The powdered ore is allowed to fall through the air in a thin stream, passing the poles of a series of large electromagnets, which draw the magnetic particles away from the waste, without coming into contact with them. (*b*) A separator, invented by Venstrom, in which the powdered ore is carried by a traveling belt toward a partly magnetized cylinder, which attracts the magnetic ore, carrying it into a chute leading to the ore-bin, while the non-magnetic ore is carried by the belt to the waste chute.—**Mazza separator**, a centrifugal separator adapted to the separation of light gases from heavy: invented by Mazza of Italy.—**Oscillating separator**, a classifying or separating apparatus in which the particles of different sizes or specific gravities are stratified or separated by an oscillation or rocking motion of the containing-vessel, instead of by the up-and-down or rotary motion used in other types.

Sephira (se-fī'rä̤), *n.* See ★*Sephiroth.*

Sephiroth, *n. pl.* In the *cabala*, the Sephiroth are the ten attributes or intelligences which form the *Adam Kadmon*, the 'Primordial man' (the Deity). These attributes emanate from the *En-Soph*, the 'Infinite.' Their names are as follows: (1) *Kether*, 'the crown'; (2) *Ḥakmah*, 'wisdom'; (3) *Binah*, 'intelligence'; (4) *Ḥesed*, 'mercy' or 'love'; (5) *Pahad, Geburah*, or *Din*, 'strength and justice'; (6) *Tiphereth*, 'beauty'; (7) *Netsah*, 'firmness' or 'victory'; (8) *Hod*, 'majesty' or 'splendor'; (9) *Yesod*, 'foundation'; (10) *Malkuth*, 'kingdom.' The Sephiroth are divided in three categories called *'Amudim*, 'pillars'; numbers 2, 4, and 7 form the right pillar, the 'Pillar of Love'; numbers 1, 6, 9, and 10 form the middle pillar, the 'Pillar of Mercy'; numbers 3, 5, and 8 form the left pillar, the 'Pillar of Judgment.' The Sephiroth are united by links forming three more triads. The first, the uppermost triad, is composed of the Crown, Wisdom, and Intelligence; the second, of Love, Justice, and Beauty; the third, of Firmness, Majesty, and Foundation. These triads, according to the Zohar, form other triads. The three pillars together are known in the cabala as *Ets-Ḥaïm*, the *Tree of Life.* See ★*Adam Kadmon.*

אין־סוף

THE EN-SOPH, "THE INFINITE"



The Ten Sephiroth.

A, the World of Creation (B'riah); B, the World of Formation (Yetsirah); C, the World of Action (Asiah). I. Jachin, the Pillar of Mercy. II. Boaz, the Pillar of Judgment; III. Middle Pillar (Compassion). The arrows within the diagram point the order of the emanation and reception.

Sepic acid, a brownish-black pigment, one of the melanins.

sepion (sē'pi-on), *n.* See *sepium.*

seppa (sep'ä̤), *a.* [Sp. *cepa*, stump of a tree, or stock of a vine.] Springing from the roots of a previous planting: as, *seppa* cotton, a term used in southern Texas to distinguish the plants of a previous season which have lived through the winter, from those of the following season. Compare ★*ratoon.* *U. S. Dept. Agr.*, Div. Entom., Bulletin 45, p. 46.

sept³ (sept), *n.* [F. *sept*, ‹ L. *septem*, seven. See *seven.*] In *music*, same as *seventh* or *seventh-chord.*

Septal cartilage, funnel, neck, plate. See ★*cartilage*, etc.—**Septal gemmation.** See ★*calycinal gemmation.*

septan, *a.* **II.** *n.* Same as *septan fever* (which see, under *fever*¹).

septane (sep'tān), *n.* [L. *sept(em)*, seven, + *-ane.*] Same as *heptane.*

septated, *a.* **2.** In *geol.*, divided by septa. *J. D. Dana*, Manual of Geol. (4th ed.), p. 137.

septavalence (sep-tav'a̤-le̤ns), *n.* The state of being septavalent.

septavalency (sep-tav'a̤-le̤n-si), *n.* Same as ★*septavalence.*

septavalent (sep-tav'a̤-le̤nt), *a.* [L. *septem*, seven (with termination of Gr. ἑπτά, seven), + E. *valent.*] Same as ★*septivalent.*

> Chlorine is univalent with respect to hydrogen and *septavalent* with respect to oxygen.
> *D. I. Mendelléjeff*, in Athenæum, April 8, 1905, p. 437.

Septembrisade (sep-tem'bri-sād), *n.* [*Septembrist.*] In *Fr. hist.*, the slaughter of prisoners that occurred in September, 1792, and known as the massacre of September; hence, any similar slaughter. See *Septembrist.*

Septembriseur (sep-tem-bri-sėr'), *n.* [F.] A Septembrist.

Septembrism (sep-tem'brizm), *n.* [*Septembr(ist)* + *-ism.*] The principles and conduct of the French Septembrists.

septentrionaline (sep-ten'tri-ō-na-lin), *n.* [L. *septentrionale* (see def.) + *-ine*².] A crystalline alkaloid, $C_{31}H_{48}O_4N_2$, found in *Aconitum septentrionale.* It melts at 129° C. It depresses the action of the heart and both local and general sensibility.

Septic tank. See ★*tank.*

septicemia, *n.*—**Hemorrhagic septicemia.** Same as *cattle-and-game* ★*disease.*

Septicemic plague. See ★*plague*, 2.

septicize (sep'ti-sīz), *v. t.*; pret. and pp. *septicized*, ppr. *septicizing.* [*septic* + *-ize.*] To render septic.

septicopyemia, septicopyæmia (sep'ti-kō-pī-ē"mi-ä̤), *n.* [NL. *septicus*, septic, + *pyemia.*] Combined septic and purulent infection of the blood.

> As the fatal end of the process approaches, the pyæmic oscillations of the temperature become less typical, and the febrile phenomena assume the character of a remittent septic fever: *septicopyæmia.*
> *Med. Record*, June 27, 1903, p. 1007.

septiferous² (sep-tif'e̤-rus), *a.* [NL. *sepsis* (*septi-*), sepsis, + *ferre*, bear, + *-ous.*] Conveying septic poison.

septillion, *n.* **3.** The cardinal numeral obtained from a septillion: used like *hundred.*

septillionth (sep-til'yo̤nth), *a.* and *n.* **I.** *a.* **1.** Last in a series of a septillion individuals: an ordinal numeral.—**2.** Being one of a septillion equal portions.

II. *n.* One of a septillion equal parts of anything.

septipartite (sep'ti-pär-tīt), *a.* [L. *septem*, seven, + *partitus*, divided.] Consisting of seven parts.

> A quartic having three acnodes is the limiting form of an anautotomic quartic in which the acnodes are replaced by three perigraphic curves; and if a line cutting the fourth portion in four real points be projected to infinity, the projection will be *septipartite.*
> *A. B. Bassett*, in Nature, Nov. 27, 1902, p. 80.

septivalent (sep-tiv'a̤-le̤nt), *a.* [L. *septem*, seven, + E. *valent.*] In *chem.*, equivalent in combining power to seven atoms of hydrogen. Compare *heptad.*

septoglœum (sep-tọ-glē'um), *n.* [NL. (Saccardo, 1880), ‹ L. *septum*, a division, + NL. *glœa*, glue.] A genus of parasitic fungi very closely related to *Glœosporium*, from which it differs in having elongate several-septate conidia. About 25 species have been described. *S. acerinum* occurs on leaves of the maple.

septoic (sep-tō'ik), *a.* [L. *septem*, seven, + *-o-* + *-ic.*] Same as ★*heptoic.*

septomaxillary, *n.* **2.** In *ichth.*, a small paired bone occurring in *Amia calva*, a ganoid fish. It lies above the vomer and below the premaxillary, entirely out of sight until one of those bones is removed.

septometer¹ (sep-tom'e-tėr), *n.* [L. *septum*, partition, + Gr. μέτρον, measure.] An anthropometrical instrument used for measuring the thickness of the septum of the nose.

septometer² (sep-tom'e-tėr), *n.* [*sept(ic)* + *-o-* + Gr. μέτρον, measure.] An instrument for ascertaining the number and kind of septic organisms occurring in air.

septon (sep'to̤n), *n.* [NL., ‹ Gr. σηπτόν, neut. of σηπτός, ‹ σήπειν, make rotten.] In *med.*: (*a*) A principle formerly supposed to be the essence of infection. (*b*) Air deficient in oxygen and containing poisonous emanations.

septonal (sep'tọ-na̤l), *a.* [*septon(ate)* + *-al*³.] Of or pertaining to a septonate.

septonate (sep'tọ-nāt), *n.* [L. *septem*, seven, + *tonus*, tone, + *-ate*¹.] In *music*, a series of seven tones, ranging from the fifth below the key-note to the fourth above, proposed by J. Klauser, in 1890, as a more rational arrangement of the tones of the scale.

Septoria (sep-tō'ri-ä̤), *n.* [NL. (Fries, 1819), ‹ L. *septum*, partition (referring to the septate spores).] A large genus of sphæropsidaceous fungi having pycnidia produced beneath the epidermis of the host, and elongate hyaline, several-septate spores. Over 900 species have been described. They occur chiefly as parasites upon leaves, producing discolored spots. *S. Rubi* is a common species producing a leaf-spot disease of the blackberry.

septum, *n.*—**Alar septa.** See ★*alar.*—**Cardinal septum,** in the extinct rugose corals or *Tetracoralla*, the principal septum or mesentery wall, lying in the fossula on the longitudinal axis of the corallum: contrasted with *counter* ★*septum* and ★*alar septa.*—**Counter septum,** one of the two principal septa or mesenteric walls in the *Tetracoralla*, contrasted with and lying in the calice opposite to the cardinal septum. See ★*alar septa.*—**Horizontal septum,** in *ornith.*, a fibrous membrane overlying the cavities containing the liver.—**Lateral septum,** in *Ptychoderidæ*, one of a pair of vascular membranes passing from the dorsal wall of the gut in the postbranchial portion of the branchiogenital region to the free border of the genital pleuræ.—**Oblique septum,** in *ornith.*, a sheet of fibrous tissue covering the free walls of the thoracic air-sac of either side and uniting with its fellow in the mid-dorsal line, thus dividing the body-cavity horizontally into two parts.—**Pharyngeal septum,** in *embryol.*, the membrane or partition which for a time separates the stomodæum or mouth-cavity from the pharynx in the vertebrate embryo.—**Septum bronchiale,** a projection into the lumen of a bronchial tube at the point of its bifurcation.

seq. An abbreviation (*a*) of the Latin *sequentes* or *sequentia*, the following; (*b*) of the Latin *sequentibus*, in the following (places).

Sequanian (sē-kwā'ni-a̤n), *n.* [L. *Sequana*, the Seine, + *-ian.*] In *geol.*, a division of the Jurassic system in France and the Jura, equivalent to the upper half of the English Corallian series. It is subdivided into an upper or Astartian and a lower or Rauracian substage.

sequence, *n.* **7.** A musical setting of a liturgical prose or sequence.—**8.** In *math.*, an infinite set of numbers or objects arranged so that every one has a definite numbered position.—**Fundamental sequence,** in *math.*, every progression or regression which belongs to a given series.—**Harmonic sequence of vowels,** in *philol.*, a principle or tendency in certain languages, as in Turkish and other languages of the Ural-Altaic family, whereby the vowels of the terminations conform to the general quality—'heavy' or 'guttural' (*a, o, u*), or 'light' or 'palatal' (*e, i, ü, ö*)—of the first or root vowel, as in *av-mak, sev-mek*, etc. The principle is one of assimilation, somewhat analogous to that of mutation or umlaut in the Teutonic languages.—**Regular sequence,** a sequence in which there is a place beyond which all the elements differ from each other by less than ε, where ε is any fixed positive rational number.

sequential, *a.* **2.** Noting land-forms produced by erosive processes acting in consequence of uplifts which initiate a new cycle of erosion.

"Initial" is therefore a term adapted to ideal rather than to actual cases, in treating which the term "*sequential*" and its derivatives will be found more appropriate. *W. M. Davis*, in Geog. Jour. (R. G. S.), XIV. 487.

sequestrectomy (sē-kwes-trek'tọ-mi), *n.* [NL. *sequestrum* + Gr. ἐκτομή, excision.] An operation for the removal of a sequestrum.

sequin^2, (sē'kwin), *n.* [Origin uncertain.] A large basket of the Californian and southwestern Indians, used for storing seeds.

The art sense of the western basket makers extends to other objects made of grass or plants, and is particularly conspicuous in their so-called "*sequin*," or granary, which, while crude, is essentially artistic and attractive. *Sci. Amer.*, Oct. 10, 1903, p. 263.

sequoia-borer (sẹ-kwoi'ä̤-bōr"ėr), *n.* See ★*borer*.

sequoiene (sẹ-kwoi'ēn), *n.* [*Sequoia* + *-ene*.] A crystalline hydrocarbon, $C_{13}H_{10}$, found in the needles of *Sequoia Washingtoniana* of California.

seradella (ser-a̤-del'ä), *n.* Same as *serradilla*.

seraf, serafic, serafim. Simplified spellings of *seraph*, etc.

serah (ser'ä̤), *n.* [Malay *sarah*, *serah*, Jav. *serah*, yield, deliver, hand over.] A present of money or goods sent by the ruler to a village (usually to some leading individual), for which a quantity of produce much exceeding the gift in value is demanded: a favorite way of obtaining revenue in the Malay states.

Serah.—This is a very well-known manner of obtaining revenue, and is as much valued by the taxing classes as it is abominated by those upon whom devolves the duty of paying taxes. *Geog. Jour.* (R. G. S.), IX. 18.

Seraphic Doctor, a title bestowed upon St. Teresa, from a wound in her heart which, in a vision, she felt made by a seraph or an angel.

Teresa, by a definitive decree of the Tribunal of the Rota, is formally declared a Doctor of the Church. The "*seraphic doctor*," the antonomasia by which she is as often as not referred to in Spain, relates to this, and not to the Doctor's degree bestowed upon her, after her death, by the University of Salamanca. *G. C. Graham*, Santa Teresa, iv.

Seraphs (ser'a̤fs), *n.* [Nominally NL., a blunder for *Serapis* (?), or for some form based on the original of *seraph*, and hence later altered to *Seraphys*.] A genus of recent and Tertiary gastropod mollusks with elongate subcylindrical or fusiform shell and short spire largely overlapped by the body-whorl.

serch, *v.* and *n.* A simplified spelling of *search*.

sereh (sē'rẹ), *n.* A serious disease of sugar-cane, the cause of which is not well understood. Also called *fan disease*.

A whole group of diseases, the etiology of which mere field study and the ordinary laboratory methods do not appear to be competent to unravel; for example, the California (Anaheim) vine disease, the wilt of the orange, the *sereh* disease of the sugar cane, gum diseases, the yellows and rosette of the peach, the winter blight of the tomato, the internal brown spotting of potato tubers, etc. *E. F. Smith*, in Science, April 18, 1902, p. 611.

serendibite (sē-ren'di-bīt), *n.* [*Serendib*, Ceylon, + *-ite*^{2}.] A borosilicate of aluminium, iron, calcium, and magnesium, which occurs in blue grains near Kandy, Ceylon.

serendipity (ser-en-dip'i-ti), *n.* [A humorous formation, with an allusion to *dip*, from *Serendip*, a form of *Serendib*, a former name of Ceylon, + *-ity*. The island of Serendib figures in Eastern romance. The name is from Ar. *Serendīb*, *Sarandīb*, also *Sarandīp* (LL. *Serendivi*, pl., as the name of the people), MGr. Σιελεδίβα, < Skt. *Simhala-dvīpa*, the island of Ceylon, < *Simhala*, Ceylon (< *simha*, lion), + *dvīpa*, island. The Skt. *Simhala* is in Pali *Sihalan*, whence **Sīlan*, Old Tamil *Ilam*, whence Malay *Sailan*, European *Seilan*, *Zeilon*, *Ceylon*.] The happy faculty, or luck, of finding, by "accidental sagacity," interesting items of information or unexpected proofs of one's theories; discovery of things unsought: a factitious word humorously invented by Horace Walpole.

This discovery [of the two coats of arms of the Capello family of Venice] I made by a talisman, which Mr. Chute calls the sortes Walpolianæ, by which I find everything I want, à pointe nommée, wherever I dip for it. This discovery, indeed, is almost of that kind which I call *serendipity*, a very expressive word, which, as I have nothing better to tell you, I shall endeavor to explain to you; you will understand it better by the derivation than by the definition. I once read a silly fairy tale, called the three Princes of Serendip; as their Highnesses traveled they were always making discoveries, by accidents and sagacity, of things which they were not in quest of: for instance, one of them discovered that a mule blind of the right eye had traveled the same road lately because the grass was eaten only on the left side, where it was worse than on the right—now do you understand *serendipity?* one of the most remarkable instances of this accidental sagacity (for you must observe that no discovery of a thing you are looking for, comes under this description,) was of my Lord Shaftesbury, who, happening to dine at Lord Chancellor Clarendon's, found out the marriage of the Duke of York and Mrs. Hyde by the respect with which her mother treated her at table. *Walpole*, Letters to Horace Mann, CCLI.

serendipper (ser-en-dip'ėr), *n.* [*serendip*(*ity*) + *-er* (after *dipper*).] One who has the gift of serendipity, or who finds things unsought, by mere 'dipping.' See ★*serendipity*. *N. Y. Times Sat. Rev.*, April 29, 1905, p. 282. [Nonce-word.]

sergeant-painter (sär'jẹnt-pān"tėr), *n.* The title of the chief portrait-painter attached to the royal court of England.

Fine specimens of the work of some early Tudor *sergeant-painter*. *H. E. D. Blakiston*, in Burlington Mag., V. 211.

Sergestes (sėr-jes'tēz), *n.* [NL., < L. *Sergestus*, a steersman among the followers of Æneas.] A genus of *Crustacea*, belonging to the order *Schizopoda*.

serge-twill (sėrj'twil), *n.* Same as ★*cassimere-twill*.

serging (sėr'jing), *n.* [*serge* + *-ing*^{1}.] In *sewing-machine work*, a method of stitching, resembling blindstitching, done on carpet-sewing machines. See *carpet-sewing machine*, under ★*sewing-machine*.

Sergt. An abbreviation of *Sergeant*.

seriary (sē'ri-ā̤-ri), *a.* [L. *series*, series, + *-ary*.] Serial: particularly relating to the position of man in the animal series. *J. Deniker*, The Races of Man, p. 65. [Rare.]

Serica, *n.* 2. [*l. c.*] An individual of the genus *Serica*.—**Iridescent serica**, an American scarabæid beetle, *Serica iricolor*, dull bluish black in color, which damages the foliage of fruit-trees. See *pear* ★*leaf-chafer*.

sericic (sẹ-ris'ik), *a.* [*seric* + *-ic*.] Of or pertaining to or derived from silk.—**Sericic acid**, a deliquescent, transparent, amorphous compound, $C_{15}H_{30}O_7N_4$, prepared by the action of barium hydroxid on purified silk.

sericitization (ser-i-sit-i-zā'shọ̈n), *n.* [*sericite* + *-ize* + *-ation*.] In *petrog.*, the alteration of a mineral or rock to sericite.

All the transverse sections show a rather coarse and poorly defined cleavage and a very faint polarization in the matrix, in some cases none at all, indicating incomplete *sericitization*. *Contrib. to Econ. Geol.*, U. S. Geol. Surv., Bulletin 213, [1902, p. 363.

sericostomatid (ser"i-kọ-stom'a̤-tid), *n.* and *a.* **I.** *n.* A member of the trichopterous family *Sericostomatidæ*.

II. *a.* Having the characters of or belonging to the family *Sericostomatidæ*.

serictery (se-rik'tẹ̈-ri), *n.* [NL. *sericterium*.] Same as *sericterium*.

A pair of silk or spinning glands (*sericteries*) which unite to form a single duct opening in the upper lip at the end of the lingua, which is modified to form the spinneret. *A. S. Packard*, Text-book of Entom., p. 339.

series, *n.* 6. In *math.*: (*b*) A sequence of things such that the situation (before or after) of each can be told with respect to any other; a set.—11. In *elect.*, an arrangement of units of a group of cells, generators, or other electrical devices (such as condensers, resistance-coils, lamps, or the like), such that the positive terminal of the first is connected to the negative terminal of the second and so on. See ★*series-connected*.

We thus arrive at the second and third classes, namely, *series* and shunt machines. *Encyc. Brit.*, XXVII. 587.

Absolutely convergent series, in *math.*, a series which remains convergent when its terms are replaced by their absolute values.—**Allegheny River series**, a series of sandstones, shales, and limestones, with interbedded coal-deposits, developed along the Allegheny river in western Pennsylvania. It belongs to the Upper Carboniferous measures, attains a thickness of 250–300 feet, and lies between the Pottaville conglomerate below and the Conemaugh series above.—**Alternating series**, in *math.*, a series whose terms are alternately positive and negative.—**Aorere series** [Maori *Aorere*, a valley in New Zealand, from *aorere*, also *aorewa*, light, flying clouds], a division of the Lower Silurian formation in New Zealand.—**Arisaig series**, a term used by the Canadian geologists to include the series of Silurian strata which are highly developed in northeastern Nova Scotia. The strata consist of shales and limestones, and are exposed in a fine series along the sea-coast for a distance of several miles. They abound in fossils which indicate that their age is Middle and Upper Silurian. The strata are highly inclined but conformable, and appear to be wedged in between Carboniferous and volcanic rocks.—**Atane series**, a series of Cretaceous plant-bearing beds in western Greenland, containing remains of the poplar, fig, laurel, oak, and other dicotyledons, with ferns, cycads, and conifers, and, interbedded therewith, marine strata of Upper Cretaceous age.—**Bajuvarian series**, a division of the pelagic Triassic rocks of the Mediterranean province, as recognized by the Austrian geologists. It constitutes the uppermost part of the Upper Trias and includes the Juvavian and Rhætic stages.—**Banff series** [*Banff*, a town in Alberta, Canada], a series of limestones and shales in the Canadian Rocky Mountain region, regarded by Canadian geologists as of Upper Devonian or Lower Carboniferous age. It attains a thickness of 5,100 feet, and is underlain by the 'Intermediate limestone' (Devonian) and overlain by the Cretaceous Kootanie group.—**Bastion series**, a division of the Lias in New Zealand.—**Baton River series**, a division of the Upper Silurian formation in New Zealand.—**Belly River series**, a subdivision of the Cretaceous formation in Assiniboia, Saskatchewan, and Alberta, Canada, regarded by Canadian geologists as equivalent to the lowest part of the Montana group. It is thought to be underlain by the Niobrara group and is overlain by the Fort Pierre group. It consists of fresh-water beds which bear a fauna largely identical with that of the Laramie group.—**Bernardston series**, a terrain in Massachusetts, consisting of crystalline limestone associated with hydromica schist, gneiss, granite, diorite, quartzite, etc. The limestone and quartzite contain Devonian fossils. The crystalline character of the rocks is the result of synchronous metamorphism of the whole series of beds.—**Blackwood series**, a division of supposed Precambrian strata in central England.—**Brand series**, a division of the rocks of Leicestershire, England, regarded as of Precambrian age.—**Caledonian series**, a series of gneisses and schists occupying the eastern portion of the Northwest Highlands of Scotland, and associated with the Precambrian Lewisian gneiss. *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 623.—**Cantorian series.** See ★*cantorian*.—**Cardinal number of a series.** See ★*number*.—**Catlin's River series**, a division of the Jurassic rocks in New Zealand.—**Cimarron series**, a subdivision of the Permian in Kansas, Oklahoma, and Indian Territory, regarded by Western geologists as equivalent to the Upper Permian of Europe, by European geologists (Frech) as equivalent to the Upper Dyas (Zechstein). It is underlain in Kansas by the Wellington shales and overlain by Mesozoic beds. Its fauna is small, consisting of a few vertebrates (*Eryops megacephalus*), lamellibranchs (*Conocardium, Schizodus, Pleurophorus*, etc.), gastropods, and a *Dielasma*.—**Closed series.** Same as *closed* ★*set*.—**Coherent series.** Same as *coherent* ★*set*.—**Cohesive series.** Same as *cohesive* ★*set*.—**Comanche series**, a name given to the Lower Cretaceous rocks of Texas.—**Compact series**, in *math.*, series that have a term between any two.—**Complete series.** Same as *complete* ★*set*.—**Condensed series.** Same as *condensed* ★*set*.—**Conditionally convergent series**, in *math.*: (*a*) A series which sometimes loses its convergence, or at least changes its value, when the order of its terms is changed. (*b*) A series not absolutely convergent.—**Conemaugh series**, in the Carboniferous rocks of Pennsylvania, the Barren measures which lie between the lower and upper productive measures.—**Connected series.** Same as *connected* ★*set*.—**Continuous series**, in *math.*, a dense series satisfying Dedekind's postulate.—**Coosa series**, a series of limestones and shales in Alabama (named from Coosa county), portions of which have afforded fossils of Lower Cambrian age.—**Countable series.** Same as *denumerable* ★*series*.—**Coutchiching series**, a series of schists in the archæan area near Rainy Lake, on the border of Ontario and Minnesota. The name was applied by A. C. Lawson. *Geol. Surv. Canada*, 1890–91, I. Rep. G, p. 39.—**Dalradian series**, a local term, proposed in 1891, by Sir A. Geikie, for an important series of metamorphic rocks in central, southern, and eastern Scotland. The series includes many kinds of schists, graywackes, quartzites, and limestones, altered sedimentary strata whose exact stratigraphic position is not fully determined. Both Cambrian and Precambrian strata are represented, with possibly even later sediments. The name is from the Celtic region of Dalriada, where these rocks are well developed. *Geikie*, Text-book of Geol., p. 893.—**Denumerable series**, in *math.*, a series whose elements form a denumerable set. See *denumerable* ★*set*.—**Discrete series**, in *math.*, any simply ordered set or class which satisfies Dedekind's postulate, and of which every element, unless it be the last, has an immediate successor, and every element, unless it be the first, has an immediate predecessor.—**Dogger series.** See *dogger*^{2}.—**Dunkard series**, a division of the Carboniferous series in the Appalachian region, essentially equivalent to the Upper Barren measures and constituting the latest phase of Paleozoic sedimentation in this region. By some writers the flora of these rocks is regarded as indicating Permian age.—**Elk River series**, a subdivision of the Upper Carboniferous of the Appalachian region in North America. It is also known as the Barren measures or Conemaugh series, and attains a thickness of 800 feet. It is underlain by the lower coal-bearing or productive measures and followed by the upper productive measures. It contains some valuable coal-seams and in some of the limestones *Productus longispinus* and *P. semireticulatus*.—**Estuarine series**, a subdivision of the Jurassic system in the vicinity of Yorkshire, England. It is regarded by British geologists as equivalent to a part of the Inferior Oölite or Bajocian. It consists of three different series of estuarine beds, the lower and middle of which are separated by the Millepore bed, the middle and upper by the Scarborough or Gray limestone series. Their combined thickness is 600 feet. It is underlain by the Dogger and overlain by the Cornbrash. It is characterized by a terrestrial flora consisting of ferns, cycads, gingkos, and conifers.—**Farrington series**, a division of the Carboniferous series in Bristol and Somerset, England.—**Floridian series.** See ★*Floridian*.—**Fundamental series.** Same as *fundamental* ★*set*.—**Gaspé series**, a term applied by the Canadian geologist Logan to a series of limestones and sandstones on the peninsula of Gaspé, having a thickness estimated to be not less than 10,000 feet. The lower part of the series was termed the Gaspé limestones and the upper part the Gaspé sandstones, and the former were regarded as equivalent to Upper Silurian strata, the latter to Devonian. It is now known that both limestones and sandstones are of Devonian age, and they have been more precisely designated, in order of age from below up, the

St. Alban, Bon Ami, and Grande Grève limestones and the Gaspé sandstones. The limestone beds are profuse in fossils, the sandstones less so, but the composition of the latter indicates deposit in a coastal lagoon with an occasional inrush of ocean waters carrying marine fossils. —**Grenville series,** a series of quartzites, slates, schists, and gneisses, together with igneous intrusives, of the original Laurentian area of Ontario, Canada. This is regarded as the equivalent of the Hastings series and as older than the original Huronian of Lake Huron. The clastics are considered by the Canadian geologists the oldest sediments of the geologic column.—**Gympie series,** a subdivision of the Permo-Carboniferous system in Queensland, lying at the base of the system and overlain by the Star formation. It is said to reach sometimes more than 20,000 feet in thickness and contains many plants and marine fossils.—**Harmonic line-series,** in *phys.*, a series of lines in the spectrum of an element arranged in a regular order of distances which is found to be accurately represented by a simple mathematical formula. See ★*convergence frequency* and *spectral* ★*series.*—**Hawkesbury series,** a group of terrestrial sandstones and shales in New South Wales, regarded as of Triassic age.—**Hokkaido series,** a subdivision of the Cretaceous system in Japan, correlated with the Middle and Upper divisions of Europe.—**Homologous series.** See *homologous* (*c*).—**Horton series,** a subdivision of the Carboniferous system in Nova Scotia and New Brunswick. It is referred to the Lower Subcarboniferous and is underlain by Devonian rocks and overlain by the Windsor series. It contains numerous plant remains (erect trees) and fishes.—**Huggins series,** in *phys.*, the long well-known series of lines in the spectrum of hydrogen (of which the red C line is the beginning), shown by the photographs of Huggins to extend far into the ultra-violet in the spectra of stars belonging to Secchi's class I: in contradistinction to the second series discovered by Pickering in the spectrum of ζ Puppis and a few other stars.—**In multiple series,** in *elect.*, connected in a series of multiple groups, as when 12 cells of a battery are arranged in four groups of three cells each placed in multiple, and the groups are connected in series.—**In series.** See *series* ★*circuit.*—**Integral series,** in *math.*, a series of ascending successive positive integral powers of a variable, as

$$a_0 + a_1x + a_2x^2 + \ldots.$$

—**Isologous series.** See *isologous.*—**James River series,** a subdivision of the Cretaceous system in eastern North America, which forms the lowest part of the Potomac series and is followed by the Rappahannock beds. By some American geologists it is now correlated with the Upper Jurassic system.—**Kakanui series,** a subdivision of the Upper Silurian system in New Zealand. It belongs to the Beaton River series, which forms the upper part of the Takaka system.—**Keele series,** the highest subdivision of the Carboniferous rocks in North Staffordshire, England, overlying the Newcastle-under-Lyme group.—**Kootanay series,** a subdivision of the Cretaceous system in the Rocky Mountain region of northwestern America. It forms there the base of the Cretaceous system, and is overlain by the Intermediate series and correlated with the Lower Cretaceous by Canadian geologists. It is characterized by plant remains, lacking angiosperms, and consists of fresh-water deposits.—**Magellanian series,** a series of Tertiary deposits lying unconformably upon the Cretaceous rocks of Patagonia. They are regarded by Scott as of late Eocene or early Oligocene age.—**Maplewell series,** a division of supposed Precambrian rocks in the Malvern Hills of England, lying between the Blackwood and the Brand series.—**Mataura series,** the uppermost division of the Jurassic rocks of New Zealand. It consists of estuarine deposits with terrestrial plant remains, and overlies the Putakaka series, carrying marine fossils.—**Mauch Chunk series,** the upper member of the Lower Carboniferous series in the Appalachian region, consisting chiefly of red shales and sandstones, and overlying the Pocono series.—**Merced series,** a series of Pliocene sediments in California. *Amer. Jour. Sci.*, Jan., 1904, p. 92.—**Method of complete series.** See ★*method.*—**Mona series,** a name given by De la Beche to the crystalline rocks of Anglesey.—**Mount Vernon series,** a division of the Cretaceous Potomac series of the Atlantic border of the United States, which lies above the Rappahannock and below the Aquia Creek divisions. —**Multiple series.** (*a*) In *math.*, a double or higher dimensional series. (*b*) In *elect.* See ★*series-parallel circuit.*—**Newark series,** the Triassic rocks of eastern North America, laid down in long estuaries or lagoons which extend, with interruptions, from Nova Scotia to South Carolina. These deposits consist largely of red sandstones, conglomerates, and black and red shales intercalated with sheets of igneous rocks. In the Connecticut valley they are celebrated for the vast numbers of footprints of labyrinthodonts and probably dinosaurian reptiles, and both there and farther south for their fishes, cycads, ferns, and conifers. In North Carolina these beds have afforded the remains of the oldest American mammal, an insectivorous marsupial, *Dromatotherium sylvestre.* The series carries important coal-beds in Virginia and North Carolina.—**New York series,** the series of sedimentary formations of Paleozoic age which occur in the State of New York, or the subdivision and classification of that series as proposed by the original State geologists (1836–43). It was the purpose of these geologists (Mather, Emmons, Vanuxem, Conrad, and Hall) to institute a series of stratigraphic units of approximately equal value; they also made use of assemblages of these units, termed by some of them 'groups,' by others 'divisions.' These were four in number, namely (beginning at the bottom of the entire series), Champlain, Ontario, Helderberg, Erie; a fifth, Catskill, was employed by Mather. The gradual encroachment of the English standard divisions of the Paleozoic rocks eventually displaced these terms, but they are now in revived favor, since experience has shown that they meet the actual conditions more satisfactorily than the European terms. The unit terms of the New York series were wholly stratigraphic, and the geologists did not contemplate any uniform minor grouping of these units. Such a grouping, however, gradually came into general use, and thereby the unit terms were in several instances duplicated. Thus the term 'Niagara' came to be employed not only as a unit term, 'Niagara limestone,' but also as 'Niagara group,' including the Medina sandstone, Clinton limestone and shale, and the Niagara shale and limestone. The terms Trenton, Onondaga, Hamilton, and Chemung were similarly expanded. The terms of the New York series became of general application wherever Paleozoic rocks were studied in America, and the series has served as a standard of reference. Its present accepted form, which conserves all the original local stratigraphic terms and expresses the most practicable grouping of those terms, is as follows:

ERA OR SYSTEM.		PERIOD OR GROUP.	AGE OR STAGE.
Carbonic		Neocarbonic	Olean conglomerate
		Paleocarbonic	Knapp beds Oswayo beds (Panama conglomerate) Cattaraugus beds (incl. Wolf Creek conglomerate)
Devonic	Neodevonic	Chautauquan	Chemung beds (Catskill sandstone local facies)
		Senecan	Portage beds (Naples beds, Ithaca beds, Oneonta beds, local facies) Genesee shale Tully limestone
	Mesodevonic	Erian	Hamilton beds Marcellus shale
		Ulsterian	Onondaga limestone Schoharie grit Esopus grit
	Paleodevonic	Oriskanian	Oriskany beds
		Helderbergian	Port Ewen limestone Becraft limestone New Scotland beds Coeymans limestone
Ontaric or Siluric		Cayugan (Neontaric)	Manlius limestone Rondout waterlime Cobleskill limestone Salina beds (Shawangunk grit)
		Niagaran (Mesontaric)	Guelph dolomite Lockport dolomite Rochester shale Clinton beds
		Oswegan (Paleontaric)	Medina sandstone (Oneida conglomerate)
Champlainic (Lower Siluric or Ordovicic)		Cincinnatian (Neochamplainic)	Richmond beds (Ohio and Indiana) Lorraine beds Utica shale
		Mohawkian (Mesochamplainic)	Trenton limestone Black river limestone Lowville limestone
		Canadian (Paleochamplainic)	Chazy limestone Beekmantown limestone
Cambric or Taconic		Saratogan	Greenfield limestone Potsdam sandstone
		Georgian	Schaghticoke shale Georgia slates Stissing quartzite

Normal series. Same as ★*Cantorian series.*—**Oreti series,** a subdivision of the Triassic system in New Zealand, lying at the base and overlain by the Wairoa series. —**Oscillating series,** a series the value of which is different when we agree to take always an even, from what it is when we take always an odd number of terms, for example, $1 - 1 + 1 - 1 + \ldots$.—**Ozark series,** a term applied by Broadhead to a series of dolomites and sandstones in the Ozark Mountains of Missouri, partly of Cambrian and, in the upper part, of Lower Silurian age.—**Paniselian series,** a series of sparsely fossiliferous, coarse, glauconitic sands typically exposed at Mont Panisel, near Mono, Belgium, and forming the top member of the Belgian Lower Eocene. It lies between the Ypresian below and the Bruxellian beds above.—**Paradoxidian series.** Same as *Paradoxidian* ★*group.*—**Parallel series,** in *elect.* See ★*series-parallel circuit.*—**Pareora series,** a term applied by Hutton to the Miocene beds of New Zealand, comprising sandstones, clays, and limestones. Their invertebrate fauna is remarkable by reason of the large size of many of the pelecypods and gastropods, giving it a tropical expression. The upper part of the series, which consists of shales and lignites, contains a tropical fossil flora.—**Partial series.** Same as *partial* ★*set.*—**Patoot series,** the Upper Cretaceous beds of Greenland, which lie above the Atana group of Middle Cretaceous age, and are probably equivalent to the Montana group of the western United States and British Columbia. The fossil contents comprise marine invertebrates and plants, the latter exhibiting Tertiary affinities and comprising such genera as indicate a warm temperate climate for that region during late Cretaceous time.—**Perfect series.** Same as *perfect* ★*set.*—**Pocono series,** the basal member of the Lower Carboniferous system of Pennsylvania and the western slope of the Appalachians as far south as Alabama. It lies between Upper Devonian beds of Chemung age below and the Mauch Chunk formation above, and consists of sandstones, shales, and conglomerates, which aggregate 1,000 feet in thickness. The deposits are mostly of estuarine and terrestrial origin, with some thin intercalated beds which contain marine fossils.—**Potency of a series.** Same as *cardinal* ★*number of a series.*—**Pueyrredon series,** a series of greensands, conglomerates, sands, and clays, 800 feet thick, forming the lower part of the Cretaceous system of western Patagonia. The lower beds contain *Exogyra;* the upper, or Belgrano beds of sandstones and clays, contain an abundant molluscan fauna of Middle Cretaceous age. The Pueyrredon series lies upon black Jurassic shales and is overlain by the San Martin series of Upper Cretaceous age.—**Puget series,** a series of sandstones, shales, and coal-beds, underlying the Tejon group in the State of Washington, and containing molluscan and plant remains of Eocene Tertiary age. —**Putakaka series,** a group of marls, sandstones, and conglomerates, with irregular beds of coal, in New Zealand, containing marine invertebrate and plant fossils of Jurassic age.—**Rappahannock series,** a division of the Potomac series or Lower Cretaceous of the eastern coast belt of the United States, being the second division from the base, lying above the James River and below the Mount Vernon divisions.—**Regular series,** in *math.*, a series in which, after some term, the difference of terms (successive or not) becomes less than any assigned value however small.—**St. Marys River series,** in *geol.*, a series of Cretaceous strata in British North America which has been referred to the age of the Lower Laramie beds.—**Scarborough series,** in *geol.*, a subdivision of the Inferior Oölite or Bajocian rocks of Yorkshire, England.—**Series circuit, coil.** See ★*circuit,* ★*coil*^{1}.—**Series machine.** Same as *series dynamo.* See *electric machine.* —**Series-multiple circuit.** See ★*series-parallel circuit.*—**Series of Titius.** See the extract.

> In the first place, the planets known for ages — Mercury, Venus, Earth, Mars, Jupiter, and Saturn — are so arranged that the interval between any two consecutive orbits, passing from within outward, almost exactly doubles. This phenomenon was first emphasized by Titius, professor at the University of Wittenberg, and is consequently known as the "*Series of Titius.*" However, between the orbits of Mars and Jupiter the distance was so great that at this point a member of the *Series of Titius* was wanting. Indeed, Kepler, in his "Mysterium Cosmographicum" of 1596, had introduced at this gap a regular body as the symbol of an undiscovered planet. When Herschel (1781) discovered Uranus beyond Saturn, it came to light that this planet also continued with exactness the *Series of Titius* outwardly.
>
> *Sci. Amer. Sup.*, Jan. 25, 1908, p. 62.

Series-parallel circuit, an arrangement of a battery set of generators or the like in which the cells or units are divided into two or more equal groups, the members of each group being connected in series and the groups in multiple with each other. Also *series-multiple circuit.*—**Shasta-Chico series,** a division of the Cretaceous system in California, divided, in ascending order, into the Knoxville, Horsetown, and Chico beds.—**Simple series,** in *math.*, a series of one dimension.—**Solutrian series,** a term which has been applied to certain postglacial deposits in France containing paleolithic human implements, based upon their relative finish of workmanship. The Solutrian deposits take their name from Solutré in Burgundy. The flints found in them have been more deftly worked than those of ★Mousterian, ★Acheulian, and ★Chellean deposits (see these terms), but are not as highly finished as those of the Magdalenian. This classification is entirely independent of evidence of superposition of deposits.—**Spectral series,** in *phys.*, a group or series of lines in the spectrum the wave-lengths of which are related in some definite and systematic manner such that the position of one of them being given that of the others may be computed. —**Stockdale series,** the lowest division of the Silurian in Westmoreland and Cumberland, England, equivalent to the Llandovery group and subdivided into a series of graptolitic zones.—**Tejon series,** the upper member of the Eocene Tertiary on the Pacific coast.—**Transitional series,** in *paleon.*, an evolutional series of genetically related varietal forms which present gradual mutation from one species to another through successive geological horizons.—**Uitenhage series,** a formation in South Africa, regarded as of Lower Cretaceous age and having some plant species identical with those of the Rajmahal series of eastern India, which is accounted of late Jurassic age. The Uitenhage beds are regarded as indicating the continued existence of the belt of emerged land between India and South Africa beyond Jurassic and into Cretaceous time.—**Ultrabasic series,** those igneous rocks which contain less than the normal percentages of silica of the basic rocks, that is, rocks below 40 per cent. *Geikie,* Text-book of Geol., p. 240.—**Unartok series,** Eocene beds on the shore of Disko Island, Greenland, from which a considerable series of plants (*Laurus, Juglans, Magnolia, Quercus, Sequoia*) has been described by Heer. —**Unconditionally convergent series,** in *math.*: (*a*) A series which is convergent and has the same value, whatever the order of its terms. (*b*) Same as *absolutely convergent* ★*series.*—**Waihao series,** a division of the Upper Silurian rocks in New Zealand.—**Wairoa series,** a division of the Triassic system in New Zealand, lying above the Oreti and below the Otapiri series.—**Wanaka series,** a lower division of the Takaka system or Silurian of New Zealand.—**Well-ordered series.** Same as *well-ordered set.* See ★*well-ordered,* 2.—**White River series,** an extensive series of fresh-water Miocene Tertiary beds which cover large areas in Colorado, Nebraska, and the Dakotas, and extend into the Northwest Territories of Canada. These beds have a thickness of about 800 feet and have been subdivided, on the basis of the fossils they carry, into the *Protoceras, Oreodon,* and *Titanotherium* beds, all of which are profuse in mammalian remains.

series-connected (sē′rēz-ko̤-nek″ted), *p. a.* In *elect.*, said of a battery or group of generators connected positive terminal of the first to negative terminal of the second, and so on, so that the electromotive force of the group is the sum of the electromotive forces of the units and the resistance of the group is the sum of their resistances. *Steinmetz,* Elect. Engineering, p. 107.

series-dynamo (sē′rēz-dī″na̤-mō), *n.* In *elect.*, a machine the field coils of which are in series with the armature circuit.

series-generator (sē′rēz-jen″e̤-rā-to̤r), *n.* See ★*series-dynamo.*

series-motor (sē′rēz-mō″tô̤r), *n.* See ★*series-dynamo.*

series-transformer (sē′rēz-trȧns-fôr″mėr), *n.* See ★*transformer.*

series-turn (sē′rēz-tėrn), *n.* Any one of the ampere-turns in the series-windings of the field coils of an electric generator or motor.

serific (se-rif′ik), *a.* [Irreg. ‹ L. *seri*(*cum*), silk, + *-ficus*, ‹ *facere*, make.] Pertaining to the making of silk threads; having the function of making silk threads: as, the *serific* glands of a silkworm.

serigraph (ser′i-grȧf), *n.* [Irreg. ‹ L. *seri*(*cum*), silk, + Gr. *γράφειν*, write.] An instrument for testing the uniformity of raw silk.

serimeter (se-rim′e-tėr), *n.* [Irreg. ‹ L. *seri*(*cum*), silk, + Gr. *μέτρον*, measure.] An instrument for testing the tensile strength of silk thread.

serinda, *n.* See ★*sarinda.*

serine (ser′in), *n.* [L. *ser*(*icum*), silk, + *-ine*^{2}.] A colorless compound, $HOCH_2$-$CH(NH_2)COOH$, prepared by the action of dilute sulphuric acid on sericin. It forms monoclinic crystals, and is also called *a-amino-hydracrylic* acid.

serio-comic, *a.* **II.** *n.* A professional singer of serio-comic songs; one who performs serio-comic rôles.

Seriphus (ser′i-fus), *n.* [NL., ‹ Gr. *σέριφος*, a kind of locust, also a kind of wormwood.] A genus of sciænoid fishes known from one species found in the eastern Pacific.

sermonoid (sėr′mon-oid), *n.* [*sermon* + *-oid.*] Something resembling a sermon. [Nonce-word.]

> A sarcasm is converted into a *sermonoid.*
> *E. A. Poe*, Marginalia, v.

sermonology (sėr-mo-nol′ō-ji), *n.* [*sermon* + *-ology.*] The art of sermon-writing and preaching; sermons and their delivery; homiletics. [Rare.]

> Few liberal-minded preachers would not prize the opportunity of investigating . . . the *sermonology* of ancient and medieval as well as of modern times.
> *Kidder*, Homiletics, iii.

sernamby (sėr′nam-bi), *n.* [Perhaps based on *Serinhem*, *Serenhem*, a name of Pernambuco.] A coarse form of Para rubber obtained from latex which has coagulated before it could be smoked in the usual manner or which has been scraped from the collecting vessels. See *Para rubber*, under ★*rubber.*

serocolitis (sē″rō-kō-lī′tis), *n.* [NL., ‹ L. *serum*, serum, + Gr. *κόλον*, colon, + *-itis.*] Inflammation of the peritoneum covering the colon.

serocyst (sē′rō-sist), *n.* [L. *serum*, serum, + Gr. *κύστις*, bladder.] A tumor, as of the breast, which contains one or more cysts: possibly a dilatation of lactiferous ducts.

serocystic (sē-rō-sis′tik), *a.* [*serocyst* + *-ic.*] Relating to, or of the nature of, a serocyst.

serodiagnosis (sē-rō-dī-ag-nō′sis), *n.* [NL., ‹ L. *serum*, serum, + Gr. *διάγνωσις*, diagnosis.] Same as *serum* ★*diagnosis.* *Nature*, May 1, 1902, p. 16.

seroenteritis (sē-rō-en-te-rī′tis), *n.* [NL., ‹ L. *serum*, serum, + Gr. *ἔντερον*, intestine, + *-itis.*] Inflammation of the peritoneal coat of the intestine.

serohemorrhagic (sē-rō-hem-o-raj′ik), *a.* [L. *serum*, serum, + E. *hemorrhage* + *-ic.*] Marked by an exudation of serum and blood. *Bowhill*, Manual of Bacteriological Technique, p. 149.

serohepatitis (sē-rō-hep-a-tī′tis), *n.* [NL., ‹ L. *serum*, serum, + Gr. *ἧπαρ* (*ἡπατ-*), liver, + *-itis.*] Inflammation of the peritoneum which covers the liver.

serolemma (sē-rō-lem′ä), *n.* [NL., ‹ L. *serum*, serum, + Gr. *λέμμα*, a scale.] In *embryol.*, the outer or serous cell-layer of the amnion in vertebrates.

serolin (sē′rō-lin), *n.* [L. *serum*, serum, + *-ol* + *-in*^{2}.] **1.** Same as ★*stercorin.*—**2.** A term formerly applied to a mixture of fats contained in dried blood-serum.

serology (sē-rol′ō-ji), *n.* [NL. *serum* + *-ology.*] The scientific study or medical use of sera. See ★*serumtherapy* and ★*immunity*, 5.

seromucous (sē-rō-mū′kus), *a.* [L. *serum*, serum, + *mucus*, mucous, + *-ous.*] Composed partly of serum and partly of mucus.

seromuscular (sē-rō-mus′kū-lär), *a.* [L. *serum*, serum, + *musculus*, muscle, + *-ar*^{3}.] Relating to both serous and muscular coats of the intestine. *Med. Record*, Jan. 17, 1903, p. 112.

seroot (se-röt′), *n.* [African.] Same as ★*seroot-fly.*

seroot-fly (se-röt′flī), *n.* A very bloodthirsty tabanid fly, of the genus *Pangonia*, inhabiting the upper Nile region in Africa. *Cambridge Nat. Hist.*, VI. 482.

seroplastic (sē-rō-plas′tik), *a.* [L. *serum*, serum, + Gr. *πλαστός*, formed, + *-ic.*] Same as *serofibrinous.* *Buck*, Med. Handbook, III. 64.

seropuriform (sē-rō-pū′ri-fôrm), *a.* [L. *serum*, serum, + *pus* (*pur-*), pus, + *forma*, form.] Same as *seropurulent.*

seropus (sē′rō-pus), *n.* [L. *serum*, serum, + *pus*, pus.] Serum which contains an admixture of pus.

serosa (sē-rō′sä), *n.* [NL. (sc. *membrana*). See *serous.*] A serous membrane.

> The outer of these two membranes, that which arises from the outer leaf or layer of the amnion-fold, is the *serosa.* *A. S. Packard*, Text-book of Entom., p. 532.

Serosa mucin, a mucinous substance found in exudates of inflammatory origin or associated with new growths: precipitated with acetic acid.

serosanguineous (sē″rō-sang-gwin′ē-us), *a.* [L. *serum*, serum, + *sanguis* (*sanguin-*), blood, + *-eous.*] Composed of serum with an admixture of blood. *Buck*, Med. Handbook, I. 705.

serose^2 (sē′rōs), *n.* [*serum* + *-ose.*] An albumose derived from serum-albumin. *Simon*, Physiol. Chem., p. 178.

serositis (sē-rō-sī′tis), *n.* [NL., ‹ L. *serosus*, serous, + *-itis.*] Inflammation of a serous membrane. *Buck*, Med. Handbook, III. 78.

serosynovitis (sē-rō-sin-ō-vī′tis), *n.* [NL., ‹ L. *serum*, serum, + NL. *synovia* + *-itis.*] Inflammation of the synovial membrane accompanied by an effusion of watery fluid into the joint.

serotherapeutic (sē-rō-ther-a-pū′tik), *a.* [L. *serum*, serum, + E. *therapeutic.*] Relating to the treatment of disease by specific sera. *Encyc. Brit.*, XXX. 486.

serotherapeutical (sē-rō-ther-a-pū′ti-kal), *a.* Same as ★*serotherapeutic.*

serotherapist (sē-rō-ther′a-pist), *n.* [*sero-therap*(*y*) + *-ist.*] One who makes use of serumtherapy in combating disease.

serotherapy (sē-rō-ther′a-pi), *n.* [L. *serum*, serum, + Gr. *θεραπεία*, medical treatment.] Same as ★*serumtherapy.* *P. E. M. Berthelot*, in Smithsonian Rep., 1898, p. 696.

serotinal (ser-ō-tī′nal), *a.* [*serotina* + *-al*^{1}.] **1.** Relating to the decidua serotina. *Buck*, Med. Handbook, III. 384.—**2.** [*serotine*, late, + *-al*^{1}. See *serotine.*] See the extract.

> Estival, June 1 to about July 7—twenty-one species *serotinal*, July 7 to about August 7—thirteen species; autumnal, August 7 to about September 21—twenty-two species. The prairie elements show a marked grouping into layers which correspond with the floral aspects. Overtopped by the autumnal, the sublayers are successively those of the *serotinal*, estival, vernal and prevernal.
> *Science*, Feb. 7, 1908, p. 207.

Serous apoplexy, sac. See ★*apoplexy*, ★*sac*^{2}.—**Serous cyst.** Same as *hygroma.*—**Serous gland.** See ★*gland.*

serow (se-rō′), *n.* [Native name.] A name for the goat-antelopes of Asia, forming the genus *Nemorhædus*: specifically applied to *N. bubalinus* of the Himalayas. This is about the size of a goat, has small, round horns, curving backward, and a coat of coarse, long, gray hair. One species, *N. crispus*, occurs in Japan.

> This somewhat isolated ruminant has its nearest allies in the genus Nemorhædus, of the mountains of Asia, which occurs in Japan (N. crispus), but of which the best-known form is commonly designated the "*serow*" by the sportsmen of the Himalayas.
> *Geog. Jour.* (R. G. S.), IX. 71.

serpentarin (sėr-pen′ta-rin), *n.* [*Serpentaria* + *-in*^{2}.] A poisonous compound contained in Virginia and Texas snakeroot, *Aristolochia Serpentaria.* It is said to be identical with clematin from *Aristolochia Clematitis* and is also called *aristolochine.*

serpentarium (sėr-pen-tā′ri-um), *n.* [NL., ‹ L. *serpen*(*t-*)*s*, a serpent, + *-arium.* See *serpent.*] A place where serpents are confined for safety or for exhibition. [Rare.]

serpentary, *n.*—**English serpentary,** the bistort, *Polygonum Bistorta.* Also called *snakeweed.*

serpent-column (sėr′pent-kol″um), *n.* A twisted bronze column which stands on the site of the ancient Hippodrome at Constantinople. It was erected at Delphi in 479 B.C. to support a gold tripod. It was removed to Constantinople by Constantine in 330 A.D. The column is composed of three snakes intertwined. The heads have been broken away, but it still retains the inscription commemorative of the Hellenic states which took part in the second Persian war. *C. T. Newton*, Travels in the Levant, II. 25.

serpent-head (sėr′pent-hed), *n.* A common name of fishes belonging to the family *Ophiocephalidæ*, found in fresh waters of Asia and Africa.

Serpentian (sėr-pen′shian), *n.* Same as *Serpentinian.*

Serpentid (sėr′pen-tid), *n.* [*Serpent* + *-id*^{2}.] A meteor belonging to a flock which has its radiant in the constellation Serpens.

> In April many fine meteors diverge from Virgo and Libra, while in May there are *Serpentids*, Scorpiids, and Ophiuchids. *Nature*, April 14, 1904, p. 571.

serpentine, *n.* **5.** In *math.*: (*a*) The surface generated by a sphere whose center travels along a helix. (*b*) A special curve of the third order. *Newton.*

serpent-kame (sėr′pent-kām), *n.* An elongate curving ridge of roughly stratified sands and gravels, supposed to mark the course of a subglacial stream. See *eskar.* *Dana*, Manual of Geol. (4th ed.), p. 971.

Serpent-kame.

serpent-ulcer (sėr′pent-ul″sėr), *n.* A serpiginous ulcer; one which travels over the surface by healing on one side as it involves new tissues on the other.

serpyllum (sėr-pil′um), *n.* [L. *serpyllum*, *serpillum*, thyme.] Same as *serpolet.*

serra, *n.* **2.** [Sp.] A fish, *Alepisaurus serra*, of the family *Alepisauridæ*, known from the coast of California. The type specimen, which was four feet long and weighed seven pounds, was discovered at Monterey in 1859. *Jordan and Evermann*, Fishes of North and Middle Amer., p. 597.

Serranellus (ser-a-nel′us), *n.* [NL., ‹ *Serranus* + dim. *-ellus.*] A genus of serranoid fishes of Europe, typified by the common *Serranellus scriba.*

serranid (ser′a-nid), *n.* Any fish of the family *Serranidæ* or sea-bass.

serranine (ser′a-nin), *n.* A trade-name of a Swedish explosive which resembles dualin and sebastine.

serrate (ser′āt), *v. t.*; pret. and pp. *serrated*, ppr. *serrating.* [*serrate*, *a.*] To render serrate; notch like a saw.

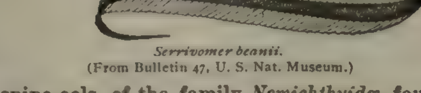
> Under a sheltering headland the lateral waves which run before the wind are small, and only serve to *serrate* the crest of the wave which comes from the offing.
> *Geog. Jour.* (R. G. S.), XI. 539.

serratiform (se-rat′i-fôrm), *a.* [*serrate* + *-form.*] Having a serrate, notched, or toothed form or appearance; serrate. [Rare.]

serre-fine (sãr-fēn′), *n.* [F., ‹ *serrer*, close, + *fine*, a fine (blood-vessel).] A small spring-forceps of spiral wire, used for closing a wounded blood-vessel during an operation.

serre-nœud (sãr-nė′), *n.* [F., ‹ *serrer*, close, + *nœud*, knot.] An instrument for tightening a ligature used in snaring off a tumor.

Serrivomer (ser-i-vō′mėr), *n.* [NL., ‹ L. *serra*, saw, + *vomer*, plowshare.] A genus of snipe-eels, of the family *Nemichthyidæ*, found in the deep sea off both coasts of North America.



Serrivomer beanii.
(From Bulletin 47, U. S. Nat. Museum.)

sertulum (sėr′tụ̄-lum), *n.*; pl. *sertula* (-lạ̈). [Dim. of L. *sertum*; in plural, a garland.] In *bot.*, (*a*) An umbel. [Obsolete.] (*b*) A selection of plants scientifically treated.

sertum (sėr′tum), *n.*; pl. *serta* (-ạ̈). [L.; in plural, a wreath or garland.] In *bot.*, an account of, or report upon, a collection of plants.

serum, *n.* 4. The blood-serum of an animal which has been rendered immune against some disease by injections of increasing quantities of the micro-organism of such disease; antitoxin. See *serum* ★*diagnosis* and ★*immunity*, 5.—**Anticholera serum, antiplague serum.** See *Haffkine's* ★*serum*.—**Antistaphylococcus serum,** a serum supposed to be curative of staphylococcus infections.—**Antistreptococcus serum.** Same as *streptococcus* ★*serum*.—**Artificial serum,** a solution of certain salts, chiefly chlorid of sodium, in the proportions existing in the blood, used in cases of shock, blood-poisoning, etc., by intravenous injection or hypodermoclysis.—**Blondel's serum,** the serum of fresh milk, obtained by filtration after coagulation and neutralization. Its action depends upon the presence of oxidases.—**Blood-serum.** See *serum*, 2. It is the liquid portion of the blood after coagulation has occurred—a yellowish liquid which differs from the blood-plasma in the absence of fibrinogen. The latter has been decomposed during the process of coagulation with the formation of fibrin and a small amount of fibrinoglobulin. The term 'blood-serum' is sometimes though incorrectly used synonymously with 'blood-plasma,' or to designate the liquid portion of the blood in contradistinction to the corpuscular elements.—**Calmette's serum,** an antiserum against certain kinds of snake-poison.—**Dunbar's serum,** an antiserum directed against the toxic action of the pollen of certain plants, as *Gramineæ*, *Solidago*, *Ambrosia*, etc., which is thought to be the cause of hay-fever.—**Haffkine's serum,** either of two different sera which bear Haffkine's name. The one is directed against cholera and hence is known as *Haffkine's cholera serum*; the other is directed against plague, and is known as *Haffkine's antiplague serum*.—**Immune serum.** See ★*immune*.—**Löffler's serum,** a 'bacteriological culture medium containing solidified blood-serum, used in the cultivation of certain bacteria, such as the diphtheria bacillus.—**Maragliano's serum,** an antituberculosis serum.—**Marmorek's serum,** an antistreptococcus serum; a serum intended to combat infection with streptococci.—**Motile serum,** an immune serum which contains flagellar agglutinins.—**Non-motile serum,** an antiserum which contains somatic agglutinins, in contradistinction to a serum which has been obtained with motile organisms and hence contains also flagellar agglutinins.—**Normal serum,** specifically in *serology*, an antiserum one tenth of a cubic centimeter of which will neutralize ten times the minimum fatal dose of a given toxin.—**Polyvalent serum,** an immune serum which contains antibodies directed against more than one immunizing agent. Marmorek's antistreptococcus serum is a polyvalent serum, resulting on immunization with several varieties of streptococci.—**Serum diagnosis.** See ★*diagnosis*.—**Streptococcus serum,** an antiserum to the action of streptococci.—**Yeast serum,** the serum of animals which have been treated with increasing doses of yeast in their food: suggested for the treatment of various infectious diseases.—**Yersin-Roux serum.** (*a*) An antiplague serum. (*b*) An antidiphtheritic serum.

serum-agar (sē′rum-ā″gạ̈r), *n.* A medium for growing certain bacteria, composed of blood-serum and agar.

serumal (sē′rum-ạl), *a.* [Irreg. < *serum* + *-al*^{1}.] Relating to or of the nature of serum or of a serum.

serum-identical (sē′rum-ī-den″ti-kạl), *a.* Showing the same behavior toward a given immune serum: applied to related bacteria. [Nonce-word.]

> Further, in discussing the "specific" value of the test, I found that two clearly differentiable vibrios . . . were, so to speak, *serum-identical*, that is, the serum of either affected the other not only by the clumping test, but also by the Pfeiffer bacteriolytic test and the protection afforded to animals.
> *H. E. Durham*, in Jour. Exper. Med., Jan. 15, 1901, [p. 355.

serum-mucoid (sē′rum-mū″koid), *n.* A mucoid which is peculiar to the blood-serum.

serumtherapy (sē-rum-ther′ạ-pi), *n.* The treatment of disease with the serum of animals which have been immunized against the specific organisms, or their products, to which the disease is supposedly referable. See ★*immunity*, 5, and *serum* ★*diagnosis*.

> In spite, however, of the mass of data thus collected in the study of the processes involved in meeting infection and the establishment of cure and immunity, actual advances in *serumtherapy* and biological methods of treatment during this period have not kept pace with theory.
> *Journal Med. Research*, Nov., 1908, p. 323.

serv. An abbreviation (*d*) [*cap.*] of *Servia*.

servage, *n.* 2. In *old Eng.* and *feudal law*, the bringing to his lord's service of other workmen by a tenant in addition to his own service or rent; also, the like bringing of other vassals by a subject to his sovereign or chief.

servant, *n.*—**Assigned servant.** See ★*assigned*.

server, *n.* 3. A male animal, particularly a bull, that copulates with, or serves, the female.

> The bulls of these families are also good *servers* and sure getters. *Rep. Kansas State Board Agr.*, 1901–02, p. 355.

servery (sėr′vẹ-ri), *n.* A service-room; a room from which to serve (something). *N. and Q.*, 8th ser., VIII. 286.

service^1, *n.* **20.** The act of copulation between domesticated animals, especially cattle and horses.

> There is no more important problem for the breeder to consider than that of *service*.
> *Rep. Kansas State Board Agr.*, 1901–02, p. 355.

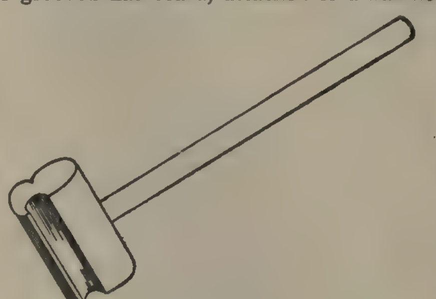
Cut service, in *lawn-tennis*, a service in which the ball is not hit squarely, but in which the racket draws strongly across the ball, so that it curves or bounds very much out of a straight line.—**Distinguished Service Order.** See ★*order*.—**Forest service.** See ★*forest*.—**Long service,** a hawser that has been served for a long distance to protect it from chafe.—**Long-service man,** an enlisted man whose term of service has been a long one.—**Overhand cut service,** in *lawn-tennis*, a cut service made overhand, that is, with the serving hand near or above the height of the shoulder.—**Reclamation Service,** the organization created by the Secretary of the Interior of the United States to carry into effect the Reclamation Act of June 17, 1902, which devoted the proceeds of the disposal of public lands to the construction of irrigation works in 14 Western States and 2 Territories. The expenditure to Jan. 1, 1909, amounted to about $50,000,000.

> All readily available sources of water supply have long since been utilized, and systems for controlling the spring floods and other waters now going to waste in the small streams and rivers must be installed before the irrigated acreage can be greatly extended. Many reservoirs have already been constructed, and several projects of considerable magnitude are now being considered by the *Reclamation Service* of the Federal Government.
> *Dept. Com. and Labor*, Bur. of Census, Bulletin 16, [Irrig. in U. S., 1902, p. 74.

Service by publication, the method of serving process on those who evade service or who are without the jurisdiction. Usually the writ or notice is published in a journal which the court specifies and a copy thereof is mailed to the person's last known address.—**United States Steamboat Inspection Service,** a bureau under the Department of Commerce and Labor, whose duty it is to examine and license all classes of steam-vessels, and certain classes of merchant sailing-vessels, and to grant to eligible masters, mates, pilots, and engineers certificates of competency authorizing them to serve in their respective capacities on board of the class of vessels for which they have received license.

II. *a.* Used ordinarily and every day, as distinguished from use under unusual conditions or in an emergency.—**Service wires,** the wires which connect the lamps, motors, or other apparatus to be supplied, within a building or on the premises of a consumer, with the mains of an electric lighting or power circuit.

service-board (sėr′vis-bōrd), *n.* A small piece of grooved flat board, attached to a handle, used in place of a serving-mallet for winding service stuff on small rope. Also called *serving-board*.



Service-board.

service-court (sėr′vis-kōrt), *n.* In *lawn-tennis*, the space in a tennis-court into which the ball must be struck by the server.

service-pump (sėr′vis-pump), *n.* A pump used every day and continuously for any duty, as distinguished from an emergency-pump.

service-rail (sėr′vis-rāl), *n.* In *railroading*, an ordinary rail in use on a line, as distinguished from the rails in a cross-over switch or crossing. See ★*stock-rail* and ★*adhesion-rail*.

service-stop (sėr′vis-stop), *n.* The gradual stop of a train by use of the train-brake in ordinary circumstances when it is desired to retard the train: distinguished from the emergency-stop, by which the train is brought to rest in the shortest distance and time.

service-tree, *n.* 3. The mountain-ash, either the European, *Sorbus Aucuparia*, or the American, *S. American*, the latter being usually distinguished as the *American service-tree*.—4. Same as *service-berry*, 3.

servigrous (sėr-vig′rus), *a.* Exceedingly or severely vigorous: as, *servigrous* oratory. [Prov., Southern U. S.]

> The Sun . . . employs that expressive provincialism of the Southern mountaineer, "*servigrous*," in describing the manner of oratory used by one of the . . . campaign speakers. . . . The word is of familiar use in the east Tennessee mountains, and has occasionally found its way down in the central basin and western valleys of this State.
> *Nashville Banner*, quoted in the N. Y. Sun, Nov. 1, 1901.

servil, *a.* and *n.* A simplified spelling of *servile*.

serving-stuff (sėr′ving-stuf), *n.* *Naut.*, spunyarn, rope-yarn, round-line, hambroline, etc., but especially the first.

servitial (sėr-vish′ al), *a.* [< L. *serviti(um)* (see *service*) + *-al*^{1}.] Pertaining to a relation of service, such as that between servant and master, child and parent.

servitude, *n.* 7. (*b*) In *civil* and *Scots law*, the subjection of a person or thing to another person or thing. The word is generally used as meaning an easement or real servitude. —**Mixed servitude,** the subjection of persons to things, or vice versa.—**Natural servitude,** a servitude which arises by reason of the natural conditions of the land.—**Real servitude,** in *Scots law*, a charge or burden upon one estate or tenement in favor of another.—**Rural servitude, urban servitude.** See *predial servitude*, under *servitude*.

Servo-Croatian (sėr″vọ-krō-ā′shiạn), *n.* Servian and Croatian considered as practically one Slavic dialect. *Keane*, Ethnology, p. 412.

servo-motor (sėr″vō-mō′tọr), *n.* [F. *servomoteur*, irreg. < L. *servire*, serve, assist, + *motor*, a mover.] A motor whose movements are automatically controlled and follow the motions of a controlling apparatus.

> The regulation of the turbine, which meets even the greatest requirements, is effected in a way similar to the hydraulic turbine of the Swiss company by means of an extremely sensitive spring governor, including a *servomotor*, the entering tension of the steam being altered according to the different loads.
> *Amer. Inventor*, July 15, 1904, p. 315.

sesame-oil, *n.*—**German sesame-oil,** camelina-oil or gold-of-pleasure oil, obtained from the seeds of *Camelina sativa*. See *gold-of-pleasure*.

sesi (sā-sē′), *n.* [Cuban Sp. *sesí*, also *jesí*, from an aboriginal name.] The black-fin snapper, *Lutjanus buccanella*, a common West Indian market-fish, crimson above and silvery beneath. Also called *boucanelle* and *sesi de lo alto* ('sesi of the deep sea').

sesquialter, *n.* **II.** *a.* In *bot.*, same as *sesquialteral* (*b*). Compare ★*hemiologamous*. *Jackson*, Glossary.

sesquicentennial (ses″kwi-sen-ten′i-ạl), *a.* and *n.* [L. *sesqui*, one half more, + E. *centennial*.] **I.** *a.* Relating or pertaining to a period of a century and a half; one-hundred-and-fiftieth: as, a *sesquicentennial* celebration.

II. *n.* A one-hundred-and-fiftieth anniversary.

sesquisulphuret (ses-kwi-sul′fụ̄-ret), *n.* Same as *susquisulphid*.

sesquiterpene (ses-kwi-tėr′pēn), *n.* [*sesqui-* + *terpene*.] The class name applied, in organic chemistry, to hydrocarbons of the formula $C_{15}H_{24}$, possessing a closed-chain structure. The term is derived from the fact that the terpenes have the formula $C_{10}H_{16}$.

sessil, *a.* A simplified spelling of *sessile*.

sessility (se-sil′i-ti), *n.* [*sessile*.] The condition of being sessile. *Amer. Geol.*, April, 1903, p. 204.

sestiad† (ses′ti-ad), *n.* [Irreg. < It. *sesto* (L. *sextus*), sixth (as in *sestina*), + *-iad* (as in *Iliad*, which Chapman translated), for *-ad*^{2} (as in *decad*, etc.). The proper term would be *hexad*.] One of six parts or divisions: applied by Chapman to his divisions, six in number, of Marlowe's (unfinished) narrative poem "Hero and Leander," including the four parts added by himself.

> The arguments of all the *Sestiads* are by Chapman; who when he continued Hero and Leander, divided into the First and Second *Sestiads* that portion of the poem which was written by Marlowe.
> *Dyce*, ed. Marlowe, Works, III. 1, note.

Sestian (ses′ti-ạn), *n.* [*Sesto*, near Florence, Italy, + *-ian*.] In *geol.*, the lowest stage of the Oligocene Tertiary in the northern Apennines of Italy.

sestino (ses-tē′nō), *n.* [It., < *sesto*, sixth, < L. *sextus*, sixth.] A bronze or copper coin struck in the name of Louis XII. of France as king of Naples (1501–1503).

Sesuto (se-sö′tō), *n.* [Basuto.] The language of the Basuto people; one of the Bantu languages of Africa. *Keane*, Ethnology, p. 274.

set^1, *v.* **I.** *trans.* **35.** In *foot-racing*, the order (*set!*) given to the runners by the starter just before firing his pistol.—**36.** In *dominoes*, to put down the first stone; pose.—**Setting-up exercises.** Same as *setting-up* ★*drill*.—**To set across,** to carry or ferry to the opposite side of a river, lake, or the like.—**To set flying.** See ★*flying.*—**To set out.** (*j*) In dressing skins, to smooth or work out flat and even with a machine or by hand. *C. T. Davis*, Manuf. of Leather, p. 214. (*k*) In *printing*, to exhaust (all the available type in a case or in a font).—**To set the watch,** to call out the night watch aboard ship.—**To set up.** (*p*) To erect or put in place with the parts fitted together in correct adjustment and ready for use: said of surveying instruments, steam-engines, etc.

II. *intrans.* **12.** To become attached to a support and, hence, likely to survive and to grow to maturity, as oyster spawn; strike, as spawn. *Stand. Dict.*—**To set out (to),** to undertake (to do something); to make up one's mind (to do something).

> We . . . kerry a hollerday, ef we *set out*,
> Ez stiddily ez though 't wuz a redoubt.
>
> *Lowell*, Biglow Papers 2d ser., vi.

set^{1}, *p. a.* **8.** In *cricket*, likely to make a good score; able to play the bowling: said of a batsman.

set^{1}, *n.* **18.** (*d*) An upsetting tool used as a punch with a hammer to give saw-teeth the desired angle from the plane of the plate or a width greater than the plate where they cut the wood. (*e*) A swage or upsetting tool for forming rivet-heads. Also called a *snap.* (*f*) A steel pin for driving finishing-nails into or below the surface of wood, or in places where the hammer-head cannot reach. (*g*) A form of spanner in which the holder for the nut or bolt-head is made by bending the shank around and back upon itself until the desired figure is formed by the bent stock. (*h*) A piece of hard wood placed on top of a pile to transmit the blows of the falling head when the pile proper has gone so far down that it cannot be struck directly. (*i*) The amount of compression which a spring takes under a load. (*j*) A device like a screw-clamp to hold two parts together until they are fitted or joined.—**27.** In *math.*, a sequence of things simply arranged; a series of terms; an aggregate of points; a manifold; an assemblage.

> Open *sets* and the theory of content: by Dr. W. H. Young. Two definitions of the content of an open *set* are given, and are shown to be in agreement for that class of open *sets* which has the property that the content of the *set*, obtained by adding to any number of the class any *set* of non-overlapping intervals, is equal to the sum of the contents of the component *sets*. This class contains all known open *sets*, and all those obtainable from them by any of the ordinary processes.
>
> *Nature*, Jan. 28, 1904, p. 311.

28. In *phys.*, a change of molecular arrangement or structure, in general of the nature of a strain, which remains after the stress which produced it has been removed. A set which gradually diminishes and finally disappears is called a *temporary set;* one which does not is a *permanent set.*

> Precautions are needed to avoid the influence of *temporary set*, or hysteresis in the resistance of the filament . . . and especially the *permanent set* due to abnormally high voltage. *W. M. Stine*, Photometrical Measurements, p. 191.

29. In *currying*, an uneven place on the flesh side of a hide, caused by careless splitting. [Rare.] *Modern Amer. Tanning*, p. 167.—**30.** A paving-block; also a curbstone. [Rare in the United States.]

> It is paved with *setts*, 6 inches by 3 inches, with a 1-inch gap, and has a regular but fairly rough surface.
>
> *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 348.

> This may be due to the fact that as the wheel travels faster, it has less time to fall into the little holes in the roadway, merely skimming along the tops of the ridges. Well-laid *setts* under these circumstances, even with wide, deep gaps, form a perfectly smooth track at high speeds. In some tests it was even found that the tractive effort was smaller for *setts* than for macadam.
>
> *Elect. World and Engin.*, Nov. 21, 1903, p. 851.

Articles of set. See ★*article.*—**Closed set,** in *math.*, a set every fundamental set in which has a limit in it.—**Coherent sets.** In *math.*, two fundamental sets or series wholly ascending or wholly descending are coherent: (1) if both are ascending, and after any term of either there is always a term of the other; (2) if both are descending, and before any term of either there is always a term of the other; (3) if one is ascending, the other descending, and the one wholly precedes the other, and there is at most one term which is between the two fundamental sets.—**Cohesive set,** in *math.*, a set for any two elements of which, t and t', if ϵ is an arbitrary distance of the kind presented by the set, for ϵ given in advance and as small as we please, there is always a finite number of elements, t_1, t_2, . . . t_n, belonging to the set, such that the distances tt_1, t_1t_2, t_2t_3, . . . t_nt' are all less than ϵ.—**Compact set,** in *math.*, a set having a term between any two.—**Complete set,** in *math.*, those terms, and only those terms, which have the generating relation or its converse to some one term, together with that one term.—**Condensed set,** in *math.*, a set each of the terms of which is a principal term.—**Connected set,** in *math.*, a set such that, given any two of its terms, there is a certain finite number (not necessarily unique) of steps from one term to the next by which we can pass from one of our two terms to the other.—**Content of a closed set of points.** If each point of a closed set of points is inclosed in a small interval of which it is the mid-point, the limit of the sum of the finite number of non-overlapping intervals filled up by these small overlapping intervals, when the lengths of these latter are indefinitely decreased, is the content I_P of the set of points.—**Continuous set.** Same as *continuous* ★*series.*—**Countable set.** Same as *denumerable* ★*set.*—**Countably infinite set,** in *math.*, a set in one-to-one correspondence with the scale of the natural numbers.—**Deduced set.** Given any finite or infinite number of sets of points, that set which contains all the points which belong to every set, and no other points, is the deduced set.—**Dense set,** in *math.*, a set between every two unequal elements of which there is another element.—**Denumerable set,** in *math.*, a set which can be exhibited as a series having a first term and in which every term takes a specifiable place; a set the elements of which can be put into one-to-one correspondence with the elements of a progression.—**Derivative of a set;** in *math.*, the assemblage of all its limiting points (*first derivative*). The first derivative of the first derivative is the second derivative, and so on.—**Derived set.** Same as *derivative of a* ★*set.*—**Equivalent sets,** in *math.*, two sets, A and B, when, and only when, it is possible to set up between the elements of A and those of B a one-to-one correspondence.—**Fundamental set,** of a given series, every progression or regression which belongs to the given series.—**Hanging sets,** in *mining*, timbers to which the cribs are suspended in sinking through soft strata.—**Infinite set,** in *math.*, a set having a proper part equivalent to the whole; a set which can be put into one-to-one correspondence with a proper part of itself.—**Limit of a fundamental set** contained in any one-dimensional set or series, in the case of a progression, a term such that it comes after the whole progression, but every term before the limit comes before some term of the progression.—**Linear set,** in *math.*, a one-dimensional set; a set representable by points on a straight line.—**Multitude of a set.** Same as ★*potency of a set.*—**Normally ordered set.** Same as *well-ordered set.* See ★*well-ordered*, 2.—**Nucleus of a set.** See ★*nucleus.*—**Numerable set.** Same as *denumerable* ★*set.*—**Open set.** (*a*) See *twill* ★*set.* (*b*) In *math.*, a set which is not closed. See extract under ★*set*^{1}, *n.*, 27. (*c*) In *coal-mining*, the unfilled space between pack-walls.—**Ordinal set.** Same as *ordinal* ★*system.*—**Partial set,** in *math.*, a set which is connected but not complete.—**Perfect set,** in *math.*, one which is closed and condensed.—**Permanent set,** in *phys.*, a strain which lasts indefinitely after the release from stress. See ★*set*^{1}, *n.*, 28.—**Potency of a set,** its Cantorian cardinal number. See ★*number.*—**Power of a set.** Same as *potency of a* ★*set.*—**Rib set.** See *twill* ★*set.*—**Set dense in itself.** Same as *condensed* ★*set.*—**Similar sets,** in *math.*, two sets such that there exists a one-to-one relation which couples every element of either with one, and only one, element of the other.—**Simply ordered set,** in *math.*, a set the elements of which have been arranged in an order of succession having the two following properties: (1) of any two elements m_1 and m_2, one, m_1, has the lower, the other, m_2, has the higher rank; (2) if of three elements, m_1, m_2, m_3, the m_1 is of lower rank than m_2, and m_2 of lower rank than m_3, then m_1 also is of lower rank than m_3.—**Spread set,** a bending sidewise of saw-teeth by a swage or set, as distinguished from the up set given to chisel-edge teeth used for cutting with the grain and the spring set given by sidewise bending.—**Spring set,** the bending of the teeth of a saw sidewise to form the kerf-width and prevent cramping of the blade.—**Temporary set,** in *phys.*, a set or strain of any sort which lasts after the removal of stress, but which gradually disappears. See ★*set*^{1}, *n.*, 28.—**Theory of sets,** in *math.*, a fundamental branch of mathematics (assemblage-theory) due, as regards its characteristic concepts and their organization into a distinct body of coherent doctrine, chiefly to Georg Cantor (dating from 1870).—**The smart set,** the ultrafashionable members of fashionable society. [Society slang.]—**Twill set,** one of the three methods of inserting wire into the foundation of card-clothing. The other two methods are called *open set* and *rib set.*—**Upper segment of a set,** in *math.*, all terms greater than μ, if μ is a single term, or greater than a variable term (some term) of μ, if μ is a class of terms all of which are greater than some fixed term of the set, and if μ has no minimum, that is, if every term of μ is greater than some other term of μ.—**Well-ordered set.** See ★*well-ordered*, 2.

seta, *n.*—**Aërostatic setæ,** certain hairs or bristles which occur on the young larvæ of the nun-moth, *Psilura monocha*, and allied bombycids, and of which each bears a small bladder in the middle. They possibly aid the spread of the larvæ by the wind. *Cambridge Nat. Hist.*, VI. 408.

Setarches (sē-tär'kēz), *n.* [NL., < L. *seta*, a bristle, + Gr. ἀρχός, the rectum.] A genus of scorpænoid fishes inhabiting deep water in temperate and warm seas.

set-back, *n.* **5.** Any game in which a failure to score is counted by setting back the player instead of allowing his adversary to add the points to his score: usually restricted to games such as all-fours, in which there is bidding for the trump.

set-copper (set'kop″ėr), *n.* A condition of the copper in the reverberatory process for refining crude copper, when the impurities have been oxidized and the amount of dissolved cuprous oxid has reached a certain point (about 6 per cent.). See the extract.

> In refining copper, the metal is melted down in a reverberatory furnace in a more or less oxidizing atmosphere and then further subjected to an oxidizing smelting in order to eliminate the common impurities, most of which have a stronger affinity for oxygen than has copper. In these operations some of the copper is oxidized to cuprous oxide and dissolved by the metal bath. When the quantity of dissolved cuprous oxide has reached about 6 per cent, the metal is said to have been brought to "*set-copper.*"
>
> *Electrochem. Industry*, March, 1904, p. 87.

set-down^{2} (set'doun), *n.* [*set*^{2} + *down.*] A meal to sit down to (implying luxury). [Slang.]

> He would hardly speak to me, he felt so important, but his main notion of style now is a sumptuous "*set-down*" and a well-filled pipe of "snipe" after it. Even if you should find him dressed in newspapers and a blue necktie he would not mind to-day, provided you caught him tucking away the *set-down.*
>
> *Josiah Flynt*, in McClure's Mag., June, 1901, p. 117.

seter (sē'tėr), *n.* [Also (Shetland and Orkney) *seater, setter, saeter;* Norw. *sæter*, *seter*, Sw. *säter*, Icel. *sætr*, *setr*, mountain pastures, dairy lands.] **1.** A pasture; a meadow; in Scandinavia, a mountain pasture to which the cattle are driven up and where they remain during the summer months.

> A large area of forest and mountain is attached to each farm, and there are usually one or two *sæters* on the mountain, to which the cows are driven for about three months in summer. *Proc. Zool. Soc. London*, 1903, p. 137.

> It is discovered . . . that B— went to pay a door-yard call on O— B—, who lives on the *saeter* where the wind and the bald granite scaurs fight it out together.
>
> *R. Kipling*, in Harper's Mag., May, 1900, p. 867.

2. A wave-cut terrace in solid rock, marking the former position of the strand.

> He believes that these phenomena extended even to the Norwegian coast, and that the strand-lines of the fjords, whether in the form of platforms eroded out of the solid rock (*seter*) or terraces of sediment, mark former levels of lakes that filled these valleys when their mouths were blocked up with the ice-sheet.
>
> *Nature*, June 2, 1904, p. 111.

setfast (set'fȧst), *n.* A boil.

Setigerous sac. See ★*sac*^{2}.

set-line (set'līn), *n.* A fish-line with a baited hook which is set or anchored: often a long line stretched horizontally, from which several shorter lines with baited hooks hang.

set-nut (set'nut), *n.* **1.** A nut screwed home on top of another, to take up any slack in the fitting of the threads and increase the friction of the helical surfaces on each other, so that unscrewing will be less likely or will be prevented; a jam-nut; a safety-nut; a pinching-nut.—**2.** A jam-nut with a radial set-screw made home against the stock of the bolt, so as to lessen the likelihood of the unscrewing of either nut.

seton (sē'ton), *v. i.* [*seton*, *n.*] To pass a tape or strip of linen through the skin to form a fistula; use a seton-needle and seton to obtain counter-irritation, to apply medicaments, and to secure drainage.

> Many plans of prevention have been adopted, such as bleeding, *setoning*, feeding upon diuretics and alteratives, all with the object of keeping down the condition, and thus making the animals less susceptible.
>
> *Yearbook U. S. Dept. Agr.*, 1897, p. 254.

set-screw, *n.* (*c*) Specifically, a screw having a square head, the distance across the flats of the head being equal to the diameter of the screw.

setsicker (set'sik-ėr), *n.* Same as ★*sitfast*, 2.

set-square (set'skwãr), *n.* **1.** In *drafting* or *plotting*, a form of T-square in which the blade can be rotated with respect to the head and can be set at any desired angle by means of a graduated arc: used for laying off parallel lines at any given angle of obliquity with the edge of the drawing-board.

> It obviates the use of the protractor, since the points can be projected with scale, T-square, and *set-square*, and the work can be set out more accurately than with any protractor. *Encyc. Brit.*, XXXIII. 88.

2. A square or right-angled triangle with acute angles of 45° or of 30° and 60°, used where the try-square (in which the stock is thicker than the blade) is not convenient.

sett^{2}, *n.* Same as ★*set*^{1}, *n.*, 30.

setter^{1}, *n.* **5.** A machine for setting out hides. See *to* ★*set out* (*j*). *Modern Amer. Tanning*, p. 113.

setting, *n.* **12.** The temporary station of a portable sawmill, yarding-engine, or other machine used in logging.—**13.** A wash of gum or other suitable material applied to the surface of a pencil or crayon drawing on paper in order to prevent the work of the artist from being rubbed off; a fixative.—**Indian setting,** a mode of setting imperfect gems whereby the normal upper or under surfaces are set face outward and are inclosed in the setting so that the flaws are not visible.—**Setting out.** (*c*) In *arch.*, the practice and art of fixing the exact place for any work to be done, as of a house upon its site, the paths and terraces of a garden, and the like. The term includes the determining of vertical height as well as of the horizontal plan.

setting-hammer (set'ing-ham″ėr), *n.* **1.** A tinsmith's hammer, having a square head and a chisel-shaped peen.—**2.** A light hand-hammer used for swaging the teeth of saws in setting them. It has a special shape to enable one tooth to be hit without striking the next also.

setting-machine, *n.* **2.** A machine for setting leather. See *set*¹, *v. t.*, 33. *Modern Amer. Tanning*, p. 116.

setting-point (set′ing-point), *n.* **1.** The point of adjustment or setting of any mechanism.—**2.** The position of any machine, or part of a machine, in which adjustment is most conveniently made.—**3.** The point or place in a machine where adjustment is arranged for or is designed to take place.

setting-screw (set′ing-skrö), *n.* **1.** A screw by which cams or timing devices may be so adjusted as to do their work as desired.—**2.** A set-screw; a screw by which pulleys or collars are fastened or adjusted on a shaft. The screw passes radially through hub or collar, and bottoms or beds upon the shaft, holding the hub or collar from slipping round or lengthwise. Sometimes the set-screw enters a counterbore made for it in the circumference of the shaft.

settings-in (set-ingz-in′), *n. pl.* Imperfections in velveteens and similar fabrics.

setting-stone (set′ing-stōn), *n.* A stone used in setting leather. See *set*¹, *v. t.*, 33. *C. T. Davis*, Manuf. of Leather, p. 416.

settlement¹, *n.* **10.** In *pathol.*, determinate nosological position.

> Even more set diseases began to lose their *settlements*, and were recognized as terms of series.
>
> *Encyc. Brit.*, XXX. 611.

Church, college settlement. See *social* ★*settlement.*—**Land settlement,** in India, the assessment of the land-tax. The assessor is styled the *settlement officer.* The details vary in different provinces, but in general a settlemen is a decision as to the agricultural capacity of a district and the value of its produce. The result is what is known as a *settlement report,* which records the mass of agricultural statistics and forms a basis for assessment. Often spoken of as *settlement* simply: as, the "*settlement* is preceded by the survey."—**Settlement officer.** See *land* ★*settlement.*—**Settlement report.** See *land* ★*settlement.*—**Social settlement,** a place of residence and varied social activity established by educated men or women in a neglected or unfavored neighborhood, for the purpose of bringing about acquaintance and sympathetic relations between educated people and the less fortunate ones living in such districts. Such houses are known also as *university settlements, college settlements, church settlements, church houses,* and *neighborhood houses.* The first experiment of the kind was Toynbee Hall, East London, established in 1884 by the Rev. Samuel A. Barnett in memory of Arnold Toynbee, an Oxford student who died before his efforts to found a social center of this kind were realized. The college settlement on Rivington street, New York city, was established by college women in 1889, and Hull House in Chicago by Miss Jane Addams in the same year. The activities of the social settlement have been enlarged from time to time, and now include reading-rooms, baths, gymnasiums, playgrounds, lectures, musical instruction, and classes in drawing, literature, kitchen-gardening and economics, and sometimes religious instruction. Day-nurseries, dispensaries, employment bureaus, and savings-banks also are carried on. Much attention is given by most of the social settlements to developing the play side of life. Social clubs and entertainments are instituted, with the object of providing means of recreation for those of all ages. Interest in civic activities is likewise stimulated, and the larger social welfare is kept in mind. In 1898 there were fifty college settlements in Great Britain and eighty in the United States. At present there are more than a hundred social centers in the United States of the kind described, a number of which bear the title of college settlement. There are social settlements in Japan, in India, and in New South Wales.—**University settlement.** See *social* ★*settlement.*—**Village settlement,** a settlement of immigrant families in a village instead of on scattered farms, the lands granted by the government for the settlement being owned and worked by the villagers in common: an experiment in colonizing first attempted in New Zealand, whence, being successful, it was introduced into the colonies in Australia.

Settlers' matches. See ★*match*².

settler's-twine (set′lėrz-twin″), *n.* A grass-like fiber-plant, *Gymnostachys anceps,* belonging to the arum family, used in New South Wales and Queensland as twine. When used for any purpose where particular strength is required, the leaves are prepared by singeing them in fire or hot ashes. Also called *traveler's-grass.*

settling-back (set′ling-bak), *n.* Same as ★*racking-back.*

settling-well (set′ling-wel), *n.* A well or basin in which water or other liquid is allowed to stand so that suspended matter or sediment may settle before the water or other liquid is drawn off for subsequent use. *Elect. World and Engin.*, Feb. 27, 1904, p. 396.

setwell (set′wel), *n.* Same as *setwall.*

set-work, *n.* **3.** In a sawmill, the mechanism of the carriage by which the log upon it is automatically set or fed to the saw after each advance of the carriage and is made to present a new section to the saw, this movement determining the thickness of the board or plank to be cut.

Sevatian (sẹ-vā′shiạn), *n.* In *geol.*, the upper division of the Juvavian stage in the pelagic Trias of the Mediterranean basin.

seven. **I.** *a.*—**The seven perfect colors,** in the manufacture of oriental carpets, indigo, blue, green, yellow, orange, rose, and red. *Burlington Mag.*, I. 79.

II. *n.*—**Under and over seven,** a dice-game played with two dice and a lay-out upon which three adjoining spaces are marked U, 7, O. After the bets are placed, the banker throws and pays even money on all bets in U if the throw is less than 7, on all in O if the throw is over 7. Bets on 7 flat pay 3 for 1. When 7 is thrown the bank takes all the money placed on U and O.

seven-bark (sev′n-bärk), *n.* The wild hydrangea, *Hydrangea arborescens.* *Buck*, Med. Handbook, IV. 774.

seven-sisters (sev′n-sis″tėrz), *n.* Either the sun-spurge, *Euphorbia Helioscopia,* or the petty spurge, *E. Peplus.*

seventh, *n.*—**Natural seventh,** in *music,* either a seventh tone in a scale derived from the seventh partial tone of the key-note, or the interval between such a tone and the key-note.

seventh-chord, *n.*—**Leading seventh-chord,** in *music,* a seventh-chord on the leading tone, usually considered to be a dominant ninth-chord with its root omitted.

Sèvres alloy. Same as ★*invar.*—**Sèvres blue.** See ★*blue.*

sew¹, *v. t.* **3.** In *bookbinding,* to pass the thread separately through the creased fold of each section of (an unbound book).

Sewage irrigation. See ★*irrigation.*

sewage-farm (sū′ąj-färm), *n.* A farm or field suitably embanked and underdrained and provided with proper channels and sluices, used for the purpose of sewage disposal by the method of irrigation, in which the production of agricultural crops may be either a primary or a secondary object.

> The Trent valley, in the southern part of the county, constitutes an important migration route, but with the exception of the *sewage farm* near Egginton there is but little to attract wild fowl and waders.
>
> *Athenæum*, Feb. 3, 1906, p. 129.

sewage-siphon (sū′ąj-sī″fọn), *n.* An arrangement of piping in connection with underground receptacles for sewage, or in disposal plants, by which the liquid is removed by siphoning, usually automatic, so as to effect a preliminary separation before the discharge is conveyed to disposing-works, or to retain the sewage in a contact-bed for a specified time and then discharge it.

sewage-sludge (sū′ąj-sluj), *n.* The precipitate or solid residue remaining after the usual treatment of sewage in sewage-disposal systems. It is often pressed into cakes after filtration.

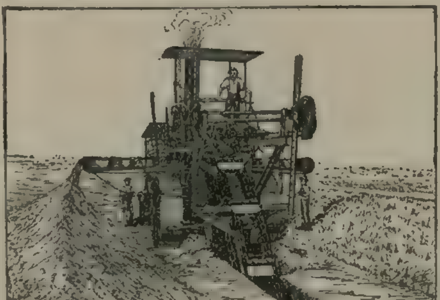
sewer³ (sū′ėr), *v.* **II.** *intrans.* To empty as a sewer; discharge sewage.

> Another change, slow in operation but serious in results, is that induced by the establishment of sewerage systems in river towns, through the growth of a population which naturally *sewers* into the river.
>
> *Buck*, Med. Handbook, VIII. 277.

sewer-brick (sū′ėr-brik), *n.* See ★*brick*².

sewering (sū′ėr-ing), *n.* The system of drains and conduits by means of which drainage and sewage are collected and conveyed by gravity to an outfall or a place of disposal.

sewer-machine (sū′ėr-mạ-shēn″), *n.* **1.** A special form of excavator of the chain-bucket dredge type used to cut the ditch or trench for sewers or other underground conduits by mechanical means and do away with hand-labor and improve the speed of such work. The excavating is done by steel buckets carried on an extension frame and fed downward and forward by power as the material is removed. The excavating and elevating frame is carried upon the front part of a steam-driven traction-engine the wheels of which rest upon the edges of the ditch on each side, and the whole machine can be self-propelled forward as the cut is made. A conveyer belt or buckets receive the discharged dirt from the excavating buckets, and can drop it at one side.



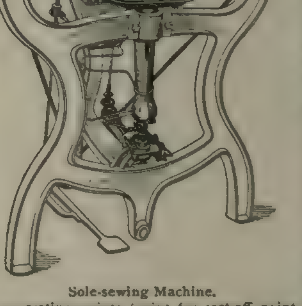
Sewer-machine.

2. A name less correctly given to the combination of wire-rope tramway with hoisting capacity, used in making sewer trenches, or similar excavations for subways or pipe-lines. It consists of a series of A-shaped frames placed in a line astride of the trench and supporting an overhead track on which a trolley, supporting a hoisting-block and bucket, traverses the whole length of the machine. At the advance end of the machine is a small house supported on wheels, which travels on a temporary track laid on the ground and contains a boiler and winding-engine, the engine controlling, by means of wire ropes, the hoisting of the bucket and the movements of the trolley. In operation the bucket, when filled in the trench, is hoisted to the trolley and hauled in either direction along the track to the dumping-place. As the trench advances, the power-house is moved forward and the frames and sections of track are taken down at the rear end of the work and reset in advance, the entire machine thus continually moving forward.

sewer-pipe (sū′ėr-pīp), *n.* A pipe for the conducting of sewage or drainage: usually a pipe of glazed earthenware with bell-and-spigot joints laid underground. It is distinguished from a soil-pipe in that the latter generally conveys the discharge from privies and water-closets of residences only, and not storm-water from the streets. The soil-pipe is usually a branch into the sewer-pipe.

sewer-trap (sū′ėr-trap), *n.* A device to seal the discharge-duct into a sewer-pipe in order to prevent the flow of gas or sewer-air into the house-drain: usually a water-seal, in a U-shaped piece of pipe of metal or glazed earthenware.

sewing-machine, *n.* **1.** The following are types of sewing-machines: (*a*) *Straight-ahead machine,* any machine in which the stitching is directly forward or in a straight line. The ordinary machine for domestic sewing is an example. (*b*) *Special machine,* any machine on which a special kind of stitching may be done or which is used on special kinds of work or material, as the carpet-sewing and the button-sewing machine. (*c*) *Cylinder-bed machine,* a machine in which a cylinder-arm takes the place of the bed-plate or table of ordinary machines. The cylinder-bed is designed to facilitate the handling of the work, particularly in sewing shoes, skirts, and large garments. (*d*) *Fancy-stitching machine,* a sewing-machine having one needle and no feed, the object being to give the operator complete control over the movement of the fabric as it passes under the needle, and to give a free hand-feed that is useful in decorative, ornamental, and fancy stitching, etc. (*e*) *Overseaming-machine,* any machine adapted to the overseaming or zigzag stitch. In this class of machines the needle-bar which supports the needle is held by a pivoted frame which, by suitable connections, can be given a reciprocating sidewise motion which changes the position of the needle at each stroke. As the feed-motion also advances at each stroke, the stitching is drawn out into an angular or zigzag figure. Since the stroke or shove of the needle and the feed are under the control of the operator, the combined motions can be used to make a great variety of stitches, adapted to a wide range of work. (*f*) *Two-needle machine,* any machine employing two needles and making two parallel rows of stitches. The needles may be fixed in the same relative positions, or the machine may be of the over-seaming type. Two-needle machines are adapted to a great variety of work, from carpet-sewing to the finest decorative and embroidery sewing. (*g*) *Multiple-needle machine,* any machine employing from three to twelve needles. The needles may be arranged side by side at equal distances apart, or in groups adapted to different stitching, as in staying, cording, boning, and other special work.



Sole-sewing Machine.

a, operating points (point for cast-off, point for feed, pressure-foot); *b*, whirl; *c*, Stanley steam-horn; *d*, feed-link; *e*, shaft for rocker; *f*, needle-lever; *g*, eccentric strap; *h*, ratchet-pawls; *i*, hand-lever; *j*, friction-pulley; *k*, friction-wheel; *l*, feed-cams; *m*, steam wax-pot; *n*, tension-truck.

3. In *shoe-manuf.*, a machine for sewing leather, built upon the general plan of the machine for sewing fabrics. It appears in a great variety of forms and under many different names, as *fair-stitch machine, counter-stitcher, saddle-seam machine, wax-thread machine, outsole stitcher*, etc. The illustration shows a typical sole-sewing machine of the McKay type.—**Carpet-sewing machine,** a portable hand-power sewing-machine used in sewing together matched lengths of carpet. The two pieces of carpet to be sewn are matched, and suspended face to face with the edges joined in a suspending- and stretching-machine. The sewing-machine is then hung on the joined edges, and is operated by turning a crank, the machine automatically feeding itself to the work as fast as the stitching is done. A larger clamping- and stretching-machine employs a power sewing-machine that is suspended from a traveling cable over the edges of the carpet-lengths. An extra heavy overseaming sewing-machine having a wide table is used in sewing carpets. A blind-stitch carpet-serging machine is also used in sewing pile carpets by employing a guide to turn the pile away from the edge of the carpet while the stitch is being made.

sewing-spasm (sō'ing-spazm), *n.* Same as *seamstresses' cramp.*

sewing-table, *n.* 3. A long bench or table on which a number of sewing-machines are placed. A shaft extends under the table to give power to the machines by means of short belts. The operator, seated before his machine, controls the power, as required, by a treadle and independently of all the other machines.

sewing-thread (sō'ing-thred), *n.* A three-ply twisted yarn suitably finished for use in sewing.

sex-abortion (seks'a̤-bôr'shọn), *n.* In *entom.*, the phenomenon of the production of sexless adults, as the worker, soldier, and other castes in certain social hymenopterous and isopterous insects. *L. O. Howard*, Insect Book, p. 1.

Sexagesimal system. See ★*system.*

sexavalence (sek-sav'a̤-lẹns), *n.* Same as ★*hexavalency.*

sexavalent (sek-sav'a̤-lẹnt), *a.* Same as *hexavalent.*

Sulphur is . . . *sexavalent* as regards oxygen.
D. I. Mendeléjeff, in Athenæum, April 8, 1905, p. 437.

sex-cell (seks'sel), *n.* A reproductive cell, either the sperm-cell of the male or the ovum of the female, or one of the cells from which they arise by division, such as the spermatogonia and the oögonia.

sexcuspidate (seks-kus'pi-dāt), *a.* [L. *sex*, six, + E. *cuspidate.*] Having six projections or cusps, as the molar teeth of some mammals; sextuberculate. *Proc. Zool. Soc. London*, 1899, p. 560.

sexenary (sek'se-nā̤-ri), *a.* [L. *sex*, six, + *-eni*, as in *centeni* (see *centenary*), + *-ary.*] In *arith.*, having a scale of notation with the radix 6.

sexigesimal (sek-si-jes'i-ma̤l), *a.* An erroneous spelling of *sexagesimal.*

sexipolar (sek'si-pō-lä̤r), *a.* [L. *sex*, six, + E. *polar.*] Having six poles.—**Sexipolar field,** a magnetic field, as in certain generators and motors, due to six magnet poles.—**Sexipolar generator or motor,** a machine with six pole-pieces.

sexitubercular (sek"si-tū-bėr'kṳ̄-lä̤r), *a.* [L. *sex*, six, + E. *tubercular.*] Having six cusps, or points, as do the molar teeth of some mammals; sextuberculate. *H. F. Osborn*, in Bulletin Amer. Mus. Nat. Hist., 1902, p. 179.

sexituberculy (sek"si-tū-bėr'kṳ̄-li), *n.* [*sexitubercul(ar)* + *-y*³.] The fact or condition of having six cusps or tubercles, as do the molar teeth of some mammals.

Superior molars progressive from tri- to *sexituberculy*, with progressive external cingulum, but without mesostyle.
H. F. Osborn, in Bulletin Amer. Mus. Nat. Hist., 1902, p. [179.

sex-prepotency (seks'prẹ̄-pō"tẹn-si), *n.* See ★*prepotency.*

sextet, *n.* 2. A bicycle for six riders.

sextil, *a.* and *n.* A simplified spelling of *sextile.*

sextile, *a.* **II.** *n.* The aspect of two planets, or of the sun and a planet, when they are at a distance of 60 degrees from each other.

sextillionth (seks-til'yọnth), *a.* and *n.* **I.** *a.* Last in a series of sextillion; also, being one of sextillion equal parts.

II. *n.* One of sextillion equal parts; the ratio of unity to sextillion.

sextipara (seks-tip'a̤-rä̤), *n.* [L. *sextus*, sixth, + *parere*, bring forth.] A woman who has passed through six pregnancies.

sextuberculate (seks-tū-bėr'kū-lạ̄t), *a.* [L. *sex*, six, + E. *tuberculate.*] Having six projections, cusps, or tubercles, as the molar teeth of some mammals; sexcuspidate. *Proc. Zool. Soc. London*, 1899, p. 558.

sextuple. **I.** *a.*—**Sextuple telegraph,** a telegraphic device for sending six messages simultaneously over a single wire; a sextuplex telegraph.

II. *n.* Same as *sextuple* ★*press.* *Census Bulletin* 216, June 28, 1902, p. 63.

sextuplex (seks'tṳ̄-pleks), *a.* and *n.* [NL., < L. *sex*, six, on the analogy of *duplex, quadruplex.* See *duplex.*] **I.** *a.* 1. Sixfold.—2. In *elect.*, designed for the transmission of six messages simultaneously.

His [Edison's] system of duplex telegraphy, which he later developed into quadruplex and *sextuplex* transmission. *Encyc. Brit.*, XXVII. 654.

II. *n.* A sextuplex telegraph.

Sexual cycle. See ★*cycle*¹.

sexuales (sek-sṳ̄-ā'lēz), *n. pl.* [L. pl. of *sexualis*, sexual.] The sexual generation in heteroparthenogenesis. See ★*heteroparthenogenesis* and *normal* ★*parthenogenesis.*

sexuosocial (sek"sṳ̄-ō-sō'sha̤l), *a.* Pertaining to the socially established relations of the sexes. *L. F. Ward*, Dynamic Sociol., I. 641.

sexupara (sek-sū'pa̤-rä̤), *n. pl.* [NL., < L. *sexus*, sex, + *parere*, produce.] Viviparous parthenogenetic female organisms which give birth to males and to females which lay fertilized eggs. See *normal* ★*parthenogenesis.*

sexupare (sek'sṳ̄-pãr), *n.* In the plant-lice, one of the parents of the sexed generation, usually developed late in the season; generally winged. Also called a *return migrant.*

These organs [nectaries of plant-lice] reached their maximum development toward the end of June, after which a general retardation set in, until the *sexupares* or return migrants were almost identical with those found on the apple during the spring.
U. S. Dept. Agr., Div. Entom., Bulletin 44, p. 8.

sexuparous (sek-sū'pa̤-rus), *a.* [*sexupar(a)* + *-ous.*] Pertaining to a sexupare or the sexupara.

seyid, *n.* See *sayid.*

seyssel (sī-sel'), *n.* An abbreviation of *Seyssel asphalt*, a bituminous limestone found in large quantities at Seyssel, department of Ain, France; extensively used as material for pavements.

sfenoid, sfere, sfinx, etc. Amended spellings of *sphenoid*, etc.

S. G. An abbreviation (*a*) of *solicitor-general*; (*b*) [*l. c.*] of *specific gravity*; (*c*) of the Latin phrase *salutis gratiâ*, 'for the sake of safety': placed on the upper left-hand margin of Lloyd's marine insurance policies, and equivalent to 'insured.'

shack¹, *n.* 5. A seafaring catch of fish made up of hake, pollack, and other cheap varieties, especially those of the cod family.

Such fish, tumbled in together, without effort at classification, are known as *shack.*
Rep. Mass. Com. Fisheries and Game, 1904, p. 78.

6. The right of common pasturage; the straying of cattle into public or on inclosed land.—**Common of shack,** the right of various owners to pasture their cattle on the one field or tract after it is harvested.

II. *a.* Relating to a catch of sea-fish of the cheaper varieties, or of shack-bait.

While at first a *shack* trip referred particularly to a voyage on which cheap species of fishes constituted the bulk of the catch, this system . . . has now broadened . . . to such a degree that it is common for vessels . . . to go as far as the Grand Bank, where cod alone are taken.
Rep. Mass. Com. Fisheries and Game, 1904, p. 78.

shackle¹, *v. t.* 3. In *elect.*, to place an insulator between the ends of (a wire that has been cut). *Houston*, Dict. Elect.

shackle-block (shak'l-blok), *n.* *Naut.*, a block provided with an iron strop, which has a fitting for a shackle in one end.

shackle-insulator (shak'l-in"sṳ̄-lā-tọr), *n.* See ★*insulator.*

Shaconian, Shakonian (shā-kō'ni-a̤n), *n.* [*Sha(kspere)* + *(Ba)conian.*] One who believes in the Baconian authorship of the plays attributed to Shakspere. [Nonsense-word.]

For a pleasing illustration of the fatuity of the "universal negative" (that fallacy so dear to a certain school of Old Testament critics as well as to *Shaconians*) he may further see Mr. Edwin Reed's "Bacon versus Shakspere" (1899). . . . This "portmanteau word" seems a necessary if unfortunate addition to our vocabulary, in order to distinguish the holders of a particular view of the authorship of certain plays from the real followers and students of the great master of inductive philosophy, who have for many years been correctly known as Baconians.
N. and Q., 9th ser., IX. 495.

shad¹, *n.*—**Alabama shad,** *Alosa alabamæ*, a fish found in streams which flow into the Gulf of Mexico.—**Gulf shad.** Same as *Alabama* ★*shad.*

shad-berry (shad'ber"i), *n.* The shad-bush or service-berry, *Amelanchier Canadensis.*

shadchan (shäd'ċhan), *n.* [Also *shatchen, schatchen*; < Yiddish *shadchan*, < Aram. *sh'dukh*, pacify.] Among the Jews, especially Russian and Eastern Jews, a professional match-maker or marriage-broker whose business it is to bring about marriages and make the contract between the parents of the parties as to the amount of dowry, etc., for which services he exacts a considerable fee from both sides. The business is not considered discreditable (it is, indeed, considered meritorious), but it is the subject of humorous treatment in novels of Jewish life.

Shaddai (shad'ī), *n.* [Heb.] Almighty: one of the Hebrew names of God in the Old Testament. *El-Shaddai* (Gen. xvii. 1) is rendered in the Authorized Version "God Almighty," but some later commentators translated it "All-sufficient." *Shaddai* is inscribed on the back of the mezuzah, which is fastened to the door-posts, and, according to the occult teaching of the cabala, the name guards the house from evil spirits and disease. The pious Jew, when leaving and entering his house, touches the name with his fingers and kisses them.

shade¹, *n.* **15.** A material for women's gowns, worn in the eighteenth century.

Painted lawns and cheqer'd *shades*,
Crape that's worn by lovelorn maids.
Anonymous, 1766.

Why cant you go and see McClellan's Lace *Shades* [for summer gowns]. I think there are some for ten shillings a yard.
Eliza Southgate Bowne (1800), in A. M. Earle, Costume [of Colonial Times, p. 213.

Cone of shade. See ★*cone.*—**Shades and shadows,** in architectural drawings, an adaptation of descriptive geometry by means of which the cast shadows on a building or other object and the difference between the lighted surfaces and the shades are all indicated. An arbitrary direction of light is assumed, usually the direction of the diagonal of a cube. The rays of light are supposed to be all parallel, and their projection on the horizontal plane and on the vertical plane to be always 45° with the base-line. The purpose of this, in architectural drawing, is usually the recording of the shape of the parts of the building, their projection from other parts, and the like, which cannot be shown otherwise except by drawing in perspective.

shade-deck (shād'dėk), *n.* See ★*deck*, 2 (*c*).

A tank steamer of the "*shade-deck*" type, 345 feet long, 45½ feet broad, and 35½ feet depth (to *shade-deck*), has had her condition examined carefully.
White, Manual of Naval Arch., p. 382.

shade-decked (shād'dekt), *a.* Having a shade-deck: said of a type of vessel.

Most of the latter have a continuous upper deck above the main deck: if this be of light construction, and openings be left between it and the main deck, the vessel is called a *Shade-decked* Vessel. *Encyc. Brit.*, XXXII. 550.

shade-frame (shād'frām), *n.* A frame for the partial shading of a seed-bed. It consists of a cover of laths, brush, or cloth, supported on posts and arranged to admit light as desired.

shade-glass (shād'glȧs), *n.* A piece of colored glass interposed between the eye and the object-glass of an astronomical instrument, usually before the eyepiece, to reduce the apparent brightness of the sun or other object under observation.

shade-roller (shād'rō"lėr), *n.* A roller resting upon supports in a window or other place, upon which a window-shade, curtain, awning, screen, or map may be rolled. The roller, usually hollow, is provided with a spring by which it is rotated, and a ratchet and pawl which control its movement.

shade-stone (shād'stōn), *n.* A flat stone projecting over a door to give shade. *H. C. Butler*, Architecture and Other Arts, p. 126.

shad-flower, *n.* 3. The trailing arbutus, *Epigæa repens.*

shading-coil (shā'ding-koil), *n.* In *elect.*, a closed copper ring or coil short-circuited upon itself, surrounding a part of the magnet poles of some motors excited by alternating currents, for the purpose of producing a lag of the alternating magnetism in the shaded portion of the magnet pole, and thereby starting the motor: used in alternating-current fan-motors. *Trans. Amer. Inst. Elect. Engin.*, 1898, p. 68.

shadow, *n.* **20.** In *alg.*, an umbral letter or symbol having no meaning apart from another sort of letter or symbol to which it assigns a property, and therefore not to be written alone.—**21.** Same as *shadow corpuscle.* See *phantom* ★*corpuscle.* *Buck*, Med. Handbook, III. 3.—**Acoustic shadow,** a sound-shadow. When the passage of a train of light-waves is obstructed by an opaque body, a shadow is formed behind the obstacle. In the case of sound-waves the similar effect is called an *acoustic shadow.* The production of a definite shadow requires an obstacle the dimensions of which are much greater than the length of the waves. Sound-shadows are formed, therefore, only in the case of a very large obstacle, as a hill or large building, or when the sound is of very high pitch.—**Cone of shadow.** See ★*cone of shade.*—**Electric shadow.** See *molecular* ★*shadow.*—**Molecular shadow,** a name sometimes given to the shadow cast upon the wall of a vacuum-tube, or upon any phosphorescent surface, when a cathode discharge takes place within the tube and some object opaque to the cathode rays intercepts portions of the cathode stream. Also called an *electric shadow.*—**Nuclear shadows,** isolated delicate bodies which appear in almost any specimen of blood. They stain a light blue with methylene blue and represent the remains of nuclei of degenerated leucocytes.—**Shades and shadows.** See ★*shade*^{1}.—**Shadow corpuscle.** See *phantom* ★*corpuscle.*—**Shell shadow.** Same as *shadow corpuscle.* See *phantom* ★*corpuscle.*

> The occurrence of . . . "*shell shadows*" in the blood after release from the bell jar.
> *Buck*, Med. Handbook, I. 204.

shadow-band (shad'ō-band), *n.* One of a series of roughly parallel broken bands, alternately bright and dark, seen during a solar eclipse traveling with an irregular flickering motion over every light-colored surface for a few moments just before and just after the totality. They are usually from 6 inches to 2 feet wide, and are probably due to the light from the then exceedingly narrow strip of the sun's disk shining through 'knots' of unequal density in the air, and carried by the wind.

> *Shadow bands* were seen, but those who attempted to measure their velocity found them too rapid and flickering for any great exactness in this determination.
> *S. P. Langley*, in Science, June 22, 1900, p. 977.

shadow-box (shad'ō-boks), *n.* A box made of some hard, polished wood, and with a glass front, in which a framed easel painting is placed. The box protects both the frame and the pigment from injury by contact or by furnace or illuminating gas, while it does not interfere with a free exhibition of the picture.

shadow-dance (shad'ō-dȧns), *n.* A dance in which the shadows of the performers (who are invisible) are thrown on a screen.

shadowgraph (shad'ō-grȧf), *n.* [*shadow* + Gr. *γράφειν*, write.] 1. A shadow-picture.—2. A radiograph or X-ray photograph; a sciagram.

> Interesting *shadowgraphs*, or radiographs, [made] by the aid of radium-bromide of high activity, imported from Paris, showing that emanations from this wonderful element discovered by Professor and Madam Curie, will penetrate cast-iron readily.
> *Jour. Franklin Inst.*, April, 1904, p. 312.

shadowgraph (shad'ō-grȧf), *v. t.* [*shadowgraph, n.*] 1. To outline in a shadow-picture on a screen.—2. In *photog.*, to take a picture of by means of X-rays, radium, or a similar source of actinic radiation.

> The third photograph is that of a chicken's foot and was *shadowgraphed* in eighteen hours with one-sixth of a grain of bromide of radium.
> *Amer. Inventor*, April 15, 1904, p. 173.

shadowgraphic (shad-ō-graf'ik), *a.* [*shadowgraph* + *-ic.*] Pertaining to or effected by shadowgraphy. *Encyc. Dict.*

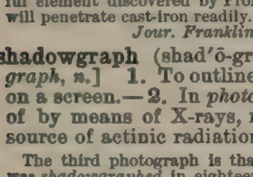
shadowgraphist (shad'ō-graf-ist), *n.* [*shadowgraph* + *-ist.*] One who is expert in shadowgraphy. *Encyc. Dict.*

shadowgraphy (shad'ō-graf-i), *n.* [*shadowgraph* + *-y*^{3}.] 1. The art or practice of producing shadow-pictures on a screen.—2. The art or practice of making photographic prints by placing an object between a sensitive surface and a source of radiant energy, such as radium salt, an X-ray bulb, etc., and then developing the latent image; sciagraphy.

shadow-photometer (shad'ō-fō-tom″e-tėr), *n.* A Rumford photometer. See *photometer.*

shadow-picture (shad'ō-pik″tūr), *n.* A picture produced by a shadow or shadows cast upon a screen or other lighted surface, as that of a wall.

shadow-pin (shad'ō-pin), *n.* A slender length of brass resting in a small brass button and designed to stand vertically on the center of a compass glass. From the shadow cast by it the sun's bearing is determined. It may also be used to take compass bearings of other objects.



Shadow-pin.

shadow-play (shad'ō-plā″), *n.* 1. The use in theatrical performances of marionettes, generally cut out of flat pieces of leather representing persons and scenery of theatrical plays, the shadows of which are thrown upon a screen. The shadow-play is found in China, the Malay Archipelago, and all over southern and western Asia. It is also known in Egypt, Turkey, and eastern Europe.—2. A theatrical performance played with figures, the shadows of which are thrown upon a screen.

shad-porgy (shad'pôr″gi), *n.* Same as *grass*-★*porgy.*

shadrach (shā'drak), *n.* [From the biblical name *Shadrach*, with allusion to the 'fiery furnace.'] In *metal.*, same as ★*salamander*, 10.

shaft^1, *n.* 4. (*f*) The main part of an arrow to which are fixed a bit of nocked horn at the butt and a head or pile at the point. See *foreshaft.* (*g*) In *golf*, the part of a club to which the head is joined.—**Cardan shaft,** a shaft having a Cardan joint at one end or at both ends.—**Cranked shaft,** a shaft into which a double crank is forged or fitted, so that the shaft is practically continuous as in one piece. There are bearings on both sides of the double crank or cranks.—**Divided shaft,** a discontinuous shaft: the construction used in most motor-cars for the driving-axle, the wheels being made fast to the driving-axle, but the axle itself being divided at the compensating-gear, so as to allow the car to turn corners or curves without slipping at the tires. See *compensating*-★*gear.*—**Flexible shaft,** a shaft which can be bent or curved, but will still transmit efficiently a turning motion. In its usual form it is composed of a number of helices of wire wound in opposite directions. The twisting force being applied at one end, this tends to unwind the coils in one direction and to wind more tightly those which are wound in the opposite direction. Hence one coil holds against the other, and the helices simply revolve. These shafts are extensively used on dental engines and portable tools, the power being taken from any source that is convenient.—**Forehand shaft,** an arrow for long-distance shooting; a flight-arrow.—**Half-speed shaft.** (*a*) A shaft carrying pulleys or gears so arranged as to drive a machine at a speed intermediate between the lowest and the highest speeds. (*b*) A shaft on a gas or internal-combustion motor, making one turn to two of the motor-shaft, and carrying the cams and other mechanisms for valves and ignition, when the motor operates on the Otto cycle (see ★*cycle*^{1}, 12), in which one working stroke occurs in each two revolutions of the fly-wheel shaft.—**Intermediate shaft,** the shaft which crosses the frame of a marine engine between the two engines and connects two paddle-shafts.—**Main shaft,** the principal shaft; a line-shaft; the long shaft in a shop from which power is taken to turn the several counter-shafts.—**Mid-wall shaft,** a column which stands in or near to the mid-line of the thickness of a wall. Thus, in Romanesque architecture, a window may be divided into two or three lights by mid-wall shafts which serve as mullions.—**Telescopic shaft,** a shaft which can be varied in length by the expedient of making it in sections, any one of which can slide over the next one, like the tubes of a telescope: used where the operating point or tool is frequently adjusted with respect to distance from the driving-point, as in some forms of drills, assembling machinery, and the like, and in piping for portable forges.—**Whippy shaft,** in *golf*, a club-shaft with a good deal of suppleness; a club-shaft which is easily bent.

shaft-bar (shȧft'bär), *n.* See ★*stoping-bar.*

shaft-bracket (shȧft'brak″et), *n.* Same as ★*strut*^{2}, 2. Also called *propeller-bracket.*

> Stems, sternposts, *shaft-brackets*, rudders, etc., are now commonly made of cast steel instead of forged iron or steel.
> *White*, Manual of Naval Arch., p. 415.

shaft-gap (shȧft'gap), *n.* A gap in a surface which is electrically conductive on a revolving shaft or armature, so arranged that when it passes a contact-piece, touching the circumference of the shaft, the electric current will be interrupted: used in motor-cars or other internal-combustion motors as a means of make-and-break to secure ignition by a spark.

shaft-governor (shȧft'guv″ėr-nọr), *n.* An engine-governor in which the admission of steam, gas, or air to the cylinder is controlled by the action of a weight which revolves with the shaft of the engine. This weight is commonly fastened to the fly-wheel.

shaft-hand (shȧft'hand), *n.* In *archery*, same as ★*loosing-hand.*

shaft-hanger (shȧft'hang″ėr), *n.* A bearing for a shaft, originally constructed to be suspended from overhead by a suitable pendent support; hence, any support for a revolving shaft, whether a support from overhead or a bracket projecting from a wall or post or from a floor.

shaft-house (shȧft'hous), *n.* The housing or protective structure over the mouth of a mine-shaft, designed to carry the pulleys and dumping-platforms and any other necessary machinery.

shafting, *n.* 2. A darkening of the shaft, or quill of a feather, as in some breeds of poultry.

> *Shafting* on the back will also help the black stripe in the saddles.
> *Yearbook U. S. Dept. Agr.*, 1896, p. 462.

shaft-lashing (shȧft'lash″ing), *n.* The combining of two or more harness-cords to one neck-cord, in a Jacquard loom, to increase the capacity of the loom. Also called *leashing.*

shaft-lathe (shȧft'lāᴛʜ), *n.* A very long lathe intended for turning shafts.

shaftment^2 (shȧft'ment), *n.* The part of an arrow on which the feathering is laid.

> It appeared that the number of sticks was originally four, and that the dice were originally made of canes, being the *shaftments* of arrows, painted or burned with marks corresponding with those used to designate the arrows of the four world-quarters.
> *Amer. Anthropologist*, Jan.-March, 1903, p. 60.

shaft-passage (shȧft'pas″āj), *n.* Same as *shaft-alley.* *White*, Manual of Naval Arch., p. 32.

shaft-ring (shȧft'ring), *n.* An annular band (see *annulated*, 3) which seems to surround a shaft of a column. It is often the wrought edge of a stone plate which separates two stones that make up a shaft, the inclosing ring being an appearance only.

shaft-rubber (shȧft'rub″ėr), *n.* An implement for smoothing arrow-shafts, consisting of two gritstones each having a groove. The arrow-shaft is placed in these grooves, the stones being held firmly together, and is polished by being rubbed to and fro between the stones.

shaft-sollar (shȧft'sol″är), *n.* A platform forming a story in a mine-shaft. It may cover either the entire section of the shaft or a part of it only.

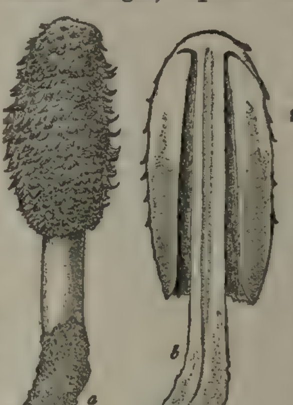
shaft-strut (shȧft'strut), *n.* See ★*strut*^{2}, 2.

shaft-tube (shȧft'tūb), *n.* In *ship-building*, a water-tight tube extending from the after end of the shaft-alley to the exterior of the vessel, of slightly larger diameter than the tail-shaft of the screw-propeller which it contains. At the after end of the tube is the stern-bearing, and at the forward end a bearing and a stuffing-box around the shaft to prevent the entrance of water into the vessel. In wooden vessels the stern tube is of bronze and is embedded in the after deadwood. In iron vessels it passes through and is fastened to the floors and framing, and in single-screw ships through the sternpost, which is bossed out to receive it.

shag^1, *n.*—**Shag, rag, and bobtail,** all; every one; every kind. [Colloq.]

> It will swallow us all, Ships and Men, *Shag, Rag, and Bobtail*, like a Dose of Pills.
> *Urquhart and Le Motteux*, tr. of Rabelais, Gargantus [and Pantagruel, iv. 33.

shaggy-mane (shag'i-mān), *n.* A common edible fungus, *Coprinus comatus*, having a white pileus covered with shaggy appressed scales and black deliquescent gills.



Shaggy-mane (*Coprinus comatus*).
a, young specimen; *b*, section through a specimen older than *a*.

shagroon (sha-grön'), *n.* [Prob. a corruption of Ir. *shaughraun.*] In the province of Canterbury, New Zealand, an original settler who came from some part of the world other than England. Those who came from England were called *Pilgrims.* *E. E. Morris*, Austral English.

> In the 'Dream of a *Shagroon*,' which bore the date Ko Matinau, April 1851, and which first appeared in the 'Wellington Spectator' of May 7, the term 'Pilgrim' was first applied to the settlers; it was also predicted in it that the 'Pilgrims' would be 'smashed' and the *Shagroons* left in undisputed possession of the country for their flocks and herds.
> *W. Pratt*, Colonial Experiences in New Zealand, p. [234, quoted in E. E. Morris, Austral English.

shahrith (shäċh'rith), *n.* [Heb., < *shaḥar*, morning.] Morning prayer, the first of the three daily services in the Jewish liturgy.

shake, *v. i.*—**Shaking ague.** See ★*ague.*

Shake culture. See ★*culture.*

shaked (shākd), *a.* In *old music*, said of certain graces or embellishments, such as the beat, backfall, etc., characterized or extended by a shake or trill: opposed to *plain* or *smooth.* Shaked graces, as a rule, were feasible only on keyboard instruments, like the harpsichord.

shaking-rig (shā'king-rig), *n.* A contrivance for shaking a grate, to relieve it from ashes and clinker.

shaku, *n.* **2.** In Japan, a stick or baton of wood or ivory which was formerly carried at court, and was held in a certain manner to give the body a dignified carriage on state occasions. When the ogi or folding fan was invented, it took the place of the shaku. *Salwey*, Fans of Japan, p. 6.

shal, *v.* A simplified spelling of *shall*^{1}.

shale^{2}, *n.*—**Astoria shale**, a division of the Miocene Tertiary deposits, which occurs in Oregon and Washington. It is largely constituted of clay shales and limestones, which are known to extend to Vancouver Island and Alaska.—**Bedford shale**, a bed of red and blue shale in Ohio, lying beneath the Berea grit and overlain by the black Cleveland shale. It is of Lower Carboniferous age.—**Benton shale**, a division or stage of the lower part of the Upper Cretaceous beds, developed in the Rocky Mountain region and the continental interior. Near Benton, Colorado, from which place it takes its name, it consists of clay shales and limestones with marine fossils, and has a thickness of about 1,000 feet.—**Birkhill shales**, a series of black shales in the uplands of Scotland, of the age of the lower part of the Upper Silurian and distinguished by the predominance of graptolites. On the basis of the species of these organisms the Birkhill shales have been divided into a series of six or more zones. The rocks are regarded as a partial equivalent of the Llandovery beds of northern England.—**Bloomsburg shale**, a subdivision of the Upper Silurian in Pennsylvania, regarded as equivalent to the lower Salina formation of New York.—**Bronsil shales**, a division of the Cambrian rocks in the Malvern Hills of England, which lies at the top of the section, attaining a thickness of 1,300 feet, including intercalated volcanic rocks, and containing many fossils, among them the graptolite *Dictyonema sociale*.—**Camillus shale.** See *Salina* ★*beds*.—**Cashaqua shale**, a division of the Portage group in the Upper Devonian rocks of western New York, which consists of soft shale with sandstone, and carries an abundant pelagic marine fauna contrasted with that of contemporaneous beds of central and eastern New York.—**Chattanooga shale**, a black carbonaceous shale which belongs at the base of the Devonian series in Tennessee and adjacent districts. The type locality is Chattanooga.—**Cleveland shale**, a rock series of Ohio, now generally regarded as the upper member of the Ohio shales. It is of Upper Devonian age and is notable for its large and numerous fishes.—**Couvin shales**, a division of the Middle Devonian in Belgium.—**Cuyahoga shale**, a thick mass of shales and sandstones which forms the middle part of the Waverly series in Ohio.—**Cypridina shales.** See ★*Cypridina*.—**Domanik shales**, a series of black bituminous shales with some calc-nodules, which in the Timan district of northeastern Russia represent the deposits of the Upper Devonian Naples beds of New York. The formation is locally known as *the Domanik*.—**Dufton shales**, an upper division of the Lower Silurian in Westmoreland and Cumberland, which lies below the Coniston limestone and is equivalent in part to the Bala beds of Wales.—**Genesee shale**, a term introduced by the New York geologists for a division lying at the base of the Upper Devonian in western and central New York and composed of black shales with some limestone. It is typically exposed on the Genesee river.—**Glarus shales.** See ★*Ligurian*, 2.—**Glenkiln shales**, a series of black shales which belongs to the Llandeilo or upper division of the Lower Silurian system in Scotland.—**Green River shale**, a subdivision of the Tertiary system in the Rocky Mountain region. It is a series of deposits of fluviatile origin, found in the Green River basin north of the Uintah Mountains, mostly in Wyoming. It attains a thickness of 4,000 feet, is regarded as of Middle Eocene age, and is placed between the Wahsatch and Bridger groups. It is noted for its fossil fishes and insects.—**Guichen shales**, a subdivision of the Lower Silurian of Brittany. It is regarded as equivalent in part to the Llandeilo shales of Great Britain.—**Halobia shales**, a division of the Triassic rocks in the Lombardy Alps, which lies above the Muschelkalk or Recoarco limestone and below the Esino limestone. It takes its name from the abundance of the mollusk *Halobia*, and is also geographically designated the *Prezzo limestone*.—**Hartfell shales**, a division of the Lower Silurian or Caradoc beds in the Moffat region of Scotland. Their characteristic fossils are graptolites, and they have been divided into many zones on the basis of the predominance and variation of these bodies.—**Hudson River shale**, a term introduced by the New York geologists to denote the uppermost division of the Lower Silurian in eastern North America, but now applied to the shaly graptolite facies homotaxial to nearly the whole Lower Silurian in the Appalachian basin.—**Huron shale**, a subdivision of the Upper Devonian in Ohio, underlain by shales with Hamilton fossils and overlain by the Erie shale. It forms the lowest part of the Ohio shales.—**Icla shales**, the lowest division of the Devonian system in the Bolivian Andes, overlain by the Huamampampa sandstone.—**Kuckers shale**, a subdivision of the Lower Silurian system in the Baltic provinces of Russia. It attains a thickness of 50 feet, and is underlain by the echinosphærite limestone and overlain by the Itfer beds. It is approximately equivalent to the Llandeilo formation of Great Britain.—**Laille shales**, a subdivision of the Lower Silurian system in the northwest of France, lying above the Armorican sandstone and below the slates of Angers. The beds are regarded as equivalent to the basal portion of the Llandeilo formation in Great Britain.—**Ledbury shales**, a division of the Silurian system of England, which lies at the top of the series and at Ledbury is recognized as passage-beds from the Downton Castle sandstone beneath into the Tilestones above, which are regarded as transitional to the Old Red Sandstone.—**Ludlowville shale**, a term introduced by Hall and applied to the lower part of the Hamilton group, in western New York, lying above the Marcellus and below the Moscow shale.—**Marcellus shale**, a term introduced by the early geologists for a series of black shales lying above the Onondaga limestone and beneath the Ludlowville and Skaneateles shale in New York. It attains a thickness of 100–200 feet, and is but sparsely fossiliferous, except in some limestone bands known as the Stafford, Cherry Valley, and agoniatite limestones. See *Marcellus group*.—**Merevale shales**, the uppermost division of the Cambrian system in the Nuneaton district of Warwickshire.—**Middlesex shale**, a subdivision of the Upper Devonian rocks in western New York, which lies above the Genesee shale and below the Cashaqua shale, and consists of highly bituminous, sparsely fossiliferous shale beds.—**Monroe shales**, shales of Middle Devonian age lying below the Bellvale flags in Orange county, New York.—**Montrose shales**, a local subdivision of the Upper Devonian rocks in eastern Pennsylvania.—**Moscow shale**, a term introduced by Hall and applied to the upper division of the Hamilton group in western New York, constituting the highest division of the Middle Devonian. It is highly fossiliferous.—**Normanskill shale**, a stage equivalent in age to the middle Trenton limestone of the Lower Silurian, but of distinct sedimentary facies, characterized by graptolites of the genera *Cœnograptus*, *Lasiograptus*, *Dicellograptus*, *Dicranograptus*, etc., which are wide-spread and thus indicate the presence of these facies and zones in North America, England, Scandinavia, Australia, etc.—**Ohio shale**, a division of the Upper Devonian rocks in Ohio, including the Cleveland, Erie, and Huron shales of Newberry.—**Oldbury shales**, a subdivision of the Cambrian system in the Nuneaton district of Warwickshire, which lies below the Merevale shales and above the Purley shales. It is composed of black shales and carries several species of trilobites.—**Oswayo shale**, a series of Lower Carboniferous shales in southwestern New York, which lies above the Cattaraugus beds and below the Knapp beds and Olean conglomerate.—**Pale shales**, a series of graptolite-bearing shales and flags of early Silurian age in the Rhayader district of Wales. They represent a pelagic facies of the Tarannon shales, lying between the Upper Llandovery below and the Woolhope beds above, and are divided into a lower Gwastaden group of flags and shales and an upper Cabau group of conglomerates and shales.—**Pittsford shale.** See *Salina* ★*beds*.—**Poligné shale**, a series of carbonaceous shales in Brittany, which contains a rich graptolitic fauna representative of the Tarannon shales of the English Silurian. The chief genera are *Monograptus*, *Petalograptus*, and *Retiolites*.—**Portland shale**, a division of the Portage group of the lower Upper Devonian of western New York.—**Pulaski shale**, in the New York series of geological formations, a group of shales developed in the vicinity of Pulaski, Oswego county, forming a local phase of the Lorraine stage of the New York Neochamplainic or Upper Silurian series.—**Purley shales**, a local phase of the middle Cambrian system developed in the Nuneaton district of Warwickshire, England.—**Rochester shale**, a division of the Upper Silurian rocks which lies beneath the Lockport dolomite and above the Clinton formation in New York, extremely profuse in finely preserved fossils which are closely similar to those of the English Wenlock. It is typically exposed between Rochester and Niagara Falls, but is not present in eastern New York.—**Shale naphtha.** See ★*naphtha*.—**Skaneateles shale**, the lowest division of the Hamilton series of the middle Devonian in central New York, resting on the Marcellus shale.—**Stockingford shales**, a division of the Cambrian rocks in the Nuneaton district of Warwickshire, comprising, in ascending order, the Purley, Oldbury, and Merevale shales.—**Utica shale**, a series of black shales in New York, lying above the Trenton limestone and below the Lorraine shales, which constitutes the topmost member of the Lower Silurian.—**Vernon shale.** See *Salina* ★*beds*.—**Warsaw shales**, a division of the Mississippian or Lower Carboniferous beds, which lies above the Keokuk limestone in the Mississippi valley.—**White-leaved-oak shales**, a division of the Cambrian system in the Malvern Hills, lying near the top of the section, below the Bronsil shale, and resting on the Hollybush sandstone. These shales are interleaved with basaltic outflows and contain characteristic trilobites which indicate their equivalence with the Lingula flags.—**Wianamatta shales**, the highest member of the Triassic system in New South Wales.

shale-ball (shāl'bâl), *n.* A local name at Meteor Crater, Coconino county, Arizona, for a globular mass, having an outer shell of limonite, an inner core of unoxidized iron, and an intermediate layer of nickel hydroxid and oxids of iron. Such balls are believed to be meteoritic in origin. *G. P. Merrill*, in Smithsonian Misc. Coll., 1907, IV. ii. 204.

shale-oil, *n.* **2.** A trade-name of mineral oil produced by the destructive distillation of bituminous shale, chiefly in the south of Scotland. It consists mainly of hydrocarbons of the paraffin, olefine, and crotonylen series, and yields as the principal commercial products illuminating- and lubricating-oils and solid paraffin wax for candles.

shale-tar (shāl'tär), *n.* Tar derived from certain thin shaly strata in the Carboniferous rocks, which contain bituminous matter.

shamanka (shä-män'kạ̈), *n.* [Russ. *shamanka*, < *shamanŭ*, Shaman, + *-ka*, a dim. and fem. ending.] A female Shaman.

shamash, *n.* See ★*shammash*.

shamba (sham'bä), *n.* [Swahili *shamba*, a plantation, a farm, a garden, etc., also the country, the rural regions.] A plantation; a portion of cultivated land.

> Statistics are given as to the manumission of slaves [East Africa], the greater number of whom have settled on "*shambas*" upon conditions entered into with the Arab cultivators. *Geog. Jour.* (R. G. S.), XVIII. 551.

shamble^{1}, *n.*—**Shamble meat**, fresh meat killed in the shambles, as opposed to salted, or to home-killed, meat. [Dial.]

> "Us did n't have no *shammel mate!*"—that is, no meat killed in the shambles but only the home-killed pig.
> Quoted in *N. and Q.*, 10th ser., I. 394.

shame-face (shām'fās), *n.* The spotted crane's-bill, *Geranium maculatum*.

shame-vine (shām'vīn), *n.* The sensitive-brier, *Leptoglottis uncinata*.

shamiana (shä-mi-ä'nạ̈), *n.* [Also *shameanah*, *shameeana*, *semianna*, etc.; < Hind. *shāmiyāna*, *shamiyāna*, dial. *samyāna*; said to be of Persian origin.] In India, an awning set on poles, forming a square tent with open sides, used for receptions and similar purposes.

shammash (shä'mash), *n.* [Heb. *shammash* (Yiddish *shames*), Syr. *shamosh*, *shamosho*, servant.] Among the Jews, especially in Russia and the Orient, one of the officers of the synagogue. In the United States the duties of the shammash have been curtailed and are now almost the same as those of a sexton, beadle, or janitor in Christian places of worship.

shamrock, *n.*—**Australian shamrock**, the Meninde clover, *Trigonella suavissima*. See under ★*clover*.—**Native shamrock**, in Tasmania, a valued forage plant, *Lotus australis*, for some time under suspicion as a poisonous plant. See *poison-plant* (*c*).—**Water shamrock**, the buckbean or marsh trefoil, *Menyanthes trifoliata*. Also called *water trefoil*.

shanga (shan'gä), *n.* Same as ★*changa*.

shanghai, *n.* **5.** A boys' catapult. [Australia.]

> The *shanghai*, which, as a secret instrument of mischief, is only less dangerous than the air-gun.
> *The Spectator* (Melbourne), July 17, 1875, p. 123, quoted [in E. E. Morris, Austral English.

Shanghai dollar. Same as *sun* ★*dollar*.

shanghai, *v. t.* **2.** To shoot with a shanghai. See ★*shanghai*, 5.

shanking, *n.* **2.** Same as ★*rattles*.

shank-ladle (shangk'lā"dl), *n.* An English name for the ordinary hand-ladle used in foundries to convey molten iron from the cupola to the molds: so named because the carrying-receptacle is borne in a ring formed in the carrying-handle or shank.

shank-steel (shangk'stēl), *n.* **1.** Steel having the properties which fit it for making shoe-shanks.—**2.** Steel suitable for shanks of anchors.

shanty^{2}, *v. i.* **2.** To visit the grog-shanty habitually; drink frequently or habitually at a public-house. [Slang, Australia.]

shanty-boat (shan'ti-bōt), *n.* Same as ★*wanigan*.

shanty-keeper (shan'ti-kē"pėr), *n.* One who sells liquor on the sly. *E. E. Morris*, Austral English. [Slang, Australia.]

shapai (shä'pī), *n.* [Amerindian of British Columbia.] In British Columbia, the Dolly Varden trout, *Salvelinus malma*.

shape^{1}, *n.* **9.** In *iron ship-building*, a general term including all forms of rolled bars, such as angle-bars, T-bars, I-bars, angle-bulb-bars, T-bulb-bars, channel-bars, Z-bars, etc., as distinguished from plates.—**Structural shapes**, rolled sections in steel or wrought-iron, which have been found convenient for combining in the framework of buildings and other structures. Such are angles, tees, channels, I-beams, Z-beams, and their combinations when riveted together. See *structural* ★*steel*.

shape^{2} (shä'pe), *n.* [See the extract below.] In Tibet, a privy councillor; one of the five who advise the Tibetan regent in state affairs.

> Another Tibetan title which has recently found its way into our journals [Aug., 1904] is *Shape* (two syllables). Yutok *Shape* was given as the name of one of the Tibetan peace delegates. *Sha-pe*, literally "lotos-foot," means a Privy Councillor, one of the five who advise the Tibetan Regent in State affairs. See Sandberg's 'Manual of Colloquial Tibetan,' 1894.
> *J. Platt, Jr.*, in N. and Q., 10th ser., II. 132.

shaper, *n.*—**Collar- and cuff-shaper.** See ★*collar*.—**Rotary shaper.** (*a*) A crank-shaper. (*b*) A shaper in which the piece operated upon can be rotated and hence a (nearly) cylindrical surface can be finished.

shaper-plate, *n.* **2.** Part of the mechanism on a spinning-mule for shaping the cop on the spindle. *Nasmith*, Cotton Spinning, p. 310.

shaper-wheel (shā'pėr-hwēl), *n.* A ratchet-wheel attached to the copping or shaping mechanism of a spinning-mule, to form the cop. *Nasmith*, Cotton Spinning, p. 308.

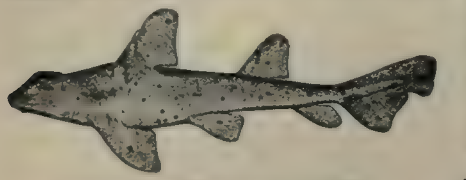
shapoo (shä'pö), *n.* A mountain-sheep, *Ovis vignei*, of central Asia, much resembling the bighorn of North America.

share^{1}, *n.*—**Founders' shares**, in *corporation law*, the part of the stock or shares of a corporation allotted to its promoters and organizers, the consideration for which usually consists in the things done or given whereby the corporation has been brought into existence.

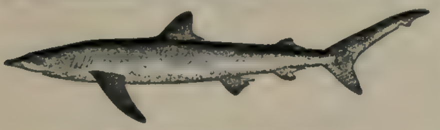
share^2, *n.* **1.** In primitive plows the share is the point or blade of iron or wood which stirs the soil. In modern turning-plows it is the entering member or segment, cutting the bottom of the furrow and is made of steel. In single-moldboard plows the share presents on one side a vertical surface with a horizontal base line, broadening by an excurved line, in the rear joining the land-side, with which it is in the same plane (see *bar share*, *slip share*, below); on the other side an oblique sloping surface extended on the outside into the 'wing' or 'heel,' on its upward and backward edges closely matching the mold-board.— **Bar share,** a plowshare which is consolidated with the land-side by welding. Compare *slip share* below.— **Double share,** a bilateral share used in a double-moldboard plow.— **Fin-cutter share,** a plowshare adapted to use with a fin-cutter, i.e., a vertical fin-shaped blade rising from the flat side of the share and serving as a colter.— **Slip share,** a plowshare secured to the land-side by bolting, therefore exchangeable. Compare *bar share*, above.

shariah (shạ-rē′ạ̈), *n.* [Ar. *sharī ʻah.*] The Mohammedan law.

shark^1, *n.*— **Bay-shark,** *Carcharhinus lamiella*, of San Diego Bay and the Mexican coast.— **Blind shark,** a long-bodied ray, *Rhinobatus granulatus.* It attains a length of 6 or 7 feet and lives on sandy bottoms feeding on crabs and the like. Also *sand-shark.* *E. E. Morris*, Austral English. [Australia.]— **Bramble-shark,** a shark of the family *Echinorhinidæ*, including only a single species of the eastern Atlantic.— **Bulldog shark.** Same as *Port Jackson shark.*— **Bull-head shark,** *Gyropleurodus francisci*, of the coast of California: especially interesting on account of its supposed relation to extinct forms.— **Cestraciont shark,** a shark of the family *Heterodontidæ*, of the suborder *Proarthri.*— **Cyclospondylous shark,** a shark of the order *Cyclospondyli.*— **Frilled shark,** a shark of the family *Chlamydoselachidæ*, containing a single species found in the open sea.— **Goblin-shark,** *Mitsukurina owstoni*, a species found in the deep waters off the coast of Japan, characterized by the peculiar trowel-like projection of the nose: hence sometimes called *rostrum-shark.* It attains a length of fourteen feet.— **Great blue shark,** *Prionace glauca*, of warm seas, occasionally taken off the coasts of the United States, but more common in Europe.— **Great white shark.** Same as *man-eater shark* (which see, under *shark*^{1}).— **Long-tailed shark.** Same as *thresher*^{1}, 3.— **Notidanoid shark,** a shark of the order *Diplospondyli.*— **Requiem shark,** a shark of the family *Galeidæ.* See ★*requiem.*— **Rostrum-shark.** Same as *goblin-★shark.*— **Saw-fish shark,** a shark of the family *Pristiophoridæ*, or genus *Pristiophorus*, embracing four species found in Australian and Japanese seas. They superficially resemble the saw-fishes (which belong among the rays), having the front of the head prolonged into a flat blade armed on each side with teeth. These saw-bearing sharks may at once be known from the saw-fishes by the position of the gill-slits, which are placed laterally rather than ventrally as in the saw-fishes and other rays.— **Scymnoid shark,** a shark of the family *Dalatiidæ.*— **Soup-fin shark,** a species of tope, *Galeus zyopterus*, in California, the dried cartilaginous fin-rays of which the Chinese use to make an excellent soup. See *tope*^{3}.— **True shark,** a shark of the suborder *Galei.* This group contains most of the living sharks.— **Typical shark,** a shark of the order *Asterospondyli.*



Bull-head Shark (*Gyropleurodus francisci*).
(From Bulletin 47, U. S. Nat. Museum.)



Great Blue Shark (*Prionace glauca*).
(From Bulletin 47, U. S. Nat. Museum.)

shark-barrow (shärk′bar″ō), *n.* The barrow or egg-case of a shark; a sea-purse or sea-barrow.

shark-hook (shärk′hůk), *n.* **1.** A large barbed hook for catching sharks.—**2.** An improvised hook-gage. [Slang.]

shark's-pilot (shärkz′pī″lọ̈t), *n.* Same as *rudder-fish*, 3.

shark-sucker (shärk′suk″ėr), *n.* One of the remoras, *Echeneis naucrates*, universally distributed over warm seas, being attached to large fishes without regard to species. Few large sharks are caught at Key West without them.

sharp, *n.*— **D sharp,** in *music:* (*a*) On the organ or piano keyboard, the black key on the right of each group of two black keys: also called *E flat.* (*b*) The tone given by such a key, or a tone in unison with such a tone: the D sharp next above middle C has (at French pitch) about 308 vibrations per second. (*c*) The staff-degree assigned to such a key or tone, being the same as that for D, but with a sharp upon it either in the signature or as an accidental. (*d*) A note placed on such a degree and indicating such a key or tone. (*e*) The key-note of the minor key of six sharps (*D sharp minor*). (*f*) In the fixed system of solmization, the sharp of the second tone of the scale, technically named *ri.*— **E sharp,** in *music*, a key, tone, or scale note a half-step above E. On the keyboard this is the same as F natural. On the staff E sharp is indicated by the same degree as E, but with a ♯ upon it either in the signature or as an accidental. E sharp is required as the proper seventh tone of the major key of F sharp and in several minor keys.— **G sharp,** in *music:* (*a*) On the organ or piano keyboard, the black key in the middle of each group of three black keys: also called *A flat.* (*b*) The tone given by such a key, or a tone in unison with such a tone: the G sharp next above middle C has (at French pitch) about 411 vibrations per second. (*c*) The staff-degree assigned to such a key or tone, being the same as that for G, but with a ♯ upon it either in the signature or as an accidental. (*d*) A note placed on such a degree and indicating such a key or tone. (*e*) The key-note of the minor key of five sharps (*G sharp minor*). (*f*) In the fixed system of solmization, the sharp of the fifth tone of the scale, technically named *si* (not to be confounded with the same syllable when used for the seventh tone).

sharping-corn (shär′ping-kôrn), *n.* A gift of grain which the farmers in some parts of England make at Christmas to the smiths for sharpening tools. *Blount*, Glossographia.

sharp-shooter, *n.* **1.** Specifically: (*b*) A soldier who makes 60 per cent. at target practice at ranges up to 1,000 yards. *Small Arms Firing Register*, 1906.—**3.** Any one of several hemipterous insects which puncture the cotton-boll, sometimes causing it to rot. *Homalodisca coagulata* is one of the commonest forms. The Mexican cotton-boll weevil was often called a 'sharp-shooter' when it was new in Texas.

> Early cotton . . . avoids to a great extent damage to the plant by the boll-worm, cotton worm, and *sharp-shooter*, as well as by a large number of fungous diseases.
> *Yearbook U. S. Dept. Agr.*, 1901, p. 377.

shas (shäs), *n.* A word formed, with an assistant vowel, from the initial letters of the Hebrew words *shisha sedārīm*, literally, 'the six orders,' the common rabbinical name for the Talmud, which is divided into six principal orders, namely: (1) Zeraim, seed; (2) Moed, holidays; (3) Nashim, women; (4) Nezikin, damages; (5) Kodshim, holy, sanctified things; (6) Ṭaharoth, purification.

shat (shut), *n.* [Ar. *shaṭṭ*, shore, coast, riverside, wharf.] A salina or saline playa; a dried-up salt lake. See *shott.* [North Africa.]

> The *shat*, or dried-up salt lake. . . . The *shats*, or salt lakes, of the south of Tunis are rather a disappointment to the traveller. On the map they promise so much in the way of expanse of water, and in reality all one sees is a flat plain of hardened mud, with a few streaks and pools of stagnant water and stretches of white salt incrustation. *Geog. Jour.* (R. G. S.), XI. 604.

shatchen (shät′ċhen), *n.* Same as ★*shadchan.*

shatter, *v.* **II.** *intrans.* **2.** Of cereals, to scatter the grain on account of overripeness.

> Other sorts from the East . . . *shatter* so badly that they soon have to be given up. Nonshattering varieties are in great demand.
> *M. A. Carleton*, in U. S. Dept. Agr., Div. Veg. Physiol. [and Pathol., Bulletin 24, 1900, p. 23.

3. Of soils, to fall into flakes or meal-like particles from the action of the weather instead of harsh angular particles as when broken by implements. *W. J. Malden*, Tillage and Implements, Glossary.

shave, *v. t.* **6.** In hat-making, to rub down the outside of (a felt hat), as with pumice or sandpaper.—**7.** To remove a thin film of oxid from a metal surface, as of sheet-lead or lead-pipe, so as to expose a clean area to receive the solder in making a joint.

shaved (shāvd), *p. a.* Affected by the action denoted by the verb 'shave'; specifically, noting a book with smooth-cut edges, as opposed to a similar book with rough or unshaved edges or leaves.

> The original edition of Spenser's 'Colin Clout,' 1595, 4to, 26*l*, 10*s*. (*shaved*), and of the same author's 'Prothalamion,' 1596. *Athenæum*, Jan. 2, 1904, p. 16.

shaver, *n.* **4.** In *leather-manuf.*, a workman who shaves the skins with a curriers' knife to get an even, smooth surface. See *shaving*, 3. *Modern Amer. Tanning*, p. 114.—**5.** An instrument or machine for removing a thin film or shaving: as, a spoke- or lap-*shaver.*—**6.** A pivoted knife and frame for cutting smoked beef into thin shavings.— **Rotary shaver,** a machine having a circular knife and adjustable feed for cutting dried meats into thin slices of uniform thickness.

shaving-cream (shā′ving-krēm), *n.* A soft paste intended for application to the face before shaving. It is usually made of high-grade cold-process soap free from excess of alkali, often with addition of glycerin and a little cocoanut-oil to facilitate lathering, and of scenting and coloring materials.

shaving-machine, *n.* **3.** In *leather-manuf.*, a machine for shaving the flesh side of hides or skins by means of a cylinder fitted with blades. *C. T. Davis*, Manuf. of Leather, p. 254.— **Wax-shaving machine,** a machine used by electrotypers for shaving the surface of their molding-composition or wax. *Census Bulletin* 216, June 28, 1902, p. 62.

Shawia (shâ′i-ạ̈), *n.* [NL. (Forster, 1776), named in honor of Thomas *Shaw* (1694–1751), an English clergyman, traveler, and botanist.] A genus of plants belonging to the family *Asteraceæ.* See *Olearia.*

shawl-goat (shâl′gōt), *n.* Same as *Cashmere* ★*goat.*

Shawnee-haw (shâ′nē-hâ″), *n.* [*Shawnee*, a tribe of North American Indians, + *haw*.] The larger withe-rod, *Viburnum nudum.*

Shawnee-wood (shâ′nē-wůd″), *n.* [*Shawnee*, a tribe of North American Indians, + *wood.*] The western catalpa or catawba-tree, *Catalpa speciosa.*

sheaf^1, *n.*— **Bearer of a sheaf.** Same as ★*vertex of a sheaf.*— **Perspective sheaves** (*geom.*), sheaves which are ejects of the same plane.— **Sheaf of lines.** Same as ★*sheaf of straights.*— **Sheaf of straights,** in *geom.*, the ∞^2 straights on a point.

shear^1, *n.* **4.** Deflection or deviation from the straight; curve or sweep; sheer: as, the *shear* of a boat.

> Some considerable *shear* to the bow lines will make a drier and safer boat. *Sportsman's Gazetteer*, p. 558.

5. In *geol.*, the attenuation or actual rupture of a mass of rock by a compressive strain, especially by one applied transversely to the bedding or foliation. It results in dragging out the component minerals into thin bands and, it may be, in rupturing their former continuity.

> In my paper on cleavage and distortion in the Geological Magazine I pointed out that it is to Sir John Herschel that we are indebted for the theory of the "molecular movement," which, I remarked, was in fact a "*shear*"—a term which has now been universally accepted for this kind of action in rocks; and in my "Physics of the Earth's Crust" I have explained how the crumpling in the harder and cleavage in softer layers of a rock would simultaneously arise from such a shearing movement. *O. Fisher*, in Nature, May 18, 1905, p. 56.

shear-blade (shēr′blād), *n.* One of the cutting-blades of a cloth-shearing machine.

shear-boom (shēr′böm), *n.* In *lumbering*, a boom so secured that it guides floating logs in the desired direction. Also called *fender-boom* and *glancing boom.*

shear-flocks (shēr′floks), *n. pl.* That portion of the nap which is cut from cloth while it is being sheared.

shearing-machine, *n.* **3.** A power-machine for clipping the fleece from the sheep; a sheep-shearer.— **Guillotine shearing-machine,** shears with two diagonal-edged knife-blades, of which the upper one moves vertically between guides. The guillotine-shears are used for shearing heavy plates and sheets as well as for puddled bars and blooms. *Phillips and Bauermann*, Elements of Metallurgy, p. 392.

shearing-plane (shēr′ing-plān), *n.* In *geol.*, the plane along which rupture takes place in rocks from a shearing-stress. *J. Geikie*, The Great Ice Age, p. 74.

shearing-stress, *n.*— **Curve of longitudinal shearing-stresses.** See ★*curves of ship calculation.*

shear-plane (shēr′plān), *n.* A plane along which strains of compression in the earth's crust are eased by shearing; a shearing-plane.

> The strata have been folded into close anticlines and synclines whose beds are often vertical or even overthrown, in some places severely faulted and occasionally overthrust, so that some are completely concealed by others that have been forced over them along *shear-planes* developed by the enormous pressures to which they have been subjected.
> *E. W. Claypole*, in Amer. Geol., Aug., 1903, p. 81.

shear-plow (shēr′plou), *n.* See ★*snow-plow.*

shears, *n. pl.* **2.** (*d*) In *calico-printing*, two metal clamps for holding the blade of the doctor on a cylinder printing-machine.—**5.** In the steam fire-engine, the side frames which carry the weight of the boiler and engine and transmit it to the wheels.— **Garden shears,** a form of cutting-shears with long wooden handles the plane of which is inclined to that of the cutting-blades: used for trimming hedges or borders or for other pruning work in gardens or lawns.— **Nail-plate shears,** a machine for cutting iron or steel plate into convenient sizes for the machines which are to make cut nails from such stock.— **Tailors' shears,** a form of shears in which the handles are bent from the line of the blades, so that the weight of the shears may be borne on a table while they are cutting cloth: the blades are longer than the handles.— **Tinmen's shears,** a hand-tool for shearing sheet-metal. The handles are longer than the cutting-blades and are either formed into a bow for the hand, or end in a bend toward each other such that they meet and stop the cut when the blades are parallel to each other.

shear-skid (shēr′skid), *n.* Same as ★*fender-skid.*

shearwater, *n.*—**Pink-footed shearwater,** *Puffinus creatopus,* a species resembling the common greater shearwater, but having pinkish feet; found off the Pacific coast of North America.—**Slender-billed shearwater,** *P. tenuirostris,* a small, dark-colored species of the North Pacific.

shear-zone (shēr′zōn), *n.* A belt of rock crushed and metamorphosed by compression. Along shear-zones massive rocks become schists. *J. D. Dana,* Manual of Geol. (4th ed.), p. 111.

sheath, *n.* **2.** (*d*) In old plows, the bar connecting the beam and sole in front: so called as sheathing the edge of the mold-board. It corresponds to the standard and in part to the shin (see ★*shin*^{1}, 8) of a modern plow. See ★*plow,* 1.—**Bast sheath.** See ★*bast*^{1}.—**Conducting sheath,** in *bot.,* the long cells of parenchyma in the inner cortex of the stem which invest the vascular bundles that pass into the leaves.—**Medullary sheath.** (*a*) See *medullary.* (*b*) The white substance of Schwann which surrounds the axis-cylinder in a nerve-fibril.—**Neumann's sheath.** Same as *dentinal sheath of Neumann* (which see, under *sheath*).—**Notochordal sheath,** an elastic envelop surrounding the notochord, known as the *elastica externa.*

sheathing-metal (shē′ᴛʜing-met″a̤l), *n.* An alloy of copper and tin, having somewhat the color of copper, used to cover the immersed surface of a wooden ship's hull to prevent the attack of boring marine worms, retard decay, and make adhesion of barnacles and vegetable growth more difficult.

sheath-piling (shēth′pī″ling), *n.* Same as ★*sheet-piling.* *Encyc. Brit.,* XXVI. 437.

sheave^{2}, *n.* **4.** The grooved wheel or disk on which a sliding door is carried upon a rail or track.—**5.** The disk or wheel over which a window-rope or -chain passes to the sash-weight.—**6.** The circular disk or body of an eccentric such as is used to operate the valves of steam-engines. [Eng.]

she-beech (shē′bēch), *n.* **1.** Same as *white sycamore* (which see, under *sycamore*). [Australia.]—**2.** Same as ★*beech*^{1}, 2.

shed^{1}, *v. i.* **3.** To fall prematurely, as the young bolls of cotton-plants do when affected by certain functional disorders. The disease is known as *shedding.*

shed^{2} (shed), *v. t.* To place in a shed; protect by means of a shed.

> If goats are to produce the best fleeces they are capable of they must be maintained in uninterrupted good condition. . . . They must not be kraaled (or *shedded*) except when absolutely necessary; they must have clean sleeping places, and must not be crowded together.
> *Yearbook U. S. Dept. Agr.,* 1901, p. 278.

shedding^{1}, *n.* **5.** Specifically, of the cotton plant, the dropping of young bolls. Shedding results to some extent from defect of pollination, but often from a deep cultivation at early flowering time, encouraging a growth of 'weed.'

> Over the eastern portion *shedding* was reported, with complaints of drought in portions of the Carolinas.
> *Yearbook U. S. Dept. Agr.,* 1899, p. 728.

Center shedding, the division of the warp in the center of the web in a Jacquard loom for the insertion of the weft. *T. W. Fox,* Mechanism of Weaving, p. 196.—**Closed shedding,** the leveling or closing of the warp-threads in a loom after the insertion of each weft-thread: opposed to *open* ★*shedding.*—**Open shedding,** a method of forming the warp-shed in a loom in which the warp-threads form two stationary lines, the changes being made by the threads passing from one fixed line to the other. *T. W. Fox,* Mechanism of Weaving, p. 20.

sheedy (shē′di), *n.* A local name in the Leeward Islands of the Spanish pistareen or 2-real piece.

sheep^{1}, *n.*—**Broad-tailed sheep.** Same as *fat-tailed* ★*sheep.*—**Criollo sheep,** a South American sheep descended from the Spanish merino but now so degenerated as little to resemble the latter in either wool or type.—**Dall's sheep.** See *mountain* ★*sheep.*—**Fannin's sheep.** See *mountain* ★*sheep.*—**Fat-tailed sheep,** the common name of a breed of sheep found in Syria, Asia Minor, and parts of Arabia, distinguished by its enormous tail, which sometimes weighs 40 or 50 pounds and is so long that it drags on the ground. Also known as *broad-tailed* and *flat-tailed sheep.* **Flat-tailed sheep.** Same as *fat-tailed* ★*sheep.*—**Indra's sheep,** delicate white alto-cumulus or alto-cirrus clouds.—**Mountain sheep.** Six species are now recognized from western North America, ranging from the Alaska Peninsula into Mexico. Dall's sheep, or white sheep, *Ovis dalli,* from the high regions of Alaska and adjoining British Territory, is almost pure white, with rather slender horns. Fannin's sheep, *O. fannini,* from the Yukon District, is bluish gray. Nelson's sheep, *O. nelsoni,* from southern and Lower California, is a small short-haired species. Stone's sheep, black sheep, *O. stonei,* from the mountains of British Columbia, is a handsome dark-colored animal.—**Nelson's sheep.** See *mountain* ★*sheep.*—**Shropshire sheep,** a breed of sheep resembling the Southdown, but larger, with a thicker fleece, a darker face, and more massive head.—**Stone's sheep.** See *mountain* ★*sheep.*

sheep^{1} (shēp), *v. t.* To pasture sheep upon; use as a sheep-range. [Western U. S.]

> The township has little value for pasturage, as it was long ago thoroughly "*sheeped.*" The lands, wherever accessible, have been "*sheeped*" so long that the grass has been exterminated. Most of the township has been closely "*sheeped,*" and its grazing value is exceedingly low. *U. S. Geol. Surv.,* Prof. Paper 22, pp. 36, 38, 54.

sheep-bine (shēp′bīn), *n.* The small bindweed, *Convolvulus arvensis.*

sheep-bug (shēp′bug), *n.* **1.** The sheep-tick, *Melophagus ovinus.*—**2.** A true tick of the genus *Argas.*

sheep-bur (shēp′bėr), *n.* The cockle-bur, *Xanthium strumarium.*—**Small sheep-bur,** the stickseed, *Lappula Lappula;* also, the American stickseed or beggar's-lice, *L. Virginiana.*

sheep-fly (shēp′flī), *n.* A European muscid fly, *Lucilia sericata,* allied to the screw-worm fly of the United States. Its larvæ infest the bodies of live sheep, especially in Great Britain and Ireland. *Nature,* Aug. 7, 1902, p. 352.

sheep-foot (shēp′fu̇t), *n.* The bird's-foot trefoil, *Lotus corniculatus.*

sheep-keep (shēp′kēp), *n.* Feed for sheep.

> The catch-croppings are therefore few and they are adopted more for the purpose of producing green-meat for cows and horses . . . than for *sheep-keep.*
> *W. J. Malden,* Tillage and Implements, p. 18.

sheep-poison, *n.* **3.** The upright yellow wood-sorrel, *Oxalis stricta.* Also called *poison sheep-sorrel.*

sheep-root (shēp′rŏt), *n.* The butterwort, *Pinguicula vulgaris.* Also called *sheep-rot* (which see).

sheep-scab (shēp′skab), *n.* Acariasis of sheep; specifically, the common sheep-scab, a disease due to mites (*Psoroptes communis*) which live on the skin and cause a formation of scab with fall of the wool. It is highly contagious, and economically one of the most serious of diseases. Scabby sheep cannot legally be shipped from one State to another. *Head-scab* is less frequent and less important; it is caused by the sarcoptic mite. *Foot-scab* is rather rare; it is caused by the chorioptic mite (*Chorioptes*). *Follicular scab,* caused by the demodectic mite, has been recorded in a few cases.

> In the appropriation bill for the current year (1894–95) tuberculosis and *sheep-scab* are specifically mentioned among those diseases which the Secretary of Agriculture is authorized to guard against in such manner as he may think best. *Yearbook U. S. Dept. Agr.,* 1894, p. 36.

sheep-shearer, *n.* **2.** Same as ★*shearing-machine,* 3. Also *sheep-shearers.*

sheep-sick (shēp′sik), *a.* Exhausted by sheep-pasturing and no longer fit for this use: applied to pasture-lands. [Australia.]

sheep-sorrel, *n.* **2.** Species of *Oxalis,* more properly called *wood-sorrel,* especially *O. Acetosella* and *O. violacea.*—**Poison sheep-sorrel,** *Oxalis stricta.* Also called *sheep-poison.*

sheepweed (shēp′wēd), *n.* **1.** The soapwort, *Saponaria officinalis.*—**2.** The butterwort, *Pinguicula vulgaris.*—**3.** The velvet-leaf, *Abutilon Abutilon.*

sheer^{3}, *v. i.*—**To sheer up,** to raise the sheer of a vessel.—**To sheer up aft,** to raise the sheer of a vessel at the quarters and stern.—**To sheer up forward,** to raise the sheer of a vessel at the bows and head.

sheer^{3}, *n.* **5.** A light scaffold, usually with three inclined legs, on which miners stand in drilling to get above the drill-rod.—**Sheer draft,** in *naval arch.,* a plan showing the lines of a vessel (see ★*line*^{2}, 4 (*b*)) in three parts: the *sheer plan,* showing the vessel in elevation with the vertical longitudinal sections in their true form; the *half-breadth plan,* showing the horizontal sections in true form; and the *body-plan,* showing the transverse vertical sections in true form. The three plans are interrelated and the whole delineates the form of the vessel. The surface usually shown is the molded surface, that is, the exterior surface of the framing with the planking or plating removed.—**Sheer line,** in *naval arch.,* one of the lines in the sheer draft indicating the sheer of a vessel at various levels, as the top-side line, gunwale line, deck line at side, etc.—**Sheer plan,** in *naval arch.,* a plan showing the form of a vessel in longitudinal elevation: one of the three plans forming the ★sheer draft (which see).

sheer-boom (shēr′böm), *n.* See ★*boom*^{2}.

> Ide had installed a system of *sheer-booms.* They spanned the current diagonally, and were to be the silent herders that would edge the log-flocks away from the banks, crowd them to centre at the sorting-gap, and keep them running free. *Holman Day,* King Spruce, p. 334.

sheer-lashing (shēr′lash-ing), *n.* *Naut.,* a lashing passed about the head of the sheers to confine them to one another.

sheer-mast (shēr′måst), *n.* *Naut.,* a mast which is made of two spars on the principle of sheers, and on which a yard is suspended.

sheet^{1}, *n.* **2.** (*e*) *pl.* A commercial name for crude rubber in thin pieces formed by coagulating the latex on a large leaf. See ★*rubber*^{1}, 3.

8. In *geol.:* (*a*) A mass of eruptive rock of great length and breadth as compared with its thickness. Two principal varieties are recognized: *surface flows,* which are poured out on the surface of the earth, and *intruded* or *intrusive sheets,* which are forced between relatively horizontal strata. (*b*) A deposit of any material, sedimentary or other, which has great areal extent and small thickness.

> In New York, the moraine is commonly rather free from large stones, as is the till *sheet* also.
> *Bulletin Amer. Geog. Soc.,* XXX. 199.

Intruded sheet, in *geol.,* a layer of igneous rock intruded in a nearly horizontal position, generally between strata of sedimentary rocks. See ★*sheet*^{1}, 8 (*a*).—**Intrusive sheet.** Same as *intruded* ★*sheet.*—**Sheet tent.** See ★*tent*^{1}.—**To give her sheet,** *naut.,* to slacken the sheets and give the sails more belly.—**To have the starboard sheets aft.** See ★*aft*^{1}.—**Vortex sheet,** in *hydrodynamics,* a surface, within the mass of a rotating fluid, made up of all the vortex lines that pass through any given line in the fluid.

sheet-brass (shēt′brȧs), *n.* Brass in sheets or broad thin plates.

sheet-ice (shēt′īs), *n.* Ice formed on the surface of a body of water.

sheeting, *n.* **5.** In carpenter-work, same as *sheathing:* a common term in the United States.—**6.** The breaking up of a massive rock into relatively thin, parallel tabulæ united by closely spaced faults or joints.

> The granite is very much altered by surface decomposition, and crumbles readily to a coarse sand. The granite is sheeted near the veins, the planes of sheeting being parallel to the veins themselves. The general *sheeting,* however, is in a different direction, the average strike being N.20°E., and the dip 70°SE.
> *Contrib. to Econ. Geol.,* U. S. Geol. Surv., Bulletin 213, [1902, p. 99.

sheet-leader (shēt′lē″dėr), *n.* A simple half-ring screwed to the deck of a ship. See ★*leader*^{1}, 5.

sheet-machine (shēt′ma̤-shēn″), *n.* Same as *sheeting-machine.*

Sheet-metal press. See ★*press*^{1}.

sheet-packing (shēt′pak″ing), *n.* Elastic packing of rubber or other material; packing made in large flat sheets of varying thicknesses.

sheet-piling (shēt′pī″ling), *n.* A vertical, thin diaphragm formed by driving into the soil planking, timbers, or narrow iron or steel members, the edges of which are kept in close contact and sometimes grooved together, used for the purpose of confining or supporting the soil on one side of the sheet-piling when that on the other is removed by excavating. Also *sheath-piling.* *Sci. Amer. Sup.,* Jan. 10, 1903, p. 22591.

sheet-steel (shēt′stēl), *n.* Steel in thin sheets, less than one quarter of an inch in thickness.

sheetwise (shēt′wīz), *adv.* In the manner of sheet-work: said of the printing of a sheet by two operations, first from a form on one side, then from another form on the other side. For a different method see *to work and* ★*turn.*

> One of the difficulties of *sheetwise* imposition is that of making register when there is a shrinkage of furniture in either form. Another is its greater liability to unevenness of color or of impression when the two forms are done on different presses and by different pressmen.
> *DeVinne,* Mod. Book Composition, p. 352.

sheety (shē′ti), *a.* Consisting of or resembling sheets; showing a tendency to break up into thin tabular masses: applied specifically to massive or eruptive rocks. *Contrib. to Econ. Geol.,* U. S. Geol. Surv., Bulletin 213, 1902, p. 287.

shel, *n.* and *v.* A simplified spelling of *shell.*

sheldrake, *n.*—**Winter sheldrake,** in New England, the merganser, *Merganser americanus,* which is found along the coast in winter.

shelf^{2}, *n.*—**Continental shelf,** the relatively shallow sea-bottom bordering a continent, in contrast to the deep ocean-floor; the submerged border of a continental plateau.

> The ocean often overlaps the borders of the continental masses in a comparatively shallow belt of water, at whose outer edge the depth is commonly about 600 feet; thence it rapidly sinks to the deep ocean floor. These shallow bottoms are known as *continental shelves.* The water on the shelf is often greenish from fine suspended sediment, unlike the clear deep blue water of the open ocean. A well-defined *continental shelf,* from 50 to 100 or more miles in width, stretches along the eastern side of North America from Newfoundland to Florida, and thence around the Gulf of Mexico. The British Isles stand upon a *continental shelf* that borders mid-western Europe. *W. M. Davis,* Elem. Phys. Geog., p. 107.

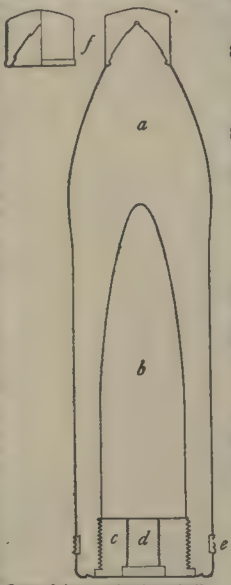
shelf-fungus (shelf′fung″gus), *n.* Same as ★*bracket-fungus.*

shelf-furnace (shelf′fėr″nạs), *n.* A furnace with shelves for the reduction of mercury ores. The shelves are arranged in an inclined position along the walls of the shaft and serve to retard the fall of the ore. A furnace with shelves was also much used formerly for roasting ores, there being several varieties. *Phillips and Bauerman,* Elements of Metallurgy, p. 603.

shelf-ladder (shelf′lad″ėr), *n.* A ladder designed for use in libraries and stores to give access to high shelves and drawers. It is fitted with wheels at the top and bottom on which it can be moved.

shelf-list (shelf′list), *n.* A list of the books in a library in the order of their location: distinct from the accessions list, and the author and subject catalogues.

shell, *n.* **19.** A smoked or colored concavo-convex glass for shielding the eye.—**20.** In *sheet-metal work,* any piece of sheet-metal upon which one operation has been performed and which requires one or more additional operations to complete it. It is usually of a cup or shell form.—**21.** The dug-out portion of a West Indian canoe, which consists of a dug-out the sides of which are built up to any required height. See ★*buck-shell.*—**22.** The part of a horse-hide obtained from the rump: a comparatively small piece. *Flemming,* Practical Tanning, p. 398.—**23.** The porous cover of ferric oxid which incloses the kernel of concentrated copper obtained in roasting cupriferous iron pyrites. See ★*kernel-roasting. Phillips and Bauerman,* Elements of Metallurgy, p. 485.—**24.** A special form of hollow flat-iron used in finishing felt hats.—**Armor-piercing shell,** a shell made of special steel with hardened point and strong walls, especially designed to penetrate through armor and containing a comparatively small bursting charge. A *semi-armor-piercing shell* is one of a character intermediate between the armor-piercing and common shell, with hardened point, and a medium-sized bursting charge, designed to penetrate moderate thicknesses of armor and burst after penetrating the armor.—**Blind shell.** (*d*) A shell containing no bursting charge.—**Capped shell,** an armor-piercing shell fitted with a soft steel plug or cap covering the point of the shell. The soft steel cap enables the shell to penetrate hard-faced armor against which the shell would otherwise break up.—**Common shell,** a shell with comparatively thin walls, containing a large explosive charge and not designed to penetrate armor.—**Flat-nose shell,** in *mining,* a cylindrical boring-tool having a valve at the bottom, used for boring through soft earth or clay.—**Pearly necklace-shell.** Same as ★*mariner,* 2.—**Roman-lamp shell,** a Tasmanian name for a brachiopod, *Waldheimia flavescens. E. E. Morris,* Austral English.—**Torpedo shell,** a projectile with thin walls and consequent large capacity for a bursting charge, and longer than the ordinary shell, or cored shot: used in mortar-firing.



Capped Armor-piercing Shell.

a, original head; *b,* powder-chamber for bursting charge; *c,* base-plug; *d,* hole for base-fuse; *e,* copper rotating band; *f,* soft steel cap.

shell-bed (shel′bed), *n.* A bed largely composed of shells: chiefly employed in glacial geology to describe the interglacial or postglacial beds associated with the continental ice-sheet. *J. Geikie,* The Great Ice Age, p. 268.

shell-boiler (shel′boi″lėr), *n.* A form of steam-generator in which the water from which the steam is generated is surrounded by a continuous shell of steel or other malleable metal, usually of a cylindrical form.

shell-curved (shel′kėrvd), *a.* In the rococo decoration of the eighteenth century, said of motives having curved lines similar to those of a sea-shell.

> The *shell-curved* lines which maintain their decorative value in the Salle à Manger have here disappeared.
> *Lady Dilke,* French Furniture and Decoration of XVIII [Cent., p. 48.

shell-extractor (shel′eks-trak″tọr), *n.* An instrument for extracting cartridges from small-arm rifles.

shell-eye (shel′ī), *n.* A dorsal eye; one of the supposed organs of sight found on the shells of various univalve and bivalve mollusks.

shell-feed (shel′fēd), *n.* In a cotton-carding machine, a feeding device consisting of a flat plate with its inner end turned up to conform to the curvature of a feed-roller. See ★*dish-feed.*

shell-fish, *n.*—**Rock shell-fish.** Same as *trunk-fish.*

shell-fishery (shel′fish″ėr-i), *n.* The industry of gathering oysters, clams, and other shell-fish; a mollusk fishery.—**Commissioner of Shell-fisheries,** a State official concerned with the protection, cultivation, and industry of gathering shell-fish in public waters. *Forest and Stream,* Jan. 31, 1903, p. 93.

shell-game (shel′gām), *n.* Another name for thimblerig, walnut-shells being used instead of thimbles to cover the pea which the victim tries to find.

shell-gland, *n.* **3.** In flatworms, the gland which supplies the material for the formation of egg-shells.

shell-opal (shel′ō″pạl), *n.* The nacreous substance of any molluscan shell in a fossil condition.

shell-plate (shel′plāt), *n.* One of the plates which form the shell or outer covering of a ship or of a boiler.

shell-plating (shel′plā″ting), *n.* In *iron shipbuilding* the plating which forms the outer shell of a vessel: also called *outside plating.*

> Iron or steel ships have comparatively thin *shell-plating* stiffened by transverse and longitudinal frames.
> *White,* Manual of Naval Arch., p. 333.

shell-powder (shel′pou″dėr), *n.* Quick-burning gunpowder especially made for the bursting-charges of shell and shrapnel.

shell-rack (shel′rak), *n.* *Naval,* a rack or support for the stowage of shells in the immediate vicinity of a gun.

shell-road (shel′rōd), *n.* A form of highway or pavement in which the road surface is composed of oyster, or other, shells.

shell-roll (shel′rōl), *n.* A form of drawing-roll used on cotton-machinery, consisting of a cylindrical shell of cast-iron on an arbor. See ★*boss-roll. Nasmith,* Cotton Spinning, p. 164.

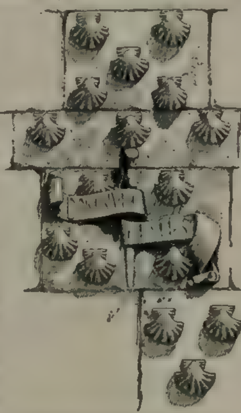
shell-shake (shel′shāk), *n.* Same as ★*ring-shake.* See also *shake,* 7.

shell-tracer (shel′trā″sėr), *n.* A device for showing the flight of a projectile at night and the point at which it strikes. A composition which burns slowly with a brilliant light is placed in the base of the projectile to be ignited upon firing.

shell-ware (shel′wãr), *n.* A name sometimes given to Gombroon ★ware (which see).

shell-work, *n.* **2.** In decorative design, especially carved or modeled, a motive which imitates or is suggested by the forms of shells.

shelter-belt (shel′tėr-belt), *n.* A natural or artificial forest maintained as a protection from wind or snow. A *wind-break* is a narrow shelter-belt in which true forest conditions do not exist, maintained as a protection against wind; a *snow-break* is a similar protection maintained against snow. Also called *wind-mantle* and *shelter-wood.*



Shell-work, Hôtel Cluny, Paris.

shelter-deck (shel′tėr-dek), *n.* See ★*deck,* 2 (*c*).

shelter-parasite (shel′tėr-par″ạ-sīt), *n.* An organism, such as certain of the algæ, which inhabits a cavity already present in the host or a place of shelter formed with the assistance of the algæ.

> The manner in which typical chlorophyllous plants gradually become *shelter-parasites,* and pass from this into the condition of true parasites is well demonstrated amongst the algae. *Tubeuf,* Diseases of Plants, p. 541.

shelter-trench (shel′tėr-trench), *n.* *Mil.,* a trench hastily excavated to secure shelter from an enemy's fire.

shelter-wood (shel′tėr-wůd), *n.* Same as ★*shelter-belt.*

shelv, *v.* and *n.* A simplified spelling of *shelve.*

shema (she-mä′), *n.* [Heb. *shem′a,* ‘hear,’ impv. of *sham′a,* hear.] In *Jewish ritual,* a name for the first word of the verse, Deut. vi. 4, and also for the verse itself, “Shem′a Yisrael,” etc., “Hear, O Israel, Jehovah is our God, Jehovah is one,” recited as the Jewish confession of faith. The term is also applied to the whole six verses, Deut. vi. 4–9, and to other verses, Deut. xi. 13–21 and Num. xv. 37–41, which form the confession of the liturgy. The shema is considered the sum and substance of the Jewish faith. It is taught to children before they learn to read. It is included by every pious Jew in his morning and evening prayers, and the first words form a sort of password among Jews everywhere. The shema is also written on square pieces of parchment which are fastened to the door-posts (see *mezuzah*), and it is placed in phylacteries.

Shenango group. See ★*group*1.

she-oak, *n.* **2.** Beer made in Australia or other English colonies. *E. E. Morris,* Austral English. [Slang.]

shepherd, *n.* **2.** A miner who does not work a claim, though preserving his legal rights respecting it. [Australia.]

sherardize (sher′ạ̈r-dīz), *v. t.*; pret. and pp. *sherardized,* ppr. *sherardizing.* [From the name of the inventor of the process.] To coat iron or steel with zinc by exposing the previously cleaned surfaces to zinc by heating them in a closed chamber containing zinc-dust.

shergottite (sher′got-īt), *n.* See ★*meteorite.*

sherif1, *n.* **3.** A high dignitary having both temporal and spiritual authority among the Sulus and other Mohammedans of the Philippine Islands. *D. C. Worcester,* Philippine Islands, p. 159.

sherif2, *n.* A simplified spelling of *sheriff.*

sheriff1, *n.*—**Issues on sheriffs.** See ★*issue.*—**Sheriff depute** or **sheriff principal,** in *Scots law,* the chief officer and judge of a county, with both civil and criminal jurisdiction. His court is known as the *sheriff court* and its clerk as *sheriff clerk.*

> Not its least valuable feature is the notices which he has compiled of the early sheriffs and *sheriffs-depute.*
> *Athenæum,* May 27, 1905, p. 655.

Sheriff's inquest. See *sheriff's jury,* under *jury.*—**Sheriff's sale.** See ★*sale*1.

sheristadar (she-ris-tä-där′), *n.* [Also *serishtadar; sar-rishtā-dār,* keeper of the clue, or file. *Yule and Burnell.*] In India, a court officer; a register-keeper who receives plaints, sees that they are in proper form and duly stamped, records depositions, etc., and generally attends to routine business. *Yule and Burnell,* Hobson-Jobson.

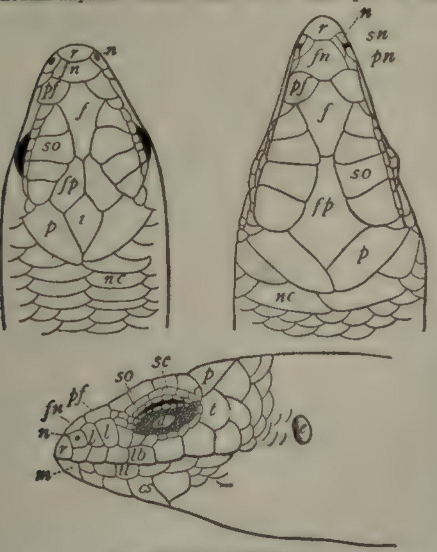
shibuichi (shē-bö-ē′chẹ̄), *n.* [Jap. *shi-bu-ichi,* ‹ *shi,* four, + *bu,* part, + *ichi,* one.] A composition extensively used in Japanese decorative art, composed of three parts of copper to one of silver.

shicer (shī′sėr), *n.* [Of low (prob. German) origin.] **1.** An Australian name for a mine which produces no valuable ore. Also called a *duffer. E. E. Morris,* Austral English.—**2.** A worthless or despicable person; specifically, one who does not pay debts of honor. Compare *shyster.* [Colloq.]

shield, *n.* **2.** (*c*) In *subaqueous tunneling,* a short metallic cylinder with its axis parallel and coincident with the axis of the circular tunnel, and with its diameter slightly larger than the exterior diameter of the masonry or metallic permanent tunnel lining. The shield is provided with a diaphragm of metallic construction occupying its entire cross-section, and through which openings give access from the rear to the forward compartment. The shield is forced forward by hydraulic or other pressure, driving the cylindrical cutting-edge or the forward extension of the shield in front of the diaphragm into the soft material through which the tunnel is being driven. The material overhead being thus protected from falling by the upper cylindrical portion of the shield, the material inside the forward compartment can be removed by workmen through openings in the diaphragm.

> The *shield* employed in the Hudson River tunnel is a cylinder, thirteen feet long and twenty feet in diameter, with a hardened-steel “cutting edge,” fifteen inches in length and three inches in circumference.
> *The Century,* Nov., 1903, p. 40.

(*g*) A guard placed over or in front of rapidly moving machinery, especially over cutters such as saws and planes, to protect the workmen from accidents. (*h*) A guard placed around belting where it passes through a floor, or around gears to prevent clothing of workmen or passers-by from becoming entangled. (*i*) A covering over bearings and shafts of grinding machinery to keep grit and dust from working into the contact-surfaces. (*j*) A guard placed on an exposed shaft, and turning loosely with it, to prevent injury from accidental contact with the revolving mass.—**Buccal shield.** See ★*buccal.*—**Canthal shield.** See ★*canthal scale.*—**Conning-tower shield.** See ★*conning-tower.*—**Dorsal shield,** in ophiuroids, one of the four plates which lie above the vertebral ossicle.—**Embryonic shield,** in *embryol.,* a shield-shaped region of the blastodisc in embryonic reptiles.—**Frontal shield.** (*b*) In *herpet.,* an unpaired scute or scale which occupies much the same position on the top of the head that the frontal bone



Head-shields of Scinid Lizards.

cs, chin-shields; *d*, disk on lower eyelid; *e*, ear-opening; *f*, frontal; *fn*, frontonasal; *fp*, frontoparietal; *i*, interparietal; *ll*, lower labials; *l*, loreals; *lb*, upper labials; *m*, mental; *n*, nasal; *nc*, nuchals; *p*, parietals; *pf*, prefrontal; *pn*, postnasal; *r*, rostral; *sc*, supraciliaries; *sn*, supranasal; *so*, supraocular; *t*, temporal.

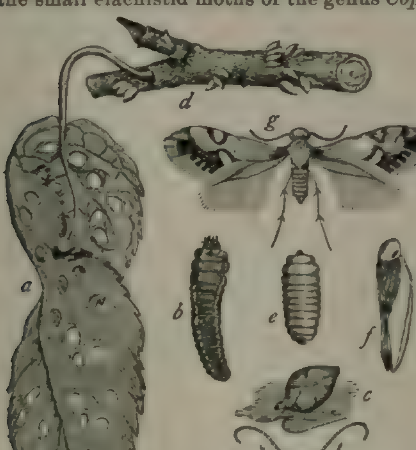
(After Stejneger, Report U. S. Nat. Museum.)

does in the skull.—**Frontonasal shield**, in *herpet.*, a median unpaired dermal scale which forms part of the covering of the head. It lies immediately in advance of the frontal.—**Frontoparietal shield**, in *herpet.*, one of a pair of dermal scales which form part of the covering of the head. It lies between the frontal and the parietal shields.—**Intergular shield.** Same as ★*intergular*.—**Interparietal shield**, in *herpet.*, a median unpaired dermal scale which forms part of the covering of the head and lies between the parietals.—**Loral shield**, one of the plates or scutes forming part of the covering of the head of reptiles, especially lizards, lying just in front of the eye.—**Magnetic shield**, a shield or wall of magnetic material, usually iron, used to protect an instrument such as a watch or a galvanometer from the action of magnetic fields.—**Mental shield**, a horny plate which covers the front of the chin in reptiles.—**Nasal shield**, in *herpet.*, the horny plate covering the end of the nose.—**Nasorostral shield**, in *herpet.*, a single horny plate or shield representing the nasal and rostral shields on the nose of a reptile. *Proc. Zool. Soc. London*, 1903, p. 185.—**Parietal shield**, one of a pair of large scales, forming part of the covering of the head of reptiles, lying at the back of the series of head-scales, much in the position of the parietal bone.

shield-back (shēld′bak), *n.* In old English furniture, a back the center of which resembles a shield.

> In the "*shield back*" chair, which is Hepplewhite's favourite shape, the shield and its interior ornament making the splat never touch the seat of the chair at all.
> *K. W. Clouston*, Chippendale Period of Eng. Furniture, [p. 65.

shield-bearer (shēld′bãr″ėr), *n.* Any one of the small elachistid moths of the genus *Coptodisca* (formerly *Aspidisca*), as the resplendent shield-bearer.—**Resplendent shield-bearer**, an American tineid moth, *Coptodisca splendoriferella*, whose larva mines the leaves of the apple, plum, and pear, eventually making an oval leaf-case which it carries about. *Comstock*, Manual of Insects, p. 254.



Resplendent Shield-bearer (*Coptodisca splendoriferella*).

a, leaf of apple showing work; *b*, summer larva; *c*, larva in case, traveling; *d*, cases tied up for winter; *e*, hibernating larva; *f*, pupa; *g*, moth; *h*, parasite: all enlarged.

(Comstock, U. S. D. A.)

shield-hand (shēld′hand), *n.* See the extract.

> Fixed in all our military and social customs, and living at the base of language itself are two facts which solve the riddle and make clear whence and how right-handedness arose. In all tribes and countries since man used implements of offense and defense, the sinistral or cardiac side was protected by the shield and the sinistral hand was called the *shield-hand*, as the dextral was called the spear-hand.
> *G. M. Gould*, in Med. Record, Nov. 2, 1907, p. 724.

shield-ibis (shēld′ī″bis), *n.* Same as *shell-ibis*.

shielding (shēl′ding), *n.* [*shield*, *v.*] The act of protecting or screening, or that which protects or screens.—**Magnetic shielding**, protection, as of the works of a watch or the needles of a galvanometer from the action of an external magnetic field. Magnetic shielding is commonly attained by surrounding the object to be screened with an iron case. Sometimes two or more concentric layers of iron are used. *Astrophysical Jour.*, July, 1903, p. 19.

shield-pigeon (shēld′pij″ọn), *n.* A breed of domesticated pigeons of small size. The head and body are white and the wings party-colored; there is no crest. Commonly called *shield*.

shift, *n.* **11**. In *pianoforte-making*, the action of the shifting ★pedal (which see).—**Angle of shift**, in *elect.*, the angular displacement of the brushes of a generator or motor, made necessary by the distortion of the magnetic field of the machine.—**One-string** or **two-string shift.** See *shifting* ★*pedal*.—**Shift of butts.** See ★*butt2*.

Shifting-pivot carriage, a gun-carriage used in the old types of war-ships in which heavy pivots secured to the deck were used for training the guns. By a suitable arrangement of front and rear pivots, the gun-carriage could be shifted from the center line so as to pivot in a gun-port on either side of the vessel.

shift-joint (shift′joint), *n.* In *masonry*, the placing of a stone or brick so that the vertical joints will come over the solid members of the course below; a break-joint; also, the stone or brick so placed.

Shigaraki pottery. See ★*pottery*.

Shiga's bacillus. See ★*bacillus*.

shikar (shi-kär′), *v. t.*; pret. and pp. *shikarred*, ppr. *shikarring*. [Hind. *shikār*, hunting. See *shikaree*.] To hunt; chase game; hence, tease; haze.

> The 'Shikarris' [nickname of regiment] *shikarred* [him] very much, and he bore everything without winking.
> *R. Kipling*, His Wedded Wife, in Plain Tales from the [Hills, p. 159.

shikimi (shē̦-kē′mē), *n.* [Japanese.] The Japanese anise-tree, *Illicium religiosum*. See *Illicium*.

shikimic (shi-kim′ik), *a.* [Jap. *shikimi* (see def.) + *-ic*.] Noting an acid, a colorless, levo-rotatory, non-poisonous compound, $C_7H_{10}O_5$, contained in the fruit of *Illicium religiosum* (Japanese shikimi). It crystallizes in fine needles, and melts at 184° C.

shikimin (shik′i-min), *n.* [Jap. *shikimi* + *-in2*.] A colorless, poisonous crystalline glucoside contained in the seeds of *Illicium religiosum* (Japanese shikimi).

shikimol (shik′i-mol), *n.* [Jap. *shikimi* (see *shikimin*) + *-ol*.] Same as *safrol*.

shilling, *n.* **3**. In *archery*, a measure of weight for arrows, equal to the weight of a new (British) silver shilling: as, a 4*s.* 6*d.* arrow.—**Baltimore shilling.** Same as *Maryland* ★*shilling*.—**Bermuda shilling**, a silver coin struck about 1615.—**Maryland shilling**, a silver coin struck by Lord Baltimore (Cecil Calvert) for the colony of Maryland about 1659.—**New England shilling**, a silver coin, stamped with the letters NE, struck in the colony of Massachusetts in 1652.—**Pomfret shilling**, a siege-piece of Charles I. of England, struck at the castle of Pomfret (Pontefract).—**Shove-groat shilling**, a worn shilling used in the game of shove-groat, which was new in England in the reign of Henry VIII. See *shove-groat*.—**Sixty shilling**, a Scotch silver coin of the time of William and Mary.—**York shilling**, the unit of the colonial currency of New York, that is, the Mexican real, eight of which went to the Spanish milled dollar and twenty to the New York currency pound.

shim2, *n.* **4**. An imperfect shingle, thicker at one side than the other; also, an imperfect stave for a bucket. [Local.]

shimmer2 (shim′ėr), *v. t.* [*shimmer2*, *n.*] In *mech.*, to correct an inequality by inserting a thin slip or shim.

> A remedy for this [poor fitting of share and mold-board] is procured by *shimmering* the share up or down with small pieces of paste-board.
> *Davidson and Chase*, Farm Machinery and Farm [Motors, p. 71.

shimose (shi-mō′sā̦), *n.* [Said to be named after its Japanese inventor.] An explosive, which consists largely of picric acid, made and used by the Japanese. The exact composition is not generally known.

> An explosive used by the Japanese, and called *Shimose*, after its inventor, for want of a better name, is said to be more powerful than either dynamite or gun-cotton, and to possess features found in no other high-power explosive. *Shimose* does not explode on percussion, or by fire, and is not injured by wetting. When it is exploded, by a charge of fulminite, it tears a hole several hundred per cent. greater than would result from the use of a similar quantity of dynamite, and, unlike that substance, its force is equally exerted in all directions.
> *Amer. Inventor*, June 1, 1904, p. 256.

shin1, *n.* **7**. In a modern turning-plow, the lower front corner of the mold-board, next the share and forming part of the cutting edge. It replaces in part the head or sheath of old plows.—**Double shin**, a mold-board shin reinforced by a piece of steel welded on.—**Sore-shin disease.** See ★*disease*.—**Sore-shin fungus.** See ★*fungus*.

shin3 (shin), *n.* An adapted pronunciation of the abbreviation *sinh*, used as a colloquial substitute for 'hyperbolic sine.'

shin4 (shēn), *n.* [Heb. Aram. Syr. Ar. *shīn*.] The twenty-first letter (ש) of the Hebrew alphabet, corresponding in sound to the English *sh*. Its numerical value is 300.

shiner, *n.* **3**. (*f*) A minnow of the genus *Notropis*.—**Spotted shiner**, one of the cyprinoid fishes, *Hybopsis dissimilis*, found in the eastern Great Lake region.

shingle1, *n.*—**Dimension shingle**, a shingle having a definite measurement as regards width or length, or both.—**Shaved shingle**, a shingle cut by hand in the old-fashioned way, generally by means of the drawing-knife, which gives it the wedgelike form, while the butt is held in a strong vise.

shingle-band (shing′gl-band), *n.* One of the wooden cross-bars used to hold a bunch of shingles together by being tied together at the ends. See cut under *shingle1*.

shingle-bolt (shing′gl-bōlt), *n.* A block of wood ready to be cut into shingles. See cut under *shingle1*.

shingle-press (shing′gl-pres), *n.* A simple form of press for use in bunching shingles.

shingle-saw (shing′gl-sâ), *n.* A saw or machine by which shingles are cut from the stock or bolt. The shingle having a definite taper from point to butt, the holder or carrier must present the stock alternately to the saw at tip and butt, to ensure least waste of stock.

shingling, *n.* **3**. In *geol.*, the arrangement of flat pebbles or boulders in such a manner that they overlap like shingles. It is especially marked in the coarse gravel of a beach (shingle) or on the bottom of a swift river, and may be detected in conglomerates.

> Besides the sandstone and shale elements, the rusty quartz pebbles which have been mentioned in connection with the old valleys on the north side of the Ohio are here a very marked feature, as are also the numerous nodules of hematite ore. In three instances a very imperfect *shingling* was observed.
> *W. G. Tight*, in U. S. Geol. Surv., Prof. Paper 13, p. 64.

shining-grass (shī′ning-gràs), *n.* **1**. The spotted touch-me-not or jewel-weed, *Impatiens biflora*.—**2**. The early meadow-rue, *Thalictrum dioicum*.

shinnery (shin′ėr-i), *n.* [*shin1*, alluding to low growth.] A dense growth of shrubby timber covering a large area, of mixed composition but predominantly of shin-oak (which see). [Southwestern U. S.]

> A great deal of the *shinnery* country undoubtedly represents a recent gain of timber growth on prairie divides.
> *U. S. Dept. Agr.*, Bur. Forestry, Bulletin 49, p. 23.

shin-oak (shin′ōk), *n.* [*shin1* + *oak*, alluding to the low growth.] **1**. One of several dwarf oaks of the southwestern United States, forming the largest element in 'shinneries.' That perhaps most properly so called is *Quercus undulata* (also called *scrub-oak*). Others are *Q. gambelii* and *Q. breviloba* (both also called *white oak*).—**2**. The upland willow oak, *Quercus cinerea*.

Shino pottery. See ★*pottery*.

shin-wood (shin′wůd), *n.* The American yew or ground-hemlock, *Taxus Canadensis*.

shiny, *a.* **3**. Rubbed smooth by abrasion: said of cloth, rails, wire rope, etc.—**4**. Reflecting light or showing differences in shade or color on account of the presence of a film of grease, as in cloth, or its absence locally from a surface which is normally lubricated, as in engine-guides.

> The entire rope, including the hemp center, is kept constantly lubricated and never allowed to work "*shiny*." The rope grease is applied with a brush, it having been found that better penetration between the wires is obtained in this way.
> *Sci. Amer. Sup.*, Dec. 27, 1902, p. 22564

ship, *n.* 3. [Ar. *markeb*, ship.] In an ancient style of chess played with dice, the piece called 'bishop' in the modern game. In this game each player had two sets of white pieces and two sets of black pieces respectively, consisting of two kings, two rooks (elephants), two knights (equestrians), two bishops (ships), and four pawns (pedestrians) each.

> Our word Rook, . . . is no doubt the Roka, or *Ship* of the Hindoos; for by no other supposition can a meaning be ascribed to it.
> *H. Staunton*, Laws and Prac. of Chess, p. 4.

Belted ship, an early type of armored war-ship in which the hull-protection was concentrated in the water-line armor-belt.—**Line-of-battle ship**. Same as *ship of the line* (which see, under *ship*).—**Lofty ship**, a ship that carries long masts; a square-rigged vessel is said to be a lofty ship because she has lower masts, topmasts and topgallant masts, and sometimes royal masts.—**Symondite ship**, an obsolete type of British war-ship having a peg-top form of cross-section, devised by (and named for) Admiral Symonds.

> A single roll, even of a *Symondite ship*, may not produce much vertical motion, but a succession of rolls may.
> *White*, Manual of Naval Arch., p. 163.

ship-maul (ship'mâl), *n.* A long-handled, heavy steel hammer used by shipwrights, one end of which is flat-faced while the other has a conical point. Also called *pin-maul*.

shipper, *n.* 4. A tobacco suited for export; a shipping tobacco. See *export* ★*tobacco*.

> It is also a first-class "*shipper*," and is sought for by the stemmer for making the highest grade of strips for the English market.
> *Killebrew and Myrick*, Tobacco Leaf, p. 321.

shipper-fork (ship'ėr-fôrk), *n.* A two-pronged device for guiding a belt from one pulley to another on a machine.

shipping, *n.*—**Merchants' Shipping Act**, an act, passed in 1854 in Great Britain, which requires all masters and other officers of British merchant-vessels to be examined and to obtain certificates of competency issued in accordance with the provisions of the act. These certificates are granted by the British Board of Trade.—**Shipping commissioner.** See ★*commissioner*.

shipping-jacket (ship'ing-jak″et), *n.* A wadded hood or cover used to slip over a milk- or cream-can to protect the contents from excessive heat or cold during transportation.

ship-sloop (ship'slöp), *n.* Formerly, in the British navy, a sloop of war under the command of a captain of full rank: so called because officers of such high rank were supposed to fly their pennant on nothing lower in rating than a ship or frigate.

ship-splice (ship'splīs), *n.* A special type of scarf used in splicing or joining broken timbers, especially in repairing railroad-cars; properly, a scarf having two cuts, one diagonal to the length of the timber and the other at nearly a right angle.

shire-horse (shīr'hôrs), *n.* A breed of English draft-horses that has long been cultivated in Lincolnshire, Cambridgeshire, and other counties to the west. The color is black; the height from 17 to 17.3 hands.

shirozame (shē-rō-zä'mạ̄), *n.* [Jap., < *shiroi*, white, + *zame*, shark.] A shark of the family *Carchariidæ*, *Mustelus manazo*. Also called *manazo*.

shirry (shėr'i), *a.* [*shirr* + *-y*^{1}.] Puckery: noting a defect in cloth caused by irregular weaving.

> The fly-wheel loses the control it has at a slow speed, and the blow of the lay becomes uneven, because the accelerated motion of the loom has also increased many fold whatever lost motion was in it before and "*shirry*" cloth is the result.
> *Elect. World and Engin.*, Feb. 20, 1904, p. 374.

shiva^2 (shiv'ä), *n.* [Yiddish, < Heb. *shib'āh*, seven.] Among the orthodox Jews, the period of mourning for a parent, brother, sister, husband, or wife, consisting of seven days. At the burial the principal mourners tear their garments; afterward they retire to their homes, take off their shoes, and sit upon the floor for seven days, spending the time in prayer and liturgical exercises.

shive, *n.* 5. A fragment of the rind or outer bark of flax, hemp, etc.

shivering^1, *n.* 2. In *ceram.*, the flaking off of parts of the ware, caused by the unequal contraction of body and glaze. Compare *crazing*, 2.

shivering^2, *n.* 2. A horsemen's term for chorea or St. Vitus's dance affecting the muscles of the hip and thigh of the horse. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 207.

shivy (shī'vi), *a.* [Also *shivey*: < *shive* + *-y*^{1}.] Containing shives or short fragments of vegetable substance, as wool, hair, etc. *C. Vickerman*, Woollen Spinning, p. 122.

sho^3 (shō), *n.* [Jap. *shō*.] A Japanese unit of measure for liquids, equal to 1.80 liters, or .477 of a United States gallon.

shoal^1, *n.*—**Magnetic shoal**, an area of magnetic disturbance under the sea.

> This remarkable area of disturbance was then called a "*magnetic shoal*," a term which at first sight hardly appears to be applicable. We have, however, become familiar with the terms "ridge line, valley line, peak, and col," as applied to areas of magnetic disturbance on land; therefore I think we may conveniently designate areas of magnetic disturbance in land under the sea "*magnetic shoals*."
> *E. W. Creak*, in Sci. Amer. Sup., Nov. 7, 1903, p. 23287.

shoal-brain (shōl'brān), *n.* An ignorant or shallow-witted person. [Rare.]

> One day more
> These muttering *shoalbrains* leave the helm to me:
> God, let me not in their dull ooze be stranded.
> *Lowell*, Columbus, l. 267.

shock^1, *n.* 4. A mirror of the poorest quality, made of ordinary window-glass.—**Secondary shock**, a condition of shock which returns after the first symptoms have passed away.

shock-compressor (shok'kọm-pres″ọr), *n.* A device for compressing corn when standing in shocks for convenience in handling and as a protection against loss or injury by storms. It consists of a short rope drawn through a locking-block which has a supporting hook, and a twine-holder. In use, the block is hooked into the shock, and the rope and twine are carried around it, the rope being drawn tight and locked to compress it, when the twine may be tied and the compressor released.

shoddy-picker (shod'i-pik″ėr), *n.* Same as *shoddy-machine*.

shode^2, *n.* 2. Refuse material used in the adulteration of oil-cake.

shoe^1, *n.* 3. (*o*) In *suspension-bridge construction*, an iron or steel "eye" or loop, resembling several horseshoes placed on one another, around which all the individual wires forming a single strand of a cable are looped. The shoes forming the ends of the several strands are permanently placed side by side with the cable end of a long anchorage eye-bar or link placed between each two adjacent shoes, with a long steel pin extending through the openings of the shoes and eye-bars alternately, thus fastening the cable to the anchorage-bars.

> In each cable there are thirty-seven of these strands, which requires thirty-seven *shoes* at each end, there being but one strand looped around a *shoe*. These *shoes* are bolted between steel bars which are anchored in masonry, pins seven inches in diameter passing through the bars and *shoes*, holding the latter in place.
> *Amer. Inventor*, July 15, 1903, p. 26.

(*p*) A sliding-contact device for connecting the moving car on an electric railway with the third rail or with an underground insulated conductor. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 666.

4. In China, a silver or gold ingot said to be derived from the Dutch *goudschuit*, boat of gold, applied to the ingots imported from India into China in the seventeenth century.

> During the Boxer trouble the transfer issued was not settled up for a period of nine months. The next settling day it was settled up by the issuers of transfer paying $81.50 for each *shoe* of transfer, the *shoe* then being worth about $79, the difference between these amounts standing for the interest. *Sci. Amer. Sup.*, Aug. 13, 1904, p. 23925.

Cross-bar shoe. Same as *bar-shoe*.—**Scarpa's shoe**, an appliance for the correction of club-foot.

shoe-boil (shö'boil), *n.* A fibrous, flabby new growth over the elbow of a horse, due to repeated injury from lying on hard floors or with the front feet doubled under the body. Also called *capped elbow*.

shoe-boss (shö'bos), *n.* A shoe-manufacturer. *Dialect Notes*, III. iii. [New Eng.]

shoe-dressing (shö'dres″ing), *n.* A liquid or pasty material used to give suppleness and luster to the upper leather of boots and shoes, sometimes also to render it waterproof.

shoeing, *n.* 3. Something designed to protect a surface as the shoe protects the foot.

> Another direction in which mechanical invention is required for the wheels of motor cars and wagons is a *shoeing* or protection of hard material of easily renewable character which can be firmly and safely attached to the outside of the tyre covers to take the wear and cutting action caused by the driving strain and by the action of the brakes on sudden stops.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 766.

shoemaker, *n.* 2. A common name of various species of carangoid fishes, especially of *Alectis ciliaris*, from its thread-like dorsal spines.—**Shoemakers' cramp** or **palsy**. See ★*cramp*^{2}.

shoe-plate (shö'plāt), *n.* 1. In *iron ship-building*, a U-shaped plate sometimes fitted around the bar-keels of coasting vessels to prevent the wearing away of the keel through friction on the ground. *A. C. Holms*, Practical Shipbuilding, p. 79.—2. A flat plate placed at the bottom or underneath part of a structure (as a column) or of a machine, to increase the bearing area or to take the wear.

shoe-shop (shö'shop), *n.* A shop or factory in which shoes are made. *Dialect Notes*, III. iii. [New Eng.]

shoe-strings (shö'stringz), *n.* The lead-plant, *Amorpha canescens*. Compare *devil's-shoestrings*.

shog-board (shog'bōrd), *n.* An oscillating-board in a threshing-machine.

> In Nalder's Threshing-machine, the shakers, *shog-board*, and large riddle are all driven from one crank.
> *J. Scott*, Textbook of Farm Engin., V. 93.

shohet (shō'ċhet), *n.* [Heb. *shoḥet*, < *shaḥat*, slaughter.] A slaughterer; a Jewish butcher who is learned in the rabbinical laws of slaughtering animals. His duty is to slaughter the animal according to the law prescribed in Hilchoth sh'ḥitah (rules for slaughtering) and examine the vital parts of the viscera. No meat is considered 'kosher' without the shohet's sanction.

shoji (shō'ji), *n.* [Jap.] A sliding screen used instead of a wall or partition in a Japanese house.

> I know of one place to which I have returned to look out of the *shoji* screens into the garden, where there is a big pottery statue of Kwannon.
> *J. La Farge*, An Artist's Letters from Japan, p. 217.

shomer (shō'mėr), *n.* [Heb., < *shamar*, watch, keep.] 1. A watchman; a keeper.—2. A trustee.—3. An official appointed by Jewish authorities to see that meat sold by butchers is 'kosher.'

shonkinite (shon'kin-īt), *n.* [*Shonkin*, an Indian name of the Highwood Mountains in Montana, + *-ite*^{2}.] In *petrog.*, a phaneric igneous rock with granular texture, consisting of augite and orthoclase, with or without olivin, and small quantities of nephelite, sodalite, etc. A rock related to syenite but rich in augite. *Weed and Pirsson*, 1895.

shoo-fly (shö'flī), *n.* The wild indigo, *Baptisia tinctoria*: so called in allusion to the wide-spread belief that the mere presence of the plant attached to the harness will keep away horseflies. Called *horsefly-weed* for the same reason.

S-hook (es'hůk), *n.* A double-pointed hook with the points turned in opposite directions.

shoot, *v.* I. *intrans.* 10. In *cricket*, to bound low and close to the ground after pitching: said of a ball bowled. *R. H. Lyttelton*, Cricket and Golf, p. 31.

II. *trans.* 15. To cast or drop, as the claw of a lobster. *Stand. Dict.*

> Lobsters have the power of dropping or "*shooting*' one or both claws, which may be more or less completely replaced by a new growth. Many incentives are quoted for this curious procedure, the principal ones being handling . . . entanglement of the claws, and fright.
> *G. B. Goode*, Fisheries and Fishery Industries of the
> [U. S., § 1, p. 805.

To shoot a jam. See ★*jam*^{1}.

shoot, *n.* 17. A district or estate over which game is shot.—18. See ★*sprout*, 1 (*c*).—**Deferred shoots**, in *bot.*, shoots produced by buds which have long remained dormant.—**Stump shoot.** See ★*sprout*.

shooter, *n.* 5. In *cricket*, a ball bowled which, owing to an inequality in the ground, bounds close to the surface after pitching. *Hutchinson*, Cricket, p. 155.

shooting, *n.*—**Turtleback shooting**, in *archery*, shooting over a tree or other high barrier at a target lying upon the ground. This form of competition is sometimes used in American shooting-matches.

shooting-field (shö'ting-fēld), *n.* A field used for archery practice.

shooting-glove (shö'ting-gluv″), *n.* In *archery*, a glove worn on the drawing-hand to protect it from the friction of the bowstring; a drawing-glove. It is now made, ordinarily, in the form of tips for the drawing-fingers.

shooting-lodge (shö'ting-loj), *n.* A hunting-box; a shooting-box.

shooting-tenant (shö'ting-ten″ạnt), *n.* A tenant who rents the privilege of shooting game on an estate.

> The landlord being continually in danger of losing the farming or *shooting tenant*, possibly both.
> *Walsingham and Payne-Gallwey*, Shooting.

shoot-off (shöt'ôf), *n.* In *trap-shooting*, a subsequent competition between contestants who have made tied scores. *Forest and Stream*, Feb. 21, 1903, p. 160.

shoot-pole (shöt′pōl), *n.* See ★*polarity*, 1 (*c*).

shop^{1}, *n.*—**Open shop,** a shop or business establishment in which either union or non-union workmen may be employed, but in which, usually, the hours and prices prescribed by the trades-unions are observed.—**Setting-up shop,** a shop where manufactured products, as machines, barrels, etc., are set up or assembled.

shop-boiler (shop′boi″lėr), *n.* A boiler which furnishes steam for power or heating in a shop.

shop-drive (shop′drīv), *n.* The set of motors and accessory devices for operating the machinery of a shop or factory by electric power. *The Iron Age*, March 26, 1903, p. 22.

shop-hour (shop′our), *n.* See ★*hour.*

shop-pan (shop′pan), *n.* A shallow pan of pressed steel used in machine-shops, bolt-works, and foundries for the convenient transportation of bolts, nails, drop-forgings, and other small articles or tools; a tote-box.

shop-tender (shop′ten″dėr), *n.* A name applied to codfish living near shore. Also called *ground-tender, ground-keeper*, and *inshore cod.*

shor (shōr), *n.* [Turki *shōr*, a salina; Turkish *shōr*, saltish, brackish (Redhouse).] A salina; a shat: used by writers on Turkestan.

> The *shors* (elongated saline depressions) . . . are seen on the southern border of the Kara-kum sands.
> *Geog. Jour.* (R. G. S.), XII. 308.

Shore hold, terrace. See ★*hold*^{1}, ★*terrace*^{1}.

shore-bug (shōr′bug), *n.* Any member of the heteropterous family *Saldidæ* (which see). *L. O. Howard*, Insect Book, p. 291.

shore-cleat (shōr′klēt), *n.* One of the heavy wooden cleats which are nailed to the side of the vessel, and against which the shores rest. See *cleat.*

shore-fast (shōr′fȧst), *n.* A hawser or length of cable which secures a vessel to the dock.

shore-fish (shōr′fish), *n.* A name used for several fishes which inhabit shallow waters, especially *Fundulus diaphanus*, a small fish of the family *Pœciliidæ*.

shore-grape (shōr′grāp), *n.* Same as *sea-grape*, 2.

shore-grass, *n.* **2.** Same as *St. Augustine* ★*grass.*

shore-horizon (shōr′hō-rī″zon), *n.* The water-line on the beach: the shore-line when the sea-horizon is hidden by the intervention of land.

shore-line, *n.*—**Mature shore-line,** the relatively stable shore-line that is produced wherever sea-border conditions remain permanent for a long time. It develops by the cutting back of promontories and the filling out of embayments making a line of comparatively smooth curves. *F. P. Gulliver*, in Proc. Amer. Acad. of Arts and Sciences, Jan., 1899, p. 151.

shore-platform (shōr′plat″fôrm), *n.* The relatively flat sea-bottom which extends outward from nearly all land-areas and is the place of habitation of sedentary marine life. *J. D. Dana*, Manual of Geol. (4th ed.), p. 222.

shore-tender (shōr′ten″dėr), *n.* Same as ★*shop-tender.*

shore-wall (shōr′wâl), *n.* Accumulations of sand and gravel pushed up into mounds by the expansion and contraction of ice formed on rivers or lakes. *Geikie*, Text-book of Geol., p. 532.

short. I. *a.* **13.** Iron is said to be *cold-short* when it shows brittleness if worked at ordinary temperature, and *red-short* when it is brittle at a red heat, crumbling under the blacksmith's hammer.—**Short and rough,** a term used in brickmaking to describe clay which is newly taken out and unmellowed, as distinguished from clay mellowed by weathering which is mild and tough.—**Short ball cause.** See ★*ball*^{1}, ★*cause.*—**Short circuit.** (*b*) In *surg.*, a passage formed around an obstructed segment of intestine by establishing an anastomosis between the portions above and below this part. *Lancet*, May 30, 1903, p. 1520.—**Short sweetening.** See *sweetening.*—**Short train.** See *long* ★*train.*—**Wet short.** See ★*wet-short.*

II. *n.* **10.** In *elect.*, a short circuit.

> All circuits are so arranged and designed that by manipulating the keys all required tests for "opens," grounds, reserves, *shorts* and all other trouble, both on the line and on the switchboard, can be made from this desk. *Elect. World and Engin.*, April 30, 1904, p. 802.

The shorts, in stock-exchange slang, those who do not possess the stocks or goods which they have agreed to deliver.

short, *adv.*—**Short apeak,** a phrase applied to an anchor cable when it is up and down from the hawse-hole — when the anchor is under foot.

short, *v.* **II.** *trans.* **3.** To short-circuit an electrical machine, line, or system of conductors. [Colloq.]

> Provision is also made on the board for generator trouble, the current passing through two lamps, so that, should any line become "*shorted*" or "grounded," etc.
> *Elect. Rev.*, Sept. 3, 1904, p. 341.

short-circuit, *v.* **II.** *trans.* **1.** In *elect.*, to establish a short circuit in.—**2.** In *surg.*, to form a communication between two portions of intestine above and below an obstruction, so that the contents may pass along. *Buck*, Med. Handbook, II. 637.

short-circuiting (shôrt′sėr″kit-ing), *n.* The act or process of establishing a short circuit, as in electricity; in *surg.*, the establishment of a short circuit in any part of the alimentary canal.

> The establishment of a permanent communication between the stomach and the small intestine when the ordinary gateway between these parts of the alimentary canal is obstructed by an irremovable malignant growth; between two parts of the small intestine so that some obstruction may be passed; or between small and large intestine. The operative procedure goes by the name of *short-circuiting*; it enables the contents of the bowel to get beyond an obstruction. *Encyc. Brit.*, XXXIII. 78.

short-fired (shôrt′fīrd), *a.* Not sufficiently baked; under-fired: said of porcelain and pottery.

short-flame (shôrt′flām), *a.* Giving out, when burned, a flame that is comparatively short: said of some kinds of coal which contain little volatile hydrocarbon matter.

short-hair (shôrt′hãr), *v. t.* In *currying*, to remove (from a skin) the short, fine hairs left after the skin has been limed. *Modern Amer. Tanning*, p. 43.

short-headed (shôrt′hed″ed), *a.* Brachycephalic; broad-headed; round-headed.

shorthorn, *n.* **2.** A new-comer; a greenhorn: as resembling a steer which, on account of the shortness of its horns, is not able to defend itself: opposed to ★*longhorn.* [Slang, western U. S.]

> Don't let no *shorthorn* have my room Mr. Stumps, I may need it myself; an' in case I do I don't want to be obleeged to bootcher no harmless stranger.
> *A. H. Lewis*, Sunset Trail, ii.

short-leg (shôrt′leg), *n.* In *cricket:* (*a*) A player who fields near to the batsman on the leg side. (*b*) The position of such a player in the field.

short-rump (shôrt′rump), *n.* Same as ★*goose-rump.*

short-rumped (shôrt′rumpt), *a.* Same as ★*goose-rumped.*

short-slip (shôrt′slip), *n.* In *cricket:* (*a*) That fielder in the part of the field behind the wicket, and to the off side, who is nearest to the wicket-keeper. (*b*) The position of such a player in the field. *R. H. Lyttelton*, Cricket and Golf, p. 43.

short-spent (shôrt′spent), *a.* Unexpended; left over.

> The sum *short-spent* on new construction amounts to £2,270,000. *T. A. Brassey*, Naval Annual, 1898, p. 1.

short-spoon (shôrt′spön), *n.* In *golf*, a wooden club, lofted, having less distance than a mid-spoon. *W. Park, Jr.*, Game of Golf, p. 27.

short-stay (shôrt′stā), *a.* Noting the condition of an anchor when it is nearly atrip, or when the cable is nearly up and down.

short-stepper (shôrt′step″ėr), *n.* A horse of which the hind feet, in walking, fall behind the imprints made by the fore feet. The animal accordingly takes short steps and covers ground slowly, at a walk.

short-suiter (shôrt-sū′tėr), *n.* In *whist* or *bridge*, one who does not believe in fixed adherence to the doctrine that the longest suit should always be selected for the original lead, no matter what the strength or weakness of the hand may be.

short-wing (shôrt′wing), *n.* A small bird of the genus *Oligura*, *Brachypteryx*, or some closely related form, belonging to the family *Timeliidæ*, found in southeastern Asia.

shoshonite (shō-shō′nīt), *n.* [*Shoshone* (Indians) + *-ite*^{2}.] In *petrog.*, a variety of basalt comparatively rich in potash, having phenocrysts of labradorite with variable amounts of augite and olivin, in a ground-mass containing labradorite and orthoclase, with pyroxene, magnetite, etc. It grades into absarokite with increase of augite and olivin and decrease in labradorite. *Iddings*, 1895.

shot^{1}, *n.* **19.** In *athletics*, a metal sphere, either with or without a covering, weighing in championship contests 16 pounds and in school contests 12 pounds, which a competitor 'puts' as far as possible beyond a ring within which he stands.—**20.** In *lawn-bowls*, the point made by the ball which lies nearest the jack at the close of the head or innings.—**Benching shot,** in *mining*, a blast-hole bored vertically downward in an open face of rock or mineral. *Barrowman*, Glossary.—**Blow-out shot,** a shot that has blown out the tamping but has not broken the coal or rock. *Coal and Metal Miners' Pocketbook.*—**Capped shot.** See ★*capped.*—**Draw-jump shot,** in *billiards*, a shot in which the cue-ball bounds up from the table almost at the instant of striking the first object-ball, and then, its forward motion dying out, begins to retrograde. As a means of smothering the cue-ball in a powerful drive, it can also be lifted, twisted, made to go forward, and then to come back.—**Palliser shot,** a chilled cast-iron projectile invented by Major Palliser of the British army to overmatch wrought-iron armor.—**Wrist-shot,** in *golf*, a short approach, played principally with the wrists.

shot-borer, *n.*—**Apple shot-borer, apple-tree shot-borer.** Same as *apple* ★*bark-beetle* (*b*).

shot-dyeing (shot′dī″ing), *n.* The process of producing two-colored effects upon union cloth of vegetable and animal fibers in a dye-bath. It may be done by first using an acid color which will dye the wool and not the cotton and later dyeing the cotton with a direct cotton color, or by the process of ★*crossdyeing* (which see).

shot-effect (shot′e-fekt″), *n.* A two-color effect produced upon union fabrics by dyeing the vegetable fiber (usually cotton) one color and the animal fiber (usually wool) another. See ★*crossdyeing* and ★*shot-dyeing.*

Shot-hole fungus. See ★*fungus.*

shot-ladle (shot′lā″dl), *n.* *Naut.*, an instrument employed for handling hot shot, and also for drawing the shell from a gun.

shot-metal (shot′met″al), *n.* An impure form of lead which contains two per cent. of arsenic: used for making shot for cartridges.

shot-stifled (shot′stī″fld), *a.* Said of a horse affected with stifle. See *stifle*^{2}, 2.

shot-tongs (shot′tôngz), *n.* An instrument for grasping and moving projectiles of large caliber. It is used in connection with the operation of bringing projectiles to a gun from the magazine.

shot-whip (shot′hwip), *n.* *Naut.*, a purchase used in hoisting or lowering shot.

shoulder, *n.* **12.** In *hort.*, the squared or expanded base of a bunch of grapes, usually produced by an extra branch in the cluster.

shoulder-clod (shōl′dėr-klod), *n.* See ★*clod*^{1}, 8.

shouldered, *a.* **2.** In *hort.*, said of grape-clusters that have a shoulder or are broadest at the base.—**3.** Broad and high in the umbolateral regions: used in the characterization of the *Brachiopoda.*

shoulder-lappet (shōl′dėr-lap″et), *n.* Same as *patagium* (*c*).

shoulder-splat (shōl′dėr-splat), *a.* Same as *shoulder-splayed.*

shoulder-steak (shōl′dėr-stāk), *n.* A steak of beef cut from the fore quarter through the shoulder.

shoulder-tuft (shōl′dėr-tuft), *n.* Same as *patagium* (*c*).

shout^{1}, *n.* **2.** A treat; a free drink. [United States and Australian slang.]

> I . . . gave the boys round a spread and a *shout.*
> *G. Walch*, Head over Heels, p. 83, quoted by E. E. [Morris, Austral English.

To go on the shout, to get drunk. [Slang.]

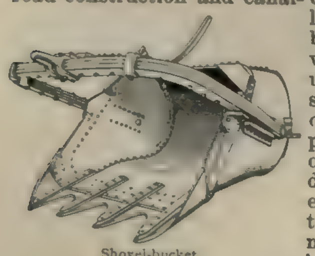
> But a bloke can do a gallon — if the tiddley 's fairly
> weak —
> Without actually *going on the shout.*
> "*Mark Thyme,*" in War's Brighter Side, xx.

shove, *n.* **4.** In *billiards*, the more common designation of the push. Degrees of strength have also given it other names. When it was foul in America to push so gently as to control the balls, the strenuous stroke was called *Bowery* in New York city, *Germantown* in Philadelphia, and *timber-lick* in the West.

shovel^{1}, *n.* **5.** The blade of any plow or cultivator exclusive of those having shares and mold-boards. Not only shovel-like blades but narrow vertical forms and horizontal scrapers are sometimes included. See ★*scalp*^{1}, *n.*, 7; ★*scooter*^{1}, 3; ★*scrape*^{1}, 7; and entries below.—**Bull's tongue, calf's tongue diamond-point egg-point shovel,** narrow forms of plow or cultivator shovels for deep penetration.—**Turning shovel,** an oblique shovel plow-blade resembling a narrow mold-board.—**Wing shovel,** a plow shovel with adjustable wings designed for hilling work.

shovel-beaked (shuv′l-bēkt), *a.* Having the muzzle produced into a spatulate beak: as, the *shovel-beaked* sturgeons.

shovel-bucket (shuv'l-buk'et), *n.* In railroad construction and canal- or road-work, a large scooping bucket armed with teeth and used with a steam-shovel or operated by power by means of chains that drag the bucket over or through loose material, causing it to scoop up a load. When filled, the bucket is lifted, swung over a car or to the spoil-bank, tripped and dumped, or dragged to a fill point and there tripped and dumped.



Shovel-bucket.

shovelnose, *n.* **2.** (*c*) A New South Wales species of ray-fish, *Rhinobatus bougainvillei*. Also called *blind shark* and *sand-shark*. In the northern hemisphere, the name is given to three different sharks and a sturgeon. *E. E. Morris*, Austral English.

shovel-spur (shuv'l-spėr), *n.* A flattened, leathery projection, found on the hind foot of toads belonging to the genera *Scaphiopus*, *Pelobates*, etc. It is used in digging; hence the popular name of *spade-foot*.

shovel-weed (shuv'l-wēd), *n.* The shepherd's-purse, *Bursa Bursa-pastoris*, so called from the shovel-shaped pods.

show^1, *v. i.*—**To show up.** (*b*) To stand out; hold its own. [Colloq.]

> There is, however, one other artist here whose work *shows up* even beside Corot, and that is Hervier, who still awaits due recognition. *Athenæum*, April 15, 1899, p. 471.

show^1, *n.* **9.** In *mining*, the effect on the flame within the gauze of a miner's safety-lamp by which the presence of fire-damp or combustible gas in the atmosphere is revealed.

II. *a.* Designed to be shown or only for show; in fanciers' language, raised for display purposes; bred for 'points.' Thus a *show* homer is a homing pigeon bred for certain characters or markings, in distinction to one raised for flying long distances.

shower^1, *n.*—**Uric-acid shower**, a temporary increase in the amount of uric acid contained in the excreted urine, occurring at times in the course of an attack of gout.

show-pipe (shō'pīp), *n.* Same as ★*display-pipe*.

shrager (shrag'ėr), *n.* A coarse pot of marl for baking wares. Same as *saggar*. [Prov. Eng.]

shredded (shred'ed), *p. a.* Torn or cut into shreds or strips, as fodder or grain.

shredder (shred'ėr), *n.* **1.** A machine for cutting into shreds or short slivers the stalks, leaves, and husks of ripe corn-plants in making stover or shredded fodder for cattle. It is a large and complicated power-machine resembling in general appearance a threshing-machine, and is often called a *husker and shredder*. The stalks of corn, with the ears, are fed to the machine, which removes and husks the ears, cuts the stalks into short pieces, shreds the stalks, leaves, and husks, cleans them from dust, and delivers the shredded product to a stacker or to a baling-press.—**2.** A machine for shredding whole wheat into long filaments or shreds. It consists essentially of pairs of steel rolls, one having a finely fluted face, placed above a traveling conveyer. Prepared whole wheat is fed between each pair of rolls and is torn into long threads that fall upon the conveyer and are conveyed to cutting-knives which divide them into cakes ready for baking.

shredder-head (shred'ėr-hed), *n.* The cylinder which carries the cutters and shredding-knives of a shredder.

shredding-machine (shred'ing-ma-shēn"), *n.* See ★*shredder*.

shril, *v.*, *a.*, *n.*, and *adv.* A simplified spelling of *shrill*.

shrilling-organ (shril'ing-ôr"gan), *n.* The sound-organ of a male cicadid.

shrimp^2, *n.*—**Sponge-shrimp**, a sponge-inhabiting shrimp, as species of the genus *Alpheus*.

shrinkage, *n.* **3.** In *founding*, the allowance made by which the pattern is larger than the finished casting is designed to be, to permit the metal in solidifying to occupy less space than when molten and hot enough to pour. The further reduction in size after solidifying and during the rest of the cooling process is called *contraction*.

shrinking-ring (shring'king-ring), *n.* A ring upon the commutator of an electric motor or generator which serves to hold the commutator-bars in place. *Elect. World and Engin.*, March 26, 1904, p. 595.

shrink-ring (shringk'ring), *n.* **1.** A ring placed when hot around some other piece, so that in the process of cooling and consequent contraction it will exert a powerful compression and add strength to resist internal strains in the piece.—**2.** A ring so located in a structure that all tendencies to contract on cooling shall be concentrated at this point, and can there be compensated or allowed for and their effects reduced or eliminated.—**3.** Same as a shrink- or shrunk-collar. *Jour. Brit. Inst. Elect. Engin.*, 1902–03, p. 419.

shrink-rule (shringk'röl), *n.* A shrinkage-rule; a rule or graduated scale used by pattern-makers, which is a fraction of an inch longer per foot than a standard rule. When used for iron, $\frac{1}{8}$ of an inch allows for the shrinkage of the casting in cooling, since every dimension is longer than the nominal or standard one in that proportion. For brass pattern-work it is $\frac{3}{16}$ of an inch longer in each foot; for steel it is $\frac{1}{4}$ of an inch larger.

shroud^1, *n.* **7.** In *mach.*: (*a*) A rim or flange cast on the ends of the teeth of a gear-wheel, so that they appear to be formed entirely or partly in the solid periphery of the wheel. If the flange or shroud extends radially to the tips of the teeth, the term *full* or *whole shrouding* is used; if the flange extends only to the pitch-line, *half-shrouding* is applied to it. Two wheels in gear may both be half shrouded if of the same width of face; if one is cast with a full shroud, the gear meshing with it cannot have any; or if not of the same width of face, the narrower one cannot have any. The shroud is to give increased strength to the teeth and diminish the danger of breaking. It is particularly serviceable for gears of large circular pitch and small diameter, giving an increase of strength of nearly 50 per cent.

(*b*) In an undershot wheel, the cylindrical surface at the inner circumference or bottom of the bucket.—**8.** The name given to the legendary portrait of Christ which is supposed to have been imprinted on the shroud in which he was wrapped in the tomb. *L. Cust*, in Burlington Mag., V. 517.

shroud^2, *n.*—**Lower-shrouds**, the shrouds of the lower fore-, main-, and mizzenmasts; the shrouds of any lower-mast.

shrouding, *n.* **2.** Same as ★*shroud*^{1}, 7.—**Full or whole shrouding.** See ★*shroud*^{1}, 7 (*a*).—**Half-shrouding.** See ★*shroud*^{1}, 7 (*a*).

shroud-laid (shroud'lād), *a.* Right-handed: said of a four-stranded rope which has a heart.

shroud-warp (shroud'wârp), *n.* *Naut.*, the length from which shrouds are cut.

shrub^1, *v. t.* **3.** To clear land of small growth by cutting it off at the ground. *Dialect Notes*, III. iii. [Western U. S.]

shrubwood (shrub'wůd), *n.* [*shrub*^{1} + *wood*^{1}.] See ★*woodland*, 2.

shtoff (shtof), *n.* [Russ. *shtofŭ* = Little Russ. *shtof*, a square bottle, a stoup, < OHG. MHG. *stouf*, a stoup. See *stoop*^{2}.] A Russian measure for liquids, equal to 1.23 liters, or .325 United States gallon.

shucker, *n.* **2.** A hulling-machine.

shuffle, *n.*—**Intricate shuffle**, in *card-playing*, the act of dividing the pack into two parts and then forcing one into the other at the ends.

Shunammite (shö'na-mīt), *n.* [*Shunem* + *-ite*^{2}.] An inhabitant of the ancient Shunem near Jezreel. 1 *Ki.*, I., 3, 15, II., 17, 21, 22; 2 *Ki.*, IV. 12, 25, 36. Also called, in "Song of Songs," *Shulammite* (?).

shunpike (shun'pīk), *n.* A road or byway so situated, by intent or not, that travelers may avoid paying toll on the turnpike which is the main thoroughfare. Such a road may be closed by injunction. [U. S.]

> There was a road which branched off from the turnpike, about a mile from the town, and which, after some windings, entered the pike again beyond the toll-gate, and although this road was not always in very good condition, it had seen a good deal of travel, which, in time, gave it the name of the *shunpike*.
>
> *F. R. Stockton*, The Captain's Toll-Gate, p. 6.

shunt, *n.*—**Calibration shunt**, in *elect.*, a shunt the resistance of which bears a known relation to that of some instrument, as a galvanometer, and which is used for the purpose of calibrating the latter.—**Inductance-shunt**, in *elect.*, a shunt consisting of a coil of wire, usually with an iron core, which because of its self-induction has much greater impedance than resistance.—**In shunt**, in *elect.*, so connected as to form a multiple circuit. For example, when the terminals of the field-coils of an electric motor are connected with the terminals of the armature, so that the current is divided between them, the field is said to be in shunt with the armature.—**Magnetic shunt**, in a magnetic circuit, a parallel or multiple path for the magnetic flux.—**Shunt coil, motor.** See ★*coil*1, *electric* ★*motor*.

shunt-box (shunt'boks), *n.* A box containing a resistance-coil or set of coils in the shunt-circuit of an electrical instrument such as an ammeter; or, in general, a box containing the shunt-circuit of any electrical device.

> Particular attention was directed to the *shunt-box* system and to the constant-current transformer method.
>
> *Elect. Rev.*, Aug. 27, 1904, p. 310.

shunting-yard (shun'ting-yärd), *n.* A railway-yard in which car-shunting takes place. *Webb*, Indust. Democracy, I. 380.

shunt-ratio (shunt'rā-shiō), *n.* In *elect.*, the ratio of the resistance of a shunt to that of the main circuit with which it is in parallel. Sometimes the ratio of the current in a shunt to that in the main circuit of which it forms a branch is called the 'shunt-ratio.'

shunt-turn (shunt'tėrn), *n.* Any one of the ampere-turns in the shunt-winding of a generator or motor.

shunt-winding (shunt'wīn-ding), *n.* The field coils of a shunt-wound generator or motor, or those coils in a compound winding which are connected in parallel with the armature-circuit.

shunt-wound (shunt'wound), *p. a.* In *elect.*, having its field coils in shunt with the armature circuit: said of certain generators and motors. *W. J. Dibdin*, Public Lighting, p. 431.

Shunuri lacquer. See ★*lacquer*.

shut^1, *v.* **I.** *trans.*—**To shut one's head** or **keep one's head shut**, to hold one's tongue; keep one's mouth shut. [Slang.]

> "If any of my inferiors on board ship don't *keep their heads shut* when they are n't spoken to," said Kettle unpleasantly, "I always disarrange their front teeth."
>
> *Cutcliffe Hyne*, A Master of Fortune, iii.

II. *intrans.*—**To shut up.** (*d*) To close the open spaces or interstices of a porous material by compression, as by hammering or pressing.

shut-in (shut'in), *n.* **1.** An invalid, cripple, or convalescent who is confined to the house for a long time. [Colloq.]—**2.** In *phys. geog.*, a narrow part of a valley which is elsewhere broadly open. [Missouri.]

> The terms "meander" and "*shut in*" and the like, have a definite enough geomorphological meaning, as appears clearly from Mr. Marbut's use of them, but we cannot help feeling that they sound crude and angular, more conformable in style to the German language than our own. *Geog. Jour.* (R. G. S.), IX. 666.

shut-out (shut'out), *n.* The act of shutting out or the state of being shut out in any sense; in sporting slang, the preventing of the opposite side from scoring, as in a game of base-ball.

> On the pitching . . . was entitled to a *shut-out*. The Tigers scored their only run in the fifth.
>
> *N. Y. World*, Aug. 3, 1904.

shutter, *n.* (*f*) In *founding*, a gate or movable partition designed to cut off the runner to a mold from the channel in which molten metal is flowing. (*g*) The name given by Inigo Jones, the architect, to the side scenes or slips which he used in his pomps and masques. *R. T. Blomfield*, in Portfolio, 1889, p. 91.—**Cat's-eye shutter**, a pneumatic photographic shutter. [Colloq.]—**Pneumatic shutter**, in *photog.*, a shutter operated by air-pressure conveyed by a rubber tube from a compressed rubber ball.

shutter-armature (shut'ėr-är"ma-tūr), *n.* The piece of soft iron, attached to the shutter of an annunciator or telephone indicator, by the attraction or release of which the signal is given.

shutter-hook (shut'ėr-hůk), *n.* A hook for holding a hinged shutter in place: usually a long hook which holds a shutter open at a certain angle with the sill.

shutter-weir (shut'ėr-wēr), *n.* See ★*weir*.

shuttle^1, *n.*—**Circular shuttle**, a swivel-shuttle used on ribbon-looms.

shuttle-armature (shut'l-är"ma-tūr), *n.* A simple form of armature for generators or motors, having a single coil wound upon a shuttle-formed bobbin, the latter being frequently of soft iron.

shuttle-bone (shut'l-bōn), *n.* A small bone applied to the posterior face of the pedal joint; the navicular bone.

shuttle-guard (shut'l-gärd), *n.* An appliance fastened to a loom to prevent the shuttle from flying up or flying out. *T. W. Fox*, Mechanism of Weaving, p. 347.

shuttle-wound (shut'l-wound), *p. a.* In *elect.*, noting an armature the single coil of which is wound longitudinally in two diametrically opposite slots in an elongated iron bobbin or shuttle.

Shu-urushi lacquer. See ★*lacquer*.

shuvel, *n.* and *v.* An amended spelling of *shovel*.

shy^1, *a.*—**To be shy.** (*a*) In *poker*, to have failed to ante in a jack-pot. (*b*) Hence, in general, to lack; be short of: as, to be *shy* four dollars. [Slang.]

shy^2, *n.* **4.** In *cricket*, a ball thrown instead of bowled.

shyer (shī'ėr), *n.* A thrower; in *cricket*, one who, in the guise of bowling, throws the ball. [Colloq.]

S. I. An abbreviation (*a*) of *Sandwich Islands;* (*b*) of *Staten Island.*

sialadenitis (sī″a̤l-ad-e-nī'tis), *n.* [NL., < Gr. *σίαλον*, saliva, + *ἀδήν*, gland, + *-itis.*] Inflammation of a salivary gland; mumps.

sialid (sī'a̤-lid), *n.* and *a.* **I.** *n.* A member of the neuropterous family *Sialidæ.*

II. *a.* Having the characters of or belonging to the family *Sialidæ.*

sialidid (sī-al'i-did), *n.* and *a.* Same as ⋆*sialid.*

sialodochitis (sī″a̤-lō-dō̤-kī'tis), *n.* [NL., < Gr. *σίαλον*, saliva, + *δοχή*, receptacle, + *-itis.*] Inflammation of a salivary duct.

sialogenous (sī-a̤-loj'e-nus), *a.* [Gr. *σίαλον*, saliva, + *-γενης*, -producing, + *-ous.*] Promoting the excretion of saliva. *Buck*, Med. Handbook, I. 645.

sialology (sī-a̤-lol'ō̤-ji), *n.* [Gr. *σίαλον*, saliva, + *-ology.*] The science of the saliva; the study of the secretion and composition of saliva in health and in disease.

Siamese cat. See ⋆*cat*^{1}.

siao (sē̤-ou'), *n.* [Chinese.] A Chinese syrinx with 16 pipes of bamboo.

siapo (sē̤-ä'pō), *n.* [Native name.] In Samoa, the name of bark cloth made from the paper mulberry (*Papyrius papyrifera*). See *tapa.*

siaresinotannol (sī″a̤-rez″i-nō-tan'ol), *n.* [*Sia*(*m*) + *resin* + *tann*(*ic*) + *-ol.*] A brown amorphous compound, $C_{12}H_{14}O_3$, contained in gum benzoin from Siam.

Sib. An abbreviation (*a*) of *Siberia;* (*b*) of *Siberian.*

sib-bred (sib'bred), *a.* [*sib* + *bred.* Cf. *sibred.*] Descended from ancestors who were blood-relations; interbred. See ⋆*sibling.*

> The possibility, however, should not be forgotten that the prepotency of the *sib-bred* hens may have been an original character of their particular strain.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., [1902, I. 4, note.

Sibiric (sī-bir'ik), *a.* [Also *Siberic:* Russ. *Sibirĭ*, Siberia, + *-ic.*] Relating to those branches of the Asiatic race whose center of distribution is Siberia, and which includes the Tungusic, Mongolic, Tataric, Finnic, Arctic, and Japanese groups. *D. G. Brinton*, Races and Peoples, p. 206.

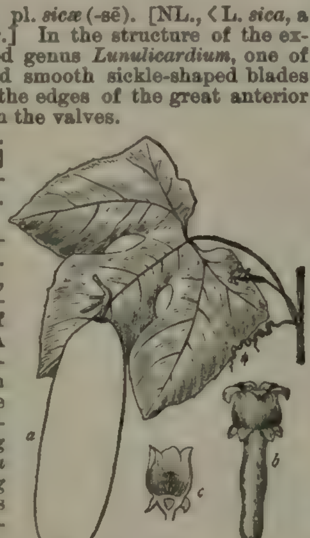
sibling (sib'ling), *n.* [*sib* + *-ling*^{1}.] A member of a family born to the same parents; a brother or a sister considered without reference to sex. *K. Pearson.*

> From the information at hand, which is not so satisfactory as information I hope to obtain during the next few years, the resemblance of twins in mental traits is roughly twice that of ordinary *siblings;* according to the actual figures of my measurements of *siblings*, more than twice.
> *E. L. Thorndike*, in Jour. Philos. Psychol. and Sci. [Methods, Sept. 28, 1905, p. 547.

Sic. An abbreviation (*a*) of *Sicilian;* (*b*) of *Sicily.*

sica (sī'kä̤), *n.*; pl. *sicæ* (-sē). [NL., < L. *sica*, a curved dagger.] In the structure of the extinct pelecypod genus *Lunulicardium*, one of the two curved smooth sickle-shaped blades which bound the edges of the great anterior hiatus between the valves.

sical (sī'ka̤l), *a.* [*sic*(*a*) + *-al*^{1}.] Of or pertaining to the sicæ. See ⋆*sica.*



Sicana odorifera.
a, fruit; *b*, female flower; *c*, male flower.

Sicana (si-kā'nä̤), *n.* [NL. (Naudin, 1862), < *sicana*, a Peruvian name of the plant.] A genus of tropical American plants of the family *Cucurbitaceæ*, differing from *Cucurbita* in not having the anthers united and having the calyx-lobes reflexed or wide-spreading. The genus has recently come into prominence in this country by the advertising of the cassabanana, *S. odorifera.* This is a tall, herbaceous, perennial tendril-climber, which produces large fruits like a vegetable marrow. It is grown for ornament and screens. It is tender in the North.

siccimeter (sik-sim'e-tėr), *n.* [L. *siccus*, dry, + Gr. *μέτρον*, measure.] An apparatus for measuring the evaporation from a surface of water; an evaporometer; an atmidometer; specifically, the tank, about 18 inches square, used by L. Dufour, in 1865, on the border of Lake Geneva.

Sicilian, *n.* **2.** In *geol.*, the uppermost stage of the Pliocene Tertiary in southern Europe.

sicilienne, *n.* **2.** A mohair of heavy weight, either plain or with a fancy pattern. *Dry Goods Economist*, June 13, 1908, p. 81.

sick^1, *a.* **11.** Having floured: said of mercury.

sickle, *n.* **3.** In *embryol.*, a crescentic thickening at the posterior edge of the blastodisc in certain vertebrate embryos with meroblastic eggs, such as the fishes and reptiles.

> In birds, typical concrescence can occur only during the earliest stage of formation of the primitive streak, i.e. so long as the groove of the *sickle* and knob is open.
> *Proc. Zool. Soc. London*, 1903, p. 18.

4. A crescentic whitish area in the choroid commonly observed in cases of myopia. *Buck*, Med. Handbook, VI. 81.—**5.** One of the arms which support the yarn guide-wire, or faller, on the spindle-carriage of a spinning-mule: so named from its shape.—**6.** A sickle-feather.

sicklebill, *n.* (*f*) The California thrasher, *Harporhynchus redivivus.*

sickle-grass (sik'l-gràs), *n.* **1.** The sedge, *Carex crinita*, so called from the sickle-shaped spikes. See *sedge*^{1} (Fig. 4).—**2.** Same as *tear-thumb.*

sickle-hammed (sik'l-hamd), *a.* Having the hock-joint too much flexed, the foot placed too far forward under the body, and the fetlock too slanting: said of a horse. Also *sickle-hocked.* See ⋆*saber-legged.*

sickle-hocked (sik'l-hokt), *a.* Same as ⋆*sickle-hammed.*

sickle-senna (sik'l-sen″ä̤), *n.* See ⋆*senna.*

sicklewort, *n.* **2.** The common bugle, *Ajuga reptans.*

sickness, *n.*—**Foehn sickness**, a depression experienced by invalids and other impressionable persons during the prevalence of the foehn wind in the Alps.

> Professor Ebert considered the cooperation of aeronauts valuable, and cited as a result of the investigation in the Alps that in the foehn wind an excess of positive electrons is found and this disturbance of the electrical equilibrium perhaps may cause the *foehn sickness.*
> *U. S. Monthly Weather Rev.*, July, 1902, p. 361.

Spotted sickness. Same as *pinta.*

sicula (sik'ṳ̄-lä̤), *n.*; pl. *siculæ* (-lē). [NL., < L. *sicula*, dim. of *sica*, a dagger.] In the graptolites, the triangular stiletto-shaped body at the proximal end of a polypary, representing the primary theca or zoöid of the colony.

sicular (sik'ṳ̄-la̤r), *a.* [NL. *sicul*(*a*) + *-ar*^{3}.] Of or pertaining to the sicula in the graptolites.

sicuri (sē-kö'rē), *n.* [Aymará of Bolivia.] One of the best-known groups of Indian dancers in Bolivia, who perform at nearly every festival. They wear as distinctive ornament a tall crown of long feathers or plumes of the nandu or American ostrich.

Sicydium (si-sid'i-um), *n.* [NL., so named in allusion to the ventral disk, < Gr. *σικύδιον*, dim. of *σικύα*, a gourd, a cupping-glass.] A genus of gobioid fishes found in fresh waters of the West Indies.

sid (sēd), *n.* [Egyptian Ar. *sīd*, a reduction of *seyyid* (*saiyid*), lord.] Master: a title of respect.

Sidalcea (sī-dal'sē̤-ä̤), *n.* [NL. (Asa Gray, 1848), < *Sida* + *Alcea*, the ancient names of two allied genera.] A genus of plants of the family *Malvaceæ*, containing about a score of West American annual and perennial herbs. The flowers are mostly destitute of involucels, in color white, purple, or pink, borne in terminal racemes; the leaves are palmately cleft or parted. A few of the hardy perennial species are in cultivation.

siddha (sē-dhä'), *n.* [Skt. *siddha*, hit (as a mark), accomplished, achieved, perfected, pp. of √ *sidh*, hit, attain one's end, etc.] In Hinduism, a seer, saint, or semi-divine being supposed to possess supernatural powers, such as volitation, etc.

siddhartha (si-där'tä or sid-härt'hä), *n.* [Skt. *siddhārtha*, < *siddha*, accomplished, + *artha*, aim, purpose.] One who has accomplished his object: an epithet of Buddha and others.

siddur (sid'ör), *n.* [Yiddish *sidder*, Heb. *siddur*, otherwise *seder tephilloth*, 'order of prayers.'] The Jewish prayer-book. The prayers are placed in order for the daily, Sabbath, and part of the festival services in the synagogue. The siddur of the Ashkenazim (German Jews) differs somewhat from the ritual of the Sephardim (Spanish Jews). The reformed Jews have eliminated a considerable number of prayers of the old siddur and substituted others.

side^1, *n.* **9.** (*b*) In *golf*, the two players playing together in a best-ball match, a threesome, a foursome, or a four-ball match.—**15.** In *geom.*: (*b*) One of the determining straights of a polygram.—**On side.** See ⋆*on*^{1}.—**Side of a court**, in *law*, a term used to indicate whether equity practice or common law practice prevails: as, equity *side*, law *side.* Formerly, in England, there were distinct branches for the two sides; but the tendency is toward the blending of them, and the highest court of England and the majority of the courts in the United States practise both.—**Three-on-a-side**, a system of playing faro in which cards are bet upon to win or lose an uneven number of times: the opposite of *to* ⋆*break even.*—**To man the side**, to form the side-boys in line on either side of the gangway for the reception of some official when he passes over the side to the deck of a vessel.

side^1, *v.* **II.** *trans.* **9.** To cultivate alongside of, as a row of cotton. [Southern U. S.]

> Two hoeings and ten furrows with the sweep, eight to *side* the cotton and two to split out the middle of the row.
> *U. S. Dept. Agr.*, Exper. Station, Bulletin 33, 1896, [p. 239.

side-beard (sīd'bērd), *n.* See ⋆*beard*, 6 (*b*).

side-bearing (sīd'bãr″ing), *n.* **1.** In *car-building*, a supporting plate on a car-truck. Such plates are arranged in pairs on each side of the ⋆center-bearing (which see), the body-bolster side-bearing and the truck-bolster side-bearing forming an opposing pair. Normally, the weight of the car rests upon the center-bearing, the side-bearings being designed to prevent excessive rocking of the car when it is in motion.—**2.** A bearing so constructed as to limit side motion.

side-beat (sīd'bēt), *n.* Same as ⋆*cross-beat.*

side-chain, *n.* **2.** The driving-chain which transmits motion to the driving-wheels of a motor-car from the counter-shaft or compensating-shaft. One is placed outside of the body of the vehicle on each side, an arrangement which necessitates two chains, and is distinguished from the center-chain design, which uses one chain under the body and near the center of the vehicle.—**3.** Same as ⋆*receptor.* See ⋆*immunity*, 5.

side-check (sīd'chek), *n.* In a harness for a horse, a check-rein that is placed at the side of the horse's head. Where the check passes over the head it is an *over-check.*

side-current (sīd'kur″e̤nt), *n.* The current produced in a Hertz receiver by the action of the oscillator.

side-edge (sīd'ej), *n.* A forming-tool made of hard wood, over which sheet-lead may be shaped for safes and similar work.

side-firing (sīd'fīr″ing), *n.* The act or process of firing or feeding fuel to a fire through a door in the side of a furnace. *W. S. Hutton*, Steam Boiler Construction, p. 48.

side-flash (sīd'flash), *n.* In *elect.*, the disruptive discharge between neighboring parts of a bent conductor which sometimes occurs in the case of oscillatory currents of high frequency; the spark between a lightning-rod and neighboring masses of metal induced by an oscillatory discharge of lightning.

side-frame (sīd'frām), *n.* **1.** That member of the structure of a machine which is at either side, as the side-frame of a locomotive, a motor-car, or a steam fire-engine.—**2.** The supporting-frame for the guides of the cross-head in an old-style vertical marine engine having no beam, but two back-acting connecting-rods from the cross-head.—**3.** Any side portion of a frame or structure.

side-head, *n.* **3.** A slide-rest carrying a cutting-tool and adjusted on ways forming part of the uprights at the sides of a metal-planing machine.—**4.** In wood-working machines, a revolving cutter-head on a vertical axis on the side of the frame, for working out profiles of moldings and similar strips.

side-jacketed (sīd'jak″et-ed), *a.* Protected on the sides by a casing or hollow wall carrying hot steam within it: distinguished, in cylinder-work, from a jacketing on the heads or ends only.

side-jointer (sīd'join″tėr), *n.* In *wood-working*, a guide or machine for a planing-block or cutting-edge which cuts upon its side or in which the edge moves in a horizontal direction.

side-keel (sīd'kēl), *n.* In *ship-building*, same as *bilge-keel.*

The power of *side-keels* placed near the water-line is very great; for example, in the Elorn the effect of such keels was one-third greater than that of ordinary bilge-keels. *White*, Manual of Naval Arch., p. 179.

side-kicker (sīd'kik″ėr), *n.* A partner. *O. Henry*, in McClure's Mag., Feb., 1903, p. 432. [Thieves' slang.]

side-ladder (sīd'lad″ėr), *n.* *Naut.*, same as *accommodation ladder* (which see, under *accommodation*).

side-lay (sīd'lā), *n.* In *printing*, the broader margin of a printed sheet, which receives the grippers. The narrower margin is called the *guide-lay*.

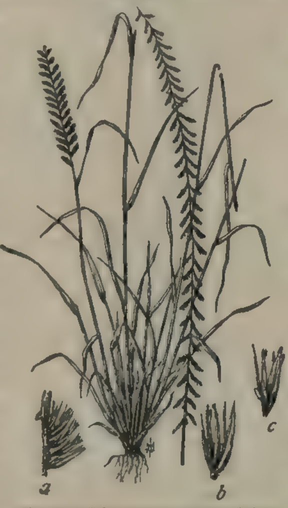
side-lever (sīd'lev″ėr), *n.* In a steam-engine, a side-beam; a lever or walking-beam beside the vertical cylinder instead of over it.—**Side-lever engine.** Same as *side-beam* ★*engine.*

side-lighting (sīd'lī″ting), *n.* In *topographical mapping*, a method of representing the relief or vertical irregularities of the topographical surveys mapped by representing the shadows (caused by an imaginary source of illumination situated at one side) cast by the mountains and other vertical irregularities. The method is an alternative of the methods of vertical lighting and of horizontal contours.

The disadvantages of "*side-lighting*" in the delineation of mountainous countries. *Geog. Jour.* (R. G. S.), X. 459.

side-line, *n.* **3.** In *foot-ball*, *hockey*, and similar games, a line defining the limit of play on the side of the field, and outside of which the ball is out of bounds.

side-oats (sīd'ōtz), *n.* A grama-grass, *Atheropogon curtipendulus*, ranging from New Jersey to the Rocky Mountains and southward into Mexico. Where abundant it makes fair hay, and its root-leaves make good pasture, though the blue grama is preferred by stock. It is one of the tallest of its genus and bears many short declined spikes along the sides of the stem. Also called *tall grama*, *jointed grama*, and *prairie-oats*, in Tennessee *horseshoe-grass*, and in the southwestern United States *mesquite* or *mesquite-grass.*



Side-oats (*Atheropogon curtipendulus*). *a*, spike; *b*, spikelet; *c*, spikelet with glumes removed.

side-partner (sīd'pärt″nėr), *n.* One who goes or works next to another. *Evening Post*, June 1, 1903, p. 1. [Colloq.]

side-planer (sīd'plā″nėr), *n.* See ★*planer.*

side-plate, *n.* **3.** One of the perpendicular plates which line the sides of the ambulacra in the *Crinoidea.*

side-play (sīd'plā), *n.* Side movement; motion not in the direction of the desired motion but at an angle to it.

Side play of this spring is prevented by beads on the post, and the top of the post is also provided with a channel or groove, so that by turning the securing screw the spring is pressed slightly into the channel, thus raising the armature. *Sci. Amer.*, Feb. 7, 1903, p. 99.

Sidereal minute. See *sidereal* ★*second.*—**Sidereal second.** See ★*second*2.

siderealize (sī-dē'rẹ-ạl-īz), *v. t.*; pret. and pp. *siderealized*, ppr. *siderealizing.* [*sidereal* + *-ize.*] To place among the constellations; relegate to sidereal regions; exalt.

German literature transformed, *siderealised*, as we see it in Goethe, reckons Winckelmann among its initiators. *W. H. Pater*, Renaissance, p. 150.

siderite, *n.* **3.** A meteorite consisting essentially of nickeliferous metallic iron. See ★*meteorite.*

sideritic (sid-ẹ-rit'ik), *a.* [*siderite* + *-ic.*] Pertaining to, containing, or composed of siderite.

siderodromophobia (sid″ẹ-rọ̄-drō″mọ̄-fō'bi-ạ̈), *n.* [NL., < Gr. σίδηρος, iron, + δρόμος, course (way), + -φοβια, < φοβεῖν, fear.] A morbid fear of railway travel. *Ribot* (trans.), Psychol. of the Emotions, p. 213.

siderognost (sid'ẹ-rog-nost), *n.* [Gr. σίδηρος, iron, + γνώστης, one that knows.] In *elect.*, an apparatus for the practical testing, by the yoke method, of the magnetic quality of iron or steel.

siderolite, *n.* **3.** Lacquered ware, manufactured in northern Bohemia, intermediate in character between fine and common stoneware. It has no glaze, but a strong surface-color of varnish or lacquer. The color or bronze is mixed with turpentine or linseed-oil and applied with a pencil. The ware is then placed in a slow oven, the ethereal oils volatilize, and the bronze color becomes fixed to the surface of the ware. *R. J. Wagner*, Chem. Technol.

sideromelane (sid″ẹ-rọ̄-mel'ān), *n.* [Gr. σίδηρος, iron, + μέλας (μελαν-), black.] In *petrog.*, a name given by Von Waltershausen (1853) to basaltic glass from palagonite tuff from Iceland.

sideronym (sid'ẹ-rọ̄-nim), *n.* [L. *sidus* (*sider-*), constellation, + Gr. ὄνομα, name.] The name of a celestial object or constellation.

siderophyre (sid'ẹ-rọ̄-fīr), *n.* See ★*meteorite.*

siderosis, *n.* **2.** A deposition of iron pigment in any of the tissues of the body.

siderosthen (sid-ẹ-ros'then), *n.* [Gr. σίδηρος, iron, + σθένος, strength.] A trade-name of a material used for protecting iron and steel from rust, consisting of tar from fat gas-producers, refined Trinidad asphalt, and refined asphalt-oil. Sometimes sulphur is used instead of the last two constituents, the gas-tar being heated with it. *Jour. Soc. Chem. Industry*, XII. 364.

siderous (sid'ẹ-rus), *a.* [Gr. σίδηρος, iron, + *-ous.*] Containing iron, as hemosiderin. *Buck*, Med. Handbook, III. 224.

siderum (si-dē'rum), *n.* [NL., < Gr. σίδηρος, iron.] A supposed new metal announced by Bergman, in 1781, as obtained from cold-short iron. It turned out to be merely iron phosphide.

siderurgic (sid-ẹ-rėr'jik), *a.* Same as *siderurgical.*

side-slip, *n.* **3.** The tendency of the rear or driving pair of wheels of a smooth-tired motor-vehicle to slip sidewise when the surface of the roadway is coated with a thin film of slippery mud. It occurs also on dirt roads when the mud has a certain consistency and the surface is crowned or high in the middle. When driving recklessly at high speed, side-slip is an occasion for dangerous accident, since the vehicle is for an instant, or until the wheels bite again, practically unmanageable. Many forms of tires to correct this evil have been proposed and patented.

side-spark (sīd'spärk), *n.* See ★*spark*^{1}.

sidestep (sīd'step), *v. i.*; pret. and pp. *sidestepped*, ppr. *sidestepping.* To take a side-step; step to one side.

The temperature Sunday held the icicles in place, but with yesterday's thaw they began to work loose. By 10 o'clock pedestrians were *sidestepping.* *N. Y. Times*, Jan. 16, 1905.

side-stop (sīd'stop), *n.* *Naut.*, one of the stops which are fastened to the side ropes of an awning in order to spread the latter to the ridge-rope.

side-stringer (sīd'string″ėr), *n.* See ★*stringer.*

side-thrust (sīd'thrust), *n.* That component of the thrust which is not in the direct line of the main force, as the axial thrust on a carriage- or car-wheel when going around a curve, or the thrust on a lathe- or planer-tool which tends to make it slip sidewise in the holder.

sidewalk, *n.*—**Moving sidewalk**, a long ramp or traveling-apron used as a conveyer for foot-passengers. It usually consists of two or more conveyers placed side by side and moving at different speeds, forming an extension of a sidewalk. The fixed portion of the walk may extend the entire length of the conveyer or may serve only as a landing. The passenger steps from the landing upon the first or slow-moving conveyer, and is carried along by it, or may then step from this to the parallel high-speed conveyer, and, standing or walking upon it, be conveyed to his destination. See ★*ramp*, 9, ★*conveyer*, 4, ★*escalator*, and *moving* ★*platform.*

As a matter of fact, however, the treatment is rather more general and comprehensive, as one finds included such diverse topics as electric locomotives for mining purposes, and the *moving sidewalk* at the Paris Exposition and Chicago, as well as brief references to elevators and traveling stairs. *Elect. World and Engin.*, April 23, 1904, p. 781.

sidewalk-light (sīd'wâk-līt″), *n.* Same as ★*pavement-light.*

sidewinder^{2} (sīd'win-dėr), *n.* In *lumbering*, a tree knocked down unexpectedly by the falling of another.

side-wipe, *n.* **2.** In *railroading*, a term used to describe a collision between trains in which one train meets another at a slight angle, as in crossing a switch, and slides or scrapes past it, doing damage to the sides of the cars, but not necessarily producing a disastrous wreck.

side-wiped (sīd'wīpt), *a.* Damaged by a side-wipe. See ★*side-wipe*, 2.

side-wire (sīd'wīr), *n.* A stout wire introduced by Helmholtz as a shunt to the primary coil in du Bois-Reymond's inductorium. When the side-wire is in place, the primary circuit is never wholly interrupted. A weakened make-current is produced when the side-current is broken, a weakened break-current when it is made. *E. B. Titchener*, Exper. Psychol., I. ii. 144.

siding, *n.*—**Novelty siding**, in *carp.*, a form of mill-worked boards used to replace clapboards. The boards are planed with a projecting tongue at one edge and an overlapping rabbet on the other.

siding-tile (sī'ding-tīl), *n.* A tile used for covering the side wall of a house or the like, and replacing clapboards and shingles.

sidonal (sī'dọ̄-nạl), *n.* A trade-name of piperazine quinate. It is used medicinally in cases of gout and rheumatism. *Buck*, Med. Handbook, VII. 214.

Sidot blende. See ★*blende.*

sidur, *n.* See ★*siddur.*

Siemens's law, electrical thermometer. See ★*law*^{1}, ★*thermometer.*

sierra, *n.*—**Pacific sierra**, a scombroid fish, *Scomberomorus sierra*, found from San Diego to Panama.

sierrated (sier'ā-ted), *a.* [*sierra* + *-ate*^{1} + *-ed*^{2}.] Having the form of a sierra: said of ridges and mountains. Compare *serrate.*

Ranges of *sierrated* crests like many Andean chains of South America. *Geog. Jour.* (R. G. S.), X. 58.

sierrita (sie-rē'tạ̈), *n.* [Sp., dim. of *sierra*, a saw.] A needle-fish, *Tylosurus stolzmanni*, found on the tropical Pacific coast of America.

siesta (sies'tạ̈), *v. i.* [*siesta*, *n.*] To rest and sleep or take a nap; to indulge in a siesta.

"Right," said Kettle. "I'll *siesta* too. My fever 's gone now, and I 'm feeling pretty rocky and mean. Sleep 's a grand pick-me-up." *Cutcliffe Hyne*, A Master of Fortune, ii.

sieve-plate, *n.* **4.** In certain hexactinellid sponges like *Euplectella*, a transverse irregular network or reticulum covering the top of the skeleton, formed at a late stage in the growth of the sponge, and serving to protect the interior of the colony by the subdivision of the excurrent passage.

sifon, *n.* and *v.* An amended spelling of *siphon.*

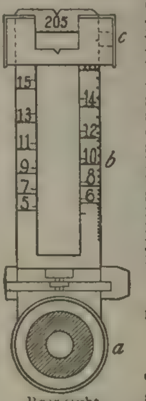
sifter, *n.* **4.** In *milling* and *baking*, a machine for sifting flour preparatory to blending it or using it in baking. It consists of a sieve inclosed in a casing and fitted with a cylindrical brush which, revolving above the sieve, breaks up all the lumps and presses the flour through the sieve.—**Sifter and blender.** See ★*blender*, 2.

sig^{2}, *n.* **2.** A bath applied to the grain side of a hide or skin, before applying the black. The sig prevents the black from striking through to a light-colored flesh. *Modern Amer. Tanning*, p. 116.

sight^{1}, *n.* **16.** In *cards*, a show of the opponent's hand. In *poker*, when a player has not enough money to call a bet, he may demand a sight for what he has, but if he has borrowed to raise he must borrow to call.—**Bill at sight.** See ★*bill*3.—**Rear sight**, the device near the breech of a gun used in aiming. It generally consists of a leaf or bar with a movable and adjustable slide having a notch or hole through which the front sight and the object can be seen.—**Reinforce-sight**, a sight situated at or near the reinforce of the gun in old ordnance.—**Sight unseen**, without seeing the objects exchanged: used by boys in trading jack-knives, marbles, and the like. [Colloq.]

The intelligent farmer of to-day has got beyond trading "*sight unseen*" or "buying a cat in a bag." *Yearbook U. S. Dept. Agr.*, 1897, p. 427.

Tangent sight, in *ordnance*, a rear sight.—**Telescopic sight.** See ★*telescopic.*



Rear-sight *a*, gun-barrel; *b*, rear-sight leaf; *c*, slide.

sight-hood (sīt'hůd), *n.* Same as ★*sighting-hood.*

sighting-hood (sīt'ing-hůd), *n.* In a warship, a small armored box or cylinder on the roof of a turret. A number of sight-holes are cut through the armor of the hood. The hood is large enough to contain the head of the gun-pointer and the turret gun-sight which is pointed through the forward sight-hole. Modern turrets usually have three sighting-hoods, one in the center line for the turret training-pointer and one on each side for the two gun-pointers. Also called *sight-hood.* See cut under ★*turret*^{1}.

sight-setter (sīt′set″ėr), *n.* A member of a gun's crew on a war-ship whose duty it is to keep the gun-sight set at the proper elevation for the range as shown by the range-indicator, so that the gun-pointer can keep his eye continuously at the gun-sight.

sight-tube (sīt′tūb), *n.* The telescopic tube through which the observer looks at the screen of a photometer. *W. M. Stine,* Photometrical Measurements, p. 77.

Sigillaria, *n.* 2. *pl.* The last days of the Saturnalia in Rome, under the empire, in which presents of figurines of wax or clay were made, especially to children and slaves. *M. B. Huish,* Greek Terra-Cotta Statuettes, p. 214.

Sigillariaceæ (sij-i-lā-ri-ā′sē-ē), *n. pl.* [NL. (Engler, 1892), < *Sigillaria* + *-aceæ.*] A family of Paleozoic fossil plants of the order ★*Lycopodiales* (which see), typified by and consisting chiefly of the genus *Sigillaria.* Some of the forms called *Ulodendron* and *Knorria* have been referred to this family, and the roots, as well as those of the *Lepidodendraceæ,* are called *Stigmaria.* Potonié regards the *Sigillariaceæ* as the remote ancestors of the *Isoëtaceæ.*

sigillarid (si-ji-lā′rid), *n.* Any fossil plant of the genus *Sigillaria* or of the family *Sigillariaceæ.*

sigillographical (sij-i-lọ̄-graf′i-kal), *a.* [*sigillography* + *-ic-al*^{1}.] Of or pertaining to sigillography.

> The matrix of the seal of the Barbers Gild is in the *sigillographical* collection of the Musées Royaux du Cinquantenaire. *R. Petrucci,* in Burlington Mag., II. 191.

sigma, *n.* 3. (*a*) The curve of the letter S or any approximate curve. (*b*) In *descriptive biol.,* one of the S-shaped ridges on the surface of certain molluscan shells, as those of gastropods and cephalopods.—4. In *exper. psychol.,* the time-unit, $\frac{1}{1000}$ of a second: abbreviated *σ.*

sigmatoid (sig′mạ-toid), *a.* Same as *sigmoid.*

Sigmistes (sig-mis′tēz), *n.* [NL., so called from the form of the lateral line, < Gr. *σίγμα,* sigma, + *-istes.*] A genus of cottoid fishes found in rock pools on the Alaskan coast.

sigmoiditis (sig-moi-dī′tis), *n.* [NL., < *sigmoid* + *-itis.*] Inflammation of the sigmoid flexure. *Med. Record,* Sept. 5, 1908, p. 403.

sigmoidoproctectomy (sig-moi″dọ̄-prok-tek′tọ̄-mi), *n.* [*sigmoid* + Gr. *πρωκτός,* anus, + *ἐκτομή,* excision.] Excision of the rectum and sigmoid flexure. *Med. Record,* June 27, 1903, p. 1057.

sigmoidoscope (sig-moi′dọ̄-skōp), *n.* [*sigmoid* + Gr. *σκοπεῖν,* view.] A form of speculum used in examination of the sigmoid flexure. *Buck,* Med. Handbook, III. 201.

sigmoidoscopy (sig-moi-dos′kọ̄-pi), *n.* [*sigmoidoscope* + *-y*^{3}.] Inspection of the mucous membrane of the sigmoid flexure.

sigmoidostomy (sig-moi-dos′tọ̄-mi), *n.* [*sigmoid* + Gr. *στόμα,* mouth, + *-y*^{3}.] Establishment of a permanent opening into the sigmoid flexure through the left flank. *Lancet,* July 4, 1903, p. 33.

sign, *n.*—**Argyll-Robertson's sign.** Same as *Argyll-Robertson pupil* (which see, under *pupil*^{2}).—**Babinski's sign,** extension of the toes, instead of flexion, when the sole of the foot is tickled. See *Babinski* ★*phenomenon.*—**Bamberger's sign,** inability to locate exactly tactile or painful sensations: observed frequently in locomotor ataxia.—**Braxton-Hicks sign,** a sign of pregnancy, shown in intermittent contractions of the uterus, detected on palpation after the fourth month.—**Charcot's sign,** elevation of the eyebrow in facial paralysis.—**Common signs,** in *astrol.,* Gemini, Virgo, Sagittarius, and Pisces.—**Complex local sign,** in *psychol.,* a local sign resulting from a fusion of qualitative sensations of special sense (sight, touch) and of intensive sensations of movement.—**Congruence sign.** (*a*) In theory of numbers, the symbol $\equiv$. *Gauss.* See *congruence,* 2. (*b*) In *geom.,* the symbol $\cong$.—**Dugas's sign,** inability to place the hand on the shoulder of the other side while the elbow rests against the chest: a sign of dislocation of the shoulder.—**Entry sign.** See ★*entry.*—**Fixed signs,** in *astrol.,* Taurus, Leo, Scorpio, and Aquarius.—**Hegar's sign,** softness of the lower portion of the womb, as felt by the finger in the rectum: an indication of pregnancy.—**Herodianic signs,** the oldest Grecian numerical symbols; the old Attic numerals, described by Herodianus.—**Kernig's sign,** inability to extend the leg when the thigh is flexed at a right angle with the body, although such extension is possible when the thigh itself is extended: a more or less trustworthy sign of cerebrospinal meningitis.—**Koplik's sign,** the enanthem of measles, a bluish-white dotted eruption on the mucous membrane of the cheeks and lips. It appears before the exanthem, or skin eruption.—**Oliver's sign,** pulsation felt in the larynx when it is grasped between the thumb and finger of the examiner and elevated: a supposed sign of thoracic aneurism.—**Quinquaud's sign,** a very fine muscular tremor perceived by the examiner when the finger tips, slightly separated, of the person examined are made to rest lightly against his palm: thought to occur only in persons using alcohol to excess. *Med. Record,* June 22, 1907, p. 1035.—**Rumpf's sign** or **symptom,** increased rapidity of the pulse on slight cause, a common symptom of neurasthenia.—**Simple local sign,** in *psychol.,* a local sign or mark, visual or cutaneous, which may be derived either from movement sensations or from the characteristic local coloring (intensive or qualitative) of the different regions of the skin or retina: distinguished from the *complex local sign,* which derives from the interaction of these two factors.

> If, following Lotze, we call every constituent of sensation which may be of influence upon the act of spatial ideation a local sign, the theories which hold that space-perceptions have been generated by psychological processes, and are neither given a priori nor result from a special quality of sensation, may be distinguished as the theory of *simple* and the theory of complex *local signs.*
> *W. Wundt* (trans.), Human and Animal Psychol., p. 169.

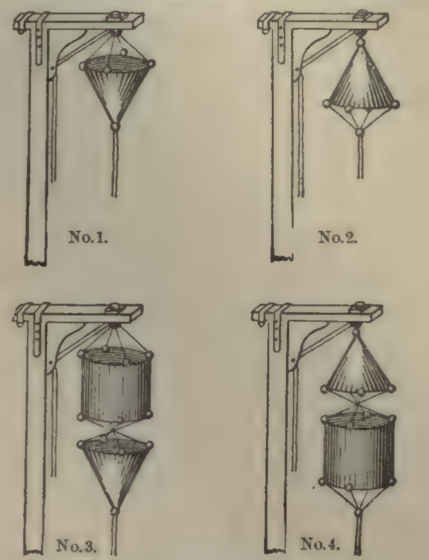
Temporal sign, in *psychol.,* elements of an idea which, by their presence, constitute it a temporal idea; mental processes or attributes of mental processes which serve as the conscious mark or tag of temporalness: a phrase formed on the analogy of *local sign.*

> We may, accordingly, regard the feelings of expectation as the qualitative, the sensations of movement as the intensive, *temporal signs* of a temporal idea.
> *W. Wundt* (trans.), Outlines of Psychol., p. 157.

Trousseau's sign. See ★*symptom.*—**Von Graefe's sign,** absence of motion of the eyeball on the attempt to look downward, although the upper lid drops naturally.—**Westphal's sign,** loss of the knee-jerk: same as *Westphal's symptom.*

signal, *n.* 2. In *railroading,* flags, lamps, gestures, sounds from a whistle, torpedoes, fusees, etc., are employed as signals to convey information to engineers, train-crews, gatemen, trackmen, or other employees. *Signals made by sounding a locomotive whistle* have the following meanings, a long blast being represented here by a dash and a short one by 0: — — 0 0, warning, as on approaching a grade street-crossing; —, warning on approaching a station; 0, stop! apply brakes; — —, release brakes; — 0 0 0, rear brakeman go back and display red flag; — — — —, flagmen return (from west and south); — — — — —, flagmen return (from east and north); — — —, train has parted; 0 0 0, train is to move back; 0 0 0 0, call for attention of train-crew; — 0 0, call for attention from other train-crews; 0 0 0 0 0, general alarm for fire or accident. One explosion of a torpedo means stop! two explosions, proceed with caution to the next signal. *Flag or light signals* have the following meanings: white (flag or lamp), trains proceed; red, stop! green, proceed with caution and slowly to next signal; white beyond a green, resume full speed; red and green, stop at flag-station. On some roads red means stop; green, proceed; blue, train or car stopped for repairs, must not be moved. A red fusee burning beside the track means stop until fire has burned out and then proceed with caution to next signal. *Signals made by the hand or a lantern:* the hand, with or without a white-light lantern (lantern lighted at night) swung across the track, stop! a lantern raised and lowered vertically, proceed; swung in a circle vertically, back; swung at arm's-length, train has parted; swung in the hand horizontally, apply air-brakes; held at arm's-length overhead, release brakes, prepare to proceed. A *slow-board* is a sign beside a railroad-track upon which repairs are being made, calling for reduced speed. A *speed-board* is a sign on a railroad-track, beyond a slow-board, indicating that full speed may be resumed. A *home signal* is a fixed signal displayed on a mast or signal-bridge at the beginning of a block to control trains approaching the block. A *distant signal* is a fixed signal placed below a home signal to report the condition of the next block in advance. If the home signal is at clear and the distant is at danger, the rule is to proceed with caution through the block. If both the home and the distant signal are clear, the train may proceed at full speed. Compare ★*signaling.*

4. In *whist,* any method of showing that the player wants trumps led. See *trumps* ★*signal.*—**Ardois signal system** (*naut.*), a night-signaling apparatus used by war-ships. It consists of a set of four or five double lanterns hung vertically over one other. Each lantern has two electric lights, one with a red, the other with a white glass. By means of a keyboard, different combinations of red and white lights can be displayed, thus signaling letters of the alphabet or numbers.—**Automatic signal,** in railway signal systems, a form or principle of such apparatus by which the passage of the train itself sets, locks, and releases the signals on the track behind it, so that no human intervention is required to operate signals by which collisions should be prevented or accidents averted. See ★*signaling.*—**Ball signals, staff-and-ball signals,** a system of signals consisting of three balls of different sizes, painted black and white, and placed vertically above each other in any specific order. The significance of each combination is arranged to suit the system of weather forecasts.—**Bomb signals,** colored lights thrown up by bombs to great heights and indicating by colors and numbers the forecasts of the weather.—**British storm signals,** the cone hung from a frame by day or the triangle of light by night, replacing the former drum and cone: strong northwest or north winds veering through E. to S.E. are indicated when the cone points upward; strong southeast or south winds veering through W. to N.W. are indicated when the cone points downward.—**Buys Ballot's system of weather signals,** a modification of the French semaphore consisting of a horizontal bar or wind-vane and an arm hinged to the vane carrying a disk at its free end. The arm and disk can be set in different directions relative to the vane, so as to indicate the expected wind, weather, and temperature. Historically it was the first of the modern systems of weather signals; adopted in Holland in 1860.—**Canadian storm signals.** See the cut.—**Cautionary signal,** a special signal used by the United States Signal Service, 1871–1891, to announce the probable occurrence, within 12 hours and within a radius of 100 miles, of a wind with a velocity of over 25 miles an hour. Now replaced by the storm warnings of the United States Weather Bureau. See *storm and hurricane* ★*warnings,* ★*weather-flag.*—**Coston signals,** colored signal rockets, of private patterns, used for distinguishing vessels of different lines at sea, etc., named after gunner Coston of the United States navy, who modified and improved the Rogers system. These rockets are held in the hand and ignited by percussion.—**Deprez signal.** See *Deprez* ★*marker.*—**Drum-and-cone signal,** the individual drum or cone or any combination of these hung from a frame, as used to signal expected strong winds at European and Colonial signal stations: in general the cone points up for north and down for south winds. See *storm-cone* and ★*wind-signal.*—**Information signal,** in the United States, a triangular red flag formerly used by the Signal Service to give warning of possible storms, and to notify shipmasters to apply for information to the local office of the Bureau: now replaced by the 'warnings' of the United States Weather Bureau.—**Meal signal.** Same as *meal pennant* (which see, under *meal*^{2}).—**Nautical signals.** See *international* ★*code.*—**Pilot signals.** The following signals are displayed separately or together as summons for a pilot: *in the daytime,* the jack hoisted at the fore; the international signal P.T. or S, with or without the code-pennant over it; the distant signal consisting of a cone pointing upward and having over it two balls, or shapes resembling balls: *in the night-time,* a blue light burned every 15 minutes; a bright white light flashed or shown at frequent intervals just above the bulwarks for about a minute at a time.—**Steam-navigation signals.** One short blast means that the boat giving the signal intends to port her helm and direct her course to starboard; two short blasts mean that she intends to starboard her helm and direct her course to port; three short blasts mean that the engines have been reversed; four or more short blasts are a danger-signal, and call for an understood and accepted agreement on the part of the two pilots for passing one another—this signal being used when there is danger of collision.—**Train signals.** See ★*signal, n.,* 2.—**Trumps signal,** in *whist,* the playing of an unnecessarily high card on one trick, followed by a lower card of the same suit on another trick, as a conventional signal to the partner to lead trumps.—**Very signals,** a system of night signals used in the United States navy, in which green and red burning stars are shot up into the air from a special pistol: named from its inventor.



Canadian Storm Signals.

These signals, if displayed by day on lakes Superior, Erie, or Ontario, indicate: No. 1, a moderate gale is expected at first from an easterly direction; No. 2, a moderate gale, at first from a westerly direction; No. 3, a heavy gale, at first from an easterly direction; No. 4, a heavy gale, at first from a westerly direction. If displayed on Lake Huron or in Georgian Bay: No. 1, a moderate gale is expected at first from a southerly direction; No. 2, a moderate gale, at first from a northerly direction; No. 3, a heavy gale, at first from a southerly direction; No. 4, a heavy gale, at first from a northerly direction. The cone, when displayed alone, indicates that it is expected that the wind will attain a velocity of 25 miles an hour, but will not exceed 35 miles, and it is not intended to indicate that an ordinary well-found vessel should stay in port, but is simply a warning that strong winds are expected from the quarter indicated. The drum is always hoisted when the velocity of the wind is expected to exceed 35 miles an hour. The night signal corresponding to day signals Nos. 1 and 3 is a red light; corresponding to day signals Nos. 2 and 4 is a white light above a red light.

signal-cabin (sig′nạl-kab″in), *n.* A small signal-house or cabin on the crest of a hill or mountain through which a tunnel is being cut, designed as a protection for the reference-points and the theodolite or transit used in locating and establishing the center-line of the tunnel. *Jour. Brit. Inst. Elect. Engin.,* 1902–03, p. 555.

signal-hose (sig′nạl-hōz), *n.* Short lengths of a hose used to couple the ends of the signal-pipes of adjoining cars in a train and make a flexible continuous pipe through the length of the train.

signaling (sig′nal-ing), *n.* The use of signals; in *railroading*, the business of controlling the traffic by means of signals. In block-signaling, signals are placed at the beginning of every one of the continuous series of blocks into which a railroad is divided. There are various methods of controlling the signals. In the *telegraph block-signaling system* they are controlled by a signalman stationed at the beginning of the block, who receives information by telegraph from the signalman in the block next above him, in the direction of travel, and sends information to the one next below him. If the next train ahead is reported to have cleared the block and proceeded to the next block in advance, the signalman displays his signal at 'clear.' If not, he detains the following train by displaying his signal at 'danger' until the block is reported clear. In the *controlled manual system* the signals are operated by hand by each signalman in coöperation with the signalman next in advance, by an electric circuit on the telegraph-pole line running between block-stations and sometimes supplemented by an electric circuit through the rails, each train shunting the circuit through its wheels and thereby controlling the signals or block-signal apparatus. In the *automatic system*, signals on masts or brackets are operated through an electric current which traverses the rails, the train, through its wheels, shunting the current when occupying these track-circuits, thus indirectly opening the signal-controlling circuits. Each track-circuit is connected with the signals at the beginning of each block, and a train entering the block sets the signal automatically at 'danger' and maintains it there until the rear end of the train has entered the next block, when the danger-signal is released and shows that the line is clear. This applies to the home signals, the distant signals, though on the same mast, being controlled by a much longer rail-circuit and remaining at 'caution' until after the home signal on its own post as well as the next home signal in advance has come to clear. Various methods are employed to move the signals under the control of the rail-circuits. The *interlocking system* of signals is one which is adapted to the movements of trains at stations, at crossovers, and in yards; its operation includes the control of the switches, the signals being displayed as the result of the switch-movements, reporting the position of the switches and permission to proceed to the train-crews. Several methods of thus controlling the movements of switches and signals are employed upon American roads. In the *mechanical system* all the switches and signals of a yard are operated from a switch-tower through the movement of hand-levers, each lever opening and closing one switch or operating one signal. The movement of the lever is transmitted to the switch by means of long rods (pipes joined together by screw-couplings) resting on roller-bearings with a bell-crank at each change of direction. Each lever opens or closes the switch and, through the interlocker, locks other levers of the system and prevents any signal from being displayed except that which shows the track-connection to be clear at that point, and leaves all other signals governing conflicting routes at danger until the next switch-movement is made. This mechanical system is limited, in point of distance, by the ability of the signalman to move a switch by means of a rod, or a distant signal by means of a long wire. The *pneumatic system* employs air-motors placed at each switch and signal to operate it, each air-motor being operated by compressed air supplied through small pipes which extend from the switch-tower to each switch and which are fed from a main feed-pipe that is kept supplied by a compressor placed at some central point in the system. A movement of the hand-lever in the tower admits air to the motor through a small pipe, and the completion of the movement of the apparatus is reported back through a second pipe to indicate to the signalman that the switch has moved and that the proper signal can be displayed to lock all conflicting routes. To change the switch or signal, air is admitted to other pipes by the movement of the lever, and the switch and signal are reversed and their reversal reported back. In the *electropneumatic system*, compressed air is employed to operate the switches and signals, the control being by means of electric circuits (through wires underground) connecting the tower with each switch and signal. The movement of a lever in the tower sets the motors at the switches and signals in motion, reporting back their movement, interlocking all signals, and, when required, reversing all switch and signal movements. In the *electric system* the switches and signals are operated by electric motors placed at each switch and signal and fed by storage-batteries, the control from the tower being by electric circuits. Compare ★*signal*, 2.—**Curb-signaling**, in telegraphy through cables, a method by which the cable is discharged between each signaling impulse by sending a reversed current into the cable and then connecting it momentarily to the earth.—**Double curb-signaling**, in telegraphy through cables, a method by which, between each signaling impulse, a current flowing first in one direction and then reversed is sent through the cable to discharge it and the cable is then grounded.—**Double-current signaling**, in *telegraphy*, the use of signaling impulses in which the current is reversed by means of a pole-changer or similar device, the positive current being immediately followed by one in the opposite direction.—**Selective signaling**, in *telephony*, a system which permits the calling of any one of a number of subscribers on a party-line without disturbing those not wanted.—**Single-current signaling**, in *telegraphy*, the sending of signals by the making or breaking of a direct-current circuit.—**Submarine sound signaling**, the transmission of signals between ships at sea or from the shore to vessels by means of subaqueous sound-waves. The transmitting device, in the system generally employed, is a submerged bell the vibrations of which are transmitted through the water to the receiving instrument of the distant ship. The receiver is attached to the hull of the vessel below the water-line and contains a telephonic transmitter which sends the signals electrically to a telephonic receiver on the bridge.

signal-locker (sig′nạl-lok″ėr), *n.* A locker on the bridge of a war-ship in which the signal-flags are kept.

signalman, *n.* **2.** In *lumbering*, one who transmits orders from the foreman of a yarding-crew to the engineer of the yarding-donkey.

Signalosa (sig-nạ-lō′sạ), *n.* [NL., so called in allusion to the long dorsal ray; < L. *signum*, a sign, standard, + *alosa*, a shad.] A genus of clupeoid fishes found in the bayous of Mississippi and Louisiana.

signal-pipe (sig′nạl-pīp), *n.* In *car-building*, an air-pipe under the body of a car used to convey signals from the train to the locomotive cab. It connects, through the signal-hose, all the cars of a train with the locomotive.

signal-tower, *n.* **2.** Specifically, an armored tower or inclosure above the deck of a war-ship to protect the signalmen when hoisting signals in action.

signal-yard (sig′nạl-yärd), *n.* A light yard on a military mast fitted with blocks for signal-halyards from which various signals can readily be displayed.

signary (sig′nā-ri), *n.* [L. *signum*, a sign, + *-ary*^{1}.] The list of Egyptian hieroglyphic signs.

> Probably all the signs in the hieroglyphic *signary* can be employed in their primary sense. The secondary value expresses the consonantal root of the name, and any, or almost any, derivative from that root.
>
> *Encyc. Brit.*, XXVII. 730.

signature-prayer (sig′nạ-tụ̄r-prãr″), *n.* A prayer expressed by a symbolic action.

> This action possibly symbolized the fertilization of the earth; indeed, one is tempted to suppose that it was once a *signature prayer* to make the earth yield buffalos.
>
> *J. W. Fewkes*, in Amer. Anthropologist, July-Sept., [1902, p. 508.

signet, *n.* **3.** The ring-shaped form of the plasmodium of malaria. See ★*signet-ring*, 2.

> While some of the stained *signets* were much larger than others, there was nothing else seen to suggest a mixed infection.
>
> *Jour. Tropical Med.*, July 15, 1903, p. 222.

Privy signet, in *Eng. law*, the seal used in making grants of the crown. By 14 and 15 Vict. c. 82 this practice was simplified and royal grants and letters patent are sealed under authority with the privy seal or with wafer seals.

signet-ring, *n.* **2.** One of the forms of the malarial parasite in which the body is of a ring shape thickened on one side.

> At a very early period of its development the æstivo-autumnal parasite in the present cases assumed a very characteristic ring shape. Many of these rings early developed a thickening of one segment, and to these bodies of various sizes the term "*signet-ring*" very aptly applies.
>
> *J. Ewing*, in Jour. Exper. Med., March 25, 1901, p. 446.

significature (sig-nif′i-kạ̄-tụ̄r), *n.* Significance.

> The morphological *significature* of the limbs of vertebrate animals has likewise been determined by Professor Owen. *McCosh*, Divine Government, p. 124.

significs (sig-nif′iks), *n.* [See *signify*.] The science or study of signification, meaning, or significance (ideal worth).

> *Significs* as a science would centralize and co-ordinate, interpret, inter-relate, and concentrate the efforts to bring out meanings in every form, and in so doing to classify the various applications of the signifying property clearly and distinctly. *Baldwin*, Dict. Phil. and Psychol., II. 529.

sigtesite (sig′te-sīt), *n.* [*Sigtes* (see def.) + *-ite*^{2}.] A supposed new alkali feldspar, shown to be merely an intimate mixture of albite and elæolite, from Sigtesö, southern Norway.

siguatera, *n.* Same as ★*ciguatera*. *Buck*, Med. Handbook, IV. 184.

sikatch (sē′käch), *n.* A Russian name for the adult bull fur-seal, in use among the natives on the Pribyloff Islands. See *seecatchie*. *D. S. Jordan*, Fur Seals and Fur-seal Islands.

sikka, *a.* See *sicca*.

sil^2, *n.* A simplified spelling of *sill*.

silage, *n.* The practice of ensiling has in recent times been greatly extended, with much change of method, at least in America. For the structures employed, see ★*silo*. The largest use of silage is on dairy farms, Indian corn being in the United States by far the most important material. Success in making silage lies in thoroughly excluding the air. Close packing is required and coarse material, such as Indian corn, should be cut up fine. The top of the mass is not now weighted. Slow filling is found to be better than rapid filling, since it gives time for settling and permits a temporary heating which expels all the air not consumed by the live tissues. This initial heating, formerly ascribed to fermentation, is now believed to be due to respiratory processes. See the phrases below.—**Sour silage**, a quality, now regarded as inferior, resulting from acid fermentation which, when carried far, imparts strong acidity, dark color, and an offensive smell. Compare *silo*, *sour* ★*hay*, and *sweet* ★*silage*.—**Stack silage**, silage produced by stacking the material compactly in the open air, with or without the aid of palings, the pile being commonly weighted. This method has been largely adopted in Australia, South Africa, etc., but is not adapted to moist climates. Compare *brown hay* (under *sour* ★*hay*).—**Sweet silage**, silage in which fermentation is mainly prevented, and which is therefore little acid, of a bright green color, and not unpleasantly scented. Sweet silage is secured (the thorough exclusion of air being presumed) by slow filling and avoidance of excessive moisture, the mass heating spontaneously to a temperature above 122° F., which kills all ferments and puts an end to chemical change. This is the only kind now sought in the United States.

silajit (si-lā-jēt′), *n.* [Hind. *silājit*, storax, stone lac, mineral coal, bitumen, red chalk, benzoin, a crystallized foliated gypsum (Fallon), < Skt. *ṣilājatu*, bitumen, < *ṣilā*, stone, rock, + *jatu*, bitumen.] A name applied in India to several distinct substances used now or formerly as a supposed cure for many disorders.

> "*Silajit*," an ancient Eastern medicine, forms the subject of a paper by Mr. David Hooper (Journ. Asiatic Society of Bengal, vol. lxxii., part ii., No. 3, 1903). There seem to be three substances known under this name; one appears as an exudation on the rocks in certain districts of the Himalayas, and consists largely of aluminium sulphate; a second, the black and probably true *silajit*, is said to form an exudation on rocks in Nepal, and consists mainly of alkalies and alkaline earths in combination with an organic acid related to humic acid; and a third, or white *silajit*, is apparently of animal origin. The substance is said to be a cure for most disorders.
>
> *Nature*, July 14, 1904, p. 255.

Silenaceæ (sī-lẹ̄-nā′sẹ̄-ē), *n. pl.* [NL. (Lindley, 1836), < *Silene* + *-aceæ*.] A family of dicotyledonous archichlamydeous plants of the order *Chenopodiales*, the pink family, for which the genus *Silene* is taken as the type. It is the *Caryophyllaceæ* of Reichenbach and most botanists, for which it is now substituted, *Caryophyllaceæ* being especially inappropriate because the genus *Caryophyllus*, from which the name was formed, does not belong to the family *Silenaceæ*.

silence, *n.*—**Belt of silence** or **region of silence**, the region in the neighborhood of a fog-signal where its sound is not heard by an observer on a vessel's deck, though it may sometimes be heard by ascending to the mast-head. According to Professor Joseph Henry, the sound is refracted by the action of the wind and passes over or around the belt of silence.—**Silence post**. See ★*post*^{1}.

silence-cabinet (sī′lẹns-kab″i-net), *n.* A telephone-booth, so called because its construction is such as to exclude noises from without.

> At most telephone exchanges a "*silence cabinet*" is provided in the public office.
>
> *Preece and Stubbs*, Manual of Telephony, p. 227.

silencer (sī′len-sėr), *n.* **1.** One who or that which silences.—**2.** Same as ★*muffler* (*c*).—**3.** A device, invented by H. P. Maxim, for silencing, or greatly reducing, the noise produced by the discharge of a rifle or other firearm. It is in the form of a steel tube, several inches in length, which can be attached to the muzzle of the gun.

Silesian. **I.** *a.*—**Silesian zinc furnace**, a direct-fired or gas-fired furnace provided with large fire-clay muffles into which the previously calcined calamin is introduced. Around these muffles the flame of the furnace burns. The heat thus generated produces a reaction between the oxid of zinc and the carbon in the muffle, producing metallic zinc which is volatilized and passes into a condenser where it is condensed in the liquid form.

II. *n.* **2.** [*l. c.*] Silesia: commonly in the plural. [Trade use.]

silica^1, *n.* Silica fused by the oxyhydrogen blowpipe may be worked in the plastic state, very much as glass is, and retains its amorphous character on cooling. Extremely delicate threads of this material may be drawn, and are used to suspend minute, readily mobile mirrors or other such parts of physical apparatus; they are also valuable as electrical insulators, being less affected by atmospheric moisture than threads of glass. Tubes, flasks, and beakers of moderate size have also been made from fused silica, and are useful on account of the hardness of the material, the high temperature it will bear without melting, the rapid changes of temperature it will sustain without cracking, and its superior resistance to most chemical reagents. Its behavior as respects dilatation by heat is also important. Berthelot has, however, recently shown that it is permeable by gases, particularly at high temperatures.

silica^2, *n.* Same as ★*siliqua*, 6.

silicane (sil′i-kān), *n.* [L. *silex* (*silic-*), flint, + *-ane*.] A name proposed for siliciureted hydrogen (SiH_4) as the analogue of methane (CH_4).

silicarenyte (sil-i-kar′e-nīt), *n.* [*silic*(*a*) + *arenyte*, < L. *arena*, sand, + *-yte*, for *-ite*^{2}.] A sandstone containing little else than grains of quartz.

> When a clastic rock is nearly or quite pure in chemical composition, as not infrequently happens, we can combine chemical and textural terms. Thus a purely siliceous arenyte like the St. Peter's sandstone of the Mississippi valley (over 99 per cent. SiO_2) may be called a *silicarenyte*.
>
> *A. W. Grabau*, in Amer. Geol., April, 1904, p. 242.

silication (sil-i-kā′shọn), *n.* [*silicat*(*e*) + *-ion.*] The union of silicic acids with bases producing silicates; silicatization. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. iv. 168.

silicicolous (sil-i-sik′ọ̄-lus), *a.* [L. *silex* (*silic-*), flint, + *colere*, inhabit.] In *phytogeog.*, inhabiting silicious soils.

According to Thurmann the so-called *silicicolous* plants are hygrophilous and the calcicolous plants xerophilous.
A. F. W. Schimper (trans.), Plant-Geog., p. 101.

silicide, *n.*—**Copper silicide.** Same as ★*silicon-copper.*

silicification, *n.* 2. In *geol.*, the replacement of a rock or of the remains of an organism with silica, as in petrified or silicified wood, or silicified limestone. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. iv. 217.

silicilutyte (si-lis-i-lū′tīt), *n.* [*silic*(*a*) + -*i*- + L. *lut*(*um*), mud, + *-yte* for *-ite*^{2}.] A rock composed essentially of finely comminuted quartz, whose particles are comparable in size to the components of clay. *A. W. Grabau*, in Amer. Geol., April, 1904, p. 242.

Silicious cement. See ★*cement.*

silicirudyte (si-lis-i-rö′dīt), *n.* [*silic*(*a*) + -*i*- + *rudyte.*] A pure quartz conglomerate or breccia. *A. W. Grabau*, in Amer. Geol., April, 1904, p. 242.

silicite (sil′i-sīt), *n.* [L. *silex* (*silic-*), flint, + *-ite*^{2}.] Same as ★*ferrosilicon*, the latter term being more commonly used.

silico-. In *chem.*, a combining form of *silicon.*

Silicofluoric acid. Same as *hydrofluosilicic acid.*

silicoformic (sil″i-kọ̄-fôr′mik), *a.* Noting a compound containing the trivalent group HSi⋞. Such compounds are derivatives of formic acid in which the carbon atom has been replaced by one of silicon.

silicol (sil′i-kol), *n.* [*silic*(*on*) + *-ol.*] A name proposed for the compound $SiH_3.OH$, as the analogue of methyl alcohol ($CH_3.OH$).

silicomethane (sil″i-kọ̄-meth′ān), *n.* Same as ★*silicane.*

silicon, *n.* Elementary silicon can now be prepared in large quantity by electrolysis, and in a fused condition. Like its oxid, in cooling from a state of fusion it passes through a plastic stage in which it can be molded into special forms or drawn into threads.—**Copper-silicon**, a general name under which various alloys of copper and silicon are known. These alloys are used for increasing the tensile strength of copper, brass, and bronze castings. The effect of the silicon is to deoxidize the casting and make it sounder. See ★*silicon-copper.*

As to *copper silicon*, this has been prepared for a long time in the furnace of Cowles, and has found considerable application as a deoxidizer, and for increasing the tensile strength in copper and brass castings.
Sci. Amer. Sup., March 21, 1903, p. 22761.

Silicon carbide. See ★*carborundum.*—**Silicon-copper**, a compound of copper and silicon, used in the manufacture of *silicon-bronze* (which see, under *silicon*). Also called *silicium copper* and *copper silicide.*—**Silicon star.** See ★*star*^{1}.—**Silicon tetrachlorid**, a colorless liquid of specific gravity 1.524, and of acrid smell, which fumes in the air and boils at 59.6° C., prepared by passing dry chlorin gas over a strongly heated mixture of silica and carbon. It is decomposed by water, hydrochloric and silicic acids being produced, the latter in gelatinous form.

silicospiegel (sil″i-kọ̄-spē′gl), *n.* Spiegeleisen containing ten per cent. or more of silicon in combination. It is used in steel castings to add both silicon and manganese at once to the metal. *Phillips and Bauerman*, Elements of Metallurgy, p. 273.

siliqua, *n.* 5. The lowest unit in the Roman coinage, the twenty-fourth part of a solidus. See *solidus.*

The solidus of Constantine (of which 72 went to the Roman pound of gold) was divided into 24 *siliquæ* or *κεράτια* (whence comes carat).
W. Ridgeway, in Jour. Hellenic Studies, X. 95.

6. A coin of base silver of the Gothic and Lombard kings of Italy. Also *silica.*

silk. I. *n.*—**Artificial silk**, a fine, continuous fiber having the luster and appearance of silk, made from a solution of tetranitrated cellulose in a mixture of alcohol and ether forced through a very small orifice into water, which solidifies it.—**Byssus silk.** See ★*byssus.*—**Chardonnet silk**, a denitrated nitrocellulose substance formed into a fine thread of silken luster by a process invented by M. de Chardonnet, and first practically demonstrated on a small scale at the Paris exposition of 1889.—**Fagara silk**, silk obtained from the cocoon of the Atlas moth (*Attacus atlas*), which is found in southern Asia.—**Gauze silk**, a thin, transparent fabric made of silk.—**Glass silk**, very fine long flexible glass threads; spun glass. **Jama-mai silk.** See *yama-mai* ★*silk.*—**Lettered silks**, in Oriental textiles, silks in the decoration of which inscriptions are used, as names of princes, verses of the Koran, etc.—**Souple silk**, raw silk which has had the silk-gelatin removed but partly by working in warm soap solution, so that there is a loss of only about 8 per cent. in weight, and has afterward been bleached and worked in a weak solution of cream of tartar nearly at the boiling-point. The product is soft and pliant, but not so strong as completely scoured silk.—**Wild silk**, silk obtained from the wild or uncultivated silkworm.—**Wood-pulp silk**, artificial silk made from woody fibers or cellulose treated with a mixture of nitric and sulphuric acids. See *artificial* ★*silk.*—**Yama-mai silk**, silk produced by the larva of the yama-mai (which see).

II. *a.*—**Silk wool**, wool which has been made to assume a silky appearance by treatment with an acidified solution of bleaching-powder.

silk (silk), *v. i.* To be in course of earing: said of growing Indian corn.

The month closed with the rye crop and the bulk of the barley crop in shock or stack, oat harvest far advanced . . . corn mostly *silking* or earing. Early potatoes and flax very good.
U. S. Monthly Weather Rev., July, 1902, p. 346.

silk-cotton, *n.*—**Red silk-cotton tree**, the simool of India, *Bombax Ceiba.* See *bubui gubat*, under ★*bubui.*

silker (sil′kėr), *n.* One who embroiders (the back of a glove, etc.) in silk.

From the cutters' room the leather, which has assumed the shape of the glove, is sent to the "*silkers*," who embroider the back, and then to the "makers." Some make the gloves, that is they sew the fingers and put the thumbs in; others, called "welters," are engaged in welting or hemming the glove round the edge of the wrist; still others, called "pointers," work the ornamental lines on the back. *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22629.

silkoline (sil′kọ̄-lin, or sil-kọ̄-lēn′), *n.* [A trade-name, irreg. < *silk* + *-ol* + *-ine*^{2}.] A light-weight fabric made from mercerized cotton yarn.

silk-scouring (silk′skour″ing), *n.* The process by which the gelatinous coating is removed from the surface of the fibers of raw silk, rendering them soft, pliant, and lustrous. It consists essentially in working the hanks of raw silk in a solution of soap, sometimes with the addition of carbonate of soda, and boiling for a longer or shorter time until the silk-gelatin swells up and dissolves, finally rinsing in tepid water.

silk-snapper (silk′snap″ėr), *n.* See ★*snapper.*

silk-stocking (silk′stok″ing), *n.* 1. One who wears silk stockings; hence, a person of luxurious habits.—2. One of the well-to-do or 'aristocratic' members of the community or of a party: applied particularly to certain members of the Whig party in the United States in the second quarter of the nineteenth century. [U. S. political slang.]

silkworm, *n.*—**Giant silkworm**, the larva of any member of the lepidopterous family *Saturniidæ* (which see).

silkworm-tree (silk′wėrm-trē), *n.* The white mulberry, *Morus alba*, which furnishes the chief food of the silkworm.

silky, *a.*—**Silky fracture**, a fractured surface of steel which has a sheen like silk. This effect is produced when the grains or crystals of steel are very small in size. It is oftenest seen in high-carbon steels (1 per cent.) which have been correctly heated, and in certain alloy steels, such as nickel steel, tungsten steel, etc.

silky-villous (sil′ki-vil′us), *a.* In *bot.*, villous with silky hairs.

sillage (si-läzh′), *n.* [F. *sillage*, a wake, track.] Wake; track; specifically, the disturbance of the ether produced by the movement through it of an electrified corpuscle or electron.

The wake (*sillage*) which accompanies the electron in its motion.
Langevin, at Congress of Arts and Science, St. Louis, IV.

sillare (sẹ̄l-yä′rạ̄), *n.* [Mex. Sp.] A local name for beds of chalky limestone beneath and around the city of Monterey, Mexico, which are supposed to have been deposited by the evaporation of the lime-bearing waters of a former lake. *Amer. Geol.*, March, 1905, p. 172.

sill-cock (sil′kok), *n.* A faucet or valve for use at the sill of a house or building to give a hose-connection.

sill-complex (sil′kom″pleks), *n.* In *geol.*, a series of intruded sheets of eruptive rock or sills.

During the geological periods when the fault-vent continued intermittently active, the form of the *sill-complex* was capable of being re-moulded periodically in harmony with the localised crust-stresses.
Nature, Sept. 3, 1903, p. 413.

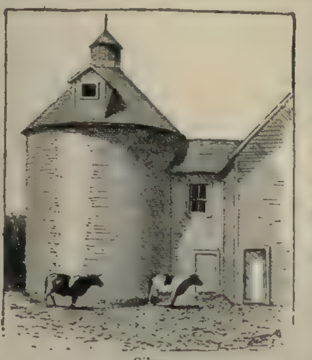
sill-course (sil′kōrs), *n.* In *arch.*, a continual horizontal course closely connected with the sills of a row of windows, either immediately below the sills, or more properly with its lower bed on a line with the lower beds of the sills so that the sills form part of it.

siller-cup (sil′ėr-kup), *n.* A name sometimes applied to fungi of the genus *Nidularia.* [Eng.]

silly, *a.*—**Silly season**, a season when there is little news and the editors of newspapers are supposed to be obliged to use any material, however foolish, that comes to hand. [Colloq.]

The recurrence of the "*silly season*" is marked this year by the revival, both in the . . . and in the . . . of the old fable as to the "derivation" of Whitsunday from the German Pfingsten. *N. and Q.*, 10th ser., II. 121.

silo, *n.* The pit silo has, in America, largely given way to above-ground structures of brick or stone or, commonly, of wood, these being found cheaper, equally effective, and more convenient except on hillsides. The wooden silo was at first rectangular, but for greater strength and to avoid the spoiling of silage in the corners a round form has been largely adopted. Round wooden silos are walled either with staves (see *stave* ★*silo*), or with studding lined and sheathed with boards or inside lathed and plastered with cement. The foundation in either case is of stone laid in cement. The superstructure may be sunk a short distance into the ground. Rectangular (and square) silos (preferred inside a rectangular building) are built with studding. All above-ground silos require doors, which are placed one above another and are often covered with an external shoot down which the silage falls as it is taken out. Outdoor silos usually require a roof with provision for ventilation.—**Stack silo**, a compactly built stack or rick of green forage, sometimes topped with grass and commonly weighted. This mode of ensiling has been largely adopted in South Africa, Australia, etc., and is said to answer well in the dry southwestern United States; but it is not adapted to moist climates. Compare *sour* ★*hay.*—**Stave silo**, a cylindrical wooden silo with walls composed of staves bound together by flat or round hoops.



Silo.

siloist (sī′lọ̄-ist), *n.* [*silo* + *-ist.*] See the extract.

The term *siloist*, a farmer making and feeding silage, is occasionally met with, and has also sometimes been used in this book. *F. W. Wool*, Book on Silage, p. 12.

siloxicon (sil-ok′si-kon), *n.* [*sil*(*icon*) + *ox*(*ygen*) + -*i*- + *c*(*arb*)*on.*] A trade-name of a refractory material useful as a furnace-lining and in making fire-proof bricks, crucibles, muffles, etc., made by the interaction of carbon and silica in an electric furnace, less carbon and a somewhat lower temperature being required than in the manufacture of carborundum. The substance is an amorphous solid, of grayish-green color; insoluble in melted iron; unattacked by acid or basic slags, by hot alkaline solutions, and by all acids except hydrofluoric; self-binding when strongly heated; and refractory in a very high degree. Its composition approximates to Si_2C_2O. When heated to 2700° F. in the presence of free oxygen it takes up that element and is resolved into silica and carbon dioxid, and in the absence of oxygen it seems to be decomposed at 5000° F. into silicon carbide (carborundum), vapor of silicon, and carbon monoxid.

"*Siloxicon*" is a term destined to become as familiar to the commercial world as "Carborundum." It is the name of a new compound, or class of compounds, discovered by Mr. Acheson, consisting of carbon, silicon and oxygen in chemical combination, and possessing physical and chemical properties of great importance to the metallurgical arts.
C. P. Townsend, in Elect. World and Engin., March [28, 1903, p. 525.

silting (sil′ting), *n.* The process of deposition of very fine sediment or silt.

The altitude of the Manchester col, or possibly of some other col still farther down the Ohio, would represent the maximum elevation to which the waters would rise within the basin. This would determine the upper limit of the *silting.*
W. G. Tight, in U. S. Geol. Surv., Prof. Paper 13, 1903, [p. 100.

Siluria (si-lū′ri-ä̤), *n.* [NL. See *Silurian.*] In *geol.*, the region of Silurian rocks taken as a whole irrespective of geographical boundaries.

silurin (si-lū′rin), *n.* [*Silur*(*us*) + *-in*^{2}.] A protamine obtained from the testicles of the fish *Silurus glanis.*

Siluro-Celtic (si-lū′rọ̄-sel″tik), *a.* Pertaining or relating to the Silurian Celts, or the Celts of Wales and Ireland.

silvaline (sil′va̤-lin), *n.* [Irreg. < L. *silva*, a wood (taken in sense of *lignum*, wood), + *-l-* + *-ine*^{2}.] A trade-name of yarn or thread made by spirally twisting, with the aid of special machinery, narrow strips of paper as made on the ordinary Fourdrinier machine, largely from chemical wood-pulp. This yarn is available for the production of textile fabrics, replacing jute or perhaps coarse cotton yarn. See, for a similar product, ★*xyloline.*

silver. I. *n.*—**Alkaline nitrate of silver.** See ★*nitrate.*—**Allotropic silver.** Carey Lea has described several forms of silver differing in properties, especially in color, from the common metal. The most notable of these are a bluish-black, a reddish-brown, and a bronze- or gold-colored precipitate, very finely divided, and apparently colloidal in character. None of them has been obtained in a pure state, and the evidence is not conclusive that they represent different allotropic forms of the element. — **Berthollet's fulminating silver,** a black powder, consisting of silver nitride (Ag_3N), produced by the action of aqueous ammonia on silver oxid. It explodes, when dry, with great violence on slight heating or gentle friction. Quite distinct from the silver salt of fulminic acid, $Ag_2C_2N_2O_2$. — **Blue silver,** metallic silver, assumed to be in a distinct allotropic form, in which it appears of a golden-yellow color by reflected light and blue by transmitted light. These appearances may be due merely to molecular grouping. — **Caustic silver.** See ★*caustic.* — **Coin silver,** the alloy of nine parts of silver and one of copper, legally fixed as the standard of fineness of the silver coins of the United States. — **Dark-red ruby silver.** Same as *pyrargyrite.* — **Fulminating silver.** (*b*) See *Berthollet's fulminating* ★*silver.* (*c*) Silver hydrazoate (AgN_3), prepared by precipitating a solution of silver nitrate by one of sodium hydrazoate. — **Herring silver,** in *old Eng. law,* money paid in lieu of the customary duty of supplying herrings to a religious institution. — **Hyposulphite silver-extraction process,** the process of extracting silver by means of hyposulphite leaching. In the Russel process the chloridizing roasted ore is first lixivated with hyposulphite of soda, and the lead is separated from the solution by means of sodium carbonate, which converts it into lead carbonate. Then the ore is leached with cuprous hyposulphite, known as the 'extra solution,' which dissolves metallic silver, silver sulphid, sulpharsenide, and sulphantimonide, and thus an additional amount of silver is extracted, which would have been lost in the ordinary method of extraction. The solutions from both of these leachings are joined and the silver precipitated and recovered. — **Light-red ruby silver.** Same as *proustite.* — **Molecular silver,** metallic silver in a finely divided state, obtained by reduction of one of its compounds at a temperature below the fusing-point of the metal. — **Platinum silver,** an alloy of silver and platinum, in which the proportion of the latter varies from 17 to 35 per cent. It has a gray color and is used principally for resistance-coils, since its electrical resistance is very little affected by changes in temperature. It is also employed in dentistry. — **Red silver.** (*b*) Metallic silver, assumed to be in a distinct allotropic form, in which it appears of an indigo-blue color by reflected light and red by transmitted light. The appearances may be due merely to molecular grouping. — **Silver acetylide.** See ★*acetylide.* — **Silver chlorid,** a compound occurring in nature as the mineral cerargyrite, used as an ore of silver. It is easily prepared by precipitation from a solution of a silver salt by a soluble chlorid, and its appearance and properties furnish a much-used test for either of its constituent elements. It is also utilized in photography. — **Silver iodide.** See ★*iodide.* — **Soluble silver,** an allotropic form of silver, collargol, possessing marked germicidal power. — **Sterling silver,** silver of the legal standard of fineness. If the term is used without further qualification it is generally understood to refer to the British standard. See *standard*^{2}, *n.*, 2, and *sterling*^{2}, *a.*, 1. — **White silver,** a form of metallic silver in a finely divided state, obtained by reduction of the metal from a strongly acid solution of one of its salts, nearly white as seen by reflected light, and nearly opaque, even in the thinnest films, in respect to transmission of light. — **Yellow silver,** metallic silver, assumed to be in a distinct allotropic form, in which it appears of an indigo-blue color by reflected light and yellow by transmitted light. These appearances may be due merely to molecular grouping.

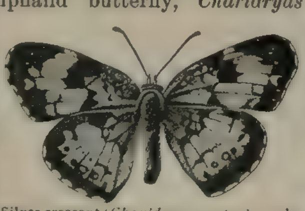
II. *a.*—**Silver-bar fish.** See ★*fish*^{1}.—**Silver emulsion.** See ★*emulsion.*—**Silver stain.** See ★*stain.*—**Silver tree-fern.** See ★*tree-fern.*

silverbelly (sil′vėr-bel″i), *n.* 1. Same as *white* ★*bream* (*b*).—2. A common name used in Tasmania for the silversides, species of fishes of the family *Atherinidæ.* *E. E. Morris,* Austral English.

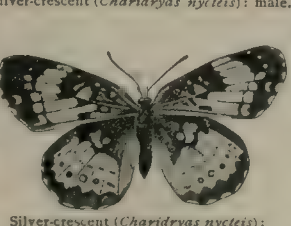
silverbilly (sil′vėr-bil″i), *n.* A common name of a fish, *Gerres ovatus,* found in Australian waters.

silver-button (sil′vėr-but″n), *n.* The large-flowered everlasting, *Anaphalis margaritacea.* Also called *silver-leaf*

silver-crescent (sil′vėr-kres″ent), *n.* An American nymphalid butterfly, *Charidryas nycteis,* dark brown in color, with a band of orange across both wings, the under sides being marked with silvery lunules. It is of wide distribution, and its larvæ feed on the foliage of a variety of compositaceous plants.



Silver-crescent (*Charidryas nycteis*): male.



Silver-crescent (*Charidryas nycteis*): female.

silverette, *n.* It is a subbreed or strain of domesticated pigeons, derived from the satinette, of a light gray color, but each tail-feather bearing a white spot as in the satinette.

silver-feather (sil′vėr-feᴛʜ″ėr), *n.* Same as *silverweed,* 1.

silver-fish, *n.* 7. A Tasmanian name for *Carangus georgianus,* of the family *Carangidæ,* the white or silver trevally. *E. E. Morris,* Austral English.

silver-lead (sil′vėr-led″), *n.* A mixture of silver and lead sometimes found in Cyprian excavations.

> Several rings of unrefined *silver-lead,* . . . like the bronze rings, and an unrecognisable fragment of silver, complete the list of metallic objects.
>
> *J. L. Myres,* in Jour. Hellenic Studies, XVII. 148.

silver-leaf, *n.* 4. The large-leaved umbrella-tree, *Magnolia macrophylla.*—5. The American or willow-leaved meadow-sweet, *Spiræa salicifolia.*—6. The spotted touch-me-not, *Impatiens biflora.*—7. Same as ★*silver-button.*

silverling, *n.* 2. The tarpon, *Tarpon atlanticus,* a large silvery game-fish of the Atlantic coast of America, known from Long Island to Brazil, and common on the southeastern coast of the United States. Also *silver-fish.*

silver-mite (sil′vėr-mīt), *n.* The rust-mite of the orange, *Phytoptus oleivorus.* See *rust-mite.*

silver-plant (sil′vėr-plant), *n.* Same as ★*silver-leaf,* 6.

silver-rod (sil′vėr-rod), *n.* 1. Same as *white* ★*goldenrod.*—2. Same as ★*king's-rod.*

silver-shilling (sil′vėr-shil″ing), *n.* The honesty, *Lunaria annua,* so called from the large, nearly circular, shining septum of the fruit, which remains after the valves fall away. Also called *money-flower* and *gold-and-silver plant.*

silversides, *n.*—**Lake-silversides.** Same as *brook-silversides.* See *silversides.*

silverspot, *n.*—**Mountain-silverspot,** an American nymphalid butterfly, *Argynnis atlantis,* occurring in Canada and the northeastern United States. Its larvæ feed on violets.

silver-standard (sil′vėr-stan″därd), *a.* Using silver money alone as full legal tender. The silver-standard countries are Central America (except Costa Rica), China, Hong-Kong, and Persia. Certain countries have had, nominally at least, a double standard (gold and silver), as the United States, Mexico, Haiti, Uruguay, Argentine Republic, Venezuela, France, Belgium, Italy, Switzerland, Greece, Spain, Servia, Bulgaria, Netherlands, Algeria, Tunis, Java, Philippine Islands, and Hawaii. Many of these, as the United States, are virtually or actually on a gold basis. In British India the gold standard has been adopted. See ★*gold-standard.*

silver-steel (sil′vėr-stēl″), *n.* Steel containing as an alloying element a small percentage of silver.

silversword (sil′vėr-sōrd), *n.* Same as ★*ahinahina.*

silvertail, *n.* 2. One who belongs to the upper classes in society or the community. Compare ★*coppertail.* *E. E. Morris,* Austral English. [Australia, bushmen's slang.]

silver-thaw (sil′vėr-thâ″), *n.* Ice which falls in large thin flakes from sails and rigging.

silver-tip (sil′vėr-tip), *n.* A variety of the grizzly bear, *Ursus horribilis,* in which the long hairs are tipped with yellowish white, giving the pelage something the appearance of that of the silver fox.

> It is a common thing . . . to see a dozen Bears feasting there at one time. They are of all kinds — Black, Brown, Cinnamon, Grizzly, *Silvertip,* Roachbacks, big and small.
>
> *E. Thompson Seton,* The Biography of a Grizzly, p. 127.

silver-trevally (sil′vėr-trẹ-val″i), *n.* See ★*trevally.*

silverwood-tree (sil′vėr-wụ̂d-trē″), *n.* A large, elegant tree of Barbados, *Drypetes serrata,* belonging to the spurge family.

Silvery spleenwort. See ★*spleenwort.*

silvical, silvics. See ★*sylvical,* ★*sylvics.*

sim (sēm), *n.* [Hind.] The lablab or Egyptian bean, *Dolichos Lablab.*

Simblum (sim′blum), *n.* [NL. (Klotzsch, 1831), < Gr. *σίμβλον,* a beehive.] A genus of gasteromycetous fungi, of the family *Clathraceæ,* which have the stipitate receptacle inclosing the gleba latticed, with the meshes about equal in diameter each way. *S. rubescens* occurs in America. The gleba has a very unpleasant odor.

Simian fissure. See ★*fissure.*

similar, *a.* 3. (*b*) In the theory of aggregates, similarly arranged; coupled by a one-one relation.

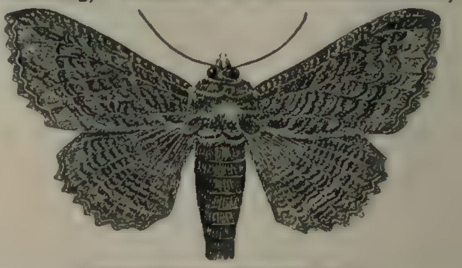
> When the elements of a manifold are arranged according to the scheme $1', 2'', 3'''$ . . . it may be said to be *similar,* or to be arranged similarly, to the natural scale.
>
> *Encyc. Brit.,* XXXI. 284.

Directly similar, in *geom.,* capable of being so rotated that corresponding sides are parallel.—**Inversely similar,** in *geom.,* similar but incapable of being so rotated that corresponding sides are parallel.—**Ordinarily similar,** capable of being brought into one-to-one correspondence in such a way that the order of any two elements is the same as the order of the corresponding elements.—**Similar sets, surds, variation.** See ★*set*^{1}, ★*surd,* ★*variation.*

similarity, *n.*—**Helmholtz's principle of mechanical similarity,** a principle in hydrodynamics by which results obtained with apparatus of small dimensions may be transferred to natural phenomena on a large scale in geometrically similar masses. It is expressed in two propositions: (1) If the ratio of the densities is not changed in geometrically similar waves, the linear dimensions increase as the squares of the velocities of the two media; the velocities increase in equal ratios. (2) If the ratio of the densities is varied, the ratio of the living forces of the corresponding units of volume must remain unchanged.

similarly, *adv.*—**Similarly placed,** in *geom.,* said of similar figures when any translation leaves them with a center of similitude (which see, under *center*^{1}).

similar-wing (sim′i-lär-wing), *n.*—**Lunate similar-wing,** a book-name for an American noctuid moth, *Homoptera lunata,* brownish with marbled wings. Its larva feeds on the leaves of plum, rose, maple, willow, and other plants.



Lunate Similar-wing (*Homoptera lunata*).
(Redrawn from Comstock.)

similative (sim′i-lā-tiv), *a.* Serving to express similarity; in *gram.,* noting the case which expresses similarity (like, similar to). Also used as a noun.

> Besides a general locative some of the most frequently occurring are inessive, superessive, introessive, ablative and terminative. Besides these comitatives, *similatives,* partitives, and suffixes expressing similar ideas are found.
>
> *Amer. Anthropologist,* Jan.–March, 1903, p. 13.

similitude, *n.*—**Axis of similitude.** See ★*axis*^{1}.—**Circle of similitude.** (*b*) See ★*circle.*—**Direct center of similitude.** See ★*center*^{1}.—**Triangle of similitude.** See ★*triangle.*

simillimum (si-mil′i-mum), *n.*; pl. *simillima* (-mạ̈). [NL. use of L. *simillimum,* neut. superl. of *similis,* like. The name alludes to the dogma *similia similibus curantur,* 'like (effects) are cured by like (agents).'] The remedy best adapted for the treatment of any special condition in accordance with the fundamental therapeutic principle of homeopathy. See *homeopathy.*

simmon (sim′ọn), *n.* [Corruption of *persimmon.* Compare *possum.*] The persimmon, *Diospyros Virginiana.* [Negro dial.]

simoleon (si-mō′lẹ̄-ọn), *n.* [Origin obscure.] A dollar. [Slang.]

> She wears a dress — it cost no less
> Than ninety-five *simoleons;*
> It 's faded tan, and looser than
> That great coat of Napoleon's.
>
> *Kansas City Daily Times* Dec. 23, 1903.

simosaur (sim′ọ-sâr), *n.* An animal of the genus *Simosaurus.*

Simosaurus (sim-ọ-sâ′rus), *n.* [NL., < Gr. *σιμός,* flat-nosed, + *σαῦρος,* lizard.] A genus of sauropterygian reptiles from the trias of Germany. It has a broad skull, with obtuse snout, and short, obtusely conical teeth.

simple. I. *a.*—**Simple branch-point,** in *math.,* a branch-point which merely interchanges a pair of branches.—**Simple circuit,** in *math.,* a circuit which cannot (without crossing the boundary or leaving the surface) be continuously deformed into two circuits.—**Simple connection,** in *math.,* the connection of a surface which is finite, open, contained by a single boundary, and such that every closed cut (or, what is equivalent, any open cut joining two points of the boundary) separates it into two parts.—**Simple curve,** one whose equation cannot be factored.—**Simple elliptic space.** See ★*space.*

II. *n.* 8. (*a*) In *French boston,* or in *heart solo,* the winning of five tricks with a partner. (*b*) In *division loo,* a pool which has been put up by the dealer alone. Pools which have been contributed to by players who have been looed are double pools.

simple, *v. i.* II. *trans.* To make (the second or low-pressure cylinder of a compound engine) receive live steam direct from the boiler, instead of receiving its working fluid as exhaust from the first or high-pressure cylinder, as in normal series-working. This is done in starting, or occasionally with unusual overload on the engine, and the two cylinders work as two simple engines.—**Simpling valve.** See *intercepting* ★*valve.*

simpler's-joy, *n.* 2. The blue vervain, *Verbena hastata*, of eastern North America: so called probably by confusion with the officinal verbena.

simplesse, *n.* 2. An affected simplicity. [Rare.]

> The simplicity of Homer is remarkable; "*simplesse*," as Arnold calls affected simplicity of a literary kind, is a very different thing, and a popular thing nowadays.
> *Athenæum*, July 15, 1905, p. 77.

simplex (sim′pleks), *a.* [L., simple, plain.] Simple; single: applied to telegraphy.

> The actual speed (*simplex*) obtained by automatic transmission with the latter cable is as high as forty-seven (or even up to fifty) five-letter words per minute.
> *Engin. Mag.*, Dec., 1898, p. 428.

Simplex telegraph, a telegraph in which the apparatus is arranged for the sending of one message over the line at a time: distinguished from duplex, or multiplex.—**Simplex telegraphy**, telegraphy in which but one message at a time is transmitted over a single wire.

Simplicative rules of evidence, those laws and customs which eliminate or restrict such testimony as, however pertinent, is confusing or creates prejudice, as opinion testimony or expert evidence, and the evidence of a judge or juryman. *Wigmore*, Evidence, § 1863.

simplifier (sim′pli-fī-ėr), *n.* One who or that which simplifies or makes clear or simple.

> Charles Fox was the great *simplifier* of debate.
> *Athenæum*, April 1, 1905, p. 394.

Simply ordered set. See ★*set*1.

simulance (sim′ụ̄-lans), *n.* [L. *simulare*. See *simulant*.] A deceptive resemblance; a mere appearance or semblance.

> Man embodies an immaterial and immortal spiritual principle which no lower creature possesses, and which makes the resemblance of the apes to him but a mocking *simulance*. *Sir D. Wilson*, Anthropology, ii.

simuliid (si-mū′li-id), *n.* and *a.* **I.** *n.* A member of the dipterous family *Simuliidæ*.

II. *a.* Having the characters of or belonging to the family *Simuliidæ*.

simulism (sim′ụ̄-lizm), *n.* [*simul*(*ate*) + *-ism*.] A term proposed to replace *mimicry*, in referring to the resemblances of animals, as implying a less conspicuous resemblance and the absence of the idea of a conscious or designed resemblance.

> The word "mimicry" is also adversely criticised, as implying conscious resemblance, which is not known to exist, and "*simulism*," "simulation," "simulating," are substituted "as being at once expressive, explanatory and euphonious, and free from the inference of designed and cognitive resemblance." *Nature*, March 30, 1905, p. 521.

Simultaneous variation. See ★*variation*.

sina (sē′nä), *n.* [From some form (ML. *Sina*, Tagalog *Sina*?) of *China*.] A Chinese silkworm, larva of *Bombyx sinensis*.

sinabatan (sē-nă-bă-tän′), *n.* [Also *sinabotan*; Tagalog *sinabatan*.] A mat made by the natives of the Philippine Islands from the leaf-fibers of the screw-pine, *Pandanus spiralis*.

Sinæan (si-nē′ạn), *n.* Of or pertaining to the Sinæ, an ancient people supposed to be the Chinese.

> To Paquin of *Sinæan* kings; and thence
> To Agra and Lahor of Great Mogul,
> Down to the Golden Chersonese.
> *Milton*, Paradise Lost, xi. 390.

sinalbin (si-nal′bin), *n.* [L. *sin*(*api*), mustard, + *alb*(*us*), white, + *-in*2.] A colorless compound, $HO.C_6H_4.CH_2N:C(SC_6H_{11}O_5).O.SO_3.C_{16}H_{24}O_5N.5H_2O$, contained in the seed of white mustard. It crystallizes in glassy lustrous needles and is colored intensely yellow by a very minute trace of alkali.

sinamay (sē-nă-mä′ẹ̄ or -mī′), *n.* [Bisaya *sinamáy*.] A fabric made by the natives of the Philippine Islands from the fibers of the leaf-stalks of the abaca (*Musa textilis*), usually mixed with fibers of silk, cotton, piña, etc.

sinapic (si-nap′ik), *a.* Pertaining to sinapin or sinapic acid.—**Sinapic acid**, a pale-yellow compound, $\overset{4}{H}O.C_6H_2(\overset{3}{O}\overset{5}{C}H_3)_2CH:CH.COOH$, prepared by the action of barium-hydroxid solution on sinapin. It crystallizes in needles or small prisms and melts at 186.5–192° C. Also called 3,5-*dimethoxy-4-hydroxycinnamic acid*.

sinapize (sin′ạ-pīz), *v. t.*; pret. and pp. *sinapized*, ppr. *sinapizing*. [LL. *sinapizare*, poultice with mustard, < *sinapi*, mustard.] To impregnate with mustard: said of a poultice or a plaster so treated.

sinapoline (si-nap′ọ̄-lin), *n.* [L. *sinapi*, mustard, + *-ol* + *-ine*2.] A colorless compound, $CH_2:CH.CH_2NHCONHCH_2CH:CH_2$, prepared by the action of lead hydroxid on allyl mustard-oil. It crystallizes in plates, melts at 100° C., and is volatile with steam. Also called ab- or symmetrical diallyl carbamide.

sincaline (sin′kạ-lin), *n.* [Also *sinkalin*, *sinkaline*, < L. *sin*(*api*), mustard, + *-cal* or *-kal*? + *-ine*2.] Same as *choline* or ★*bilineurine*.

Sinceny pottery. See ★*pottery*.

sinder1, *n.* 2. An amended spelling of *cinder*.

Sindhi (sin′dē or sind′hē), *a.* and *n.* [Also *Sindi*; Sindhi *Sindhi*, < *Sindh*, Sindh, < Skt. *Sindhu*, the Indus, the region of the Indus, Sindh: see *Indian*.] **I.** *a.* Of or pertaining to Sindh or its people or their language.

II. *n.* 1. A native of Sindh, or one whose native tongue is Sindhi.—2. An Aryan language spoken principally in Sindh, India.

Sindi, *n.* See ★*Sindhi*.

sine2, *n.*—**Hyperbolic sine**, hysin $x \equiv \sinh x = \frac{1}{2}(e^x - e^{-x})$. See ★*shin*3.—**Sine law.** See ★*law*1.

sine-compass (sīn′kum″pạs), *n.* A sine galvanometer (which see, under *galvanometer*).

sine-curve (sīn′kėrv), *n.* Same as *curve of sines*. See *curve* and *sinusoid*.

Sinesian (si-nē′zhiạn), *a.* [L. *Sinæ*. See *Sinic*.] Of or pertaining to China; Sinic: as, the *Sinesian* countries of Eastern Asia. *Athenæum*, Feb. 13, 1904, p. 200.

sine-wave (sīn′wāv), *n.* A wave in which the vibrations of the particles of the transmitting medium are simple harmonic motions. *H. Hertz* (trans.), Electric Waves, p. 17.—**Sine-wave current**, in *elect.*, an alternating current in which the wave-form is sinusoidal.—**Sine-wave telegraphy**, a system of telegraphy in which a single-phase alternating current, the wave-form of which is approximately sinusoidal, is used for signaling.—**Sine-wave transmitter**, in *teleg.*, an instrument for sending the signaling impulses used in sine-wave systems of telegraphy. The characteristic feature is an automatic device by which the circuit is opened and closed only when the current intensities pass through zero.

sing, *v. i.*—**To sing out.** (*b*) To sing with the full strength of the voice.

> "*Sing out*"—shouted one gentleman in a white greatcoat. "Don't be afraid to put the steam on, old gal," exclaimed another. . . . "Sing louder," said Mrs. Jennings Rodolph.
> *Dickens*, The Mistaken Milliner, in Sketches by Boz, I. [337.

Singing glass. See ★*glass*.

Singapore cedar. Same as *Moulmein* ★*cedar*.

singeing-plate (sin′jing-plāt), *n.* A heated metallic plate or cylinder over which cotton cloth intended for calico-printing is rapidly drawn, so as to singe or burn off the nap of short projecting fibers without scorching the cloth itself. A row of small gas-flames is now generally used for this purpose.

singer1, *n.*—**Singer's nodes.** See ★*node*.

singing-tube (sing′ing-tūb), *n.* The glass tube used in the production of a singing-flame. See *singing-flame*. *J. M. Baldwin*, Dict. of Philos. and Psychol., I. 610.

single1. **I.** *a.*—**Single court.** See ★*court*.

II. *n.* 1. (*f*) In *whist*, the score made by the winners when the game is 5 points up and rubbers are played, if the losers of any game are 3 or 4 up: as, '*single*, double, and the rub.' (*g*) In the extraction of antimony from its native sulphid, the manufacturers' name for the first crude product from melting the ore with scrap-iron. It generally contains about 91.5 per cent. antimony, 7 per cent. iron, and 1 per cent. sulphur. (*h*) In *golf*, two players playing against each other. (*i*) In furniture, silverware, and the like, a separate piece not belonging to a set.

> Fine specimens, even if '*singles*,' have been added wherever possible.
> *R. S. Clouston*, in Burlington Mag., V. 381.

5. One strand of sliver, roving thread, or yarn.—6. *pl.* A commercial name in England for thin sheet-steel or -iron used as a foundation for tin-plate, having a thickness ranging from 0.238 to 0.35 of an inch, or from No. 4 to No. 20 B. W. G.

single-beat (sing′gl-bēt), *a.* Having only one beat: noting valves which have a single bearing-surface or seat, as ordinary lifting-valves: distinguished from *double-beat* valves, which have two seats, so that they may be in equilibrium of pressures above one face and below the other. Cornish valves and most puppet-valves for large engines are double-beat. Check-valves of small area are single-beat.

> Both valves are of the *single-beat* poppet, or mushroom type, and seat vertically along the same axis but in opposite directions, the admission valve opening downward and the exhaust upward.
> *Elect. World and Engin.*, Sept. 24, 1904, p. 517.

single-break (sing′gl-brāk), *a.* In *elect.*, opening the circuit at one point only: said of certain types of switch. *Jour. Brit. Inst. Elect. Engin.*, 1901–02, p. 1210.

single-gear (sing′gl-gēr), *n.* A transmission, usually by toothed wheels, in which only one pair of wheels or one pair of transmission elements is involved: usually one wheel and one pinion, for the gain of power and loss of speed or for a gain in velocity with corresponding reduction of power.

single-geared (sing′gl-gērd), *a.* Directly driven by belt or other transmission without the interposition of a reducing-gear shaft: used of speed-lathes or drill-presses having no back-gear on the head-stock, and of motor-car transmissions where the motor turns slowly enough to render a counter-shaft and gear-train unnecessary.

single-hung (sing′gl-hung), *a.* Having a cord and pulley on one side only, the single weight being a sufficient counterpoise: said of a window-sash. Such fitting is used for narrow sashes only, or else rollers are put on the other side to prevent the sash from binding on the window-frame.

single-leaf (sing′gl-lēf), *n.* The one-leaved piñon or nut-pine, *Pinus monophylla*: so called because there is only one leaf in a bundle.

single-phase (sing′gl-fāz), *a.* In *elect.*, noting a system of electric distribution by alternating currents produced by a single alternating electromotive force, in which therefore all the currents are in phase with each other, that is, reverse simultaneously in direction, or differ in phase only so far as is due to the different character of the circuits in which they flow.—**Single-phase alternater**, a generator supplying alternating current to a single-phase circuit, as distinguished from the machines for producing simultaneously two or more currents differing in phase such as are used in polyphase systems.—**Single-phase circuit**, an ordinary two-wire circuit for the transmission of an alternating current, as distinguished from the circuits in a polyphase system.—**Single-phase current**, an ordinary alternating current the wave-form of which is sinusoidal, sometimes with superimposed harmonics, as distinguished from the two or more currents, differing in phase, that are employed in polyphase systems.—**Single-phase generator.** See ★*generator* and ★*single-phase alternater*.

single-phaser (sing′gl-fā″zėr), *n.* In *elect.*, a single-phase alternating-current generator. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 246.

single-riveted (sing′gl-riv″et-ed), *a.* Having only one row of rivets parallel to the joint or seam: distinguished from *double-* or *chain-riveted*, where two rows of rivets are used.

single-seeded (sing′gl-sē″ded), *a.* Same as *monospermous*.

single-stage (sing′gl-stāj), *a.* Having only one stage; completed in one operation; not continued through two or more similar stages: used of air-compressors and steam-turbines. A *single-stage* compressor is one in which the compression is completed in the first cylinder; a *single-stage* turbine, one in which the steam passes through an expansion-nozle only once.

single-sticker (sing′gl-stik″ėr), *n.* A sloop or cutter; a vessel having but one mast. [Colloq.]

single-taxer (sing′gl-tak″sėr), *n.* One who advocates the levying of all, or practically all, taxation upon a single object, as land, capital, or consumption; specifically, one who accepts the doctrine of Henry George that all taxes should be levied upon the value of land, exclusive of all improvements due to industry. The measure, if fully carried out, would divert to the government the rent of the land itself.

> *Single-taxers* maintain that the reason the wages of labor do not increase as material progress advances is because rent, or the price paid for the use of land, is continually increasing. *Science*, Dec. 13, 1901, p. 915.

single-valued (sing′gl-val″ūd), *a.* Taking under specified conditions only a single value.—**Single-valued function**, in *math.*, one which by all continuations within a certain region always takes the same value at any point: said to be *single-valued* in that region.

singling (sing′gling), *n.* A manufacturers' name for the first step in the reduction of antimony from its ore, namely, fusion with scrap-iron in crucibles. See ★*single*, 1 (*g*).

sing-sing2 (sing′sing), *n.* Same as *singsong*, *n.*, 3. [Colloq.]

> The number of native songs is enormous, and musical evenings or "*sing-sings*" are a regular institution.
> *Geog. Jour.* (R. G. S.), XIII. 664.

singular, *a.*—**Non-essential singular point.** See ★*point*1.—**Singular point of a function.** See ★*point*1.

singularity, *n.*—**Accidental singularity**, in *math.*, a singularity at a non-essential singular point.—**Compound singularity** in *geom.*, one involving two or more ordinary singularities—these being called 'ordi-

nary,' because, without limiting the generality of a curve of given order or class by any special hypothesis, they may all present themselves.—**Logarithmic singularity**, in *math.*, a point about which a function acts like a logarithm.—**Non-essential singularity**, in *math.*, a value of the variable of a function for which the function has a determinate infinite value. The term was proposed by Cathcart.—**Ordinary singularity.** See *singularity*, 3, and *compound* ★*singularity*.—**Singularity of the first class**, in *math.*, accidental singularity.—**Singularity of the second class**, in *math.*, an essential singularity of the simplest kind.—**Singularity of the third class**, in *math.*, a singularity resulting from the union of an infinity of those of the second class.

sinh (pron. shin). An abbreviation for 'hyperbolic sine,' a function having a relation to a rectangular hyperbola similar to that of the ordinary trigonometric sine to a circle.

Sinicize (sin′i-sīz), *v. t.*; pret. and pp. *Sinicized*, ppr. *Sinicizing*. [*Sinic* + *-ize*.] To make similar in habits and thought to the Chinese. *Encyc. Dict.*

Sinico-Japanese (sin′i-kō-jap-a-nēs″), *n.* Belonging both to China and to Japan.

> The science of old Japan was equally modelled upon that of China. Nothing original of any importance has yet been found in the *Sinico-Japanese* literature of the last millenium. *Athenæum*, April 1, 1905, p. 396.

Sinify (sin′i-fī), *v. t.*; pret. and pp. *Sinified*, ppr. *Sinifying*. [ML. *Sina*, China, + *-fy*.] To make Chinese or similar to the Chinese in habits and thought. *Encyc. Dict.*

sinigrin (sin′i-grin), *n.* Same as *potassium myronate* (which see, under *myronate*).

Siniperca (sin-i-pėr′kä), *n.* [NL., < ML. *Sina*, China, + L. *perca*, perch.] A genus of serranoid fishes found in the rivers of China, Manchuria, and Japan.

sinistraural (sin-is-trâ′ral), *a.* [L. *sinister*, left, + *auris*, ear, + *-al*^{1}.] Noting a condition in which one naturally turns the left ear rather than the right when listening to some faint or distant sound. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 361.

sinistrin (sin′is-trin), *n.* [L. *sinister*, left, + *-in*^{2}.] 1. Same as *inulin*.—2. A colorless, pulverulent, levorotatory compound, $C_6H_{10}O_5$, contained in the white or red sea-onion or squill, *Urginea Scilla*. It is probably identical with achroödextrine.

sinistrocular (sin-is-trok′ū-lär), *a.* [L. *sinister*, left, + *oculus*, eye, + *-ar*^{3}.] Noting a condition in which one naturally uses the left eye in monocular work, as sighting a gun, looking through a microscope or telescope, etc. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 361.

sinistrodextral (sin″is-trō-deks′tral), *a.* [L. *sinister*, left, + *dexter*, right, + *-al*^{1}.] From left to right.

sinistromanual (sin″is-trō-man′ū-al), *a.* [L. *sinister*, left, + *manus*, hand, + *-al*^{1}.] Left-handed.

> The bow and arrow, the spear, boomerang, club, etc., could be used as well with the left hand by the *sinistromanual*. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 363.

sinistromanuality (sin″is-trō-man-ū-al′i-ti), *n.* [*sinistromanual* + *-ity*.] Left-handedness.

> No pupil with *sinistromanuality* established can learn piano-playing easily.
> *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 363.

sinistropedal (sin″is-trō-ped′al), *a.* [L. *sinister*, left, + *pes* (*ped-*), foot, + *-al*^{1}.] Left-footed. *G. M. Gould*, in Pop. Sci. Mo., Aug., 1904, p. 361.

sinistrorsally (sin-is-trôr′sal-i), *adv.* Left-handedly; with turnings to the left.

Sinitic (si-nit′ik), *a.* Same as *Sinic*.

sink, *v. i.* 16. (*a*) To drive a mine or exploration shaft downward through the earth's surface.

> Nor do we, as in the past, throw away vast sums of money in *sinking* for coal in Cambrian or Silurian rocks. *Science*, Oct. 9, 1903, p. 462.

(*b*) To run a shaft or drift in any direction into the earth in search of mineral or ore.

sink, *n.* 8. In *mining:* (*b*) The amount by which the shaft-level is lowered by a blast in sinking operations. (*c*) The distance inward, or depth, to which the excavation for a shaft or drift is to be carried. (*d*) The lowest point in the shaft, toward which the drainage flows.—10. In *geom.*, a place of transition from space of *n* into space *n* − 1 dimensions.—11. In *elect.*, in the theory of the flow of current in plane sheets, a point at which the current leaves the sheet.

> We may investigate, first, the simple case of one source and one *sink* in an infinite plane sheet of thickness δ, and conductivity *k*. *Encyc. Brit.*, XXVIII. 18.

sink-boat (singk′bōt), *n.* An oblong box submerged to the rim in the water, used as a boat and for concealment by persons engaged in shooting wild-fowl; a sink-box; a battery.

sink-box (singk′boks), *n.* Same as ★*sink-boat*.

sinker, *n.* 4. Same as ★*dead-head*, 4.—5. A heavy dumpling or doughnut; a dough-sinker; a dough-boy. [Slang.]

> The New York Dairy Lunch, with its mirrored and marbled bathroom decoration, its elevating Bible texts, and depressing "*sinkers*" . . . would never make a success with Parisians.
> *F. B. Smith*, How Paris Amuses Itself, p. 48.

6. A (silver) dollar. [Slang.]

> I waited for him [a city tramp] nearly an hour, when he returned with a "poke-out" (food given at the door) and "a *sinker*" (a dollar). I of course was a little surprised, and asked for details.
> *Josiah Flynt*, in The Century, March, 1894, p. 713.

7. See the extract.

> The parasite is attached to the host by "*sinkers*" which consist of specially modified, but true, rootlets, although in function they simulate the haustoria of other parasites. The *sinkers* penetrate the bark of the host and obtain nourishment for the parasite from the growing tissues beneath it, much as food-sap is obtained from the soil by normal plants. The parasitism is complete. Examples: The mistletoes. *Amer. Nat.*, Jan., 1908, p. 22.

sinker-boat (sing′kėr-bōt), *n.* Same as ★*catamaran*, 4.

sink-head (singk′hed), *n.* A riser; a column of metal which is cast as a part of a large casting for the purpose of increasing the soundness of the casting. It exerts a pressure to fill all cavities while the metal in the mold is fluid and is shrinking during the cooling process, and all bubbles of gas tend to rise into it and remain there.

sinking, *n.* 5. In *piquet*, the manœuver of calling only a part of a combination, so as to conceal the strength of the hand for playing: usually resorted to only when the player knows his adversary has no better call.

sinking-fire (sing′king-fīr), *n.* A forge in which wrought-iron scrap or refined pig-iron is partly melted or welded together by means of a charcoal fire and a blast.

sinking-lift (sing′king-lift), *n.* In *mining:* (*a*) An elevating apparatus especially designed for use in sinking shafts. (*b*) A sinking-pump for use at the bottom of a shaft while it is being sunk.

sink-pipe (singk′pīp), *n.* 1. The outflow-pipe from a sink.—2. The pipe which enters a sink in a mine to remove the water which drains into the sink from higher points.

Sino-Australian (sīn″ō-âs-trā′li-an), *a.* [L. *Sinæ*, the Chinese, + E. *Australian*.] Noting a hypothetical continent, restored by M. Neumayr by interpretation of the strata and believed to have existed in the Jurassic and Cretaceous periods, and perhaps in the Tertiary. Including Australia on the south, it embraced the East Indies, the Malay peninsula, and portions of China. *Amer. Nat.*, Sept., 1904, p. 646.

Sino-Japanese (sin′ō-jap-a-nēs″), *a.* [L. *Sinæ*, the Chinese, + E. *Japanese*.] Relating to both China and Japan; Sinico-Japanese: as, *Sino-Japanese* art, literature, or religion.

> We must place to the front the fact that *Sino-Japanese* design is almost exclusively an art of contours, of values of movement, and, in its own way, not ours, of space-composition. *B. Berenson*, in Burlington Mag., III., 13.

Sinophile (sin′ō-fil), *n.* [Gr. Σῖναι, Chinese, + *φιλεῖν*, love.] One who loves or admires the Chinese; an admirer of the Chinese nation or of Chinese civilization.

> That the author [E. R. Scidmore] is no *sinophile* will be gathered from the following: No one knows, or ever will really know, the Chinese—the heart and soul and springs of thought of the most incomprehensible, unfathomable, inscrutable, contradictory, logical and illogical people on the earth. *Outlook*, July 21, 1900, p. 693.

Sinoxylon, *n.*—**Red-shouldered sinoxylon**, an American bostrychid beetle, *Sinoxylon basilare*, the larva of which bores into the stems of the grape and into the twigs of the apple and peach. See cut at *Sinoxylon*.

sinse, *adv.*, *prep.*, and *conj.* An amended (restored) spelling of *since*.

sinter^1, *n.*—**Ceraunien sinter**, the glassy material of fulgurite.

sinter (sin′tėr), *v. t.* and *i.* To compact or become compacted together by partial fusion, so as to resemble sinter. See ★*sintering*.

> A fine crystalline precipitate of methylmercaptothymine came down, which weighed 9.2 grams, or 20 per cent of the calculated. It crystallized in strings of small plates from water, in which it is difficultly soluble when hot and nearly insoluble when cold. On heating, it *sintered* at about 225° and melted at 233°.
> *Amer. Chem. Jour.*, May, 1903, p. 487.

sintering (sin′tėr-ing), *n.* The incomplete union into a solid mass of the particles of a powder heated so that softening but not perfect fusion occurs.

> *Sintering*, therefore, may be defined as diffusion at a temperature below the melting point of the components or of the resulting solid solution.
> *Sci. Amer. Sup.*, Dec. 17, 1904, p. 24207.

sinuitis (sin-ū-ī′tis), *n.* [NL., < L. *sinus* (*sinu-*), sinus, + *-itis*.] Same as ★*sinusitis*.

sinus, *n.*—**Accessory sinus.** Same as *air-sinus* (which see, under *sinus*).—**Axial sinus.** See ★*axial*.—**Cerebral sinuses**, sinuses of the dura mater.—**Circumintestinal sinus**, in certain chætopod worms, a blood-sinus lying between the epithelial and the muscular walls of the intestine.—**Intestinal sinus**, in some arthropods, as *Apus*, a large median cavity, a subdivision of the body-cavity, in which lies the enteric canal. Compare *lateral* ★*sinus*.—**Lateral sinus**, in some arthropods, as *Apus*, one of the cavities in which the muscles are contained. Compare *intestinal* ★*sinus*.—**Mastoid sinus**, a vacuity, or air-space in the mastoid bone: correlated with *frontal sinus*, *maxillary sinus*, etc.—**Median sinus**, in many of the *Brachiopoda* (*Spirifer*, *Athyris*, *Rhynchonella*), a median depression of the shell, usually on the ventral valve, accompanied by a median fold on the opposite or dorsal valve.—**Pericardial sinus**, in arthropods, a cavity lying in the median dorsal region and containing the heart.—**Pyriform sinus**, a small fossa on the side of the larynx external to the aryepiglottic fold.—**Sinus caroticus**, a prolongation of the cavernous sinus into the carotid canal.—**Sinus præcervicalis**, a sac-like structure in the embryo formed by the folding in of the posterior branchial arches. *W. Bateson*, Study of Variation, p. 176.—**Sinus terminalis**, a blood-channel which surrounds the vascular area in the embryo.—**Vertebral sinuses**, two large venous sinuses which extend the entire length of the spinal canal along the bodies of the vertebræ.

sinusitis (sī-nu-sī′tis), *n.* [*sinus* + *-itis*.] Inflammation of any sinus, whether an air-sinus or a sinus of the dura mater. *Med. Record*, Aug. 17, 1907, p. 256.

Sinusoidal circulation. See ★*circulation*.—**Sinusoidal current**, in *elect.*, an alternating current the wave-form of which is a curve of sines.—**Sinusoidal variation**, in *elect.*, a fluctuation of current or electromotive force such that the variations of intensity are graphically indicated by a curve of sines.

sion, *n.* A simplified (and former) spelling of *scion*.

Siouan, *a.* **II.** *n.* The linguistic stock which embraces the Siouan languages and includes the languages of the Sioux or Dakota, Hidatsa, Crow, Mandan, Omaha, Ponca, Osage, Winnebago, Kansa, Quapaw, Iowa, Oto, Missouri, Biloxi, Tutelo, and Catawba.

sipapu (sē-pä-pö′), *n.* [Hopi.] An opening somewhere in the Grand Cañon of the Colorado, according to the legends of the Hopi, through which they reached the surface of the earth; also, its symbolic representation on altars, kivas, and other objects.

> The Snake chief at Cipaulovi has no tiponi, and consequently no altar. The only objects at the end of the kiva, where the altar would have been had he possessed a tiponi, was a row of twenty snake whips leaning against the ledge of the rear wall, behind the *sipapū*.
> *J. W. Fewkes*, in An. Rep. Bur. Amer. Ethnol., 1894–95, [p. 279.

sipho (sī′fō), *n.*; pl. *siphones* (si-fō′nēz). [NL.: see *siphon*.] In the shell-bearing cephalopods, the fleshy or muscular tube extending from the posterior end through the internal chambers. Also *siphon*.

siphon, *n.* 2. (*d*) (2) A tubular anal organ of the aquatic bugs of the family *Nepidæ*, probably respiratory in function. (*h*) In siphonophorans, a feeding zoöid or hydranth.—**Electric siphon**, a siphon provided with an electrically operated device for automatically removing the accumulation of gases in the neck of the tube.—**Exhalant siphon**, the more dorsal of the two siphons at the posterior end of many lamellibranch mollusks, being the tube through which the water passes away from the gills after having been admitted to them through the ventral or inhalant siphon.—**Inhalant siphon**, in bivalve mollusks, the siphon through which water enters the mantle-cavity.—**Inverted siphon**, an offset in a continuous line of pipe by which the pipe is carried under and thus avoids an intervening obstacle to its straight alinement: usually limited to pipes or open channels which in their straight portions are not under pressure, as in a sewer passing under a stream.—**Mitscherlich's siphon** a simple form of siphon filled by suction and provided with a bulb safety-device to prevent corrosive liquids from entering the mouth.—**Siemens's siphon**, a contrivance by which the gases from the producer are pressed down to the level of the furnace. It consists of a horizontal cooling-tube connecting the uptake-tube with the downcomer. The gases passing through the cooling-tube gain from 50 to 60 per cent. in weight and pass into the descending tube by overbalancing the ascending column, although both tubes are of equal length. In the modern producers air and steam are supplied under pressure, so that the siphon tubes are no longer needed.

siphonaceous, *a.* 2. Of or pertaining to the *Siphonales*, an order of the grass-green algæ.

Siphonal cæcum, lobe. See ★*cæcum*, ★*lobe*.—**Siphonal process**, in some gastropods, as *Triton*, a spout-like prolongation of the peristome of the shell.

Siphonales (sī-fọ-nā'lēz), *n. pl.* [NL., < L. *sipho(n-)*, a pipe, tube, + *-ales.*] Same as *Siphoneæ*, of which it is the modern form.

Siphonanthæ (sī-fọ-nan'thē), *n. pl.* [NL., < Gr. *σιφων*, a tube, + *ἄνθος*, flower.] A group or suborder of *Siphonophora*, having the stem formed by the manubrium of the original bilateral medusa, the buds arising in the ventral line of this manubrium, and the larva bilateral.

siphonanthous (sī-fọ-nan'thus), *a.* [NL. *Siphonanth(æ)* + *-ous.*] Having the characters of, or belonging to, the *Siphonanthæ*.

siphonapter (sī'fọ-nap-tėr), *n.* A member of the order *Siphonaptera*; a flea.

siphonate, *a.* **II.** *n.* That part of a mass of liquid which has been drawn off by means of a siphon.

> Such organisms, however, can be secured by filtering the *siphonate*, and washing the filter with a small quantity of filtered or distilled water.
> *B. L. Seawell*, in Trans. Amer. Micros. Soc., Nov., 1903, [p. 18.

siphoneous (sī-fō'nẹ̄-us), *a.* Same as ⋆*siphonaceous*.

> The gigantic Nematophycus, to be described below, has been regarded as having *Siphoneous* affinities
> *Encyc. Brit.*, XXXI. 409.

Siphonia² (si-fō'ni-ạ̈), *n.* [NL., < L. *sipho(n-)*, < Gr. *σίφων*, a pipe, tube, siphon.] A genus of pear-shaped, silicious, lithistid sponges with a long or short peduncle, the interior having a deep cloaca and numerous arched canals. It abounds in the Cretaceous rocks.

siphonogam (sī-fon'ọ-gam), *a.* [*Siphonogam(a)*.] In *bot.*, same as ⋆*spermatophyte*.

Siphonogama (sī-fọ-nog'ạ-mạ̈), *n. pl.* [NL., < Gr. *σιφων*, pipe, tube, + *γάμος*, marriage.] Same as ⋆*Spermatophyta*. See also ⋆*Embryophyta*. Also *Siphonogamæ*.

siphonogamous (sī-fọ-nog'ạ-mus), *a.* [*siphonogam* + *-ous.*] Same as ⋆*spermatophytic*.

siphonoglyph (sī-fon'ọ-glif), *n.* [Gr. *σίφων*, a pipe, + *γλυφή*, a carving.] In sea-anemones, one of the ciliated grooves at each end of the mouth leading down into the gullet. In alcyonarians, the groove is single. Also *gonidial groove*, and *sulcus*.

> When the mouth is closed the central parts are in apposition, but the grooves, called *Siphonoglyphs*, remain always open, and through them a current of water may be kept circulating in and out of the animal even when in its most contracted condition.
> *A. E. Shipley*, Zool. of the Invertebrates, p. 65.

siphonophoral (sī-fọ-nof'ọ-rạl), *a.* Same as *siphonophorous*.

siphonopore (sī'fọ-nọ-pōr), *n.* [Gr. *σίφων*, a pipe, + *πόρος*, pore.] In *Octocoralla* of the family *Helioporidæ*, one of the smaller tubes or corallites which, with the larger tubes or autopores, constitute the corallum. Both are tabulate, but the siphonopores are not septate.

siphonosome (sī'fọ-nọ-sōm), *n.* [Gr. *σίφων*, a pipe, + *σῶμα*, body.] The portion of a siphonophore colony that bears siphons.

siphonostele (sī'fọ-nọ-stēl), *n.* [Gr. *σίφων*, a pipe, tube, + *στήλη*, pillar.] In *bot.*, a tubular stele. See ⋆*stele*³, 2.

siphonostelic (sī'fọ-nọ-stel'ik), *a.* [*siphonostel(e)* + *-ic.*] Pertaining to or possessing a siphonostele.

Siphonotreta (sī″fọ-nọ-trē'tạ̈), *n.* [NL., < Gr. *σίφων*, pipe, tube, + *τρητός*, perforated.] A genus of neotrematous brachiopods with elongate conchiolinous shells, the pedicle-passage long and tubular, the epidermal shell-layer covered with spines, and the inner layers punctured by radiating tubules. It occurs in Silurian rocks.

siphonozoöid (sī″fọ-nọ-zō'oid), *n.* [Gr. *σίφων*, pipe, tube, + E. *zoöid.*] In alcyonarians, one of the modified zoöids whose function it is to drive currents of fluids through the canal system of the colony.

> The name zooid is applicable to any asexually-produced individual entering into the composition of a colony, and therefore Kölliker was in error when he restricted it to those arrested and modified individuals whose function it is to drive currents of water through Alcyonarian colonies. These should be called *siphonozooids*.
> *G. C. Bourne*, in Trans. Linnean Soc., Zool., March, [1900, p. 521.

siphon-tap (sī'fọn-tap), *n.* A contrivance for tapping metal out of a furnace. The molten metal rises through an oblique channel to the bottom of a reservoir outside of the furnace, in which it rises to a higher level than it occupies in the furnace on account of the blast pressure and the weight of material in the furnace, and from which it can be ladled without disturbing the furnace. It is used commonly in lead-furnaces under the name of *Arendt's siphon-tap*. *Phillips and Bauerman*, Elements of Metallurgy, p. 75.

siphon-trap (sī'fọn-trap), *n.* A piece of pipe which has the shape of an inverted U or siphon and which acts, when filled with water, as a seal.

siphonula (sī-fon'ụ̄-lạ̈), *n.* [NL., < L. *sipho (siphon-)*, a siphon, + dim. suffix, *-ula.*] An early bilateral embryonic form in the development of certain cœlenterates such as the *Siphonanthæ*.

Siphostoma (sī-fos'tọ-mạ̈), *n.* [NL., < Gr. *σιφων*, a pipe, + *στόμα*, mouth.] A genus of pipe-fishes (*Syngnathidæ*) which embraces numerous species found in all warm seas.

siphuncle, *n.* (*c*) In the cephalopods, the calcareous tubular wall of the siphon. (*d*) The protrusible portion of the mouth-parts of a true louse, supposed to be modifications of the epipharynx and hypopharynx.

Siphunculata (sī-fung-kụ̄-lā'tạ̈), *n. pl.* [NL., < L. *siphuncul(us)*, dim. of *sipho*, tube, + *-ata.*] An order of insects erected by Meinert to include the true lice, whose mouth-parts, he believes, are radically different morphologically from those of the *Hemiptera*.

sipid (sip'id), *a.* [(*in*)*sipid*. See *sapid* and *insipid*.] Same as *sapid*. [Rare.]

sipidity (si-pid'i-ti), *n.* [(*in*)*sipidity*. Same as *sapidity*. [Rare.]

> The *sipidity* of honey, sugar, and juices of fruits.
> *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. lx.

sipiri (sẹ̄-pē'rẹ̄), *n.* [Guarani.] Native name in British Guiana for the greenheart, *Ocotea Rodiæi*. See *greenheart*, 1.

sipp (sip), *n.* The form of sling or hurling implement used by the natives of New Guinea. *Smithsonian Rep.*, 1904, p. 637.

sippio (sip'i-ō), *n.* [A made name?] A game played with balls on a table, extending across the foot of which is a row of pockets or pens, each of sufficient width to receive the ball. There are fifteen of these pens, numbered, from left to right (as one faces the foot of the table), 17, 4, 11, 9, 16, 8, 2, 20, 1, 13, 7, 12, 15, 3, 18. The game is played with nine balls, eight of one color, usually red, and one of another color, usually white. The object is to drive each of the eight red balls into some one of the pens by means of the white ball struck with an ordinary cue. For each ball penned, the player scores the number of points painted over the pen which the ball entered. The balls drop down through the pens after entering, and are returned to the head of the table by runways under the table; and the exit of each runway under the head of the table has painted over it the same number as over the pen itself, so that there may be no question as to which pen was entered. The player making the larger score by penning the balls wins.

> The mayor and aldermen of a city, except Boston, and, in Boston, the board of police, and the selectmen of a town, may grant a license to a person to keep a billiard, pool or *sippio* table, etc.
> *Revised Laws of Mass.*, cii. § 168.

sir¹, *n.*—**Sir Garnet**, a special bid in the game of napoleon.

> *Sir Garnet* consists of an excess hand of five cards, dealt in the usual way, and left on the table. Until this extra hand is appropriated, each player, when it is his turn to call, has the privilege of taking it up and combining it with his own hand. From the ten cards thus in his possession, he must reject five, which he throws away face downwards, and on the remaining five he is bound to declare Napoleon. The stakes are the same as on an ordinary Nap call. *Amer. Hoyle*, p. 298.

sir² (sēr), *n.* [Pers. **sīr*, < Hind. *sēr*, *sīr*: see *seer*⁴.] A Persian measure of weight, equal to 16 miskals or 2⅜ ounces troy.

sirajo (sē-rä'hō), *n.* [Cuban.] A gobioid fish, *Sicydium plumieri*, found in fresh waters of the West Indies.

Siratic group. See ⋆*meteorite*.

sirdar-melon (sėr-där'mel″ọn), *n.* [Afghan *sirda (palíz)*, muskmelon, + E. *melon.*] In Afghanistan, the muskmelon, *Cucumis Melo*.

> The pomegranates of Kandahar, with its "*sirdar*" melons and grapes, being unequalled in quality by any in the East. *Encyc. Brit.*, XIII. 836.

siree (sė-rē'), *n.* [*sir* + *-ee.*] An emphatic form of *sir*: especially in the phrase 'yes (no) *siree*!' *Dialect Notes*, III. iii. [Colloq.]

siren, *n.* **11.** A monster without lower extremities.—**12.** Same as *sympus*.

siren-limb (sī'ren-lim), *n.* In *teratol.*, a fusion of the lower extremities with incomplete separation of the feet.

sirenomelus (sī-re-nom'e-lus), *n.*; pl. *sirenomeli* (-lī). [NL., < Gr. *σειρήν*, siren, + *μέλος*, limb.] A monster whose lower extremities are fused and taper to a point without feet.

Sirian, *a.* **2.** A term introduced by Lockyer to denote stars having a spectrum resembling that of Sirius.

siricid (sir'i-sid), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Siricidæ*.

II. *a.* Having the characters of or belonging to the family *Siricidæ*.

sirium (sir'i-um), *n.* [NL., < *Sirius.*] The name of a supposed new chemical element announced in 1818 as present in a nickel ore. It was later shown to consist of nickel, iron, sulphur, and arsenic. Also called *vestium*.

Sirmian (sėr'mi-ạn), *a.* [NL. **Sirmianus*, < LL. *Sirmium*, < Gr. *Σίρμιον*, a city in ancient Pannonia Inferior whose ruins are at Mitrowitz.] Of or pertaining to Sirmium; specifically, pertaining to the three councils of Sirmium (351, 357, 358 A.D.). Their purpose was to form some basis of union between the strict Arians and the semi-Arians or Eusebians.

Sirmuellera (sėr-mül'ẹ-rạ̈), *n.* [NL. (Kuntze, 1891), named for *Sir* Ferdinand von *Müller* (1825–1896), the Australian botanist.] A genus of proteaceous plants including about 46 species.

sirocco, *n.* **2.** A name for a special drying apparatus using a heated blast of air derived from a fan, and blowing over the material to be dried, as fruit, or tea-leaves.—**3.** A trade-name for a form of fan-blower.

sirocco-dust (si-rok'ō-dust″), *n.* See ⋆*sea-dust*.

siserskite, *n.* Same as *sisserskite*.

sissified (sis'i-fīd), *a.* [*sissy* + *-fy* + *-ed*².] Effeminate; girlish. [Colloq.]

> To be seen with girls was not so "*sissified*," in his mind as it used to be. *J. C. Lincoln*, Partners of the Tide, iv.

sissoo (sis'ö), *n.* [Hindi *sisu.*] A large, deciduous tree of the bean family, *Dalbergia Sissoo*, common in India and Afghanistan. It is much planted throughout India as an avenue tree and yields a very durable, dark brown wood used extensively for boat- and carriage-building and for furniture.

sissors, *n.* An amended spelling of *scissors*.

sister, *n.*—**Little Sisters of the Poor.** See ⋆*poor*.—**Three sisters**, the three rattans once carried by the master-at-arms and boatswain's mates on British men of war, which were 'laid on' the backs of slow-moving sailors. These rattans were bound together at the handle, but were allowed to separate at the other end.

sistole, *n.* Same as *citole*.

sistroid (sis'troid), *a.* [*sistr(um)* + *-oid.*] Included between the convex sides of two intersecting curves: as, a *sistroid* angle.

Sistrurus (sis-trö'rus), *n.* [NL., < Gr. *σεῖστρον*, a sistrum, + *οὐρά*, tail.] A genus of rattlesnakes distinguished by having the top of the head covered with plates (as in harmless snakes and the *Proteroglypha*) instead of scales. There are but three species, two of which occur in the United States. The best known is the *massasauga*.

sit, *v. i.*—**To make (one) sit up**, to surprise; astonish; shock. [Slang.]

> "When the time comes," said the little sailor grimly, "we shall be ready for them, and if they interfere with me, I shall *make* the Congo Free State people *sit up*. But in the meanwhile they are not here."
> *Cutcliffe Hyne*, A Master of Fortune, iv.

> If the poet had emulated the frankness of Byron, and owned that his purpose in these things was to *make* the British matron "*sit up*," he would have disarmed much of the criticism that has befallen him.
> *N. Y. Times Sat. Rev.*, Aug. 12, 1905, p. 527.

To sit tight, to keep one's seat firmly, as on a horse; hold oneself steady; hold on quietly; devote one's attention closely. [Colloq.]

> He promised himself the pleasure of probing with his usual exquisite dexterity, into the problem so abruptly presented to him. He therefore *sat tight* and began to look very observant. *R. Hichens*, The Londoners, iv.

sitar (si-tär'), *n.* [Hind. *sitār*, < Pers. *sitār*, < *sih*, three, + *tār*, string.] A Hindu guitar with a pear-shaped body, a long neck, and three or more strings. It is sometimes played with a bow, like a viol.

site² (sīt), *v. t.*; pret. and pp. *sited*, ppr. *siting*. [*site*², *n.*] To select a site for; place; locate.

> The *siting* of the trenches will depend on the ground. The position generally should be on high ground, both for the sake of a clear view of the enemy's advance, and for concealment of the dispositions of the defence.
> *Encyc. Brit.*, XXVIII. 449.

sitfast, *n.* 2. The creeping buttercup, *Ranunculus repens*, so called from the difficulty in eradicating it.—3. The rest-harrow, *Ononis repens*. See *rest-harrow*, 1.—4. A fixed object, as an obstacle encountered by a plow.

> More subject to snap when the share is strained by any *sit-fast*, root, &c.
> *T. Williamson*, Agricultural Mechanism, p. 172.

sithe^1, *n.* An amended (restored) spelling of *scythe*.

Sitilias (si-til′i-as), *n.* [NL. (Rafinesque, 1836), said by its author to be an ancient name of *Hieracium*, a related genus.] A genus of cichoriaceous plants. See *Pyrrhopappus*.

sitotoxicon (sī-tọ-tok′si-kon), *n.* [Gr. *σῖτος*, food, + *τοξικόν*, poison.] A substance responsible for the symptom complex produced by vegetable poisoning.

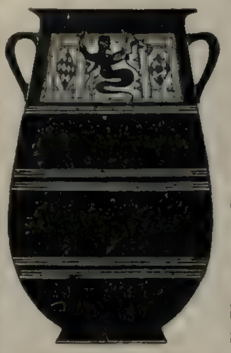
sitotoxin (sī-tọ-tok′sin), *n.* [Gr. *σῖτος*, food, + E. *toxin*.] A substance which produces vegetable poisoning.

sitotoxism (sī-tọ-tok′sizm), *n.* [*sitotox*(*in*) + *-ism*.] Poisoning by vegetable food. *Vaughan and Novy*, Cellular Toxins, p. 188.

sitter, *n.* 2. In *cricket:* (*a*) An easy catch missed by a fielder. (*b*) A fielder who misses such a catch. *Hutchinson*, Cricket, p. 117. [Slang.]

situla, *n.* 3. A deep bucket-shaped vase with a wide mouth and two handles near the top. In Greek pottery this form is found mainly in the earlier styles.

> In the center was a silver *situla* standing upon three feet, which contained the ashes of the deceased.
> *C. D. Edmonds*, in Jour. Hellenic Studies, XX. 23.



Situla (Greco-Egyptian).

situs, *n.*—**Analysis situs**, a general and fundamental kind of geometry, which neither considers sects or arcs or surfaces or solids in their character of being measurable by a unit, nor distinguishes straight from curved or crooked lines, nor plane from curved or bent surfaces, but studies only the manner in which the parts of places are continuously connected.

siv, *n.* and *v.* A simplified spelling of *sieve*.

Sivaism (sē′va̤-izm), *n.* [*Siva* + *-ism*.] The worship of Siva. Also *Sivism*.

Sivism (sē′vizm), *n.* Same as ★*Sivaism*.

siwash (si-wäsh′), *a.* and *n.* [Chinook jargon, ‹ F. *sauvage*, savage.] **I.** *a.* Of or relating to an Indian, more particularly to an Indian of the North Pacific coast.

II. *n.* An Indian of the North Pacific coast: often used as though *siwash* were the name of a particular tribe.

sixain, *n.* 3. The half of the douzain. See ★*douzain*, 2.

six-coupled (siks′kup″ld), *a.* Having six driving-wheels connected together by coupling- or connecting-rods: used of a locomotive with three driving-wheels on a side, as in the mogul or ten-wheeler types. The weight of the engine for adhesion is distributed over a longer length of track or over more points of contact than when fewer wheels are used, while the use of coupling-rods enables the wheels to act in unison.

sixer, *n.* 2. In *cricket*, a hit which scores six runs. [Colloq.]

six-faced (siks′fāst), *a.* Having six faces.—**Six-faced octahedron**, in *crystal.*, a hexoctahedron.

sixfold, *a.*—**Sixfold symmetry.** See ★*symmetry*, 6.

sixpence, *n.*—**Pudsey sixpence**, a silver coin of Elizabeth of England: said to be so called from a place in Yorkshire.

six-phase (siks′fāz), *a.* In *elect.*, pertaining to a system of electric distribution by six alternating currents displaced in phase from each other by one sixth of one period. Six-phase converters are frequently built, the six-phase currents being derived by transformation from three-phase currents.

sixteen, *n.*—**In sixteens**, said of an imposed form of composed type or plates containing 16 pages; also of a book that has 16 printed pages to each section.

sixty, *n.*—**Like sixty**, very fast; very hard; like fury. [Colloq.]

> They came down the hill *like sixty*, the old mare going for all she was worth, the reins flying.
> *The Good Fortune of Silas Mearns*, p. 27.

size^1, *n.*—**Victoria size**, a photograph 2 × 4½ inches, the size of the mount being 3½ × 5 inches.

size^1, *v. t.* 7. To cut or trim to the size required.—**To size down**, to arrange according to size with the smallest at the top, as shingles or slates.

> As here and in all the traditional old houses of the country-side, they are '*sized down*,' the smaller ones to the top and the bigger ones toward the eaves.
> *A. Vallance*, William Morris, p. 115.

sizer, *n.* 3. A wood-turning chisel which has an adjustable gage for regulating the size of the work.

sizing-chisel (sī′zing-chiz″el), *n.* A form of chisel, used in wood-turning, fitted with a gage by which the diameter of the work is determined.

sizing-machine^1 (sī′zing-ma̤-shēn″), *n.* [*size*^{1}, *v.*, + *machine*.] In *candy-making*, a pair of engraved or fluted rolls used in forming and sizing caramels, chocolates, and other candies.

sizing-machine^2 (sī′zing-ma̤-shēn″), *n.* [*size*^{2}, *v.*, + *machine*.] A machine for sizing warp-yarns for weaving. Sometimes called a *dressing-machine* or *slasher*.

sizing-ring (sī′zing-ring), *n.* A ring carrying cutters on its side or inner face, so that it will reduce to a determined size rods of wood presented to it: used for making dowel-pins or the pins on blind-slats and the like.

sizzard (siz′a̤rd), *n.* [*sizz*(*le*) + (*blizz*)*ard*.] A very uncomfortably hot, moist atmosphere in which one 'sizzles.' [Colloq.]

sjambok (shäm′bok), *n.* [D. *sjambok*, formerly also *siamback*, prob. taken up from Malayan servants at the Cape, ‹ Jav. *sambok*, also *chambok*, nasalized forms of the Malay *chābuk*, ‹ Hind. *chābuk*, whence E. *chabouk*, q. v.] A heavy whip of leather or hide. [South Africa.]

> When the mules ceased pulling in every direction except the right one from sheer exhaustion, a few judicious cracks of the *sjambok*, together with a few different languages, mostly bad, and up we eventually did go.
> *H. P. Battersby*, in War's Brighter Side, ix.

sjambok (shäm′bok), *v. t.* [*sjambok*, *n.*] To strike with a sjambok.

> One refugee states that several Free State burghers who displayed cowardice at Belmont were afterwards publicly *sjamboked* as an example to the others.
> *Pall Mall Gazette*, Jan. 15, 1900, p. 7. *N. E. D.*

Skaneateles shale. See ★*shale*^{2}.

skat^2 (skät), *n.* [G. *skat*, a game so named, ‹ It. *scarto*, a discarded card, a discard, useless paper, refuse, ‹ *scartare*, take from the paper or cards, discard, = Sp. Pg. *descartar* = E. *discard*, *v.*] The German national card-game for three players. The pack contains 32 cards, ranking A, 10, K, Q, 9, 8, 7, the four jacks being always the four best trumps, and preserving the same rank as the suits, clubs being the best, then spades, hearts, and diamonds. All trumps in unbroken sequence with the club jack held by the same side are called *matadors*. Ten cards are given to each player, three, four, three at a time, two being laid off for the skat, between the first and second rounds. The players bid against one another for the privilege of playing some one of the four varieties of the game. 'Mittelhand' bids to 'Vorhand,' and when 'Vorhand' refuses or 'Mittelhand' stops bidding, 'Hinterhand' bids to the survivor. Each bids well within what he thinks he can make, naming the value in figures, without stating what game he purposes playing. If he fails to make good his bid in his play, the adversaries score what he should have made as the matadors lie. The successful bidder is known as the 'player.' The four games are: *tournee*, in which the player turns over one of the skat cards for the trump, afterward taking both skat cards into his hand and discarding others in their place; if the turned card is a jack, he may change his game from tournee to grando; *solo*, in which the trump suit is named and the skat cards are not touched until the end of the play, when they are counted for the player's side; *grando*, in which the four jacks are the only trumps, so that there are four plain suits; *nullo*, in which there are no trumps and the cards rank A, K, Q, J, 10, 9, 8, 7, the object of the player being not to take a single trick. Each of these games has a standard value according to the trump suit. The tournees are: diamonds 5, hearts 6, spades 7, clubs 8. The solos are: diamonds 9, hearts 10, spades 11, clubs 12. There are four varieties of grando (or grand). The *turned grand* is worth 12. *Gucki grand*, in which the player announces in advance that jacks shall be the only trumps, but takes both the skat cards and then discards two in their place, is worth 16. *Solo grand*, played without touching the skat cards, is worth 20. *Open grand*, in which the player lays his cards face up on the table and guarantees to win every trick, is worth 24. Nullos also have four varieties. *Gucki nullo*, in which the player takes both the skat cards and then discards, having previously announced to play nullo, is worth 15. If the player announces an *open gucki nullo*, he must lay his cards face up on the table after discarding; it is worth 30. *Solo nullo*, if played without touching the skat cards, is worth 20; if played open, 40. If the first card turned in a tournee does not suit the hand, the player can announce *passt mir nicht*, and turn the other. All guckis and passt mir nichts lose double if lost. The unit values of all games except nullos are multiplied by the number of matadors, and it does not matter which side holds the sequence of matadors, its multiplying power is the same. If the single player has the jacks of clubs, spades, and hearts, he is 'with three.' If he has nothing higher than the king of trumps, he is playing 'against six.' There are also five game values, which are used as multipliers. Counting each ace as 11, tens 10, kings 4, queens 3, and jacks 2, there are 120 points in the pack. If the player gets 61 of these he wins his game; if his two adversaries combined get 60 they beat him. If the player gets 91 he makes them 'schneider'; if they get 90 they make him 'schneider.' If he gets every trick he makes them 'schwarz'; if they get all the tricks they make him 'schwarz.' The multipliers are: game 1; schneider 2; if the schneider is announced in advance, or if schwarz is made without announcing anything, 3; if schwarz is made after announcing schneider, 4; schwarz announced, 5. No announcement of schneider or schwarz can be made in any game in which the skat cards have been used, such as tournees and guckis. Suppose the player announces a club solo, unit value 12, and is with two matadors, getting 74 points out of the 120. He reckons, one for game, with two, three times twelve, or thirty-six points won. Varieties of skat, such as *point ramsch*, *schieber ramsch*, *contra* and *recontra*, *uno* and *duo*, are sometimes played; but they are not recognized by the Skat League. When four play at the same table, the dealer takes no cards; but he shares the fortunes of those opposed to the single player as to winning or losing on the hand. Vorhand, on the dealer's left, always leads for the first trick, no matter who is the successful bidder. Players must follow suit if they can; but if they cannot follow suit, they can trump or discard at pleasure. In nullos, the moment the single player takes a trick, his game is lost. The penalty for a revoke is the loss of the game.

skate^1, *n.* In New Zealand, the skate is *Raja nasuta*.

skate-leech (skāt′lēch), *n.* See ★*leech*^{2}.

Skatol carbonic acid. See ★*carbonic*.

skatologic, skatology, etc. See ★*scatologic*, *scatology*, etc.

skatosin (skat′ọ-sin), *n.* [*skat*(*ol*) + *-ose* + *-in*^{2}.] A derivative of skatol, $C_{10}H_{16}N_2O_2$.

skatoxyl, *n.* Same as ★*scatoxyl*.

skedge (skej), *n.* [Cornish.] The privet, *Ligustrum vulgare*. Also *skedgwith*. [Prov. Eng.]

skeep (skēp), *n.* [Cf. *skep*.] A scoop, especially one used for baling small boats. *Eng. Dial. Dict.* [Prov. Eng.]

skeep (skēp), *v. t.* [Cf. *skeep*, *n.*] To hew or shave off a thin piece of anything; also, to skin a small place by a glancing blow; skin (an animal). *Dialect Notes*, III. iii. [Local, U. S.]

skein^1, *n.* 5. In *cytol.*, same as ★*spireme*.

> No sign of chromatin thread (linin or *skein*) is apparent.
> *Science*, March 4, 1904, p. 393.

skein^1 (skān), *v. t.* [*skein*^{1}, *n.*] To wind (yarn) into hanks of definite lengths other than the normal. *Nasmith*, Cotton Spinning, p. 360.

skein-dyeing (skān′dī″ing), *n.* Same as ★*hank-dyeing*.

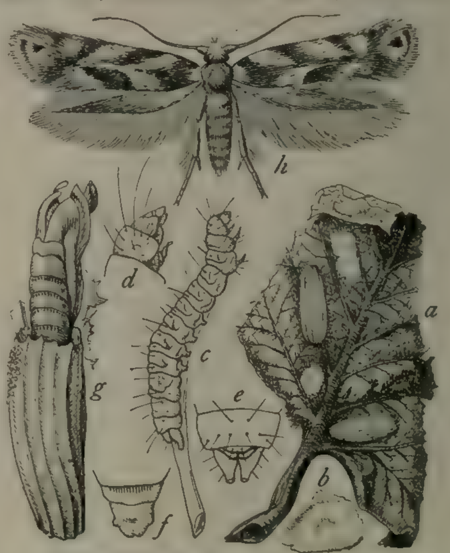
skeletin (skel′e-tin), *n.* [*skelet*(*on*) + *-in*^{2}.] One of certain complex organic substances which supposedly belong to the albuminoids. They are the principal components of the internal supporting structures of many invertebrates. The group comprises the fibroin found in silk, the spongin found in sponges, the conchiolin of molluscan shells, etc.

Skeletogenous layer. See ★*layer*.

skeleton, *n.*—**Intermediate skeleton.** Same as *supplemental* ★*skeleton*.—**Supplemental skeleton**, in the *Foraminifera*, calcareous deposits on the periphery of the test and in its cavities, giving rise to excrescences and in some cases pierced with tubules.

skeleton-crystal (skel′e-to̤n-kris″ta̤l), *n.* See ★*crystal*.

skeletonizer, *n.*—**Birch skeletonizer**, an American tineid moth, *Bucculatrix canadensisella*, whose larva mines the leaves of birch-trees in Canada and the northeastern United States.



Birch Skeletonizer (*Bucculatrix canadensisella*).

a, skeletonized leaf; *b*, pseudo cocoon; *c*, larva; *d*, head of same; *e*, anal segments of same; *f*, anal segments of pupa; *g*, cocoon with extruded larval skin; *h*, adult: all enlarged.

(Packard, U. S. D. A.)

skeleton-weed (skel′e-tọn-wēd), *n.* The gum succory, *Chondrilla juncea.* Also called *naked-weed.*

Skelgil beds. See ★*bed*¹.

skene-arch (skēn′ärch), *n.* Same as *scheme-arch.*

Skene's ducts. See ★*duct.*

sker, *n.* A dialectal form of *scar*².

sketch-map, *n.* **2.** In *surv.*, a map prepared without accurate measurement.

The accompanying *sketch-maps* are based on the maps given in the Mitteilungen of the Royal Hungarian Geographical Society. *Geog. Jour.* (R. G. S.), XVI. 219.

sketch-paper (skech′pā″pėr), *n.* Paper in sheets of any convenient size ruled vertically and horizontally with lines which are distant any desired aliquot parts of an inch. It is used in making sketches rapidly and in scaling without the use of measuring-instruments.

sketch-plan (skech′plan), *n.* The first plan of a building or architectural scheme, suggesting matter to be developed in later detailed drawings.

sketch-plate (skech′plāt), *n.* In *iron ship-building*, a plate of any polygonal shape not a rectangle. Such plates are ordered to avoid waste in cutting to the shape required on the vessel. The name is derived from the fact that they are ordered from the rolling-mills by an outline dimensioned sketch.

skete (skēt), *n.* [NGr. *σκῆτος*, a monastery (cf. *ἀσκητήριον*, a hermit's cell), < *ἀσκητής*, a hermit, an ascetic: see *ascetic.*] A monastery or monastic settlement of the Greek Church, characterized by a strict discipline.

Dependent on the several monasteries are twelve *sketes* (*σκητια, ἀσκητήρια*), or monastic settlements, some of considerable size, in which a still more ascetic mode of life prevails. . . . The large *skete* of St. Andrew and some others belong to the Russians; there are also Rumanian and Georgian *sketes.* *Encyc. Brit.*, XXX. 399.

skeuobiomorph (skū-ọ-bī′ọ-môrf), *n.* [Gr. *σκεῖος*, vessel, utensil, + *βίος*, life, + *μορφή*, form.] An ornamental form or pattern due to the combination or amalgamation of a skeuomorph and a biomorph. *Haddon*, Evolution in Art, p. 192.

skeuomorph (skū′ọ-môrf), *n.* [Gr. *σκεῦος*, vessel, utensil, + *μορφή*, form.] A form of ornament or ornamental design which can be shown to be due originally to the nature of the material and the method of working it, or to technique. The forms and patterns originating in a certain technique may then be further modified or copied in other material. *Haddon*, Evolution in Art, p. 75.

skeuomorphic (skū-ọ-môr′fik), *a.* [*skeuomorph* + *-ic.*] Relating to or having the character of a skeuomorph; illustrating or exhibiting skeuomorphs in its form or decoration: as, *skeuomorphic* pottery. *Haddon*, Evolution in Art, p. 6.

skew¹, *a.*—**Skew variation.** See ★*variation.*

skew¹, *n.* **6.** In *math.*, a regulus.

A Ruled Surface, Regulus, or *Skew*, is a configuration of lines which satisfy three conditions, and therefore depend on only one parameter. *Encyc. Brit.*, XXVIII. 660.

skewback (skū′bak), *n.* In masonry arch construction, one of the series of consecutive stones extending along the top of the abutment of a segmental arch having its upper face inclined so as to receive the lower stone of the arch. As the number of skewback stones is dependent on the length of the arch measured parallel with its axis, a segmental arch in a wall may require but one or two skewback stones at each end of the arch. The name is sometimes specifically confined to the sloped surface of the top course of stones forming the abutment, rather than to the stone itself. In full-center arches the tangents to the arch curve at the ends are vertical and the upper surface of the top course of the abutment is therefore horizontal instead of sloped, and hence the name 'skewback' is not properly employed in connection with full-center arches. See *skew back*, under *skew*¹, *a.*

The main span, which is of trussed steel arch construction, measures 376½ feet between *skewbacks.* Of the seven smaller spans, five measure 113 feet between *skewbacks*, and the other two 51 feet.
Sci. Amer. Sup., May 23, 1903, p. 22894.

skewer, *v. t.* Specifically—**2.** See the extract.

Various schemes are used to hasten the growth of mold. The cheese may be *skewered* (punched with holes with an instrument resembling a skewer) or it may be "ironed" and the plug left out some time to admit fungus spores. Such a cheese becomes dry and hard without acquiring the proper flavor.
U. S. Dept. Agr., Bur. Animal Industry, Rep., 1905, p. 97.

skewing, *n.* **2.** In *printing*, an improper method of fastening type in a chase, by which the lines are put askew or made to hang or bow.

skewness (skū′nes), *n.* [*skew*¹, *a.*, + *-ness.*] The character or state of being skew. Specifically: (*a*) In *biometry:* (1) The property of exhibiting skew variation. See ★*variation.*

There is positive *skewness* in body length, and negative in the mandibles. *Science*, March 8, 1901, p. 375.

(2) The numerical expression of skew variation; asymmetry, measured by the ratio $a=D/\sigma$, where D is the distance (mean, mode) and σ is the index of variability.

The following Table gives the means, modes, standard deviations, and *skewnesses* of the various age groups.
A. O. Powys, in Biometrika, Oct., 1901, p. 43.

(*b*) In *math.*, the degree of disturbance of symmetry in a curve.

The left-hand polygon has a *skewness* of +0.48; the right-hand polygon of −0.03.
C. B. Davenport, in Pop. Sci. Mo., Sept., 1901, p. 455.

Negative skewness, in *biol.*, a skewness where the mean is less than the mode.—**Positive skewness,** in *biol.*, a condition of skewness where the mean is greater than the mode.

skew-sight (skū′sīt), *n.* Oblique vision, the object being seen distinctly only when to one side of the direct line of vision.

skiagram (skī′ạ-gram), *n.* Same as ★*sciagram.*

skiagrammatic (skī″ạ-gra-mat′ik), *a.* Same as ★*sciagrammatic.*

skiagrammatically (skī″ạ-gra-mat′i-kạl-i), *adv.* Same as ★*sciagrammatically.*

skiagraph (skī′ạ-gráf), *n.* Same as ★*sciagraph.*

skiagraph (skī′ạ-gráf), *v. t.* Same as ★*sciagraph.*

skiagraphic (skī-ạ-graf′ik), *a.* Same as ★*sciagraphic.*

skiagraphy, *n.* **2.** Same as ★*sciagraphy.*

skiametry (skī-am′e-tri), *n.* Same as ★*sciametry.*

skiascope (skī′ạ-skōp), *n.* Same as ★*sciascope.*

skiascopic (skī-ạ-skop′ik), *a.* Same as ★*sciascopic.*

skid¹, *n.* **8.** In *lumbering*, a log or pole, commonly used in pairs, upon which logs are handled or piled; also the log or pole laid transversely in a skid-road.—**9.** A peeling-iron; an instrument for peeling bark from trees or logs. [Colloq., U. S.]—**Spiked skid**, in *lumbering*, a skid in which spikes are inserted in order to keep logs from sliding back when being loaded or piled.

skid¹, *v. t.* **4.** In *lumbering:* (*a*) To draw (logs) from the stump to the skidway, landing, or mill. (*b*) As applied to a road, to reinforce (it) by placing logs or poles across it. —**5.** To check with a brake, as wheels, so that they will continue to slide but not to rotate, as the wheels of a moving train. (See *skid*¹, *v. i.*, 1.)

When the wheels are *skidded* the retardation of the train is always reduced. *Encyc. Brit.*, XXVI. 348.

To skid up. (*a*) Same as ★*skid*¹, 4 (*b*). (*b*) To collect (logs) and pile upon a skidway.

skid-beam (skid′bēm), *n.* One of a set of beams placed athwartship above the open deck of a large vessel, upon which the small boats are carried when not in use. Also called *boat-beam.*

skidder, *n.* **2.** A steam-engine, usually operating from a railroad-track, which skids logs by means of a cable.—**3.** The foreman of a crew which constructs skid-roads.

skidding-chain (skid′ing-chān), *n.* A heavy chain used in skidding logs.

skidding-hooks (skid′ing-hụ̇ks), *n. pl.* Same as ★*skidding-tongs.*

skidding-sled (skid′ing-sled), *n.* Same as ★*dray*¹, 3.

skidding-tongs (skid′ing-tôngz), *n. pl.* A pair of hooks, attached by links to a ring, used for skidding logs. Also called *skidding-hooks, grips, grapples, grabs*, and *dogs.*

skid-grease (skid′grēs), *n.* A heavy oil applied to skids to lessen the friction of logs dragged over them.

skid-road (skid′rōd), *n.* See ★*road.*

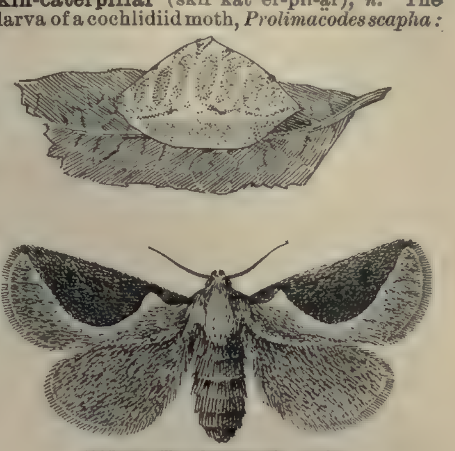
skidway (skid′wā), *n.* In *lumbering:* (*a*) Two skids laid parallel at right angles to a road, generally raised above the ground at the end nearest the road. Logs are usually piled upon a skidway as they are brought from the stump for loading upon sleds, wagons, or cars. (*b*) A prepared path down which logs, etc., can slide as down a skid. See *skid*¹, *n.*, 2.

Once in a while open lanes run from the water's edge up to the hilltop. Down these "*skidways*" slid the great logs, cleaving the blue waters with a splash that sent the spray flying high into the air. *Outing*, Feb., 1906, p. 539.

To break a skidway, to roll piled logs off a skidway.

skif, *n.*, *v. t.*, and *a.* A simplified spelling of *skiff.*

skiff-caterpillar (skif′kat″ėr-pil-ạ̈r), *n.* The larva of a cochlidiid moth, *Prolimacodes scapha:*



Skiff-caterpillar (*Prolimacodes scapha*).
Larva above, moth below, enlarged.
(Hubbard, U. S. D. A.)

so named on account of its fancied resemblance to a minute boat.

skil, *v.* and *n*¹. A simplified spelling of *skill.*

skil² (skil), *n.* A fish, *Anoplopoma fimbria*, found from California to Alaska.

skild, *a.* A simplified spelling of *skilled.*

skil-fish (skil′fish), *n.* Any fish of the family *Anoplopomatidæ*, found in the North Pacific.

skilling³, *n.*—**Skilling banco,** a subsidiary coin of Sweden until 1857, equal to one forty-eighth of a rix-dollar, or 1.12 United States cents.

skim, *v. t.* **9.** In *plastering*, to put the finishing coat or skim-coat on.

skim, *n.* **3.** A cultivator blade for surface work, analogous to a sweep. See ★*scalp*¹, 7, and ★*sweep*, 12 (*b*).

This *skim* is cast in two parts, which renders it movable to suit any width of ridge.
J. Scott, Field Implements and Machines, p. 119.

skim-cheese (skim′chēz), *n.* See ★*cheese*¹.

skim-coat (skim′kōt), *n.* In *plastering*, the finishing coat in three-coat work, which is generally very thin. Compare *hard-finish.*

skimfish (skim′fish), *n.* *Carpiodes velifer*, one of the suckers (*Catostomidæ*) found in the Mississippi.

skimmene (skim′ēn), *n.* [*Skimm*(*ia*) (see def.) + *-ene.*] A colorless dextrorotatory liquid, $C_{10}H_{16}$, contained in the oil from *Skimmia Japonica.* It boils at 170–175° C.

skimmer¹, *n.* **1.** (*e*) An attachment to a plow placed like a skim-colter, but turning a slice of sod 10 inches broad and 2 inches thick. [Kentucky.]

Two methods of breaking are practiced: one with a plow having a "*skimmer*" attached just in front of the subsoiler. *Killebrew and Myrick*, Tobacco Leaf, p. 343.

skimmer-pipe (skim′ėr-pīp), *n.* In *soap-making*, a pipe working on a swivel joint and capable of adjustment to any height within a soap-boiling pan, so that the soap in solution may be drawn off from any desired level.

skimmetin (skim′e-tin), *n.* [*skimm*(*in*) + *-et* + *-in*².] A colorless crystalline compound, $C_9H_6O_3$, prepared by the action of dilute acids on skimmin. It melts at 223° C.

skimmin (skim′in), *n.* [*Skimm*(*ia*) (see def.) + *-in*².] A colorless glucoside, $C_{15}H_{16}O_8$, contained in *Skimmia Japonica.* It crystallizes in needles and melts at 210° C.

skimming-back (skim′ing-bak), *n.* In *brewing*, a large wooden vat, provided with funnels, into which the surplus yeast is skimmed from the surface of the beer after the first or principal fermentation is at an end. The beer thus 'cleansed' is run off into a 'settling-back' or into casks.

skimming-ladle (skim′ing-lā″dl), *n.* A ladle for use in pouring molten metal in foundries and elsewhere, especially adapted by shape and construction to deliver the pure metal from below the surface, and retain the scum of oxids and impurities which are light and float at the top. There may be a guard at the lip, or, in larger types, the discharge may be from the bottom instead of over the upper edge.

skin, *n.* **9.** In *elect.*, the outer layers of a conductor, which serve in the conduction of currents of high frequency.—**Glossy skin,** a condition sometimes following an injury to the trophic nerve-supply, consisting of intense burning pain with atrophy and abnormal smoothness of the skin.—**Inner skin**, the interior covering or inner-bottom plating of a vessel.—**Outer skin**, the outer covering or outside plating of a vessel.

skin, *v. t.* 6. To take off the top layer of, as of a race-track. [Colloq.]

The time, 2:05 flat, was not considered fast, for the track stood in prime condition and has been "*skinned*" and generally rendered faster than it was a year ago.
N. Y. Eve. Amer., Aug. 2, 1904.

skin-beetle (skin′bē″tl), *n.* Any scarabæid beetle of the genus *Trox* (which see). *Comstock*, Manual of Insects, p. 559.

skin-conduction (skin′kon̤-duk″shon̤), *n.* In *elect.*, the conduction, as of high frequency currents, by the outer layers only of the conducting material.

Increasing the frequency of alternation removes the current from the interior towards the boundary, shortening the wave-length. The tendency is towards *skin conduction*. The attenuation is so rapid in going inwards that only one wave-length in the wire itself need be considered. This may be confined within a mere skin.
Encyc. Brit., XXXIII. 216.

skin-current (skin′kur″ent̤), *n.* An electric current conducted, as is the case with alternating currents of high frequency, by the outer layers only (skin) of the conducting material.

skin-effect (skin′e-fekt″), *n.* In *elect.*, see ★*effect*.

skin-field (skin′fēld), *n.* The area of skin to which a given nerve is distributed on the ultimate ramification of its fibers.

skin-grafting, *n.*—**Thiersch's method of skin-grafting**, the application of broad pieces of skin, as distinguished from the ordinary method of applying very small bits.

skin-hunter (skin′hun″tėr), *n.* One who hunts animals for their skins.

The Boers trekked to the districts now known as the Orange River Colony and the Transvaal, and, once there, the fierce pursuit of the game, which, as we have seen, had taken place in Cape Colony, was repeated, but at a more rapid rate, owing to improvements in fire-arms, and the operations of the "*skin-hunters*," who shot down the animals by tens of thousands, prompted by the commercial uses to which their hides could be put. Between the years 1840 and 1875 the destruction of animals in the old republics, it is safe to say, might be reckoned by millions.
Knowledge, July, 1905, p. 190.

skin-moth (skin′môth), *n.* Any one of the tineid moths whose larvæ live on furs and skins.

skin-muscle (skin′mus″l), *n.* The thin muscle, *panniculus carnosus*, lying just beneath the skin, whose contractions give rise to the twitching of the skin so evident in horses. It is by a modification of this muscle that the hedgehog is able to curl into a ball. *Nature*, Oct. 30, 1902, p. 661.

skinning-knife (skin′ing-nīf), *n.* A knife adapted for doing the cutting when removing a hide from a carcass.

skin-plating (skin′plā″ting), *n.* In *iron-ship-building*, the exterior plating which covers the bottom and sides of a vessel. *White*, Manual of Naval Arch., p. 338.

skin-resistance (skin′rē̤-zis″tan̤s), *n.* 1. Same as *skin-friction*.—2. See ★*resistance*.

skin-vision (skin′vizh″on̤), *n.* The perception of light by the skin by a reflex functional action and without special organs of vision, as in earthworms.

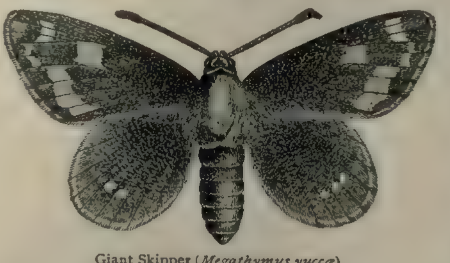
skip^{1}, *n.* 7. In *poker*, a straight in which the cards are alternate, such as 2, 4, 6, 8, 10: when played, it beats two pairs.

"*Skips*," consisting of alternate cards in sequence, for instance, Three, Five, Seven, Nine, Jack are sometimes played to beat two pairs, where "blazes" are unknown, but are equally destitute of merit.
American Hoyle, p. 163.

skipful (skip′fu̇l), *n.* Same as *skepful*.

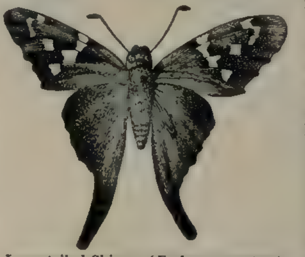
skipjack, *n.* 4. (*j*) *Pomolobus chrysochloris*, of the family *Clupeidæ*, a herring found land-locked in the Ohio and Mississippi rivers.

skipper^{1}, *n.* 7. Same as ★*climbing-fish*, 2.—**Arctic skipper**, an American hesperiid butterfly, *Pamphila palæmon*, of northern distribution. In the larval state it feeds on grasses.—**Brazilian skipper**, an American hesperiid butterfly, *Calpodes ethlius*, brown in color, with whitish translucent spots on the wings. It occurs in the southern United States and extends southward to Argentina. Its larva feeds on canna-leaves.—**Broad-winged skipper**, an American hesperiid butterfly, *Phycanassa viator*, having blackish-brown wings marked with dull tawny. It occurs from New England to the Gulf of Mexico.—**Canadian skipper**, an American hesperiid butterfly, *Erynnis comma*, occurring throughout Canada from the Atlantic to the Pacific and in the mountains of the northwestern United States.—**Cobweb skipper**, an American hesperiid butterfly, *Erynnis metea*, found in the northeastern United States, where its larva feeds on grasses.—**Cofaqui skipper**, an American butterfly, *Megathymus cofaqui*, found in Florida and Colorado.—**Cross-line skipper**, an American hesperiid butterfly, *Limochroes manataaqua*, occurring from New England west to Nebraska, and in the larval stage feeding on grasses.—**Dun skipper**, an American hesperiid butterfly, *Euphyes vestris*, widely distributed in the Mississippi valley and in the northern United States.—**Giant skippers**, the butterflies of the family *Megathymidæ*.



Giant Skipper (*Megathymus yuccæ*).
(Redrawn from Riley, U. S. D. A.)

There are two species in the United States, *Megathymus cofaqui* and *M. yuccæ*. The larvæ of the latter bore in the stems and roots of plants of the genus *Yucca*.—**Golden-banded skipper**, an American hesperiid butterfly, *Rhabdoides cellus*, brown in color, with a golden band across each fore-wing. It ranges from West Virginia south to the Gulf of Mexico.—**Grizzled skipper**, a hesperiid butterfly, *Hesperia centaureæ*, common to boreal North America, Norway, and Lapland, having dark-brown wings checkered with white.—**Hobomok skipper.** Same as ★*Mormon*1 (*c*).—**Indian skipper**, an American hesperiid butterfly, *Erynnis sassacus*, having yellowish wings bordered with brown. It occurs in the Atlantic United States and ranges westward to Colorado. Its larvæ feed on grasses.—**Least skipper**, an American hesperiid butterfly, *Ancyloxipha numitor*, which occurs throughout the eastern United States. Its larvæ feed on grasses.—**Leonard's skipper**, an American hesperiid butterfly, *Anthomaster leonardus*, occurring from New England to Florida and westward to Kansas. Its larvæ feed on grasses.—**Long-tailed skipper**, an American hesperiid butterfly, *Eudamus proteus*, ranging from New York southward into Mexico. In the south its larva, known as the *roller-worm*, is a pest in vegetable-gardens, eating the leaves of beans, turnips, and cabbages.—**Otho skipper**, an American hesperiid butterfly, *Thymelicus otho*, which occurs in the eastern United States. Its larvæ feed on grasses.—**Pepper-and-salt skipper**, an American hesperiid butterfly, *Amblyscirtes samoset*, occurring in the northern and middle United States west to Iowa.—**Powesheik skipper**, an American hesperiid butterfly, *Oarisma powesheik*, occurring in the western United States.—**Roadside skipper**, an American hesperiid butterfly, *Amblyscirtes vialis*, of wide distribution within the United States. Its larvæ feed on grasses.—**Silver-spotted skipper**, a common American hesperiid butterfly, *Epargyreus tityrus*, occurring throughout the United States. Its larvæ feed on locust-leaves and other allied trees and plants.—**Swarthy skipper**, an American hesperiid butterfly, *Euphyes fusca*, which is found in the Gulf States and extends as far north as Pennsylvania.—**Vitellius skipper**, *Phycanassa vitellius*, a species of butterfly which occurs in the West Indies and the United States.—**Zabulon skipper**, *Atrytone zabulon*, which occurs in the eastern United States. Its larvæ feed on grasses.



Long-tailed Skipper (*Eudamus proteus*).

skipper^{3}, *n.* 2. In *cricket*, the captain of a cricket eleven. [Colloq.] *Encyc. Brit.*, XXVII. 280.—3. Also the commander of any other body of men, as of a company of soldiers; a leader. [Colloq.]

He returned to sit at the feet of Revere, his '*skipper*'—that is to say, the captain of his company, and to be instructed in the dark art and mystery of managing men.
R. Kipling, Only a Subaltern, in Soldiers Three, p. 115.

skipper^{3} (skip′ėr), *v. t.* [*skipper*^{3}, *n.*] To command a ship; command and drill (as sailors); serve as skipper to. [Colloq.]

If a saint was to come down and *skipper* the brutes we have to ship as sailor-men nowadays, he'd wear out his halo flinging it at them.
Cutcliffe Hyne, A Master of Fortune, xi.

skippery (skip′ėr-i), *a.* [*skipper*^{1} + *-y*^{1}.] Containing skippers or cheese-hoppers. See *skipper*^{1}, 4 (*b*).

skipple (skip′l), *n.* [D. *schepel*, a bushel.] A measure equal to three pecks. The old Amsterdam schepel, or bushel, was about one fourth less than the bushel used in the United States. See *bushel*^{1}, 1. *N. and Q.*, 9th ser., VIII. 183. [New England.]

skip-road (skip′rōd), *n.* 1. The ways or guides for a bucket or skip in a mine-shaft or drift.—2. The path left free for the passage of the bucket or skip, over which it traverses.

Skip-shaft draft. See ★*draft*^{1}.

skirt^{1}, *n.*—**Parasol skirt**, a short spreading skirt worn by ballet-dancers in the latter part of the nineteenth century.

skirt-dance (skėrt′dȧns), *n.* See *skirt-dancing*.

skirt-dancer (skėrt′dȧn″sėr), *n.* One who dances skirt-dances.

skirted (skėr′ted), *a.* [*skirt*^{1} + *-ed*^{2}.] 1. Having a skirt: usually in composition.—2. Having the skirt or skirting removed.

skirt-steak (skėrt′stāk), *n.* A steak of beef cut from the inside of the plate.

skitter (skit′ėr), *n.* [*skitter*, *v.*] The act of skittering, or gliding or skimming over with a light touch.

The grind of the slides and the tearing swash of blades abruptly ceased as the slim shell trailed with dying headway to the *skitter* of the resting oars.
Scribner's Mag., July, 1905, p. 1.

skiving-machine, *n.*—**Amazon skiving-machine**, a special form of skiver.

skoke, *n.* Same as *scoke*.

skowitz (skō′wits), *n.* An Amerindian name of the silver salmon, *Oncorhynchus kisutch*, found on both sides of the North Pacific.

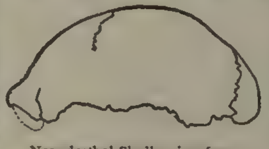
skreel (skrēl), *n.* [Appar. a dial. form of *reel*, by confusion with *creel*. Confusions of *cr-* and *scr-* are common in modern dial. usage.] A form of small spool or bobbin for holding yarn or thread.

skul, *n.* A simplified spelling of *skull*.

Skuld (sku̇ld), *n.* [ONorse *Skuld*, in origin identical with *skuld* (= Dan. *skyld* = AS. *scyld* = G. *schuld*), debt, due, from root of *skulu*, shall: see *shall*.] In *Norse myth.*, one of the three Fates; the Norn of the future.

skulduggery, *n.* See *skulduddery*.

skull^{1}, *n.* 7. The trade-name for the anterior plate of the carapace of the hawk's-bill turtle, which yields the tortoise-shell of commerce.—**Calaveras skull**, a skull found in Calaveras county, California (in 1886), believed by some to be of great antiquity. It is, however, more probable that it belonged to one of the present race of Indians.—**Cannstatt skull**, a skull found at Cannstatt, near Stuttgart, about two hundred years ago, and long believed by some authors to belong to the paleolithic race, but probably of much more recent origin. *Keane*, Ethnology, p. 133.—**Neanderthal skull**, a part of a skull, of a low type and high geological age, found, with other portions of a skeleton, in the Neanderthal near Düsseldorf, in 1856, under a diluvial deposit about two meters thick.



Neanderthal Skull: view from left side.

skull-banker (skul′bang″kėr), *n.* In Australia, a loafer; a tramp. Also *scowbanker*. [Slang.]

A *skull-banker* is a species of the genus loafer—half highwayman, half beggar.
A. Michie, Retrospects . . . of the Colony, p. 9, quoted [in E. E. Morris, Austral English.

skull-cracker (skul′krak″ėr), *n.* A falling weight, with the necessary framing and hoisting apparatus, used in breaking up the skulls or solidified metal from ladles and runners in steel-works.

The track leading to the drop from the casting level of the open-hearth building rises six feet to the drop, and the track from the charging level descends six feet, tracks on the two levels, which are twelve feet apart, thus having a loop connection in the rear of the *skull-cracker*. The latter consists of a tripod, and the drop is operated by a winding drum driven by a 25-horse-power motor.
Sci. Amer. Sup., July 23, 1904, p. 23870.

skulled, *a.* 2. In *metal.*, covered with skull. See *skull*^{1}, *n.*, 6.

skunk, *n.* Including the little striped skunks, at least twelve species have been recognized. After being changed back and forth by various revisers the name *Mephitis* is retained for the larger species and *Spilogale* for the smaller.—**Little spotted skunk**, any one of the small skunks of the genus *Spilogale*, which are marked with rows of spots.—**Striped skunk**, a general name for the smaller skunks of the genus *Spilogale* found in the southern and western United States.

skunk, *v. t.* 3. In an election, to defeat (an opponent) completely, so that the latter gets no votes at all.

II. *intrans.* To leave without paying one's bills. *Jour. Amer. Folk-lore*, Oct.-Dec., 1902, p. 258.

skunk-bear (skungk′bãr), *n.* A name sometimes given to the wolverene, *Gulo luscus*, whose appearance and markings are somewhat suggestive of a large skunk.

skunk-bush (skungk′bu̇sh), *n.* 1. The ill-scented or Canadian sumac, *Rhus trilobata*.—2. The bear-brush, *Garrya Fremontii*. See ★*bear-brush* and ★*quinine-bush*.

skunk-grass (skungk′grȧs), *n.* Same as ★*stink-grass.*

skunkweed, *n.* **2.** A low annual herb, *Navarretia squarrosa,* troublesome as a weed in grain and grass lands from Washington to California. Its ill odor (which suggests the common name) is damaging to the quality of the crop.

Skunnemunk conglomerate. See ★*conglomerate.*

sky^1, *n.* **6.** An abbreviation of *sky-blue. T. W. Fox,* Mechanism of Weaving, p. 382.—**Clear sky.** See ★*clear day.*—**Green sky,** a sky of a pale-green or pea-green color seen at sunset and rarely on other occasions: possibly due to a combination of the colors from the red sky and the blue sky.—**Lamb's-wool sky,** small white fleecy patches of cloud against a blue sky.—**Livid sky,** clouds of a dark leaden color.—**Sky aspect.** See ★*aspect.*

sky^1, *v. t.* **2.** In *golf,* to so strike (a ball) as to cause (it) to go unusually high in the air.

sky-blue, *n.*—**Diamine sky-blue,** a coal-tar color of the diazo type, related to dianisidine. It dyes unmordanted cotton a very pure blue in an alkaline salt bath.

skyer (skī′ėr), *n.* In *cricket,* a ball hit high in the air.

sky-glow (skī′glō), *n.* See the extract.

> "*Sky glows,*" . . . These phenomena were first observed about July 1 at Copenhagen, Kònisberg, Berlin, Vienna, and other places. Mr. W. F. Denning, the English astronomer, says: "Certain features of the glows struck me as being essentially different from exhibitions of normal auroræ boreales. No streamers whatever were seen. Clouds observed were of peculiar character, and some of them showed traces of spiral formation. Though thin, they were strongly illuminative, and stars shone through them with surprising distinctness."
>
> *Sci. Amer.,* Aug. 29, 1908.

skylight, *n.* **2.** The light of the sky; specifically, the blue or pale white color of the aërial vault. The light of the sky is, in general, reflected sunlight. Its color is due to the size of the reflecting particles, blue light coming from the finest gaseous particles and red light from larger vaporous ones. Blue light may also come from the molecules of the gases mixed together in the atmosphere. The white light with which the blue is adulterated comes from larger particles or globules of water that reflect all the colors of the sunlight. The blue light is polarized in a plane perpendicular to the sun's rays, the white light in the plane of the sun's rays; the resultant light is polarized according to the law combining these two elementary conditions. **3.** Illumination by means of the light of the sky: as, a studio with a good *skylight.*

skylight-quadrant (skī′līt-kwod-rant), *n.* In *marine hardware,* a brass bar in the form of a quadrant, or quarter-circle, hinged to a plate at one end and having a slot in the middle. The plate is screwed to the side of a ship's skylight and the sash carries a set-screw that slides in the slot. It is used to hold the sash open at any desired angle.

sky-line, *n.* **2.** In *arch.,* the profile of a building or mass of buildings as seen against the sky; in *painting* and other arts of representation, the profile of mountains, trees, or other natural masses seen in the same way.

sky-pilot (skī′pī″lot), *n.* A clergyman; a priest; one who pilots or shows the way to heaven. [Slang.]

> We insist that the gravediggers, pallbearers, "*sky-pilot,*" choristers, surviving members of the family, hired mourners, charioteers, brass band and the like shall wear flowers at the obsequies.
>
> *Kansas City Daily Star,* May 4, 1903.

skysail-mast (skī′sāl-mȧst), *n.* The spar on which the skysail-yard is carried, and on which the skysail is set. Strictly speaking, this should be called the *skysail-pole,* which is that part of the royal-mast above the shoulder, and which terminates at the truck.

skysail-pole (skī′sāl-pōl), *n.* The upper part of a royal-mast (from the shoulder to the truck) to which the skysail-yard is confined by a parrel.

skysail-yard (skī′sāl-yärd), *n.* The spar to which the head of the skysail is bent.

sky-scraper, *n.* **4.** A very tall office-building such as those first erected in various cities of the United States in the latter part of the nineteenth century. Originally from ten to fifteen stories in height, they are now occasionally built with forty stories and more. [Colloq.]

> We are told . . . that "*sky-scrapers*" are preventers of conflagrations, and that a law should be passed requiring the erection of a double row of them, the length of Broadway. . . . There are happily not many of these "modern" structures in any city, and this is one reason why we have not yet heard of a serious fire originating in one of them. Another is, that being few in number, they are as yet used exclusively for office purposes and the contents are not especially combustible.
>
> *Sci. Amer.,* Jan. 21, 1899, p. 39.

sky-sign (skī′sīn), *n.* See the extract.

> Advertisements coming within the definition of *sky-signs* in the London Building Act of 1894. These specifications are as follows:—"*Sky sign*" means any word, letter, model, sign, device, or representation in the nature of an advertisement, announcement, or direction supported on or attached to any post, pole, standard, framework, or other support, wholly or in part upon, over, or above any building or structure, which, or any part of which, *sky sign* shall be visible against the sky from any point in any street or public way, and includes all and every part of any such post, pole, standard, framework, or other support. The expression "*sky sign*" shall also include any balloon, parachute, or similar device employed wholly or in part for the purposes of any advertisements or announcement on, over, or above, any building, structure, or erection of any kind, or on or over any street or public way.
>
> *Encyc. Brit.,* XXV. 97.

sky-worship (skī′wėr″ship), *n.* That form of primitive religion in which the sky, the heavenly bodies, and meteorological phenomena are worshiped. *Jour. Amer. Folk-lore,* Jan.–March, 1902, p. 31.

S. L. An abbreviation (*b*) of *sergeant at law;* (*c*) of *solicitor at law.*

slab^1, *n.* **1.** (*b*) In Australia, a piece of timber, two or three inches thick, ax hewn, not sawed: used for the walls of rough houses. Also used attributively. *E. E. Morris,* Austral English.

> The house in which this modern Robinson Crusoe dwelt was what is called a *Slab* Hut, formed of rough boards and thatched with grass.
>
> *J. L. Stokes,* Discoveries in Australia, I. 266.
>
> The hut was built of logs and *slabs.*
>
> *R. M. Praed,* Australian Life, p. 8, quoted in E. E. [Morris, Austral English.

6. A flat mass of metallic tin cast in a chilling mold of stone or metal.—**7.** *pl.* A commercial name of crude rubber in pieces an inch or two thick formed by pressing several sheets together. See ★*rubber*^{1}, 3.—**Fibrous slab.** See ★*fibrous.*

slab^1, *v. t.* **2.** To keep (the sides of any excavation, as a mining-shaft or a well) from crumbling and falling by facing (them) with slabs, either of timber or of stone.

> The *slabbed* margin of a well.
>
> *Keats,* Endymion, i.

slabbing (slab′ing), *n.* In *soap-making,* the process of cutting the blocks of soap, which have solidified in frames, into slabs which are afterward cut transversely into bars. A loop of wire is used and drawn through the block by hand, or a special slabbing-machine is applied.

slabby, *a.* **3.** Consisting of slabs, or resembling a slab or series of slabs.

slab-dross (slab′dros), *n.* A by-product of the manufacture of galvanized iron consisting of impure zinc which in the molten state has alloyed with and dissolved a large proportion of iron.

slab-saw (slab′sâ), *n.* A saw which cuts the bark and outer slab from a round log, to make it square in section or flat-sided with irregular corners.

slab-wave (slab′wāv), *n.* A wave consisting of the motion of an element or 'slab,' of the ether bounded by parallel planes and subjected to uniform electric and magnetic forces at right angles to each other and parallel to the bounding planes: a term used by Heaviside in the discussion of electric waves.

slack^1. **I.** *a.*—**Slack water.** (*c*) See ★*water.*

II. *n.* **5.** The interval of slack water, when the tide is at rest, either at high or low tide; sluggishness of the current, at that time. See *slack*^{1}, *a.,* 2.

> There is little or no *slack* in the stream at high water, and the ebb runs out with strength to low water.
>
> *Geog. Jour.* (R. G. S.), XVIII. 179.

6. *pl.* A sailor's loose trousers.

> Bill blushed and became interested in the foretop until nudged by Smith, when he suddenly hitched up his *slacks,* saluted, and said, hurriedly, "Aye, aye, sir."
>
> *Wide World Mag.,* April, 1903, p. 596.

7. Feeble, foolish talk. [Slang.]

> "If I were not crippled you would not give me that *slack* before strangers."
>
> "Well, use common sense, then, and you won't get any *slack* from me," his son told him.
>
> *Forest and Stream,* Feb. 21, 1903, p. 142.

slackage (slak′āj), *n.* [*slack, a.,* + *-age.*] The amount allowed for the droop or for any unstressed part of a rope or cable; slack.

> The Anglia laid exactly 1,315 knots of cable from Midway to this point, and with the additional eighteen miles of shore end the actual amount of cable laid is 1,333 knots. There was about eight per cent. of *slackage.*
>
> *Elect. World and Engin.,* July 25, 1903, p. 145.

slack-dross (slak′dros), *n.* Refuse coal or coke in powder or very small fragments.

slacken (slak′n), *n.* The slags or cinder from previous fusions, used in smelting operations to mix with natural ores and to retard fusion of the ores until reduction shall have proceeded to the desired point.

slackener (slak′nėr), *n.* One who or that which slackens; specifically, a rod in a loom for weaving leno or gauze, designed to ease the tension on the warp-threads. Also called *easer* and *slackner.*

slackness, *n.* **2.** A tendency of a vessel under sail to fall off or away from the direction of the wind when the helm is amidships: opposed to *ardency.*

> The contrary condition, where the resultant resistance acts abaft the resultant wind pressure, and makes the head of the ship fall off from the wind, is termed "*slackness,*" and can only be counteracted by keeping the helm a-lee.
>
> *White,* Manual of Naval Arch., p. 508.

slag^1, *n.*—**Basic slag,** slag from the manufacture of steel by either the Bessemer or the Siemens-Martin process with the Thomas-Gilchrist modification of basic (lime and magnesia) lining of the converter or hearth. The object of such lining is the removal from the metallic product of sulphur and phosphorus; the presence of the latter element in the slag, in the state of phosphates, gives it value as a fertilizer, for which purpose it is used on a very large scale.—**Gray slag,** lumps of a mixture of lead, lead sulphid, oxid, sulphate, silicate, gangue, cinders, and lime, obtained in smelting lead ore in an ore-furnace. It is treated generally in a blast-furnace, but sometimes in a slag-hearth to extract the lead.—**Ore-furnace slag,** in the Swansea process of copper-smelting, the slag, consisting principally of ferrous silicate and practically free from copper, which is produced in the first melting-furnace and serves to get rid of the iron of the ore treated.—**Phosphatic slag,** basic slag; odorless phosphate.—**Refinery slag.** (*a*) In the Swansea process of copper-smelting, the slag which separates when crude blister copper is re-fused and exposed to the action of atmospheric oxygen on the hearth of a roasting-furnace. It contains a number of impurities removed from the residual copper, such as arsenic, antimony, iron, etc., along with a large amount of cuprous oxid and some silicate of copper, silica having been taken up from the furnace-lining. (*b*) In the puddling process for making wrought-iron, the slag which forms when, as a preliminary step not always taken, air is blown down upon the surface of a charge of melted cast-iron in a specially constructed hearth. Silicon is the principal substance removed from the iron, and the slag consists mainly of ferrous silicate.—**Sharp slag,** the slag obtained in the third stage of the Welsh process for copper smelting.—**Thomas slag.** Same as *basic* ★*slag,* the basic process of steel-making having been introduced by Messrs. Thomas and Gilchrist. *Sci. Amer. Sup.,* Nov. 15, 1902, p. 22463.

slag^1, *v.* **II.** *trans.* In *metal.*: (*a*) To convert into slag: as, an excess of limestone used as a flux may to a greater or less extent *slag* the lining of a furnace. (*b*) To cake together as the result of chemical action at a heat lower than that of fusion.

slag-buggy (slag′bug″i), *n.* A car for carrying a slag-ladle.

slag-dump (slag′dump), *n.* A place of deposit for the slag or cinder which results from a metallurgical operation on an ore. The cinder is conveyed in cars and dumped, or it is allowed to flow in fluid form through runners or channels.

slag-eye (slag′ī), *n.* An eye or hole through which slag can be drawn off, as in certain blast-furnaces used for lead.

Slag-hearth browse. See ★*browse*^{2}.

slag-hole (slag′hōl), *n.* The opening through which slag or cinder is discharged from a blast-furnace or cupola. The slag is lighter than the fused metal and floats upon its surface. It can therefore be discharged through an opening at the proper level as it accumulates during the process.

slag-lead (slag′led), *n.* See ★*lead*^{2}.

slaglessness (slag′les-nes) *n.* The fact of having no slag or cinder. Those forms of wrought-iron and steel which have not been fused in their production are liable to suffer from the presence of such foreign ingredients. From material which has been fused all slag is removed by the difference in specific gravity of the slag and the metal.

> But the former [certain varieties, such as blister steel] lack the essential quality—*slaglessness*—which makes the latter [low-carbon] steel.
>
> *Encyc. Brit.,* XXIX. 571.

slag-lip (slag′lip), *n.* The edge, or lip, of a ladle or other receptacle over which the slag is poured. *Phillips and Bauerman,* Elements of Metallurgy, p. 671.

slag-machine (slag′ma-shēn″), *n.* A machine for granulating the slag from a blast-furnace and reducing it to the form of fine gravel suitable for various industrial purposes.

slag-pot (slag′pot), *n.* A vessel or pot designed to receive the discharge of cinder, scorias, or slag from a furnace in continuous operation, such as a shaft-furnace. The slag is allowed to cool in these pots, and is then removed and dumped.

slam^1, *n.*—**Grand slam,** in *bridge*, the winning of all thirteen tricks by the same partners, which counts 40 in the honor column; in other games, the winning of all the tricks.—**Little slam,** in *bridge*, the winning of 12 out of the 13 tricks by the same partners, which counts 20 in the honor column. See *bridge*.

slam-bang (slam-bang′), *v. i.* [*slam-bang, adv.*] To move with violence or noise. [Colloq.]

> My engines, after ninety days o' race an' rack an' strain
> Through all the seas of all Thy world, *slam-bangin'* home again.
>
> *R. Kipling*, McAndrew's Hymn, l. 10.

slander, *n.*—**Slander of title,** defamatory and false statements injuring one's property, real or personal, or one's title thereto.

slank^2 (slangk), *n.* **1.** A slope; a declivity; a depression in the ground. *Eng. Dial. Dict.* [Prov. Eng. and U. S.]—**2.** Wrinkled skin: especially used of animals. *Eng. Dial. Dict.*

slant. **I.** *a.*—**Slant culture.** See ★*culture*.

slant-eyed (slant′īd), *a.* Having eyes the inner part of which is covered by a heavy fold of the upper eyelid and therefore appearing to be set obliquely, as the Chinese and other Mongoloid races.

> The prophets of the elder day,
> The *slant-eyed* sages of Cathay,
> Read not the riddle all amiss
> Of higher life evolved from this.
>
> *Whittier*, Miriam, st. 3.

slapiness (slā′pi-nes), *n.* [**slapy* + *-ness.*] Slipperiness; deficiency in clinging quality. Also *slapeiness*.

> In the staple bulk, again, they do not lie so close together as do those of cotton fibres. This *slapeiness* may be put down to the want of spiral character in the fibres. What resistance there is in the staple of ramie comes from the length of the fibres as they are drawn out from their entanglements, and the nearly glabrous surface of the fibres. *Hannan*, Textile Fibres of Commerce, p. 56.

slapping, *a.* **II.** *n.* Specifically, in *ceram.*, the process of preparing clay for the wheel. See *wedging*, 2.

slash^1, *n.* **7.** (*b*) A wet or marshy linear depression between nearly parallel ridges of dunes on a sand-reef. See the extract.

> There are many successive ridges of shingle running in varying directions, and often with narrow strips of marsh enclosed between successive ridges. Such bands of marsh have been given the very appropriate name of "*slashes*" in New Jersey. *Geog. Jour.* (R. G. S.), IX. 538.

slashed (slasht), *a.* Specifically, in *bot.*, deeply cut-lobed or laciniate.

slasher, *n.* **1.** (*b*) (3) In a *sawmill*, a saw-table fitted with one or two saws and used to slash or cut up short slabs and other stuff into short lengths; a slab-slasher. (4) In *paper-manuf.*, a sawing-machine for cutting logs and short lengths of wood into blocks suitable for grinding into wood-pulp. The single-saw slasher has an appliance for delivering the wood to the saw and holding it until cut.

slashing, *n.* **4.** The sizing, drying, and beaming of cotton warp for weaving on a machine called a slasher. *R. Marsden*, Cotton Weaving, p. 514.

slat^3, *n.* **5.** A green sheepskin, with the wool removed, which has been dried in the sun. *Modern Amer. Tanning*, p. 43.

slate^2, *n.*—**Dolgelly slates,** a division of the Upper Cambrian or Lingula flags of Wales.—**Ilfracombe slates,** the middle division of the Devonian series in North Devon, equivalent to the Torquay and Plymouth limestones of South Devon.—**La Couyère slates,** a subdivision of the Lower Silurian system in the northwest of France. The slates are underlain by the shales of Guichen and overlain by the Grès de May. They are correlated with the Llandeilo formation of Great Britain.—**Lithographic slates.** See *lithographic stone*, under *lithographic*. Specifically, a very fine and even-grained limestone in thin layers occurring in the Jurassic beds at Solnhofen in Bavaria, where it is about 80 feet thick and noted for its wonderfully perfect preservation of fossil crustaceans, spiders, insects, impressions of birds' feathers and wings of pterodactyls. A division of the Subcarboniferous Kinderhook group in Missouri is also known as the 'Lithographic limestone.'—**Moel Ferna slates,** a division of the Upper Silurian in North Wales lying above the Pen-y-glog grits and equivalent to the Lower Ludlow rock.—**Momable slates,** a subdivision of supposed Precambrian rocks in Newfoundland regarded by Walcott as containing evidences of organic remains.—**Morte slates,** the lowest division of the Upper Devonian in North Devon, lying above the Ilfracombe slates and below the Pickwell Down group.—**Spirit slates,** the slates employed by a medium in ★slate-writing (which see). *A. A. Hopkins*, Magic, p. 123.—**Transparent slate,** a sheet or pane of glass slightly ground on one side. A picture or design placed against the unground surface can be traced on the ground surface with a lead-pencil. Also called *tracing-slate*.—**Vireux slates,** a division of the Coblenzian group of the Lower Devonian in Belgium and northern France.

Slaters' hammer. Same as *sax*^{1}, 2.

slate-writer (slāt′rī″tėr), *n.* One who practises slate-writing, or is supposed to have the mediumistic gift of slate-writing.

> The death of Henry Slade, the *slate-writer*, removes the last of the mediums who a generation and more ago made spiritualism a fashionable cult.
>
> *N. Y. Evening Post*, Sept. 12, 1905.

slate-writing (slāt′rī″ting), *n.* A sleight-of-hand trick, regarded by the credulous, in spite of repetition and of exposure, as due to a mediumistic gift whereby communication may be had with the spirits of the dead. There are many ways of performing the trick. In general, two wooden-framed slates, with a piece of slate-pencil between them, are tied together with string and the knots sealed. The slates are held beneath the table by the medium; the scratching of the pencil is heard; knots and seals are found intact; and the slates, when taken apart, prove to have writing upon their inner faces. The result may be most easily produced by means of a false slate (piece of slate-colored cardboard): the writing is done beforehand, and the sound is produced by the finger-nail. *A. A. Hopkins*, Magic, p. 124.

> President G. Stanley Hall of Clark University said he knew seven different tricks of legerdemain by which he could explain all the cases of *slate-writing* of which he had ever heard. *N. Y. Evening Post*, Sept. 12, 1905.
>
> There has probably been nothing that has made more converts to spiritualism than the much talked of "*Slate Writing* Test," and if we are to believe some of the stories told of the writings mysteriously obtained on slates, under what is known as "severe test conditions" that preclude, beyond any possible doubt, any form of deception or trickery, one would think that the day of miracles had certainly returned; but we must not believe half we hear nor all that we see, for the chances are that just as you are about to attribute some unaccountable spirit phenomena to an unseen power, something turns up to show that you have been tricked by a clever device which is absurd in its simplicity. *Sci. Amer.*, Oct. 8, 1898, p. 229.

slath (slath), *n.* [A dial. form of *sloe.*] In *basket-making*, the parallel rods and the largest osiers which are intertwined.

> The *slath*, which is the foundation of the basket.
>
> *Encyc. Brit.*, III. 423.

slating-machine (slā′ting-ma-shēn″), *n.* A machine for setting out a hide on the grain side to give it an even surface and to remove fine hairs. *Flemming*, Practical Tanning, p. 12.

slating-table (slā′ting-tā″bl), *n.* A table for setting out a hide on the grain side to give it an even surface and to remove fine hairs. *C. T. Davis*, Manuf. of Leather, p. 113.

slaughter-tree (slâ′tėr-trē), *n.* Same as ★*strangler-tree*.

slauter, *n.* and *v.* A simplified spelling of *slaughter*.

Slav. An abbreviation of *Slavic*, *Slavonian*, or *Slavonic*.

slave-ant (slāv′ȧnt), *n.* An ant held in slavery by another species of ant. Thus *Formica subsericea* is frequently a slave in the colonies of *Formica difficilis*. *Comstock*, Manual of Insects, p. 641.

slave-maker (slāv′mā″kėr), *n.* One who or that which (as an ant) makes slaves. See *slave-making*.

> In its pure form it is known to occur only in two of the several thousand described species, namely, in the sanguinary or blood-red *slave-maker* (Formica sanguinea) and the amazon (Polyergus rufescens).
>
> *W. M. Wheeler*, in Pop. Sci. Mo., Dec., 1907, p. 550.

slaving (slā′ving), *n.* Slave-dealing; the buying and selling of slaves.

> Formerly, numerous caravans of Arabs and Swahilis came up to trade for ivory, combined with a little quiet *slaving*, but the days of *slaving* and dealing in contraband are now past. *Geog. Jour.* (R. G. S.), XII. 372.

slavocratic (slā-vọ-krat′ik), *a.* [*slavocrat* + *-ic.*] Characteristic of, or pertaining to, a slavocrat or slavocracy.

Slavo-Lithuanic (slȧv″ọ-lith-ụ-an′ik), *a.* and *n.* Slavic and Lithuanic considered as a separate division of the Indo-European languages. *Keane*, Ethnology, p. 411, note.

Slavo-Teuton (slȧv-ọ-tū′tọn), *n.* One of a people of mixed Slavic and Teutonic descent. *Keane*, Ethnology, p. 200.

Slavo-Teutonic (slȧv″ọ-tū-ton′ik), *a.* Of or pertaining to the Slavo-Teutons; of mixed Slavonic and Teutonic descent.

slay^2 (slā), *v. t.* [*slay*^{2}, *n.*] To arrange (the warp-threads) in the loom-reed for weaving.

slay-block (slā′blok), *n.* The beam of the slay, or lathe, of a loom. *R. Marsden*, Cotton Weaving, p. 166.

slay-cap (slā′kap), *n.* A strip of wood, grooved on its under side, for holding the reed in position in the slay, or lathe, of the loom. *R. Marsden*, Cotton Weaving, p. 166.

slay-sword (slā′sōrd), *n.* One of the supports upon which the slay, or lathe, of a loom oscillates during the process of weaving. *R. Marsden*, Cotton Weaving, p. 166.

sled^1, *n.* **4.** A small tool, resembling a sled in form and having sharp blades for runners, used for cutting gold-leaf into rectangular sheets.

> In it the gold is beaten for about one and a half hours with a 10-pound hammer, until each leaf is about four inches square. The leaves are then again quartered, this time by means of a small instrument called a "*sled*" or a "wagon." *Sci. Amer. Sup.*, June 25, 1904, p. 23816.

5. The device for making sliding contact between the underground conductors of an electric road and those of a moving railway-car upon the road.—**Automobile sled,** an automobile vehicle constructed with runners, like a sled, and propelled by a motor which actuates levers which grip the surface of the ice.—**Donkey sled,** the heavy frame upon which a donkey-engine is fastened.

sledge^1, *n.* **6.** The thick wooden outer case of a mummy.

> In front of these [boxes] rose, shoulder-high, the oblong black mass of a "*sledge*," the outermost case for a mummy.
>
> *H. C. Greene*, in The Century, Nov., 1905, p. 66.

sledge^2, *n.*—**Plow sledge,** a vehicle with low wheels or with none, designed for the conveyance of a plow on the farm. *J. Scott*, Textbook of Farm Engineering. [Eng.]

sled-tender (sled′ten″dėr), *n.* In *lumbering*: (*a*) One who assists in loading and unloading logs, or skidding with a dray. Also called *chain-tender*. (*b*) A member of the hauling crew who accompanies the turn of logs to the landing, unhooks the grabs, and sees that they are returned to the yarding-engine.

sleeker, *n.* **4.** See ★*boss-tool*.—**Brass sleeker,** a tool with a brass blade set in a wooden handle, used for scraping or smoothing out wet skins on a table or bench. See *sleeker*, 1.

sleep, *n.*—**Diurnal sleep,** in *bot.* See *paraheliotropism* and *sleep*, 5.—**Sleep drunkenness.** See ★*drunkenness*.

sleeper^1, *n.* **9.** In *faro*, a bet left upon a card which the case-keeper shows is dead. Such a bet is public property and the first one to see it can take it.

Sleeping rent. See ★*rent*^{2}.

sleeping-beauty (slē″ping-bū′ti), *n.* The wood-sorrel, *Oxalis Acetosella*.

sleeping-car, *n.*—**Tourist sleeping-car.** See ★*tourist*.

sleeping-sickness, *n.* **2.** A disease of silkworms. *Jour. Roy. Micros. Soc.*, April, 1904, p. 179.

Sleepy staggers. See ★*stagger*.

sleepy-dick (slē′pi-dik″), *n.* The star-of-Bethlehem, *Ornithogalum umbellatum*, so called from the early closing of its flowers.

sleepy-grass (slē′pi-grȧs), *n.* A stout bunch-grass, *Stipa Vaseyi*, growing in the Rocky Mountains at altitudes of from 5,000 to 6,000 feet. The leaves have a narcotic effect upon horses which feed upon them, causing a drowsiness which lasts several days. After once eating, the victim thenceforth avoids it. The hay does not appear to have any ill effect.

sleepy-yellow (slē′pi-yel″ō), *n.* A pierid butterfly found throughout the United States. Its larvæ feed on cassia, senna, and clover.

sleet-cutter (slēt′kut″ėr), *n.* In electric railroading, a trolley-wheel which has a corrugated tread used to break the ice that may form on an overhead trolley-wire during sleet-storms.

sleev, *n.* and *v.* A simplified spelling of *sleeve*.

sleevd, *a.* A simplified spelling of *sleeved*.

sleeve^1, *n.* **2.** Specifically: (*a*) A hollow tube or cylinder inserted into some structural detail, so that some other element may pass freely through, such as a sleeve in a wall to allow a shaft to pass through, or a pipe or conduit. (*b*) A hollow tube or cylinder fitting loosely upon a revolving shaft, so that no accident may result from the catching of clothing on projections upon the shaft. Such a sleeve is often in sections. (*c*) A hollow tube or pipe into the ends of which two other lengths of pipe may be screwed to join them together. Also called a *muff*, but more usually, in this sense, a *coupling-sleeve*. (*d*) A hollow tube or cylinder fitting with a running fit upon a revolving shaft and carrying a pulley or clutch. The shaft may turn without the pulley on the sleeve, or the pulley turn without the shaft, or both may turn together when a clutch is engaged. The sleeve may be moved lengthwise on the shaft. Used in jack-shaft designs, and in reversing and quick-return motions, and in compensating gears in motor-cars and in traveling cranes. (*e*) A hollow tube or cylinder running in independent bearings, the inside diameter being so large that a shaft may traverse the sleeve, without touching it, allowing a flexibility and lateral adjustment if the shaft and sleeve do not aline perfectly. Used in some designs of motor-driven electric locomotives.

3. A square of cloth or other flexible material through the center of which a catheter is passed and tied. It is then inserted into a canal to be tamponed, and the space between the catheter and its cloth covering is packed with pledgets of cotton, worsted yarn, or other material.

> A *sleeve* for a packing which has to be left in the nose for any length of time. *Med. Record*, March 7, 1903, p. 387.

Insulating-sleeve, a tube or cover of insulating material used to protect a joint or splice in an electric circuit.

sleeve^{1}, *v. t.* 3. In *mech.*, to fasten or adjust in the manner of a sleeve.

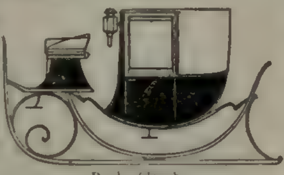
> On the Baltimore and Ohio locomotives the motors are *sleeved* on the axles, there being a slight play between the sleeve and the axle, which allows a flexible support. *Encyc. Brit.*, XXVIII. 97.

4. To attach or operate by a sleeve. See ★*sleeve*^{1}, *n.*, 2.

sleeve-bearing (slēv′bãr″ing), *n.* 1. A form of bearing in which a hollow cylinder or quill fits the shaft-journal on its inside and the box or bearing proper on its outside surface. The sleeve may turn in the box or the shaft turn in the sleeve. — 2. A form of long bearing for a shaft to be inserted in a ,wall and permit the revolving shaft to pass through it to the other side.

sleeve-joint (slēv′joint), *n.* A connecting device for electric wires in which the conductors are passed, from opposite ends, through a sleeve or tube of metal and then twisted together, brazed, or soldered.

sleigh^{1}, *n.*—**Booby sleigh**, a sleigh having a body resembling that of a brougham swung by straps from a sleigh-frame.



Booby Sleigh.

sleuth^{2}, *n.* 2. A newspaper name for a detective. [Recent.]

> The *sleuths* were unable to discover how the [thief] had gotten into the house, and concluded, therefore, that he must have used a skeleton key. *N. Y. Times*, Dec. 24, 1905.

slewing-bracket (slö′ing-brak″et), *n.* A bracket or arm projecting from the mast of a pivoted crane and carrying the gear-wheel used in rotating the crane or slewing it. The gear is driven and meshes into a stationary or fixed gear or rack.

slice, *n.* 3. (*k*) Same as *paddle*^{1}, 6 (*b*).
5. A mill or machine for slitting or dividing gems. — 6. In *golf*, the side spin imparted to a ball which causes it to curve to the right in the case of a right-handed player, or the reverse in the case of a left-handed player. *W. Park, Jr.*, Game of Golf, p. 111.

slice, *v.* I. *trans.* 4. In *golf*, to draw the face of the club across (the ball) from right to left in the act of hitting it, the result being that it will travel with a curve toward the right; or the reverse for a left-handed player. *W. Park, Jr.*, Game of Golf, glossary.— 5. To break with a bar. Bituminous coal, when burned, fuses and forms a solid mass which must be broken up in this manner. *Trans. Amer. Soc. Mech. Engin.*, 1903, p. 320.

II. *intrans.* In *golf*, to cause the ball, when struck with the club, to curve from left to right in the case of a right-handed player, or the reverse in the case of a left-handed player.

slicer, *n.* (c) The name of various machines and appliances used in cutting bread, smoked beef, potatoes, etc., into thin slices. The simplest form is a horizontal knife set in a wooden frame; in another the knife is pivoted; still others employ revolving cutters.

slice-shot (slīs′shot), *n.* In *croquet* and similar games, a shot in which the object-ball is but little displaced, the mallet-ball receiving most of the force of the blow.

slickens (slik′nz), *n. pl.* [*slicken*, *a.*] 1. The fine dust or powdered rock from an ore stamp-mill or rock-crusher. — 2. The lighter earth carried away in the sluices of a hydraulic mining operation.

slicker, *n.* 2. Same as *silver-fish*, 6. [Local, U. S.] *L. O. Howard*, Insect Book, p. 380.

slick-stone (slik′stōn), *n.* Same as ★*setting-stone*. *C. T. Davis*, Manuf. of Leather, p. 545.

slide, *v. i.* — **Sliding-bow contact**, in *elect.*, a sliding-contact used as a substitute for the trolley on many electric railways, especially in Europe. It consists of a horizontal transverse metallic rod bent downward upon itself at the ends and mounted above the roof of the car. It is held in contact with the under side of the trolley-wire by the action of springs.

slide, *n.* 14. An inclined plane up which hay is drawn by horse-power on to a rick by means of a net and a cable running over the top of the rick. The net, when emptied, is drawn back by a horse with a long rope. This method is practised on very large ranches. *U. S. Dept. Agr.*, Bur. Plant Industry, 1902, Bulletin 15, p. 30.—**Label-card slide.** See ★*label-card*.

slide-bar, *n.* 3. One of the bars or elements which guide and control a reciprocating piece in any machine or engine. Usually called *guide*. *Uhland*, Corliss-Engines, p. 27.

slide-car (slīd′kär), *n.* A conveyance without wheels, consisting of a pair of shafts attached to short runners.

slide-feed (slīd′fēd), *n.* A gravity feed-motion in which sheet-metal is fed, by sliding into the press, to a blanking-die, the cut blank then sliding down to a stamping-die; a gravity feed-motion in which the shells, cans, or other objects slide down an incline in any manner to any machine.

slide-frame (slīd′frām), *n.* A frame which embraces or forms guides for a slide. *D. K. Clark*, Steam Engine, III. 27.

slider, *n.* 1. (*h*) The sliding contact device used in some forms of the Wheatstones bridge or the potentiometer. See ★*slide-wire*. *Elect. World and Engin.*, Feb. 6, 1904, p. 283.

slide-rail, *n.* 3. A rail or track on the bed of a machine upon which some element, such as the tool-carriage, slides and is guided to its work.

slide-resistance (slīd′rẹ̄-zis″tạ̈ns), *n.* See ★*resistance*.

slide-rock (slīd′rok), *n.* Same as *talus*, 7.

> In the mountains we often find the hillside slopes covered with broken stone of various sizes. This we call *slide rock*. This *slide rock* may be very coarse and the surface extremely ragged, when it is called "heavy slide." It may be fine and bound together by soil, in which case it can be plowed. It may be fine and dry and run just like dry sand when one attempts to walk on it or otherwise disturb it; this is called "fine *slide rock*." *Yearbook U. S. Dept. Agr.*, 1900, p. 195.

slide-tender (slīd′ten″dėr), *n.* In *lumbering*, one who keeps a slide in repair.

slide-tongs (slīd′tôngz), *n. pl.* Blacksmiths' tongs, in which the handles are pressed together to grip the work by means of a ring which envelops them and slides along their length until it is held by friction on their inclined sides.

slide-wheel (slīd′hwēl), *n.* A part of an oscillating tappet-motion of a loom for rotating the pattern chain in such a manner as to place the weft in the fabric progressively. *T. W. Fox*, Mechanism of Weaving, p. 58.

slide-wire (slīd′wīr), *n.* In *elect.*, a resistance wire with sliding contact or contacts: a simple form of rheostat consisting of a stretched wire. By means of a fixed contact at one end and an adjustable sliding contact, which can be moved at will the entire length of the wire, any desired portion of the resistance of the wire can be introduced into an electric circuit.

> The electrical method required the use of a standard solution of potassium chloride the resistance of which was balanced against that of the sample by means of a *slide-wire* Wheatstone's bridge, a telephone being used instead of a galvanometer. *Nature*, Dec. 4, 1902, p. 98.

slide-zone (slīd′zōn), *n.* The lower part of the pitcher of a pitcher-plant (*Nepenthes*, *Sarracenia*, etc.), which is slippery, so that the insects slide down it into the water at the bottom of the pitcher.

Sliding-gear transmission. See ★*transmission*.

sliding-plane (slī′ding-plān), *n.* Same as *gliding-plane*. See also ★*solution-plane*.

> Various experiments showed that the ice was plastic both under pressure and under tension, at temperatures far below the freezing-point — the glacier-grains or ice-crystals apparently slipping over each other. Even the crystals themselves exhibited plasticity, due to *sliding-planes*, the rate of distortion increasing with the temperature. *J. Geikie*, The Great Ice Age, p. 32.

sliding-pole (slī′ding-pōl), *n.* A smooth, vertical pole which reaches from the floor of the engine-room in a fire-engine house, through an opening in the floor above to the ceiling of the room above. The hole in the floor is large enough to permit a man to slide down the pole, thus enabling him to reach the floor below more quickly than by going down the stairs. *Sci. Amer.*, Feb. 28, 1903, p. 159.

sliding-ways (slī′ding-wāz), *n. pl.* In *shipbuilding*, the lower part of the cradle on which a vessel slides down the launching-ways (which see). Also called *bilge-ways*.

slight^{2}, *n.* A simplified and former spelling of *sleight*.

slim^{3} (slim), *a.* [D. *slim*, cunning. See *slim*^{1}, *a.*] Cunning; crafty; tricky.

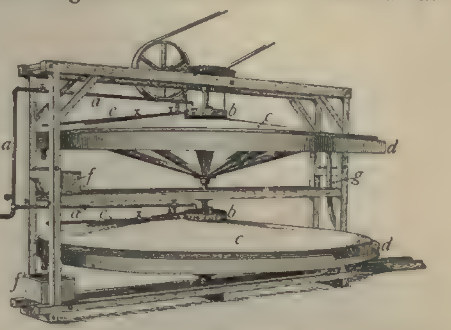
> For "*slim* 's" the word now most in vogue
> (That 's "sly," if read aright);
> From head to heel be dull and dim,
> Your brain alone be bright.
> *E. T.*, in War's Brighter Side, x.

> The Boer word "*slim*" has not yet been introduced in America, but some of the English papers are using it, and, as it expresses a quality which is not exactly defined by any English word, it is likely to become incorporated in the English language. *N. Y. Times*, July 6, 1902.

slime, *n.*— **Electrolytic slime.** See ★*electrolytic*.

slimer (slī′mėr), *n.* [*slime* + *-er*^{1}.] Same as *toad-fish*, 1.

slime-table (slīm′tā″bl), *n.* In *ore-dressing*, a revolving table whose surface is that of a flat cone and has about 1$\frac{1}{8}$ inches of inclination for each foot of radial distance, the inclination varying, however, with the material to be treated. On this revolving cone the slime is delivered, and the gentle motion and the incline separate the elements in the flowing water. Also called *buddle* and *vanner*.



Double-deck Slime-table.

a, *a*, *a*, feed-water piping; *b*, *b*, feed-boxes; *c*, *c*, slime-tables; *d*, *d*, launders; *e*, *e*, wash-water pipes; *f*, *f*, receptacles for concentrator; *g*, drain-pipe for gangue.

> *Slime-tables* are circular revolving tables . . . with flattened conical surfaces, and a slope of 1$\frac{1}{8}$ inch more or less per foot from centre to circumference. . . . These tables treat material [grains (quartz)] of $\frac{1}{100}$ inch and less in diameter coming from box classifiers. . . . The capacity of such a table is 12 tons or more of pulp, dry weight, in twenty-four hours. *Encyc. Brit.*, XXXI. 372.

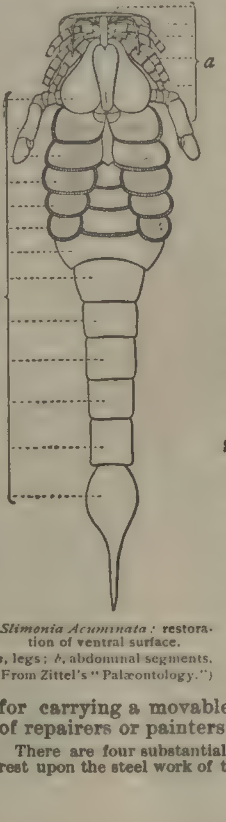
slime-washer (slīm′wosh″ėr), *n.* A machine for washing, separating, and concentrating slimes; a buddle or vanner.

slime-water (slīm′wâ″tėr), *n.* Water containing ore and gangue in suspension, to be treated in slime-tables for the concentration and separation of the ore and rejection of the tailings or valueless rock.

slimness^{2} (slim′nes), *n.* [*slim*^{3} + *-ness*.] The character of being 'slim' or sly; craftiness. See ★*slim*^{3}.

> The British officer may be criticized for lack of '*slimness*,' but when it comes to leading straight into an ugly breach he can give them all cards and spades. *The Citizen* (Ottawa), quoted in N. and Q., 9th ser., XI. [508.

Slimonia (slī-mō′ni-ạ̈), *n.* [NL., from a personal name.] A genus of extinct merostomatous crustaceans of the family *Eurypteridæ*, of large size, with subquadrate cephalothorax, the preoral appendages small and chelicerate, five pairs of postoral appendages of which the first is antenniform, the first six of the twelve abdominal segments represented on the ventral side by parts of the genital plate, and four discontinuous plates bearing branchial lamellæ. The genus is found in the Old Red Sandstone of Scotland.



Slimonia Acuminata: restoration of ventral surface.
a, legs; *b*, abdominal segments.
(From Zittel's "Palæontology.")

sling^{1}, *n.* 10. A harness consisting of a wide girth with breast-strap and breeching, suspended from a ceiling, for supporting invalid horses in a standing position. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, plate XXVIII.—11. A suspending chain or rope for carrying a movable platform for the use of repairers or painters.

> There are four substantial brackets at the base which rest upon the steel work of the building, and the top

stiffened by a ring made of two 6-inch by 6-inch by ⅜-inch angles, and below this a ring made of Z bar for carrying *slings* for painting. A ladder extends from the roof to the top of the stack.
Elect. World and Engin., Sept. 24, 1904, p. 512.

sling-bow (sling′bō), *n.* A bow with a double bowstring provided in the middle with a small rope for a bullet: used in Brazil and other parts of South America, and also in China. *Ratzel* (trans.), Hist. of Mankind, II. 62.

sling-fruit (sling′fröt), *n.* Same as ⋆*bolochore.*

sling-hoop (sling′höp), *n.* **1.** A hoop or ring of round or flat iron, with a board seat at the bottom, by which a workman may be raised by a block and fall to inspect or repair elevated structures such as chimneys, steeples, and the like.— **2.** The hoop or ring on the end of a hoisting-rope to which rope- or chain-slings may be made fast.

sling-psychrometer (sling′sī-krom″e-tėr), *n.* See ⋆*psychrometer.*

sling-rod (sling′rod), *n.* **1.** A rod used for fastening a locomotive boiler to the frame.— **2.** One of the suspension-rods by which a boiler is hung from beams which rest on the top of the side walls of the brick setting.

sling-shot (sling′shot), *n.* Same as *catapult*, 2.

sling-stay (sling′stā), *n.* One of the rods or braces in a steam-boiler by which the girder or crown-bar stays are tied to a part of the shell which resists strain in an opposite direction. In a locomotive-boiler, for example, the crown-sheet of which is stiffened from collapse by crown-bars, the bars are tied to the sides of the dome overhead by sling-stays, which hold the dome down and resist flexure of the bars.

slink², *n.* **5.** The skin of a still-born calf. Also *slunk. Modern Amer. Tanning*, p. 157.

slinker (sling′kėr), *n.* A name of the pickerel, *Esox lucius*, in Maine and Canada. This fish is found from Alaska to the Ohio river in America, and in northern parts of Asia and Europe. See cut at *pike.*

slinkweed (slingk′wēd), *n.* The swamp loosestrife, *Decodon verticillatus.*—**Red** or **Cardinal slinkweed,** the cardinal-flower, *Rapuntium cardinale.*

slip¹, *v. i.*—**To slip up.** (*b*) To fail in a scheme; be disappointed in any expectation. *Dialect Notes*, III. iii. [Colloq., U. S.]

slip¹, *n.* **5.** The slip of a screw-propeller or of a paddle-wheel is the difference between the speed of the propeller or paddle-wheel and the actual speed with which it advances through the water. The speed of the propeller is the speed at which it would move forward if it were working in a solid nut, which is the same as the product of the pitch of the propeller by the revolutions per minute; and the speed of the paddle-wheel is the circumferential velocity of the outer edges of the paddle-floats. The slip is usually expressed as a percentage of the speed of the propeller. The water immediately in front of the screw-propeller at the stern of a vessel in motion has a forward motion with reference to the surrounding water. The *true slip* is that with reference to the difference of the speed of the propeller and the actual speed through this water. The *apparent slip* is the difference between the speed of the propeller and that of the vessel propelled by it, and is therefore less than the true slip. *Negative slip* is apparent slip in which the speed of the ship is greater than the speed of the propeller. In most such cases, however, the assumed pitch of the propeller is less than the maximum real pitch which should be taken. **32.** In *elect.*, in alternating-current induction-motors, the difference in speed from synchronism, that is, from rotation in step with the alternations of the impressed voltage, usually given as fraction or in percentage of synchronous speed.—**33.** The moving on each other of two surfaces which are intended to be immovable with respect to each other, as the slip of the plates in a riveted joint under stress.—**34.** In pumps, the difference between the actual volume of water or other liquid delivered by a pump during one complete stroke, revolution, or period, and the theoretical volume during the same stroke, revolution, or period as determined by calculation of the displacement. It is due both to leaks past pistons, plungers, and valves, and to the back-flow through valves during the time the valves are closing. It is usually expressed as a percentage of the displacement volume. —**35.** See the extract.

A "*slip*" is neither cockerel nor capon, but is between the two, possessing the mischievous disposition and the appearance of an ordinary cockerel, but, as a rule, being unable to reproduce. This condition is due to the fact that a small piece of the testicle is left in the body. This piece often grows to a considerable size. As the "*slips*" possess the same restless disposition as the cockerels, they grow and fatten little if any better, while they do not bring as good a price in the market as the capons.
U. S. Dept. Agr., Bur. Animal Industry, Rep., 1905, [p. 273.

Albany slip, a clay dug from the shore of the Hudson river at Albany, New York, used extensively as a dark-colored glaze for earthenware by American potters, and as a test of the heat of the kiln in the early stages of the firing.—**Coefficient of slip.** See ⋆*coefficient.*—**Shear slip,** in *geol.*, small crushes and movements along a thrust fault or zone of compression.

Horizontal differential movements had occurred, and local thrusts and *shear slips* took place again, fragmenting the previous thrust-masses and igneous intrusions.
Nature, Feb. 12, 1903, p. 359.

Slip of an induction motor, the ratio of the difference between the speed of the rotating field and that of the rotor to the speed of the rotating field. If n_s be the speed of the rotating field, n_r that of the rotor, $n_s - n_r / n_s$ is the *slip.*

slip-angle (slip′ang″gl), *n.* The angle between the helix which would be generated by a point on the face of screw-propeller, if working at a given speed of rotation in a solid nut, and the helix actually developed by the same point when the propeller works at the same speed in the water and drives the ship; the angle between the actual and theoretical helixes generated by the same point on the screw.

slip-band (slip′band), *n.* One of the lines which appear in a material which is under stress, and which consists of an aggregation of minute elements which must move upon each other if they are not all of the same elastic character. These lines appear in testing a material, such as a weld-iron of ductile character, after the common elastic limit is passed and the elements are being pulled lengthwise in a testing-machine. They seem to be due to variation in adherence of the elements to each other sidewise. They are called *slip-lines* if filamentous, and *slip-bands* if more massive. They are clearly revealed on polishing and etching the smooth surface.

The metal chosen for experiment was Swedish iron, of high and very uniform quality. It had the further advantage for our purpose of possessing a clearly defined and fairly large crystalline structure, well adapted when polished and etched to exhibit the characteristic lines known as "slip-lines" or "*slip-bands,*" which appear in ordinary testing when any portion of the material has passed its limit of elasticity under strain.
Philos. Trans. Roy. Soc. (London), 1903, ser. A, p. 242.

slip-catch (slip′kach), *n.* A device which slides or slips on two parts of a mechanism for their relative adjustment.

slip-cup (slip′kup), *n.* In *ceram.*, a baked earthenware utensil in which the potters' slip, or diluted clay, is placed; a quill-box. It is provided with one or more quills at one side, through which the slip is poured in decorating pottery. A slip-cup differs from a pipette in being open at the top, while the latter is closed, having only an air-hole or vent by means of which the potter regulates the flow of slip by the pressure of his thumb. The latter term is used by European potters.

slip-cut (slip′kut), *n.* A certain cut of the pile in velveteen and similar fabrics.

slip-decorated (slip′dek″ō-rā-ted), *a.* In *ceram.*, ornamented with designs traced with diluted clay, or slip, poured through a quill.

slip-dish (slip′dish), *n.* An earthenware utensil ornamented with liquid clay, or slip, poured through a quill; a slip-decorated dish.

An interesting *slip-dish* in the Pennsylvania Museum, Philadelphia, remarkable for its unusual size, light weight, and perfect condition, is embellished with a conventional design of tulips in white and green outlined with lavender, on an orange-colored ground. This superb specimen measures seventeen and a half inches in diameter and possesses a double band of inscriptions in low German, and the date 1769. . . . This was made at one of the old potteries in Eastern Pennsylvania.
E. A. Barber, Pottery and Porcelain of the U. S., p. 71.

slipe-cart (slīp′kärt), *n.* Same as *slipe* (*a*).

slip-fault (slip′fâlt), *n.* In *geol.*, a normal, tension, or gravity fault.

The Triassic masses in this region consist largely of Dolomites; and these are said by the Author [M. M. O. Gordon] to be isolated by faults. Folded by many successive creeping movements of the Earth's crust, intersected by *slip-faults* and thrust-faults.
Annals and Mag. Nat. Hist., Jan., 1904, p. 78.

slip-fiber (slip′fī″bėr), *n.* See the extract under ⋆*cross-fiber.*

This has caused the slickensiding phenomena on the fracture planes and a consequent stretching of the fibrous content; hence the term "*slip-fiber.*"
Amer. Geol., March, 1905, p. 194.

slip-gear (slip′gēr), *n.* A slip-motion; a device to make a slide-valve, or other sliding piece, change its position sidewise and hence prevent wear on one part of the sliding surface more than on another.

slip-glaze (slip′glāz), *n.* In *ceram.*, a glaze of clay mixed with ground minerals, applied in a liquid state and then burned.

slip-glazed (slip′glāzd), *a.* In *ceram.*, glazed with a liquid preparation composed of ground minerals mixed with clay.

slip-grab (slip′grab), *n.* A pear-shaped link attached by a swivel to a skidding evener or whiffletree through which the skidding-chain is passed. The chain runs freely when the slip-grab is held sidewise, but catches when the grab is straight. Also called *grab-link.*

slip-hitch (slip′hich), *n.* *Naut.*, a hitch so formed that it will not jam, but will untie if the hanging end is pulled.

slip-jaws (slip′jâz), *n. pl.* Movable jaws slipped on the active surfaces of a holding apparatus, such as vise-jaws and clutches. They are usually set in dovetails on the massive parts of the jaw, and are intended to be easily removable when worn, or to permit of the use of different styles of contact-surface with the work.

slip-joint (slip′joint), *n.* A form of expansion-joint for use in a long pipe which is subject to changes of length by temperature. On one end at the joint is a stuffing-box construction; entering this is a smoothly finished piece of tube, often of bronze, which may slide or slip without leakage through the packing material in the stuffing-box. Care must be taken to prevent the smooth tube from drawing out of the box lengthwise under pressure, since the joint is effective to resist leakage only, and not to prevent the two lengths from separating in the direction of the slip-motion. *F. R. Hutton*, Power Plants, p. 354.

slip-line (slip′līn), *n.* See ⋆*slip-band.*

slip-motion (slip′mō-shon), *n.* In *mach.*: (*a*) An intentional looseness of fit, which allows one part to move without driving the other during a part of the phase of such first part: used in direct-acting pumps where the valve of one is driven by the piston of the other. (*b*) A motion of one part on another where only the components in one direction are to be used, as of a pin driving a rocking arm by contact with the sides of the slot in such an arm, or the driving of a Corliss valve-arm by a detent which slips by on the return stroke.

slip-noose (slip′nös), *n.* Same as *slip-knot*, 2.

slip-pan (slip′pan), *n.* See ⋆*pan*¹.

slipper³, *n.* **3.** In *mech.*: (*a*) A part which is adjustable by sliding, usually in the direction of its length, as a nozle or tube. *Elect. World and Engin.*, Nov. 21, 1903, p. 845. (*b*) A steam-engine cross-head having somewhat the shape of a slipper. The piston-rod is attached to the part which is where the heel or counter would be, and the guides are under the sole. The connecting-rod vibrates over the toe part.—**4.** In *cricket*, one who fields in the slips, that is, in the part of the field behind the wicket and somewhat to the 'off' side. *Hutchinson*, Cricket, p. 102. [Slang.] —**5.** Same as ⋆*rosser.*

slipper-bowl (slip′ėr-bōl), *n.* An earthen bowl somewhat resembling a slipper in form: found in the archæological remains of Central America and some of the adjoining countries.

slipper-brake (slip′ėr-brāk), *n.* A form of brake for railway-trains on steep gradients in which a block or shoe is pressed downward by a lever upon the surface of the rail to retard the motion. Since the block acts on the fixed surface of rails secured to the ground, and the abutment to its pressure is furnished by the weight of the car itself, these brakes can be very effective. Used on mountain roads as an emergency brake. *Science Abstracts*, VI. sec. B, p. 56.

slipper-weed (slip′ėr-wēd), *n.* The pale touch-me-not or jewel-weed, *Impatiens aurea*; also the spotted touch-me-not, *I. biflora.* These plants are also sometimes called *wild lady's-slipper*, or simply *slippers*, the names all referring to the shape of the flowers.

slippery-dick (slip′ėr-i-dik), *n.* In the Bahamas and Florida Keys, the brilliantly colored fish *Halichœres bivittatus*, of the family *Labridæ.*

slipping (slip′ing), *n.* Specifically, in *ceram.*, the process of mixing clay with water to form slip; also, the act of decorating ware with slip.

slip-ratio (slip′rā″shiō), *n.* The ratio between the slip of a propeller and the speed of the propeller. It differs from slip percentage only in being represented as a fraction of unity instead of parts in a hundred. See ⋆*slip*, 5.

slip-ring (slip′ring), *n.* A metal ring, usually of copper or cast-iron, used on electric apparatus to lead the current into a revolving structure.

Since the generator side of the motor generator set may always be brought up to speed before being loaded, it is unnecessary to use a motor with wound secondary, or *slip rings.* *Jour. Franklin Inst.*, Nov., 1903, p. 356.

slip-shuck (slip′shuk), *v. t.* To pick from the husk or shuck leaving the latter attached to the stalk: said of the ears of maize. Compare ★*snap, v. t.*, 9. [Southern U. S.]

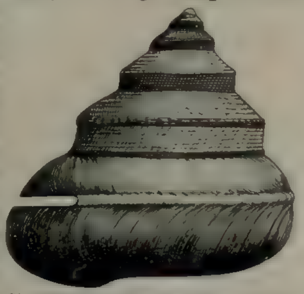
In handling, the ear left in the field pendent, in situ, from the stalk . . . is frequently "*slip-shucked*" and carted to barn or crib. *The Book of Corn*, p. 169.

slip-ware (slip′wãr), *n.* Earthenware which is coated with slip, or thinly diluted clay. See *slip*^{1}, 11.

Slip ware, though naturally superseded by the finer earthenwares of the eighteenth century, is not yet extinct. *R. L. Hobson*, in Burlington Mag., II. 69.

slit^1, *n.* **6.** In *optics*, the narrow opening through which a beam of light is admitted into the tube of a spectroscope or other optical instrument.—**Cephalic slits.** See ★*cephalic.*—**Double slit,** the two slits of the spectroheliograph, one, as usual, at the end of the collimator, the other in front of and very close to the photographic plate. As the collimator slit traverses, or is traversed by, the image of the object (ordinarily the sun) formed by the object-glass of the telescope to which the spectroscopic apparatus is attached, an exactly corresponding motion is given by some mechanism to the slit before the plate. Thus a photograph is obtained due to the light of some single wave-length, say that of the calcium K or of hydrogen F. See ★*spectroheliograph.*—**Vierordt slit,** a double slit the halves of which are opened and closed by means of separate micrometer-screws: a form of slit used in spectrophotometry.

slit-band (slit′band), *n.* In gasteropod mollusks of the families *Pleurotomariidæ*, *Bellerophontidæ*, and some others, a band on the periphery of the whorl produced by the progressive closing of a slit at the aperture which is due to the exsertion of the anal tube.



Pleurotomaria subscalaris (Tower Oolite), showing slit-band.
(From Zittel's "Palæontology.")

slit-bar (slit′bär), *n.* A bar or lever within which is formed a slit or slot. In this slot a pin or stud is fitted on a suitable slide, the latter usually on a screw parallel to the slot and serving to adjust and clamp the stud in a desired position; or the block may be moved by hand to its desired position and clamped there by a nut. The length of stroke of rods attached to the stud and driven by it may be varied according to the effective radius of the traverse of the pin. The device is used in feed-motions and in a wide variety of mechanical movements. A disk, called a *slit-disk*, is also used for the same purposes as the lever.

slit-disk (slit′disk), *n.* See ★*slit-bar.*

slither, *n.* **2.** In *archery*, a minute longitudinal split in a bow.

slither, *v. i.* **2.** To suffer a minute longitudinal split: said of a bow.

slitheroo (sliTH-e̤-rö′), *v. i.* [*slither, v.*] To slide with a slow gliding motion; slidder. [Slang.]

Don't *slitheroo* thet way [in rowing]. . . . Short 's the trick, because no sea 's ever dead still. *R. Kipling*, Captains Courageous, iii.

slit-jaw (slit′jâ), *n.* One of the two pieces which form the sides of a spectroscope slit and can be moved so as to widen or narrow it.

Huggins's reflecting *slit-jaws* . . . permit the star image to be seen on the slit, and are preferred by many observers to other guiding devices. *Encyc. Brit.*, XXXII. 783.

slitting-gage, *n.* **2.** A form of marking-gage.

sliver-can (sliv′ėr-kan), *n.* In *cotton-manuf.*, a can for holding the sliver in the carding or drawing process.

slob^2 (slob), *n.* [See *slobberer.*] One who is untidy in his habits and dress; a slovenly fellow. [Slang.]

You don't know how the swell
Can put it on the plain unfinished *slob*
Who lacks the . . . warpaint of the snob,
And can't make good inside a giddy shell.
Wallace Irwin, Love Sonnets of a Hoodlum, vii.

slog^2, *v. i.* **2.** In *cricket*, to hit at the ball wildly and without judgment.

slogger^1, *n.* **2.** In *cricket*, one who strikes at the ball wildly and without judgment. *R. H. Lyttelton*, Cricket and Golf, p. 219.

Sloid bench, a woodworker's bench designed for use in manual-training schools. It is fitted with a vise, stops, etc., and is adapted for both instruction and practice.

slone-bloom (slōn′blöm), *n.* The sloe or blackthorn, *Prunus spinosa.* [Prov.]

sloop^2, *n.*—**Loose-tongued sloop.** See ★*swing-dingle.*

sloop^2, *v. t.*—**To dry-sloop,** to sloop logs on bare ground, a method employed when the slope is so steep that it would be dangerous to sloop on snow.

slop^1, *n.* **6.** The product from finely ground Indian corn freed from the germs and bolted, the bran which remains on the bolting-cloth sieves being pressed, mixed with about 50 per cent. of water, and sold for immediate use as cattle-food. Also called *glucose food, sugar-food, corn-food*, etc. *Census Bulletin* 190, June 16, 1902, p. 23.—**Slop padding-mangle.** See ★*padding-mangle.*

slope, *n.* **4.** The gradient of a surface, as of land. In the description of forests, the following terms are used to define the slope, each of which has its equivalent in percentages of the horizontal distance and in degrees.

	Per cent.	Degrees.
Level	0– 5	0. – 3.0
Gentle	5– 15	3.0– 8.5
Moderate	15– 30	8.5–16.5
Steep	30– 50	16.5–26.5
Very steep	50–100	26.5–45.0
Precipitous	Over 100	Over 45.0

5. In *printing*, a face of type that inclines forward or backward.

FORWARD SLOPE

BACKWARD SLOPE

6. In *bacteriol.*, same as *slant* ★*culture.*—**Constructional slope,** in *geol.*, a slope formed by a process of accumulation or deposition.

The Soufrière rises on all sides, with even, *constructional slopes* of rather low angle, to an altitude of a little over 4,000 feet. *E. Howe*, in Amer. Jour. Sci., Oct., 1903, p. 317.

Continental slope, the submarine declivity which descends from a continent or continental shelf to the deep ocean-floor.

It is well known that mud travels persistently from the shore seawards, and that it forms the bottom over vast tracts beneath deep-sea water, e. g. at the foot of the *continental slope.* *Geog. Jour.* (R. G. S.), XI. 533.

Potential slope. Same as ★*potential gradient.*—**Temperature slope,** in *phys.*, the line or curve indicating, by its inclination to the base-line of a diagram, the rate of change of temperature within a substance; temperature gradient.

The difference of *temperature-slope* at different parts of the two bars was measured by means of thermoelectric couples. *Physical Rev.*, March, 1905, p. 174.

slope-wall (slōp′wâl), *n.* A rubble-masonry layer on a slope of a canal, river, or reservoir, designed to preserve it from wash or abrasion, but usually too thin to act as a retaining-wall and resist pressure from behind.

slot^2, *n.*—**Mechanical slot,** a trade-term applied to a railroad-signaling interlocking device employed where one signal is controlled from two separate cabins. Its essential features are a sliding-box controlling by its movements the signal, two rods each controlled from separate cabins, and a roller resting in the box on the sloping ends of the two rods. When the first signalman, through his lever and its connections, causes the first rod to move, it slides upward, slipping past the roller and causing it to rest on top of the other rod, and, thus far, not affecting the signal. When the second rod is moved, by the second signalman, it encounters the roller and, being unable to push it to one side, carries it upward, taking the box with it and changing the signal. The signal is now locked and the second signalman cannot then move it until the first signalman causes the first rod to move downward past the roller, taking the box with it and clearing the signal. The device makes it impossible for one signalman to change a signal without the coöperation of the other signalman.

slot-drill (slot′dril), *n.* A flat-ended, double-cutting drill ground with two radial cutting-edges opposed to each other and without a center point: used to cut slots. It is traversed laterally or lengthwise as it operates, and really acts like an end-mill. Also called *traversing drill.* *Lockwood*, Dict. Mech. Engin. Terms.

slot-insulator (slot′in″sụ̄-lā-tọr), *n.* See ★*insulator.*

slot-link (slot′lingk), *n.* The member or element in a Stephenson or other link-motion, for engine valve-gears, in which the position of the pin which actuates the valve is made to vary as desired. This is done by forming a slot in this link or bar, *g* (see cut at *Stephenson* ★*link-motion*), and fitting a slider carrying the pin which drives the valve. The forward eccentric is attached to the upper end of this link, in the Stephenson gear, and the backward eccentric to the lower, usually; thus, when the sliding block is opposite the forward eccentric the valve is constrained to move as required for the forward motion of the engine; and the reverse for the backward running. In intermediate positions of the slider in the slot the travel of the valve on its seat is diminished, and as a consequence admission ceases or cut-off takes place earlier in the stroke. In other link-motions, as in the Walschaert, the link, *g*, may be fixed in position and have a rocking motion only, and the position of the slider is made to vary, or to pass the center of its motion.

slot-machine (slot′ma̤-shēn″), *n.* A machine for vending small articles of merchandise, exhibiting pictures, weighing, playing musical instruments, etc., which is either unlocked or set in motion by dropping a coin into a slot. See ★*vending-machine.*

slot-rail (slot′rāl), *n.* See ★*rail*^{1}.

slotting-drill (slot′ing-dril), *n.* See ★*drill*^{1}.

slotting-machine, *n.*—**Frame-slotting machine,** a slotting-machine for finishing locomotive-frames which has several heads on one base and can take several cuts at once across the axis of the frame.

slot-winding (slot′wīn″ding), *n.* An armature-winding the wires of which are laid in deep grooves or slots cut in the core. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 802.

slot-wound (slot′wound), *p. a.* Said of an electric generator or motor the core of the armature of which is provided with deep grooves or channels within which the wires are laid. *Science Abstracts*, VI., sec. B, p. 120.

slough-bass (slö′bås), *n.* The large-mouthed black-bass, *Micropterus salmoides. Jordan and Evermann*, Amer. Food and Game Fishes, p. 358.

slough-grass (slö′grås), *n.* A stout subaquatic perennial grass, *Beckmannia erucæformis*, found in Europe and Asia, and in North America from Ontario to the Pacific, reaching north to Alaska. It grows in sloughs and along streams, and in some places in the northwest makes an important part of the forage of lowlands. It bears narrow one-sided spikes suggesting the rattle of a rattlesnake, whence sometimes called *rattlesnake-grass.* Also called *nit-grass* and *wild timothy.*

slow-ardent (slō′är″dent), *a.* In *psychol.*, a mixed type of character, based upon a classification in terms of rapidity and energy of bodily movement. See ★*lively-ardent. Ribot* (trans.), Psychol. of Emotions, p. 384.

slub^2, *n.* **2.** A lump or thick piece of cotton which becomes attached to or twisted into the yarn during the process of spinning. *Nasmith*, Cotton Spinning, p. 175.

slubbing-frame (slub′ing-frām), *n.* In *cotton-manuf.*, the first fly-frame machine which takes the sliver from the drawing-frame. *Nasmith*, Cotton Spinning, p. 184.

slubbing-jenny (slub′ing-jen″i), *n.* A slubbing-machine, an adaptation of Hargreave's jenny, for preparing slubbing for the spinning-mule. Also called *billy.* *C. Vickerman*, Woollen Spinning, p. 217.

slubbing-wheel (slub′ing-hwēl), *n.* A wheel or gear on a spinning-mule for indicating the length in inches of the roving delivered from the rollers, which are regulated without change-wheels.

sludge, *n.* **5.** The more or less viscid mud thrown down from dilute waste soap-liquors of wool-scouring, cotton-bleaching, and dyeing industries when such liquors are treated with crude aluminium sulphate and milk of lime. The remaining effluent is thus in a large measure purified, but the sludge thrown down has usually little value, even as a manure.—**6.** The precipitated solid matter in sewage, usually collected in settling-basins in sewage-disposal works after chemical treatment and filtration. Often pressed into cakes.—**7.** The sediment, in the form of a mud, which collects in a steam-boiler.—**8.** Incorrectly, by abbreviation, an opening in a steam-boiler for the removal of sludge or mud; also, the lid which covers such an opening.—**9.** A sand-pump or mud-pumping device for removing sludge from a sink or a bore-hole.—**10.** The silt-like deposit in the bottom of an electrolytic cell. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 274.

The rationale of electrolytic refining is to transfer this copper, by the selective action of the current, from the anode to the cathode and to leave the impurities behind as a *sludge.* *B. Blount*, Pract. Electro-Chemistry, p. 35.

sludge-cock (sluj′kok), *n.* The valve at the bottom of a boiler or a mud-drum through which the mud or sediment precipitated from the water may be removed by blowing off the water under pressure, or by washing. In the United States it is called the *blow-off valve.*

sludgy, *a.* 2. Figuratively, slushy; mushy; sickening; as if made of sludge or refuse.

> I shall get a *sludgy* paragraph in the papers for the Grosser Carl, headed 'Gallant rescue,' with all the facts put upside down.
> *Cutcliffe Hyne*, A Master of Fortune, xii.

sluf, sluft. Amended spellings of *slough*^{2}, *sloughed*.

slug^{4}, *n.* 1. (*h*) The solid line produced by the linotype machine. See ★*linotype*.

> Types have no existence in the product of the linotype machine; the unit is the line, which is known as a "*slug*." *Census Bulletin* 216, June 28, 1902, p. 51.

(*i*) A lead of extra thickness used to widen the space between lines of type.

3. In *mech.*, a name proposed by Worthington for the mass to which a gravitational unit of force must be applied to produce a foot-pound unit of acceleration; 32.2 (or *g*) times the mass of a standard pound.

> The author [A. M. Worthington] introduces the name "*slug*" to denote the mass to which a foot-pound unit of acceleration is produced by a gravitation unit of force.
> *Nature*, Feb. 12, 1903, p. 352.

slug-caterpillar, *n.*—**Willow slug-caterpillar**, the larva of an American cochlidiid moth, *Euclea delphinii*. It is spiny and slug-like in shape, and feeds on the foliage of willow, oak, and certain fruit-trees.

slugger, *n.* 2. A form of steam- or air-driven rock-drill which delivers powerful strokes of the drill-bar with the least cushioning effect of steam or air in the actuating cylinder.

slugger-plate (slug'ėr-plāt), *n.* A corrugated plate fastened to the mandrel of a rock-crusher roll. It protrudes slightly more than the other plates on the mandrel, thus striking a harder blow as the roll revolves, whence its name.

> On one row, two of the plates are supplanted by "*slugger plates*," the corrugations of which extend slightly beyond the rest to act more or less as a sledge-hammer in breaking up the rock.
> *Sci. Amer. Sup.*, Jan. 30, 1904, p. 23470.

slug-shot (slug'shot), *n.* A trade-name for an insecticide preparation used to protect plants from grubs, etc., containing as its active constituent a small proportion of copper arsenite.

sluice, *n.* 2. (*b*) Same as ★*flume*, 4.

sluice, *v. t.* 6. In *lumbering:* (*a*) Same as ★*flume*, 2. (*b*) To float (logs) through the sluiceway of a splash-dam. Same as ★*splash*, 5. (*c*) To injure (as a team of horses or their driver) by the down-rush of a load of logs due to the breaking of the hawser used to control its descent over a steep slope. [Maine.]

> Tommy Eye knew without looking—knew without understanding. He knew—that most terrible knowledge of all woods terrors—that he was "*sluiced*."
> *Holman Day*, King Spruce, p. 318.

sluice-box (slös'boks), *n.* A rectangular vessel which receives the flow from a pipe or stream, from which through a flume or sluice the water is led to the desired point of discharge.

sluice-gate, *n.* 2. The gate which closes a sluiceway in a splash-dam.

sluice-valve, *n.* 3. A straightway valve having a free through opening; a gate-valve.

sluiceway, *n.* 2. The opening in a splash-dam through which logs pass.

sluice-weir (slös'wēr), *n.* A notch in a sluice or channel below the level of which the water comes to rest to allow solid matters held in suspension to settle out; also used to enable the quantity of water flowing in the channel to be measured by the use of accepted weir formulæ. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 190.

sluing-gear (slö'ing-gēr), *n.* The horizontal rack and pinion, or the swinging wheel and rope and connections, used at the base of a derrick to slue or swing the boom in a circular path. Also called *swinging-wheel*.

sluit (slėit), *n.* [D., related to *slot*, track, etc.: see *slot*^{3}.] A watercourse or gulch. [South Africa.]

> River-beds as dry as a bone in a furnace are very plentiful, and so are other smaller gutters, called "*sluits*," where water flows in the rainy season.
> *J. Ralph*, An American with Lord Roberts, p. 30.

slumber-cell (slum'bėr-sel), *n.* In *histol.*, one of the cells supposed to exist in connective tissues and to be undifferentiable by any known histological methods.

slumgum (slum'gum), *n.* The propolis or bee-glue and other impurities which remain when a honeycomb has been drained of honey and the wax clarified by melting in hot water.

slumming^{2} (slum'ing), *n.* [An arbitrary use of *slumming*^{1}, with a vague suggestion of dirty work. Compare *puddling* as associated with *puddle*, *n.*] The washing of earthy matter, pulverized rock, etc., to separate a desired element, as fossil remains or grains of ore.

> Whatever method is employed for bleaching, this process has to be done very carefully, so as to prevent the fossils from being destroyed by the acids. The next step is the "*slumming*," or washing of the macerated mass. For this purpose there are different devices for slumming vessels. These are all constructed on the plan of creating a rising current of water through the mass, which is poured over a sieve of brass netting with meshes not smaller than 1.5 mm. in diameter.
> *Amer. Nat.*, Nov., 1903, p. 794.

slunk-weed (slungk'wēd), *n.* The joepye-weed, *Eupatorium purpureum*.

slur^{1}, *v. t.*—**Slurred third**, in *music*. See ★*tierce coulée*.

slur-cock (slėr'kok), *n.* A cam for operating the jacks and jack-sinkers in a knitting-machine.

slurry, *n.* 1. (*b*) In the manufacture of Portland cement, the mixture of silicious and calcareous ingredients in due proportion, brought to the consistence of a fluid mud by the addition of a sufficient amount of water, so as to insure intimate and uniform admixture before drying and burning the solid material.—3. In *ceram.*, inequalities in the interior of a pottery vessel which are smoothed by the rib or profile held in the left hand of the workman as the wheel revolves, while a damp sponge, held in the right hand, smooths the exterior.

slusher (slush'ėr), *n.* On an Australian station at shearing-time, an assistant to the cook. Also *slushy*. *E. E. Morris*, Austral English.

> 'Sundays are the most trying days of all,' say the cuisiniers, 'for then they have nothing to do but to growl.' This man's assistant is called 'the *slusher*.'
> *The Argus*, Sept. 20, 1890, p. 13, quoted in E. E. Morris, [Austral English.
>
> The tarboy, the cook, and the *slushy*, the sweeper that swept the board,
> The picker-up, and the penner, with the rest of the shearing horde.
> *A. B. Paterson*, Those Names, in Man from Snowy [River, l. 5.

slushing-machine (slush'ing-ma̤-shēn″), *n.* In *paper-manuf.*, a machine for extracting the water in which wood-pulp or other pulp is suspended and causing the pulp to thicken preparatory to using it in the paper-machine.

slush-lamp (slush'lamp), *n.* A lamp made from an old tin can and with a rag as a wick, and filled with slush or refuse fat: used in the Australian bush, and by explorers in the Arctic regions, etc.

> The *slush-lamp* shone with a smoky light.
> *J. Keighley*, Who are You? p. 45, quoted in E. E. [Morris, Austral English.

slush-wheel (slush'hwēl), *n.* A wheel or drum for washing hides or skins. *Modern Amer. Tanning*, p. 118.

slushy (slush'i), *n.* Same as ★*slusher*.

Sm. The chemical symbol of *samarium*.

S. M. An abbreviation (*b*) of the French *Sa Majesté*, His (or Her) Majesty; (*c*) of *Senior Magistrate*; (*d*) of *sergeant-major*; (*e*) [*l. c.*] of *sewing-machine*; (*f*) of *Sons of Malta*; (*g*) of *State Militia*; (*h*) of the Latin *Scientiæ Magister*, Master of Science.

small. I. *a.*—**Small circle.** See ★*circle*.

II. *n.*—**Pyrites smalls**, a manufacturers' name for the smaller fragments and dust of iron pyrites, as distinguished from the lumps, the two needing to be separately roasted. All that will pass through a riddle of half-inch or sometimes quarter-inch mesh is usually classed as 'smalls.'

small-fruit (smâl'fröt), *n.* See ★*bush-fruit*.

smallpox, *n.*—**Modified smallpox.** Same as *varioloid*.

smallpox-plant (smâl'poks-plant), *n.* The pitcher-plant or side-saddle flower, *Sarracenia purpurea*; also the southern species, *S. minor*, which was called *S. variolaris* by Michaux, from its supposed value in cases of smallpox.

smalto (smäl'tō), *n.* [It. See *smalt*.] Small squares of colored glass used in mosaic work.

smaragd-green (smar'agd-grēn″), *n.* A green of the color of smaragd. *A. S. Packard*, Text-book of Entom., p. 202.

smart^{1}, *a.*—**The smart set.** See ★*set*^{1}.

smartweed, *n.*—**Dotted smartweed.** Same as *water-smartweed* (*a*) (which see, under *smartweed*).—**Water-smartweed.** (*b*) *Polygonum emersum*, which grows in swamps and low grounds in the eastern United States and is somewhat injurious to pastures, meadows, and muckland crops.

smartweed-dodder (smärt'wēd-dod″ėr), *n.* See ★*dodder*^{1}.

smash, *v. t.* 5. To press or make (the folded and sewed sections of a proposed book) of a uniform thickness.

> During the next ten years the principal advance in bookbinding doubtless will be in those branches of the industry which are concerned with casting-in, gathering, *smashing*, folding and sewing.
> *Census Bulletin* 216, June 28, 1902, p. 65.

smash, *n.* 5. In *lawn-tennis*, an overhand volley played hard and fast to prevent, by the speed of the stroke, a return by the opponent.

smashing-point (smash'ing-point), *n.* That point in the life of an incandescent lamp at which, owing to its decreased efficiency, it should be broken and replaced by a new lamp as a matter of economy. *Amer. Inventor*, Nov. 1, 1903, p. 214.

Sm. C., sm. caps. Abbreviations of *small capitals*.

S. M. E. An abbreviation (*a*) of the Latin *Sancta Mater Ecclesia*, Holy Mother Church; (*b*) of *School of Military Engineering*.

smear, *n.* 5. The soft, semi-fluid mud of calcium sulphate left in the generators when whiting and sulphuric acid were used to produce carbon-dioxid gas in the manufacture of aërated waters.—6. In *bacteriol.*, a preparation of bacteria for microscopical examination made by smearing the organisms upon a slide or cover-glass. Also called *spread*. See ★*culture*.

> Gonococci were demonstrated . . . by *smears* only.
> *Med. Record*, Feb. 7, 1903, p. 209.

smear, *v. t.* 5. To give a gloss to (pottery or stoneware) without glazing, as by putting a volatile flux or glazing preparation in the kiln or in the saggar with the ware. See ★*smear-glaze* and ★*smearing*.

smear-culture (smēr'kul-t̤ūr), *n.* A culture of a micro-organism obtained by smearing some of the material under examination over the surface of one of the usual solid culture media.

smear-glaze (smēr'glāz), *n.* In *ceram.*, a slight gloss produced by smearing the inside of the saggar or case in which unglazed pottery is fired with glaze which in the kiln vaporizes and forms a slight deposit on the surface of the ware.

smearing (smēr'ing), *n.* Specifically, in *ceram.*, the process of glazing by evaporation. See ★*smear-glaze*.

> In the earthenware kilns, where common glazes are employed upon the ware, if the saggars be closed, and the heat be sufficient, other biscuit-ware placed in the saggars may be slightly covered with a coating of glaze, or be 'smeared,' by the evaporation from the glazes. Certain compositions may also be placed in the bottom of the closed saggars and by their evaporation the ware in them may be smeared or semi-glazed.
> *Handbook Brit. Pottery and Porcelain*, Mus. Pract. [Geol., p. 58.

smeeching (smē'ching), *n.* See the extract.

> While the kiln is in operation, the escape of the arsenic fumes can be detected here and there in the form of little jets, which the workmen describe as "*smeeching*."
> *Sci. Amer. Sup.*, Oct. 5, 1907, p. 210.

Smegma bacillus. See ★*bacillus*.

smel, *v.* and *n.* A simplified spelling of *smell*.

smell-hollow (smel'hol″ō), *n.* An olfactory pit on the antenna of a honey-bee.

smelling-stick (smel'ing-stik), *n.* The sassafras.

smelt^{2}, *n.* 1. (*h*) In Melbourne, the fish *Havengula vittata*, of the family *Clupeidæ*. (*i*) In New Zealand and Tasmania, *Retropinna retropinna*, of the family *Salmonidæ*. Its young are called *whitebait*.—**Cobbosseecontee smelt**, *Osmerus mordax abbotti* of Cobbosseecontee Lake, Maine.—**Derwent smelt**, a fish, *Haplochiton scali*, of the family *Haplochitonidæ*, found in Tasmania.—**Kodiak smelt** *Osmerus albatrossis*, found in Alaska.—**Pond smelt**, *Hypomesus olidus* of Alaska and Kamchatka.—**Smelt of the New York lakes**, *Argyrosomus osmeriformis*, one of the ciscos, found in lakes of central New York.—**Wilton smelt**, *Osmerus mordax spectrum*, of Wilton Pond, Maine.

smer (smėr), *n.* [Sw. *smör*, butter: said to be due to the fact that much of the butter made by the Swedish homesteaders was unfit for use.] Rank, rancid, or soiled butter. [Western U. S.]

S. M. I. An abbreviation of the French *Sa Majesté Impériale*, His (or Her) Imperial Majesty.

smick-smock (smik'smok), *n.* The meadow bitter-cress or cuckoo-flower, *Cardamine pratensis*. Also called *lady's-smock* and *smell-smock*.

smiddy-leaves (smid'i-lēvz), *n.* The good-King-Henry, *Chenopodium Bonus-Henricus*.

smilacaceous (smi-lā-kā'shius), *n.* Belonging to the plant family *Smilacaceæ*.

smilaceous (smī-lā′shius), *a.* Pertaining to or resembling smilax: sometimes used for ★*smilacaceous.*

smilacin (smī′lạ̄-sin), *n.* [*Smilax* (*smilac-*) + *-in*².] Same as ★*smilasaponin.*

smilasaponin (smī-lā-sap′ọ̄-nin), *n.* [*smila*(*x*) + *saponin.*] A yellowish white, horn-like, levorotatory glucoside contained in the root of sarsaparilla, *Smilax medica, S. officinalis,* etc. It resembles saponin and was formerly called *sarsaparillasaponin* or *smilacin.*

sminthurid (smin′thụ̄-rid), *n.* and *a.* **I.** *n.* One of the collembolous family *Sminthuridæ.*

II. *a.* Having the characters of or belonging to the family *Sminthuridæ.*

Smithianism (smith′i-an-izm), *n.* The economic doctrines of Adam Smith. The term is often used to characterize a belief in the beneficence of unrestricted competition. *Gumplowicz* (trans.), Outlines of Sociol., p. 155.

Smithism (smith′izm), *n.* Same as ★*Smithianism.*

smithite (smith′īt), *n.* A rare mineral species from the dolomite of the Binnenthal, Switzerland. It occurs in light-red monoclinic crystals with adamantine luster, and contains sulphur, arsenic, and silver. Its formula is probably $AgAsS_2$.

Smithsonian wind-scale. See *wind-*★*scale.*

smithy (smith′i), *v. t.*; pret. and pp. *smithied,* ppr. *smithying.* To forge in a blacksmith's fire or shop.

S. M. M. An abbreviation of the Latin *Sancta Mater Maria,* Holy Mother Mary.

smoke, *v. i.* **9.** To get away; skip; skedaddle. [Slang, Australia.]

> He said to the larrikins, "You have done for him now; you have killed him." "What!" said one of them, "do not say we were here. Let us *smoke.*" "*Smoke,*" it may be explained, is the slang for the "push" to get away as fast as possible.
> *Sydney Morning Herald,* June 26, 1893, p. 8, quoted in [E. E. Morris, Austral English.

smoke, *n.*—**Cape smoke.** Same as ★*dop*³.

> Crude spirits such as *Cape* "*Smoke*" and the cheap Portuguese liquors. *Encyc. Brit.,* XXXII. 808.

smoke-breeching (smōk′brich″ing), *n.* A flue for conducting the hot gases from a boiler, or a battery of boilers, to the chimney; an uptake. *Trans. Amer. Soc. Mech. Engin.,* 1903, p. 936.

smoke-burner (smōk′bėr″nėr), *n.* A name improperly given to furnaces or fires in which the formation of smoke is prevented. A true smoke, which consists of a current of gas carrying particles of carbon, is not combustible; and if the tarry gases or fumes are combustible, a furnace which consumes them is a 'smoke-preventer' and not a smoke-burner. Smoke-prevention is secured by supplying enough oxygen at a sufficiently high temperature to unite with the combustible gases and giving room enough for such mixture and union to take place.

smoke-cap (smōk′kap), *n.* A device, such as a cowl or hood, on the top of a smoke-stack or chimney, designed to prevent gusts of wind from striking the unprotected opening from above and blowing the products of combustion downward or backward into the flue, carrying the smoke with them. Such caps may be simple deflectors, or they may be movable so as to turn the smoke outlet in the direction toward which the wind blows.

smoke-eater (smōk′ē″tėr), *n.* A fireman: a name given to the men of the fire patrol. [Slang.]

smoke-preventer (smōk′prē̦-ven″tėr), *n.* A device designed to prevent the incomplete combustion of carbon which causes the formation of smoke. Such devices, to be successful, must furnish an adequate supply of oxygen, and keep both air and gas at a temperature high enough for chemical combination to be complete. This combination also must have room enough and time enough to be complete before the temperature falls below the temperature of combustion and ignition. See ★*smoke-burner* and *smoke-consumer.*

smoke-proof (smōk′prōf), *n.* In *type-founding,* the trial proof taken by the punch-cutter or engraver. The steel punch is held over a smoking flame until covered with carbon, and is then impressed by hand on slightly dampened paper.

> Pleasing as a new ornament in this style might appear in the *smoke-proof,* it was sure to be a blotch in the print and at variance with the type.
> *De Vinne,* Title-pages, p. 79.

smoker, *n.* **1.** (*d*) In *bee-keeping,* an apparatus for creating a smoke to quiet the bees.

5. An informal gathering of men where smoking is freely indulged in: music, a vaudeville show, cards, etc., are sometimes part of the evening's entertainment. [Colloq.]

> The *smoker* on Saturday, February 21, was well attended by members and their friends. The programme was exceptionally good, several of the numbers received enthusiastic encores. *N. Y. Athl. Club Jour.,* March, 1903, p. 19.

smoke-room (smōk′röm), *n.* A room or cabin set apart for the use of smokers: usually referring to such a room on a ship.

> Kettle turned on his companion with a sudden viciousness. "By James!" he snapped, "you better take care of your words, or there 'll be a man in this *smoke-room* with a broken jaw.
> *Cutcliffe Hyne,* A Master of Fortune, xi.

smokery (smō′kėr-i), *n.* **1.** A smoking-room; a place in which to smoke.

> Brenton was in his *smokery,* a happy-go-lucky room on the first floor. *Story of a Great Scoop,* p. 31.

2. A place in which opium is smoked; an opium-joint.

> The law is cumbrous on the subject; but the immorality of the '*smokeries*' will probably suffice to close them as disorderly. *Daily Chronicle,* May 29, 1901.

smoke-stack, *n.*—**Telescopic** or **telescoping smoke-stack,** a smoke-stack consisting of two or more sections which telescope or slide one into another: used on small boats to enable them to pass under bridges.

smoke-tree, *n.*—**American** or **wild smoke-tree,** the chittam-wood, *Cotinus cotinoides.*

smoking-bean (smō′king-bēn), *n.* The catalpa or Indian bean, *Catalpa Catalpa:* so called from the custom of boys of smoking the pods.

smoking-chair (smō′king-chãr), *n.* A chair, of the Chippendale period of English furniture, which faces diagonally, that is, which is so made that one corner is directly in front, and the opposite corner directly behind. Also called *corner-chair.*

smoking-lamp, *n.* **2.** In *physiol.,* a lamp employed for the smoking of the glazed paper fastened to the drum of the kymograph. Various forms of smoking-lamps are in use, the most common, perhaps, being gas-burners with broad fish-tail flames, petroleum-lamps with very broad wicks, and lamps fitted with an air-bulb to spray the soot upon the paper. *E. B. Titchener,* Exper. Psychol., I. ii. 173.

smoking-stand (smō′king-stand), *n.* In *physiol.,* a stand of wood or metal in which the drum of the kymograph is held and slowly rotated during the smoking of the glazed paper. *E. B. Titchener,* Exper. Psychol., I. ii. 173.

Smoky stones. See ★*stone.*

smooth, *a.* **15.** In *old music,* same as ★*plain*¹, 16.

smooth, *v. t.*—**To smooth a series of observed quantities** or **a curve,** to diminish or smooth away the accidental irregularities so as to bring out the general systematic variations. The principal methods of smoothing are the following: (*a*) The *graphical method,* in which the original observations are plotted to scale and a smooth curve is drawn by hand so as to leave about the same area on either side of it: the coördinates of the curve are then used instead of those plotted from the original observations. (*b*) *Numerical methods,* in which the means are taken of successive pairs of observations and again the means of successive means. This process may be repeated indefinitely, and is known as *Bloxaming* or *Bloxam's method.* An analogous method, but one more nearly in accord with the precepts of the laws of chance, is embodied in the following rule, devised by Dr. Galle of Breslau, for combining together seven consecutive daily means *a* . . . . *g* into one value for the median date (*d*):

$$\frac{t}{n} = \tfrac{1}{40}\,(a + 4b + 9c + 12d + 9e + 4f + g).$$

This formula can be rearranged so as to reduce the whole process of computation to a simple system of summing and halving.

> *Smoothed* rainfall *curves* for the British Isles, Brussels, Madras, Bombay, Cape Town and the Upper Ohio valley show a long-period variation at all the stations.
> *Science,* July 17, 1903, p. 91.

smooting (smö′ting), *n.* Same as ★*grassing,* 2. *Webb,* Indust. Democracy, I. 439. [Trade Union cant.]

smother, *v. t.*—**Smothering crop.** See ★*crop.*—**To smother the ball.** See ★*ball*¹.

smouse, *n.* **2.** In South Africa, a peddler; a kind of commercial traveler for storekeepers in large towns, who goes through the thinly inhabited parts selling goods; an itinerant merchant. Also *smous.*

> Even the wandering "*Smouse*" had not penetrated so far. *Mrs. Lionel Phillips,* South African Recollections, ii.

s. m. p. An abbreviation of the Latin *sine mascula prole,* without male issue.

smudge¹, *n.* **3.** In the game of set-back all-fours, the player who bids 4 and makes it, winning the game on the hand if he is not in the hole on the score at the time.

smut, *n.*—**Barley-smut,** a disease of barley caused by smut-fungi. There are two kinds: *covered barley-smut,* due to *Ustilago Hordei,* in which the spores of the fungus are often retained by a thin envelop until harvest; and *naked barley-smut,* due to *Ustilago nuda,* in which the spores soon become free and are blown away.—**Corn-smut.** See *maize-smut* and *corn-*★*ergot.*—**Hard smut,** the stinking smut. See *smut,* 3 (*b*).—**Hidden smut,** a smut disease of oats caused by *Ustilago avenæ levis.* It is so called because the spore-mass of the fungus is concealed within the chaff of the grain.—**Loose smut,** a destructive fungous disease of grain which attacks and destroys the kernels, producing a black powdery mass of spores. The loose smut of wheat is caused by *Ustilago Tritici,* and that of oats by *Ustilago Avenæ.*—**Onion-smut,** a fungous disease of the onion due to *Urocystis Cepulæ,* which attacks the young leaves and bulbs.—**Rice-smut,** a smut disease of rice due to the smut-fungus *Tilletia corona.*—**Rye-smut,** the smut disease of rye due to *Urocystis occulta,* which attacks the leaves and culms of rye. Also called *rye-stem smut.*—**Sorghum-smut,** the disease of sorghum-grain caused by the smut-fungus *Cintractia Sorghi-vulgaris.*—**Stone-smut,** the stinking smut. See *smut,* 3 (*b*).—**White smut,** a disease of spinach due to *Entyloma Ellisii.*

smut, *v. t.* **5.** In *leather-manuf.,* to go over (the blacked side of a hide or skin) with a woolen cloth to remove dirt and improve the appearance of the blacking. *C. T. Davis,* Manuf. of Leather, p. 433.

smut-grass (smut′gràs), *n.* A rush-grass, *Sporobolus Indicus,* widely distributed through the warmer regions of the world, and common in many parts of the southern United States. It grows in scattered tufts and patches in dry open fields. The slender leafy stems soon become woody and tough, unfitting the plant for forage. The long and slender spike is usually blackened by a smut (*Helminthosporium Ravenelii*), whence this name and that of *black-seed grass.* Sometimes called *carpet-grass.*

snaffle-bit, *n.* Specifically, a light bit for the riding-bridle, with long-horned and solid ring-cheeks, which are loose in the heads of the mouthpiece. The name was originally applied to a single-cheek riding-bridle; on the introduction of the double-cheek bridle it was retained for the bit.—**Dexter snaffle-bit,** a trotting-bit which has a mouthpiece with unusually large ends and a small center.—**Half-cheek snaffle-bit,** a light driving-bit characterized by ring cheek-pieces with half-cheeks attached that fall below the mouth.—**Half-horned snaffle-bit,** a bit with half-horns and rings at the outer ends of the mouthpiece.—**Rarey snaffle-bit,** a bit in which the mouthpiece is a wooden roller turning upon an iron pin: introduced by Rarey, a noted horse-trainer. It is also called a *wooden gag-bit.*—**Ringed snaffle-bit,** a light ring-bit with loose rings on the mouthpiece for a nose-band.

snaffles (snaf′lz), *n.* The wood-betony or lousewort, *Pedicularis Canadensis.*

snag¹, *n.* **9.** In *mech.,* a lug, or projection from a surface, through which there is a hole to receive a bolt or pin.

snagrel (snag′rel), *n.* Same as ★*sangrel.*

snag-scow (snag′skou), *n.* A scow used in pulling snags out of a river.

> The white *snag-scow* that likes to hang round St. Louis considerable did keep the snags pulled out of the mouth of the Missouri anyway.
> *C. D. Stewart,* Partners of Providence, xiii.

snail-cam (snāl′kam), *n.* A cam shaped somewhat like a snail; a rocker-cam. *W. J. Dibdin,* Public Lighting, p. 77.

snail-eater (snāl′ē-tėr), *n.* A book name for *Anastomus lamelligerus,* one of the African storks.

snail-shell, *n.*—**Snow snail-shell,** a modified form of snow-roller produced by a small object rolling down a steep slope of moist snow, collecting the adhesive surface layer and surrounding itself with a spiral strip of snow wound like the whorl of a snail-shell. *Plant World,* March, 1904, p. 65.

snake, *n.*—**Horned snake,** the horned viper, *Cerastes,* a very poisonous African snake.—**Horsehair-snake.** Same as ★*hair-snake.*—**Ringneck snake.** See ★*ring-neck.*—**Snake-skin green.** See ★*green*¹.

snake-arrow (snāk′ar″ō), *n.* An arrow carved and ornamented so as to represent a snake. *Haddon,* Evolution in Art, p. 25.

snake-berry (snāk′ber″i), *n.* **1.** The red baneberry, *Actæa rubra.*—**2.** The common bryony, *Bryonia dioica.*—**3.** The partridge-berry, *Mitchella repens.*—**4.** The bittersweet, *Solanum Dulcamara.*

snake-bite (snāk′bīt), *n.* **1.** The nodding wake-robin, *Trillium cernuum.*—**2.** The bloodroot, *Sanguinaria Canadensis.*—**3.** The wild lettuce, *Lactuca Canadensis.*

snake-blenny (snāk′blen″i), *n.* A blennioid fish of the genus *Lumpenus.* *L. serpentinus* is found in the North Atlantic.

snake-dance (snāk′dàns), *n.* A ceremony or dance in which snakes or images of snakes are used; particularly, a ceremony of the Hopi in which live rattlesnakes are caught and carried by the priests in their mouths. The ceremony is related to observances intended to procure rain.

> The description of the snake and flute ceremonies, still performed according to the ancient ritual, unmodi-

> fied by Christianity, for the purpose of bringing abundant rains and successful crops, is founded on studies conducted in 1896 and 1897, and is illustrated by coloured pictures of the *snake dance* and the antelope altar at Mishongnovi, and by other plates. The ceremony is attended by some repulsive features—as the rush to catch the snakes, their being carried by the priests in their mouths, and the general distribution of an emetic prior to the great feast which closes the proceedings.
> *Athenæum*, Sept. 19, 1903, p. 385.

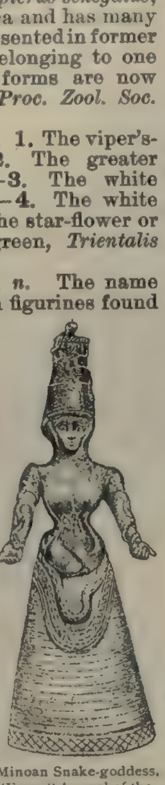
> The psychic element of religion in the *Snake dance* is totemic ancestor worship, which is fundamental in the whole Hopi ritual. The reptile is a society totem, the lineal survivor of a clan totem, and the totem ancestor, called the Snake maid, is, generally, like totemic ideas, an anthropo-zoömorphic conception.
> *An. Rep. Bur. Amer. Ethnol.*, 1897–98, p. 1009.

snake-fern, *n.* 2. See ★*fern*1.

snake-fish, *n.* 4. A fish, *Polypterus senegalus*, which lives in rivers of Africa and has many peculiar characters: well represented in former times, but only two genera belonging to one family remain. The fossil forms are now arranged in five families. *Proc. Zool. Soc. London*, 1899, p. 985.

snake-flower (snāk′flou″ėr), *n.* 1. The viper's-bugloss, *Echium vulgare*.—2. The greater stitchwort, *Alsine Holostea*.—3. The white dead-nettle, *Lamium album*.—4. The white campion, *Lychnis alba*.—5. The star-flower or American chickweed-wintergreen, *Trientalis Americana*.

snake-goddess (snāk′god″es), *n.* The name given to the subject of certain figurines found in recent excavations in Cnosus in Crete. The most important of these is 34.2 centimeters high and is dressed in a high tiara and an extremely modern-looking bodice and skirt. The breasts are bare and full. The image dates from the Mycenæan and Minoan periods, probably before 1500 B.C.



Minoan Snake-goddess.
(From "Annual of the British School at Athens," 1903.)

snake-grass (snāk′gràs), *n.* 1. The forget-me-not, *Myosotis palustris*.—2. Same as ★*snake-flower*, 2.

snake-lily (snāk′lil″i), *n.* See ★*lily*.

snake-milk (snāk′milk), *n.* The flowering spurge, *Euphorbia corollata*.

snake-necked (snāk′nekt), *a.* Having a long, snake-like neck.—**Snake-necked turtles**, a group of fresh-water turtles, usually considered as a suborder, in which the neck can not be drawn into the shell, but is bent sideways; the *Pleurodira*.

snakeroot, *n.*—**Evergreen snakeroot**, the fringed milkwort, *Polygala paucifolia*.—**Oil of Canada snakeroot.** See ★*oil*.—**Poison snakeroot**, the poison hemlock, *Conium maculatum*.—**Samson's snakeroot.** (*b*) See *soapwort-gentian*, under ★*gentian*.

snake-salamander (snāk′sal″a-man-dėr), *n.* A limbless, burrowing amphibian of the order *Gymnophiona*; a cœcilian.

> Burrowing amphibians generally known as cœcilians, but which may be better designated in popular zoology as *snake-salamanders*. *Knowledge*, Dec., 1904, p. 293.

snake's-eyes (snāks′īz), *n. pl.* A term popularly applied in England to certain fossil fish teeth, generally those of the pavement-toothed selachians.

snake-worship (snāk′wėr″ship), *n.* See *ophiolatry*.

snap, *v. t.* 8. In *cricket*: (*a*) To snatch at instead of waiting for (the ball). (*b*) To catch (a batsman) out: said of the wicket-keeper. [Colloq.]—9. To pick without releasing from the husk: said of the ears of maize: as, a crib of *snapped* corn. Compare ★*slip-shuck*. [Western U. S.]

snap, *n.* 21. A temporary banking game: as, to deal a *snap* at faro.—22. Same as *snap-*★*bean*.

snap-bean (snap′bēn), *n.* See ★*bean*1.

snap-berry (snap′ber″i), *n.* The coral-berry, *Symphoricarpos Symphoricarpos*.

snap-cracker, *n.* 2. A fire-cracker. *Dialect Notes*, III. iii. [U. S.]

snap-finger (snap′fing″gėr), *n.* Same as *trigger-finger*. *Buck*, Med. Handbook, IV. 526.

snapper, *n.* (*j*) In *glass-manuf.*, a workman who operates a snap or case. See *snap*, 16.

> Eighteen "*snappers*" of the Kansas window glass factory returned to work today after a two days' strike for higher wages. *Kansas City Daily Star*, Dec. 12, 1903.

(*k*) An automatic attachment to a sounding-lead for taking samples of the bottom. It consists of jaws which close when the lead strikes the sea-bottom.—**Black-fin snapper**, a small snapper, *Lutjanus buccanella*, found in the West Indies.—**Dog-snapper, lane-snapper.** See ★*dog-snapper*, ★*lane-snapper*.—**Mahogany snapper**, *Lutjanus mahogoni*, a small brown West Indian snapper of the family *Lutianidæ*.—**Mexican snapper.** Same as *red snapper*. See *snapper*.—**Red-tailed snapper**, a common name of *Lutjanus synagris*, an abundant food-fish of the West Indian fauna, found from Florida to Brazil.—**Silk-snapper**, a common name given to two related lutianoid fishes, *Neomænis hastingsi* and *Neomænis vivanus*, both of them of the West Indian fauna. Also called *pargo de lo alto*.—**Yellow-tailed snapper**, *Ocyurus chrysurus*, a food-fish of the West Indian fauna.

Yellow-tailed Snapper (*Ocyurus chrysurus*).
(From Jordan's "Guide to the Study of Fishes.")

snapper-flower (snap′ėr-flou″ėr), *n.* See *snap-jack*.

snap-ring (snap′ring), *n.* 1. A form of ring, used by jewelers and others, in which a segment of the circumference of the ring can be slid round upon the adjacent portion, so as to open the ring to receive a closed link or ring. The movable segment snaps back into place by a spring, and locks in place by fitting into or over the segment against which the spring presses it.—2. A ring which is snapped into place; a cast-iron ring cut at only one point, used for packing an engine-piston. It is expanded to pass the end of the piston and snaps into place.

> In so far as the rings are concerned, the best practice now makes them as light as possible, in many cases dispensing with springs entirely. This type of piston is used on the heaviest kind of work, with very high pressures, in locomotive and torpedo-boat engines, and is wholly reliable against leakage. The advantages are that being relieved from abnormal and unnecessary pressure on its walls, the cylinder wears true and is not scored or cut by the packing rings. These last are called "*snap rings*," from the fact that they are sprung into the piston, having elasticity enough to go over its flanges and resume their form when they get into the grooves provided in the piston for them. *Sci. Amer.*, Feb. 14, 1903, p. 110.

snap-shot (snap′shot), *n.* and *a.* I. *n.* A sudden or quick shot, literally or figuratively; in *photog.*, the instantaneous taking of a picture as with a detective camera, or with one of the many portable cameras.

> *Snapshots* by night may soon be a matter of course to every possessor of a camera.
> *Photo-miniature*, Sept., 1901, p. 289.

II. *a.* 1. Pertaining to or taken by a snap-shot, as a photograph; adapted to the taking of instantaneous photographs: as, a *snap-shot* camera.

> A large number of "*snapshot*" photographs.
> *Geog. Jour.* (R. G. S.), XVI. 124.

2. Hence, executed rapidly or sketchily. [Colloq.]

> Each line of the above, it should be added, is illustrated by *snap-shot* sketches of Franz at his toilette.
> *R. C. Brooks*, in Bookman, Sept., 1905, p. 16.

snapshot (snap′shot), *v.*; pret. and pp. *snapshotted*, ppr. *snapshotting*. I. *trans.* To take a photographic snap-shot of.

II. *intrans.* To take photographs with a snap-shot camera.

snap-welding (snap′wel-ding), *n.* A method of joining the rails of an electric road in which the ends of the rails are heated to softness and then snapped or squeezed together.

snap-willow (snap′wil″ō), *n.* Same as *crack-willow* (which see, under *willow*1).

snap-wood (snap′wu̇d), *n.* The spice-bush, *Benzoin Benzoin*.

snare, *v. t.* 3. In *surg.*, to cut off by means of a snare. *Buck*, Med. Handbook, I. 146.

snark (snärk), *n.* [*sn*(*ake*) + (*sh*)*ark*.] A name given in "Alice's Adventures in Wonderland" to an imaginary animal. See ★*blend-word*.

snatch-block, *n.*—**Eye snatch-block**, an iron snatch-block having an eye at the top and open at the side for convenience in adjusting the rope to the block.—**Link snatch-block**, a snatch-block in which the open side is connected by a link with the hook of the block.—**Plate snatch-block**, an iron snatch-block which has a plate at the bottom for convenience in securing it to the deck; a deck snatch-block. Another form of deck-block is secured by a bolt.

snatch-hook (snach′hu̇k), *n.* 1. The hook of a snatch or snatch-block.—2. The hook of a chain or wire rope which may be caught in one of the links or over the standing part of the chain or rope.—3. The hook of a chain-sling for catching barrels under the chime to hoist them.

sneak, *n.* 3. In *cricket*, a ball bowled along the ground; a grub. *Hutchinson*, Cricket, p. 34.—4. In *whist*, a singleton lead.

sneak-current (snēk′kur″ent), *n.* In *elect.*, stray current, due to leakage or deficient insulation, which, while not of sufficient intensity to melt fuses or open circuit breakers, is detrimental to the circuit in which it flows if of long duration; specifically, such a current in telegraphic and telephonic circuits. *Elect. World and Engin.*, Oct. 8, 1904, p. 630.—**Sneak-current coil**, a protective device against sneak-currents, consisting of a coil of high resistance the gradual heating of which by such currents results in the melting of a fuse and the breaking of the circuit in which it is placed.

sneaker, *n.* 3. Same as ★*grub*, 4.—4. *pl.* Low heelless canvas shoes with rubber soles. [Colloq.]

sneez, *v.* and *n.* A simplified spelling of *sneeze*.

sneezeweed, *n.* 2. In Australia, a dwarf, erect, odorous herb of the aster family, *Centipeda Cunninghamii*, considered a valuable specific for certain diseases of the eye.

snib2 (snib), *v. i.*; pret. and pp. *snibbed*, ppr. *snibbing*. In *lumbering*, to allow one's self to be carried away (ostensibly by accident) on the first portion of a jam that moves; ride away from work under the guise of being accidentally carried off in river-driving. [U. S.]

snibel, *n.* In New England, the pin that fastens the tongue to the body of a cart. See the extract.

> This is obviously the Dutch *snavel*, German *Schnabel*, beak, point, hook. . . . The word, of course, came through the Dutch. *F. M.*, in N. and Q., 9th ser., VIII. 183.

snide, *n.* 2. A spurious object; a humbug; a fake; something designed to cheat. [Slang.]

> His diamond ring 's a cut-glass *snide*.
> *Wallace Irwin*, Love Sonnets of a Hoodlum, vi.

snif, *v.* and *n.* A simplified spelling of *sniff*.

snip, *n.* 5. A small, insignificant person or thing: as, a mere *snip* of a girl.

snipe1, *n.* 4. The Lake Tahoe trout, *Salmo clarkii henshawi*, found in western Nevada and neighboring parts of California.

snipe1, *v. i.* 2. To shoot at the enemy, or at isolated soldiers or outposts, in a casual way, as opportunity offers. See ★*sniping*.

II. *trans.* To shoot (one of the enemy) from ambush or in a casual way, and not in a regular battle.

snipe3 (snīp), *v. t.*; pret. and pp. *sniped*, ppr. *sniping*. Same as ★*nose*1, 5.

sniper1 (snī′pėr), *n.* [*snipe*1, *v.*, + *-er*.] 1. One who shoots snipe.—2. An irregular fighter; a sharp-shooter. See ★*snipe*1, *v. i.*, 2.

> We were going to ride over open, rolling country, dotted with kopjes and believed to hold a good number of the genus '*sniper*.' The escort fell in behind us in file, and walked solemnly after us like a string of ducks.
> *Army and Navy Jour.*, March 30, 1901, p. 749.

3. A prospector.

> Some unsystematic work [searching for gold] was done during the fall of 1901 by *snipers*, usually working with rockers. *U. S. Geol. Surv.*, Prof. Paper 10, p. 51.

sniper2 (snī′pėr), *n.* [*snipe*3, *v.*, + *-er*.] One who noses logs before they are skidded. See ★*nose*1, 5.

sniping (snī′ping), *n.* and *a.* I. *n.* Desultory firing by an enemy into a camp or force on the march; sharp-shooting: so called from the methods of snipe shooters.

> The soldiers in the trenches put their hats on the parapet to draw the enemy's marksmen and "humorously called it *sniping*."
> *Gen. Evening Post*, June 15, 1773, quoted in N. and Q., [9th ser., XI. 434.

II. *a.* Characteristic of the firing of a sharp-shooter; desultory; irregular; unexpected: said of shooting.

> But even this advantage was greatly reduced by their being exposed to a *sniping* fire from neighbouring walls.
> *V. Blacker*, Mahratta War, p. 179.

> Lieut. . . . of the Ninth United States Infantry received a serious *sniping* wound while patrolling at Hoshiru.
> *N. Y. Times*, Aug. 28, 1900.

snippy, *a.* 3. Inclined to be supercilious or 'uppish'; snobbish. [Colloq.]

snip-snap-snorem (snip′snap-snō″rem), *n.* A card-game in which any number can play, a full pack being dealt out, one at a time, as far as it will go. The eldest hand lays on the table, face up, any card he pleases. Each player to the left in turn matches it, if he can, with one of the same denomination, calling out "snip." The holder of the third card of that denomination calls "snap," and the holder of the fourth calls "snorem" and is entitled to start another round with any card he pleases. The first to get rid of all his cards gets a chip for every card held by others. Also called *Earl of Coventry.*

snolly-goster (snol′i-gos-tėr), *n.* [Origin obscure.] An ambitious, boastful, talkative, unprincipled fellow. [Slang.]

A *snollygoster* is a man who is ambitious for office regardless of party, platform or principles, and if he gets there at all he does so by monumental talk.
The Georgia Cracker, Aug. 17, 1896.

We am de *snollygosters*
An' lubs Jim Ribber oysters.
Dan Emmet, The Black Brigade.

snook², *n.* 5. The pike and various other fishes of similar shape.

snooker (snö′kėr), *n.* A game played with balls on a billiard table.

He nodded significantly towards the new-comers, as much as to hint that a third person with them would be distinctly an inconvenient third. Onslow turned to them, cue in hand, and proposed a game of *snooker.*

"That's precisely what we came up for," said Amy Rivers promptly. "Hamilton, get out the balls. Mr. Onslow, will you put the billiard-balls away, so that they don't get mixed?"

They played and talked merrily.
Cutcliffe Hyne, The Little Red Captain, iii.

snooz, *v.* and *n.* A simplified spelling of *snooze.*

snorter¹, *n.* 5. A motor-car driven by an internal-combustion engine, the high-pressure exhaust of which is so incompletely muffled as to emit a snorting noise. [Slang.]—6. Something unusually good. *Dialect Notes*, III. iii. [U. S., slang.]

snot, *n.* 4. The first part of the shedding stage, in the soft crab industry. *Saturday Eve. Post.*

snotgall (snot′gâl), *n.* A common name in Tasmania of *Seriolella brama*, a fish belonging to the family *Carangidæ.*

snotty, *a.* II. *n.* In the British navy, a midshipman. [Slang.]

Our Mr. Moorshed. He was the second cutter's *snotty* — my *snotty* — on the Archimandrite — two years.
R. Kipling, Their Lawful Occasions, in Traffics and [Discoveries, p. 101.

Snouba bark. See ★*bark*².

snout-beetle, *n.*—**Scarred snout-beetle**, any member of the family *Otiorhynchidæ*, so called on account of a scar at the tip of the rostrum characteristic of this family of beetles.

snout-moth, *n.*—**Cotton snout-moth.** See ★*cotton*¹.

snow¹, *n.* **Glory of the snow.** See ★*Chionodoxa.*—**Golden snow**, a light-yellow colored snow which occasionally falls in Europe and America. The color is due to the admixture of the pollen of pine-trees.—**Pole of snow.** See ★*pole*².—**Treading snow**, a crunchy sound due to slowly repeated puffs of gas igniting in a wood fire, imitating the slow heavy step of an old man in the snow. [Colloq., Virginia.]

snow¹, *v. t.*—**To snow the cards**, to take a card from the top and bottom of the pack simultaneously and throw them on the table, instead of shuffling them. See ★*fuzzing.*

snowball, *n.* 3. (*d*) A delicate pudding steamed in a mold, then rolled in powdered sugar, and served with wine sauce.—**Little snowball**, the button-bush, *Cephalanthus occidentalis.*—**The snowball system**, in England, the name of a popular system of making charitable collections in which one person asks each one of a certain number (say five) to contribute a small sum, every one of the five pledging himself to ask five others to do the same; the twenty-five in turn ask five each; and so on, the amount collected rolling up (like a snowball) to a large sum in a very short time. Also called the *endless chain system.*—**Wild snowball.** (*b*) The redroot or New Jersey tea, *Ceanothus Americanus.*

snowberry, *n.* 3. A Tasmanian name for *Gaultheria hispida.* See *wax-cluster* and ★*chucky-chucky.*

snow-bird, *n.* (*e*) The ivory gull, *Larus eburneus*, an arctic species that in winter is pure white.

snow-blanket (snō′blang″ket), *n.* Snow which covers the ground and protects vegetation from severe cold. As the snow melts slowly by the conduction of heat from below it furnishes water for the plants that are living below it.

snowbreak, *n.* 2. In *forestry*, the breaking of trees by snow.—3. An area on which trees have been broken by snow.—4. See ★*shelter-belt.*

snow-cloud (snō′kloud), *n.* A cloud from which snow is falling or is likely to fall.

snow-craft (snō′kråft), *n.* A knowledge of the behavior of snow and the best methods of combatting it: an important part of successful mountaineering.

In *snow-craft* the choice of route is the result of a full understanding of the behaviour of snow under a multitude of varying conditions; it depends largely upon experience, and much less upon gymnastic skill.
Encyc. Brit., XXXI. 23.

snow-creep (snō′krēp), *n.* The slow movement or settling of snow down a slope.

Small trees are directly broken and abraded by weight of snow or by *snow creep.* *Science*, Feb. 28, 1908, p. 339.

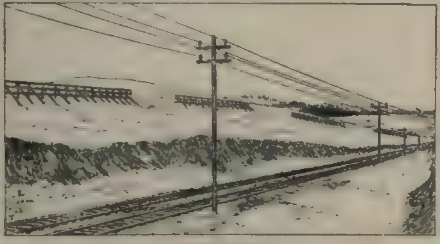
snow-cripple (snō′krip″l), *n.* A tree crippled by snow. See the extract.

On the other hand, when the struggle of trees for existence is primarily with snow, the forest as altitude increases is resolved into groups of trees. These become more separated, and the upper groups of the trees occupy ridges and local elevations. *Snow-cripples* possess the spire form, with flourishing upper shoots, but the lower branches and foliage are dying or dead, broken by snow and attacked by fungi. *Science*, Feb. 28, 1908, p. 339.

snow-drift, *n.* 2. Same as *snow-on-the-mountain*, 1.—3. The sweet alyssum, *Aduseton maritimum.*

snowdrop, *n.*—**African snowdrop.** Same as *African* ★*bladder-nut.*—**Yellow snowdrop**, the yellow dog-tooth violet, *Erythronium Americanum.*

snow-dust (snō′dust), *n.* The finest snow raised from the ground by the wind and carried along, as in the purga.



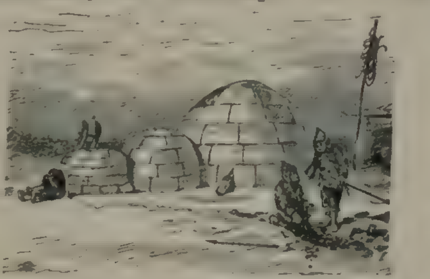
Snow-fence.

snow-fence (snō′fens), *n.* A fence built to break the force of the wind in snow-storms and to prevent the drifting of the snow.

Snow-fences are commonly erected in Canada to check the rate of snow-drifting. *Nature*, Sept. 4, 1902, p. 454.

snowflake, *n.* 3. (*b*) The sweet-william, *Dianthus barbatus.*

snow-hut (snō′hut), *n.* A hut built of snow, particularly the dome-shaped hut of the Eskimo built of blocks of snow which are arranged spirally so as to form a vault.



Snow-hut.

snowing (snō′ing), *n.* 1. The falling of snow.—2. Same as ★*fuzzing.*

snow-plow, *n.* Snow-plows used on electric roads are special cars fitted with high-power motors and some form of snow-scraper. One form, called a *shear-plow*, is fitted with strong wide shear-boards placed in pairs, the lower and outer board being adjustable at an angle of about 45° across the track in front of the car; another, called a *nose-plow*, has a double shear in front of the car. Each style also employs wing-scrapers behind the plows to shove the snow away from the car. Small shear-plows, called *track-scrapers*, are also fitted to ordinary cars to remove light falls of snow. For city streets snow-plows are often replaced by a machine called a *track-sweeper.*

snow-ripple (snō′rip″l), *n.* A ripple-mark in snow.

On *Snow-ripples.* Abstract of paper by the author [V. Cornish] read at Section E, British Association, 1900. See Report Bradford Meeting.
Geog. Jour. (R. G. S.), XVIII. 192, note.

snow-roller (snō′rō″lėr), *n.* See the extract.

It seems that the flakes of a light fluffy layer of surface snow are made adhesive by a rise in the temperature of the air above the freezing point, while the under snow remains cold and dry, and the particles of damp surface snow are enabled to adhere to each other, but not to the dry under snow. A strong wind may then push over little projections of the surface snow and start them rolling, when, of course, they will travel and grow until the resistances overcome the propelling power of the wind. These "*snow rollers*" vary in size, some being only a few inches in diameter, while at times others have been seen 2 feet or more in length. *Nature*, March 12, 1908, p. 453.

snow-rose (snō′rōz), *n.* See ★*rose*¹.

snow-slide, *n.* 2. In *lumbering*, a temporary slide on a steep slope, made by dragging a large log through deep snow which is soft or thawing. When frozen solid, the track may be used to slide logs to a point at which they can be reached by sleds.

snow-spectacles (snō′spek″ta-klz), *n. pl.* A shield, with narrow slits, designed to protect the eyes from the glare of snow.

snow-worm (snō′wėrm), *n.* Same as *snow-flea.*

snubbing-pitch (snub′ing-pich), *n.* In *lumbering*, the slope at which it is necessary to use a snub-line to control the downward movement of a load of logs. [Maine.]

It was the crux of the situation, that *snubbing-pitch.* With its desperate dangers, its uncertainties, its celerity, it was ominous and it was fascinating.
Holman Day, King Spruce, xxvi.

snub-line (snub′līn), *n.* 1. Same as *snubbing-line.*—2. In *lumbering*, a hawser used to control the movement of a load of logs down a steep slope. [Maine.]

It was well into February before they began to haul their logs to the landing-place on Blunder Stream. But even with an estimated five millions to dump upon the ice of Blunder, time was ample, for the *snub-line* down the steep quarter-mile of Enchanted's shoulder made a cut-off that doubled the efficiency of the teams.
Holman Day, King Spruce, xxvi.

snuf, *v.* and *n.* A simplified spelling of *snuff.*

snuff¹, *n.*—**High dried snuff**, a type like Scotch, but more pungent, with only 5 per cent. of moisture.—**Maccoboy snuff.** Same as *maccouba* ★*snuff.*—**Maccouba snuff.** See *maccouba* and *rappee* ★*snuff.*—**Offal snuff**, in the British excise law, waste material formerly converted into snuff, but with the disuse of that article left on the hands of manufacturers. A drawback is allowed by the Customs for this material. See quotation under ★*Queen's Pipe.*—**Rappee snuff.** See *rappee.* The dark color of this snuff is due to longer fermentation. It is highly scented and contains an average of 40 per cent. of moisture. Maccouba snuff is sometimes included as a variety of this.—**Scotch snuff**, a light-colored type, plain or scented, containing about 20 per cent. of moisture.

snuff², *v. t.* 2. In *currying*, to smooth or put out with a sleeker. See *to put out* (*c*), under *put*¹, *v. i.* *C. T. Davis*, Manuf. of Leather, p. 429.

snuff-bean (snuf′bēn), *n.* A name given to the tonka-bean, from its use in scenting snuff.

snuff-box, *n.*—**Musical snuff-box**, a name formerly used for all musical boxes, because early examples were made of small size and were not unlike snuff-boxes in appearance.

snuff-work (snuf′wėrk), *n.* In the British excise law, any tobacco material, whether leaf, stalks (midribs), returns (see under ★*tobacco*), or stalk flour, or these combined, in course of fermentation to be ground into snuff. To *lay down snuff work* was to place such material, after damping, cutting, and mixing, in a cask or bin to ferment. *A. E. Tanner*, Excise Tobacco Laws, p. 121.

snug, *v. t.*—**To snug down**, to take in, as sails; to make all snug.

Before dark, Kettle *snugged* her *down* to single topsails, himself laying out on the foot ropes with the Portuguese. *Cutcliffe Hyne*, A Master of Fortune, vii.

snum (snum), *v. i.* A euphemistic substitute for *swear.* [Dial. or slang, New Eng.] See *swan*², *swow*².

"Drive where?" asked old Anthony, pausing with one foot on the step of the ancient carryall.

"To Miss Dane's!"

"Well, I *snum!*" said old Anthony.
L. E. Richards, Mrs. Tree, xiii.

snuzzle (snuz′l), *v. i.* [See *nuzzle.*] To thrust the nose against; rub closely with the nose; nuzzle: said of animals. [Dial.]

His [the dog's] general look, and a way he had of going '*snuzzling*' about the calves of strangers, were not pleasant for nervous people.
T. Hughes, Tom Brown at Oxford, iii.

sny (snī), *v. i.* [*sny*, *n.*] In *ship-building*, to curve away sideways from the normal straight position: said of a plank or plate, as at the bows or stern, where it is necessary to force the strakes so as to get an even distribution of the planking or plating.

so¹, *adv.*—**So fash.**, an abbreviation of *so fashion*, a colloquial phrase meaning, in this or such a fashion or way; hence, in the right fashion, mode, or form. [Slang.]

If you put my coat on that chair, you 'll be more *so fash*, sir.
R. Kipling, The Disturber of Traffic, in Many Inven- [tions, p. 4.

So. An abbreviation of *south.*

soaa (sō-ä′ä), *n.* [Fijian *soangga*, the vernacular name of the fruit and plant.] See ★*fei.*

soak, *v. t.* 10. To place in a furnace, or soaking pit, with the object of equalizing the temperature rather than causing an increase: especially applied to ingots of steel which, soon after casting, have a solid exterior or shell and a molten interior, and are therefore unfit for rolling until solid and of a nearly uniform temperature throughout.

> The only other furnace treatment, that of "*soaking*," merely equalizes the heat of the ingot.
> *Encyc. Brit.*, XXIX. 571.

soak, *n.* **6.** A slough.

> The term *soak* in Western Australia, as used on maps and plans, signifies a depression holding moisture after rain. It is also given to damp or swampy spots round the base of granite rocks. Wells sunk on *soaks* yield water for some time after rain. All *soaks* are of a temporary character.
> *The Australasian*, Sept. 7, 1895, p. 461, quoted by E. E. [Morris, Austral English.

7. In *tanning*, a tank or vat of water for soaking hides or skins. *C. T. Davis*, Manuf. of Leather, p. 80.

soakage, *n.* **2.** A slough; a soak.

> Some 50 feet from the surface, is a small pool of water, evidently a *soakage* from the surrounding country, and possibly a spring. *Geog. Jour.* (R. G. S.), XI. 261.

3. The residual charge of a cable or condenser. *Houston*, Dict. Elect. [Rare.]

soaking, *n.* **3.** The operation of desilverizing a lead regulus by running it into a bath of molten lead in the fore-hearth of a blast-furnace; also the operation of equalizing the temperature of steel ingots in a soaking-pit.

soap, *n.*—**Acid soap.** (*a*) An acid ammonium ricinoleate which approximates the formula $NH_4C_{18}H_{33}O_3 + C_{18}H_{34}O_3$ and is prepared by partly neutralizing Turkey-red oil with ammonia. (*b*) The fatty matter obtained by adding just enough acid to a soap solution to cause the separation of the fatty acids.—**Bast soap,** a soap bath which has been used in degumming or boiling off silk and which has become so charged with sericin as to be of no further value as a scouring agent. It is often added to the dye-bath in silk-dyeing. Also known as *boiled-off liquor.*—**Black soap,** soft soap used in France as an insecticide: originally made with hemp-seed oil and potash, and sometimes artificially colored by copperas and nutgalls or logwood.—**Borax soap,** soap made with an addition of borax to increase its cleansing effect on clothing, while borax is not to any serious extent injurious to the fabric, at any rate in the case of linen and cotton.—**Calico-printers' soap,** a soap made of tallow, cocoanut-oil, castor-oil, and palm-oil. This soap should contain no free fat and no free caustic. The following composition gives a good calico-printers' soap: water, 23.5 per cent.; alkali as soap, 9 per cent.; alkali, free, 0.2 per cent.; fat, free, 0.2 per cent.; fat as soap, 67.1 per cent.—**Cold-process soap,** soap made from cocoanut-oil saponified with caustic alkali without boiling, leaving the glycerin in the soap.—**Cold-water soap,** a soap which washes well in cold water: usually made of very soft, fatty materials, and containing 20 per cent. of water, that is, two thirds of the usual amount. It is occasionally stiffened by the addition of sodium carbonate or silicate.—**Dyers' soap,** an absolutely neutral soap, either a 'finely fitted' soap, or a curd soap from which the caustic lye has been pumped and which has been finished by boiling in brine.—**Filled soap,** soap which has its weight unduly increased by retention of water, aided by leaving in it the glycerin produced in soap-boiling, or by adding 'soluble glass' (sodium silicate) or other hygroscopic material. Also known as *padded soap* or *hydrated soap. Sadtler*, Handbook of Indust. Chem., p. 62.—**Fish-oil soap,** soap made by boiling fish-oil with potash lye and used especially for spraying plants.

> *Fish-oil Soap.*—
>
> | | |
> |---|---|
> | Crystal potash lye | 1 pound. |
> | Fish-oil | 3 pints. |
> | Soft water | 3 gallons. |
>
> Dissolve the lye in the water, and when boiling, add the oil, and boil for two hours. One pound of the soap may be dissolved in 5 to 10 gallons of water. This is of value as an insecticide.
> *E. G. Lodeman*, The Spraying of Plants, p. 146.

Grained soap. (*b*) Soap separated as curd from solution by the addition of common salt to the product of the boiling together of fat and an aqueous solution of an alkali. Also known as *salted-out soap.* See *to ★salt out.*—**Hydrated soap.** Same as *filled ★soap.*—**Magnesia soap,** the magnesium salt of one or more of the acids of ordinary fats. It is insoluble in water. Hence magnesium compounds, as well as those of calcium, in natural water render it 'hard' or capable of curdling the common alkaline soaps.—**Marbled soap,** soap irregularly streaked with various colors by drawing through the melted white stock soap a comb with blunt teeth which has been dipped into melted soap containing dissolved or suspended coloring-matter.—**Marseilles soap,** originally soap made at Marseilles from olive-oil and soda: practically the same as Castile soap. The term is now applied to any good hard soap of substantially similar character, wherever made, although the olive-oil is frequently replaced by other oils which pass under that name.—**Medicated soap,** a kind of soap prepared either for internal use, such as croton or jalap soap, or for use on the skin, on which, on account of certain substances which it contains, it exercises a specific influence. Among the principal varieties which are prepared for external use are those which contain carbolic acid, petroleum, borax, camphor, chlorin, iodine, mercurial salts, sulphur, or tannin.—**Milled soap,** soap which has been cut into thin slices or chips, dried until very little water remains, ground between rollers, mixed with any desired perfume or coloring-material, compressed into a continuous bar, cut into short pieces, and stamped into cakes. Fine toilet-soap is to a large extent manufactured in this way, since delicate perfumes can be used which would be volatilized or destroyed by the application of heat.—**Mottled soap,** soap made by boiling together fat and dissolved alkali, adding salt to separate the 'curd,' drawing off the 'underlye,' and boiling down the curd, generally with further addition of alkali, until the remaining water does not exceed about 20 per cent. of the mass, which is then well stirred and poured into frames to solidify. As a result of the thick consistence due to boiling down, ferrous sulphid and iron soap, present in small quantity, instead of settling to the bottom, remain irregularly distributed through the mass and give it the mottled or marbled bluish-green appearance to which the name refers. Originally the iron was present in consequence of the impure alkali, crude barilla, used; but since such soap acquired a good reputation as not containing a large proportion of water, the practice was adopted of intentionally adding iron, as green vitriol, to produce the mottled appearance.—**Niger soap,** the dark-colored layer containing caustic lye, soap, water, and organic impurities, which settles from the good soap after a boiling of soap is given the finishing change.—**Normandy soap,** soap to which in the melted condition sodium sulphate or thiosulphate has been added to the extent of one fifth or one third of the weight of the soap, the object being to harden the product and prevent it from being too rapidly dissolved and wasted in scrubbing, particularly with hot water.—**Petroleum soap,** a laundry-soap which contains paraffin, naphtha, or some other product of petroleum, the use of which in soap facilitates the removal of greasy matter from linen.—**Remelted soap,** soap prepared by remelting in a steam-jacketed kettle one or more kinds of soap, together with the perfume and other ingredients.—**Salt-water soap,** a soap consisting of 2–3 per cent. of carbonated alkali (Na_2CO_3), not more than 3 per cent. of salt, not more than .50 per cent. of mineral matter, not more than 55 per cent. of water, and the rest of cocoanut-oil with the proper amount of alkali.—**Sand soap,** soap containing about 75 per cent. of powdered quartz or feldspar, 20 per cent. of cocoanut-oil soap, and 5 per cent. of sal-soda or silicate of soda.—**Scouring soap,** a sand soap made usually of about 75 per cent. of powdered quartz and 25 per cent. of cocoanut-oil soap. A small amount of sal-soda and silicate of soda is also usually added. The soap is used in cleaning metal and window-glass.—**Soap leaves,** small sheets of tissue-paper which have been covered with a film of soap by dipping them into a good grade of toilet-soap melted with a little water and perfumed as desired. Each leaf suffices for a single washing of the hands.—**Tobacco soap,** a solution of soap to which an infusion or extract of tobacco-stems has been added, used as an insecticide for application, by spraying, to growing plants.—**Whale-oil soap,** a coarse soap, made from whale-oil, a solution of which is used as an insecticide and as a means of emulsifying kerosene and other substances to be employed for the same purpose on growing plants.—**Whale soap,** the 'foots' or deposit from the refining of crude spermaceti by heating with a small quantity of potash lye. It consists mainly of potassium palmitate.

soap, *v. t.* **3.** In *calico-printing*, to remove, by means of soap, impurities from (cloth) before bleaching; also, after printing, to remove the thickening used in the color.

soapberry, *n.*—**Soapberry family,** the plant family *Sapindaceæ* (which see).

soap-copper (sōp'kop″ėr), *n.* A large open vessel in which soap is made by boiling together the fatty and alkaline materials with water: now generally made of boiler-plate iron or steel, heated by steam-coils, and provided with stirrers. Compare *soap-kettle* and *soap-pan*.

soap-cyst (sōp'sist), *n.* An encysted collection of yellowish fatty material in the breast. Called also *butter-cyst*.

soaper, *n.* **2.** In *calico-printing*, a machine in which the cloth is washed with soap.

soap-lock, *n.* **2.** A man who wears soap-locks; hence, a low fellow; a young rowdy or rough: as, "the *soap-locks* of the Bowery." [U. S.]

soap-lye (sōp' lī), *n.* In *soap-making*, the watery solution which settles out on graining the soap with salt. It contains the glycerin and organic impurities which are the products of the stock saponified.

soap-oil (sōp'oil), *n.* See ★*oil*.

soap-powder (sōp'pou″dėr), *n.* A trade-name of various mixtures of pulverized dry soap with soda crystals, starch, oatmeal, bran, or other materials also in the powdered state.

soap-press (sōp'pres), *n.* A machine for imprinting upon bars or cakes of soap designs and the manufacturer's name.

soaproot, *n.* **3.** The soapwort, *Saponaria officinalis.*—**4.** The soap-plant, *Chlorogalum pomeridianum.*

soap-slabber (sōp' slab″ ėr), *n.* A machine containing a number of tightly stretched steel wires, which are pushed against a frame of soap, cutting it into slabs of the desired thickness.

soap-test (sōp'test), *n.* The process of determining the hardness of a natural water by measuring the volume of a solution of soap of known or standard strength which is curdled by a given volume of the water. Adding the soap solution by small portions in succession, and shaking after each addition, a froth or lather lasting several minutes is produced as soon as the quantity required for curdling has been slightly exceeded.

soapwort, *n.*—**Spanish soapwort.** Same as *soaproot*, 1.

sobaco (sō-bä'kō), *n.* [Cuban Sp. *sobaco*, prop. *sabaco*, a native name.] A fish, *Canthidermis sobaco*, of the family *Balistidæ*, found in the West Indies.

sobby (sob'i), *a.* [Var. of *soppy*. Cf. *seep*.] Wet; soppy, as land. [Local.]

Sobralia (sō-brā'li-ä), *n.* [NL. (Ruiz and Pavon, 1794–1798), named in honor of Francisco Martinez *Sobral*, physician and councilor of the king of Spain, and patron of botany.] A genus of plants of the family *Orchidaceæ*. There are about thirty species, inhabiting the region from Mexico southward. They are large-growing, handsome plants with leafy stems and very large but fugacious flowers. Some of the species to be found in the collections of orchid fanciers are *S. macrantha*, *S. Cattleya*, *S. fragrans*, and *S. xantholeuca*.

Sobranje, *n.* **2.** [*l. c.*] A local representative assembly in Russia.

soccer, socker (sok'ėr), *n.* [A corruption of *association*.] The 'Association' game of football. See *foot-ball*, 2.

social, *a.* **5.** In *botany*, in recent (phytogeographical) usage, following that of Drude, the term is confined to species which control the vegetation of large tracts: essentially the original use of the term (see the extract). Compare ★*gregarious*, 2. If all other species are excluded, the species (according to F. E. Clements) is *social-exclusive*; if secondary species are admitted, it is *social-inclusive*.

> Those species of plants which I have termed *social* uniformly cover vast extents of land.
> *Humboldt* (trans.), Cosmos, I. 346.

Social aggregate. See ★*aggregate.*—**Social capillarity,** the effort and tendency—statistically demonstrated—of all individuals in democratic society to rise from lower to higher social functions, and to a higher plane of living. *Arsène Dumont*.

> In brief M. Dumont's theory is that population increases inversely with '*social capillarity*.'
> *Pop. Sci. Mo.*, Aug., 1903, p. 357.

Social chemistry, classes. See ★*chemistry*, ★*class.*—**Social composition,** the combination of small social groups, as families, tribes, or villages, into larger compound societies, as nations. Compare ★*social constitution.*

> By *social composition* is to be understood a combination of small groups into larger aggregates, when each of the smaller groups is so far complete as a social organism that, if necessary, it could lead an independent life for a time. Family, clan, tribe, and folk, or family, township, commonwealth and nation, are names that stand both for elements and for stages in social composition.
> *Giddings*, Prin. of Sociol., p. 73.

Social constitution, that organization of society which corresponds to the social division of labor—which does the work and achieves the ends of the community. Compare ★*social composition. Giddings*, Prin. of Sociol., p. 73.—**Social Democratic Federation.** See ★*federation.*—**Social economics, heredity, parasitism, pyschology, surplus, telesis, telics, transmission.** See ★*economics*, etc.—**Social settlement.** See *college* ★*settlement.*—**Social synergy,** co-working of social forces.

II. *n.* A sociable; an informal gathering of people, especially a church gathering. [U. S.]

socialism, *n.*—**State socialism.** (*a*) Socialism established and directed by the existing state, in opposition to proletarian socialism, established and directed by working-men. (*b*) Specifically, in Germany, legislation, supported by Prince Bismarck, intended to improve the condition of the working-man. Among the measures included were the insurance of workmen against accident, sickness, and old age, and the establishment of coöperative associations under state protection.

Socialist Labor party. See ★*labor*^{1}.

socialry (sō'shal-ri), *n.* [*social* + *-ry*.] Social organization. *W. J. McGee*, in 17th An. Rep. Bur. Amer. Ethnol., p. 285.

> The career of the Society from 1883 up to the present seems to have been normal, fully in accord with the times, and beyond reproach; its present function as a nucleus for special societies—i. e., subtribes, in the analogy with primitive *socialry*—would also seem to be ideal.
> *Science*, Feb. 14, 1902, p. 249.

sociétaire (sō-si-ā-tãr'), *n.* [F.] A member of one of the two classes of actors at the *Comédie Française*, in Paris, who has an interest in the theater and its government, a share of the profits, and assists in the choice of plays. On retirement he is pensioned. The other class is composed of ★pensionnaires (which see).

societal (sō-sī'e-tal), *a.* [L. *societ*(*as*), society, + *-al*^{1}.] Pertaining to the social order or to natural society.

> A very wide range of ethnographical inquiry under the following heads:—(1) maintenance; (2) perpetuation; (3) gratification; (4) religious and superstitious ideas and usages; (5) the *societal* system; (6) contact and modification. *Nature*, Dec. 24, 1903, p. 172.

society, *n.*—**Burial society,** a friendly or mutual benefit society which provides a certain sum for the burial of each of its members.—**Component society,** a social group which could lead an independent life, as a family, tribe, or village, but is in fact one among like groups which make up a larger compound society. Compare ★*constituent society.*

Social groups that could exist as complete and independent societies, but which in fact are only component parts of integral societies to which they are, in certain respects, subordinate, may be called *component societies.*
Giddings, Elem. of Sociol., p. 7.

Constituent society. See ★*constituent.*—**Ethnic society,** society organized on the basis of real or nominal blood-kinship; tribal society; gentile society. *Giddings,* Elem. of Sociol., p. 186.—**Grand medicine society.** Same as ★*mide* or ★*midewiwin.*—**Integral society,** a complete natural society.

A natural society that is large enough to carry on every known kind of social activity and coöperation, and which, independently of every other society, maintains control over the territory that it occupies, may be called an *Integral Society.* *Giddings,* Inductive Sociol., p. 6.

Natural society, a society which is spontaneously formed and is not a product of conscious planning.—**Society of Jesus.** See *Jesuit.*—**Turnway society.** See the extract.

The most primitive form of sharing work is seen in the "*turnway*" societies of the Thames watermen, for regulating the "turns," or order in which the men plying at any particular "stairs" serve the passengers who present themselves. *Webb,* Indust. Democracy, I. 437.

sociocracy (sō-shi-ok′rạ̄-si), *n.* [L. *socius,* fellow, + Gr. -κρατια < κρατεῖν, rule.] The art of applying social science to the betterment of social conditions. *L. F. Ward,* Dynamic Sociol., I. 60.

socio-economic (sō″shi-ō-ē-kọ̄-nom′ik), *a.* Pertaining to phenomena that are both social and economic. *L. F. Ward,* Dynamic Sociol., I. 525.

sociogenetic (sō″shi-ō-jẹ̄-net′ik), *a.* [L. *socius,* companion, + E. *genetic.*] Pertaining to the forces and conditions which create and mold society. *L. F. Ward,* Pure Sociol., p. 41.—**Sociogenetic forces,** society-creating or socializing forces. L. F. Ward defines the sociogenetic forces narrowly, to include particularly the spiritual forces, moral, esthetic, and intellectual.

sociol. An abbreviation (*a*) of *sociological;* (*b*) of *sociology.*

sociology, *n.*—**Anthropogenic sociology,** a division of social science concerned with the anthropogenic stage of social evolution. *Giddings,* Prin. of Sociol., p. 74.—**Demogenic sociology.** See ★*demogenic.*—**Ethnogenic sociology** that division of social science which is concerned with tribally organized or gentile society; ethnology; especially the study of that stage of social evolution in which society is organized on the basis of kinship. Compare *zoögenic, anthropogenic,* and ★*demogenic sociology.* *Giddings,* Prin. of Sociol., p. 74.—**Zoögenic sociology,** that division of social science which deals with the stage of social evolution in which the association and mutual aid of animals in swarms, herds, or bands develops social instincts and modifies the processes of selection and survival. *Giddings,* Prin. of Sociol., p. 73.

socionomic (sō′shi-ọ̄-nom′ik), *a.* [*socionom(y)* + *-ic.*] Of or pertaining to socionomy.

His second order of play is *socionomic,* that is, it takes two or more to fight, play chess, torment, haze, court, cooperate in diversion.
O. T. Mason, in Science, May 31, 1901, p. 862.

sociophagous (sō-shi-of′ạ-gus), *a.* [L. *socius,* fellow, + Gr. φαγεῖν, eat.] Subsisting upon or at the expense of others. [Rare.]

As, among anthropophagi, the suppression of man-eating is not favourably regarded; so in *sociophagous* nations like ours, not much pleasure is caused by contemplating the cessation of conquests.
H. Spencer, Prin. of Ethics, I. 472.

Soc. Is. An abbreviation of *Society Islands.*

socius, *n.* 2. The individual, in his social qualities and relations, as the unit of society, in distinction from the individual as an animal or as a mind. *Giddings,* Elem. of Sociol., p. 10.—3. In *social psychol.,* the social self. See the extract.

The development of the child's personality could not go on at all without the constant modification of his sense of himself by suggestions from others. . . . He thinks of the other, the alter, as his *socius:* just as he thinks of himself as the other's *socius:* and the only thing that remains more or less stable, throughout the whole growth, is the fact that there is a growing sense of self which includes both terms, the ego and the alter. In short, the real self is the bipolar self, the social self, the *socius.*
J. M. Baldwin, Social and Ethical Interpretations, p. 30.

sock², *n.*—**Broad-finned, feathered, winged sock.** See ★*plow.*

socker, *n.* See ★*soccer.*

socket, *n.* 7. In *golf,* the neck of a club into which the shaft runs.—8. A chuck or holder on the end of a drill-spindle having a taper-hole to receive the corresponding taper-shank of the drill or of another socket.—**Dental socket,** in the hinged *Mollusca* (*Brachiopoda* and *Pelecypoda*), one of the pits into which the teeth of the opposite valve fit. In the *Brachiopoda* the dental sockets are in the dorsal valve only; in the *Pelecypoda* they may be in either or both of the lateral valves.

socket-club (sok′et-klub), *n.* In *golf,* a wooden club of which the shaft enters a socket at the neck: in contradistinction to a spliced club or wooden club with a thin, tapering neck, to which the shaft is glued and then whipped.

socket-hammer (sok′et-ham″ėr), *n.* A form of carpenters' hammer having the part to which the handle is fitted drawn down into socket form to give a better bearing for the wood and strengthen it for use as a claw for drawing nails.

socket-headed (sok′et-hed″ed), *a.* Having a socket in the head or end, as a wrench or key for turning nuts which are at the bottom of a depression where they cannot be turned with the ordinary spanner or wrench.

socket-pick (sok′et-pik), *n.* 1. A form of pickax for heavy work, in which the part where the handle fits has been forged in socket form.—2. A form of pickax in which the cutting or working ends are removable and fit in sockets in the body to which the handle is attached.

socket-screw (sok′et-skrö), *n.* 1. A screw having a polygonal socket in its head by which it may be turned.—2. A screw which passes through a thimble, and by bottoming on the latter secures it in place.

socket-tool (sok′et-töl), *n.* A tool formed with a socket, either for use as a socket-wrench or as a holder of other tools.

Socratic elenchus. See ★*elenchus.*

soda, *n.* 1. The manufacture on a commercial scale of this important material is understood to include the production both of sodium hydroxid, or caustic soda, and of sodium carbonate. The new electrolytic process, involving the decomposition of common salt in solution by an electric current, is now industrially established, though both the Solvay and Leblanc processes are still the chief means of manufacturing soda, the Solvay process being the more advantageous, so far as soda alone is concerned, but having the drawback of yielding chlorin as a by-product in a form in which it cannot readily be utilized.—**Anhydrous soda,** in early chemistry, sodium oxid, Na_2O: still sometimes so used, as in stating the results of the analysis of silicious minerals. But at present the term is, in a scientific sense, applied to dry sodium hydroxid ($NaHO$), and technologically also to sodium carbonate (Na_2CO_3) in a dry state and without water of crystallization.—**Crystal soda.** Same as *washing-*★*soda.*—**Greenbank caustic soda.** See ★*caustic.*—**Recovered soda,** carbonate of soda, mixed with some silicate of soda, obtained by evaporating to dryness the waste liquor of the soda process for making paper-pulp from wood, esparto, and other similar materials, and then burning off organic matter from the residue. This recovered carbonate can be converted again into caustic soda by boiling with slaked lime, and the product used in the treatment of fresh fibrous material.—**Soda card, process.** See ★*card*1, ★*process.* **Summer soda,** carbonate of soda obtained by the natural evaporation in summer of water holding this salt in solution, such solution occurring in pools or small lakes in various parts of the world. The material so obtained is the *trona* of Lower Egypt and the *urao* of South America.—**Washing-soda,** usually a normal sodium carbonate with ten molecules of water of crystallization ($Na_2CO_3.10H_2O$). Also called *washing-soda crystals, washing-crystals,* and *crystal soda.* But the name is sometimes also applied to the normal salt crystallized with one molecule of water ($Na_2CO_3.H_2O$), known as *crystal carbonate,* and occasionally to sodium bicarbonate or acid-carbonate ($NaHCO_3$).

sodamide (sọ̄-dam′id), *n.* [*sod(a)* + *amide.*] A solid substance, white when pure, but generally seen of greenish or brownish color, readily fusible, and at a high temperature decomposed into its elements, obtained by passing dry gaseous ammonia over heated metallic sodium. Its composition is $NaNH_2$. It is used with advantage in the preparation of hydrazoic acid.

sodammonium (sōd-a-mō′ni-um), *n.* [NL., < *sod(a)* + *ammonium.*] A copper-colored substance which separates from a blue liquid obtained by dissolving metallic sodium in liquefied ammonia in a sealed tube. There is some reason to assume that it is a definite compound of the composition $N_2H_6Na_2$.

soda-orthoclase (sō′dạ̈-ôr″thọ̄-klāz), *n.* A variety of the potash feldspar, orthoclase, peculiar in containing several per cent. of soda.

soda-prairie (sō′dạ̈-prā″ri), *n.* An alkaline playa.

sod-form (sod′fôrm), *n.* In *phytogeog.,* see ★*vegetation-form.*

Sodic chlorid. Same as *sodium chlorid.*

sodioferric (sō-di-ọ̄-fer′ik), *a.* [*sodium* + L. *ferrum,* iron, + *-ic.*] Containing as constituents iron (in the ferric state or with apparent triad valence) and sodium: as, *sodioferric* sulphate.

sodipotassic (sō″di-pọ̄-tas′ik), *a.* [*sodi(um)* + *potass(ium)* + *-ic.*] In *petrog.,* in the quantitative classification of igneous rocks (see ★*rock*1), having soda and potash in equal or nearly equal amounts, within the limits $\frac{K_2O'}{Na_2O'} < \frac{5}{3} > \frac{3}{5}$.

sodium, *n.*—**Acid sodium carbonate.** Same as *sodium acid-carbonate* or *sodium bicarbonate,* $NaHCO_3$.—**Becker's sodium process.** See ★*process.*—**Sodium acetate,** a salt prepared by the action of acetic acid on sodium carbonate. It forms large transparent prisms belonging to the monoclinic system and has a chemical constitution expressed by the formula $NaC_2H_3O_2 + 3$ aq. The crystals effloresce slightly in dry air and completely at a moderate heat, and melt below 100° C. They are soluble in three parts of cold and an equal weight of hot water, and are also soluble in alcohol.—**Sodium acid-carbonate.** See *sodium bicarbonate.*—**Sodium aluminate.** As a commercial product in the United States this salt is known by the trade-name *Natrona saponifier,* being manufactured at Natrona, Pennsylvania, for use in soap-making.—**Sodium arseniate,** a substance used in dyeing calico: known as *dung substitute* or ★*dunging-salt* (which see).—**Sodium dioxid.** Same as ★*sodium peroxid.*—**Sodium hyposulphite.** See ★*sodium thiosulphate.*—**Sodium light.** See ★*light*1.—**Sodium manganate,** a compound now manufactured on a large scale for use as a disinfectant. The alternate formation and decomposition of this salt form the basis of the Tessié du Motay process, as modified by Fontana, for the preparation of oxygen in large quantity.—**Sodium methylate.** See ★*methylate.*—**Sodium permanganate,** a salt now used to some extent, though not as largely as the manganate, for disinfecting purposes.—**Sodium peroxid,** a yellowish-white solid substance prepared by heating metallic sodium in an excess of oxygen or of air to about 300° C. It has the composition Na_2O_2. When heated with combustible substances it acts as a most energetic oxidizing agent, the combustion by means of it of aluminium in a finely divided state being used as a source of extremely high temperature. (See ★*aluminothermics* and ★*thermit.*) Dissolved in water, sodium peroxid becomes a source of hydrogen dioxid, and thus, advantageously with addition of magnesium sulphate to correct the injurious effect of caustic soda formed at the same time, this material is coming into use as a valuable bleaching agent. Also called *sodium dioxid.*—**Sodium phosphate,** crystallized disodium orthophosphate, $Na_2HPO_4.12H_2O$. It is used as a saline purgative in medicine, and to some extent finds applications in calico-printing and photography.—**Sodium silicate.** This compound, as manufactured for industrial use, varies in composition, but commonly approximates to $Na_2Si_4O_9$. It is made either by fusion of silicious sand with carbonate or sulphate of sodium, or more usually by heating quartz, flints, or silicious sand with a solution of caustic soda under pressure. It is known as *soluble glass* or *water-glass,* and is largely used in making artificial stone for building and paving and for grindstones, in cementing stone, in fixing fresco-painting, in making "silicated" soap, and in connection with dyeing and calico-printing.—**Sodium stannate,** a salt (Na_2SnO_3) prepared by fusing together the dioxid of tin and caustic soda: extensively manufactured for use in calico-printing. When so used it is known as *preparing salts.*—**Sodium sulphate,** a substance known in the dry state as *salt-cake* (which see), being obtained by the action of sulphuric acid on common salt. *Niter-cake* (which see) is the same substance produced by the action of sulphuric acid on Chile saltpeter. It is used on a very large scale in the manufacture of glass and for conversion into sodium carbonate by the Leblanc process. Crystallized from solution it has the composition $NaSO_4.10H_2O$, and in this state is known as *Glauber's salt* and is used in medicine as a common saline purgative.—**Sodium sulphid,** a substance frequently used, along with a creamy mixture of slaked lime and water, by tanners to effect the loosening of hair and epidermis from hides, so that these may be removed from the hides preparatory to tanning.—**Sodium sulphite.** The normal sulphite (Na_2SO_3) is used as an antichlor to remove any traces of residual chlorin after bleaching by means of it, and also occasionally as an antiseptic. The *acid-sulphite* ($NaHSO_3$) is employed by brewers to sterilize the interior of casks to be filled with beer.—**Sodium thiosulphate,** a salt (in the crystallized state $Na_2S_2O_3.5H_2O$) largely used in the metallurgy of silver, as a fixing agent by photographers, and as an antichlor in connection with the bleaching of paper-pulp, occasionally also in medicine. Formerly, and often still in commercial language, called *sodium hyposulphite,* or by photographers *hypo.* By scientific writers the term *sodium hyposulphite* is applied to a different substance, $Na_2S_2O_4$.—**Sodium tungstate.** See *tungstate.*

sodium-bead (sō′di-um-bēd), *n.* A globule of sodium carbonate, or some other salt of sodium, fused in a loop formed at the end of a slender platinum wire. When heated in a clear flame it tinges the flame with the characteristic monochromatic (yellow) light of sodium in the state of vapor.

sod-oil, *n.* It is sometimes confounded with degras or moellon. Properly speaking, skins which have been prepared for oil-tanning are thoroughly saturated (by heating) with fish-oils, hung up for some time in a warm atmosphere, and submitted to pressure to squeeze out the surplus, partially oxidized, oil. This oil or soft grease is known as *degras* or *moellon.* The skins are then washed in an alkaline bath, which dissolves out more oil, and sulphuric acid being afterward added to the liquid after the skins have been removed from it, a further portion of oil or grease is separated, to which the name sod-oil is applied. Both degras and sod-oil are used in currying leather.

sof (sōf), *n.* [Turk. Ar. *sūf, sōf,* wool, goats' hair, a fabric thereof.] A kind of cloth made of mohair.

soffioni (sō-fē-ō′nē), *n. pl.* [It., pl. of *soffione*, a blowing-pipe (of a bellows), ‹ *soffio*, blowing, ‹ *soffiare*, ‹ L. *sufflare*, blow up from below: see *sufflate*.] Vents from which steam, sulphurous fumes, and other exhalations issue in the dying stages of vulcanism.

> With the reduction in volume of steam and the lighter gases the heavier and nonexplosive gases become more evident, and then occur the later phenomena known as fumaroles, solfataras, *soffioni* and mofettes. It may be that in the volcanic reservoirs the several vapors are arranged, as in the atmosphere, according to their specific gravity. *Amer. Geol.*, Feb., 1904, p. 103.

sofism^2, sofist, sofisticate, sofistry. Amended spellings of *sophism*, etc.

soft. I. *a.* 19. In *archery*, smooth and even in flexure and recoil: said of a bow.—**Soft drink**, any drink that is non-alcoholic, as lemonade, ginger-ale, tea, etc.—**Soft ground**, in *etching*, the ordinary varnish or ground rendered soft by melting it with an equal quantity of tallow. A piece of paper is placed upon this ground and the drawing is made upon the paper. Where the point of the pencil presses, the ground will adhere and the plate be exposed. The plate may then be bitten with the usual mordants. This method was invented two hundred and fifty years ago by a Swiss etcher, Dietrich Meyer. It has recently been revived. See *etching*.

II. *n.* 3. *pl.* Rags of loosely woven or knitted goods, such as flannel, hosiery, etc.

soft-board (sôft′bōrd), *v. i.* In *currying*, to roll on itself, as a skin in graining. *C. T. Davis*, Manuf. of Leather, p. 417.

soften, *v. t.* 2. To remove from (natural water) the hardness due to the presence of salts of calcium or magnesium in solution. In the case of temporary hardness, boiling the water or adding to it a carefully determined proportion of calcium hydroxid is used to produce softening; in the case of permanent hardness, sodium carbonate, not in too large excess, may be added. See ★*hardness*, 2.

softening, *n.* 4. The removal of antimony and other impurities from lead. See ★*improving*, 2. *Phillips and Bauerman*, Elements of Metallurgy, p. 686.

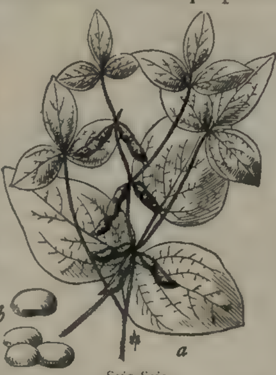
softwood, *n.* 2. A needle-leaved, coniferous tree.

II. *a.* 1. As applied to trees and logs, needle-leaved; coniferous.—2. In *hort.*, designating the 'wood' or twig that is not yet hardened or ripened; green wood: used with reference to the making of cuttings. Compare ★*hardwood*.

soggarth (sog′ärth), *n.* [Also *sogarth*, ‹ Ir., *sagart*, a priest.] Same as ★*saggart*. *Eng. Dial. Dict.*

sohaga (sō-hä′gä), *n.* [Hind. *suhaga*, *sohaga*, borax.] A name in use in the bazaars of India for borax brought from Tibet: same as *tincal*.

Soia (soi′ä), *n.* [NL. (Moench, 1794), from *suju*, the Japanese name of a sauce prepared from the beans.] A genus of plants of the family *Fabaceæ*. It contains about 20 species, chiefly twining herbs of the Old World tropics. The genus is of generail nterest because it includes the soy-bean, *Soia Soja*, an erect, hairy, bean-like plant from China and Japan that is now grown in the United States for soiling and green-manuring. The genus is closely allied to *Phaseolus*, *Vigna*, and *Dolichos*, from which it is distinguished by very technical characters.



Soia Soja.
a, leaf, and spray with pods; *b*, beans.

soie (swo), *n.* [F., silk. See *say^3* and *satin*.] In *fencing*, the tongue of the foil, which traverses the handle and is riveted down on the pommel.

soie laine (swo lān′). [F., 'silk wool.'] A soft, silky flannel for women's dresses.

soil^1, *n.* 3. In *forestry*, the depth of soil is defined by the following terms, each of which has its equivalent in inches: *very shallow*, less than six inches; *shallow*, 6 to 12 inches; *moderate*, 12 to 24 inches; *deep*, 24 to 36 inches; *very deep*, over 36 inches. The moisture of the soil is defined by the following terms: *wet*, when water drips from a piece held in the hand without pressing; *moist*, when water drips from a piece pressed in the hand; *fresh*, when no water drips from a piece pressed in the hand, though it is unmistakably present; *dry*, when there is little or no trace of water; *very dry*, when the soil is parched. Very dry soils are usually caked and very hard, sand being an exception.—**Acid soil,** virtually a swamp, peat, or muck soil, since this only (on account of its large humus content) contains much acid. Excessive soil acidity is corrected by draining and by liming.—**Buckshot soil,** a black or grayish black soil found in the bottom lands of Louisiana, which crumbles into fine grains when dry. It is very deep and extremely rich and is said to be the best cotton soil of the United States.—**Bureau of Soils.** See ★*bureau*.—**Cane-brake soil.** See ★*cane-brake*.—**Cold soil,** practically one that is relatively retentive of water, especially in the spring.—**Gumbo soil.** See ★*gumbo^1*, 4.—**Heavy soil,** a compact, tenacious soil difficult to work; hence, a clay soil, though such a soil is much lighter in weight when dry than a sandy soil.—**Light soil,** a soil of little cohesion, easily worked; hence, a sandy soil, though actually heavier than a clay soil.—**Soil analysis,** the determination of the contents of a soil. This may be either chemical or mechanical. In the latter case it consists in the separation of the particles according to size and the determination of percentages by weight according to an assumed standard of classification. The three principal grades from coarser to finer are sand, silt, and clay. The separation is effected by taking advantage in some way of the different rates of subsidence of different-sized particles in water. See ★*soil elutriator*.—**Soil atmosphere,** air contained in the interstices of the soil mingled with gases and usually saturated with vapor.—**Soil climatology.** See ★*climatology*.—**Soil elutriator,** an apparatus employed in the mechanical analysis of soils (see ★*soil analysis*). In Hilgard's elutriator a current of water passes upward through a tube containing the sample, taking with it particles increasing in size with the velocity of the current. In Goder's elutriator and other late apparatus the principle of centrifugality is depended upon. See ★*elutriator*.—**Soil hygrometer,** an instrument for determining soil moistures by measuring the resistance offered by the moisture between two carbon plates buried in the ground to the passage of an electric current from one to the other. *Yearbook U. S. Dept. Agr.*, 1900, pl. XLVIII.—**Soil moisture,** the water contained in soils, which, in its mechanical relations, is of three kinds: *gravitation* or *ground* water—that which stands in the soil by gravitation (see *ground water* under *water* and ★*water-table*, 4); *capillary* water—that which is retained in the interstices by capillarity; and *hydroscopic* water—that which adheres to the surface of the particles regardless of gravitation and capillarity.—**Sour soil.** Same as *acid* ★*soil*.—**Stiff soil,** a tenacious or heavy soil.—**Strong soil,** a soil rich in available plant food.—**Sweet soil,** a non-acid soil.—**Wash soil,** an alluvial soil. Cf. *wash*, *n.*, 7.

soil^1 (soil), *v. t.* [*soil^1*, *n.*, 4.] In *plumbing*, to paint (the ends of pipes about to be joined) by wiping (them) with soil. See *soil^1*, *n.*, 4.

soil-aspirator (soil′as″pi-rā-tọr), *n.* An apparatus for studying the permeability of the soil to air. It consists of a tube reaching down to the desired depth, connected with a manometer and aspirator that establishes a definite suction-pressure and measures the rate at which the air can be drawn through the soil under this pressure.

soil-binder (soil′bīn″dėr), *n.* A plant which serves to protect a clayey or loamy soil from washing. Soil-binding grasses form a compact turf. Some of them are *mud-binders*, fixing the soil of bogs and muddy shores.

soil-creep (soil′krēp), *n.* The slow movement or settling of soil down a slope, caused by removal of support and by circulating water, air currents, and frost.

> Hill-drifts [of flints] which have suffered from the movement of *soil-creep* and foundering, and it is concluded that this is the cause of the chipped edges [of pressure-chipped flints]. *Athenæum*, Dec. 30, 1905, p. 902.

soil-disease (soil′di-zēz″), *n.* See ★*disease*.

soiling, *n.* 1. The objects of soiling (the summer feeding of cattle, chiefly dairy stock, in confinement with green feed) are to economize land, to permit the better regulation of the feed of animals and save their strength in seeking it, and to conserve the whole yield of manure. Three to five times as much forage can be produced on the same area by cropping as by pasturing, while the yield of milk is maintained or increased and the manure, otherwise largely wasted, keeps up the fertility of the soil. Soiling is either *complete* or *partial*, in the latter case consisting of the supplementary use of green feed at the time when the pasturage is low. The latter practice is thought to be of great utility in America where the cost of labor and the comparative abundance of land make complete soiling less advantageous. Also *green feeding* and, pleonastically, *green soiling*.—**Soiling crop.** See ★*crop*.

soil-inoculation (soil′in-ok-ū-lā″shọn), *n.* The transplanting of micro-organisms to the soil, especially the nitrogen-gathering bacteria which assist in supplying nitrogen to cultivated crops.

soil-map (soil′map), *n.* A map which shows the distribution of different kinds of soils.

> Hilgard published an agricultural map of Mississippi in 1860 showing the distribution of the soils of the State. This was based principally upon the distribution of the native vegetation, especially upon the forest trees. Following out this idea, *soil maps* of all the cotton-producing States were published in connection with the Tenth Census. Much of this work has subsequently been republished in modified form by the several States and enlarged maps have been issued. Many general reconnoissances have been made by State geological surveys and by the transcontinental surveys for railroads. In 1892 the first *soil map*, based upon the texture and physical properties of soils, was issued by the World's Fair Commission of Maryland, in connection with the Handbook of the State prepared at the Johns Hopkins University. *Yearbook U. S. Dept. Agr.*, 1899, p. 344.

soil-mulsh (soil′mulsh), *n.* See ★*mulsh*.

soil-survey (soil′sėr-vā), *n.* A field and laboratory study of soils with regard to their relation to crops, involving their classification and local delimitation, the results being expressed finally in a soil-map. The classification is based mainly on physical features determined from samples, but chemical character and vegetation are also observed. Such surveys are undertaken by the United States government in conjunction with State institutions. *Yearbook U. S. Dept. Agr.*, 1899, p. 26.

soil-thermometer (soil′thėr-mom″e-tėr), *n.* A thermometer adapted to taking the temperature of the soil at a considerable depth.

sojurn, sojurner. Simplified spellings of *sojourn*, *sojourner*.

sol. An abbreviation (*b*) [*cap.*] of *Solicitor*.

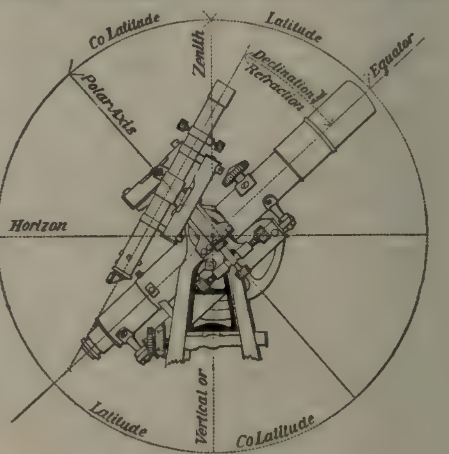
sola^3 (sō′lä), *a.* Feminine of *solo* or *solus*. See *solus*.

solanicine (sō-lan′i-sin), *n.* [*solan*(*ine*) + *-ic* + *-ine^2*.] A bright-yellow, amorphous, strongly basic compound, $C_{26}H_{39}ON$ (?), prepared by the action of concentrated hydrochloric acid on solanine. It melts and decomposes above 250° C.

solanidine (sō-lan′i-din), *n.* [*solan*(*ine*) + *-id* + *-ine^2*.] A colorless, basic compound, $C_{40}H_{61}NO_2$, prepared by the action of dilute hydrochloric acid on solanine. It crystallizes in long needles and melts at 88° C.

solanoma (sol-a-nō′mä), *n.*; pl. *solanomata* (-ma-tä). [NL., ‹ L. *solanum* (*tuberosum*), potato, + *-oma*.] A cancer of a type intermediate between scirrhus and encephaloid.

solar^1, *a.*—**Apparent solar day.** See ★*day^1*.—**Carrington's law of solar rotation.** See ★*law^1*.—**Solar attachment,** a later and improved form of Burt's solar compass, consisting of a small telescope with adjustments, attached to an engineer's transit or theodolite. It determines the true meridian directly within a minute or two of arc, by a simple pointing upon the sun. Compare *solar* ★*compass*.—**Solar cautery, climate, compass.** See ★*cautery*, etc.—**Solar constant.** It is the amount of heat received from the sun in a unit of time by a unit of area at the earth's mean distance perpendicularly exposed to the sun's rays and unshielded by atmosphere, that is, the amount of heat actually measured by the actinometer and corrected by adding the heat absorbed by the air. On account of the difficulty in determining this latter correction, the deduced values of the solar constant vary widely, ranging from about two to four gram-calories per square centimeter per minute. At present it is generally assumed to lie between 2.0 and 2.5. It is possible that it may vary with the condition of the sun's surface.—**Solar cyclone, flocculus, granule.** See ★*cyclone*, etc.—**Solar magnetic period.** See ★*period*.—**Solar motor, parallax, tide.** See ★*motor*, etc.—**Solar phosphori,** substances that are photoluminescent, emitting light as the result of exposure to sunlight. See ★*luminescence*.—**Solar star.** See ★*star^1*.



Solar Attachment.

solar^2 (sō′lär), *n.* [L. *solarium*. See *sollar*.] In Roman and early medieval houses, a terrace, or balcony, or a room much exposed to the sun; a sollar.

> Rooms at the side of the great hall were added, called *solars* (solaria), the sunny or light rooms. *Pollen*, Furniture at South Kensington, lxvii.

Solarian (sọ̄-lā'ri-ạn), *n.* [L. *solari(s)*, of the sun, + *-an.*] An inhabitant of the Utopian "City of the Sun." *C. Lombroso* (trans.), Man of Genius, p. 287.

solarization, *n.*—**Reversal by solarization,** in *photog.*, the conversion of what should be a negative image into a positive by over-exposure.—**Solarization of the earth,** in *meteor.*, the heat, light, or other influence received by radiation from the sun; insolation; incident solar radiation.

solarometer (sō-lạ̈-rom'e-tėr), *n.* [L. *solar(ium)*, sun-dial (?), + Gr. *μέτρον*, measure.] An instrument built upon the theory of the astronomical triangle, mounted upon a pedestal whose base is in the plane of the horizon: designed by Commodore W. H. Beehler, *U. S. N.* It affords a mechanical solution of the astronomical triangle, and obviates logarithmic and other mathematical calculations; it also combines in itself a pelorus, thereby furnishing a solution of the entire problem for ascertaining a ship's place in latitude and longitude, and the error of the compass. Another feature of the solarometer is that it provides means of observing astronomical angles independently of the sea horizon, as all calculations are made from the zenith.

soldado, *n.* **2.** The West Indian squirrel-fish, *Holocentrus ascensionis.*

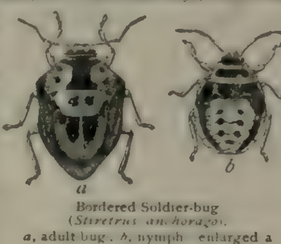
solder, *n.*—**Brass solder,** a class of copper-zinc alloys used for joining various parts of articles by fusion. The proportions vary from 34 parts of copper and 66 parts of zinc to 58 parts of copper and 42 parts of zinc. When brass solder is used for soldering iron and copper, tin is added to the copper and zinc, and the alloy changes in color from yellow to gray or white. In some brass solders a small proportion of lead is also added; but these are now used very rarely. The preparation of brass solders is usually effected by adding strongly heated zinc to melted brass, and pouring the mixture through a wet broom into cold water, thereby producing granulation.—**Pale solder.** See *pewterers'* ★*solder.* **Pewterers' solder,** an alloy of the color of lead or pewter, made up of tin and lead, with or without bismuth. When the alloy is tin (66⅔) parts and lead (33⅓), it is called *hard pale solder*; when bismuth is added it is called *middling pale solder.*—**Soft solder.** (*a*) The more fusible solder in general use for articles which need not withstand temperatures much above that of boiling water. It consists of an alloy of tin and lead in various proportions: *fine solder*, 2 parts tin to 1 part lead; *tinmen's solder*, 1 tin to 1 lead; *common* or *plumbers' solder*, 1 tin to 2 lead; *coarse solder*, 1 tin to 3 lead; *pewterers' solder*, 2 tin, 1 lead, and 1 bismuth.

soldier, *n.* **6.** (*g*) A scorpænoid fish, *Gymnapistes marmoratus*, of Tasmania. (*h*) A labroid fish, *Pseudolabrus miles*, of New Zealand. (*i*) A percoid fish, *Etheostoma cæruleum*, of the United States.—**9.** An artificial fly used in bass-fishing. *Jordan and Evermann*, Amer. Food and Game Fishes, p. xlviii.—**Soldier's spots,** whitish spots sometimes seen post-mortem on the serous surfaces of the pericardium, the peritoneal covering of the liver, etc. *Buck*, Med. Handbook, IV. 772.

soldier-ant, *n.* **2.** The bulldog ant of Australia

soldier-bird (sōl'jėr-bėrd), *n.* A name of two Australian honey-suckers, *Philemon corniculatus*, also called the *friar-bird*, and *Myzomela sanguineolenta.*

soldier-bug, *n.* **Bordered soldier-bug,** an American hemipterous insect, *Stiretrus anchorago*, of the family *Pentatomidæ*, red and black in color and predatory in habit, feeding upon the larva of the asparagus-beetle (*Crioceris asparagi*) and other injurious insects.—**Glassy winged soldier-bug,** an American capsid bug, *Hyaliodes vitripennis*, which is predatory in its habits and destroys leaf-hoppers and other small soft-bodied insects. It is a noted enemy of the grape-vine leaf-hopper. **Green soldier-bug,** an American pentatomid bug, *Nezara hilaris*, which preys on soft-bodied insects and also sucks the sap of tender plant growth. **Placid soldier-bug,** an American pentatomid bug, *Podisus placidus*, which destroys the imported currant-worm and other insect larvæ.



Bordered Soldier-bug (*Stiretrus anchorago*).
a, adult bug; *b*, nymph: enlarged a little more than two times.
(Chittenden, U. S. D. A.)

soldier-fish, *n.* **2.** A common name of a scorpænoid fish, *Sebastes kuhlii*, of Madeira.

soldier's-buttons (sōl'jėrz-but"nz), *n.* The marsh-marigold, *Caltha palustris.*

soldier's-cap (sōl'jėrz-kap"), *n.* The plant Dutchman's-breeches, *Bikukulla Cucullaria.*

soldier's-plume (sōl'jėrz-plöm"), *n.* The flaming or smaller purple fringed orchis, *Blephariglottis psychodes.*

soldino (sọl-dē'nō), *n.* [It., dim. of *soldo.* See *soldo.*] A small silver coin introduced in Venice in the fourteenth century, and subsequently current in other parts of Italy.

soldone (sọl-dō'nạ̄), *n.* [It., aug. of *soldo.* See *soldo.*] **1.** A copper coin of Mantua in the eighteenth century.—**2.** A billon coin of Venice, equal to 12 soldi.

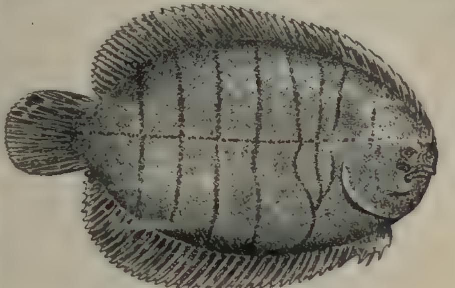
sole[1], *n.* **4.** (*o*) The closely interwoven mass of roots which forms the base of a turf.

> Crested dog's tail-grass . . . contributes materially to the production of a good "*sole*" in the turf of pastures.
> *W. Fream*, Complete Grazier, p. 898.

(*p*) In *golf*, the flat, bottom part of a club which rests on the ground. (*q*) The inner cylindrical surface of a water-wheel which forms the bottoms of the buckets on the periphery. See *sole-plate*, 2.

sole[1], *v. t.* **2.** In *golf*, to place the sole of (a club) on the ground immediately behind the ball in preparing for a shot.

sole[2], *n.* **2.** A name given to various Australian fishes: in Sydney to *Synaptura nigra*; in Melbourne to *Rhombosolea bassensis*; in New Zealand to *Rhombosolea monopus* (called the *flounder* in Tasmania) and *Peltorhamphus novæ-zelandiæ*; and in Tasmania to *Ammotretis rostratus*, of the family *Pleuronectidæ.* *E. E. Morris*, Austral English.—**American sole,** *Achirus fasciatus*, of the Atlantic coast of the United States.—**English sole,** a name given in California to the flounder, *Eopsetta Jordani.*—**Long-finned sole,** *Glyptocephalus zachirus*, found in deep waters of the northern Pacific.—**Mexican sole,** *Achirus mazatlanus*, a sole found on the west coast of Mexico.—**San Diego sole,** *Symphurus atricaudus*, known from San Diego to Cape San Lucas.—**Slippery sole,** *Microstomus pacificus*, found in rather deep water off the Pacific coast of North America, from Monterey to Unalaska.—**Tasmanian sole,** *Ammotretis rostratus*, a flatfish of the family *Soleidæ.*



American Sole (*Achirus fasciatus*).
(From Bulletin 47, U. S. Nat. Museum.)

sole-bar (sōl'bär), *n.* An outside sill in a railway car. [Eng.]

solem, *a.* A simplified spelling of *solemn.*

soleniform (sọ-len'i-fôrm), *a.* [NL. *Solen* + L. *forma*, form.] Having the form of the pelecypod genus *Solen.*

solenium (sọ-lē'ni-um), *n.*; pl. *solenia* (-ạ̈). [NL., < Gr. *σωλήνιον*, a small pipe or conduit.] In some alcyonarians, one of the canals lined by endoderm, which are given off as diverticula from the cœlentera of the zoöids comprising a colony and from which buds develop. *G. C. Bourne*, in Trans. Linn. Soc., Zool., March, 1900, p. 522.

solennemente (so-len-ẹ̄-män'tẹ̄), *adv.* [It., < *solenne*, solemn.] In *music*, with solemnity or dignity.

Solenopsidæ (sol-ẹ̄-nop'si-dē), *n. pl.* [NL., < *Solen* + Gr. *ὄψις*, form, + *-idæ.*] A primitive family of prionodesmaceous pelecypods having thin elongate valves with edentulous hinge and external ligament. Its representatives are found in rocks from the Silurian to the Triassic.

solenostelic (sō"lẹ̄-nọ-stē'lik), *a.* [Gr. *σωλήν*, a tube, + *στήλη*, a column.] In *bot.*, having a tubular stele with both external and internal phloem, as in certain ferns, etc. *Nature*, Nov. 19, 1903.

solentine (sol'en-tīn), *n.* [Variant of *celandine.*] The spotted touch-me-not, *Impatiens biflora.* Also called *ceroline* and *brook-celandine.*

sole-plate, *n.* **3.** Any bed-plate or base-plate on which a machine rests. It is ordinarily less massive than a bed-plate, and parts are bolted to it rather than cast in one piece with it.—**4.** The bed of a horizontal or reverberatory heating-furnace.—**5.** The casting underneath a large bearing for a shaft.

solfataric, *a.* **2.** Noting that stage in the expiring or quiescent phase of a volcano during which steam and vapors, more or less sulphurous, are alone emitted. *Geikie*, Text-book of Geol., p. 278.

sol-flower (sol'flou"ėr), *n.* The rock-rose, *Helianthemum Helianthemum.*

Sol.-Gen. An abbreviation of *Solicitor-General.*

solid, *a.* **15.** Of uniform color; self-colored: a pigeon-fanciers' term.—**Solid box,** a cylindrical bushing or bearing which has no joint; a deadeye.

solidity, *n.*—**Geometrical solidity,** tridimensional extension. *Sir W. Hamilton.*—**Physical solidity,** that property of matter which prevents two different bodies from occupying the same portion of space at the same time. *Sir W. Hamilton.*

solidus curve. [L. *solidus*, solid.] A curve which shows the temperatures of complete solidification or beginning liquefaction of a series of alloys containing every proportion of the two constituents. See *liquidus* ★*curve.*

> The authors give data for the liquidus and for the *solidus curve* for aluminum and tin.
> *Jour. Phys. Chem.*, May, 1904, p. 363.

Solinian (sọ-lin'i-ạn), *a.* [LL. *Solin(us)* (see def.) + *-ian.*] Of or pertaining to Solinus, a Roman grammarian and geographer of the third century A.D.

> The chief additional references [in mediæval maps] to what may be called the fact and fiction of the central Mediæval period do not lie in the monsters [geographical mythology] of South Africa (as some have supposed), for these are almost purely *Solinian.*
> *Geog. Jour.* (R. G. S.), XV. 141.

solitary, *a.* **12.** In *astron.*, noting certain stars which have no conspicuous neighbors (*α* Hydræ, for instance), or stars which are not members of a binary system, visual or spectroscopic. Called by W. Herschel *intersystematical.*

solitidal (sol-i-tī'dạl), *a.* [L. *sol*, sun, + E. *tide* + *-al*[1].] Pertaining to the tide produced by the sun. See *solar* ★*tide.*

solo, *n.* **3.** In *card-playing*, a bid to play without a partner or without discarding from the hand, as in solo whist and skat.—**Heart solo,** solo for three players, the pack being reduced to 24 cards by throwing out the 8 of hearts and all the diamonds but the 7. Diamonds are always color, and the only bid is solo. *Amer. Hoyle*, p. 292.

soloid (sol'oid), *n.* [*sol(id)* + *-oid.*] A compressed preparation of a drug.

> The contents are as follows: . . . pipette, vaseline, brush, &c.; cover-glasses when spread with blood, &c., ready for staining; "*soloids*" of various staining powders; tissue paper for blood spreads, etc.
> *Lancet*, July 4, 1903, p. 36.

Solomonian (sol-ọ-mō'ni-ạn), *a.* Of, pertaining to, or characteristic of, King Solomon: as, "*Solomonian* wisdom." *Ratzel* (trans.), Hist. of Mankind, I. 134.

Solomon's-seal, *n.* **1.** (*b*) In Tasmania, the turquoise-berry, *Drymophila cyanocarpa.* See ★*turquoise-berry.*—**Clustered, dwarf, small, zigzag Solomon's-seal,** the false Solomon's-seal, *Vagnera racemosa.*—**Two-leaved Solomon's-seal,** *Valentinia Canadensis.* Also called *false lily-of-the-valley* and *oneblade.* See *Maianthemum.*

soloric (sọ-lor'ik), *a.* [*Solor(ina)* + *-ic.*] Of or derived from *Solorina.*—**Soloric acid,** a ruby-red compound, $C_{15}H_{14}O_5$, contained in the lichen *Solorina crocea.* It crystallizes in lustrous monoclinic prisms or needles and melts at 199-201° C.

solotnik, *n.* See ★*zolotnik.*

solpugid (sol-pū'jid), *n.* and *a.* **I.** *n.* A member of the family *Solpugidæ.*

II. *a.* Having the characters of or belonging to the family *Solpugidæ.*

Solr. An abbreviation of *Solicitor.*

solubility, *n.*—**Coefficient of solubility,** in *chem.* or *phys.*, a numerical constant denoting the degree of solubility of a substance in a given solvent.—**Solubility product.** See ★*product.*

solut. An abbreviation of *solution.*

solute, *a.* **II.** *n.* The substance dissolved in a given solution: as, a solution is composed of solvent and *solute.*

> As the molecular weight of the *solute* is inversely proportional to the difference in the vapor pressure of solvent and solution, it follows that the observed vapor pressure of the solution was much too small to conform to theory. *Jour. Phys. Chem.*, May, 1904, p. 317.

solution, *n.*—**Almén's solution,** a solution prepared by dissolving 4 grams of potassium-sodium tartrate, 2 grams of bismuth subnitrate, and 10 grams of sodium hydrate in 90 cubic centimeters of water, heating to the boiling-point, and filtering on cooling. It is used in testing for glucose.—**Battley's solution.** Same as *laudanum.* Also known as *liquor opii sedativus.*—**Belt of solution,** in *geol.*, a phrase used by Van Hise to indicate a characteristic process of the 'belt of weathering,' a belt from which matter is removed by the solvent action of water. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. 487.—**Concentrated solution,** a strong solution; one containing a large proportion of the dissolved substance, either as approaching the maximum amount capable of solution, or as compared with the amount of most other substances soluble in the same liquid.—**Critical composition of solution,** the composition of the solution which belongs to the critical temperature.—**Critical solution,** a solution having the critical composition.—**Critical temperature of solution,** a temperature below which two liquids which are without chemical action on each other do not dissolve in each other in all proportions, while above this temperature they do thus dissolve.—**Decinormal solution.** See ★*decinormal*, 2.—**Dilute solution,** a weak solution; a solution containing a small proportion of the dissolved substance, either as compared with the maximum amount capable of solution, or as compared with the amount of most other substances soluble in the same liquid.—**Dunham's solution,** a bacteriological culture-medium which is composed of 10 grams of peptone and 3 grams of salt to the liter of water. It differs from ordinary nutrient bouillon in the absence of the constituents of beef extract. It is used to study the production of indol.—**Ehrlich-Biondi solution,** a staining mixture prepared by mixing solutions of acid-fuchsin, orange G, and methyl green, saturated at ordinary temperatures, in the proportion of 4 : 7 : 8 respectively. The resulting solution may then be diluted with water to the desired degree 1 : 50-100. It is essential that the dyes in question should be chemically pure. They are best obtained from the Berliner Actiengesellschaft für Anilinfabrikation. The solution is used in the study of the blood.—**Equimolecular solutions.** See ★*equimolecular*.—**Geometrical solution,** a solution by means of ruler and compasses only, that is, by straight lines and circles only.—**Gravity-solution** or **heavy solution.** Of the numerous solutions proposed, the following are the most important: *Thoulet's* or *Sonstadt's solution* and *Klein's solution*. See *gravity-solution*. *Braun's solution*, methylene iodide, CH_2I_2, having a density of 3.33. *Penfield's solution*, silver-thallium nitrate, liquid at 75° C, density 4.5. *Retger's solution*, mercury-thallium nitrate, liquid at 76° C, density 5.3. *Rohrbach's solution*, barium-mercury iodide, density 3.588.—**Heat of solution.** See ★*heat*.—**Heavy solution.** See *gravity-*★*solution*.—**Isotonic saline solution,** a solution in which the salts are in the same proportion as in the blood-plasma, so that when injected into the veins it causes no alteration in the blood-corpuscles.—**Isotonic solution.** See *isotonic saline* ★*solution*.—**Mandl's solution,** a solution of 10 grains of iodine, 4 grains of phenol, and 20 grains of potassium iodide, in one ounce of glycerin.—**Mayer's solution,** a solution of potassium-mercuric iodide used in chemical analysis for the detection and quantitative determination of alkaloids.—**Monsel's solution,** a deep red-brown, syrupy, aqueous solution of basic ferric sulphate of variable composition, which contains not less than 13.57 per cent. of metallic iron. It is a powerful styptic.—**Morton's solution,** a solution of 5 grains of iodine, and 30 grains of potassium iodide, in one ounce of glycerin.—**Nessler's solution.** (*b*) The solution of Nessler's reagent for the detection and determination of ammonia. It is made by precipitating a solution of mercuric chlorid by one of potassium iodide, adding the latter in excess until the precipitate is barely redissolved, and making the liquid so obtained strongly alkaline with potassium or sodium hydroxid.—**Normal salt solution,** in *med.*, a term often incorrectly used to denote the so-called *physiological salt solution*, or one containing approximately the same proportion of chlorid of sodium as the blood; the latter is more nearly a decinormal solution, or one one tenth the strength of a normal solution. Also *normal saline solution*. See *physiological salt* ★*solution*.—**Normal solution,** a solution which contains in one liter a sufficient quantity of a chemical reagent to replace, unite with, or directly or indirectly bring into action one gram of hydrogen. A liter of a normal solution of a chemical reagent therefore always contains a number of grams of the reagent equal to its molecular weight divided by the number of active hydrogen atoms it contains, or by the number of hydrogen atoms the active element or group it contains can replace. The following table illustrates the principle:

Reagent.	Formula.	Molecular Weight.	Normal Solution, grams per liter.
Hydrochloric acid	HCl	36.4	36.4
Sodium hydroxid	$NaOH$	40	40
Sulphuric acid	H_2SO_4	98	[illegible]
Phosphoric acid	H_3PO_4	108	36
Sodium chlorid	$NaCl$	58.4	58.4

Normal solutions are of great value in volumetric chemical analysis. When solutions of less strength than the normal are desired, they are diluted one half, one fifth, one tenth, and one one-hundredth, giving seminormal, quintinormal, decinormal, and centinormal solutions. These are usually abbreviated as $\frac{N}{2}$, $\frac{N}{5}$, $\frac{N}{10}$ and $\frac{N}{100}$.—**Orth's solution,** a mixture of 10 parts of Müller's fluid and 1 part of formol: used as a fixative agent in histological work.—**Pacini's solution,** a solution of sodium chlorid and corrosive sublimate, used to dilute the blood in counting the red corpuscles in a drop under the microscope.—**Perfusion solution.** See ★*perfusion*.—**Physiological salt solution,** a solution of sodium chlorid of the same strength as that found in the blood-serum of a given animal; when used for injections in man a 0.7 to 0.8 per cent. solution should be employed. Such a solution is said to be isotonic, and will not cause the dissolution of hemoglobin from the red blood-corpuscles. Physiological salt solution, injected subcutaneously or intravenously, is extensively utilized to combat heart-failure. Compare *normal salt* ★*solution*.—**Physiological solution.** Same as *physiological salt* ★*solution*.—**Ringer's solution,** a solution which is extensively used in physiological experiments as a substitute for blood-serum in maintaining the life of tissues. It is composed of 100 cubic centimeters of a 0.75 per cent. solution of sodium chlorid, 5 cubic centimeters of a 0.25 per cent. solution of calcium chlorid, 2.5 cubic centimeters of a 0.5 per cent. solution of bicarbonate of sodium, and the same amount of a 0.75 per cent. solution of potassium chlorid.—**Saline solution,** in *physiol.* and *pathol.*, when not otherwise qualified, a physiological solution of salt (sodium chlorid). See *physiological salt* ★*solution*.—**Salt solution.** Same as *saline* ★*solution*.—**Seiler's solution.** Same as *Seiler's* ★*spray*.—**Solid solution,** a solid homogeneous mixture of two or more constituents which remains homogeneous although their ratio is varied. One important property of a solution is that a dissolved substance diffuses from places where it is abundant to places where it is less abundant. The fact that diffusion may take place in solids suggested the conception of solid solutions. If clean gold and lead are left in close contact for ten years, gold is found to have diffused into the lead more than three or four hundredths of an inch from the surface. So carbon, absorbed by hot wrought-iron, diffuses to the center of the mass, as in making steel by cementation. The application of the principles governing solid solutions, not only to matters of purely theoretic interest, but also to important metallurgical processes, has been fruitful.

No one had done more than Sir Benjamin Baker to insist on the importance of phenomena which engineers used to consider "mysterious" in connection with the behaviour of steel, and his warnings and example were at last being regarded and followed. The lecturer pointed out that when metallurgists gave engineers mild steel, they provided a cinder-free *solid solution* of iron and carbon. All subsequent advance has been due to the recognition of this fact, and to the gradual studies of the properties of metallic *solid solutions*.
Nature, May 1, 1902, p. 19.

Solution tension. See ★*tension*.—**Solution theory,** the theory that steel and various alloys consist of solid solutions, subject to the laws of solid solutions, and to be studied by the same methods.—**Standard solution,** in *analyt. chem.*, a solution made of such strength that one cubic centimeter of it corresponds to some convenient definite quantity of a substance whose amount is to be determined by measuring the volume of the standard solution required to complete some suitable reaction with it. Since Gay-Lussac the assay of silver is made by dissolving in nitric acid an amount of the alloy which contains a little more than one gram of silver, precipitating the silver by a standard solution of sodium chlorid of such strength that 100 cubic centimeters of it precipitate one gram of silver, and measuring the volume of the standard solution required. See *standardized solution*.—**Supersaturated solution,** in *phys. chem.*, a solution which contains more dissolved substance than produces saturation at the actual temperature if the solution is in contact with undissolved solid. The addition of a minute fragment of the solid will cause the excess of the dissolved salt to crystallize, and the temperature of the solution to rise; even a mechanical disturbance will end the supersaturation, if it be considerable.—**Thiersch's solution,** a solution of salicylic acid 2 parts, boric acid 12 parts, in distilled water 1,000 parts, used as an antiseptic lotion.—**Toison's solution,** a solution used as a diluent in counting the blood-corpuscles with the hematocytometer: it also prevents the blood from clotting. It has the following composition: sodium chlorid 1 gram, sodium sulphate 8 grams, neutral glycerin 30 grams, distilled water 160 grams, methyl violet 5B 0.025 grams.—**Vapor pressure of a solution.** See ★*pressure*.—**Wackenroder's solution,** a liquid obtained by passing sulphureted-hydrogen gas into an aqueous solution of sulphur dioxid. It is a complex mixture, containing pentathionic acid, and probably also hexathionic, tetrathionic, trithionic, and sulphuric acids.—**Ziehl's solution,** a carbol-fuchsin of the following composition: 1 part of fuchsin, 100 parts of a 5 per cent. aqueous solution of carbolic acid, and 10 parts of absolute alcohol.

solutional (sọ-lū'shọn-al), *a.* [*solution* + *-al*¹.] Of the nature of a solution; of or pertaining to solution. *Nature*, Dec. 3, 1903, p. 103.

solution-plane (sọ-lū'shọn-plān), *n.* See ★*plane*¹.

solution-pressure (sọ-lū'shọn-presh″ụ̈r), *n.* See ★*pressure*.

solutol (sol'ụ-tol), *n.* [L. *solutus*, pp. of *solvere*, dissolve, + *-ol*.] A trade-name of a mixture of cresol and its sodium salt. It is soluble in water and is used as a disinfectant.

Solutrian (sọ-lū'tri-a̤n), *a.* [F. *Solutré*, a cave in the Mâcon district, Saône-et-Loire.] Of or pertaining to the Solutré cave; specifically, noting the third of De Mortillet's paleolithic periods, characterized by flint implements of higher perfection than the preceding Chellian and Moustierian periods. Also *Solutrean*. *Keane*, Ethnology, p. 87.

M. Armand Viré describes the *Solutrean* cavern of Lacave (Lot), which yielded many objects of reindeer horn, some bearing carvings (one a spirited head of antelope), and well-worked flint implements.
Athenæum, Jan. 20, 1906, p. 82.

solv, *v.* A simplified spelling of *solve*.

solvate (sol'vāt), *n.* [*solv*(*ent*) + *-ate*¹.] In *phys. chem.*, a term suggested to denote supposed compounds of one or more molecules of a solvent either with the ions or with the undissociated molecules of a dissolved substance: if the solvent is water, these compounds are called *hydrates*. *Jour. Phys. Chem.*, Jan., 1905, p. 80.

Solvent naphtha. See *naphtha*, 2.

solveol (sol'vẹ̄-ol), *n.* [L. *solvere*, dissolve, + *-ol*.] **1.** A trade-name of a mixture of cresol and sodium cresotinate. It is used in medicine internally like creosote.—**2.** A trade-name of solutions of mixtures of the cresols and salicylates.

solvin (sol'vin), *n.* [L. *solvere*, dissolve, + *-in*².] A trade-name of sodium sulphoricinate. See ★*sulphoricinate*.

sölvsbergite (sėlvs'berg-īt), *n.* [*Sölvesberg*, Norway, + *-ite*².] In *petrog.*, a dense aphanitic to fine-grained igneous rock composed of alkali feldspars (albite and microcline) with ægirite, and sometimes hornblende (katoforite), with or without quartz or nephelite; a grorudite poor in quartz. *Brögger*, 1894.

soma¹, *n.* (*c*) The body of a multicellular organism as contrasted with its germ-cells.

In the Metazoa, according to my opinion, the germ-cells are immortal like the Protozoa . . . ; only the *soma* dies. *Eimer* (trans.), Organic Evolution, p. 68.

somæsthetic, *a.* See ★*somesthetic*.

somal (sō'ma̤l), *a.* [*soma*¹ + *-al*¹.] Of or pertaining to the body. *Proc. Zool. Soc. London*, 1900, p. 133.

soma-plasm (sō'ma̤-plazm), *n.* [Gr. *σῶμα*, body, + *πλάσμα*, anything formed.] The plasm or protoplasm of the body-cells of an organism, in contradistinction to the reproductive plasma of the germ-cells.

With Weismann, we suppose the germ-plasm to be different in kind from the general *soma-plasm*.
Encyc. Brit., XXIX. 259.

Somaschian, *n.* **II.** *a.* Pertaining to the religious society of Somaschians.

somatalgia (sō-ma̤-tal'ji-ä̤), *n.* [NL., < Gr. *σῶμα*(*τ-*), body, + *ἄλγος*, pain.] Bodily pain. *G. S. Hall*, Adolescence, I. 480.

Somatic cell. (*b*) A cell that takes part in the formation of the soma or body, as distinguished from a germ-cell. See ★*soma*1 (*c*).

But, from another point of view, it may be said with equal accuracy that the fertilized ovum gives rise in development to two sets of elements—to the *somatic cells* which become differentiated into the various tissues of the body, and to a lineage of non-specialized germ-cells, some of which will eventually be separated off to begin a new generation. *Encyc. Brit.*, XXXII. 209.

Somatic mesoblast. See ★*mesoblast*, 2.

somatically (sọ-mat'i-ka̤l-i), *adv.* Corporeally; as regards the body or soma.

But while the Seri Indians are so well developed *somatically*, are runners in a land of running peoples (their very name signifies 'spry'), . . . 'they have been no less notorious among the Caucasian settlers of two generations for unparalleled laziness.'
A. F. Chamberlain, in Pop. Sci. Mo., March, 1902, p. 421.

somaticos (sọ-mat'i-kos), *n.*; pl. *somaticoi* (-koi). [Gr. *σωματικός*, adj.: see *somatic*.] The human body; man viewed from an anatomical point of view without regard to his psychic activities. [Rare.]

Accordingly, the *somatikos* is gradually reshaped by the demotic activities; and, since the course of development of the activities is convergent, the somatic modification is also convergent, and hence bodies of unrelated peoples tend toward a common type.
J. W. Powell, in An. Rep. Bur. Amer. Ethnol., 1895-96, [xxxviii.

somatoblast (sō'ma̤-tọ-blȧst), *n.* [Gr. *σῶμα*(*τ-*), body, + *βλαστός*, germ.] A blastomere which is to give rise to the ventral plate and nervous system of an annelid.

somatochrome (sō'ma̤-tọ-krōm), *n.* [Gr. *σῶμα*(*τ-*), body, + *χρῶμα*, color.] A nerve-cell which possesses a well-marked cell-body surrounding the nucleus on all sides and staining deeply in basic aniline dyes. *Nissl*.

Cells which react both as to their nuclei and as to their cell bodies to the Nissl stain. To these cells Nissl has given the name "*somatochromes*."
F. R. Bailey, in Jour. Exper. Med., Oct. 1, 1901, p. 552.

somatoderm (sō'ma̤-tọ-dėrm), *n.* [Gr. *σῶμα*(*τ-*), body, + *δέρμα*, skin.] The somatopleura or somatic layer of mesoderm in the vertebrate embryo.

somatogenetic (sō″ma̤-tọ-jẹ̄-net'ik), *a.* [Gr. *σῶμα*(*τ-*), body, + *γένεσις* (*γενετ-*), origin, + *-ic*.] In *biol.*, arising in the somatic elements of the body and not in the germ-cells: opposed to ★*blastogenetic*: said of the acquired as opposed to the congenital characters of an organism.

But although the modifications thus induced may be and generally are adaptive,—such as the increased muscularity caused by the use of muscles, "practice making perfect" in the case of nervous adjustments, and so on,—in no case can these so-called acquired or "*somatogenetic*" characters exercise any influence upon the germ-cells, such that they should re-appear in their products (progeny) as congenital or "blasto-genetic" characters.
G. J. Romanes, in Smithsonian Rep., 1890, p. 441.

somatogenic, *a.* **2.** Pertaining to or concerning origin from the larval or later stages of development. [Rare.]—**Somatogenic variation.** See ★*variation*.

somatography (sō-ma̤-tog'ra̤-fi), *n.* [Gr. *σῶμα*(*τ-*), body, + *-γραφία*, < *γράφειν*, write.] The description of the physical characteristics of the races of man.

somatologist (sō-ma̤-tol'ọ̄-jist), *n.* [*somatolog*(*y*) + *-ist*.] One who devotes himself to, or is versed in, the study of somatology.

This plan of partial deportation and colonization was familiar to the Carthaginians, Romans, and other enterprising nations of the Mediterranean Basin, and explains to a large extent the constant blending of extreme physical types which the *somatologist* discovers in the remains from the oldest cemeteries around that great interior sea.
D. G. Brinton, in Smithsonian Rep., 1893, p. 594.

somatophyte (sō′mạ-tọ-fīt), *n.* [Gr. σῶμα(τ-), body, + φυτόν, plant.] A plant some part of which ceases from growth, thus forming a body. All the higher plants are somatophytes, and qualifiedly even those unicellular ones (*Vaucheria*, *Mucor*) in which growth is at length only apical. Opposed to *asomatophyte*. *Pfeffer* (trans.), Physiol. of Plants, II. 3.

somatophytic (sō″mạ-tọ-fit′ik), *a.* [*somatophyt(e)* + *-ic*.] Of the nature of a somatophyte: opposed to *asomatophytic*. *Pfeffer* (trans.), Physiol. of Plants, II. 6.

somatoplasma (sō″mạ-tọ-plaz′mạ̈), *n.* [NL.] Same as *somatoplasm*.

somatopsychic (sō″mạ-tọ-sī′kik), *a.* [Gr. σῶμα(τ-), body, + E. *psychic*.] Consisting of mind and body; pertaining to mind and body, or to their relation.

> Consciousness is a function of the associative mechanism and may be considered in its threefold relationship to the outer world, the body and self — allopsychic, *somatopsychic*, and autopsychic. *Buck*, Med. Handbook, V. 27.

somatopsychical (sō″mạ-tọ-sī′ki-kạl), *a.* [Gr. σῶμα(τ-), body, + ψυχικός, of the mind, + *-al*¹.] Relating to both body and mind: as, "*somatopsychical* ideas of anxiety." *Alien. and Neurol.*, Feb., 1903, p. 56.

somatose (sō′mạ-tōs), *n.* [Gr. σῶμα(τ-), body, + *-ose*.] A commercial peptone (albumose) preparation. *Buck*, Med. Handbook, I. 186.

somatosplanchnic (sō″mạ-tọ-splangk′nik), *a.* [Gr. σῶμα(τ-), body, + σπλάγχνα, viscera, bowels, + *-ic*.] Of or pertaining to both the somatic and splanchnic layers of mesoderm. *Philos. Trans. Roy. Soc.* (London), 1890, ser. B, p. 165.

somesthesis (sō-mes-thē′sis), *n.* [Gr. σῶμα, body, + NL. *æsthesis*.] A supposed subconscious alertness or diffused 'touchiness' due to varying tonicity of the sensory centers of the cortex.

> I shall use the term 'kinesthesis' for that diffused sensation-feeling due to variations in muscular tonicity; 'cœnesthesis' for the sea of undifferentiated organic 'tone'; and, finally, '*somesthesis*' for the melange of sensibility due to the fusion of currents coming from low-tension ('tonal') functioning of the specific-sensation centers.
> *T. P. Bailey*, in Jour. Philos., Psychol., and Sci. [Methods, Dec. 20, 1906, p. 710.

somesthetic (sō-mes-thet′ik), *a.* [Gr. σῶμα, body, + E. *esthetic*.] Relating to organic or common sensation: noting an area in the cortex of the brain which is believed to be the center for such sensation.

> At a rough estimate it may be said that the association areas constitute two-thirds of the human cerebral cortex, while only the remaining third, taking the *somæsthetic* and sense-areas together, is provided with projection fibers chiefly.
> *Amer. Anthropologist*, Oct.–Dec., 1903, p. 609.

somite, *n.* — **Mesoblastic somite**, one of the segmental or metameric pieces of mesoblast found in embryos of annelids, arthropods, and vertebrates: same as *protovertebra* in vertebrate embryology. The mesoblastic somites are of considerable theoretical importance as indicating the number of segments in the body or particular regions of the body, like the head, trunk, etc.

somnal (som′nạl), *n.* [L. *somnus*, sleep, + *-al*³.] A trade-name of a solution of chloral hydrate and urethane in alcohol. It is used in medicine as a hypnotic. *Jour. Soc. Chem. Industry*, IX. 101.

somnambulancy (som-nam′bụ̄-lạn-si), *n.* Somnambulism; somnambulance.

> The enthusiast passes through life in a sort of happy *somnambulency* — smiling and dreaming as he goes, unconscious of whatever is real, and busy with whatever is fantastic. *Isaac Taylor*, Nat. Hist. Enthusiasm, i.

somnambulize (som-nam′bụ̄-līz), *v.*; pret. and pp. *somnambulized*, ppr. *somnambulizing*. [*somnambul(ism)* + *-ize*.] I. *trans.* To put into a sleep-walking state; mesmerize or hypnotize into such a state.

II. *intrans.* To fall into a state of somnambulism or of sleep-walking; act in such a state.

somnifuge (som′ni-fūj), *n.* [L. *somnus*, sleep, + *fugere*, flee.] Something that drives away or prevents sleep. [Rare.]

> I am not sure we would have [the nightingale] if we could, for, in spite of the poets, . . . he has a bad character . . . as a *somnifuge*. *Lowell*, Letters, II. 411.

Somniosus (som-ni-ō′sus), *n.* [NL., < LL. *somniosus*, sleepy, < *somnus*, sleep.] A genus of scymnoid sharks known from northern seas.

somnipathy (som-nip′ạ-thi), *n.* [L. *somnus*, sleep, + Gr. πάθος, passive state.] Hypnotic sleep. [Rare.]

somnium (som′ni-um), *n.*; pl. *somnia* (-ạ̈). [L., < *somnus*, sleep.] A dream; the dreaming state; the semiconscious state between sleeping and waking.

somnoform (som′nọ-fôrm), *n.* [L. *somnus*, sleep, + *-form*. Compare *chloroform*.] An anesthetic mixture of ethyl and methyl chlorid with a small quantity of ethyl bromide.

Son of Heaven. See ★*heaven*.

Sonata di camera, a chamber sonata. — **Sonata di chiesa**, a church sonata.

sonder (zọn′der), *a.* [Abbr. of G. *sonderklasse*, < *sonder*, special, particular, + *klasse*, class.] Noting a class of small yachts which originated in Germany, and which are restricted in relation to points in construction and sail area. In the aggregate of water-line length, extreme beam, and extreme draft they must not exceed thirty-two feet: as, for example, a water-line of 22 feet, beam of 6 feet, and draft of 4 feet. They must not cost to build more than $1,440 in Germany or more than $2,400 in America, including two suits of sails. Another feature of this sonder class is that their displacement must not be less than 4,035 pounds, and it is required also that their draft of water and their water-line length must be measured with stores on board but without a crew, which latter must consist of three men, all amateurs, and citizens of the country in which the yacht is built. Hollow spars cannot be used, and the sail area is restricted to 550 square feet. Races are sailed under the rules of the International Yacht Racing Union.

> *Sonder* yachtsmen, both victors and vanquished.
> *N. Y. Evening Post*, Sept. 9, 1909.

songsmith (sông′smith), *n.* A song maker; a poet. *Athenæum*, March 18, 1905, p. 329. [Rare.]

song-speech (sông′spēch), *n.* A method of speaking that approximates song, — is characterized, that is, by fuller resonance, longer quantities, more continuity of tone, and more definite modulations of pitch than are usual in ordinary speech.

sonomaite (sō-nō′mạ-īt), *n.* [*Sonoma* (see def.) + *-ite*².] A hydrated sulphate of aluminium and magnesium, which occurs in silky crystalline forms at the geysers in Sonoma county, California.

sonora (sọ-nō′rạ̈), *n.* [From *Sonora*, one of the states of Mexico.] A local storm originating east of San Diego, in the mountains of California or adjacent Arizona, and descending from the east, but preceded by westerly winds. Storms of a similar character occur also in the northern part of the Great Basin of California.

Sonoran (sọ-nō′rạn), *a.* and *n.* I. *a.* 1. Of or pertaining to Sonora, Mexico.

> The division of the northern part of Arctogæa into a palæarctic and a nearctic region is, however, retained; and it is somewhat regrettable to find that the author is unable to convince himself of the necessity of a *Sonoran* region. *Nature*, Aug. 14, 1902, p. 374.

2. Of or pertaining to a long-headed Indian type which is found in the state of Sonora and scattered over the southwestern parts of the United States. — **Sonoran region, Sonoran zone**, a zoögeographical region instituted by Cope, in 1875, including northern Mexico and adjoining desert portions of New Mexico, Arizona, Nevada, and eastern California. As defined by Merriam, in 1890, the Sonoran zone included also the peninsula of Lower California and part of western Texas as well as much of central Mexico. The term was loosely used by Cope, whose map and description do not agree with one another.

II. *n.* A division of the supposed Uto-Aztecan linguistic family: equivalent to *Piman*.

Sonorous texture, the texture of the sonorous stone which gives forth a musical sound when struck lightly with a mallet. See *sonorous stone*, under *sonorous*.

> Large Canton Punch Bowl. *Sonorous texture.*
> *Marquand Catalogue*, 1903.

Sonsonate balsam. See ★*balsam*.

sool² (söl), *v. t.* 1. To excite (a dog) or set him on; 'sic' (a dog). *E. E. Morris*, Austral English.

> She went quickly towards her camp, calling softly, 'Birree gougou,' which meant '*Sool* 'em, *sool* 'em,' and was the signal for the dogs to come out. Quickly they came and surrounded the black fellows.
> *Mrs. K. L. Parker*, Australian Legendary Tales, p. 90.

2. To worry, as a dog worries a rat.

soomga (söm′gạ̈), *n.* [Russ. *semga*, *sëmga*, pron. syōm′gạ̈, a salmon.] A large sea-trout, *Salmo gairdneri*, common on the Pacific coast; the steelhead.

sooner (sö′nėr), *n.* [*soon*, *a.*, + *-er*³.] In the western States, any one who settles on government territory before it is legally opened to settlers and thus gains the choice of land and location; hence, any one who gains an unfair advantage by getting ahead of others. [Slang, U. S.]

> As the Department holds that every person who now goes upon the strip is a "*sooner*" and loses his rights to take land there, the negatives will become valuable evidence against those going in now to hunt out good claims.
> *Weekly Post*, N. Y., Aug. 2, 1893.

soor (sör), *n.* Aphthæ; thrush.

> The streptococcus in pure culture was found in the pus of the cerebro-spinal meninges, but the *soor* fungus appeared in the cultures made from both kidneys.
> *Jour. Exper. Med.*, Feb. 4, 1905, p. 396.

soothless (söth′les), *a.* Truthless; treacherous; false.

> Lochiel. — Down *soothless* insulter! I trust not the tale:
> Though my perishing ranks should be strewed
> in their gore.
> *Campbell*, Lochiel's Warning.

soot-proof (sůt′pröf), *a.* Not affected by soot or deposited carbon, as apparatus and devices for igniting or for other purposes within the combustion chambers of internal-combustion engines, which are likely to become coated with lampblack from incomplete combustion.

soot-sucker (sůt′suk″ėr), *n.* A device for removing deposits of carbon, in the form of soot, lampblack, or cinders, by the aspirating effect of a current of steam which induces a flow of air and carries out the deposited carbon. Water may also be used to induce the motion. Also called *cinder-ejector*.

sooty-wing (sůt′i-wing), *n.* An American hesperiid butterfly, *Pholisora catullus*, widespread in the United States. Its larvæ live on *Chenopodium*.

sop. An abbreviation of *soprano*.

sophic, *a.* 2. Relating to the philosophic opinions of man, including the beliefs of primitive tribes.

> The *sophic* activities so highly developed among the tribes of the arid pueblo region.
> *J. W. Powell*, in An. Rep. Bur. Amer. Ethnol., 1897– [98, p. xlv.

sophiology (sof-i-ol′ọ-ji), *n.* [Gr. σοφία, wisdom, + -λογια, < λέγειν, speak.] The scientific study of the philosophies developed by the various races of man, from the most primitive tribes to the present civilized nations.

> The sciences of esthetology, technology, sociology, philology, and *sophiology*.
> *J. W. Powell*, in An. Rep. Bur. Amer. Ethnol., 1897– [98, p. xii.

sophoretin (sof-ọ-rē′tin), *n.* [*Sophora* + *-et-* + *-in*².] A yellow compound, $C_{15}H_{10}O_7$, prepared by the action of dilute sulphuric acid on sophorine. It crystallizes in yellow needles and closely resembles quercitin in general properties.

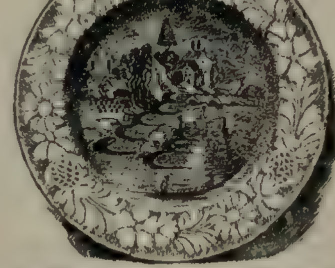
sophorine (sof′ọ-rin), *n.* [*Sophora* (see def.) + *-ine*².] A colorless crystalline alkaloid, $C_{11}H_{14}ON_2$, contained in the seeds of *Sophora tomentosa*, *S. secundiflora*, *Anagyris fœtida*, and *Euchresta Horsfieldii*: same as ★*baptitoxine*, *cytisin*, and *ulexine*.

sophronist (sō′frō-nist), *n.* [Gr. σώφρων, of sound mind, prudent, + *-ist*.] A cautious, meticulous person; one who is afraid to go too far; one who is given to qualifying his statements. [Rare.]

> The latter's [youth's] instincts are far wiser than they know, for iconoclasm is never better directed than against the literalist, formalist, and *sophronist*.
> *G. S. Hall*, Adolescence, II. 412.

sopilka (sọ-pil′kạ̈), *n.* See *sopelka*.

sopra bianco (sō′prạ̈ bẹ-än′kō). [It. *sopra*, above, over, + *bianco*, white.] In *ceram.*, a style of decoration in which the design is painted in white enamel on a ground of a slightly different tint. See *damassé*, 2. Also called *bianco sopra bianco*.



Sopra Bianco. — Delf plate, Bristol, 18th century.
(In the Pennsylvania Museum, Philadelphia.)

sora, *n.* — **King sora**, a name sometimes given to the Florida gallinule, *Gallinula galeata*.

sorbinose (sôr′bin-ōs), *n.* [*sorbin* + *-ose*.] Same as *sorbin*, which term it has now superseded.

sorbite, *n.* 2. A constituent of steel; practically pearlite which has not had time to become perfectly formed. The solid solution of carbon in iron (austenite) will decompose into pearlite, together with either excess ferrite or excess cementite, according as the percentage of carbon is less or more than 0.90 per cent. The complete decomposition of the austenite requires time, and there is therefore very frequently only a partial resolution into pearlite. The transition-forms between the austenite and pearlite are called respectively *martensite, troostite,* and *sorbite.* Present knowledge does not disclose fully the nature of these transition-forms.

Austenite, troostite, *sorbite,* and other constituents [of iron] have also been described. *Encyc. Brit.*, XXIX. 572.

sorbitic (sôr-bit'ik), *a.* [*sorbite* + *-ic.*] Pertaining to or of the nature of sorbite: as, *sorbitic* steel.

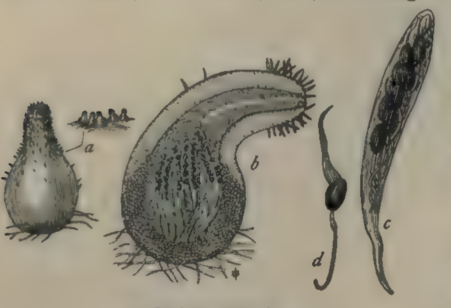
Stead and Richards in a paper on *sorbitic* steel rails give a simple method for the production of sorbite in steel. *Electrochem. Industry,* Feb., 1904, p. 51.

sorbitol (sôr'bi-tol), *n.* [*sorbite* + *-ol.*] Same as *sorbite,* 1, which term it has now superseded.

sorbose (sôr'bōs), *n.* [*sorb*¹ + *-ose.*] Same as ★*sorbinose.*

sorcerer, *n.* 2. A fish of the family *Nettastomidæ,* found in the deep sea, having a fragile body and a thin skin charged with black pigment.

Sordaria (sôr-dā'ri-ä), *n.* [NL. (Cesati and De Notaris, 1863), < L. *sordes,* filth, referring to the habitat of many of the species.] A genus of pyrenomycetous fungi having separate perithecia and unicellular dark-colored spores frequently provided with hyaline appendages. The species are numerous and widely distributed. Many are found on dung. *S. fimiseda* occurs on horse and cow dung in Europe and North America.



Sordaria fimiseda.
a, ascocarps, or perithecia; *b,* vertical section of a perithecium; *c,* ascus, or spore-case; *d,* spore.

Sordariaceæ (sôr-dā-ri-ā'sẹ-ē), *n. pl.* [NL., < *Sordaria* + *-aceæ.*] A family of pyrenomycetous fungi named from *Sordaria,* one of its principal genera. Most of the genera and species are found on dung.

sordidin (sôr'di-din), *n.* [NL. *sordida* (see def.) + *-in*².] A colorless neutral compound, $CH_3OC_{12}H_7O_7$, contained in the lichens *Lecanora sordida* and *L. sulphurea.* It crystallizes in needles, melts at 210° C., and is volatile without decomposition.

sore¹, *n.*—**Veldt sore,** a painful ulcer, of the hands or feet chiefly, occurring in South Africa. Also called *Natal boil.*

sorehead, *n.* 3. Same as ★*bird-pox.*

Sorel's cement. See ★*cement.*

sore-shin (sōr'shin), *n.* Same as *sore-shin* ★*disease.*

Soret phenomenon or **principle.** See ★*phenomenon.*

sorghum-blight (sôr'gum-blīt), *n.* A disease of sorghum producing red spots on the culms and leaves, believed to be due to *Bacillus Sorghi.*

sorghum-evaporator (sôr'gum-ẹ̄-vap"ọ-rā-tọr), *n.* A device for removing moisture or excess of liquid from sorghum molasses.

sorghum-knife (sôr'gum-nīf), *n.* A heavy knife used for cutting sorghum.

sorghum-midge (sôr'gum-mij), *n.* A cecidomyiid fly, *Diplosis sorghicola,* which deposits its eggs in sorghum heads in the southern United States, and whose larvæ absorb the juices from the young ovaries, causing a sterility of the seeds. *Science,* Jan. 17, 1908, p. 114.

sorghum-smut (sôr'gum-smut), *n.* See ★*smut.*

soroban (sō-rō-bän'), *n.* [Jap.] The Japanese abacus.

sororiation (sọ-rō-ri-ā'shọn), *n.* [L. *sororiare,* grow up or swell together: said of the female breasts.] The enlarging of the female breasts at puberty.

sorority (sọ-rō'ri-ti), *n.* [NL. *sororitas,* sisterhood, < L. *soror,* sister.] A sisterhood, corresponding to *fraternity:* often applied to women's Greek letter societies.

One saw many of those neat little *sorority* pins the American girl proudly brings home from boarding-school or college.
E. Insley, in Harper's Mag., Sept., 1900, p. 490.

sorosis, *n.* 2. A woman's club; specifically, the first woman's club in America, organized in 1868.

Sorosporium (sō-rọ-spō'ri-um), *n.* [NL. (Rudolphi, 1829), < Gr. σωρός, heap, + σπόρος, seed, referring to the masses of spores.] A genus of smut-fungi of the order *Ustilaginales,* having the spores loosely united in small spherical masses which are surrounded by a gelatinous envelop when young. *S. Ellisii* occurs frequently and destroys the inflorescence of species of *Andropogon.*

sorrel¹, *n.*—**Engelmann's sorrel.** Same as *drop-seed* ★*dock.*—**Guinea sorrel.** Same as *Indian sorrel* (which see, under *sorrel*¹).—**Ladies' sorrel,** *Oxalis stricta,* a delicate species with yellow flowers, ranging throughout most of temperate North America east of the Rocky Mountains and introduced into Europe. Also called *upright yellow-wood sorrel.*—**Queensland sorrel,** the green kurrajong, *Hibiscus heterophyllus,* the young shoots, leaves, and roots of which are eaten by the aborigines.—**Upright yellow-wood sorrel.** See *ladies'* ★*sorrel.*

sorrel-dock (sor'el-dok), *n.* See ★*dock*¹.

sorrel-tree, *n.* 2. The stagger-bush, *Pieris Mariana.*

Sorrento work. See ★*work.*

sortation, *n.* II. *a.* Of or pertaining to sorting.

On a Correct Colour Code or *Sortation* Code in Colours.
Geog. Jour. (R. G. S.), XVIII. 342.

sortes, *n. pl.*—**Sortes viales,** in *Rom. antiq.,* divination by a lot drawn by the first person encountered on the street.

sortilegic (sôr-ti-lej'ik), *a.* [*sortilege* + *-ic.*] Divinatory; of or pertaining to sortilege.

Seri warfares, like the hunting customs of the tribe, is 'largely *sortilegic,*' and the warfare of the tribe (devoid of military tactics in the strict sense of the term) is 'merely an intensified counterpart of their chase.'
Science, May 17, 1901, p. 782.

sorting-boom (sôr'ting-böm), *n.* In *lumbering,* a strong boom used to guide logs into the sorting-jack, to both sides of which it usually is attached.

sorting-gap (sôr'ting-gap), *n.* See ★*sorting-jack.*

sorting-hammer (sôr'ting-ham"ėr), *n.* A hammer of about two pounds weight, shaped like a narrow, blunt ax, used to break ores for sorting.

sorting-jack (sôr'ting-jak), *n.* In *lumbering,* a raft, secured in a stream, through an opening in which logs pass to be sorted by their marks and diverted into pocket booms or the down-stream channel. Also called *sorting-gap.*

sospirando (sọs-pi-rän'dō), *a.* [It., ppr. of *sospirare,* sigh.] Sighing: used, in *music,* to denote passages that are to be rendered in a doleful manner.

sospiro (sọs-pē'rō), *n.* [It., a sigh, < *sospirare,* sigh. See ★*sospirando.*] In *music,* an old name for a crotchet or quarter-note rest; also, earlier, for a minim or half-note rest.

sospiroso (sọs-pi-rō'sō), *a.* [It., < *sospiro,* a sigh.] Doleful: used, in *music,* like ★*sospirando.*

soterial (sọ-tē'ri-a̤l), *a.* [Gr. σωτήρ, savior, + *-i-al*¹.] Of or pertaining to the Saviour or to salvation; soteriological.

The *soterial* pith of the Gospel is simple and soon exhibited. *Howard Crosby,* Christian Preacher, ii.

sotol (sō-tōl'), *n.* [Nahuatl *zotoli,* the ancient Mexican name.] In the southern United States and Mexico a name given to several species of yucca-like plants belonging to the genus *Dasylirion,* sometimes called bear-grass. The fleshy crown at the apex of the stem of *Dasylirion Texanum* and *D. Wheeleri* are roasted and eaten by the Mexicans and Indians, and yield an inferior brandy called *mezcal de sotol,* which is distilled in the same manner as the common mescal from the agave. The ancient Mexicans wove sandals (*zotolcactli*) and mats (*zotolpetlatl*) from the leaves. The fresh ladle-like leaf-bases of *Dasylirion acrotrichum* are now used in some of the markets as receptacles for carrying home lard, olives, oil, etc.

sou. An abbreviation of *southern.*

Soubise sauce. See ★*sauce.*

souchong, *n.* Souchong tea is prepared from the souchong leaves, namely the fourth and fifth from the tip of the shoot, or is of a quality regarded as corresponding to these. The leaf is longer and thinner than in the congous, in the prepared state folded rather than curled or twisted. In drinking-quality the souchongs are similar to the congous; the flavor is technically described as 'tarry.' Six trade subclasses are enumerated. Cf. *congou* ★*tea,* ★*pekoe.*—**Pekoe souchong,** a grade of tea somewhat coarser than pekoe.

Soudan III. See ★*Sudan III.*—**Soudan formation.** See ★*formation.*—**Soudan G.** See ★*Sudan G.*

souesite (sö'e-sīt), *n.* [Named after F. *Soues,* who sent the specimen for examination.] A native nickel-iron alloy from the auriferous gravels of the Fraser river in British Columbia: closely allied to awaruite, but containing somewhat more nickel.

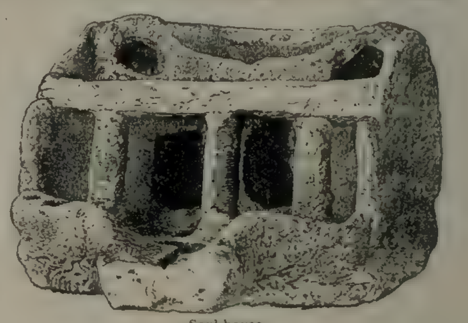
souffle, *n.*—**Funic souffle,** a soft blowing sound heard on auscultation of the abdomen of a pregnant woman, believed to be caused by the movement of blood in the umbilical cord. *Buck,* Med. Handbook, IV. 342.

soufrière (sö-fri-yãr'), *n.* [F. *soufrière,* < *soufre,* sulphur. See *sulphur.*] The French equivalent of *solfatara,* somewhat current in English since the volcanic outbreaks in Martinique and St. Vincent in 1902. The word is a common geographical name in the Windward Islands where the French influence either is or has been predominant. It is applied to any expiring volcanic vent. When there is but one on an island it is called La Soufrière.

The steam puffs grew in magnitude, and before the end of April there were several explosions, accompanied by rumblings and tremblings of the earth, in which jets of mud were shot into the air and swept far a-sea by the trade-winds; while the warm springs and solfataras (or *souffrieres*) on Martinique and other islands displayed unwonted activity.
W. J. McGee, in Pop. Sci. Mo., July, 1902, p. 273.

soul¹, *n.*—**Animal soul,** the conscious principle of an individual animal in contradistinction to the vegetative soul, or mere life.—**Heart and soul.** See ★*heart.*

soul-house (sōl'hous), *n.* A small clay model of a house or residence placed, by the ancient Egyptians (VIth–XIIth dynasty), in a tomb for the accommodation of the soul of the departed.



Soul-house.
(From restored model in Metropolitan Museum of Art, New York.)

Prof. Petrie also gave a paper to the section describing the excavations carried out by the British School of Archæology, under his direction, at Gizeh and Rifeh. In this communication he described the interesting series of pottery *soul-houses,* found on the latter site, which are of great importance apart from their religious significance as showing the design and evolution of the ordinary Egyptian house, about which little had previously been known. *Nature,* Aug. 29, 1907, p. 462.

souling, *n.* See ★*suling.*

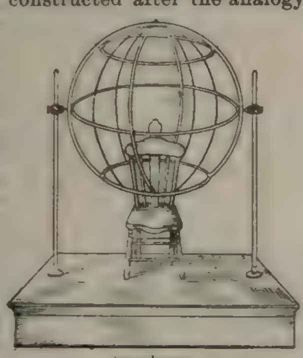
soul-worship (sōl'wėr"ship), *n.* The worship of ghosts or spirits; belief in the survival of a conscious spirit after the death of the body, and acts of propitiation to appease it: one of the most wide-spread and persistent of primitive cults. *Gumplowicz* (trans.), Outlines of Sociol., p. 55.

sound⁵, *n.*—**Colored sounds,** sounds having imaginary colors strongly associated with them in the minds of some persons.—**Sounds of subdivision,** in *acoustics,* the upper partials of a compound tone or clang; overtones.

soundboard, *n.* 3. In *organ-building,* same as *wind-chest.*

sound-box (sound'boks), *n.* In *phonet.,* the round metal box which carries the reproducing or the recording stylus of the gramophone.

The reproducing *sound-box* differs only in detail from the recording *sound-box.*
Scripture, Exper. Phonetics, p. 55.



Sound-cage.
(From "Yale Psychol. Studies.")

sound-cage (sound'kāj), *n.* In *exper. psychol.*, an instrument, constructed after the analogy of the perimeter, for the study of localization of sound. In fixed form, the sound-cage consists of a hollow spherical cage. The imaginary surface of the sphere is divided, perhaps, into eight equal parts by four vertical great circles: and again, horizontally, by the equator and by two small circles parallel to the equator at a distance of 45° from the poles. The cage, made of stout wire, is left open below to admit the back of a chair and the observer's body. The observer is so seated that the center of the line joining the external openings of his two ears is the center of the sphere. Sounds are given by a telephone-sounder, which travels from point to point over the surface, the observer, who is blindfolded, being required to indicate the direction from which the sound appears to come. As this apparatus is bulky, sound-cages have been devised in which two semicircles, or two quadrants, are made to revolve in such a way as to cover the whole surface of the sphere. Also *sound-perimeter*. *E. B. Titchener*, Exper. Psychol., I. i. 179.

sound-centroid (sound'sen"troid), *n.* In *exper. phonet.*, an imaginary point in the flow of sound in speech or song, at which (for purposes of scientific treatment) we may regard the entire energy of the sound to be concentrated. See the extract.

> Just as in the case of any irregular body, we can find different grades of centroids by limiting the consideration to larger or smaller portions. There are thus phrase-centroids, syllable-centroids, *sound-centroids*, etc.
> *Scripture*, Exper. Phonetics, p. 451.

sound-chest (sound'chest), *n.* Same as *resonance-box*, or as *soundboard* or *wind-chest*. In some old keyboard-instruments, resonance was sought by using not a mere soundboard, but a fully inclosed *sound-chest*, after the analogy of other stringed instruments.

soundflat (sound'flat), *n.* In *pianoforte-making*, same as *soundboard*.

sound-hammer (sound'ham"ėr), *n.* In *physiol.* and *psychophys.*, a metal hammer which strikes upon a metal block, and therefore (if shaft and block are included in an electrical circuit) makes electrical contact at the moment that the sound of the stroke occurs. The hammer is much used as a sound-stimulator in reaction experiments in which the Hipp (or other electrical) chronoscope is employed. *E. B. Titchener*, Exper. Psychol., II. i. 154.

sound-helmet (sound'hel"met), *n.* In *exper. psychol.*, a sound-cage made in the form of a cap of light wire, which is fitted to the head of the observer, and from which free wires, straight or bent, radiate out in the various directions of space: the stimuli are sounded at the extremities of these wires. *E. B. Titchener*, Exper. Psychol., I. ii. 359.

sound-hole, *n.* **2.** See the extract.

> These *sound-holes*, which are a special feature of the finer Norfolk towers, are square, unglazed openings filled with tracery in the stage below the bell-chamber windows. *Athenæum*, April 9, 1904, p. 473.

sounding[1], *n.* **4.** In *astron.*, the investigation of the probable distance of the boundaries of the stellar universe by enumerating the number of stars visible in different regions in the field of a given telescope or on a photographic plate.

> The second point for photographic investigation refers to the limits of the system towards the galactic poles. There is reason to believe them comparatively restricted. M. Celoria, of the Milan observatory, using a refractor capable at the utmost of showing stars of eleventh magnitude, obtained for a "mean *sounding*," at the north pole of the milky way, almost identically the same number given by Herschel's great reflector.
> *A. M. Clerke*, in Smithsonian Rep., 1891, p. 106.

Pneumatic sounding-apparatus, an apparatus devised by Paulsen, Prytr, and Rung in 1885, in which a volume of air is compressed and the depth is calculated from the pressure that effected this compression. It is applicable to much greater depths than the analogous Thomson sounding-tube.

sounding-balloon (soun'ding-ba-lön"), *n.* A small balloon bearing meteorological apparatus, but without an aëronaut, sent rapidly up to the highest possible elevation in order to ascertain the atmospheric conditions. The balloon is carried off by the wind and comes to the ground at a long distance, and the record is found and brought back. Two forms of sounding-balloons are in use. One, the older, usually of silk or paper, falls when sufficient hydrogen gas escapes through the open appendix; the other, of rubber, sealed, expands as it rises and eventually bursts, the apparatus falling slowly, supported by a parachute. Originally and frequently called *ballon-sonde*.

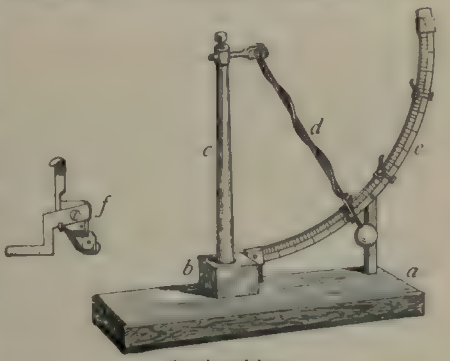
sounding-machine, *n.*—**Sigsbee sounding-machine**, a machine for taking soundings in very deep water by means of a lead weight attached by a cord to the end of a fine wire on which are marks to show the amount of wire paid out at the time the lead touches bottom: the invention of Rear-Admiral C. D. Sigsbee, U. S. N.

sounding-tube (soun'ding-tūb), *n.* **1.** A watertight tube or pipe extending vertically up from the bottom of a vessel, or from any compartment, so that the depth of water in the interior can be conveniently measured from the deck by dropping a sounding-rod attached to a line through the tube to the bottom.—**2.** A glass tube, in a protecting case, lowered with sounding-lead to the bottom of the shoaler parts of the ocean, the lower end of the tube being open and the upper end closed. The air within is compressed in proportion to the depth of the ocean. The water penetrates and dissolves a red paint from the inside of the tube, so that the colored remainder indicates the amount of compression of the air and hence the depth of the water. It was invented by Sir William Thomson (Lord Kelvin) about 1860.

sound-memory (sound'mem"ọ-ri), *n.* In *psychol.*, auditory memory; memory aroused by auditory cues and couched in auditory terms.

> The meaningless sound sen . . . called up the *sound-memory* of 'clams.' *Scripture*, Exper. Phonetics, p. 118.

sound-pendulum (sound'pen"dụ̄-lum), *n.* In *psychophys.*, a pendulum suspended from a steel pillar, the hard-rubber bob of which strikes, as the pendulum falls, upon a block of ebony cemented to the base of the instrument. Since the intensity of the sound produced by the blow is directly proportional to the height of fall of the bob, that is, to the square of the sine of half the arc through which the pendulum swings, the relative intensities of successive sounds may readily be calculated by reference to a graduated arc of metal, also attached to the base of the instrument. The sound-pendulum is sometimes made with two pendulums, hung to right and left of the pillar and striking on the two faces of the block: but it is difficult to insure the qualitative similarity of the two sounds thus produced. The sound-pendulum was first constructed by Volkmann, and since Fechner's time it has been a standard piece of psychophysical apparatus.



Sound-pendulum.

a, wooden base on layer of felt; *b*, ebony striking-block; *c*, steel pillar; *d*, pendulum, wrapped with rubber tubing to prevent vibration; *e*, arc, doubly supported on base, and capped with sponge-rubber (it carries three releases); *f*, pendulum catch and release, shown separately on larger scale.

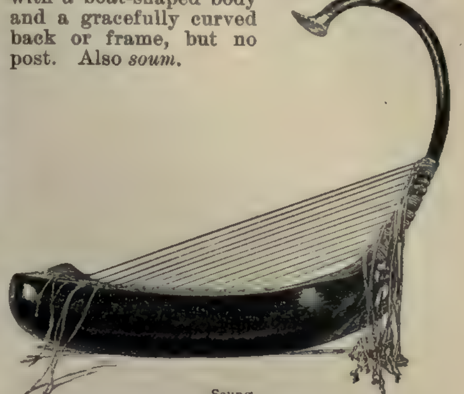
> A good way of turning this principle to account for the investigation of sound-intensities which do not differ very greatly from one another is indicated in the [accompanying] schematic representation of the *sound-pendulum*.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 30.

sound-perimeter (sound'pẹ̄-rim"e-tėr), *n.* In *exper. psychol.*, same as ★*sound-cage*. *Psychol. Rev.*, Jan., 1903, p. 64.

sound-sensation (sound'sen-sā"shọn), *n.* In *psychol.*, auditory sensation; especially, a sensation of noise. *W. Wundt* (trans.), Human and Animal Psychol., p. 32.

sound-shifting (sound'shif"ting), *n.* [Tr. G. *lautverschiebung*.] The 'shifting of (consonant) sounds' in a regular series or rotation: applied to this phenomenon in the history of Teutonic languages. See ★*lautverschiebung* and *Grimm's law*, under *law*[1]. *Keane*, Ethnology, p. 413.

soung (söng), *n.* [Burmese?] A Burmese harp with a boat-shaped body and a gracefully curved back or frame, but no post. Also *soum*.



Soung.
(In the Stearns Collection, University of Michigan.)

soup[2], *n.*—**In the soup**, in a predicament; helpless to act; in a mortifying situation. [Slang.]

soup-bone (söp'bōn), *n.* A bone (with some meat on it) used for making soup-stock: usually the shank of beef.

soupir (sö-pēr'), *n.* [F., a sigh. See ★*sospiro*.] In *music*, an old name for a crotchet or quarter-note rest.

soupon, *n.* See *supawn*.

soup-spoon (söp'spön), *n.* A spoon of a size and form adapted for use in eating soup.—**Soup-spoon man**, a certain member of a gang of burglars. See ★*yeggman*. [Thieves' slang.]

> When the prisoners were taken to Police Headquarters Assistant Superintendent Dougherty of the Pinkerton Detective Bureau identified the man who said he was William Smith as Gus De Ford, alias "Ky Yellow," alias "Buggsey," an expert with high explosives, known as the "King of the *Soup Spoon Men*." *N. Y. Times*, Jan. 2, 1905.

soup-stock (söp'stok), *n.* See *stock*[1], 24.

sour, *n.* **5.** In drenching or puering skins, the old liquor which has become sour or turned. *Modern Amer. Tanning*, p. 47.—**White sour**, the bath of very dilute sulphuric acid in which cotton cloth is immersed after it has been exposed to the action of a weak solution of bleaching-powder, as a part of the usual process of chlorin-bleaching. *Sadtler*, Handbook of Indust. Chem., p. 475.

sour-ball (sour'bâl), *n.* A round sugar-plum, very strongly flavored with lemon.

sour-berry (sour'ber"i), *n.* The European cranberry, *Oxycoccus Oxycoccus*.

source, *n.* **4.** In *geom.*, a place of transition from space of $n \pm 1$ into space of n dimensions.—**5.** In *elect.*: (*a*) That point or region in an electric circuit at which abrupt difference of potential exists so that current flows from it on one side through the circuit and toward it through the circuit from the other side. Thus a dynamo generator, a voltaic cell, or a charged condenser is a source of current in the circuit in which they are placed. (*b*) In the case of current flow in plane sheets, a point at which the current enters the sheet.

> In the case of current flow in plane sheets, we have to consider certain points called *sources* at which the current flows into the sheet, and certain points called sinks at which it leaves. *Encyc. Brit.*, XXVIII. 18.

sourdine, *n.* **II.** *a.* Softly played; muted; pathetic. [Rare.]

> Yet there is here and there a stroke of dramatic force, and there is the art of making a commonplace event striking by telling it in hints, as in the *sourdine* little tragedy of "A Modern Melodrama," where a prostitute guesses her death-sentence from the doctor's visit.
> *N. Y. Times*, July 2, 1898.

sour-dock (sour'dock), *n.* **1.** See *sour*.—**2.** See ★*dock*[1].

sourdough (sour'dō), *n.* See the extract. [Local slang.]

> Strange as it may seem, the closing in of winter [in Alaska] opens up the country to the "*sourdough*," for dogs can pull where horses fail, and the prospector with his team and "grubstake" roams at will.
> *National Geog. Mag.*, March, 1905, p. 107.

sour-grass, *n.* **2.** In the West Indies, *Andropogon pertusus*, a native of India, but naturalized in Australia and the West Indies, where it is considered one of the most valuable fodder-grasses.—**3.** Either the common Old World sorrel, *Rumex Acetosa*, or the sheep-sorrel, *R. Acetosella*.—**Ladies' sour-grass.** Same as *ladies'* ★*sorrel*.

sour-gum, *n.* **2.** See ★*gum*[2].

souring-machine (sour'ing-ma-shēn"), *n.* In *bleaching*, a machine for washing cotton or linen cloth in an acidulated bath. *G. Duerr*, Bleaching and Calico-printing, p. 11.

sour-sop, *n.*—**Sour-sop bird**, a small, bright-colored tanager, *Calliste versicolor*, so called from its frequenting the sour-sop tree.

sourweed (sour′wēd), *n.* The sheep-sorrel, *Rumex Acetosella.*

Southern canary-grass. See ★*canary-grass.*—**Southern cattle-fever.** Same as *Texas fever.*—**Southern cattle-tick.** See ★*cattle-tick.*—**Southern root-rot.** Same as *Ozonium* ★*root-rot.*—**Southern timothy.** See ★*canary-grass.*

southing, *n.* **4.** In *surveying* and in *navigation*, the linear distance measured in a north and south direction from the northerly end of a line to the true east and west line or the parallel of latitude passing through the southerly end of the line. Geometrically the southing or the northing of a line is equal to its east and west projection on to a meridian. The southing of a line thus is equal to its northing, and the former or the latter will be used solely in accordance with the direction of real or imaginary motion along the line.

> The position of each point is calculated trigonometrically with reference to its distance east or west, north or south, of the starting-point of the survey. The distance from point to point, measured along or parallel to the meridian, is called the difference of latitude of these two points, or northing or *southing*. *Encyc. Brit.*, XXXIII. 88.

South Sea arrowroot. See *Tacca* and ★*gaogao.*

sovereign, *n.* **2.** (*b*) An Austrian gold coin of the value of three ducats. The sovereign of Ferdinand I. was worth $6.76.—**3.** Any one of several nymphalid butterflies of the genus *Basilarchia*, as the banded purple, the hybrid purple, the red-spotted purple, the viceroy and the vicereine.—**Adelaide sovereign**, a pound gold token struck by the assay-office of Port Adelaide in 1852.—**Brabant sovereign**, a gold coin of Austria. That of Joseph II. (1766) weighed 171.468 grains, 916.667 fine, and was worth $6.76.—**Silver sovereign**, a nickname of the Spanish dollar.

soveren, soverenty. Simplified spellings of *sovereign, sovereignty.*

sovik (sō′vik), *n.* [Samoyed?] A large, loose fur tunic worn by the Samoyeds over the malitza, with the hair outside, and provided with a large hood. See extract under ★*loupthu.*

sovrano (sō-vrä′nō), *n.* [It. See *sovereign.*] A coin of Francis I. of Austria, in 1831, for the dukedom of Milan and for Austrian Lombardy.

sow^2, *n.* **3.** In *metal.*: (*b*) Same as *bear*^{2}, 7.

sowberry (sou′ber″i), *n.* Same as ★*sourberry.*

sow-foot (sou′fůt), *n.* The coltsfoot, *Tussilago Farfara.*

sow-grass (sou′gràs), *n.* The swine-cress, *Coronopus Coronopus.*

sowne^2†, *a.* [Corrup. of F. *souvenu*, remembered.] In *old Eng. law*, such as is leviable: said of a sheriff's return.

sow-plum (sou′plum), *n.* See ★*plum*^{1}.

sow-tit (sou′tit), *n.* The wood strawberry, *Fragaria vesca.*

Soxhlet extractor. See *Soxhlet's extraction* ★*apparatus.*

Soyka's bacteria flask. See ★*flask.*

sozal (sō′zal), *n.* [Irreg. < Gr. *σώζειν*, save, + *-al*^{3}.] A trade-name of aluminium paraphenolsulphonate, $(\mathrm{H}\overset{4}{\mathrm{O}}\mathrm{C}_6\mathrm{H}_4\overset{1}{\mathrm{S}}\mathrm{O}_3)_3\mathrm{Al}$. It is a crystalline astringent compound and is used in surgery as an antiseptic.

sozin (sō′zin), *n.* [Irreg. < Gr. *σώζειν*, save, + *-in*^{2}.] Any defensive albuminous substance. *Buck*, Med. Handbook, III. 844.

sozoiodol (sō-zọ-ī′ọ-dol), *n.* [Gr. *σώζειν*, save, + E. *iod*(*ine*) + *-ol.*] A crystalline powder (diiodophenol-sulphuric acid), employed in surgery and gynecology as a substitute for iodoform. *Jour. Soc. Chem. Industry*, VII. 227.

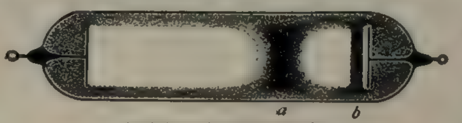
sozoiodolate (sō″zọ-ī-ō′dọ-lāt), *n.* [*sozoiodol* + *-ate*^{1}.] A trade-name of a salt of diiodoparaphenol-sulphonic acid. The potassium, sodium, zinc, and mercury salts are used medicinally as antiseptic and antipyretic remedies, applied both internally and externally.

sozol (sō′zol), *n.* [Irreg. < Gr. *σώζειν*, save, + *-ol.*] A trade-name of aluminium paraphenolsulphonate, $\mathrm{Al}(\mathrm{HOC}_6\mathrm{H}_4\mathrm{SO}_3)_3$. It is a brownish granular compound and is used in surgery as an antiseptic. *Buck*, Med. Handbook, VII. 262.

sozolic (sọ-zol′ik), *a.* [*sozol* + *-ic.*] Noting an acid, the same as ★*aseptol*: a trade-name.

Sp. An abbreviation (*b*) of Spain.

space, *n.*—**Bolyai space.** Same as *Lobachevskian* ★*space.*—**Cathodic dark space.** See ★*cathodic* and *Crookes's* ★*space.*—**Clifford-Klein spaces**, space-forms obtained when the geometric axioms are only assumed for an every-way bounded piece of space.—**Clifford's space**, the space formally analogous to Clifford's surface of zero curvature and finite extent. In it most of the usual Euclidean properties hold as regards figures not exceeding a certain size. The angle-sum of a triangle is two right angles, and there are motions in which all points travel along straight lines. The straight line is closed and the whole space is finite.—**Crookes's space, Crookes's dark space**, in the electric discharge through vacuum-tubes, a dark layer immediately surrounding the cathode and separating it from the negative glow. As the pressure diminishes the dark layer increases in thickness, gradually displacing the negative glow.—**Curvature of space**, a metric property which an imaginary space can have and which real or physical space may have in an almost inconceivably small degree, which is expressible by such a differential equation as to require mathematical analysts to admit that it is of the nature of a curvature. A curvature like that of the surface of a sphere will cause the sum of the three angles of a triangle to be greater than two right angles; and that curvature if constant implies that space is finite and unbounded. A curvature like that of a saddle will cause the sum of the three angles of a triangle to be less than two right angles; and that curvature if constant implies that space is infinite in its measurement and that measurable space is bounded. It is only the flat space in which the sum of the angles of a triangle is exactly 180° that is at once limitless and infinite — characters generally opposed to one another. For in proceeding along a line, and measuring as one goes, either the line comes to an end while the measurement is still finite, in which case the line is finite and limited, or the line returns into itself, completing the measurement while the measurement is still finite, in which case the line is finite and unlimited, or the measurement becomes infinite before the line comes to an end or returns into itself when the line is infinite and the measurable part of it is limited, whether the whole line is limited or not; and it is only when the line returns into itself simultaneously with the measurement becoming infinite that the whole line is measurable yet infinite and is unlimited. There is always some law of progress along a line such that the progress is brought to an end by a character of the line itself, namely, either its coming to an end or its return into itself.—**Dark space**, a region, within a vacuum-tube traversed by the electric discharge, which is devoid of luminescence. When an electric current passes through a tube containing a gas, such as air, at low pressures the glow does not extend uniformly throughout the tube. Near the cathode is a non-luminous region the length of which increases as the pressure diminishes. This is the first dark space or Crookes's space. Beyond this is the negative glow, followed by the second dark space or Faraday's space.—**Dead space.** (*b*) In *chem.*, a name given by Liebreich to certain parts of a solution in which he thought no reaction occurred between substances dissolved in it. (*c*) The clearance-space in a steam-engine cylinder between the head of the cylinder and the end of the piston when the crank is on its dead center. (*d*) The difference between the readings of the mercurial thermometer when the temperature is rising and when it is falling, due in part to the change in the curvature of the meniscus and in part to the expansion of the bulb from the change in pressure of the vertical capillary column. The general effect is analogous to that of the dead motion of the micrometer-screw.—**Double elliptic space**, a space in which the straight line is finite and every two meet twice.—**Faraday's dark space**, in the electric discharge through vacuum-tubes at pressures less than about ½ a centimeter, the dark space between the positive column and the glow around the negative electrode. Faraday's dark space increases in width as the pressure decreases until it finally displaces the positive column altogether.—**Five-to-em space**, in *printing*, a blank type, one fifth the width of the square of the body of the text-type.—**Four-to-em space**, in *printing*, the low or blank type that is one fourth the width of the square of the body of the text-type.—**Fourth dimension of space.** See ★*dimension.*—**Hair-space.** See *hair-space.*—**Ideal space**, that part of the complete spatial manifold without (outside) the absolute.—**Interseptal space**, in sea-anemones and corals, the space between two mesenteries of adjacent pairs. Compare ★*intramesenterial space.*—**Larrey's spaces**, open spaces along the line of attachment of the diaphragm to the chest-walls.—**Linear space.** (*a*) See *linear.* (*b*) Euclidean space.—**Lobachevskian space**, the space characterized by the Bolyai-Lobachevski non-Euclidean geometry.—**Monodromy of space.** See ★*monodromy.*—**Non-Euclidean space**, a space in which a non-Euclidean geometry is true (is actual).—**Poiseuille's space**, that part of the blood-stream in contact with the walls of the capillaries, where the white corpuscles move along sluggishly, the red corpuscles moving more rapidly in the center. Also called *still layer.*—**Postperforated space.** Same as *posterior perforated space.* See *perforated space* (*b*), under *perforated.*—**Prussak's space**, a small space in the tympanum bounded by the malleus, its external ligament, the outer wall of the attic, and Shrapnell's membrane. Also called *Prussak's pouch* or *chamber.*—**Retzius's space**, a small space or cavity in the tissues anterior to the bladder.—**Riemannian space**, a space in which a Riemannian geometry is actual. See ★*geometry.*—**Robin's spaces**, minute spaces in the outer coat of an artery, which connect with the lymphatics.—**Simple** (or **single**) **elliptic space**, one in which the straight line is finite and no two have more than one point in common.—**Six-to-em space**, in *printing*, a blank type, one sixth the width of the square of the body of the text-type: same as *hair-space* on small bodies.—**Space error.** See ★*error.*—**Space of Broca**, the central portion of the anterior olfactory lobe of the brain.—**Space of discission.** See ★*discission.*—**Space of dissolution.** See ★*dissolution.*—**Space of straights**, in *geom.*, space with the straight as element.—**Space of Tenon**, the space between Tenon's capsule and the sclerotica.—**Space of Vestberg**, the periaortic space between the pericardium and the beginning of the aorta.—**Spaces of Fontana**, intervals left between the prolongations of the suspensory ligament of the iris.—**Tactile space**, space considered as a synthesis from tactile sensations and perceptions.—**Temperature of space**, the temperature of an interplanetary or interstellar region not exposed to the radiation from the sun or from other hot bodies. According to the estimates of Langley, confirmed by subsequent investigations by others, the temperature or space is approximately the absolute zero or −273° C.—**Thick space**, in *printing*, the space usually known as three-em or three-to-em.—**Thin space**, in *printing*, a space of indeterminate width, thicker than the hair-space and thinner than the commoner three-to-em space. Usually applied to the four- or five-to-em space.—**Three-to-em space**, in *printing*, a low type, one third the width of the body of the text-type, used to make a blank between words.—**Traube's space**, an area on the left side of the chest over the stomach, where a tympanitic percussion-sound is heard, contrasting with the dullness of the precordial area.—**Visual space**, space considered as a synthesis from visual sensations and perceptions.



Dark Space in a Vacuum-tube.
a, Faraday's dark space; *b*, Crookes's dark space.

space-bar (spās′bär), *n.* Same as *spacer*, 2.

space-consciousness (spās′kon″shus-nes), *n.* In *psychol.*, a general term for the various modes (visual, auditory, tactual, etc.), of perception or apprehension of space.

> An analogous difficulty is at present felt by the disciples of Kant. These cannot imagine how it is possible that our *space-consciousness* can have arisen out of that which was not originally a *space-consciousness*.
> *H. Spencer*, in Mind, O. S., XV. 310.

space-constant (spās′kon″stant), *n.* The reciprocal of the square root of Riemann's measure of curvature.

> It has, consequently, become customary to speak of the reciprocal of the square root of Riemann's measure of curvature as the *space-constant*, in order to avoid all appearance of implying a curvature of non-Euclidean spaces.
> *Encyc. Brit.*, XXVIII. 666.

space-contrast (spās′kon″tràst), *n.* The reciprocal influence of adjacent spatial extents or areas, of widely different dimensions: supposed by some psychologists to explain certain phenomena of optical illusion.

space-experience (spās′eks-pē″ri-ẹns), *n.* In *psychol.*, experience of spatial magnitudes or relations; experience couched in terms of spatial perceptions or ideas: usually opposed to ★*time-experience.*

> An hour is just as much an hour of *space-experience* as an hour of time-experience.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 19.

space-hunger (spās′hung″gėr), *n.* In *psychol.*, the instinct of truancy or vagrancy; instinctive aversion to the confinement of every-day life. [Rare.]

> Ennui, malaria, *space-hunger*, horror of familiar environments and habitual duties, and spring fever are comparatively infrequent as long as children are sexually neuter. *G. S. Hall*, Adolescence, II. 376.

space-key (spās′kē), *n.* In a type-writer or type-setting machine, a key which controls the spacing. See ★*type-writer.*

space-lattice (spās′lat″is), *n.* A net-like structure assumed in discussing the molecular relations of different types of crystalline forms. In it the particles are regarded as situated at the solid angles of equal, parallel parallelepipeds. Also *space-net.*

space-net (spās′net), *n.* Same as ★*space-lattice.*

spacer, *n.* **3.** In a type-setting machine, a device for spacing words.

> After being once brought into use, a matrix bar or *spacer* is not employed again until all others of the same kind stored in the magazine have been used in turn.
> *Census Bulletin* 216, June 28, 1902, p. 58.

4. Anything by which a space or interval is made.

> Large horizontal and radial ventilating spaces are provided. These ventilating spaces are obtained by means of metal *spacers*. *Elect. Rev.*, Sept. 10, 1904, p. 404.

space-sense (spās′sens), *n.* In *psychol.*: (*a*) A sense which mediates perceptions of space.

> This conclusion, that sight is a *space-sense*, is supported by the results of Franz's experiments.
> *G. M. Stratton*, Exper. Psychol. and its Bearing upon [Culture, p. 134.

(*b*) A term formed on the analogy of 'light-sense,' 'pressure-sense,' etc., to denote the capacity of space-perception. It is doubly misleading, since it implies that our simplest spatial experiences are sensations as specific as those of color or pressure, and also suggests that we are endowed with a sense-organ of space, as we are with an organ of vision, etc.

> E. H. Weber tested the 'cutaneous *space sense*' by applying the two points of a pair of compasses to the skin. *O. Külpe* (trans.), Outlines of Psychol., p. 37.

space-telegraph (spās′tel″ẹ-gràf), *n.* Same as *wireless* ★*telegraph.*

space-telegraphy (spās′tel″ē̤-graf-i or -te-leg″-ra̤-fi), *n.* Telegraphy without wires.

space-threshold (spās′thresh″ō̤ld), *n.* In *psychophys.*, the limen of dual impression for the skin or retina, as determined by the esthesiometric compasses or by the just noticeable separation of black dots on a white background.

> The smallest, just noticeable distance between two impressions is called the *space-threshold* for touch.
> *W. Wundt* (trans.), Outlines of Psychol., p. 105.

space-variation (spās′vā-ri-ā″sho̤n), *n.* In *math.*, the change in value of any function from point to point throughout a space.

space-washer (spās′wosh″ėr), *n.* A distance-piece, usually annular; a disk with a central hole, placed upon a spindle or axis to keep two other objects on the same axis at a desired fixed distance apart.

space-writer (spās′rī″tėr), *n.* In newspaper and other literary work, one who is paid by space, usually by the column, line, or word.

> In one way or another . . . by learned professors or by clever *space-writers* . . . all but a very few of the leading actors in our earlier scenes have been . . . sufficiently bewritten and belauded.
> *W. G. Brown*, Life of Oliver Ellsworth, i.

spacing-rod (spā′sing-rod), *n.* In *elect.*, a rod or strip, usually of insulating material, which separates the successive layers of a coil. Spacing-rods are used particularly where a circulation of air for ventilating through the coil is desired.

spadaite (spä′dä̤-īt), *n.* [Named in honor of L. di Medici-*Spada*.] A hydrated magnesium silicate which occurs in reddish amorphous masses: found near Rome, Italy.

spade¹, *n.* **5.** In *artillery*, a thick metal projection at the end of the trail of a field-gun carriage, which is forced into the ground by the recoil and tends to keep the carriage in the same position for subsequent rounds.

> The [gun] carriage was fitted with hydraulic recoil cylinders, and with a "*spade*."
> *Hazell's Annual*, 1902, p. 41.

Spade pattern, a reciprocal trefoil pattern to be seen in some Oriental rugs, especially in the borders.

spade², *n.*—**Spade casino.** See ★*casino*.

spade-fish, *n.* Same as *paddle-fish*.

spade-foot, *n.* **2.** An enlargement of the thin end of a leg of a chair or other piece of furniture having a contour similar to that of a spade. Also used adjectively.

> By using the "*spade foot*," as the square excrescence at the thin end of the leg is called.
> *K. W. Clouston*, Chippendale Period in Eng. Furniture, [p. 154.

spade-money (spād′mun″i), *n.* An early Chinese bronze coinage made in imitation of spades and shovels.

spade-press (spād′pres), *n.* A wool-press of rude construction, used in Australia, in which a spade is employed for ramming down the wool. *E. E. Morris*, Austral English.

spader, *n.*—**Rotary spader**, a machine consisting of a drum turning on a horizontal axis and carrying on its rim a series of projecting blades which turn up the earth as the machine is drawn along.

Spagnuoli (spän-yö-ō′lē̤), *n. pl.* The Sephardim Jews of Turkey and the Balkan states.

spain, *v. t.* Same as *spane*.

span¹, *v. t.* **7.** To harness (a horse, etc.) to a vehicle; inspan; furnish (a vehicle) with animals to draw (it). [South African Dutch.]

> Montsioa's reply was short: "No one ever *spanned* in an ass with an ox in one yoke." *Encyc. Brit.*, XXVI. 187.

span¹, *n.* **9.** In *math.*, the span of a region in any direction is the width of a strip which is bounded by lines perpendicular to that direction, contains every internal point of the region, and has on each of its bounding lines at least one boundary point of the region; and the upper limit of these spans of the region in every direction is called the span.

> If R_1, R_2, . . . be a countably infinite series of closed regions, each being entirely within the preceding, and if the *span* of the regions do not decrease indefinitely, the common points form a perfect connected set.
> *W. H. Young*, in Proc. Math. Soc. (London), ser. 2, [III. 371.

span-dogs, *n. pl.* **2.** *sing.* In the bending of barrel-staves, a bar of iron used as a holder to retain the curved shape of the staves until they have cooled, when they will not bend back.

> Before the stave is released, a bar of iron bent at each end is forced over it to hold it in position until it has cooled, when it will retain the curve made by the bender. This bar is called the "*span-dog*," and as a rule it is required to be nearly half the thickness of the wood it holds, such is the force which it is utilized to counteract.
> *Sci. Amer. Sup.*, Sept. 10, 1904, p. 23982.

spangle, *n.* **4.** One of many small, somewhat triangular spots on the wing of a pigeon or fowl.

spangled, *a.* **2.** Having numerous small pointed markings on the wing or body. In spangled pigeons the markings are on the 'shoulder,' or bend of the wing; in fowls, such as the spangled Hamburgs, they occur on the body as well. Spangles differ from checkers in being smaller and more numerous.

Spaniard, *n.* **2.** [*l. c.*] Same as *jack-spaniard*. —**3.** In New Zealand, same as *spear-grass*, 3.

spanipelagic (span″i-pē̤-laj′ik), *a.* [More prop. **spanopelagic*, < Gr. σπάνις, rarity (σπάνιος, rare), + πέλαγος, sea.] Floating or swimming in the depths of the sea, and coming to the surface only rarely or exceptionally. See ★*pelagic*, ★*autopelagic*, and ★*bathypelagic*.

> The final cause of this remarkable *spanipelagic* mode of life must lie chiefly in the conditions of reproduction and ontogeny.
> *Haeckel* (trans.), Planktonic Studies, p. 583, in Rep. [U. S. Fish Com., 1889–91.

Spanish blanket, bur, cane, etc. See ★*blanket*, etc.—**Spanish cat.** Same as *tortoise-shell* ★*cat*.—**Spanish château**, a castle in Spain, or in the air.

> In short she 's the pink of perfection, you know;
> And she lives like a queen in my *Spanish Château!*
> *J. G. Saxe*, My Castle in Spain, st. 2.

Spanish reef. See ★*reef*².—**Spanish wild cherry.** Same as *islay*.

Spanish-American (span′ish-a̤-mer′i-ka̤n), *a.* and *n.* **I.** *a.* Of or pertaining to the parts of America settled or controlled by Spaniards or their descendants, and where Spanish, more or less modified, is the vernacular.

II. *n.* An American of Spanish blood; a citizen of a Spanish-American state.

spank-stick (spangk′stik), *n.* A flat stick with which the operation of spanking was performed. [Dial.]

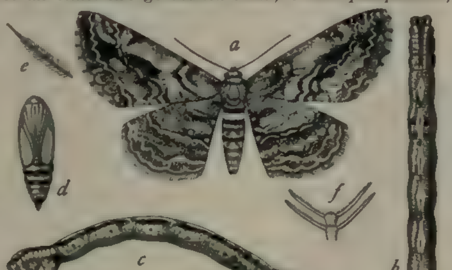
> "Do you remember your Uncle Tree's *spankstick*, Phœbe?"
> "Shall we perhaps change the subject?" said Miss Phœbe, with bland severity.
> *L. E. Richards*, Mrs. Tree, viii.

spanner, *n.*—**Clyburn spanner**, an adjustable spanner wrench the movable jaw of which is adjusted by means of a screw with a knurled head.

spanopnœa (span-op-nē′ä̤), *n.* [NL., < Gr. σπάνιος, rare, scarce, + -πνοια, < -πνοος, < πνεῖν, breathe.] Abnormal slowness of respiration.

span-wire (span′wīr), *n.* A tightly stretched wire attached to the trolley-wire of an electric road and used to hold the latter in its position above the track.

span-worm, *n.*—**Cranberry span-worm**, the larva of an American geometrid moth, *Cleora pampinaria*, found commonly in the Massachusetts cranberry-bogs.—**Elm span-worm**, the larva of an American geometrid moth, *Ennomos subsignarius*.—**Gooseberry span-worm**, the larva of an American geometrid moth, *Cymatophora ribearia*.—**Horned span-worm**, the larva of an American geometrid moth, *Ania limbata* (formerly called *Nematocampa filamentaria*). The larva lives on plum and strawberry and other rosaceous plants, and bears on its back four long curved fleshy horns, two curving forward and two backward.—**Pine span-worm**, any one of several geometrid larvæ which feed on pine-leaves, as the *pine measuring-worm*, larva of *Paraphia subatomaria*, the *redhead inchworm*, larva of *Macaria bisignata*, and others.—**Strawberry span-worm.** Same as *horned* ★*span-worm*.



Cranberry Span-worm (*Cleora pampinaria*).

a, female moth; *b*, larva, dorsal view; *c*, larva, lateral view; *d*, pupa; *e*, male antenna; *f*, enlarged joints of same: all enlarged, *e* and *f* more so.

(Chittenden, U. S. D. A.)

Moth of Elm Span-worm (*Ennomos subsignarius*).

spar¹, *v. t.*—**To spar-down**, *naut.*, to seize oars, or short pieces of light timber, across the shrouds preparatory to rattling down the rigging.

spar², *n.*—**Flaky-spar**, cleavable calcite. [Local, Eng.] **Greenland spar.** Same as *cryolite*.—**Zinc spar**, smithsonite or calamin, native zinc carbonate.

sparadrapier (spar-a̤-dra-pēr′ or -drap′i-ėr), *n.* [F. *sparadrapier*, < *sparadrap*, sparadrap.] A machine for spreading antiseptic paraffin or other medicating compound upon thin linen, cotton, or other fabric to make surgical bandages or plasters; a spreading-machine for coating cerecloth.

sparassodont (spa-ras′ō̤-dont), *a.* and *n.* **I.** *a.* Having the characters of or pertaining to the *Sparassodonta*.

II. *n.* An individual of the suborder *Sparassodonta*.

Sparassodonta (spa-ras-ō̤-don′tä̤), *n. pl.* [NL., < Gr. σπαράσσειν, tear, rend, + ὀδούς (ὀδοντ-), a tooth.] A suborder proposed by Ameghino for the large carnivorous marsupials of the Santa Cruz formation of Patagonia. According to its author, the *Sparassodonta* are neither creodonts, placental carnivores, nor carnivorous marsupials.

sparer, *n.* **2.** That which spares; specifically, in metabolism, a substance which through its own destruction will curtail the destruction of other material: for example, carbohydrates are sparers of the tissue albumins.

> The great power as proteid *sparers* which the carbohydrates exercise. *Buck*, Med. Handbook, V. 564.

sparesome (spãr′sum), *a.* Economical; careful of money; somewhat close. [Colloq.]

Sparganiaceæ (spär-gā-ni-ā′sē̤-ē), *n. pl.* [NL. (Agardh, 1858), < *Spargani(um)* + *-aceæ*.] A family of monocotyledonous plants of the order *Pandanales*, the bur-reed family, containing only the genus *Sparganium* (which see).

sparge (spärj), *n.* [L. *spargo*, a sprinkling, < *spargere*, sprinkle, spray.] In *brewing*, the spray of heated water which is thrown upon malt in the preparation of 'wort.'

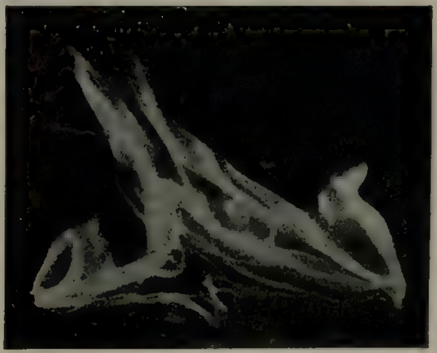
> One may note the temperature at which the "*sparge*" is applied; 170° is frequently exceeded, and the use of stirrers in wash stills by no means universal, especially where small stills are employed.
> *Nature*, May 1, 1902, p. 2.

Sparisoma (spar-i-sō′mä̤), *n.* [NL., < *Sparus* + Gr. σῶμα, body.] A genus of scaroid fishes including many species, most of them found in warm and tropical parts of America.

spark¹, *n.*—**Active spark**, in an experiment described by Hertz, an electric spark the ultra-violet rays from which are used to influence a second, simultaneously produced, spark called the *passive spark*.

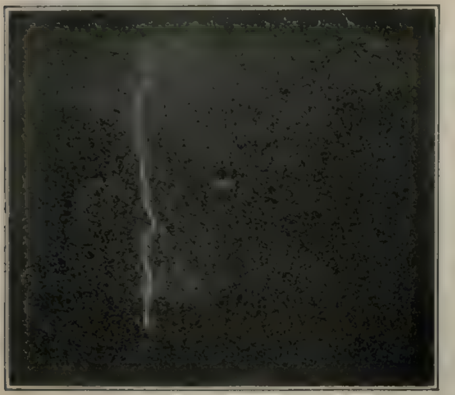
> The efficiency of the *active spark* is not confined to any special form of it.
> *H. Hertz* (trans.), Electric Waves, p. 66.

Advanced spark. See ★*ignition*, 5.—**Electric spark**, the passage of the electric current between two terminals, at high voltage, by mechanical disruption of the insulating medium between the terminals. In the electric spark, the medium filling the space between the terminals or electrodes carries the current, becoming temporarily conducting by disruption by the electrostatic stress of very high voltage, while in the electric arc a bridge of conducting vapor of the electrodes carries the current. The spark therefore starts spontaneously as soon as the voltage is sufficiently high to disrupt the insulating medium, while the arc has to be started by forming the conducting vapor bridge. The voltage re-



High-voltage alternating arc, and spark which started it (150,000 volts).

quired to produce a spark between two terminals usually is many hundred times greater than the voltage required to maintain an arc. If the supply of current is sufficient, an arc usually follows the spark. In air the spark is sharply defined, of irregular shape and intense brilliancy, while the arc is more diffused. The light of the spark shows the spectrum of the material filling the space between the electrodes, the light of the arc the electrode spectrum. See *electric* ★*arc.*— **Jump-spark.** See ★*jump-spark.*— **Mercury-spark,** an electric spark discharge the spectrum of which shows the bright lines characteristic of the metallic vapor of mercury.—**Passive spark,** in an experiment described by Hertz, an electric spark which is subjected to the ultra-violet rays from another, and simultaneously produced, spark called the *active spark.* (See above.)



Lightning Spark.

> The susceptibility of the *passive spark* to the action is to a certain extent dependent upon its form.
> *H. Hertz* (trans.), Electric Waves, p. 66.

Retarded spark. See ★*ignition,* 5.— **Side-spark,** in *elect.*, the spark in the air-gap of a Hertz's receiver.— **Wiping-spark** or **wipe-spark,** an electric spark obtained by bringing into contact two terminals which are in a circuit of sufficient potential difference and then separating them. There is usually more or less sliding or slipping of the terminals past each other while in contact, whence the name. Distinguished from a ★*jump-spark,* in which the electrodes are permanently separated.

spark-arrester, *n.* **2.** Spark-arresters are required when the fuel is wood or shavings even with natural or chimney draft, but with forced or mechanical draft, as in locomotives, they are needed for coal fuels also. In chimneys for wood-fires the spark-arrester may be a cage of galvanized-iron wire netting in the top of the stack; or the stack may be enlarged in cross-section near the top and a gauze grating placed at the largest section; or the arrester may be a deflecting cone, or several of them, by which the sparks or cinders are caught and their motion is stopped while the current of gas passes around and so out. These deflectors have usually spark-pockets or receptacles in which the cinders accumulate and from which they may be removed. In locomotives this catcher has often been in an annular cavity, the stack being double, or one tube within another, the sparks passing between the tubes. The more modern practice, with locomotives, is to put the spark-arresting netting below the base of the stack and in the extension-front smoke-box. The sparks then accumulate in the smoke-box below the netting, and are washed out or removed by spark-ejectors when convenient. In this method, the exhaust steam does not have to work through the meshes of the netting. The accumulated cinders and sparks in the smoke-box are emptied through a gate-valve in the bottom into a hopper at the top of a short tube called the *spark-hopper*, the tube discharging into a pit between the rails at the roundhouse or terminal.

spark-balls (spärk'bâlz), *n. pl.* The spherical metal terminals with which electrical apparatus for the production of the disruptive discharge is commonly provided and between which the spark-gap lies.

spark-box (spärk'boks), *n.* Same as ★*spark-arrester*, 2.

spark-break (spärk'brāk), *n.* The breaking of an electric circuit at a point of usual contact, so that an electric arc or series of sparks jumps across the gap until the space between the terminals is too great for the tension of the current to overcome the resistance offered by the air or other medium through which the current would have to pass: used in igniting charges in internal-combustion motor cylinders in the make-and-break system.

> The trip is worked by a vertical rod which moves up and down, and its end raises or lowers the trip and thus operates the *spark-break.* *Elect. Rev.*, Sept. 10, 1904, p. 386.

spark-catcher (spärk'kach″ėr), *n.* Same as ★*spark-arrester*, 2.

spark-coil, *n.* **2.** A coil of many turns of insulated wire on an iron core, used for producing a spark by opening the circuit of the coil, for electric gas-lighting, igniting the charge in the gas or gasolene engine-cylinder, etc.

spark-deflector (spärk'dẹ̄-flek″tọr), *n.* See ★*spark-arrester*, 2.

spark-gap (spärk'gap), *n.* The open space between the terminals of the secondary circuit of an induction-coil, or the similar space in any electric circuit, across which the disruptive electric discharge in the form of a spark takes place.

spark-hopper (spärk'hop″ėr), *n.* See ★*spark-arrester*, 2.

sparking-plug (spär'king-plug), *n.* See ★*spark-plug.*

sparking-point (spär'king-point), *n.* In explosion-engines, the terminal of the spark-producing device for ignition.

> It [electric reigniting device] consists of a spark-producing device contained in a cylindrical metal case, five inches long and three inches in diameter. Projecting from the upper side of this case is a stem surmounted by platinum *sparking points*, one of which is automatically movable. *Hiscox*, Horseless Vehicles, p. 404.

spark-instant (spärk'in″stant), *n.* The time or period, in the stroke of an internal-combustion motor, at which the spark which is to ignite the combustible mixture in the cylinder is caused to jump the gap between the terminals of an electric circuit in that cylinder. *F. R. Hutton*, Gas Engine, p. 219.

spark-knobs (spärk'nobz), *n. pl.* The knobs or balls with which the spark-gap of induction-coils, or other machines for the production of the disruptive discharge, is usually provided.

sparkle, *v. i.*—**Sparkling waters,** waters containing or charged with carbonic acid gas.

spark-lead (spärk'lēd), *n.* See ★*ignition*, 5.

spark-length (spärk'length), *n.* The distance traversed by the disruptive discharge in passing the spark-gap of any electric circuit. The spark-length affords a measure of the difference of potential between the terminals.

spark-lever (spärk'lev″ėr), *n.* The lever or handle by which the period at which a spark passes between terminals in an internal-combustion motor is controlled: used especially in motor-cars and motor-cycles, where such control of the instant of ignition is very important, as the resistance to be overcome or the desired speed may vary. Spark-levers are usually on the steering-post of motor-cars, and on the handle-bars of motor-cycles.

spark-micrometer (spärk'mī-krom″e-tėr), *n.* See ★*micrometer.*

spark-plug (spärk'plug), *n.* In internal-combustion motors, the apparatus which carries into the combustion-chamber the electric terminals, properly insulated, by which the charge of carbureted air or gas is electrically ignited at the proper time. It is a tube of non-conducting material, such as porcelain, inserted into a screwed bushing or plug fitting a threaded hole in the cylinder. The electric conductors are attached to platinum wires insulated in this tube and with their points projecting inside the cylinder, with a small air-gap ($\frac{1}{16}$ inch) across which the spark will jump and fire the mixture. If these points are foul or are too far apart, or if the current is of too low electric tension, the spark does not pass when the contact is made by the commutator, and the ignition fails and the motor stops.

> Instead of the usual *spark-plug*, a mechanical break is made in the cylinder head. This is carried out by using a contact piece which is fixed inside the cylinder.
> *Elect. Rev.*, Sept. 10, 1904, p. 386.

spark-spectrum (spärk'spek″trum), *n.* The spectrum of the light produced by an electric spark. Spark-spectra are usually bright-line spectra the character of which depends not only on the gases in the spark-gap but also upon the nature of the terminals: thus the spark between terminals of zinc, tin, cadmium, etc., gives a spectrum which contains the lines characteristic of the vapors of those metals.

spark-telegraphy (spärk'tel″ẹ̄-graf-i or -tẹ̄-leg'ra̤-fi), *n.* Same as *wireless* ★*telegraphy.*

Sparnacian (spär-nā'shia̤n), *a.* and *n.* In *geol.*, noting a division of the Lower Eocene Tertiary in northern France and Belgium, lying above the Thanetian or Thanet sands.

sparrow, *n.*—**Ipswich sparrow,** *Ammodramus princeps*, a species much like the well-known savanna-sparrow, but larger, without the yellow markings, and of a more rufous cast. It was named from Ipswich, Massachusetts, where it was discovered. It is restricted to the New England coast and immediate vicinity, breeding on Sable Island.— **Oregon sparrow.** See *Oregon song-sparrow.*— **Sea-shore sparrow,** *Ammodramus rostratus*, a species common on the Pacific coast.

sparrow-bottle (spar'ō-bot″l), *n.* A bottle or jar made to hang on a nail in a wall and serve as a nesting-place for house-sparrows: a device resorted to by farmers in certain districts of England in order to save their thatch roofs from the inroads of nesting sparrows.

sparsioplast (spär'si-ọ̄-plast), *n.* [Irreg. < L. *sparsus*, scattered, + Gr. *πλαστός*, formed.] A colored elæoplast found in certain diatoms. It is variable in number and position. See ★*stabiloplast.*

spar-varnish (spär'vär″nish), *n.* A superior make of varnish which is not affected by salt water, steam, soap, grease, or ammonia fumes. It is used as a coating for spars and all outside or exposed work where natural wood (unpainted) is found, such as boats, skylights, etc.

spasm, *n.*— **Malleatory spasm.** Same as *malleation*, 3. — **Mimetic spasm,** involuntary convulsive twitching of certain of the muscles of the face.— **Mimic spasm.** Same as *mimetic* ★*spasm.*— **Occupation spasm.** Same as *functional spasm* (which see, under *spasm*).

> Dr. James Putnam referred to the view that these continuous movements which hysterical patients sometimes carried on were the work of dissociated cerebral centres; they seemed to be performed without fatigue to the patient and differed from the "*occupation spasms*" (habit spasms) which occurred in some persons without any relation to hysteria, and which were brought on by work, and were attended with profound local fatigue of the affected parts. *Lancet*, June 25, 1904, p. 1810.

spasmophilia (spas-mọ̄-fil'i-ạ̈), *n.* [NL., < Gr. *σπασμός*, contraction, + *φιλεῖν*, love.] In *pathol.*, a tendency to convulsions from slight causes.

spasmophilic (spas-mọ̄-fil'ik), *a.* [*spasmophil(ia)* + *-ic.*] Relating to spasmophilia; marked by a tendency to tetany and other convulsive disorders. *Med. Record*, May 30, 1908, p. 963.

spasmotin (spas'mō-tin), *n.* [Gr. *σπασμός*, contraction, + *-ot-* + *-in*^{2}.] A yellow amorphous principle present in ergot in very small quantity and claimed by Jacobi to be the specifically active substance. It is probably impure sphacelotoxin.

Spastic gait. See ★*gait*^{1}.

spatch-cock (spach'kok), *v. t.* **1.** To kill and serve (a fowl) hastily, as a spatch-cock.— **2.** To prepare (something) in haste for an emergency; in the extract, to insert hastily into a document.

> As a matter of fact, the suggestion of surrender which he "*spatchcocked*" into one of his messages to General White was capable of an explanation not altogether discreditable to General Buller. *N. Y. Tribune*, Oct. 24, 1901.

3. *Milit.*, to punish by stretching upon the ground with arms and legs extended and fastened down.

Spathiocaris (spath″i-ok'a̤-ris), *n.* [NL., < Gr. *σπάθη*, a blade, + *καρίς*, a shrimp.] A group of organic structures having the form of oval or circular disks split at one end by a triangular cleft running from center to edge, composed of chitinous matter: originally described as phyllocarid crustacean carapaces and later as the opercula of cephalopods; their real nature is not known. They are found in Upper Devonian rocks.

spatialization (spā-sha̤l-i-zā'sho̤n), *n.* [*spatial* + *-iz(e)* + *-ation.*] The act of rendering spatial; the act of giving a spatial character (to).

> All forms of external experience are not alike calculated to awaken the mind to react with a *spatialization* of its objects. *B. P. Bowne*, Metaphysics, p. 209.

spatiology (spā-shi-ol'ọ̄-ji), *n.* [L. *spatium*, space, + *-λογια*, < *λέγειν*, speak.] The science of space, spaces, or hyperspaces, Euclidean or non-Euclidean.

> With the elliptic hypothesis (space finite) the Principle of Duality has full sway; in any theorem, points and straight lines, lengths and angles, being respectively interchanged, a new and true theorem results in the geometry of the plane. This is an æsthetic argument against the Euclidean scheme of *spatiology*.
> *W. B. Frankland*, Euclid with Commentary, p. 13.

spatter-cone (spat'ėr-kōn), *n.* A subordinate volcanic cone formed at mildly explosive vents that throw out little dabs of lava. They sometimes arise from the lava-flows themselves. *Chamberlin and Salisbury*, Geol., I. 580.

spattle^2 (spat'l), *v. t.* [*spattle*^{2}, *n.*] In *ceram.*, to sprinkle or mottle with colored glaze.

spawning-brush (spâ'ning-brush), *n.* A brush used in fish-hatcheries when the fishes are spawned (the eggs are taken). *Philos. Trans. Roy. Soc.* (London), 1900, ser. B, p. 307.

spawning-place (spâ'ning-plās), *n.* Any place selected by fishes to deposit their spawn, as the rocky shores chosen by codfishes or the river-beds by anadromous fishes.

> Some beds of this kind, in salmon-frequented rivers, have been notable from time immemorial as *spawning-places.* *Chambers' Encyclopædia*, IX. 114.

S. P. C. An abbreviation of *Society for the Prevention of Crime.*

S. P. C. A. An abbreviation of *Society for the Prevention of Cruelty to Animals.*

S. P. C. C. An abbreviation of *Society for the Prevention of Cruelty to Children.*

S. P. C. K. An abbreviation (*a*) in England, of *Society for Promoting Christian Knowledge*; (*b*) in Scotland, of *Society for Propagating Christian Knowledge.*

speak-easy (spēk′ē′zi), *n.* A bar-room or saloon where liquor is sold (illegally) without a license. Also used adjectively. [Slang.]

> There are to-day, as then, in abundance, disorderly houses, "*speak-easies*," saloons, or "clubs" where liquor is sold long after the permitted time, and tramps.
> *Josiah Flynt*, in McClure's Mag., June, 1901, p. 116.

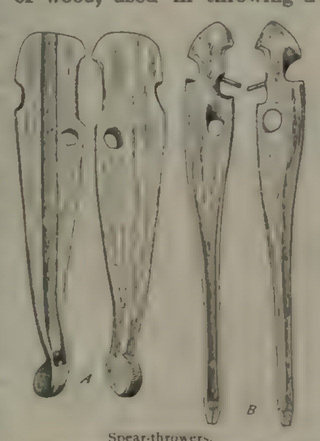
spear^1, *n.*—**Sucking spears,** in *entom.*, the coadapted mandibles and maxillæ, forming spear-like organs which are suctorial in function. These occur in the larvæ of the neuropterous families *Chrysopidæ*, *Hemerobiidæ*, *Myrmeleonidæ*, and *Coniopterygidæ*. *Cambridge Nat. Hist.*, V. 466.

spear-grass. **4.** In Australia, any one of several species of valuable forage grasses, namely, several species of the genus *Stipa* and *Andropogon contortus*. The seeds of these grasses are sharp and covered with fine barbs so that they easily become entangled in the wool of sheep and frequently penetrate the skin, often causing the death of the animal.—**Creeping sea spear-grass.** Same as *sea* or *sea-coast* ★*spear-grass.*—**Sea** or **sea-coast spear-grass,** a slender perennial grass, *Puccinellia maritima*, with creeping rootstocks, found on the northern coasts of both hemispheres. It is a valuable element in the salt-marsh hay of New England and the Middle States.—**Southern spear-grass,** a grass, *Eragrostis Purshii*, with lance-shaped spikelets, common from the Middle States to Arizona. It has no agricultural value. Two woodland grasses, *Poa brevifolia* and *P. autumnalis*, have also been so called.—**White spear-grass,** the reed meadow-grass, *Panicularia Americana*.

spearing (spēr′ing), *n.* **1.** The action denoted by the verb *spear*; specifically, in harvesting tobacco, the forcing of a pointed stick through the butts of several cut stalks which are to hang upon it while curing. For other methods see ★*pegging*, 6, and ★*splitting*.—**2.** A fish, *Trachinocephalus myops*, the ground-spearing, belonging to the family *Synodontidæ*, found in tropical parts of the western Atlantic.

spear-kite (spēr′kīt), *n.* See ★*kite*^{1}.

spear-thrower (spēr′thrō″ėr), *n.* An implement, usually of wood, used in throwing a spear so as to give it an increased velocity. Such implements are usually about two feet long, with a knob or notch at one end to engage the end of the spear, the other end being often provided with a special grip for the hand. They are found only in limited areas, such as among some Indian tribes of the coast of Alaska, the Eskimos, the Australians, in parts of South America, and in Mexico. Also called *throwing-board*.



Spear-throwers.
A, Ungava type; *B*, Yukon River type.
(In U. S. Nat. Museum.)

specchia (spek′ē-ä), *n.*; pl. *specchie* (spek′ę-ā). [It. dial., < L. *specula*, a lookout, a watch-tower. See *speculate*.] A kind of prehistoric stone structure found in southern Italy, supposed to have been intended for a watch-tower.

Special state. See ★*state*.

speciegraphic (spē-shi-ę-graf′ik), *a.* Same as ★*speciegraphical*.

speciegraphical (spē-shi-ę-graf′i-kąl), *a.* [*speciegraph*(*y*) + *-ic* + *-al*^{1}.] Of or pertaining to the scientific description or diagnosis of species.

speciegraphy (spē-shi-eg′rą-fi), *n.* [L. *species*, species, + Gr. -γραφία, < γράφειν, write.] The scientific description or diagnosis of species. Also *speciography*.

species, *n.* **10.** A former standard of currency in certain parts of Germany and in the north of Europe, apparently answering to the modern dollar of commerce.—**Agricultural species,** one of two or more plant types developed under cultivation from the same natural species and considered to be as distinct as natural species. **Bipolar theory of distribution of species.** See ★*bipolar*.—**Doctrine of the immutability of species.** See ★*pre-Darwinian*.—**Elementary species,** a number of individuals, within the limits of a species, characterized by a distinctive and hereditary peculiarity, or by more than one.

> What is a species, what is a new species? What is an *elementary species*, which has also been called a subspecies? *Pop. Sci. Mo.*, July, 1904, p. 217.

Form species, an apparent species which is only a form or stage in the development of a pleomorphous species.—**Superstitial species,** in *paleon.*, those species that survive into later geological periods and are hence found in formations higher than those in which they are normally characteristic or culminant.

species-cycle, *n.* **2.** In *biol.*, the series of forms needed to represent the species in its completeness. The species-cycle is the same as the ovum-cycle or genealogical individual, except in cases where the sexes are separate or polymorphism occurs. See *ovum-cycle*.

> The complete series of forms needed to represent the species . . . [is] the *species-cycle*. *Encyc. Brit.*, XVI. 843.

specific. **I.** *a.*—**Specific conductance** or **conductivity, refractivity.** See ★*conductance*, ★*refractivity*.

II. *n.* **2.** A definite substance in the serum of an animal that gives rise to a special kind of immunity.

speciographic (spē-shi-ǫ-graf′ik), *a.* [*speciograph*(*y*) + *-ic.*] Same as ★*speciegraphic*. *Science*, Jan. 10, 1902, p. 58.

speciography (spē-shi-og′rą-fi), *n.* Same as ★*speciegraphy*. *Science*, Jan. 10, 1902, p. 61.

speck^1, *n.*—**White speck of tobacco,** a disease producing small white spots on the leaves of tobacco caused by the fungus *Macrosporium tabacinum*.

speck^1, *v. t.* **3.** To stain or dot with ink small blemishes in (a finished fabric), so as to conceal or obliterate them.

spectacle, *n.* **8.** *pl.* Signal-glasses of varying color, held in a metal frame suggesting spectacles, to be moved in front of the lenses of signal-lights at night: usually of red and green if there are two. Also used, in the singular, for one frame with its colored glass.

> This calendar shows a miniature equipment of a complete signal system, presenting the arrangement of a universal ninety-degree *spectacle* for two positions, continuous light, lamp on top of post; also double ninety-degree *spectacles* arranged for two and three positions, and continuous light sixty-degree *spectacles* applied to a double arm for home and distant signals.
> *Elect. Rev.*, March 7, 1903, p. 356.

9. A frame with two bow-shaped handles for carrying well-boring tools.—**Bifocal spectacles,** spectacles having a lens of different focal distance, cemented to or replacing the lower portion of the main lens: a form of compound spectacles, usually distance and reading glasses combined in one frame.—**Pulpit spectacles,** spectacles with the upper part of the lens removed, enabling the wearer to look over them. [Colloq.] **Skeleton spectacles,** spectacles whose lenses are pierced with holes for the attachment of the temples and the bridge-piece for the nose, instead of being held in a wire frame.—**To make a pair of spectacles,** in *cricket*, to make a score of nothing in each inning. *Hutchinson*, Cricket, p. 76.

spectacle-frame (spek′tą-kl-frām), *n.* **1.** The frame, usually of metal, which holds the lenses of a pair of spectacles.—**2.** In *iron ship-building*, a cast-steel frame projecting from each side of the stern of a twin-screw steamer which supports the stern-bearings of the propeller-shaft in vessels of a form in which the hull of the vessel is bossed out to cover the whole screw-shaft. The spectacle-frame forms the after termination of the bossed-out part of the hull.

spectacle-iron (spek′tą-kl-ī″ėrn), *n.* The clue-iron in the lower corners of squaresails.

spectacle-scars (spek′tą-kl-skärz″), *n. pl.* In some *Brachiopoda*, such as the extinct genera *Obolus* and *Lingulella*, the two oval adductor muscle impressions which make spectacle-like scars on the inner surface of the valves.

Spectral series. See ★*series*.

spectrobolograph (spek-trǫ-bō′lǫ-gråf), *n.* [NL. *spectrum*, spectrum, + E. *bolograph*.] An automatic record of the distribution of energy in the spectrum, made by means of the bolometer. See ★*bolograph*.

spectrobolographic (spek″trǫ-bō-lǫ-graf′ik), *a.* [*spectrobolograph* + *-ic.*] Of or pertaining to a bolographic measurement of the spectrum; obtained by means of the spectrobolograph. *Smithsonian Rep.*, 1899, p. 69.

spectrobolometric (spek″trǫ-bō-lǫ-met′rik), *a.* [NL. *spectrum*, spectrum, + E. *bolometer* + *-ic.*] Of or pertaining to the measurement of the spectrum by means of a bolometer, or to the use of the spectrobolometer.

> Recent unpublished *spectrobolometric* studies at the Astrophysical Observatory show that on two apparently equally clear days, near the middle of March, 1902, with equal altitudes of the sun, the difference in the absorption in the well-known visible and infra-red water-vapor bands alone was such as to cause a difference in the solar radiation at the earth's surface of 7 per cent. Changes far in excess of this occur from the same cause between spring and summer.
> *U. S. Monthly Weather Rev.*, April, 1902, p. 180.

spectrocolorimetry (spek″trǫ-kul-ǫ-rim′e-tri), *n.* [NL. *spectrum*, spectrum, + E. *colorimetry*.] The spectrophotometric study of the colors of solutions and chemical compounds, especially as a method of chemical analysis.

spectrocomparator (spek″trō-kom′pą-rā-tǫr), *n.* [NL. *spectrum*, spectrum, + E. *comparator*.] An instrument devised by Hartmann for the precise comparison and measurement of photographs of line-spectra. *Nature*, Dec. 20, 1906, p. 182.

spectrogram (spek′trǫ-gram), *n.* [NL. *spectrum*, spectrum, + Gr. γράμμα, anything written.] The photograph of a spectrum, made by a spectrograph, that is, a spectroscopic camera.

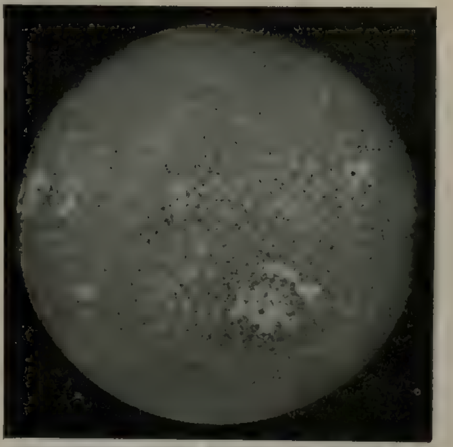
> *Spectrograms* taken with a slit by Professor Campbell at Jeur suggested, by the distortions of the characteristic ray impressed upon them, the progress of radial movements, such as might well be deemed inevitable in an aerial envelope obviously not in a state of equilibrium.
> [*A. M. Clerke*, Problems in Astrophysics, p. 131.

spectrograph, *n.*—**Autocollimating spectrograph,** a spectrograph the adjustment of which, as to collimation, is automatically done by means of a mechanical attachment. *Science*, Jan. 31, 1908, p. 167.—**Quartz spectrograph,** an apparatus for the photography of ultra-violet portions of the spectrum, the lenses and prisms of which are of quartz. The absorption of the shorter wave-lengths by glass is thus avoided and the range of the instrument is increased.

spectrographic, *a.*—**Deslandres's spectrographic method,** a method of determining the rate of rotation of a planet by measuring the inclination of the lines in the photograph of its spectrum to those of an adjacent comparison spectrum, the slit of the spectroscope being adjusted so as to coincide with the equator on the planet's image.—**Keeler's spectrographic method,** the method of determining the rotation rate of a planet by placing the slit of the spectrograph across the equator of the planet's image and measuring the apparent inclination of the lines in its spectrum to the lines in the sky-spectrum taken on the same plate as soon as possible without disturbing the instrument. According to Doppler's principle, the lines at one limb of the planet will be shifted slightly toward the red and at the other toward the blue by the planet's rotation, and thus slightly tilted.

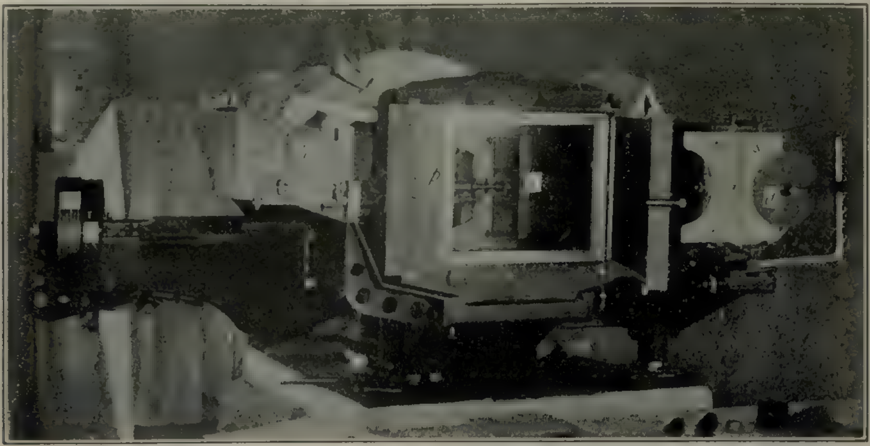
spectrographically (spek-trǫ-graf′i-kąl-i), *adv.* By means of the spectrograph; by means of spectrographic methods. *Nature*, Sept. 17, 1903, p. 477.

spectroheliogram (spek-trǫ-hē′li-ǫ-gram), *n.* [NL. *spectrum*, spectrum, + Gr. ἥλιος, sun, + γράμμα, anything written.] A photograph of the sun made by means of the spectroheliograph with monochromatic light, usually that of one of the violet calcium lines (K or H), and showing the details of the sun's surface and surroundings as they would appear if no other kind of light were emitted.



Spectroheliogram showing the calcium (H_2) flocculi (1906, August 25, 6^h 18^m A. M., Pacific Standard time), made with five-foot spectroheliograph of Mt. Wilson Solar Observatory.

spectroheliograph (spek-trǫ-hē′li-ǫ-gråf), *n.* [NL. *spectrum*, spectrum, + Gr. ἥλιος, sun, + γράφειν, write.] A specialized spectrograph, invented independently by Hale in the United States and by Deslandres in Paris about 1892, for the purpose of photographing the sun by monochromatic light. Its essential feature is a second slit placed immediately in front of the sensitive plate so as to isolate some line of the spectrum, all other light being cut off. The instrument is used in connection with a telescope so pointed as to throw the image of the sun upon the collimator slit. If then this slit is made to traverse the sun's image, and a corresponding motion is accurately communicated to the second slit, the object will be attained. A better plan is to keep the two slits fixed, and to cause the image of the sun to travel across the slit by moving the telescope, while a corresponding motion is automatically communicated to the sensitive plate. This is the arrangement used at the Yerkes Observatory. Deslandres has improved the instrument by placing a second spectroscope 'tandem' with respect to the first. The slit which was next the photographic plate becomes the collimator slit of the second spectroscope, while a third slit is placed before the sensitive plate of that spectroscope; this secures a more perfect isolation of the ray which forms the image. The instrument is based upon the fact that the dark lines of the solar spectrum are dark only relatively to the background and are really luminous.



Five-foot Spectroheliograph mounted for use with Snow telescope (Mt. Wilson Solar Observatory).

In this case the solar image and plate remain stationary, while the box, *b*, containing the prisms and lenses, and the slits, *s* and *s′*, are moved slowly sidewise by a screw turned by the wheel *m*, which is connected by an endless cord with a distant electric motor. To insure an even motion, the box and slits are supported by wooden blocks floating in mercury. The plate in its plate-holder is clamped into position at *p*, and the solar image brought to a focus at *d*. The disk, *d*, is left in position if the prominences at the limb of the sun are to be photographed; but is removed when a spectroheliogram of the entire solar disk is to be made.

> George E. Hale, under the title of The Rumford *Spectroheliograph* of the Yerkes Observatory, described in detail the *spectroheliograph* recently constructed at the Yerkes Observatory for photographing the sun in monochromatic light, in conjunction with the forty-inch telescope. Photographs which have been taken with the *spectroheliograph* show a finely mottled structure covering the entire surface of the sun. In certain parts of the sun, and especially in the neighborhood of sun spots, there are extensive regions of very bright calcium vapor. The photographs taken with this instrument include those which represent the denser calcium vapor at low levels in the solar atmosphere, and others showing the less dense vapor at higher levels.
> *Sci. Amer.*, May 9, 1903, p. 351.

spectroheliographic (spek-trọ-hē″li-ọ-graf′-ik), *a.* Of or pertaining to the spectroheliograph; obtained by means of the spectroheliograph.

> Prof. Julius's contribution to the subject, entitled '*Spectroheliographic* Results explained by Anomalous Dispersion.' According to his view, the photographic results achieved require no new hypothesis to explain their peculiarities. *Athenæum*, April 29, 1905, p. 535.

spectrometer, *n.*—**Bolometric spectrometer,** a spectrometer having a bolometer in place of the eyepiece: same as *spectrobolometer.*

spectrometry (spek-trom′e-tri), *n.* [*spectrometer* + $-y^3$.] The measurement of wave-lengths by means of a spectrometer.

spectromicroscope (spek-trọ-mī′krọ-skōp), *n.* [NL. *spectrum*, spectrum, + E. *microscope.*] A microscope in which a spectroscope replaces the eyepiece.

spectromicroscopically (spek-trọ-mī-krọ-skop′i-kạl-i), *adv.* In a manner pertaining to the spectroscopy of minute objects; by means of the spectromicroscope.

spectrophotograph (spek-trọ-fō′tō-gräf), *n.* [NL. *spectrum*, spectrum, + E. *photograph.*] The photograph of a spectrum. *Philos. Trans. Roy. Soc.* (London), ser. A, p. 118.

spectrophotography (spek″trọ-fọ-tog′rạ-fi), *n.* [NL. *spectrum*, spectrum, + E. *photography.*] The photography of spectra. *Woodbury*, Encyc. Dict. of Photog., p. 304.

spectrophotometer, *n.* To serve as a spectrophotometer a spectroscope must be so constructed as to permit of the production side by side, wave-length corresponding with wave-length throughout, of the spectra of the two sources of light to be compared. It is also necessary to be able to vary the intensity of these spectra separately by any desired amount, and to measure the amount of such variation. In some instruments the light which is to form one of the spectra is introduced into the slit of the spectroscope by placing a right-angled reflection-prism over half the slit, as shown in Fig. 1. The sources of light to be spectrophotometrically compared being placed at *A* and *B*, the light from *A* enters the slit directly, while that from *B* is totally reflected within the prism into the other half of the slit. The line dividing the spectra, in instruments in which this device is used, lacks sharpness, and the ray from *B* suffers losses by reflection and absorption. To secure symmetry two reflecting-prisms are sometimes used, as in the *horizontal slit photometer* of Nichols (Fig. 2), in which the light from *A* and *B* is reflected into the slit from either side by means of the two similar prisms *P*, *P*. Numerous other devices have been employed for this purpose, one of the most satisfactory of which is that of the *Lummer-Brodhun spectrophotometer.* This instrument has two collimators, *C* and *C′* (Fig. 3), mounted at right angles to each other. An arrangement consisting of two right-angled prisms placed together so as to form a cube (*L*), known as the *Lummer-Brodhun body*, transmits a portion of the light from *C* to the prism *P* and reflects a portion of the light from the collimator *C′* at the surface separating the two prisms. The reflected beam, thus rendered parallel to that from collimator *C*, likewise enters the prism *P*, and both beams are dispersed, forming adjacent spectra which may be observed in the usual manner by means of the telescope *T*. In *Brace's spectrophotometer* (Fig. 4) the dispersing-prism *P* is split and a portion of the interface *SS* is silvered. A portion of the light from the collimator *C* passes through the unsilvered parts of the interface and enters the telescope *T* after dispersion in the usual manner. Light from *C′*, reflected from the silvered strip, also enters *T* and forms a spectrum adjacent to that from *C*. In the spectrophotometric comparison of two sources of light, different regions of their spectra are isolated successively by means of a diaphragm in the eyepiece of the instrument. Each of these is brought in succession to the same intensity, and for each region the reduction to which the brighter of the two spectra must be subjected to produce equality is noted. It is then possible to express the brightness of one of the spectra, wave-length for wave-length, in terms of that of the other, which is called the comparison spectrum, and to express the relation between the two by means of a curve known as the curve of relative intensities. To produce equality of the spectra, Vierordt substituted for the slit of the ordinary spectroscope a double slit the upper and lower halves of which could be opened and closed independently by means of separate micrometer-screws. The brightness of the spectrum of the light entering either half of such a slit is approximately proportional to the slit-width, so that when the two spectra are equal the ratio of the intensities is readily computed from that of the slit-widths. In instruments of the Lummer-Brodhun type the measurement is made by adjusting the slits of the two collimators. Another means of equalizing the two spectra in a spectrophotometer consists in polarizing the light before dispersion and of regulating the light which reaches the eye by the rotation of a Nicol prism. The measurement of the angle between the plane of the polarizing prism and that of the analyzer gives the ratio of the two intensities. Such polarizing devices are used in the spectrophotometers of Hüfner, Glan, Koenig, Gouy, and others. To avoid the errors introduced by varying the width of the collimator-slits, the two spectra are sometimes brought to equality by placing in the path of the beam of light from the brighter source a revolving open-sectored disk so constructed that the openings are capable of adjustment during observation. The ratio between the open and closed sectors gives directly the reduction in intensity of the periodically interrupted beam. By means of the spectrophotometer it is possible to determine quantitatively the character of the light emitted by various flames and artificial light sources, the selective absorption of substances through which light is transmitted, and the selective reflection of surfaces, and to find the distribution of energy in all sorts of continuous spectra.—**Flicker spectrophotometer,** an instrument for the determination of the luminosity of different parts of the spectrum, in which each region of the spectrum is separately compared in brightness with an undispersed beam of light by the method of the flicker photometer. See ★*photometer.*

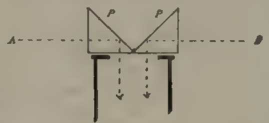

Fig. 2.

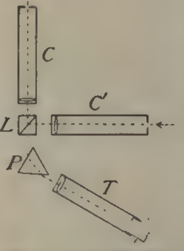

Fig. 3. Lummer-Brodhun Spectrophotometer.

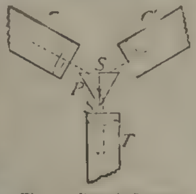

Fig. 4. Brace's Spectrophotometer.

spectrophotometrically (spek″trọ-fō-tọ-met′-ri-kạl-i), *adv.* By means of the spectrophotometer; by comparisons as to brightness, wave-length by wave-length, throughout the spectrum.

spectropolarigraph (spek″trọ-pọ-lar′i-gräf), *n.* [NL. *spectrum* + L. *polaris*, polar, + Gr. *γράφειν*, write.] A spectrograph with a Nicol prism behind the slit.

spectropolarimeter (spek-trọ-pō-lạ-rim′e-tėr), *n.* [NL. *spectrum* + E. *polarimeter.*] An instrument in which are combined a spectroscope and a polariscope, used for determining the amount of optical rotation of media. *W. D. Halliburton*, Chem. Physiol. and Pathol., p. 53.

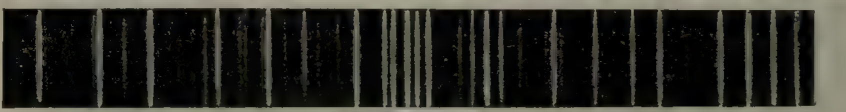
spectropolariscope, *n.* **2.** A sensitive form of half-shadow polariscope, used in combination with a spectroscopic apparatus in the study of the polarization of light.

spectrorefractometer (spek″trọ-rē-frak-tom′-e-tėr), *n.* [NL. *spectrum* + E. *refractometer.*] An instrument for the determination of the dispersion constants of liquids.

spectroscope, *n.*—**Constant-deviation spectroscope,** a form of spectroscope in which the prism is always at minimum deviation. The collimator and telescope are at right angles to one another.—**Echelon spectroscope,** a spectroscope of high dispersive power, invented by Michelson, in which the spectrum is produced by diffraction at the projecting edges of a set of glass plates arranged stepwise, as an echelon.—**Fixed-arm spectroscope,** a form of spectroscope in which collimator and view-telescope are firmly fixed upon a pier and different parts of the spectrum are brought into view by motion of the prism-train or grating, or by reflection from a mirror in the prism-box.—**Interference spectroscope,** a spectroscope, as the echelon spectroscope of Michelson or the more recent instrument of Lummer and Gehrke, in which dispersion is obtained through interference of light.—**Objective spectroscope,** a form of slitless spectroscope.—**Protuberance spectroscope.** See ★*protuberance-spectroscope.*—**Slitless spectroscope,** a spectroscope without a slit. The objective spectroscope is the most usual form.—**Slit spectroscope,** a spectroscope of the usual form, with collimator and slit: distinguished from the objective or slitless spectroscope.—**Stellar spectroscope,** a spectroscope adapted to the observation of star-spectra.

Spectroscopic camera, doubles, eyepiece. See ★*camera*, ★*double*, 18, and ★*eyepiece.*

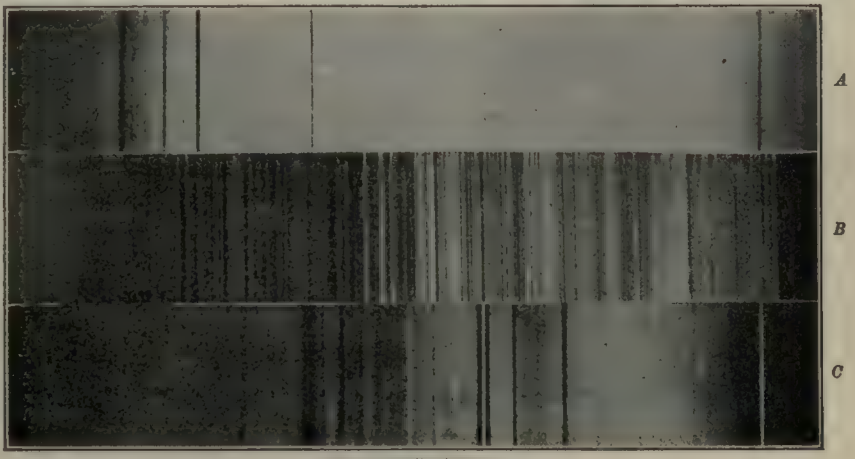
spectrum, *n.*—**Abnormal spectrum,** a spectrum in which the dispersion varies with the wave-length: opposed to *normal spectrum.*—**Actinic spectrum,** the spectrum considered with reference to its chemical or photographic action. Since the violet and ultra-violet rays are of great actinic power, the term is sometimes applied specifically to those parts of the spectrum in which they lie; however, such power is not confined exclusively to any definite region of the spectrum.—**Arc-spectrum,** the spectrum obtained from the light of the electric arc. The term is applied not only to the spectrum of the ordinary arc between carbon terminals, but also to the bright-line spectra obtained by volatilizing various substances in the arc or by using metals as terminals.—**Artificial spectrum top.** See ★*top*³.—**Atmospheric spectrum,** the spectrum formed by the refraction and dispersion of a beam of light in its passage through the atmosphere.—**Banded spectrum,** a spectrum consisting of bright bands of light, not monochromatic but nearly so, or a continuous spectrum crossed by dark bands due to absorption.—**Bolometric spectrum,** that portion of the spectrum, lying chiefly in the infra-red, which it is possible to explore and measure by means of the bolometer.—**Bright-line spectrum,** a discontinuous spectrum consisting of bright lines due to the radiation from an incandescent vapor or gas.—**Channeled spectrum.** Same as *fluted spectrum.*—**Comparison spectrum,** a reference spectrum brought into the field of a spectroscope or spectrophotometer for comparison, wave-length by wave-length, with the spectrum under observation.—**Compound spectrum,** a gas spectrum of more complex structure than the usual bright-line spectrum, obtained from a glowing gas or vapor.—**Diffraction-spectrum,** a spectrum which is produced by the diffraction of light as by a grating or set of closely ruled parallel lines.—**Discontinuous spectrum,** a banded, fluted, or channeled spectrum; a line spectrum; any spectrum in which some of the wave-lengths are absent.—**Emission-spectrum,** the spectrum of the light emitted by a glowing substance, owing its character to the composition of that light, and not, as in the case of absorption-spectra, to the effect of the media through which the light has passed.—**Energy-spectrum,** a curve whose abscissæ



Bright-line Spectrum.

represent the wave-lengths and whose ordinates represent the intensity or amount of radiant energy transmitted by each individual wave-length.—**Flash-spectrum.** See ★*flash-spectrum.*—**Fluorescence-spectrum,** the spectrum of the light emitted by a substance when excited to fluorescence.—**Fraunhofer spectrum,** a continuous spectrum crossed by black lines such as the spectrum of the sun or of certain fixed stars: so called because these lines were first observed by Fraunhofer (1814).—**Gas-spectrum,** the emission-spectrum of a glowing gas or the absorption-spectrum due to the dispersion of light which has been transmitted by a vapor or gas.—**Grating-spectrum,** the spectrum produced by transmission of light through or reflection from the surface of a diffraction-grating; a diffraction-spectrum.—**Infra-red spectrum.** (*a*) A spectrum the wave-lengths of which all exceed that of the extreme red of the visible spectrum, as in the case of a body below the red heat. (*b*) That portion, of any spectrum, which consists of rays less refrangible than the longest wave-lengths of the visible spectrum.—**Lunar spectrum,** the spectrum of sunlight reflected from the moon and modified by the selective reflection of that body.—**Magnetic spectrum,** the band of light observed when a phosphorescent screen is subjected to the action of a stream of cathode rays which have been deflected from their path by a magnetic field. Owing to the differing velocities of the cathode particles they are not all equally deflected, and the single spot of light which would have marked the point of contact of the stream with the screen is elongated, giving what has been termed the *magnetic spectrum.*—**Metallic spectra,** bright-line spectra of the metals. The number and wave-lengths of the lines vary greatly according to the metal from whose vapor they are emitted and also according to the temperature to which the vapor is heated. Thus fewer lines appear in the spectrum of a metal capable of being volatilized in the flame of a Bunsen burner than in the spark-spectrum or arc-spectrum of the same metal. The number of lines is vastly greater in the case of some metals, such as iron or titanium, in whose spectra thousands of lines have been mapped, than in others, such as sodium, lithium, and thallium, which have but few strong lines in the visible spectrum. As we pass from the visible spectrum to the shorter wave-lengths of the ultra-violet, the lines of metallic spectra become as a rule more numerous, although they no longer excite vision and are to be detected only by photography or by their power to produce fluorescence and phosphorescence. In some cases metallic spectra are a source of intense illumination. Thus the red lines of the strontium spectrum are used in signaling under the name of red fire; the calcium spectrum in combination with the spectra of certain other substances forms the chief source of light in the flaming arc; the spectra of titanium and iron are prominent in the so-called magnetite arc, while the mercury arc-lamp derives its light solely from the mercury spectrum. The sodium spectrum, zinc spectrum, cadmium spectrum, iron spectrum, mercury spectrum, and many other metallic spectra have numerous uses in science. The iron spectrum, with its numerous and widely distributed lines, affords an excellent scale of wave-lengths in the study of other spectra. The red line of the lithium spectrum, the yellow lines of the sodium spectrum, the green lines of the spectra of mercury and thallium are used as sources of monochromatic light. The following table gives the wave-lengths of some of the most prominent lines in the visible spectrum of several elements. Wave-lengths are given in Angstrom units. **Mixed spectrum,** a spectrum of a source of such breadth, in the plane of dispersion, that the overlapping of the spectral images causes appreciable mingling of unlike wave-lengths.—**Multiple spectra,** spectra differing as to the number, arrangement, and position of their lines or bands, but all pertaining to the same substance.—**Normal spectrum,** a spectrum of uniform dispersion in which equal distances measured in the plane of dispersion correspond to equal changes of wave-length.—**Phosphorescence-spectrum,** the spectrum of the light emitted by a phosphorescent body. Such spectra, which frequently consist of two or more broad bands, may vary in character, according to the interval of time that has elapsed since the close of excitation, because the bands may diminish in brightness at different rates.—**Planetary spectrum,** the spectrum of sunlight reflected from any planet and modified in composition by absorption in the planet's atmosphere and selective reflection at its surface.—**Prismatic spectrum,** a spectrum produced by the dispersive action of a prism or train of prisms.—**Pure spectrum,** one in which the overlapping of the spectral images of the source produces no appreciable mingling of unlike wave-lengths.—**Radiation-spectrum.** Same as *emission-*★*spectrum.*—**Solar spectrum,** the spectrum of the sun's light. See *spectrum*, 3.—**Spark-spectrum,** the bright-line spectrum of the light of an electric discharge.—**Spectrum of the second order,** the second spectrum in either of the two symmetrical series of spectra produced by a diffraction-grating. The innermost spectra of these groups are termed *spectra of the first order*, the third pair, counting from the axis, *spectra of the third order*, etc.—**Spectrum top.** See ★*top*^{3}.—**Stellar spectrum,** the spectrum of a fixed star.—**Swan spectrum,** the fluted or channeled spectrum of the non-luminous parts of a hydrocarbon flame: so called because it was first mapped by Swan in 1857. The characteristic flutings of this spectrum have been found to be due to carbon monoxid.—**Thermal spectrum,** a spectrum of heat-waves, specifically of the infra-red waves.—**Ultra-violet spectrum,** that portion of any spectrum that consists of rays of greater refrangibility than those which constitute the visible portion.

Element.	Wave-lengths of important lines.
Lithium	6708., 6104., 4972., 4602., 4273., 4132., 3985., 3915.
Sodium	6161/55., 5890/96., 5680., 5150., 4980., 4750., 4670., 4540., 4500., 4390., 4320.
Potassium	6930/11., 5832/12., 5802/782., 5360/43., 5340/24., 5112/098., 5100/085., 4966/52., 4957/43., 4864/51.
Magnesium	5529., 5184/73/68., 4703., 4352., 4058.
Barium	6142., 5854., 5778., 5535., 4934., 4554., 3994.
Calcium	6494., 6463., 6439., 6162., 6122., 5858., 5594., 5589., 5350., 5270., 4878., 4586., 4454/35/26., 4302., 4227., 3969.
Strontium	5504., 5481., 5257., 5239., 5156., 4962., 4832/12., 4607., 4216., 4078.
Zinc	6364., 5182., 4811., 4722., 4630.
Cadmium	6439., 5086., 4800., 4678.
Mercury	5770/90., 5461., 4358., 4047/78.
Aluminium	3962/44.
Indium	4511., 4102.
Thallium	5351. (also 5940., 5154., 5079., 4983., 4737.; spark-lines).
Tin	5632., 4524. (also 6453., 5799., 5589., 5564., 5333., 4859., 4586.; spark-lines).
Lead	6002., 4168., 4058/62., 4020.
Antimony	4034.
Bismuth	5552., 4723., 4493., 4308.
Tungsten	5071., 5054., 4171., 4138., and very many less intense lines.
Uranium	5528., 5495., 5483., 5478., 4544., 4342., 4270., 4242., 4090., and very many weak lines.
Molybdenum	5571., 5533., 5507., 4382., 4326., 4293/92., 4277., 3903., 3798., and many other lines.
Titanium	5036., 5014., 4990., 4556.—4513. (a group of nine lines), 3999., 3990., 3982., and very many weaker lines.
Chromium	5209/06/05., 4290., 4275., 4255., and many weaker lines.
Manganese	6014/17/22., 5341., 4415., 4035/33/31., and numerous other lines.
Iron	6495., 6192., 6137., 6066., 5863., 5616., 5587., 5195/93., 5041., 4384., 4270., 4072/64/46/05., and numerous weaker lines.
Cobalt	5484., 4868/40/14., 4534/31., 4122/19/11., and many other lines.
Nickel	6177., 5893., 5477., 5084/81/80., 4866/56., 4716/15., 4649., 4471/63/59/02., and many other lines.
Copper	5782/00., 5218., 5106/53., 4023/63.
Silver	5472/66., 5209., 4669., 4476., 4213., 4212., 4055., 3982.
Gold	5838., 4793.



Types of Stellar Spectra.
A, α Cygni; B, Betelgeux; C, μ Centauri.

specularite (spek′ụ̄-lär-īt), *n.* [*specular* + *-ite*^{2}.] Same as *specular iron*, or *hematite*.

speculum, *n.* 7. In *astrol.*, a table exhibiting at one view the latitudes, destinations, semi-arcs, etc., of the planets in a nativity.—**Bridge-like speculum,** in *ichth.*, a mesocoracoid, a bone of the shoulder-girdle in the soft-rayed fishes. It arches from the hypercoracoid to the hypocoracoid.

specus (spē′kus), *n.* [L. *specus*, a cave, ditch, channel, underground watercourse, etc.] In *Rom. archæol.*, the channel or waterway of an aqueduct, usually of masonry and vaulted over. This was carried underground and on embankments, according to the level, but also for great distances on long arcades.

speech, *n.*—**Clipped speech.** See ★*clipped.*—**Explosive speech,** sudden, loud enunciation, constituting a disorder of speech occurring as a symptom of certain forms of cerebral disease.—**Internal speech,** in *psychol.*, endophasia; the contents of consciousness when speech is reproduced or recalled, whether or not the reproduction prompts to utterance.

> The rise of the larynx for high tones and its fall for low ones indicate activity of the thyrohyoid and sterno-thyroid muscles. Movements during *internal speech* have been similarly registered.
> *Scripture*, Exper. Phonetics, p. 266.

Slurred speech, the clipping of syllables or entire words which sometimes characterizes speech in general paralysis of the insane.—**Visible speech.** See *visible.*

speech-curve (spēch′kėrv), *n.* A speech-record; a graphic representation of the flow of speech, as obtained by means of the phonautograph, phonograph, gramophone, etc.

> The analysis of *speech curves* might be greatly facilitated by an inspection of curves produced by compounding vibrations of known characters.
> *Scripture*, Exper. Phonetics, p. 67.

speechfulness (spēch′fůl-nes), *n.* The character or fact of being speechful; loquacity. [Rare.]

> Sensory aphasia is . . . in the beginning . . . the aphasia of comparative *speechfulness*, while motor aphasia in the beginning is usually absolute speechlessness.
> *Buck*, Med. Handbook, I. 414.

speech-song (spēch′sông), *n.* See ★*song-speech.*

speed, *n.* 6. Rapidity of action, as of a lens. The speed of a lens is dependent upon the amount of light it projects on the plate.

> There is much talk regarding the *speed* of various lenses. The matter is simple in the extreme. The *speed* of the lens depends upon no mystical properties, but almost entirely upon the amount of light which it projects on the plate. As in a house, the larger the window compared to the size of the room, the greater the light; so with the lens, the more light that passes through it the speedier the lens. *Trade Catalogue.*

7. In *mech.*, a device by which the rate of motion may be changed or controlled, particularly in motor-vehicles.

> It will be readily observed that the main driving *speed*, as well, also, the intermediate and backing *speeds*, are operated by friction disks through the operation of two hand levers. *Hiscox*, Horseless Vehicles, p. 251.

Critical speed. (*a*) The highest speed at which a machine, or part of a machine, can be operated without breaking. (*b*) The speed at which a machine, vibration, or other periodic element synchronizes with another machine, vibration, or periodic element: for example, the synchronizing of the speed of a machine with the period of vibration of the building in which it is operated. (*c*) A rate of travel or speed of revolution of the drivers of a locomotive or of a motor-car at which the rate of flow of steam, or motor fluid to the cylinder, is so retarded by friction in passages, or otherwise, that further increase of speed is not accompanied by increase of power. This may also occur because of diminished adhesion of the drivers to the rail or road surface at such high speed.—**Rotary speed,** speed of revolution; angular velocity.

speed-cone, *n.* 2. A cone-shaped form made of light canvas painted black displayed by each vessel when war-ships are steaming in fleet or squadron, to indicate to all other vessels the speed and direction of motion of its propelling engines. The cone is suspended from the yard-arm by signal-halyards in such a way that it may be made to point upward or downward to indicate motion ahead or astern respectively. The height to which the cone is hoisted between the ship's rail and the yard-arm is proportionate to the speed of the engine. In a twin-screw vessel a cone on each side of the vessel may be used to give indication of the motions of the starboard and port engines respectively.

speed-controller (spēd′kọn-trō″lėr), *n.* A form of friction-coupling designed to transmit power from one shaft to another at variable speeds. The simplest type is composed of two cones placed one above the other with the apex of one opposite the base of the other. The upper or delivery cone is on the driving-shaft and revolves with it at a uniform speed. The transmitting-cone is placed on another shaft immediately under the first cone. The frictional contact between the two cones is made by means of a sliding contact-belt placed between them. A slight change in the position of the contact-belt along the line of contact of the two cones will produce a change of speed. Another type consists of two pairs of conical disks placed side by side, one disk of each pair being mounted on a hollow shaft or sleeve and the other disk of each pair being mounted on a shaft which runs through the sleeve. The central disks, on the sleeve, form the delivery-disks, and the two outside disks, on the shaft, are the transmitting-disks. Between each pair of delivery- and transmitting-disks are two smaller disks pivoted at right angles with the larger disks and touching each one at some point of its surface. By rotating the small disks the points of contact may be changed, each change in relative position between the disks causing a change of speed. A third type, called the *speed-changing pulley*, employs two large disks and two small disks, the larger disks each being a pulley, one carrying the delivery-belt and the other the transmitting-belt. The same principle is used with different forms of pulleys. Electric motors used to drive lathes and other machine-tools also employ electrical speed-controlling appliances. See *friction-cones, friction-gearing,* and *motor.*

speed-counter (spēd′koun″tėr), *n.* Same as ★*counter*¹, 2.

speeder, *n.* **5.** A regulator or governor for controlling the revolutions of a machine, such as an electric motor.

speed-gear (spēd′gēr), *n.* That arrangement of the gear-train driving a machine which makes it run at its highest speed. *Science Abstract*, VI. sec. B, p. 49.

Speeding up. See the extract.

> The workman steadily becoming less and less of an individual producer, working at his own speed, and more and more a member of a "team," or set of operatives each performing a small part of the process, and thus obliged to keep up with each other. This enforced "*speeding up*" would be all very well if the old plan of paying by the piece were continued. *Webb*, Indust. Democracy, I. 399.

speed-lathe (spēd′lāᴛʜ), *n.* Any lathe which runs at a high speed or faster than the iron-working lathes. All wood-working lathes are speed-lathes.

speed-light (spēd′līt), *n.* *Naval*, in station-keeping, one of the stern-lights displayed by each ship in line, to regulate the speed of the following ship if station is to be kept properly.

> The Sub watches the *speed-lights* of the next ahead, for as those lanterns change so must he adjust his pace. . . . The leading ship has slowed a certain number of revolutions, . . . but she has not changed her *speed-light* in time. . . . But *speed-lights* unless properly handled . . . are, he doubts not, an invention of the Devil.
>
> *Kipling*, A Fleet in Being, ii.

speed-limit (spēd′lim″it), *n.* See ★*engine-stop.*

speedometer (spē-dom′e-tėr), *n.* [*speed* + Gr. *μέτρον*, measure.] A speed-recorder; a speed-indicator or recorder adapted to an automobile, carriage, or bicycle. See *speed-indicator.*

speed-reducer (spēd′rẹ-dū″sėr), *n.* A set of grooved wheels, of various diameters, by means of which the rate of rotation of an apparatus driven, for instance, by an electric or water motor may be reduced by any required amount.

> The power by which the discs were rotated was obtained from a Crocker-Wheeler motor, whose speed was reduced by a Pillsbury *speed reducer.*
>
> *Amer. Jour. Psychol.*, VIII. 494.

speedway (spēd′wā), *n.* A public road set apart for fast driving. [U. S.]

speiskobalt (shpīs′kō″bält), *n.* [G., < *speis(e)*, mortar, + *kobalt*, cobalt.] A German name for the cobalt-nickel diarsenide, smaltine.

spel, *n.* and *v.* A simplified, and former, spelling of *spell.*

speleological (spē″lẹ-ọ-loj′i-ka̤l), *a.* [*speleolog(y)* + *-ical.*] Of or pertaining to speleology, or the study of caves.

> The progress of *speleological* exploration in Yorkshire by the members of local scientific societies.
>
> *Geog. Jour.* (R. G. S.), XV. 78.

speleologist (spē-lẹ-ol′ọ-jist), *n.* [*speleolog(y)* + *-ist.*] One who is concerned in the exploration and study of caves; a student of speleology.

> Palæontology and archæology have been until now the principal objects of English *speleologists.*
>
> *Geog. Jour.* (R. G. S.), X. 500.

speleology (spē-lẹ-ol′ọ-ji), *n.* [F. *spéléologie*, < Gr. *σπήλαιον*, a cave, + *-λογια*, < *λέγειν*, speak.] The scientific study of caves.

> E. A. Martel in France has initiated the special study of caverns, a fascinating branch of minor exploration, to which the name *Speleology* has been applied, and to which attention is now directed in all European countries.
>
> *Encyc. Brit.*, XXVIII. 629.

spelt⁴ (spelt), *n.* An unrecognized abbreviation of *spelter*, a commercial name of zinc.

speltz (spelts), *n.* [G.] Same as *spelt*¹, *n.*

Spencerian, *a.* **2.** Pertaining or relating to P. R. Spencer or to his system of free-hand writing, introduced about the middle of the nineteenth century.

spender, *n.* **2.** In *leaching*, the pit in which the bark is leached. *C. T. Davis*, Manuf. of Leather, p. 61.

Spenerism (spā′nėr-izm), *n.* The Pietist doctrines taught by Philip Jacob Spener of Strasburg, Germany, in the latter half of the seventeenth century. The system was a protest against the dogmatism in the Lutheran Church engendered by its continuous controversies with Geneva and Rome, and against the low state of public morals due to the incessant preaching of dogma. Stress was laid on the duty of active morality.

spergulin (spėr′gū-lin), *n.* [NL. *Spergul(a)* (see def.) + *-in*².] A colorless amorphous compound, $(C_5H_7O_2)_x$, contained in the seeds of *Spergula arvensis.* Its alcoholic solution exhibits an intense blue fluorescence.

Spermaceti cerate. See ★*cerate*¹.

spermacrasia (spėr-ma̤-krā′zịä̤), *n.* [NL., < Gr. *σπέρμα*, seed, + *ἀκρασία*, ill condition.] Same as *spermatorrhea.*

spermanucleinic (spėr″ma̤-nū-klẹ-in′ik), *a.* [Gr. *σπέρμα*, seed, + L. *nucleus*, nucleus, + *-in*² + *-ic.*] Noting a nucleinic acid obtained from the testicles of certain animals. A product of this order derived from the salmon has the formula $C_{40}H_{54}N_{14}O_{17}.2P_2O_5$.

Spermaphyta (spėr-ma̤-fī′tä̤), *n. pl.* [NL.] Same as ★*Spermatophyta.*

spermase (spėr′mās), *n.* [Gr. *σπέρμα*, seed, + *-ase.*] An oxidizing ferment which occurs in barley grains.

> Grüss has recently observed an oxidizing enzym in barley grains which has no reaction on guaiac, but yields a violet color with tetramethylparaphenylendiamine. He calls it *spermase.* *U. S. Dept. Agr. Rep.* 68, p. 39.

sperm-aster (spėrm′as″tėr), *n.* The aster associated with the male pronucleus or head of the spermatozoön during the precleavage stages of the fertilized egg. *Biol. Bull.*, April, 1904, p. 226.

spermatangium (spėr-ma̤-tan′ji-um), *n.*; pl. *spermatangia* (-ä̤). [NL., < Gr. *σπέρμα(τ-)*, seed, + *ἀγγεῖον*, a vessel.] A multicellular organ which gives rise to sperms, found in the *Characeæ* and the brown alga *Dictyota*: formerly included under *antheridium.* See ★*spermatocyst*, 3.

Spermatic capsule. See ★*capsule.*

spermatid (spėr′ma̤-tid), *n.* [Gr. *σπερμα(τ-)*, seed, + *-id*².] One of the two cells which arise by division of a secondary spermatocyte and give rise by transformation to a spermatozoön. In oögenesis the spermatid is represented by the oötid.

> In Ascaris megalocephala univalens there is the normal number of two chromosomes. The ovotid and *spermatid* have each only one. In the fertilized egg there is one derived from the *spermatid*, one from the ovotid; therefore the bivalent chromosome found in the maturation period of the spermatocyte or ovocyte must have been formed by the conjugation of a paternal with a maternal chromosome. *Biol. Bulletin*, Feb., 1904, p. 150.

spermatide, *n.* Same as ★*spermatid.*

spermatiferous (spėr-ma̤-tif′ẹ-rus), *a.* [Gr. *σπέρμα(τ-)*, seed, + *φέρειν*, bear.] Containing or producing spermatia.

spermatin (spėr′ma̤-tin), *n.* [Gr. *σπέρμα(τ-)*, seed, + *-in*².] A nucleo-albumin found in spermatic liquid.

spermatocidal (spėr″ma̤-tọ-sī′da̤l), *a.* [Gr. *σπέρμα(τ-)*, seed, + L. *-cida*, < *cædere*, kill, + *-al*¹.] Causing the arrest of motility of spermatozoa: as, a *spermatocidal* serum. *Vaughan and Novy*, Cellular Toxins, p. 145.

spermatocyst, *n.* **3.** In *bot.*, any unicellular structure which produces sperms found in the algæ or fungi. See ★*spermatangium.*

spermatocyte, *n.*—**Primary spermatocyte**, one of the testicular cells belonging to the last generation of spermatogonia and giving rise by mitotic division to two secondary spermatocytes, each of which divides in turn to form a spermatid.—**Secondary spermatocyte**, one of the two cells arising by the mitotic division of a primary spermatocyte.

spermatocytic (spėr″ma̤-tọ-sit′ik), *a.* [*spermatocyt(e)* + *-ic.*] Of or pertaining to a spermatocyte. *Biol. Bulletin*, Feb., 1904, p. 158.

spermatogone (spėr′ma̤-tọ-gōn), *n.* [NL. *spermatogonium*, < Gr. *σπέρμα(τ-)*, seed, + *γονή*, generation.] **1.** A spermatic or seminal cell. *Buck*, Med. Handbook, IV. 318.—**2.** In *entom.*, one of the colossal cells, in the blind end of the testicular tube, from which the whole contents of the testes originate. They occur in the larvæ of many insects.

> In the blind end of the testicular tubes lies a colossal cell visible to the naked eye, the *spermatogone*, from which the entire contents of the testes originate.
>
> *A. S. Packard*, Text-book of Entom., p. 499.

spermatogonial (spėr″ma̤-tọ-gō′ni-a̤l), *a.* [NL. *spermatogoni(um)* + *-al*¹.] Of or pertaining to spermatogonia or spermatogones. *Buck*, Med. Handbook, VI. 870.

spermatogonic (spėr″ma̤-tọ-gon′ik), *a.* Same as ★*spermatogonial.* *Biol. Bull.*, Feb., 1904, p. 158.

spermatomerite (spėr-ma̤-tom′ẹ-rīt), *n.* [Gr. *σπέρμα(τ-)*, seed, + *μέρος*, part, + *-ite.*] One of the chromatin granules into which the sperm-nucleus resolves itself after it has entered the egg. *Böhm*, 1887.

spermatophobia (spėr″ma̤-tọ-fō′bi-ä̤), *n.* [NL., < Gr. *σπέρμα(τ-)*, seed, + *-φοβια*, < *φοβεῖν*, fear.] Morbid dread of having spermatorrhea, or hypochondriacal belief that it is present when it is not.

Spermatophoral sac. See ★*sac*².

Spermatophyta (spėr-ma̤-tọ-fī′tä̤), *n. pl.* [Gr. *σπέρμα(τ-)*, seed, + *φυτόν*, a plant.] A great group or phylum, the highest in the vegetable kingdom, embracing the seed-bearing plants. It is the same as the *Phanerogamia* of the older botanists, all properly flowering plants also bearing seeds, and as this latter character is now regarded as the more fundamental one, the name *Phanerogamia* is being generally abandoned. It is also equivalent to the *Embryophyta Siphonogama* of Engler. Sometimes shortened to *Spermaphyta.* The form *Spermophyta* is no longer used. See *Phanerogamia* and ★*Embryophyta.*

spermatophyte (spėr′ma̤-tọ-fīt), *n.* [NL. *Spermatophyta.*] A plant of the phylum *Spermatophyta*; a seed-plant; a spermophyte.

> It is possible that in some such way the reduction in numbers of megaspores took place in those *spermatophytes* in which only three or fewer megaspores have been reported. *Bot. Gazette*, Dec., 1902, p. 401.

spermatophytic (spėr-ma̤-tọ-fit′ik), *a.* [*spermatophyt(e)* + *-ic.*] Belonging to the plant phylum *Spermatophyta*; seed-bearing; spermophytic.

spermatoschesis (spėr-ma̤-tos′kē-sis), *n.* [NL., < Gr. *σπέρμα(τ-)*, seed, + *σχέσις*, retention, < *ἔχειν*, hold, retain.] Partial or complete absence of the spermatic secretion.

spermatostrote (spėr′ma̤-tọ-strōt), *n.* [Gr. *σπέρμα(τ-)*, seed, + *στρωτός*, strewn.] In *phytogeog.*, a plant distributed by means of seeds. *F. E. Clements.*

spermatotoxin (spėr″ma̤-tọ-tok′sin), *n.* [Gr. *σπέρμα(τ-)*, seed, + E. *toxin.*] A cytotoxin which results on immunization with spermatozoa. *Buck*, Med. Handbook, Appendix, p. 539.

spermatoxin (spėr-ma̤-tok′sin), *n.* Same as ★*spermatotoxin.*

spermaturia (spėr-ma̤-tū′ri-ä̤), *n.* [NL., < Gr. *σπέρμα(τ-)*, seed, + *οὖρον*, urine.] Presence of spermatozoa in the urine when voided.

sperm-center (spėrm′sen″tėr), *n.* In *cytol.*, the centrosome supposed to be derived from the middle-piece of the spermatozoön after its entrance into the egg.

sperm-duct (spėrm′dukt), *n.* Same as ★*spermiduct*, 2.

sperm-filament (spėrm′fil″a̤-me̤nt), *n.* A flagellate spermatozoön.

spermiducal (spėr-mi-dū′ka̤l), *a.* Of or pertaining to a spermiduct. *Proc. Zool. Soc. London*, 1897, p. 343.—**Spermiducal gland.** See ★*gland.*

spermiduct, *n.* **2.** In many invertebrates, a canal for carrying the seminal fluid to the exterior.

spermin, *n.* **2.** A trade-name of a preparation of the testicle used for hypodermic injection in cases of senility and of locomotor ataxia.

spermine (spėr′min), *n.* [Gr. *σπέρμα*, seed, + *-ine*².] A colorless crystalline basic compound, $C_{10}H_{26}N_4$, found, in combination, in spermatic fluid and in the heart and liver of calves.

spermocenter (spėr-mọ-sen′tėr), *n.* [Gr. *σπέρμα*, seed, + *κέντρον*, center.] The sperm centrosome during the fertilization of the ovum. *Wilson.*

spermoduct (spėr′mọ-dukt), *n.* Same as *spermaduct.*

sperm-oil, *n.*—**Arctic sperm-oil.** Same as *doegling* ★*oil.*

spermolysin (spėr-mol′i-sin), *n.* [Gr. *σπέρμα*, seed, + E. *lysin.*] Same as ★*spermatotoxin.*

spermoön (spėr-mō′on), *n.*; pl. *spermoa* (-ä̤). [NL., < Gr. *σπέρμα*, seed, + *ᾠόν*, egg.] The fertilized ovum.

spermophorium (spėr-mọ-fō′ri-um), *n.*; pl. *spermophoria* (-ä̤). [NL.] Same as *spermatophore.*

spermotoxin (spėr-mọ-tok′sin), *n.* Same as ★*spermatotoxin.*

sperm-sac (spėrm′sak), *n.* A sac which contains spermatozoa.

sperm-whale, *n.*—**Pygmy sperm-whale.** Same as *sperm-whale porpoise.*

spessartite, *n.* **2.** In *petrog.*, a name used by Rosenbusch (1895) for a variety of lamprophyre composed of hornblende and diopside with lime-soda feldspar. Occasionally orthoclase and olivin may be present. The variety is nearly the same as camptonite.

spet² (spet), *n.* [Origin obscure.] The European barracuda. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 260.

spew, *v. i.* **3.** To exude grease or become dull on the surface after being finished a short time: said of leather. *Modern Amer. Tanning*, p. 117.

S. P. G. An abbreviation of *Society for the Propagation of the Gospel.*

sphacelic (sfạ-sel'ik), *a.* [*Sphacel*(*ia*) + *-ic.*] Noting an acid, a compound said to be contained in ergot.

sphacelinic (sfas-e-lin'ik), *a.* [*Sphacel*(*ia*) + *-in* + *-ic.*] Same as ★*sphacelic.*

sphaceloderma (sfas″e-lō-dėr'mạ̈), *n.* [NL., < Gr. *σφάκελος*, gangrene, + *δέρμα*, skin.] Gangrene of the skin.

sphacelotoxin (sfas″e-lọ-tok'sin), *n.* [Gr. *σφάκελος*, gangrene, + E. *toxin.*] A colorless compound, $C_{13}H_{24}O_2N_2$, contained in ergot, which it resembles in physiological properties.

sphacelous (sfas'e-lus), *a.* [Gr. *σφάκελος*, gangrene, + *-ous.*] Gangrenous; necrotic.

Sphærexochus (sfẹ-rek'sọ-kus), *n.* [NL., < Gr. *σφαίρα*, sphere, + *ἐξοχή*, a prominence.] A genus of proparian Silurian trilobites with inflated lobed glabella, small eyes, and ten thoracic segments.

Sphæriales (sfē-ri-ā'lēz), *n. pl.* [NL., < Gr. *σφαιρα*, sphere, + *-ales.*] A large order of pyrenomycetous fungi, so named from the genus *Sphæria.* As defined by Engler and Prantl it includes 18 families and over 2,000 species.

sphæricephalic (sfē″ri-se-fal'ik), *a.* [Gr. *σφαίρα*, sphere, + *κεφαλή*, head, + *-ic.*] In *craniom.*, having a brachycephalic skull, with the occipital and basal regions globular. *Aitken Meigs.*

Sphærioidaceæ (sfē″ri-oi-dā'sẹ-ē), *n. pl.* Same as ★*Sphæropsidaceæ.*

sphærobacterium (sfē″rọ-bak-tē'ri-um), *n.*; pl. *sphærobacteria* (-ạ̈). [NL., < Gr. *σφαῖρα*, sphere, + NL. *bacterium.*] One of the *Sphærobacteria.*

sphæroblast (sfē'rọ-blȧst), *n.* [Gr. *σφαῖρα*, a ball, + *βλαστός*, germ.] A nodule or small mass of wood arising from the cambium of a dormant bud and becoming separated from the wood beneath. Also called *wood-nodule.*

> Wood-nodules or *Sphæroblasts* are curious marble-like masses of wood which protrude with a covering of bark from old trunks of Beeches, etc., and can be readily dug out with a knife. *H. M. Ward*, Disease in Plants, p. 225.

sphærocobaltite, *n.* See *spherocobaltite.*

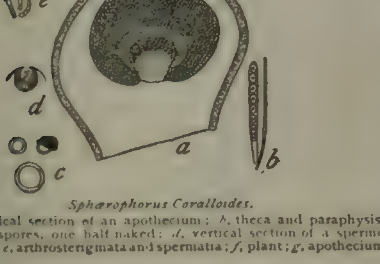
sphærolite (sfē'rọ-līt), *n.* In *petrog.*, same as *spherulite.*

sphærolitic (sfē-rọ-lit'ik), *a.* Same as *spherulitic.*

Sphæronema (sfē-rọ-nē'mạ̈), *n.* [NL. (Fries, 1818), < Gr. *σφαίρα*, a ball, + *νῆμα*, a thread, alluding to the thread-like necks of the pycnidia.] A genus of *Fungi Imperfecti* of the order *Sphæropsidales*, having pycnidia with more or less elongated necks and unicellular hyaline spores. Over 70 species have been described. They occur chiefly on dead leaves and branches.

Sphærophoraceæ (sfē″rọ-fọ-rā'sẹ-ē), *n. pl.* [NL., < *Sphærophor*(*us*) + *-aceæ.*] A family of foliaceous or fruticose ascolichens, so named from the principal genus *Sphærophorus.*

Sphærophorus (sfẹ-rof'ọ-rus), *n.* [NL. (Persoon, 1794), < Gr. *σφαίρα*, a ball, + *-φορος*, < *φέρειν*, bear.] A genus of ascolichens, type of the family *Sphærophoraceæ*, having the thallus much branched and brittle, bearing terminal globose apothecia at first inclosed by the thallus, which finally ruptures. The spores are unicellular and dark-colored. About 10 species are known. They grow upon the ground or at the base of trees. *S. coralloides* is found in the mountains of Europe and America.



Sphærophorus Coralloides.

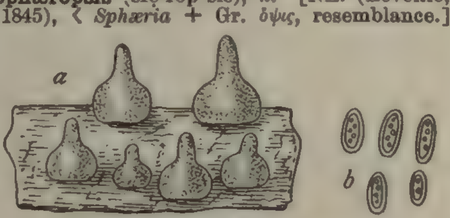
a, vertical section of an apothecium; *b*, theca and paraphysis; *c*, three spores, one half naked; *d*, vertical section of a spermogonium; *e*, arthrosterigmata and spermatia; *f*, plant; *g*, apothecium.

Sphæropsidaceæ (sfē″rop-si-dā'sẹ-ē), *n. pl.* [NL., < *Sphæropsis*, the typical genus, + *-aceæ.*] A large family of *Fungi Imperfecti*, having mostly black, glòbose, carbonaceous or coriaceous pycnidia.

sphæropsidaceous (sfē″rop-si-dā'shius), *a.* Pertaining or belonging to the fungus family *Sphæropsidaceæ.*

Sphæropsidales (sfē″rop-si-dā'lēz), *n. pl.* [NL., < *Sphæropsis* + *-ales.*] One of the three orders of *Fungi Imperfecti*, having spores produced in perithecia-like cavities called pycnidia which resemble the sporocarps of the pyrenomycetous order *Sphæriales.* Some are known to represent an early stage in the life-cycle of ascomycetous fungi.

Sphæropsis (sfẹ-rop'sis), *n.* [NL. (Léveillé, 1845), < *Sphæria* + Gr. *ὄψις*, resemblance.] A large genus of fungi, type of the family *Sphæropsidaceæ*, having separate black pycnidia and dark-colored unicellular spores. Over 180 species have been described. They are especially numerous in North America. *S. Malorum* is the cause of the black rot of the apple. *S. tabacina* is found on decaying wood.



Sphæropsis tabacina.

a, several pycnidia of the fungus; *b*, spores of the same, much magnified.

sphærotheriid (sfē-rọ-thē'ri-id), *n.* and *a.* **I.** *n.* A myriapod of the family *Sphærotheriidæ.*

II. *a.* Having the characters of or belonging to the family *Sphærotheriidæ.*

Sphagebranchus (sfaj-ẹ-brang'kus), *n.* [NL., < Gr. *σφαγή* or *σφάξ* (*σφαγ-*), the throat, + *βράγχια*, gills.] A genus of ophichthyoid eels remarkable for showing no trace of fins in the adult stage.

Sphagnales (sfag-nā'lēz), *n. pl.* [NL. (Engler, 1892), < *Sphagn*(*um*) + *-ales.*] An order of mosses, the peat-mosses, containing the single family *Sphagnaceæ* and genus *Sphagnum* (which see).

Sphagnous or **sphagnum bog.** See ★*bog*1.

sphecid (sfes'id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Sphecidæ.*

II. *a.* Having the characters of or belonging to the family *Sphecidæ.*

sphegid (sfej'id), *n.* and *a.* **I.** *n.* A member of the hymenopterous family *Sphegidæ.*

II. *a.* Having the characters of or belonging to the family *Sphegidæ.*

Sphegoidea (sfẹ-goi'dẹ-ạ̈), *n. pl.* [NL., < *Sphex* (*Sphec-*) + *-oidea.*] The *Sphegidæ* considered as a group of superfamily rank.

sphenocephalia (sfē″nọ-se-fā'li-ạ̈), *n.* [NL., < Gr. *σφήν*, a wedge, + *κεφαλή*, the head.] Monstrosity characterized by a wedge-shaped head.

sphenoid, *n.* **1.** By some authors the term is limited to a form having two faces only, which meet in a wedge-shaped edge. The combination of two complementary forms of this type is then called a *bisphenoid.* A tetragonal scalenohedron, a form having eight similar triangular faces arranged in symmetrical pairs, has been called a *disphenoid.*

3. In *anthrop.*, a cranium the norma verticalis of which has a wedge-shaped form, the forehead being narrow and the greatest width being near the occiput. *G. Sergi* (trans.), Var. of the Human Species, p. 32.

sphenoidal, *a.*—**Sphenoidal class.** See ★*symmetry*, 6.

Sphenomaxillary crest. See ★*crest.*

sphenosis (sfẹ-nō'sis), *n.* [NL., < Gr. *σφήνωσις*, a wedging, obstruction, < *σφηνοῦν*, wedge, close up, < *σφήν*, a wedge.] Impaction of the fetal head in the pelvis.

sphenosquamous (sfē-nọ-skwā'mus), *a.* [Gr. *σφήν*, wedge, + L. *squama*, a scale.] Relating to the sphenoid bone and the squamous portion of the temporal bone: noting a suture.

sphenotic, *n.* **2.** In *ichth.*, an anterodorsal ossification of the auditory capsule. It articulates above with the pterotic and frontal, and below with the alisphenoid and proötic. It usually bears part of the concavity for the reception of the head of the hyomandibular.

sphere, *n.* **10.** A spherical sponge-spicule, a modified form of the monaxial type.—**Celestial sphere**, the spherical surface upon which the heavenly bodies appear to lie. Its radius is assumed to be infinite, so that not only the earth but also the entire solar system and all the stars are sensibly but a point at its center.—**Directive sphere.** Same as ★*astrosphere* (*a*).—**Great circle of sphere**, a circle whose plane contains the sphere's center. See *great circle.*—**Harmonic spheres**, four spheres of a sphere-complex which determine, with every sphere not belonging to the complex, four harmonic radical planes.—**Mean sphere**, in *phys. geog.*, a spheroid which has its surface at the mean level of the solid crust of the earth, or about 7,500 feet below actual sea-level.—**Morgagni's spheres.** Same as *Morgagni's* ★*globules.*—**Neumann's sphere**, a sphere used for the representation of imaginary quantity and formed by stereographic projection from an Argand diagram. It is due to Riemann and was named for Carl Neumann.—**Orthogonal spheres**, spheres which cut at right angles.—**Oval sphere**, a sphere having a radius less than $\frac{1}{4}\pi\gamma$, where γ is the numerical constant used in defining distance.—**Sphere-complex**, the assemblage of spheres (of ordinary space) which are all orthogonal to the same sphere; the aggregate of all spheres with respect to which a given point *C* has a certain power *p*.—**Sphere-congruence**, the totality of spheres common to two sphere-complexes.—**Sphere geometry**, geometry with the sphere as element.—**Sphere of influence.** See *sphere*, 7.—**Sphere of interest**, the name first given to what is now known as a *sphere of influence.* See *sphere*, 7.

> "Spheres of influence," "spheres of action," "*spheres of interest*," "zones of influence," "field of operations," "Machtsphäre," "Interessensphäre," are phrases which have come into use to describe regions as to which nations have agreed that one or more of them shall have exclusive liberty of action. These phrases became common after 1882, when the "scramble for Africa" began, to describe diplomatic arrangements with respect to it. *Encyc. Brit.*, XXXII. 789.

Sphere range, the common intersection of three independent sphere-complexes.

sphere-apparatus (sfēr'ap-a-rā″tus), *n.* In *cytol.*, a general name applied to idiozome, centrotheca, and centriole considered as a unit.

> Yolk-Nucleus or Corpus Balbiani in Vertebrates.—K. v. Skrobansky has studied this much discussed body in the ova of the guinea-pig. The question is, whether it represents morphologically and genetically a "*sphere-apparatus*" (idiozome, centrotheca, or centriole), or whether it is a quite distinct structure. According to the author's observations, the formation of the body is not associated with the division of the oogonia, and the corpuscle cannot therefore be identified as a *sphere-apparatus.* *Jour. Roy. Micros. Soc.*, Aug., 1903, p. 485.

sphere-circle (sfēr'sėr″kl), *n.* The circle in which all spheres meet the plane at infinity.

Spheric number. See ★*number.*

spherical, *a.*—**Lateral spherical aberration.** Same as *circle of aberration* (which see, under *aberration*).—**Negative, positive spherical aberration.** See ★*aberration.*—**Spherical candle.** See ★*candle.*—**Spherical chord**, a great-circle arc whose end-points are on a circle of the sphere.—**Spherical ellipse**, the locus of the point whose spherical sects from two fixed points have a constant sum.—**Spherical harmonic analysis.** See ★*harmonic.*—**Spherical hyperbola**, the locus of the point whose spherical sects from two fixed points have a constant difference.—**Spherical radius, sector, ungula**, etc. See ★*radius*, etc.—**Spherical wedge.** Same as *spherical* ★*ungula.*

spherics, *n.*—**Pure spherics**, two-dimensional spherics; intrinsic spherics; spherics deduced from a set of assumptions which have no reference to anything not in the sphere (sphere meaning what is sometimes called the surface of a sphere).

spheridium, *n.* See *sphæridium*, 1.

spheroid, *n.* **3.** In *anthrop.*, a cranium of nearly spherical form. *G. Sergi* (trans.), Var. of the Human Species, p. 35.—**Bessel's spheroid**, the spheroid given by Bessel as most nearly representing the figure of the earth.—**Elliptic spheroid.** Same as *ellipsoid of revolution* (which see, under *ellipsoid*).—**Maclaurin spheroid**, a rotating spheroid in equilibrium.—**Mean spheroid**, in *phys. geog.*, an imaginary spheroidal form which represents the figure of the earth as if sea-level were everywhere continued and to which geodetic measures are referred; the geoid.—**Spheroid of reference**, an imaginary regular spheroid whose surface is approximately coincident with the earth's sea-level, from which the actual sea- and land-surface is measured: contrasted with *geoid.* See the extract.

> It may be worth while adding a quotation from Prof. C. A. Young, to show that the *spheroid of reference* is only a convenient assumption. "On the whole," says Prof. Young, "astronomers are disposed to take the ground that since no regular geometrical solid whatsoever can absolutely represent the form of the Earth, we may as well assume a regular spheroid for the standard surface, and consider all variations from it as local phenomena, like hills and valleys." *Geog. Jour.* (R. G. S.), XIII. 242.

Spheroid of revolution. See ★*revolution.*—**Viscous spheroid,** a spheroid of a viscous consistency. Thus the flattening at the poles of the rotating earth shows that it behaves as a slightly viscous spheroid. *Geog. Jour.* (R. G. S.), XV. 47.

spheroidal, *a.* **4.** In *petrog.*, noting the cracking or parting of rocks upon shrinking, commonly from cooling, whereby they break into spheroidal masses. It is the same phenomenon as perlitic cracking in volcanic glasses. The term is sometimes used as a synonym of *orbicular* as applied to certain granites and diorites.—**Spheroidal constant, recovery.** See ★*constant,* ★*recovery.*

Spheroides (sfẹ-roi′dēz), *n.* [NL., < Gr. *σφαιροειδής*, spheroid. See *spheroid.*] A genus of tetrodontoid fishes widely distributed in warm seas.

spheroidism (sfē′roi-dizm), *n.* [*spheroid* + *-ism.*] The property or condition of being a spheroid. *The Engineer*, Jan. 9, 1903, p. 42.

Spherometer caliper, an apparatus devised by Harkness in which a delicate spherometer is utilized in calipering the diameters and determining the irregularities of the pivots of transits and other astronomical instruments. *Nature*, March 12, 1903, p. 442.

spherophyric (sfē-rọ-fir′ik), *a.* [*spher*(*ulite*) + (*por*)*phyr*(*y*) + *-ic.*] **1.** Noting a porphyritic rock containing spherulites in place of the usual phenocrysts. *J. D. Dana*, Manual of Geol. (4th ed.), p. 77.—**2.** In *petrog.*, in the quantitative system of classification (see ★*rock*¹), having megascopic spherulites in a ground-mass; noting the character of a porphyry with megascopic spherulites.

spherospermia (sfē-rọ-spėr′mi-ạ̈), *n. pl.* [NL., < Gr. *σφαῖρα*, sphere, + *σπέρμα*, seed.] Rounded spermatozoa, without tails, characteristic of the nematodes and crustacea.

spherotetrahedral (sfē-rọ-tet-ra-hē′dral), *a.* [Gr. *σφαῖρα*, sphere, + E. *tetrahedr*(*on*) + *-al*¹.] Intermediate in shape between a sphere and a tetrahedron. *Buck*, Med. Handbook, V. 616.

spherotocephalus (sfē″rō-tọ-sef′ạ-lus), *n.*; pl. *spherotocephali* (-lī). [Gr. *σφαῖρα*, sphere, + *οὖς* (*ὠτ-*), ear, + *κεφαλή*, head.] In *anthrop.*, a cranium, spheroid in its anterior part, but with more irregular curves back of the coronal suture. *G. Sergi* (trans.), Var. of the Human Species, p. 35.

sphincter, *n.*—**Oscular sphincter,** in some sponges, a band of fibers or elongated cells surrounding the osculum and serving to close the same. *Parker and Haswell*, Zoology, I. 102.

sphindid (sfin′did), *n.* and *a.* **I.** *n.* A member of the coleopterous family *Sphindidæ.*

II. *a.* Having the characters of or belonging to the family *Sphindidæ.*

sphingal (sfing′gạl), *a.* [Gr. *σφίγξ* (*σφιγγ-*), sphinx, + *-al*¹.] Of or pertaining to the sphinx; sphinx-like. [Rare.]

> No *sphingal* countenance more calm,
> Than his majestic face.
> *B. W. Ball*, Elfin-Land.

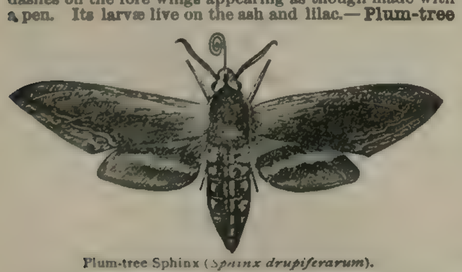
sphinges (sfin′jēs). A plural of *sphinx.*

> Duncan says of the Senegal Galago (Galago senegalensis): "It pursues Beetles, *Sphinges*, and Moths with great ardour, even while they are on the wing, making prodigious bounds at them, and often leaping right upwards to seize them." *Amer. Jour. Sci.*, Jan., 1904, p. 26.

sphingid (sfin′jid), *n.* and *a.* **I.** *n.* A member of the lepidopterous family *Sphingidæ.*

II. *a.* Having the characters of or belonging to the family *Sphingidæ.*

sphinx, *n.*—**Four-horned sphinx,** an American sphingid moth, *Ceratomia amyntor*, whose larva feeds on the foliage of the elm. *J. B. Smith*, Econ. Entom., p. 257.—**Green grape-vine sphinx,** an American sphingid moth, *Ampelophaga myron*, common in the Mississippi valley and the eastern United States, whose larvæ feed on grape foliage.—**Harris's sphinx,** an American sphingid moth, *Lapara bombycoides* (formerly called *L. harrisii*), whose larvæ feed on pine-leaves and are protectively colored with alternating green and white longitudinal stripes.—**Pen-marked sphinx,** an American sphingid moth, *Sphinx chersis*, ash-gray in color, with a series of black dashes on the fore wings appearing as though made with a pen. Its larvæ live on the ash and lilac.—**Plum-tree sphinx,** an American sphingid moth, *Sphinx drupiferarum*, which occurs throughout the United States. Its larvæ feed on plum-leaves.—**Purblind sphinx,** an American sphingid moth, *Smerinthus myops*, which occurs in the eastern United States and the Mississippi valley. Its larvæ feed on the leaves of rosaceous plants.—**Twin-spotted sphinx,** an American sphingid moth, *Smerinthus jamaicensis* (formerly *S. geminatus*), which has an eye-spot on each hind wing. Its larvæ feed on the ash, willow, plum, elm, and apple.—**Vine-sphinx,** any one of the several sphingid moths whose larvæ feed on grape-leaves, as the achemon sphinx, Abbot's sphinx, and others.—**White-lined sphinx,** the white-lined morning-sphinx. See *morning-sphinx*, under *sphinx.*



Plum-tree Sphinx (*Sphinx drupiferarum*).
(About two thirds natural size.)

sphragistic (sfrạ-jis′tik), *a.* [Gr. *σφραγιστικός*, < *σφραγίζειν*, seal, < *σφραγίς*, a seal.] Of or pertaining to seals. See *sphragistics.*

> The prevailing type of seal, for instance, is the Oriental cylinder, and among the most frequent of the engraver's designs is a native adaptation of the Egyptian floral pillar as seen on the porcelain ornaments and beads of Tell-el-Amarna. But the whole together forms a new *sphragistic* style of a specifically Cypro-Mycenæan class.
> *A. J. Evans*, in Jour. Anthrop. Inst., July–Dec., 1900, [p. 200.

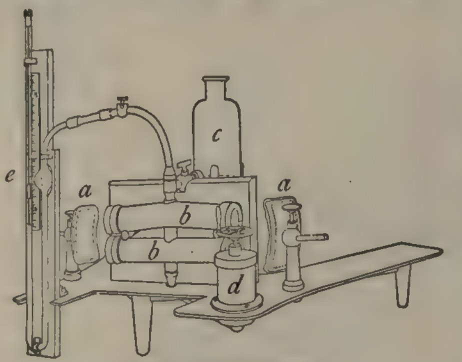
sphygmocephalus (sfig-mọ-sef′ạ-lus), *n.* [Gr. *σφυγμός*, pulse, + *κεφαλή*, head.] A beating pain in the temples.

sphygmochronograph (sfig-mọ-kron′ọ-grȧf), *n.* [Gr. *σφυγμός*, pulse, + *χρόνος*, time, + *γράφειν*, write.] A sphygmograph with an attachment for recording the number of pulsations to the minute.

sphygmodic (sfig-mod′ik), *a.* [Gr. *σφυγμώδης*, like the pulse (see *sphygmoid*), + *-ic.*] Pulse-like; beating rhythmically.

sphygmogenin (sfig-moj′e-nin), *n.* [Gr. *σφυγμός*, pulse, + *-γενης*, -producing, + *-in*².] An old term for adrenalin.

sphygmomanometer, *n.*—**Mosso's sphygmomanometer,** in *physiol.* and *exper. psychol.*, a form of sphygmomanometer devised by A. Mosso and used, for example, in the study of the influence of mental or physical work, or of emotion, upon blood-pressure. The instrument consists essentially of two metal tubes, for the reception of the first and second fingers of each hand; of a recording mercurial manometer; and of a metallic piston for regulating the pressure of the water which fills the system.



Mosso's Sphygmomanometer.

a a, adjustable supports for the back of the hand; *b b*, finger-tubes of metal, containing rubber finger-stalls; *c*, flask for water; *d*, regulator; *e*, manometric tube.

sphygmoplethysmograph (sfig″mọ-plẹ-this′mọ-grȧf), *n.* [Gr. *σφυγμός*, pulse, + E. *plethysmograph.*] In *physiol.*, a plethysmograph whose tracing shows a record of pulse (volume pulse) superimposed upon the curve of fluctuation of volume.

> But by a still better contrivance called the plethysmograph or . . . *sphygmoplethysmograph* we get not only the pulse, but the changes in the general volume of a limb.
> *G. M. Stratton*, Exper. Psychol. and its Bearing upon [Culture, p. 264.

sphygmotonometer (sfig″mọ-tọ-nom′e-tėr), *n.* [Gr. *σφυγμός*, pulse, + *τόνος*, tension, + *μέτρον*, measure.] An instrument for measuring the degree of elasticity of a blood-vessel in experimentation on animals. *Nature*, Oct. 21, 1897, p. 591.

Sphyrænops (sfī-rē′nops), *n.* [NL., < NL. *Sphyræna* + Gr. *ὤψ*, eye, face (appearance).] A genus of fishes of the family *Chilodipteridæ*: found only in Cuba, in deep water.

sphyrelaton (sfī-rel′ạ-ton), *n.* [Gr., neut. sing. of *σφυρήλατος*, wrought with the hammer.] Art work in metal which is beaten out and not cast; especially archaic Greek bronze work in hammered plates, nailed together.

> A canopus of this metal in a curule chair of the same, all in *sphyrelaton* or hammered work, the plates being hammered together with big nails.
> *Dennis*, Etruria, II. 313.

sphyrotomy (sfī-rot′ọ-mi), *n.* [Gr. *σφῦρα*, hammer, + *-τομια*, < *ταμεῖν*, cut.] In *surg.*, excision of the handle of the malleus.

spianato (spē-ạ-nä′tọ), *a.* [It., < L. *explanatus*, made level, flattened. See *explanate.*] In *music*, smooth, even: noting passages to be so rendered.

Spicara (spi-kā′rạ̈), *n.* [NL., < It. *Spicara*, a local name in Sicily, prob. < L. *spica*, a spike.] A genus of fishes of the family *Mænidæ*, carnivorous shore-fishes chiefly of the Old World.

spicigerous (spī-sij′ẹ̈-rus), *a.* Same as *spiciferous.*

spick (spik), *a.* An abbreviation of *spick-and-span-new.*

spiculate, *v. t.* **2.** To cover with or stick full with fine points, darts, etc. [Rare.]

> In those representations, man indeed was not more uglily than fearfully made,—as he stood erect and naked, *spiculated* by emitted influences from the said signs, like another St. Sebastian. *Southey*, Doctor, lxxxvii.

spicule, *n.* **2.** (*c*) In *bot.*, the empty frustule of a diatom.

spiculofiber (spik″ụ-lọ-fī′bėr), *n.* A portion of a sponge consisting of spicules and fibers.

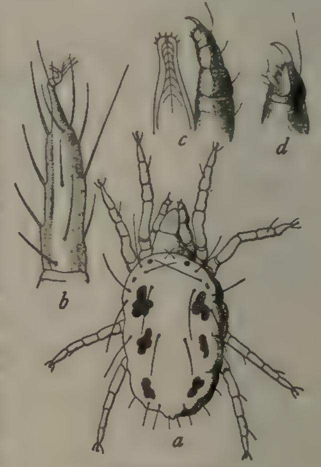
> Skeleton forming a rectangular network, the meshes being for the most part unispiculate, but with a few slender primary lines of *spiculo-fibre* 2–4 spicules thick.
> *Proc. Zool. Soc. London*, 1900, p. 137.

spiculofibrous (spik″ū-lọ-fī′brus), *a.* [*spiculofiber* + *-ous.*] Consisting of or pertaining to spiculofibers.

> Skeleton consisting of an axial or central open *spiculofibrous* network formed of broad loose strands about 10 spicules thick. *Proc. Zool. Soc. London*, 1900, p. 138.

spiculum, *n.* **2.** A needle-shaped splinter of bone.

spider, *n.* **7.** In the English form of pyramid-pool billiards, a skeleton rest, or bridge, designed for certain exigencies.—**8.** In *archery*, a prize for the best gold, awarded at the Grand National Archery meeting in England.—**Birds'-dung spider,** any spider which possesses a protective resemblance to birds' dung, notably a Ceylonese species of the genus *Phrynarachne.*—**California spider,** one of the so-called red-spiders, *Tetranychus sex-maculatus*, occurring on oranges in California and Florida. Also called the *six-spotted mite of orange.*—**Flying spider,** any one of many young spiders of the family *Theridiidæ* and allied families. They are wafted through the air by long light threads of silk.—**Purse-web spider.** See ★*purse-web.*—**Red spider.** See *red-spider.*—**Red-streaked spider.** Same as *katipo.*—**Running spider,** any spider of the family *Lycosidæ.*—**Spider cancer, spider nævus.** See *spider* ★*cancer.*



California Spider
(*Tetranychus sex-maculatus*).

a, dorsal view of adult spider, vastly enlarged; *b*, greater enlargement of foot; *c*, *d*, mouth parts.

(Marlatt, U. S. D. A.)

spider-beetle (spī′dėr-bē″tl), *n.* A British collectors' name for certain beetles of the genus *Ptinus*, as *P. fur* and *P. brunneus.*

spider-fern (spī′dėr-fėrn″), *n.* See ★*fern.*

spider-lily (spī′dėr-lil″i), *n.* See ★*lily.*

spider-sheave (spī′dėr-shēv), *n.* A wrought-iron or malleable iron pulley-block, or the grooved disk therein, in which the wood of the ordinary construction is replaced by forged iron. The iron is only required to stand the strain and guide the rope, hence the structure is solid at the pin and open on the sides, suggesting the body and bent legs of a spider.

> On reaching the place selected for the landing of the cable, the ship approached as close to the shore as possible. A couple of *spider-sheaves* were sent ashore, and fixed by sand anchors some 60 yards apart. Hauling lines were payed out from the ship, reeved through the sheaves, and brought back on board again.
> *Sci. Amer.*, Jan. 31, 1903, p. 80.

S-piece (es′pēs), *n.* In mechanical construction, a bracket or other piece in which the braces or compression-elements are curved like the letter S, so as to deflect under stress and not deform on the contracting of the principal elements of the structure.

spiel (spēl), *n.* [Also written *speal, spiel, speil.* A shortened form of *bonspiel* (which see). Cf. G. *spiel*, play.] **1.** A game; play; a curling-match. *Eng. Dial. Dict.*—**2.** Talk; a yarn; lingo; patter. [Slang.]

> Can you not see that Murphy's handy *spiel*
> Is cheap balloon juice of a Blarney brew.
> *Wallace Irwin*, Love Sonnets of a Hoodlum, xi.

spieler (spē′lėr), *n.* [*spiel*, *v.*, + *-er.*] **1.** At a booth or fair, a crier or announcer of the goods for sale; a barker for side-shows.

> In front of the entrance a "*spieler*" stood on a starch box and beat upon a piece of tin with a stick, and we weakly succumbed to his frenzied appeals and went inside. *N. Y. Times*, June 12, 1899.

2. A cheat; a sharper; a professional gambler.

> Open the ranks like a "*spieler's*" Wink.
> This is a speedy and frolicsome bomb,
> Do not despise it, but do not shrink,
> This is a nerve-test, this swift Pom-pom.
> *J. H. M. A.*, in War's Brighter Side, xxi.

spigeline (spij′ē̤-lin), *n.* [*Spigelia* + *-in*².] An alkaloid said to be present in spigelia.

spigot, *n.*—**Bell and spigot.** See ★*bell*¹.

spike¹, *v. t.* **6.** In *base-ball* and *foot-racing*, to strike or injure (a player) with the spikes in the shoes.

spike³ (spīk), *n.* [*spike*¹, *n.* (?)] A disease of the pineapple in which the plants are dwarfed and the leaves become narrow and crowded; also a disease which destroys sandalwood timber in India.

spike-tub (spīk′tub), *n.*. *Naut.*, a temporary receptacle for the blubber, etc., from whales.

spil², *v.* and *n.* A simplified spelling of *spill*¹.

spile-driver (spīl′drī″vėr), *n.* A machine for driving spiles or piles into the earth.

spile-worm (spīl′wėrm), *n.* A ship-worm or teredo, *Teredo navalis.*

spill², *n.* **7.** *pl.* The thin layers or filaments of cinder in wrought-iron bars of poor quality due to imperfect working of the metal in squeezer, hammer, or roll treatment. [Eng.]

spill², *v. t.* **2.** To brace or stay a drift or adit with piles. [Eng.]

spill-box (spil′boks), *n.* In *irrigation*, a measuring device or module so arranged that excess water spills over a lip or edge back into the main supply-ditch. *F. A. King*, Irrigation and Drainage, p. 245.

spilly (spil′i), *a.* [*spill*² + *-y*¹.] Showing spills (see ★*spill*², 7) or cracks or seams: said of inferior wrought-iron bar. [Eng.]

spiloma (spi-lō′mạ̈), *n.*; pl. *spilomata* (-ma-tạ̈). [NL., < Gr. *σπίλωμα*, a blemish, < *σπιλοῦν*, spot, stain, soil, < *σπίλος*, a spot, stain, blemish.] Same as *nævus.*

spiloplania (spil-ọ̄-plā′ni-ạ̈), *n.* [NL., < Gr. *σπίλος*, a spot, + *πλάνος*, wandering.] An evanescent eruption of small red spots.

spin¹, *n.* **4.** A variation of the game of newmarket in which the holder of the diamond ace is allowed to play it in order to stop the suit, provided it is his play to the sequence at the time. See *newmarket.*—**5.** In *cricket*, a twist or rotation imparted to the ball by the bowler. *Hutchinson*, Cricket, p. 34.

spin² (spin), *n.* An abbreviation of *spinster.* [Colloq., Eng.]

> There were all the Gurrumpore *spins* in their beautiful new frocks. *B. M. Croker*, Diana Barrington, xxiii.

spina, *n.* **5.** A slender projection from the upper, median portion of a bird's sternum, just between the articulations of the coracoids. When the spina lies above the line of the coracoid grooves it is termed the *spina interna*, and when below them the *spina externa*; when these are both present, united in one mass, it forms a *spina communis.* *Proc. Zool. Soc. London*, 1903, p. 276.—**Spina ventosa**, any morbid swelling of bone, such as sometimes occurs in cancer or caries, in which the cancelli are enlarged and the osseous tissue is thinned.

Spinach flea-beetle. See ★*flea-beetle.*—**Summer spinach**, in England, same as *New Zealand spinach.*

spinal, *a.*—**Short spinal reflex.** See ★*reflex.*—**Spinal meningitis.** See ★*meningitis.*—**Spinal weakness**, a relaxed state of the spinal muscles allowing of a lateral or other abnormal curvature of the spine.

spinalgia (spī-nal′ji-ạ̈), *n.* [NL., < L. *spina*, spine, + *ἄλγος*, pain.] Pain caused by pressure on the spinous processes of the dorsal vertebræ. *Med. Record*, June 27, 1903, p. 1057.

spinant (spī′nant), *n.* [L. *spina*, spine, + *-ant.*] A substance (as a drug) which stimulates the spinal motor centers, causing muscular contraction.

spination (spī-nā′shọn), *n.* [L. *spina*, a spine, + *-ation.*] The state or condition of bearing spines.

spindle, *n.* **3.** (*g*) A manufacturers' name for a hydrometer, from the shape of the instrument. *Sadtler*, Handbook of Indust. Chem., p. 163.—**Achromatic spindle.** See ★*achromatic.*—**Directive spindle**, in *embryol.*, one of the karyokinetic division spindles that gives rise to a polar or directive body; a polar-body spindle.—**Elastic spindle**, a type of spinning-spindle which assumes its center of gravity in attaining its full speed.—**Mozambique spindles**, a trade-name for crude india-rubber from Mozambique, in pieces of the shape of a finger, of various colors, yellow, pink, brown, and black.—**Nissl spindles.** See *Nissl* ★*granules.*—**Nuclear spindle**, the fusiform arrangement of chromatin fibers in karyokinesis.—**Tigroid spindle.** Same as *Nissl* ★*body.*

spindle-band (spin′dl-band), *n.* The band which runs the spindle on a spinning-machine. *Nasmith*, Cotton Spinning, p. 357.

spindle-box (spin′dl-boks), *n.* The bearing for a small axle, spindle, or arbor.

spindle-chuck (spin′dl-chuk), *n.* A form of holding device for drills or similar small tools or work, attached to or forming part of the rotating spindle or shaft of the tool.

spindle-draft (spin′dl-dråft), *n.* In *cotton-spinning*, the drawing or attenuation of the roving by the spindle during the outward traverse of the carriage in a mule. *C. Vickerman*, Woollen Spinning, p. 210.

spindle-draw (spin′dl-drâ), *v. t.* To draw or attenuate (the roving of wool or cotton) by the spindle instead of by rollers. *C. Vickerman*, Woollen Spinning, p. 207.

spindle-frame (spin′dl-frām), *n.* That part of a spinning-machine which holds the spindles. *C. Vickerman*, Woollen Spinning, p. 14.

spindle-oil (spin′dl-oil), *n.* See ★*oil.*

spindle-rail (spin′dl-rāl), *n.* An iron bar on a ring-spinning frame to which the spindles are fixed. *Nasmith*, Cotton Spinning, p. 335.

spindle-sander (spin′dl-san″dėr), *n.* See ★*sandpapering-machine.*

spindle-valve, *n.* A valve which is actuated from without the casing in which it works by a rod or stem or spindle. The spindle may be threaded, so that the valve is operated by screwing the spindle or turning it in a nut; or the spindle may be pushed in or out without turning. When the stem or spindle does not screw in and out, the valve is called a *valve with non-advancing stem;* when it does move in and out it is said to be an *advancing-stem valve.*

spine, *n.* **7.** One of the quills of a harpsichord or spinet.—**8.** Specifically, a sharp, columnar mass of solidified lava which was forced upward to a height of over 1,000 feet above the summit of Mount Pelée, Martinique, in 1903. See ★*volcano*, 1. It constituted a new phenomenon in vulcanology. See cut under ★*cumulo-volcano.*

> There was at that time [April, 1903] a tremendous *spine* or tooth, more than 1,000 feet in height, rising from the side of a cone-shaped base, the top of which was higher than the old altitude of Morne Lacroix. The tip of the spine was about 600 feet above the highest part of the new cone. *Science*, Nov. 13, 1903, p. 622.

Helcodermatous spine, one of the boring or tearing spines of a pupal insect, as distinguished from the locomotor spines. *A. S. Packard*, Text-book of Entom., p. 612.—**Henle's spine**, a bony projection occasionally found above the opening of the external auditory canal.—**Hysterical spine**, a simulation of disease of the vertebræ which occurs in neurotic individuals and is accompanied by a lateral curvature as well as the usual subjective symptoms of spinal disease.—**Interpalatine spine**, the interpalatine when produced anteriorly in a long, slender process.—**Poisonous spines**, certain specialized spines on some lepidopterous larvæ. They are partly hollow and are supplied with a poisonous fluid secreted by large cells at the base of the spines.—**Squamosal spine**, in *ornith.*, a slender process or projection directed forward from the upper anterior part of the squamosal bone. *Proc. Zool. Soc. London*, 1899, p. 396.—**Typhoid spine**, weakness and pain in the spine sometimes observed in convalescence from typhoid fever. It is not permanent, but while it continues it incapacitates the sufferer for all continuous effort.

spine-cell (spīn′sel), *n.* One of the cells of the rete mucosum of the skin. Also called *prickle-cell.* *Buck*, Med. Handbook, III. 854.

spine-finned (spīn′find), *a.* Same as ★*spiny-rayed.*

spinel, *n.*—**Adamantine spinel**, a name applied to the very pale spinel which has an adamantine luster when brilliant-cut.—**Blue spinel**, a blue variety of spinel.—**Spinel law.** See *spinel twin*, under ★*twin*¹.

spinelet (spīn′let), *n.* [*spine* + *-let.*] A small spine.

> It is quite likely, therefore, that these horny *spinelets* are equally characteristic of Galago garnetti. *Proc. Zool. Soc. London*, 1901, p. 273.

spinescence (spi-nes′e̤ns), *n.* [See *spinescent.*] The character of being spinescent. [Rare.]

spinetail, *n.* (*d*) The log-runner, a bird of the genus *Orthonyx.* See ★*log-runner.*

spine-tube (spīn′tūb), *n.* One of the canals which extend from the interior of the ventral valve in the brachiopod genus *Chonetes* through the cardinal substance and are continued beyond the hinge in the form of a series of spines.

spinibulbar (spī-ni-bul′bä̤r), *a.* [L. *spina*, spine, <NL. *bulbus*, bulb, + *-ar*³.] Relating to the spinal cord and medulla oblongata together.

spinicerebellar (spī″ni-ser-ē̤-bel′ä̤r), *a.* [L. *spina*, spine, + *cerebellum*, cerebellum, + *-ar*³.] Relating to both the spinal cord and the cerebellum. Also *spinocerebellar.* *Buck*, Med. Handbook, VII. 322.

spinifex (spin′i-feks), *n.* [L. *spina*, spine, + *facere*, make.] In Australia, any one of several species of grasses having stiff, sharp-pointed leaves or spiny flower-clusters, especially the two following, distantly related species: (*a*) *Spinifex hirsutus*, the hairy spinifex or spiny rolling-grass. See under ★*rolling-grass.* (*b*) *Triodia irritans*, the desert spinifex, more often called *porcupine-grass.* See ★*porcupine-grass*, 2.

spinifugal (spī-nif′ụ̄-ga̤l), *a.* [L. *spina*, spine, + *fugere*, flee.] In *neurol.*, moving from the spinal cord toward the periphery of the body: said of efferent nerve-impulses. Compare ★*spinipetal.*

spinimuscular (spī″ni-mus′kụ̄-lä̤r), *a.* [L. *spina*, spine, + *musculus*, muscle, + *-ar*³.] Relating to the spinal cord and the muscles. Also *spinomuscular.* *Med. Record*, Feb. 14, 1903, p. 263.

spiniperipheral (spī″ni-pe-rif′e̤-ra̤l), *a.* [L. *spina*, spine, + Gr. *περιφέρεια*, periphery, + *-al*¹.] Relating to the spinal cord, or nerve-center, and the periphery. Also *spinoperipheral.* *Buck*, Med. Handbook, VI. 845.

spinipetal (spī-nip′e-ta̤l), *a.* [L. *spina*, spine, + *petere*, seek.] In *neurol.*, moving from the periphery of the body toward the spinal cord: said of afferent nerve-impulses. Compare ★*spinifugal.* Also *spinopetal.* *Buck*, Med. Handbook, VII. 325.

Spinivomer (spī-ni-vō′mėr), *n.* [NL., < L. *spina*, spine, + *vomer*, plowshare.] A genus of snipe-eels taken in the Atlantic at a depth of over two thousand fathoms.

spinner¹, *n.* **6.** A quality of leaf suitable for roll tobacco. See *spinning-leaf* ★*tobacco.*

spinning, *n.* **3.** In *angling*, fishing with a spinner. See *spinner*¹, 1 (*c*).

> In all sorts of *spinning* . . . a good breeze is usually an advantage.
> *H. Cholmondeley-Pennell*, Modern Pract. Angler, p. 123.

4. The operation of running off a part of the water on the top of the charge in an amalgamating-mill.—**5.** The operation of molding metals such as silver, etc., while they are rapidly revolving ('spinning'), in a manner similar to the molding of wet clay, into pitchers, vases, etc.

spinning-gland (spin′ing-gland), *n.* A silk-gland. See *spinneret* and *spider.*

spinning-lathe (spin′ing-lāᴛʜ), *n.* In *sheet-metal work*, a power-lathe of simple form and heavy construction adapted to metal-spinning. By the use of a number of attachments and special tools it can also be used for finishing sheet-metal ware which has been stamped in a press, by spinning a portion of the vessel into new forms, and for burnishing, trimming, beading, and wiring vessels already partly finished on other machines. See ★*metal-spinning.*

spinning-machine, *n.*—**Throstle spinning-machine.** Same as *throstle*, 2.

spinning-metal (spin′ing-met″a̤l), *n.* A metal or an alloy which by reason of its great ductility is capable of being worked up from disks into surfaces of revolution by spinning in a lathe. Such are copper, brass, britannia, and the like.

spinning-mule (spin′ing-mūl), *n.* An intermittent spinning-machine for cotton, etc., invented by Samuel Crompton in 1779, combining the principles of Hargreaves's and Arkwright's spinning-machines. See *mule*, 5.

spinning-tackle (spin′ing-tak″l), *n.* In *angling*, tackle for fishing with a spinner or spoon-bait. It consists of a spinning-hook or -hooks attached by a trace to the reel-line.

spinning-tube (spin′ing-tūb), *n.* Any one of the small tubes on the end of a spider's spinneret.

spinning-whorl (spin′ing-hwėrl), *n.* Same as *whorl*, 4. Also called *spindle-whorl.* *Haddon*, Evolution in Art, p. 177.

spinobulbar, *a.* Same as ★*spinibulbar.*

spinocerebellar, *a.* Same as ★*spinicerebellar.*

spinola (spin′ọ̄-lạ̈), *n.*; pl. *spinolæ* (-lē). [NL., irreg. (or from It. *spinola*, pron. spi-nō′lä) dim., < L. *spina*, a thorn, spine. See *spine.*] Same as *spina bifida.*

spinomuscular, *a.* Same as ★*spinimuscular.*

spinoperipheral, *a.* Same as ★*spiniperipheral.*

spinopetal, *a.* Same as ★*spinipetal.*

spinthariscope (spin-thar′i-skōp), *n.* [Gr. *σπινθαρις* (*σπινθαριδ-*), a spark, more prop. **spintharidoscope* or **spintheroscope*, ‹ *σπινθήρ*, a spark (see *scintilla*), + *σκοπεῖν*, view.] An instrument, invented by Sir William Crookes, exhibiting the fluorescence produced by radium, containing a screen of fluorescent material, usually willemite (zinc silicate), on which a trace of radium is mounted, and a magnifying-glass in front of the screen. In darkness the screen shows a number of scintillating sparks caused by the impact of the radium rays on the willemite.

> A convenient way to show these scintillations is to fit the blende screen at the end of a brass tube with a speck of radium salt in front about a millimeter off, and to have a lense at the other end. I propose to call this little instrument the '*spinthariscope*,' from the Greek word *σπινθαρις*, a scintillation.
> *Sir W. Crookes*, in Science, June 26, 1903, p. 1002.

spinthariscopic (spin-thar-i-skop′ik), *a.* [*spinthariscop*(*e*) + *-ic.*] Of or pertaining to the phenomena exhibited in the spinthariscope.

spintherism (spin′thẹ-rizm), *n.* [Gr. **σπινθηρισμός*, ‹ *σπινθηρίζειν*, emit sparks, ‹ *σπινθήρ*, a spark.] The sensation as of points of light dancing before the eyes.

spintheropia (spin-thẹ-rō′pi-ạ̈), *n.* [NL., ‹ Gr. *σπινθήρ*, spark, + *ὤψ*, eye.] Same as ★*spintherism.*

Spiny bamboo. See ★*bamboo.*

spiny-eel, *n.* **2.** An eel-like fish of the family *Notacanthidæ*, found in deep water, and characterized by the presence of numerous spines in the dorsal fin.

spiny-rayed (spī′ni-rād), *a.* Having spines in the fins: said of certain fishes, particularly when more than one or two spines are present in the dorsal fin. Fishes with only a single dorsal spine do not technically belong to the spiny-rayed fishes, *Acanthopteri.*

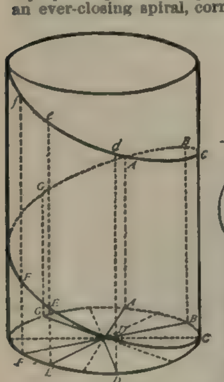
S-pipe (es′pīp), *n.* See ★*pipe*¹.

spiracle, *n.* **3.** A vent for small explosive outbreaks, produced upon the surface of a still highly heated and at least partially molten lava-stream by the escape of imprisoned vapors. A little cone of ejected clots may gather around it.

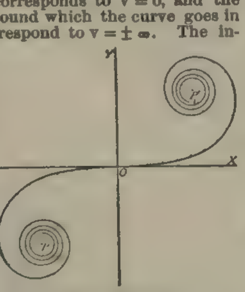
spiradenoma (spī″ra-dẹ̄-nō′mạ̈), *n.*; pl. *spiradenomata* (-mạ-tạ̈). [NL., ‹ Gr. *σπεῖρα, coil,* + *adenoma.*] Adenoma of the sweat-glands. *Buck*, Med. Handbook, I. 116.

Spiræa, *n.*—**Blue spiræa.** Same as *Japanese* ★*beni.*

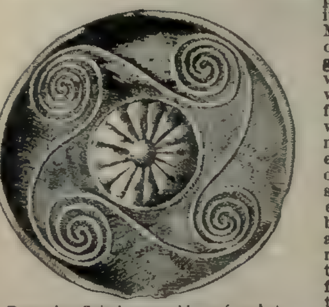
spiral, *n.* **6.** A loop in a railroad line used to overcome steep grades in a mountainous region by carrying the line through a continuously rising curve. Spirals may be cut entirely within a mountain in the form of a constantly turning and rising tunnel, the outlet being much higher than the inlet. The more common valley spirals consist of double loops or complicated curves which return and pass under or over one another, by means of tunnels or bridges, on a continuously rising grade. The spiral loop on the Georgetown branch of the Union Pacific Railroad is an example of a valley spiral.—**Bismuth spiral.** See ★*bismuth.*—**Conical spiral**, a spiral on a conical surface.—**Conjugate spiral**, in phyllotaxy, a whorl involving two or more genetic spirals parallel with each other.—**Cornu's spiral**, a curve exhibiting the relationship between Fresnel's integrals considered as rectangular coördinates (x, y) of a point: $x = \int_0^v \cos\frac{1}{2}\pi v^2.dv$, $y = \int_0^v \sin\frac{1}{2}\pi v^2.dv$. The origin of coördinates O corresponds to $v = 0$, and the asymptotic points, P', P_1, round which the curve goes in an ever-closing spiral, correspond to $v = \pm\infty$. The intrinsic equation, expressing the relation between the arc σ (measured from O) and the inclination ϕ of the tangent at any point to the axis of x, is $\phi = \frac{1}{2}\pi\sigma^2$.—**Cylindrical spiral**, a helical curve which winds round a cylinder like a screw.—**Drobisch's spiral**, in *psychol. acoustics*, a diagram, published by M. W. Drobisch in 1855, which represents by a spiral line the range of tonal hearing and the interrelations of the tones of the musical scale. The spiral takes the same place among diagrammatic representations of auditory sensation that is held among those of visual sensation by the color triangle or the color pyramid.—**Fermat's spiral.** Same as *parabolic spiral* (which see, under *spiral*).—**Flat spiral**, in *geom.*, a plane spiral.—**Reciprocal spiral.** Same as *hyperbolic spiral* (which see, under *spiral*, 1).—**Returning spiral**, a double spiral, the two branches originating in a common point: a favorite motive in Mycenæan decoration.—**Roget's spiral**, a vertical helix of wire the lower free end of which dips into mercury. An electric current of sufficient strength shortens the helix by the mutual attraction of neighboring turns and the free end leaves the mercury, thus breaking circuit. The helix immediately returns to its normal length, the circuit is again closed and this action repeats itself indefinitely, giving a rapid vertical vibratory motion to the spiral.—**Spiral theory**, the theory that the Milky Way consists of streams of stars arranged spirally in space.—**Vortex spiral**, a spiral fluid vortex. *W. M. Hicks*, 1895.



Drobisch's Spiral.
(From Hofler's "Psychologie.")



Cornu's Spiral.



Returning Spiral on a gold cup found at Ægina, now in British Museum.
(From Jour. Hellenic Studies, by permission of The Council.)

spiral, *v.* **II.** *intrans.* To assume a spiral form; move in a spiral course.—**Spiraling winds.** See ★*wind*².

spirale (spī-rā′lẹ̄), *n.*; pl. *spiralia* (-li-ạ̈). [NL., neut. of ML. *spiralis*, spiral.] In the brachiopods of the superfamily *Spiriferacea*, either of two spirally coiled calcareous ribbons which support the brachia. These consist of two cones placed base to base or with their axes inclined to one another. The spiralia are usually joined by a transverse band or jugum the bifurcations from which may be produced between the volutions of the spiralia, thus forming a double spiral on each side, or diplospire.

spiraliform (spī-ral′i-fôrm), *a.* [ML. *spiralis*, spiral, + L. *forma*, form.] Having the form of a spiral; specifically, in decoration, noting a pattern or type based on the spiral: common in primitive art, especially the Mycenæan in Greece proper and Crete. See *returning* ★*spiral. Haddon*, Evolution in Art, p. 142.

spiraxon (spī-rak′son), *n.* [Gr. *σπεῖρα*, a coil, + *ἄξων*, axis.] Among sponge-spicules, a monaxon whose ideal axis is a screw helix. See ★*pedinaxon.*

spireme (spī′rēm), *n.* [Gr. *σπείρημα, σπείραμα*, a coil, ‹ *σπειρᾶσθαι*, to be coiled, ‹ *σπεῖρα*, a coil.] The stage of the nucleus in karyokinesis, or mitosis, during which the chromatin assumes the form of a continuous or segmented thread. *Flemming*, 1882.

Spiriferina (spir″i-fe-rī′nạ̈), *n.* [NL., ‹ L. *spira*, a spire, + *ferre*, bear, + *-ina*¹.] A genus of spire-bearing brachiopods like *Spirifer*, but having a punctate shell-substance and a median septum in the ventral valve: found in rocks from the Carboniferous to the Jurassic.

spirigerous (spi-rij′ẹ-rus), *a.* [L. *spira*, a spire, + *gerere*, bear.] Spire-bearing; spiriferous.

spirilliform (spī-ril′i-fôrm), *a.* [NL., ‹ *Spirill*(*um*) + *-form.*] Shaped like bacteria of the genus *Spirillum.*

spirillosis (spī-ri-lō′sis), *n.* [NL., ‹ *Spirill*(*um*) + *-osis.*] A general term denoting any infection of any animal by organisms belonging to the genus *Spirillum.*

> *Spirillosis* of Fowls.—E. Marchoux and A. Salimbeni have investigated a disease of fowls common in Rio de Janeiro. The symptoms are diarrhœa, pyrexia, malaise, and death usually in a few days. In the blood they found a spirillum, and this blood produced the disease in other fowls. *Jour. Roy. Micros. Soc.*, Feb., 1904, p. 100.

Spirillum, *n.* **2.** [*l. c.*] A bacterium of the genus *Spirillum.*—**Deneke's cheese spirillum**, a species of bacteria, *Microspira* (*Spirillum*) *tyrogena*, found in old cheese.—**Miller's spirillum**, *Microspira* (*Spirillum*) *Milleri*, found in decaying teeth.—**Spirillum of Asiatic cholera.** Same as *Koch's comma* ★*bacillus.* See ★*Microspira.*

spirit, *n.* **11.** (*b*) One of an officially recognized class of pharmaceutical preparations, formerly made by distilling with alcohol a crude drug containing some volatile and medicinally useful ingredient, but now frequently by direct solution in alcohol of this ingredient, such as a volatile oil or essence, previously obtained in separate form. Spirit of cinnamon is an example.—**Amaranth, aniline spirits.** See *tin* ★*spirits.*—**Compound spirit of ether**, a mixture of 32½ parts of ether, 65 parts of alcohol, and 25 parts of ethereal oil by volume; Hoffman's anodyne.—**Cotton spirits**, a liquor consisting chiefly of stannic salts. Sometimes used in the mordanting of cotton.—**Finishing spirit**, a name given by dyers to one of the acid mixtures containing stannic chlorid which were formerly used as mordants much more than at present. *Sadtler*, Handbook of Indust. Chem., p. 481.—**Orange spirits.** See *tin* ★*spirits.*—**Perfumers' spirit.** Same as *spirits of* ★*cologne.*—**Plum spirit**, a trade-name for one of the solutions which contain stannic chlorid used as mordants in dyeing. It derived its name from being used with a decoction of logwood to produce a plum color (purple) upon cloth.—**Puce, purple spirit.** See *tin* ★*spirits.*—**Rectified spirit.** As defined by the British Pharmacopœia, a mixture of alcohol and water which contains 84 per cent. by weight of real alcohol and has a specific gravity of .8382 at 60° F.—**Red spirits.** See *tin* ★*spirits.*—**Resin spirit.** Same as ★*pinolene.*—**Scarlet spirits.** See *tin* ★*spirits.*—**Spirit fresco**, a method of fresco-painting invented by Mr. Gambier Parry, in England, which enabled him to use wax without heating it, as in ancient encaustic. He dissolved wax in various volatile oils making a medium which could be applied in the usual way.—**Spirit of vitriol**, an old name for sulphuric acid.—**Spirit of vitriolic ether.** See ★*ether*¹.—**Spirit ration.** See ★*ration.*—**Spirits of cologne.** See ★*cologne spirit.*—**Spirit varnish.** See ★*varnish.*—**Spirit Wrestlers.** See ★*Doukhobors.*—**The Great Spirit**, the supposed supreme deity of the North American Indians. While many Indian tribes believe in a spirit of great power, their ideas are not monotheistic, and this spirit is only one among many that, in their belief, have sway over the destinies of man. In its refined form the 'Great Spirit' of the Indians is an elaboration of American romancers and poets.—**Tin spirits.** Specifically, a solution of stannous chlorid or tin crystals: sometimes known by the names of *yellow, orange, scarlet, amaranth, purple, plum*, and *puce spirits*, when sulphuric and hydrochloric acids are used in its preparation. When nitric and hydrochloric acids are used in its preparation it is sometimes designated as *red*, and *aniline spirits.* Other special names are sometimes applied to tin spirits, but they are of little importance, as the introduction of the coal-tar coloring matters has rendered their use almost obsolete.—**Yellow spirit**, a manufacturers' name for a solution of tin made with a mixture of hydrochloric and sulphuric acids, formerly used as a mordant in dyeing yellow with quercitron

spiritine (spir′i-tin), *n.* [*spirit* + *-ine*².] A trade-name for spirits of turpentine made by distilling with water the refuse wood of the long-leafed pine in the southern United States. In an imperfectly refined state it has been regarded as different from ordinary spirits of turpentine, obtained by distillation of the oleoresinous exudation from the tree, but when properly purified it is the same material.

spiritology (spi-ri-tol′ọ̄-ji), *n.* [L. *spiritus*, breath, spirit, + Gr. *-λογια*, ‹ *λέγειν*, speak.] Same as *pneumatology*, 3.

Spiritual wife. See ★*wife.*

Spiritus Mindereri. See *spirit of Mindererus.*—**Spiritus salis**, a name applied by the alchemist Basil Valentine to hydrochloric acid obtained by heating together common salt and green vitriol. See *spirit of sea-salt.*—**Spiritus tartari**, a name given by Paracelsus to the product of the destructive distillation of the tartar from wine-casks. This he used medicinally. It is a complex mixture, containing among other substances pyrotartaric acid.

Spirobranchiopoda (spī″rọ̄-brang″ki-op′ọ̄-dạ̈), *n. pl.* [NL., ‹ Gr. *σπεῖρα*, a coil, + *βράγχια*, gills, + *πούς* (*ποδ-*), foot.] A name introduced by Gray for the *Brachiopoda.*

Spiroceras (spī-ros′ẹ-rạs), *n.* [NL., ‹ Gr. *σπεῖρα*, a coil, + *κέρας*, a horn.] A genus of Jurassic ammonoid cephalopods showing decadent or phylogerontic characters in its loose open coils.

spirograph (spī′rọ̄-gráf), *n.* [Gr. *σπεῖρα*, a coil, + *γράφειν*, write.] **1.** A device for drawing spirals.—**2.** Same as ★*atmograph*, 1.

spirographidin (spī-rọ̄-graf′i-din), *n.* [NL. *Spirograph*(*is*) + *-id* + *-in*².] A hyalin derived from spirographin. *W. D. Halliburton*, Chem. Physiol. and Pathol., p. 486.

spirographin (spī-rog′rạ-fin), *n.* [NL. *Spirograph*(*is*) (see def.) + *-in*².] An albuminous substance, belonging to the hyalogens, found in the skeletal portions of a worm, *Spirographis. C. E. Simon*, Physiolog. Chem., p. 46.

spirogyrate (spī-rọ̄-jī′rāt), *a.* [Gr. *σπεῖρα*, a coil, + *γυρός*, round.] Twisted or coiled in a spiral.

spiroid (spī′roid), *a.* [Gr. **σπειροειδής, σπειρώδης*, ‹ *σπεῖρα*, a coil, + *εἶδος*, form.] More or less spiral; resembling a spiral. *Buck*, Med. Handbook, VII. 154.

spirojector (spī′rọ̄-jek-tọr), *n.* [L. *spira*, a coil, + *-jector* (in comp.), ‹ *jacere*, throw.] A commercial name for a form of ejector, or siphon-condenser, in which the descending current of injection-water is compelled to move in a helical path by deflecting flanges. It is asserted that a more effective aspiration of air is secured at the point where the vacuum is to be maintained than where no care is taken to secure a spiral motion.

> The pump for supplying water to the *spirojector* condensers has a double-reduction 20-hp General Electric motor. *Elect. World and Engin.*, Jan. 2, 1904, p. 14.

Spirorbis (spī-rôr′bis), *n.* [NL., < L. *spir(a)*, a coil, + *orbis*, a circle.] A genus of tubicolous worms which form spirally enrolled calcareous tubes cemented to some object by the flat lower side. The spiral may be dextral or sinistral, and is frequently ornamented with tubercles or spines. Tubes of this kind are found in Paleozoic rocks and thenceforward to the present seas.

spiroscope (spī′rọ-skōp), *n.* [Gr. *σπεῖρα*, a coil, + *σκοπεῖν*, view.] Same as *spirometer*.

Spirosoma (spī-rọ-sō′mä), *n.* [NL. (Migula, 1900), so named from the form of the cells; < Gr. *σπεῖρα*, a coil, + *σῶμα*, body.] A genus of bacteria having broad comma-shaped or spiral non-flexile and non-motile cells. They commonly form zoöglœa. Most of the species are found in sewer-mud.

spiroylic (spī-rọ-il′ik), *a.* [*Spir(æa)* + *-o-* + *-yl* + *-ic.*] Derived from *Spiræa*.

spirular (spir′ụ-lär), *a.* [*spirul(e)* + *-ar*3.] Having the form of or pertaining to a spirule.

spirule (spir′ūl), *n.* [L. *spirula*, a small twisted cake, lit. a little coil, dim. of *spira*, a coil: see *spire*2.] In the sponge-spicules, a form with a gently spiral curve to the rhabd.

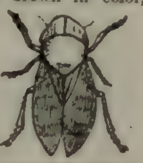
spissum (spis′um), *n.* [ML., neut. of L. *spissus*, thick.] In *medieval music*, a semitone or other small interval.

spitfire, *n.*—**Spitfire jib**, *naut.*, a small storm jib, common on English cutters.

spitting-devil (spit′ing-dev″l), *n.* See ★*peeoy*.

spittle1, *n.* 2. The secretion surrounding the larva of a spittle-insect.

spittle-insect, *n.*—**Cranberry spittle-insect**, a small cercopid, *Clastoptera proteus*, whose larvæ are found in frothy masses on the growing shoots of cranberry.—**Four-spotted spittle-insect**, an American cercopid, *Aphrophora quadrinotata*, brown in color, with four black spots on the wing-covers, the spaces between the spots being whitish.—**Signoret's spittle-insect**, an American cercopid, *Aphrophora signoreti*, whose froth-covered larva is often found on grape-canes.



Four-spotted Spittle-insect (*Aphrophora quadrinotata*). (Enlarged about two and one-half times.)

spitzharfe (shpitz′här″fe), *n.* [G.] Same as *pointed* ★*harp*.

splanchnectopia (splangk-nek-tō′pi-ạ̈), *n.* [NL., < Gr. *σπλάγχνον*, pl. *σπλάγχνα*, viscera, + *ἔκτοπος*, out of place.] A displacement of any of the viscera.

splanchnocœle, *n.* 2. In *embryol.*, the portion of the body-cavity lying between the somatopleure and splanchnopleure of the vertebrate embryo and persisting in the adult as the pleuroperitoneal cavity.

splanchnoderm (splangk′nọ-dėrm), *n.* [Gr. *σπλάγχνον*, pl. *σπλάγχνα*, viscera, + *δέρμα*, skin.] The splanchnopleure, or splanchnic layer of mesoderm, in the vertebrate embryo.

> In Amblystoma the mesonephric blastula is derived from a portion of the somite which is homologous with the mesomer of elasmobranchs, and it contains both *splanchnoderm* and somatoderm. *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 511.

splanchnodynia (splangk-nọ-din′i-ạ̈), *n.* [NL., < Gr. *σπλάγχνον*, pl. *σπλάγχνα*, viscera, + *ὀδύνη*, pain.] Pain in any of the abdominal organs.

splanchnomegaly (splangk-nọ-meg′ạ-li), *n.* [Gr. *σπλάγχνον*, pl. *σπλάγχνα*, viscera, + *μέγας*, (*μεγαλ-*), great.] A condition in which the abdominal organs are of abnormal size.

splanchnopathy (splangk-nop′ạ-thi), *n.* [Gr. *σπλάγχνον*, pl. *σπλάγχνα*, viscera, + *-πάθεια*, < *πάθος*, disease.] Disease of any of the abdominal viscera.

splanchnoptosis (splangk-nop-tō′sis), *n.* [NL., < Gr. *σπλάγχνον*, pl. *σπλάγχνα*, viscera, + *πτῶσις*, a falling.] Downward displacement of the abdominal viscera, especially the intestines; enteroptosis. Also called *Glénard's disease*. *Med. Record*, March 7, 1903, p. 398.

splash, *v. t.* 5. In *lumbering*, to drive (logs) by releasing a head of water confined by a splash-dam.

splash, *n.* 7. A bird-fanciers' name for an elongate spot of color.—8. A dash; a show; display. [Slang.]

> The Patrie Française made a great *splash* in the way of a patriotic funeral for the assassinated colonel. *H. Lynch*, French Life in Town and Country, ix.

II. *a.* Dashing; ostentatious; extravagant.

> Girls . . . brought up in foolish luxury, whose parents "entertained" in that thriftless, *splash*, Irish fashion, drank champagne, drove horses, when the French of the same class would be . . . teaching their children the art of counting. *H. Lynch*, French Life in Town and Country, vii.

splash-about (splash′ạ-bout), *n.* A device or method to secure lubrication of working surfaces in the inclosed crank-case of a steam-engine by agitating the lubricant in a suitable well. If the oil is struck by the end of the connecting-rod and the latter has a spattering effect upon the oil, the lubrication is better assured.

splash-board, *n.* 2. A kind of screen raised above the deck-line or bulwark-rail, to prevent water from coming on deck owing to a low freeboard or a swell.

> The cabin did n t go clear to the stern, either. Only the engine-room roof was back there and that was so low that the *splash-board* stood up in front of the wheel like a back-yard fence—but higher. *C. D. Stewart*, Partners of Providence, vi.

splash-dam (splash′dam), *n.* A dam built to store a head of water for driving logs.

splashed (splasht), *p. a.* Marked with splashes; specifically, having the tips of many of the body-feathers marked with elongate spots of color: as, a *splashed* pouter pigeon.

splashing (splash′ing), *n.* In a specific use, a succussion sound (see *succussion*).

> The stomach was dilated and extended to about two fingers' breadth below the umbilicus; "*splashing*" could be detected. *Lancet*, Aug. 29, 1903, p. 587.

splat2 (splat), *n.* A thin, flat piece of wood; in *furniture*, a flat piece of wood worked into a back or other part of a frame. [Prov. Eng.]

> The carving of this specimen is peculiarly good, both in the *splats* and the front leg. *R. S. Clouston*, in Burlington Mag., V. 382.

splate (splāt), *n.* [Origin not ascertained.] A substance used for the purpose of adding extra weight to sole-leather (which is sold by the pound). *Modern Amer. Tanning*, p. 192.

splatter-work (splat′ėr-wėrk), *n.* In *lithography*, an effect produced by filling a brush with ink and drawing it over a knife or other edge. *Singer and Strang*, Etching, Engraving, etc., p. 124.

splay1, *v. t.* 4. In *cooperage*, to form (a barrel) by drawing it together at the ends.

spleen, *n.*—**Accessory spleen**, a small mass of splenic tissue detached from the spleen proper.—**Wandering spleen**, a spleen the attachments of which have become stretched so that there is more or less displacement of the organ.

spleenwort, *n.*—**Dwarf spleenwort**, *Asplenium Trichomanes*, a small fern of wide distribution, common upon shaded ledges. The fronds, which are borne in rosettes, are narrow and simply pinnate, from 4 to 8 inches long, with polished purplish-brown stipes and rachises. See under *Asplenium* and *spleenwort*.—**Green spleenwort**, *Asplenium viride*, a small fern of boreal range in Europe and North America, similar to the dwarf spleenwort, but readily distinguished by the green rachis, which suggests its vernacular name.—**Silvery spleenwort**, *Athyrium thelypteroides*, a woodland fern of eastern North America and eastern Asia, the common name referring to the color of the under surface of the immature frond, in which the sori are silvery white, numerous, and borne close together.

splenatrophia (splē-nạ-trō′fi-ạ̈), *n.* [NL., < *σπλήν*, spleen, + *ἀτροφία*, atrophy.] Atrophy of the spleen. Also *splenatrophy*.

splendor (splen′dọr), *v. t.* To make splendid; illuminate with splendor; light up. [Rare.]

> 'T is not for me
> To fling a Poem, like a comet, out,
> Far-*splendoring* the sleepy realms of night.
> *Alex. Smith*, Life-Drama, i. 49.

splenectasis (splē-nek′tạ-sis), *n.* [NL., < Gr. *σπλήν*, spleen, + *ἔκτασις*, extension.] Enlargement of the spleen.

splenectomize (splẹ-nek′tọ-mīz), *v. t.*; pret. and pp. *splenectomized*, ppr. *splenectomizing*. [*splenectom (y)* + *-ize*.] To remove the spleen from by a surgical operation.

Splenic anemia, cachexia. See ★*anemia*, ★*cachexia*.

splenification (splē″ni-fi-kā′shọn), *n.* [Gr. *σπλήν*, spleen, + L. *-ficatio(n-)*, < *facere*, make.] Same as *splenization*.

splenocolic (splē-nọ-kol′ik), *a.* [Gr. *σπλήν*, spleen, + *κόλον*, colon.] Relating to both the spleen and the colon: noting a fold of peritoneum called the *splenocolic ligament*.

splenolymph (splē′nọ-limf), *a.* [Gr. *σπλήν*, spleen, + L. *lympha*, water (lymph).] Relating to or originating in both the spleen and the lymphatic glands. *Buck*, Med. Handbook, IV. 469.—**Splenolymph glands.** See ★*gland*.

splenolymphatic (splē″nọ-lim-fat′ik), *a.* Same as ★*splenolymph*.

splenolysin (splẹ-nol′i-sin), *n.* [Gr. *σπλήν*, spleen, + *λύσις*, dissolving, + *-in*2.] A cytotoxin resulting on immunization with spleen substance. *Buck*, Med. Handbook, Appendix, p. 539.

splenomedullary (splē-nọ-med′u-lạ̄-ri), *a.* [Gr. *σπλήν*, spleen, + L. *medulla*, marrow, + *-ary*.] Relating to both the spleen and the bone-marrow.

> The general result of the investigations has been to show that an increase in the number of leucocytes does not necessarily go hand in hand with a rise of endogenous alloxuric bodies in the urine, but that only in cases of *spleno-medullary* leucocythæmia is a distinct increase present. *R. Hutchison* and *J. J. R. Macleod*, 122 Jour. Exper. [Med., Oct. 1, 1901, p. 542.

splenomegalia (splē″nọ-me-gā′li-ạ̈), *n.* [NL., < Gr. *σπλήν*, spleen, + *μέγας* (*μεγαλ-*), great.] Enlargement of the spleen. *Med. Record*, April 11, 1903, p. 590.

splenomegaly (splē-nọ-meg′ạ-li), *n.* Same as ★*splenomegalia*.

splenomyelogenous (splē″nọ-mī-e-loj′e-nus), *a.* [Gr. *σπλήν*, spleen, + *μυελός*, marrow, + *-γενής*, -producing.] Relating to or originating in both the spleen and the bone-marrow: noting a form of leucemia.

> *Spleno-myelogenous* leucæmia or myelœmia is almost always chronic, and may last for several years. *Encyc. Brit.*, XXXI. 558.

splenoncus (splẹ-nong′kus), *n.* [Gr. *σπλήν*, spleen, + *ὄγκος*, mass.] Same as ★*splenomegalia*.

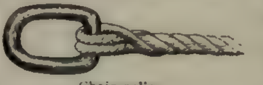
splenonephroptosis (splē″nọ-nef-rop-tō′sis), *n.* [NL., < Gr. *σπλήν*, spleen, + *νεφρός*, kidney, + *πτῶσις*, a falling.] Displacement downward of the spleen and of the kidney on the same side.

> Consequently, ptoses of the spleen do not exist without hepatoptoses. The same may be said of *splenonephroptosis*, which always accompanies ptosis of the liver. *Med. Record*, Oct. 19, 1907, p. 641.

splenopexy (splē′nọ-pek-si), *n.* [Gr. *σπλήν*, spleen, + *πῆξις*, a fixing.] Operative fixation of a wandering spleen. *Med. Record*, June 27, 1903, p. 1057.

splenoptosis (splē-nop-tō′sis), *n.* [NL., < Gr. *σπλήν*, spleen, + *πτῶσις*, a falling.] Same as *wandering* ★*spleen*. *Med. Record*, May 30, 1903, p. 862.

splice, *n.* 3. In *cricket*, that part of the handle of the bat which fits into the blade.—**Chain-splice**, a rope spliced into the link of a chain, only two strands of the rope being used.—**Drawing splice**, a splice made without tucking the ends in order that the strands may be readily drawn out.—**Horseshoe-splice**, a short piece of rope with its two ends spliced into the bight of another rope, so that when the latter is pulled taut the splice will stand out distinct and with some resemblance to a horseshoe.—**Mariner's splice**, a long splice in a cable-laid rope.—**Sailmaker's splice**, the joining of two ropes of different sizes, the effect being a tapered splice.—**Wire-eye splice**, an eye or loop formed in a wire rope by splicing the end of the rope into its own part.—**Wire-long splice**, the uniting of the ends of two wire ropes, where the laying in of the many strands is so extended and carefully done that the original diameter of the rope is not increased in any part.—**Wire-short splice**, the joining of the ends of two wire ropes in a comparatively short space by a process of tucking, and which in the direct vicinity of the splice considerably enlarges the original diameter of the rope.

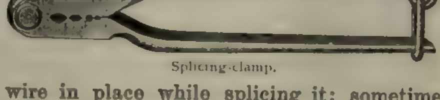


Chain-splice.

splice-bar (splīs′bär), *n.* A metallic piece or fish-plate connecting the ends of rails on a rail-way. Same as *splice-piece*.

splice-joint (splīs′joint), *n.* A joint formed by fishing, lapping, scarfing, or splicing the pieces together.

splicing-clamp (splī′sing-klamp), *n.* A lineman's hand-clamp for holding a telegraph wire in place while splicing it: sometimes called a *connector*.



Splicing-clamp.

spline, *n.* 3. In *building*, a thin piece of board, especially when used under certain conditions, as in light and thin ceiling, the filling of large panels like the backs of seats in a church, or the curved outer shell of the centering for an arch.—**Feather-tongue spline**, a spline sawed to a wedge-shaped section like a clapboard. See *clapboard*, 2.

splint, *n.* 6. A variety of bituminous coal which is of a dull, stony luster and breaks in slab-like masses; splint-coal. It is contrasted with the shining variety or *glance-coal*, which breaks in cubes and which is often strongly coking, whereas splint-coal is not.—**Interdental splint**, a splint used in fracture of the jaw, being held in position by wires passed between the teeth.—**Thomas's splint**, a form of immobilizing apparatus employed in the treatment of hip-disease and other chronic joint-affections. *Lancet*, July 4, 1903, p. 19.

splint-bar (splint′bär), *n.* Same as ★*splinter-bar*.

Splinter bulkhead. See ★*bulkhead*.

splinter-bar, *n.* 2. A bar or roller placed close in front of the revolving cutter-heads of wood-working or power-planing machines to remove or diminish the tendency of the fibers to splinter and destroy the smoothness of surface when working the stock with the grain of the wood. *D. K. Clark*, Steam Engine, IV. 408.

splinter-deck (splin′tėr-dek), *n.* See ★*deck*, 2 (*a*).

splinter-proof, *a.* II. *n.* A shelter impervious to splinters.

> The houses even of the more solid sort offered such slender defence against shells, that hundreds of households prepared what were called "*splinter proofs*" in their yards and gardens. These were little chambers or caves hollowed out of the earth.
> *J. Ralph*, An American with Lord Roberts, p. 70.

splinter-screen (splin′tėr-skrēn), *n.* A thin plate of vertical armor in the interior of a war-ship to intercept flying fragments from exploding shells.

split, *v. t.* 7. In *agri.*, same as ★*cleave*^{2}, 4.—8. In *faro*, to divide (a bet). When two cards of the same denomination come out of the box on the same turn, the banker splits all bets on that card, taking half the amount for himself.—**Splitting freeze**, a frost so severe as to split the stalk of sugar-cane; a stalk-splitting freeze. [Louisiana.]

> After a *splitting freeze*, every effort should be made to work up standing cane as rapidly as possible.
> *W. C. Stubbs*, Sugar Cane, p. 167.

To split the difference. See ★*difference*.—**To split the ridge**, in plowing, to start a new land by turning two furrow slices in opposite directions from the same line, then plowing them together again the next bout.

> This is known as *splitting the ridge* and is the best form, as all the land is ploughed, etc.
> *W. J. Malden*, Tillage and Implements, p. 106.

split, *n.* 15. In *glass-cutting*, an acute-angled cut made by a mitered wheel.—**Flesh split.** See ★*flesh-split*.

split, *p. a.* 4. In *whist*, noting a hand which contains four trumps and three of each of the plain suits.—5. In *glass-manuf.*, said of a cut made by a mitered wheel and showing an acute angle.—**Billet's split lens.** See ★*lens*.

split-finger (split′fing″gėr), *n.* A stomatopod crustacean, *Gonodactylus chiragra*, found in the West Indies. It is so called because it frequently cuts with its claws the fingers of one who handles it.

splitfoot, *n.* 2. A congenital deformity of the foot in which the separation between two adjacent toes extends farther than usual into the foot itself; cleft foot.

> Split-hand and *split-foot* deformities, their types, origin, and transmission. *Biometrika*, March, 1908, p. 26.

splithand (split′hand), *n.* A congenital deformity in which the separation between two adjacent fingers extends into the hand itself, sometimes nearly to the wrist; cleft hand.

> From the many varieties of *split-hand* and split-foot, one stands out prominently, and of this our "G" family presents notable examples. This type is characterised by its marked tendency to transmission, and by other features. *Biometrika*, March, 1908, p. 27.

split-joint (split′joint), *n.* A tongue-joint; a welded joint in which one of the parts to be joined is split or opened to receive the other part.

split-motion (split′mō″shọn), *n.* A mechanism attached to a loom for weaving center selvages to a fabric to be afterward split or severed.

split-phase (split′fāz), *a.* In *elect.*, said of an alternating single-phase current in a divided circuit where, in consequence of inductance in one branch of the circuit, there is a difference of phase between the currents in the two branches.

split-rock (split′rok), *n.* Same as *alum-root*.

splitting (split′ing), *n.* An act denoted by the verb 'split'; specifically, in harvesting tobacco, the cleaving of the stalk nearly to the base, with the purpose of 'hanging,' i.e. placing it astride a stick for curing: practised with heavy export tobacco. For other methods see ★*pegging*, 6, and ★*spearing*, 1.

splitting-machine, *n.*—**Belt-splitting machine**, a machine for dividing belt-leather parallel to the face of the hide, so as to reduce the thickness to that suitable for transmission of light power. *Sci. Amer. Sup.*, Jan. 24, 1903, p. 22629.

split-worm (split′wėrm), *n.* The tobacco leaf-miner (which see, under ★*leaf-miner*). *Yearbook U. S. Dept. Agr.*, 1898, p. 122.

splotch (sploch), *v. t.* To soil with splotches; cause to look splotchy.

> The place was as bare and rude as a printing-office seems always to be; the walls were *splotched* with ink and the floor littered with refuse newspapers.
> *W. D. Howells*, in Scribner's Mag., May, 1893, p. 545.

S. P. M. An abbreviation of *short particular meter*.

spod (spod), *n.* [Origin uncertain.] The inferior bottom leaves of the tobacco-plant; the flyings (fliers) and sand leaves. *Killebrew and Myrick*, Tobacco Leaf, p. 347.

Spode's tower. See ★*tower*^{1}.—**Spode ware.** See ★*ware*^{2}.

spodiophyllite (spod-i-of′i-līt), *n.* [Gr. *σπόδιος*, ashy, + *φύλλον*, leaf.] A metasilicate of aluminium, iron, manganese, magnesium, sodium, and potassium, related to ægirite. It occurs in ash-gray or pearl-gray rhombohedral crystals, with micaceous cleavage, in southern Greenland.

spodogenic (spod-ọ-jen′ik), *a.* [Gr. *σποδός*, ashes, + *-γενης*, -producing, + *-ic.*] Caused by or giving origin to waste organic material. See *spodogenous*. *Buck*, Med. Handbook, VI. 413.

Spoerer's law. Same as ★*law of zones*.

spoil-ground (spoil′ground), *n.* A place where refuse material from an excavation or from dredging is deposited; a spoil-bank.

> An examination of the *spoil ground* at Spithead showed that the deposit from the dredges, which have been at work for two years in Portsmouth harbour, has made no appreciable difference in the depth.
> *Geog. Jour.* (R. G. S.), IX. 656.

spoil-truck (spoil′truk), *n.* A form of wagon or buggy, running usually on a track, in excavations or underground workings, on which the refuse or material to be wasted is loaded and run off to the waste-dump or spoil-bank.

> The space occupied by the pipes in service allowed so little clearance room on each side of the heading *spoil-trucks* as to impede and even endanger the safety of the various maneuvers.
> *Sci. Amer. Sup.*, April 1, 1905, p. 24452.

spoke^1, *n.* 5. See ★*spoke-stitch*.

spoke-machine (spōk′ma-shēn″), *n.* In *wood-working*, a general term applied to a number of machines, each one of which performs one step in the process of making a wagon-wheel spoke. In several machines two or more steps in the work of finishing a spoke are performed by one machine, as in the *spoke-tenoning, -mitering*, and *-pointing machine*, a machine that cuts a tenon on the spoke, shaves the end down to the proper miter, and points the end of the spoke. Examples of these multiple machines are found in the *tenoning and equalizing machine, spoke-facing and -tapering machine, spoke-sizing and retenoning machine.* The names, as in the *spoke-throating machine*, are self-explanatory. Such machines are usually fitted with *feeding-reels*, the spokes being laid by unskilled labor in the reels, and the machine performing all the work automatically. In all, the results are obtained by means of revolving cutter-heads carrying cutters of various shapes.

spoke-shave, *n.* 2. A ring with cutting edge attached to a handle, used in certain operations within the cavity of the nose. *Buck*, Med. Handbook, VI. 120.

spokesman, *n.* 2. One who or that which speaks; one who is able to speak. [Rare.]

> Psittacus erithacus — the well-known Grey Parrot with a red tail — is the most accomplished *spokesman* of the whole group. *Encyc. Brit.*, XVIII. 323.

spoke-stitch (spōk′stich), *n.* A method of sewing by which the loose threads of drawn-work are sewn together in a series of short bunches or groups called *spokes*.

spondylarthrocace (spon″di-lär-throk′ạ-sē), *n.* [NL., < Gr. *σπόνδυλος*, a vertebra, + *ἄρθρον*, joint, + *κάκη*, bad condition.] Any disease of the vertebræ, especially caries.

spondylioid (spon-dil′i-oid), *a.* [*spondyli(um)* + *-oid.*] Having the form of a spondylium.

Spondylitis rhizomelia, progressive rigidity of the spine due to ankylosis of the vertebræ advancing from below upward.

spondylium (spon-dịl′i-um), *n.*; pl. *spondylia* (-ạ̈). [NL., < Gr. *σπονδύλιον*, dim. of *σπόνδυλος*, a vertebra.] In certain genera of the brachiopods, as *Pentamerus* and *Conchidium*, an internal spoon-shaped shelly plate extending from the beak of the ventral valve and serving as a support for the muscles. It is usually connected with the bottom of the valve by a vertical septum.

spondylocace (spon-di-lok′ạ-sē), *n.* [Gr. *σπόνδυλος*, a vertebra, + *κάκη*, a bad condition.] Same as ★*spondylarthrocace*.

spondylodynia (spon″di-lọ-din′i-ạ̈), *n.* [NL., < Gr. *σπόνδυλος*, a vertebra, + *ὀδύνη*, pain.] Pain in the spine.

spondylopyosis (spon″di-lọ-pī-ō′sis), *n.* [NL., < Gr. *σπόνδυλος*, a vertebra, + *πύον*, pus, + *-osis.*] Suppurative inflammation of the vertebræ.

spondylose (spon′di-lōs), *n.* Same as *spondylitis*.

spondylotomy (spon-di-lot′ọ-mi), *n.* [Gr. *σπόνδυλος*, a vertebra, + *-τομια*, < *ταμεῖν*, cut.] 1. Same as ★*laminectomy*.—2. Division of the spine of the fetus in order to effect delivery in a case of impacted cross-birth.

sponge, *n.* 3. (*c*) Any absorbent material employed to take up the blood and other fluids in surgical operations.

> Aprons, towels, gauze *sponges*, blankets, and sheets.
> *Buck*, Med. Handbook, I. 568.

Bakers' sponge test. See ★*test*^{1}.—**Great sponge**, the immense swampy forest tract which lies at the head-waters of the Kongo river, in the interior of Africa.

> Not even in the "*great sponge*," from which the Zambesi and the Congo draw their remote supplies, do we meet with such impenetrable density.
> *J. S. Keltie*, in Smithsonian Rep., 1890, p. 287.

Platinum sponge. See ★*platinum*.

sponged (spunjd), *p. a.* Specifically, in *ceram.*, decorated with designs transferred to the ware by means of a piece of sponge cut in a pattern and dipped into the coloring preparation.

sponge-graft (spunj′gråft), *n.* See ★*graft*^{2}.

sponge-grafting (spunj′gråf″ting), *n.* The employment of sponge-grafts. See ★*graft*^{2}.

sponge-iron (spunj′ī″ėrn), *n.* Porous iron produced in a bloomery. *Phillips and Bauerman*, Elements of Metallurgy, p. 197.

sponge-lead (spunj′led), *n.* Same as *spongy* ★*lead*.

sponge-shrimp (spunj′shrimp), *n.* See ★*shrimp*^{2}.

spongiarian (spon-ji-ā′ri-ạn), *a.* [NL. *_spongiarius_, < L. *spongia*, sponge, + *-an.*] Pertaining to or containing *Spongiæ* or sponges: as, the *spongiarian* bed of the Upper Cretaceous in Great Britain.

spongiculture (spun′ji-kul-ṭụ̄r), *n.* The cultivation and growing of sponges.

> Sponges in Commerce, *Spongiculture*.
> *Encyc. Brit.*, XXXII. 813.

sponging (spunj′ing), *n.* 1. The act denoted by the verb 'sponge.'—2. In curing yellow tobacco, a staining of the face side of the leaf of a dull Spanish brown, due to insufficient heat in the process of fixing the color.

spongioblast (spon′ji-ọ-blåst), *n.* [Gr. *σπογγιά*, sponge, + *βλαστός*, germ.] 1. In *histol.*, one of the branching ectodermic cells situated in the embryonic brain and spinal cord and giving rise to the neuroglia: distinguished from ★*neuroblast*.

> Mitotic figures are occasionally found in multipolar nerve cells and in *spongioblasts*.
> *Science*, Jan. 17, 1902, p. 103.

2. One of the granules in the reticular layer of the retina which send prolongations into the layer of rods and cones.

spongiologist (spon-ji-ol′ọ-jist), *n.* Same as *spongologist*.

> Sollas and other competent *spongiologists* consider that the leucon type has been evolved many times.
> *Natural Science*, Jan., 1897, p. 30.

spongioplasm, *n.* 2. The supporting framework of the cell protoplasm, inclosing in its reticulum the hyaloplasm. *Buck*, Med. Handbook, II. 761.—3. In *entom.*, the longitudinal and radiating filaments in the muscle-fiber of an arthropod.

> The longitudinal . . . and radiating filaments or reticulum (*spongioplasm* of Gehuchten) lie in a nutritive filling substance (the hyaloplasm of Gehuchten).
> *A. S. Packard*, Text-book of Entom., p. 217.

spongioporphyrin (spon″ji-ọ-pôr′fi-rin), *n.* [Gr. *σπογγιά*, sponge, + *πορφύρα*, purple, + *-in*^{2}.] A pigment found in an Australian sponge, *Suberites Wilsoni*. *Encyc. Brit.*, XXVII. 151.

spongy, *a.* 5. In *bookbinding*, having a certain looseness or softness, which arises from irregularities in type impressions which have not been beaten out.

For the permanent solidity of the volume beating is the best process to obtain it. A *spongy* book is very unsatisfactory. *W. Matthews*, Modern Bookbinding, p. 20.

sponson, *n.* (*b*) In a war-ship, a projecting structure in which a gun is placed: designed to enable the gun to be trained forward and aft.

sponson (spon'sọn), *v. i.* In *ship-building*, to be fitted with a sponson, or to have a projection from the side of a vessel of the form of a sponson: usually followed by *out*.

The guards, which are usually dangerous in river boats when they go outside, were in this case *sponsoned out* and tightly planked, so that they were not a serious disadvantage to her. They tapered out very quickly forward, so that for a long distance they presented no obstruction to the bow in entering a wave.
Sci. Amer., Jan. 14, 1899, p. 23.

spool, *n.* 3. In *elect.*, the reel or bobbin upon which a resistance coil, magnet coil, or sometimes the field coil of a generator or motor is wound.

There are six high-tension and 16 low-tension *spools*, which subdivision of the windings has been chosen in order to facilitate repairs.
Elect. World and Engin., Jan. 31, 1903, p. 184.

Spool donkey. See ★*donkey*.

spool-strip (spöl'strip), *n.* In *wood-working*, a bolt of wood of suitable shape and size for turning into spools.

spoon^{1}, *n.* 3. (*i*) In *pianoforte-making*, see ★*damper-lifter*.—4. In *cricket*, a mishit which sends the ball high in the air.—**Daviel spoon**, an instrument used to extract the lens in an operation for cataract. *Buck*, Med. Handbook, II. 727.—**Puritan spoon**, in old English silver, a slip-top spoon, the end being beveled as if the knob were sliced away.—**Sharp spoon**, an instrument with spoon-shaped expanded extremity having sharp edges, used to scrape away diseased tissue.—**Slip-top spoon**, a spoon in which the end is beveled as if the knob were sliced away. Same as *Puritan* ★*spoon*. *J. S. Gardner*, Old Silver Work, p. 44.—**Souvenir spoon**, a spoon of a special design, intended to be sold as a souvenir of a particular locality.—**Spanish spoon**, a ★post-spoon (which see).—**Volkmann's spoon**. Same as *sharp* ★*spoon*.

spoon^{1}, *v. t.* 3. In *angling*, to fish for with spoon-bait.—4. In *golf*, *croquet*, and similar games, to send (the ball) into the air with the club or mallet.—5. Specifically, in *cricket*, to send (the ball) high in the air by a mishit.—6. In *golf*, to move (the club) very slowly in putting, as though it were a teaspoon: an unfair stroke. *W. Park, Jr.*, Game of Golf, p. 217.

spoon^{3}, *v. i.* II. *trans.* To be spoony about; be in love with; court. [Colloq.]

"Bobby Ferris told me . . . that there was a fellow *spooning* his sister once —"
"What 's *spooning?*"
"Oh, I dunno. . . . It 's—it 's—it 's just a thing they do, you know." *K. Grahame*, Golden Age, p. 90.

I confess I have *spooned* other women,—have perhaps made a point of telling them I adored them, simply because I did n't. *M. Hungerford*, Beauty's Daughters, vi.

spoon-bow (spön'bou), *n.* In *ship-building*, a bow the shape of which bears a general resemblance to the bowl of a spoon. Whaleback steamers of the Great Lakes and some yachts have such bows.

spoon-brake (spön'brāk), *n.* A shoe or block which is curved to fit a rounded wheel or tire.

By the side of the main gear and within the same case is a pulley on which acts a band brake, besides which shoe or *spoon brakes* are also fitted to the rear tires.
Hiscox, Horseless Vehicles, p. 339.

spoon-ladle (spön'lā"dl), *n.* See ★*butter-ladle*.

spoon-motion (spön'mō"shọn), *n.* In *cotton-manuf.*, a spoon-shaped device on a sliver-drawing frame for stopping the machine when a sliver breaks or runs out. *Thornley*, Cotton Combing Machines, p. 27.

spoon-nail (spön'nāl), *n.* A concave condition of the nails; koilonychia.

spoon-oar (spön'ōr), *n.* An oar which is curved at the end of the blade: used in racing-shells and other light boats.

spoon-tree (spön'trē), *n.* In the Danish West Indies, same as ★*cocorron*.

spoon-wheel (spön'hwēl), *n.* A form of turbine water-wheel in which the shape of the buckets receiving the water suggests a spoon-bowl.

Two of the first group of 150-hp turbines are of the Girard type and the third turbine of this group is of the Rusch "*spoon-wheel*" type.
Elect. World and Engin., Jan. 2, 1904, p. 34.

spoony, *a.* 2. Being in love; sentimentally fond of (some one): with *upon* or *on*. [Colloq.]

"Don't you think Alfred Hardie is *spoony upon* our Julia?" . . . Edward did not relish her remark, it menaced more spoons than one. *C. Reade*, Hard Cash, iv.

spoor, *n.* 2. In general, any track or trace.

The meaning of this apparent confusion is perceived when we trace out the track of the glaciers that issued from the Highlands, and follow the *spoor* of those that crept down from the Southern Uplands.
J. Geikie, The Great Ice Age, p. 69.

sporadic, *a.* 2. In *phytogeog.*, distributed in several regions: so used specifically by A. P. de Candolle (F. *sporadique*), in contrast with *endemic*, of plant genera whose species are thus distributed. Compare ★*polydemic*.

sporadicity (spō-rạ-dis'i-ti), *n.* [*sporadic* + *-ity*.] The state or quality of being sporadic.

sporadosiderite (spọ-rad-ọ-sid'ėr-īt), *n.* [*sporad*(*ic*) + Gr. σίδηρος, iron, + *-ite*^{2}.] See ★*meteorite*.

Among the distinctive and significant characters of meteorites are their fragmentary forms, . . . the scattered condition of iron crystals among silicate crystals in many cases (*sporadosiderites*), etc.
T. C. Chamberlin, in Carnegie Inst. Yearbook, 1904, p. 201.

spore^{2}, *n.*—**Summer spore**, a spore produced in summer, as the uredospores of rusts and the conidia and pycnospores of ascomycetous fungi.—**Winter spore**, a spore especially adapted to survive the winter, as the teleutospores of rust-fungi and the ascospores of pyrenomycetous fungi.

spore-print (spōr'print), *n.* A print made by placing the pileus of a fungus with the hymenium downward upon paper and allowing the spores to collect.

sporidial (spọ-rid'i-ạl), *a.* [NL. *sporidi*(*um*) + *-al*^{1}.] Of or pertaining to sporidia.

spork (spôrk), *n.* [*sp*(*oon*) + (*f*)*ork*.] A 'portmanteau-word' applied to a long, slender spoon having at the end of the bowl projections resembling the tines of a fork. [Trade use.]

sporoblast, *n.*—**Definitive sporoblast**, in *Sporozoa*, a sporoblast formed by the complete union, including the nuclei, of two conjugating gametes.

sporocyst, *n.* 2. In *bot.*, a unicellular alga which, usually by a process of division, produces only asexual spores: in contrast with *sporangium*, which is usually limited to multicellular organs producing asexual spores.

sporodochium (spō-rọ-dō'ki-um), *n.*; pl. *sporodochia* (-ạ̈). [NL., < Gr. σπορά, a spore, + δοχεῖον, a receptacle.] The dense tubercular or wart-like mass of sporogenous hyphæ which produce conidia in *Tubercularia* and related genera of the *Fungi Imperfecti*.

sporogenic (spō-rọ-jen'ik), *a.* [Gr. σπορά, seed (spore), + -γενης, -producing.] Pertaining to or of the nature of development from spores; sporogenous.—**Sporogenic cycle, germ-plasm.** See ★*cycle*^{1}, ★*germ-plasm*.

sporogonic (spō-rọ-gon'ik), *a.* [*sporogon*(*y*) + *-ic*.] Of or pertaining to sporogony.

There exists a whole group of Coccidiida, the Goussia and Coccidium of fish, of which only the *sporogonic* cycle is known, the microgametes being perhaps represented by the old Rhabdospora (Laguesse).
Encyc. Brit., XXXII. 816.

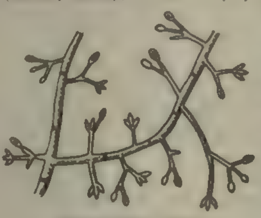
sporological (spō-rọ-loj'i-kạl), *a.* [*sporolog*(*y*) + *-ic-al*^{1}.] Pertaining to or based upon spore characters: as, a *sporological* system of classification.

sporophyl, *n.* 2. In *algol.*, a leaflet-like outgrowth upon which occur the sporangia, arising below the large terminal blade in *Alaria* and other closely related genera of the *Phæophyceæ*.

sporostrote (spō'rọ-strōt), *n.* [Gr. σπορά, seed (spore), + στρωτός, strewn.] In *phytogeog.*, a plant disseminated by spores. *F. E. Clements*.

sporotrichosis (spō-rọ-tri-kō'sis), *n.* [NL. *Sporotrich*(*um*) + *-osis*.] A mycotic disease of the skin and mucous membranes due to the presence of a mucedinous fungus of the genus *Sporotrichum*.

Sporotrichum (spọ-rot'ri-kum), *n.* [NL. (Link, 1809), < Gr. σπορά, spore, + θρίξ, hair.] A large genus of hyphomycetous fungi having much-branched, widely-spreading, prostrate hyphæ, bearing acrogenous, mostly single, uniseptate conidia. Over 120 species have been described. They are widely distributed and mostly saprophytic. *S. globuliferum* is one of the few parasitic species. It attacks the chinch-bug and has been used with some success in combating it. *S. roseum* occurs on damp paper and similar substances.



Sporotrichum roseum.

sporozoite (spō-rọ-zō'īt), *n.* [*Sporozoa* + *-ite*^{2}.] One of the minute germs of telosporidean *Sporozoa*, which enter the intestinal cells of vertebrates and start the life-cycle of the species to which they belong.

If a piece of fresh muscle be teased in some indifferent fluid and examined under a low power the whitish streaks resolve themselves into opaque, thin-walled tubes, densely packed with crescentic bodies, the so-called *sporozoites*.
Jour. Exper. Med., Nov. 29, 1901, p. 4.

sporozoitoblast (spō"rọ-zọ-it'ọ-blåst), *n.* [*sporozoite* + Gr. βλαστός, germ.] The parent-cell from which the sporozoites are derived.

sport, *n.* 10. A man; a fellow; especially a man who has a fad: as, a fresh-air *sport*. [Slang.]

A passel of surveyor *sports* who comes . . . through the hills. *A. H. Lewis*, Wolfville Nights, xii.

A short sport. See the extract. [Slang.]

There is a kind of people who go about projecting plans and weakly withdrawing them. We have a name for them back in America. Nobody likes it, nobody would be it, nor have a wife . . . *a short sport*.
L. C. Hale, in Bookman, Jan., 1906, p. 512.

sporty (spōr'ti), *a.* Sporting; devoted to sports; characteristic of sportsmen; game. [Colloq.]

A thoroughbred in spirit, as in looks;
Sporty, yet tender; and though steadfast, gay.
Judge, quoted in N. Y. Com. Advertiser, May 11, 1901.

spot, *n.* 9. A small piece of ground or inclosure; a plot: applied to land or crops. *Eng. Dial. Dict.* [Prov. Eng.]—**Bacterial spot.** See ★*bacterial*.—**Brown spot**, a disease of tobacco-leaves caused by *Macrosporium longipes*.—**Canker-spot**, a diseased and distorted place on the branch of a tree. See ★*canker*, 1 (*b*).—**Fairy-ring spot**, a disease of carnation leaves caused by *Heterosporium echinulatum*, which frequently forms irregular circles on the diseased spots. See ★*Heterosporium*.—**Fruit-spot**, a fungous disease of the pear and quince caused by *Entomosporium maculatum*, which forms dark blotches on the fruit. The same fungus occurs on the leaves, causing leaf-blight. See ★*Entomosporium*.—**Great red spot** an immense oval spot which appeared on the southern hemisphere of the planet Jupiter in 1878. It was at first of a conspicuous brick-red color, but is now (1908) extremely faint. Its cause and nature are problematical.

This can scarcely be called a current, as the surface material referred to under this heading is confined within the limits of the *Great Red Spot*. This remarkable object was detected in 1878 by M. O. Lohse, of Potsdam (who appears to have been the first to draw it), and by Professor Pritchett, of Missouri, and Mr. Dennett, of Southampton (whose observations seem to have been the earliest published), and quickly attracted general notice. Nearly every telescope was directed to its observation, and its behaviour carefully watched. It is elliptical in shape; its dimensions being about 27,000 miles in length, and nearly 9000 in breadth. What the nature of the spot may be it is impossible at present to say. Certainly it cannot be regarded as a solid feature of the planet's globe, since it is by no means stable in position; but, on the other hand, there can be no doubt that it is the product of forces which have considerable permanence, and, judging from the very definite and regular appearance of the well-known hollow or bay on the S. side of the S. equatorial belt in which the *Red Spot* lies (see Fig. 5), despite the present faintness of the spot itself, as yet show no signs of declining energy. *Knowledge*, Jan., 1904, p. 10.

Koplik's spots, the enanthema, or mucous-membrane eruption, of measles, consisting of bluish-white spots in the mouth, preceding by some days the cutaneous eruption.—**Lenticular rose spots**, the typical eruption of typhoid fever.—**Mariotte's spot.** Same as *blind spot* (which see, under *blind*^{1}).—**Ocular spot**, in *zoöl.*, a specialized pigment-spot or accumulation of pigment-cells supposed to be sensitive to light, and hence representing a preliminary stage in the phylogenetic development of the eye; an eye-spot.—**On the spot.** (*c*) In *cricket*, of the bowler, accurate in pitch; of a good length.—**Round the spot**, a dice game in which nothing counts but the dice that have a spot in the center, so that the ace, deuce, four, and six are blanks. Three-spot counts two and five-spot four.—**Violet spot.** See ★*leaf-spot of violet*.

II. *a.* Made, paid, delivered, or the like, on the spot, or at once: as, *spot* wheat. [Colloq.]—**Spot cash.** See ★*cash*^{2}.—**Spot freight**, freight which is to be shipped at once.—**Spot rate**, the rate charged on spot freight.

At the beginning of the season, *spot rates* on grain shipped to the United Kingdom were about $9 per ton.
Yearbook U. S. Dept. Agr., 1901, p. 579.

spot, *v. t.* 9. In New Zealand, to buy up (choice spots of land containing water, etc.), ruining the neighboring property. Called *peacock* in Australia.

Under free selection, the squatter *spotted* his run, purchasing choice spots.
E. E. Morris, Austral English, s. v. 'spotting.

10. See *blaze*^{3}, 2, 3.

spot-disease (spot'di-zēz"), *n.* Any fungous disease of plants which appears in the form of discolored spots on stem, leaves, or fruit. See ★*disease*.

spot-face (spot′fās), *v. t.* To face a small area; finish a section or spot on (a piece of material) and not the surrounding surface. *Trans. Amer. Soc. Mech. Engin.*, 1903, p. 1141.

spot-frequency (spot′frē″kwen-si), *n.* The frequency or abundance of sun-spots, which varies in a semi-regular manner from year to year.

spot-indicator (spot′in″di-kā-tor), *n.* In *elect.*, a form of inclosed safety fuse in which the blowing of the fuse darkens a spot on the surface of the inclosing cylinder, thus indicating the fact that the circuit is open at that point.

> Disruption of the indicator follows, but the final break takes place in the interior conductor. Figs. 26, 27, 28, 29 show this action and also the "*spot*" *indicator* before and after blowing.
> *Jour. Franklin Inst.*, Jan., 1903, p. 21.

spot-stroke (spot′strōk), *n.* A billiard manœuver consisting chiefly in repeatedly pocketing a red ball from its spot, and at the same time pulling the cue-ball back. The process may be easy or hard, according to both the size and the shape of pocket-opening. If hard, the striker can work into position for a series of caroms, starting near a corner; and when this opportunity for nursing threatens to vanish, he can plan to resume spot-playing. The highest number for the English championship, which was instituted in 1870 and came to an end in 1885, was 16 (a run of 48 only) in sixteen matches having an aggregate of 22,744 points. In America, more than half a century ago, spot-playing was limited to thrice in succession.

Spotted paria. See ★*paria.*—**Spotted strawberry leaf-beetle.** Same as *spotted* ★*paria.*

spotter, *n.* **2.** Specifically, a person employed to keep secret watch on the employees of a company, especially on a street railway to spot or note the number of fares (if any) not turned in by the conductor.—**3.** *Naval*, a person stationed at a suitable position above the deck to note the point at which the shots from a gun strike with reference to a target or the enemy's vessel, and thus give information as to the necessary correction of the range at which the gun-sight is set.

> Our ship was to umpire the Ohio's night practice, sending over a chief umpire and assistants, chief *spotter* and assistants, as the custom is. They pass upon doubtful hits, inflict the many penalties of the regulations—disinterestedly, like their counterparts in athletic games.
> *N. Y. Evening Post*, May 16, 1908.

4. One who tints photographs.—**5.** A somersault in which the performer comes down upon the same spot from which he springs—that is, does not advance forward or backward. [Slang.]

> He ran to the door of the tent and come out of it on a back somersault and threw a row of flip-flaps through that crowd that made them all stand back. He could throw *spotters* and gainers and twisters; he was as good as Quigley or anybody in Barnum and you bet he let them folks see it.
> *C. D. Stewart*, Partners of Providence, xix.

spotting, *n.* **2.** The tinting of photographs. —**3.** The process of separating a train into sections.

> This breaking up and switching of the trains into sections, which is called "*spotting*," is attended to by one or the other of two small General Electric electric locomotives, each of which is equipped with two 12½-hp motors provided with R38 controllers.
> *Elect. World and Engin.*, Sept. 24, 1904, p. 506.

spotty, *a.* **II.** *n.* A New Zealand fish, a wrasse, *Pseudolabrus bothryocosmus.* Also called *poddly* and *kelp-fish.* *E. E. Morris*, Austral English.

spot-weave (spot′wēv), *n.* Any weave in which the warp and weft are so interlaced as to show a fancy design in spots. *R. Marsden*, Cotton Weaving, p. 102.

spot-white (spot′hwīt), *n.* In *billiards*, the reverse of *plain* ★*white* (which see).

spot-zone (spot′zōn), *n.* One of two zones on the surface of the sun, within which the sun-spots ordinarily appear. They lie between 5° and 40° of solar latitude on each side of the sun's equator, only occasionally appearing nearer to the equator, and with extreme rarity outside the 40° limit.

spoud (spöd), *n.* [Gr. σπουδή, haste, speed.] A name proposed for the unit of acceleration; an acceleration of one centimeter per second per second.

spout, *n.* **6.** In *turpentine-making*, the projection of the lower gutter beyond the center of the face. See ★*gutter*¹, 9.—**7.** A narrow part of a river, with a swift current. [Canada.]

spout-plane (spout′plān), *n.* A gutter-plane or round-molding plane. See *plane*², 1, and *molding-plane.*

S. P. Q. F. An abbreviation of the Latin *Senatus Populusque Florentinus*, the Senate and the People of Florence: letters often found on Italian majolica.

sprag¹, *n.* **3.** A bar of steel attached by one end to a wagon or motor-car frame or body, while the other end (which is sharpened) can be let down at an angle with the ground, to prevent the vehicle from running backward down hills or grades. This device was first used on heavy wagons on hilly roads, so that the horses might be rested without the strain of the load. In motor-cars it guards against accident in case the brakes fail to hold or the tires slip. The sprag should be of such length as to be in no danger of being toppled over by a small lift of the body, and must be short enough to dig effectively even into a hard road surface. Also called locally a *dart* or a *dagger.*

> A device which does not seem to receive from the makers the attention which it merits is the *sprag*, the iron rod suspended from the rear axle to hold the car on a grade in case brakes do not operate or are not in use. Too often the *sprags* fitted to heavy large cars are altogether too slender for the purpose; often they are stout enough, but so short that the car would be certain to ride over them. It is not often that the *sprag* is needed, but when it is wanted the need is great and immediate, and not only the car, but the lives of its occupants may depend upon the apparently insignificant device.
> *N. Y. Times*, quoted in Sci. Amer., Dec. 20, 1902, p. 444.

sprangle-top (sprang′gl-top), *n.* **1.** The grass *Scolochloa festucacea*, found in wet places from Iowa and Nebraska northward. It is a stout, erect, smooth perennial with a large open panicle, not possessing marked value.—**2.** A grass, *Diplachne dubia*, found in the southwestern United States, in Mexico, and in southern Florida. Its panicle consists of 8 or 10 spreading spikes.

sprat², *n.* **2.** (*e*) Same as *thread-herring.*—**Yellow-billed sprat,** a West Indian marine fish, *Sardinella bishopi.*

sprat-weather (sprat′weᴛʜ-ėr), *n.* Dark days in the late fall and early winter (November and December) which are supposed to be favorable for sprat-fishing.

sprawl¹, *n.* **4.** Ability to spread one's self or to make a show or 'splurge'; 'go.' [Slang.]

> Stella Kimbark informed me to-day that she had a place in view for me. "A reg'lar cinch, too," she added, "if you only had a nickel's worth of *sprawl.*"
> "What is *sprawl?*" I asked.
> "*Sprawl,*" explained Miss Kimbark, sarcastically, "means what you an' most other folks ain't got. It means reg'lar git-up-an'-go, if that suits you better; an' what's more, it means the knowin' how an' when to git up an' go!" *F. M. Kingsley*, The Singular Miss Smith, xi.

spray¹, *n.* **5.** A set of castings fed from a common runner, to which they are still attached by the smaller channels or sprues, and resembling a branch with twigs and leaves.

spray², *n.*—**Dobell's spray.** Same as *Dobell's solution.*—**Seiler's spray,** an alkaline antiseptic solution containing bicarbonate of sodium, borax, sodium benzoate, sodium salicylate, eucalyptol, menthol, thymol, and oil of wintergreen. Also called *Seiler's solution.*

spray², *v. t.* **3.** To protect (cultivated plants) from insect enemies and vegetable parasites by covering them with a spray which has a toxic effect upon the animal or vegetable organisms.

spray-cart (sprā′kärt), *n.* A light cart carrying a liquid to be sprayed upon plants or vegetables with the view of killing obnoxious insects or fungi.

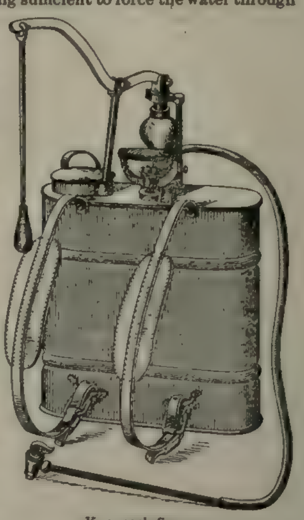
> Without his *spray-cart* and fungicide the tomato-grower is lost—and knows it!
> *L. H. Bailey*, Cyc. Amer. Horticulture, p. 1816.

spray-cure (sprā′kūr), *n.* Treatment of disease by the application of water in the form of spray.

sprayer, *n.* **2.** A device or apparatus for making into a fine mist or spray the particles of liquid fuel which are to form a hydrocarbon vapor to be burned in internal-combustion motors.

> Air passes from the air-pump D by way of the annular channel b into the *sprayer* c, and there meets the oil jet issuing from a. *Encyc. Brit.*, XXVIII. 189.

Knapsack sprayer, a combined reservoir and pump for spraying liquid insecticides and fungicides over trees and plants. It consists of a copper tank, resembling in form a knapsack, and designed to be carried on the back of the operator, combined with some form of pump for forcing the liquid through a hose. Several types of pumps are used, one employing a rubber compression-diaphragm, and another a rubber bulb, while others are simple piston-pumps placed inside the tank. Another method used is to force air under pressure into the tank, the air-pressure being sufficient to force the water through the hose and nozle. The illustration shows a knapsack sprayer with piston-pump operated by a hand-lever.



Knapsack Sprayer.

sprayer-pump (sprā′ėr-pump), *n.* A force-pump fitted with a short length of hose for drawing a liquid from a small tank or from a barrel and sending it in a fine spray over plants and trees. Small pumps are made in many forms and are operated by hand; larger pumps for spraying fruit-trees or field crops are mounted on wheels and may be operated by some form of motor.

spraying (sprā′ing), *n.* Specifically, in *ceram.*, the process of applying color or glaze to the surface of ware in spray blown from an atomizer. By this means different colors may be blended in the ground tinting, as in Rookwood pottery.

spraying-bellows (sprā′ing-bel″ōz), *n.* An atomizer operated by means of a bellows.

spray-injector (sprā′in-jek-tor), *n.* A device for injecting into a combustion-chamber a spray of liquid hydrocarbon so as to form a mist of finely divided carbon in a carrying current of air. This is done by forcing a fine jet of liquid into the current of air, or by forcing the current of air through an annular jet of liquid. The liquid is atomized by the air acting in injector fashion, and a sort of air-gas is formed which is highly combustible and burns both rapidly and completely. It is used in many forms of ★carbureter (which see). *W. S. Hutton*, Steam Boiler Construction, p. 33.

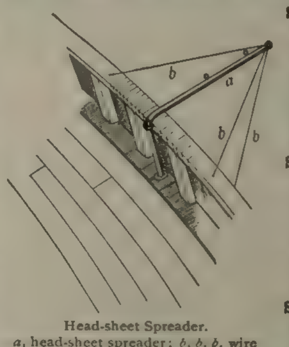
spray-nozle, *n.* **2.** A nozle designed to deliver water or other liquid either as a fine spray, in the form of a fan, or an inverted cone, or a cloud-like mist.

spray-tube (sprā′tūb), *n.* A tube to be used in a spray-injector or sprayer to secure the atomizing of the liquid by the current of air, and to convey the mixture to the point where it is to be utilized: used in internal-combustion motors as part of the ★carbureter (which see).

spray-twyer (sprā′twī″ėr), *n.* An open box-twyer cooled by the vaporization of a spray of water.—**Lloyd's spray-twyer,** a water-cooled twyer open at the back and cooled by a spray of water driven from a perforated pipe against the front of the twyer.

spread, *n.* **13.** In *math.*: (*b*) A continuous or discontinuous connected aggregate, assemblage, or manifold of elements: thus, for instance, a two-spread may be considered as a surface with points or lines as elements.—**14.** In *bacteriol.*, same as ★*smear*, 6.—**15.** A misère or grando, in any game of cards in which the single player's cards are placed face up on the table. See ★*skat*² and *boston.*—**Angle of spread,** in an armature winding, the angle within which all the turns of the winding are contained.

spreader, *n.* —**Head-sheet spreaders,** the horizontal bars rigged out on the bows of sharp-built yachts in order to give greater spread to the head-sheets.



Head-sheet Spreader.
a, head-sheet spreader; *b*, *b*, *b*, wire guys to hold it firm.

spread-head (spred′hed), *n.* In newspapers, a heading set in several lines of large type. [Colloq.]

spreading-hammer (spred′ing-ham″ėr), *n.* A gold-beaters' hammer for spreading gold-leaf.

spred, *r.*, *n.*, and *p. a.* A simplified, and former, spelling of *spread.*

sprigger (sprig′ėr), *n.* In *ceram.*, a workman in a pottery who attaches molded ornaments, or sprigs, usually of a different color, to the surface of the ware.

sprightly, *a.* 3. Having a lively, distinctive taste; not palling.

> Flesh [of grape] tender, breaking, juicy; seeds of medium size, two or three to the berry; flavor mild, sweet and *sprightly.* *Yearbook U. S. Dept. Agr.*, 1901, p. 388.

sprig-molded (sprig′mōl″ded), *p. a.* In *ceram.*, decorated with relief designs which have been made in separate molds.

spring, *v. t.* 17. To fit with springs, as a carriage or a motor-vehicle.

> Having learned to properly *spring* horse-drawn and railway carriages, builders of transportation vehicles were next confronted with a much more difficult problem.
> *Automobile Topics*, May 27, 1905, p. 491.

spring. I. *n.* 16. In *golf*, the movement of a ball lying in a small cup or hollow when struck with a straight-faced club. *W. Park, Jr.*, Game of Golf, p. 43.—**Cañon spring**, a spring emerging on a cañon-wall or in an alcove of the wall.

> From beneath the lava stream or from a porous layer, numerous powerful springs issue along the side of the canyon below Shoshone falls. These may be called '*canyon springs*,' a new term introduced in the classification of springs. *Science*, Jan. 17, 1902, p. 86.

Combination spring, a spring made up of several coils or sets which act together under a load.—**Cylindrical spring.** (*a*) A spring the coils of which have been wrapped around a cylindrical mandrel, so that a casing to inclose it will have a cylindrical shape. (*b*) A helical spring made by coiling a cylindrical or round steel rod around a mandrel.—**Elliptic spring**, a carriage-spring formed of two half-elliptic sections. The ends are secured by bolts which pass through lips on the upper section, and eyes on the lower.—**Flat spring**, a spiral spring made of wire wound around an axis, so that the plane in which the wire is wound is everywhere approximately perpendicular to the axis.—**Graduated spring**, a nest of concentric helical springs arranged one inside of another, and so connected that light loads are taken by the small springs. When a heavy load is applied, it closes the small springs and is carried by the heavy ones.—**Grasshopper-spring**, a half-elliptic spring used on a tandem cart. The center is clipped to the axle-bed, and the ends are shackle-jointed to half-circle arms attached to the shaft.—**Hour-glass spring**, a spring which is so coiled as to be smallest in diameter at the middle and larger at the top and bottom, and hence resembles an hour-glass in form.—**Laminated spring**, a leaf-spring; a spring made up of a number of leaves, plates, or strips placed one over the other.—**Multicoil spring**, a spring made up of several separate coils.—**The Pierian spring.** See ★*Pierian.*

II. *a.*—**Spring azure.** See ★*azure.*

spring-board, *n.* 2. In *lumbering*, a short board, shod at one end with an iron calk, which is inserted in a notch cut in a tree, on which the faller stands while felling the tree.

spring-box, *n.* 4. In *organ-building*, that part of a wind-chest in which are the pallets and their springs.

spring-brake (spring′brāk), *n.* An early form of train-brake in which a powerful spiral spring was coiled in a casing on the spindle of the brake hand-wheel. This spring could be wound up by hand, using the brake-wheel for this purpose, and held under strain by a detent. The detents on the cars of the train were connected to the continuous rope of the bell-signal in the engine, so that when the rope was pulled by the engineer, the detents were released, and the uncoiling of the incased springs turned the brake-wheels and set the brakes. The hand-wheels were made extra heavy so as to act with a fly-wheel effect, increasing the tension on the brake-levers. The objections to the device were the suddenness with which the brakes were set, the lack of any gradation in the intensity of an application, and the necessary consequence of slack in the bell-rope, which set the brakes on the front end of the train first. This entailed great discomfort to travelers, and prevented the use of the brake except in an emergency. The best-known type of spring-brake was the Creamer.

spring-branch (spring′brȧnch), *n.* A stream which originates in springs. [U. S.]

spring-cord (spring′kôrd), *n.* A tension-regulator for the whip warp-threads in a loom for tappet-weaving. *T. W. Fox*, Mechanism of Weaving, p. 275.

springer, *n.* 6. In *old music*, a grace or embellishment, consisting of an after-note one degree above the principal note: as,

spring-finger (spring′fing″gėr), *n.* Same as *trigger-finger.*

springfish (spring′fish), *n.* Same as *miller's-thumb.*

spring-governor (spring′guv″ėr-nor), *n.* A governor in which the constant force of gravity, generally used, is replaced by the varying force of a spring. *Thurston*, Manual of Steam-Engine, II. 367.

springing, *n.* 3. The act or process of furnishing with springs; also, springs (as of a vehicle) collectively. See *spring*, *n.*, 9.

> One has but to try any one of a dozen reputable cars to see that *springing* is now a science instead of, as in the past, a compound of ignorance and guesswork. There are still instances of bad *springing* to be found — cases where the springs are too light and lacking in temper, or too heavy and unresponsive to absorb the road shocks to which they are subjected.
> *Automobile Topics*, May 27, 1905, p. 491.

spring-key (spring′kē), *n.* A spring-wedge often used to fasten a pulley firmly to a shaft.

spring-load (spring′lōd), *n.* The load which can be applied to a spring to compress, deflect, or extend it without setting it down solid or straining it beyond its elastic resiliency; the normal weight on a spring. *The Engineer* (London), 1901, p. 612.

spring-louse (spring′lous), *n.* Same as *flea-louse.*

spring-motor (spring′mō″tor), *n.* A motor driven by a coiled spring, as a clock or railway-signal mechanism, or some forms of car-starting apparatus. The effort required to coil powerful springs and store in them any considerable amount of power limits this type of motor to comparatively light service. *Trans. Amer. Inst. Elect. Engin.*, 1903, p. 18.

spring-plate (spring′plāt), *n.* 1. A plate or sheet of steel from which the leaves of flat or spiral springs are cut.—2. A plate on which a nest or series of springs rests or against which the springs act.

spring-rail (spring′rāl), *n.* In *pianoforte-making*, see ★*hammer-rest.*

spring-ring (spring′ring), *n.* A snap-ring.

spring-saddle (spring′sad″l), *n.* Same as ★*saddle*, 3 (*c*) (5).

spring-seat (spring′sēt), *n.* A seat which rests on or is suspended by springs; a wagon- or carriage-seat attached to the body by springs.

springtanz (shpring′tänts), *n.* [G.: see *spring* and *dance.*] An old dance, probably the same as the *lavolta* or *volta*, and possibly a precursor of the waltz, or the music for such a dance.

spring-trip (spring′trip), *n.* A mechanism which permits a part of an implement to give way to an obstacle but restores it to position by means of a spring: applied in many cultivators.

spring-vise (spring′vīs), *n.* 1. A screw- or lever-vise for compressing a spring: used in assembling, as in gun-work.—2. A vise closed by a spring, so that no more compression may be possible on the work than the maximum effort of the spring.—3. A vise opened by a spring when the compression of the screw is released.

sprinkle, *v. t.* 6†. To make intoxicated or tipsy. [Old slang.]

> Why! we were all a little stained last night, *sprinkled* with a cup or two. *B. Jonson*, Bartholomew Fair, i. 1.

sprinkler, *n.* 1. (*d*) A vehicle carrying water in a reservoir and fitted with a delivery-pipe having perforated nozles or spouts or surfaces, for watering streets and highways. (*e*) An automatic fire-extinguisher for stores, factories, warehouses, and other inclosed spaces. Pipes are placed along the ceilings, in which water is maintained under pressure, at all times, from an overhead tank or reservoir. At intervals varying with the height of the room, sprinkler-heads are attached to these pipes, constructed as outward-opening valves, held shut by a linkage or lever action which is locked in place by a joint of fusible solder. Any heat in the room from a fire hot enough to melt this solder releases the valve, and the water is sprayed upon the burning mass below. The head is constructed to act as a diffuser and spread the flowing water uniformly over a large area. (*f*) In *lumbering*, a large wooden tank from which water is sprinkled over logging-roads during freezing weather, in order to ice the surface.—**Automatic sprinkler.** See ★*sprinkler*, 1 (*e*).

sprinkler-head (spring′klėr-hed), *n.* See ★*sprinkler*, 1 (*e*).

sprinkling-cart (spring′kling-kärt), *n.* See *watering-cart.*

sprinkling-tower (spring′kling-tou″ėr), *n.* 1. An elevated structure carrying a tank from which pressure and supply of water may be derived for the pipes of automatic sprinkling systems in factories and warehouses. See ★*sprinkler*, 1 (*e*).—2. An elevated structure from which water may be showered or sprayed in a finely divided state for moistening currents of air or other similar uses.

sprite[1], *n.* 6. A beach-crab, especially *Ocypoda arenaria.*

sprit-topsail (sprit′top″sāl, or -sl), *n.* A topsail set flying from the deck, with its luff laced to a pole called a 'sprit.' This sail does not project beyond the gaff-end like a club-topsail, and it must not be confounded with the spritsail, spritsail-topsail, or spritsail topgallantsail.

sprout, *v. i.* 5. Specifically, used to designate the action of silver during solidification. The molten silver beneath the thin solid crust forces up the crust with explosive violence and a part of it solidifies in the form of trees or sprouts. This action is attributed to the oxygen absorbed by the silver while above the melting-point, and seeking to escape at the point of solidification of the metal. Also *vegetate.* *Phillips and Bauerman*, Elements of Metallurgy, p. 637.

sprout, *n.* 1. (*c*) In *forestry*, a tree which has grown from a stump or root. A *shoot* is a sprout which has not reached a height of three feet.—**Reserve sprout method**, that method of conservative lumbering in which an overwood composed of seedling trees is maintained above a stand of sprouts. Also called *standard coppice system.*—**Sprout forest**, a forest consisting of sprouts or trees which have grown from stumps or roots.—**Sprout system**, one of the three chief systems of forest management, in which reproduction is secured by sprouts. Also called *coppice system.*

spruce^3, *n.*—**Brown rot of the spruce.** See ★*rot.*—**Douglas spruce bark-beetle.** See ★*bark-beetle.*—**Sitka spruce.** Same as *tideland spruce.*

spruce-bird (sprös′bėrd), *n.* The white-winged crossbill, *Loxia leucoptera*: so named from its habit of frequenting evergreen forests.

spruce-borer (sprös′bōr″ėr), *n.* 1. Any one of several species of bark-beetles, as *Xyloteres bivittatus*, *Xyleborus cælatus*, *Crypturgus atomus*, and *Hylurgops pinifex.*—2. The buprestid *Melanophila longipes* and allied species.—3. The cerambycids *Rhagium lineatum* and *Xylotrechus undulatus.*—4. Various other species, including the white-pine weevil, *Pissodes strobi.*

spruce-gum, *n.* 2. See ★*gum*^{2}.

sprue-cutter (sprö′kut″ėr), *n.* A power-tool for cutting off the sprue or other excess of metal which clings to a casting. See *sprue*, *n.*, 1.

sprue-head (sprö′hed), *n.* Same as *sinking-head.*

spruit (sproit), *n.* [D. *spruit* = E. *sprout.*] A small stream or creek. [South Africa.]

> These plains . . . are much cut up by small *spruits* and hippo tracks. *Geog. Jour.* (R. G. S.), XI. 618.

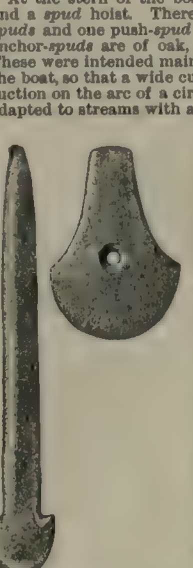
spud, *n.* 6. A curved chisel-like tool for removing bark.—7. One of several heavy vertical pieces of timber shod with a pointed iron at the lower end, arranged to slide in guides on a floating dredge. When lowered to the bottom the spuds anchor the dredge and hold it in place against the push of the dredging machinery.

Spud for removing Bark.

> At the stern of the boat [dredge] is a steam capstan and a *spud* hoist. There are also two vertical anchor-*spuds* and one push-*spud* at the stern of the boat. The anchor-*spuds* are of oak, 24 ins. square and 40 ft. long. These were intended mainly as pivots on which to swing the boat, so that a wide cut could be made by moving the suction on the arc of a circle, but this method is not well adapted to streams with a strong current.
> *Engin. News*, XL. 236.

8. In *archæol.*, one of a class of pecked or polished stone implements varying considerably in size and form, but always having a rather broad blade with a sort of handle of variable length: often referred to as spade-like or paddle-shaped implements.

> It has been a puzzle to archeologists to assign to any class the peculiar stones called "*spuds.*" They are usually of a comparatively soft material, carefully worked and polished, and bear no marks of rough usage. On the other hand, they seem too large for ornament. Perhaps their office may have been in some ceremony or game.
> *Smithsonian Rep.* (*Bur. of* [*Ethnol.*), 1892, p. 109.



Forms of Spud.
(From An. Rep. Bur. Amer. Ethnol., 1891–92.)

9. In *surg.*: (*a*) A flat spade-like instrument used for the detachment of soft parts from

bone. (*b*) An instrument of similar shape used in the extraction of foreign bodies from the eye.—**Spud casing,** one of the two or more square, vertical openings or wells extending entirely through the hull of a dredge-boat, closed and water-tight on the four sides, but open at the upper and lower ends, in which is placed a heavy, square timber or spud. See ★*spud*, 7.

spudder (spud′ėr), *n.* See *barker*^{2}, 1.

spudding-bit (spud′ing-bit), *n.* A tool used in boring wells through earth and near the surface. It has a broad and dull or spade-like edge.

spudger (spuj′ėr), *n.* An implement for tamping, stirring, or mixing.

> Or, in some localities, the masses (of fishes) are separated by stirring them with a "*spudger*," consisting of a thick board 10 inches long and 2 or 3 inches wide, nailed in the center to a wooden handle.
> *Bulletin U. S. Fish Com.*, XVIII. 438.

spud-grower (spud′grō″ėr), *n.* A farmer who raises potatoes. See *spud*, 5 (*b*). *L. M. Wilcox*, Irrigation Farming, p. 238. [Colloq.]

spud-hoist (spud′hoist), *n.* The device used in lifting the spuds of a scow or dredge when the latter is to be moved. See ★*spud*, 7.

spumose (spū′mōs), *a.* Same as *spumous.*

spunge, *n.* and *v.* A simplified, and former, spelling of *sponge*.

spun-ware (spun′wãr), *n.* Bowls, vases, saucepans, or other cylindrical vessels for domestic use, formed from copper, brass, or other sheet-metals on a spinning-lathe. See ★*spinning-lathe.*

spur, *n.* **3.** (*n*) (4) Same as *ram*^{2}, 1 (*b*), but much less frequently used.

> These decks are usually curved downwards at the fore end, for the purpose of gaining such a depth below water as will enable the *spur* to pierce an enemy below the armour. *White*, Manual of Naval Arch., p. 340.

(*w*) The ridge in the interior of a bifurcating tube between the two branches given off from it. (*x*) In *hort.*, a twig or short branch that bears flowers and fruit, in distinction from one that continues to elongate in woody growth.

> With these two plants, however, the bearing shoots are not those making the most vigorous growth at the ends of the branches, but they are usually more obscurely located upon the sides of the branches, and make a much smaller growth, for which reason they have been termed "*spurs.*" *Yearbook U. S. Dept. Agr.*, 1901, p. 437.

4. A side-track running out from a main railway line and forming part of a Y.—**Palatine spur.** See ★*palatine*^{2}.

spur-bow (spėr′bō), *n.* *Naval*, same as *ram-bow*. [Rare.]

> The *spur-bows* themselves, prolonged under water as they are, also tend to reduce pitching by increasing resistance; and in the French navy, where this form of bow has been largely adopted for unarmoured as well as for armoured ships, it is said that a sensible reduction in pitching has resulted.
> *White*, Manual of Naval Arch., p. 272.

spur-gear, *n.* **2.** Toothed gearing for transmission of motion and power in which the pitch-surfaces from which the teeth are developed are cylinders with elements parallel to the axis. *Jour. Brit. Inst. Elect. Engin.*, 1902–1903, p. 1003.

spurge-ipecac (spėrj′ip″ẹ̄-kak), *n.* See ★*ipecac.*

spurket, *n.* Same as *spirket.*

spurrite (spėr′īt), *n.* [After J. E. *Spurr*, who collected the specimens.] A mineral consisting of the silicate and carbonate of calcium $(2Ca_2S:O_4.CaCO_3)$. It occurs in cleavable granular masses of pale gray color at Velardeña, Durango, Mexico.

sputum-tube (spū′tum-tūb), *n.* A graduated capillary tube for holding sputum while it is rotated in a centrifugal, as the ★*hematocrit* (which see).

sp. vin. rect. An abbreviation of the Latin *spiritus vini rectificatus*, rectified spirit of wine.

sq. An abbreviation (*b*) of the Latin *sequens*, *sequentes*, *sequentia*, the following.

sqq. An abbreviation (*a*) of the Latin *sequentia*, the things following; (*b*) of the Latin *sequentibus*, in the following places.

squadron, *n.* **3.** The vessels of a fleet are assigned consecutive numbers from one upward. When the vessels are in column with number one leading, or in line with number one on the right, and the other vessels in the order of their numbers, the fleet is in natural order and in that case the squadron with the lowest numbers is the *van squadron* and is leading in column and on the right in line; the middle squadron is the *center squadron;* and the last in column or to the left in line is the *rear squadron.* When there are but two squadrons, they are designated as *van squadron* and *rear squadron.*—**Flying squadron,** a squadron of cruisers of high speed and great mobility.—**Squadron of evolution.** See ★*evolution.*—**White squadron,** a name given to the first vessels of the modern navy of the United States, cruising in squadron, from the fact that these steel vessels were painted white outside, whereas the old wooden vessels were painted black.

squall-cloud (skwâl′kloud), *n.* The roll-cloud at the front of and above an advancing squall of wind. Its formation is often the first intimation of the existence of the squall. It is most fully developed in front of a large thunder-storm cloud.

squalodont (skwal′ọ̄-dont), *a.* and *n.* [L. *squalus*, a shark, + Gr. ὀδούς (ὀδοντ-), tooth.] **I.** *a.* Related to or having the characters of the *Squalodontidæ*.

II. *n.* One of the *Squalodontidæ*.

Squalodontidæ (skwal-ọ̄-don′ti-dē), *n. pl.* [NL., < *Squalodon(t-)*, the type genus, + *-idæ.*] A family of extinct cetaceans having a skull resembling that of the toothed whales, but with two-rooted molars quite distinct in shape from the other teeth. *Brandt*, 1873.

Squaloraja (skwal-ọ̄-rā′jạ̈), *n.* [NL., < L. *squalus*, a shark, + NL. *raia*, *raja*, a ray or skate.] A genus of fossil chimæras or selachian fishes of the order *Holocephali*, having a depressed or elongated trunk, the head produced in a long, slender snout on which there is a prehensile spine in the males, tapering tail, and calcified vertebral rings. Specimens of *S. polyspondyla* occur as nearly complete skeletons in the Lower Lias of Lyme-Regis, England.

squama, *n.* **5.** The scale-like exopodite of a crustacean antenna.

> The antennal *squama* reaches nearly to the end of the antenn. ped. [peduncle of the antennulæ], with its distal portion broad and the outer spine well developed.
> *Proc. Zool. Soc. London*, 1903, p. 53.

Squama occipitalis, the supraoccipital bone: same as *squama occipitis.*—**Squama temporis,** a bone on the posterior lateral surface of the cranium in fishes; the pterotic. *Starks*, Synonymy of the Fish Skeleton, p. 511.

squamatine (skwam′a-tin), *a.* [NL. *Squamat(a)* + *-ine*^{2}.] Relating to or having the characteristics of the members of the reptilian order *Squamata.*

squamipinnate (skwā-mi-pin′āt), *a.* [*Squamipinn(es)* + *-ate.*] Having the fins more or less extensively covered with scales; relating to or having the characteristics of the *Squamipinnes* or chætodonts, a group of fishes in which the scales extend for some distance on the fins.

squamosity (skwā-mos′ị-ti), *n.* [*squamose* + *-ity.*] **1.** The state of being squamose.—**2.** A squamose area, as on the elytron of a beetle.—**3.** The collective scales on a squamose area.

> Elytra broader, with more nodiform shoulders, their series of punctures more regular and distinct, *squamosity* more infuscate.
> *Annals and Mag. Nat. Hist.*, Aug., 1904, p. 107.

squamosomaxillary (skwā-mō-sō-mak′si-lā-ri), *a.* Relating to the squamosal and maxillary bones.

> Note . . . the single *squamoso-maxillary* bar.
> *Am. Nat.*, Feb., 1904, p. 102.

squamosoparietal (skwā-mō″sō-pạ̄-rī′e-tạl), *a.* Relating to the squamosal (temporal) and parietal bones: as, the *squamoso-parietal* suture. *Proc. Zool. Soc. London*, 1898, p. 962.

squamosphenoid (skwā-mọ̄-sfē′noid), *a.* Same as *squamosphenoidal* and ★*sphenosquamous.*

squantum (skwon′tum), *n.* [Possibly, as some assert, of Amerindian origin, connected with *Squantum*, a place-name, or Massachusetts (Natick) *squantum*, *squantam*, an evil spirit, a reduction of *musquantam* (*musquantum manit*, 'God is angry').] A good time; a merrymaking; a picnic. *Osgood*, New England, 1883, p. 61; *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 259. [Nantucket and other parts of New England.]

> The *squantum* was to be held at a point on the narrow peninsula, or rather mere sandbar, that divides the ocean from the broad lagoon which extends for many miles above the harbor proper of Nantucket.
> *E. Bellamy*, Six to One, vi.

square^1, *n.* **21.** A strong iron frame to which the carriages of a spinning-mule are fastened and coupled, and in which is carried some of the mechanism for giving motion to the spindles and for building the cops.—**22.** The three to five (often four) leaf-like heart-shaped bracts surrounding the flower of the cotton plant, taken collectively. They are fringed or cut in different degrees in different species, of which they thus become distinctive. [Southern U. S.]

> The writer found a "patch" of cotton with luxuriant stalks . . . but almost devoid of "*squares*" or blooms.
> *E. W. Hilgard*, Soils, p. 503.

General magic square, n^2 integers arranged in a square in such a manner that the rows, columns, and diagonals contain partitions of the same number, zero and repetitions of the same integer being permissible among the integers.—**Greco-Latin square,** a square lattice of square compartments each containing one Greek and one Latin letter of two sets of as many different letters as rows, and so placed that every row and every column contains all the Greek letters and also all the Latin letters.

αf	βg	γh	[illegible]	εj
βg	γh	δi	εj	αf
γh	δi	εj	αf	βg
δi	εj	αf	βg	γh
εj	αf	βg	γh	δi

Imperfect square. See ★*imperfect.*—**Latin square,** in *math.*, a square lattice, divided into rows and columns of square compartments, every compartment containing one of a set of different Latin letters equal in number to the square's order, and arranged so that every one of the letters occurs in every row and in every column. The square's order is the number of the compartments in a row.

a	b	c	d	e
b	c	d	e	a
c	d	e	a	b
d	e	a	b	c
e	a	b	c	d

Latin square problem. See ★*problem.*—**Law of inverse squares.** See ★*law*^{1}.—**Ordinary magic square,** a general magic square in which the n^2 integers are restricted to be the first n^2 integers of the natural succession: the component integers being 0,1,2,3,4,5,6,7,8, are 8 in number: for example,

7 2 3
0 4 8
5 6 1.

Set-square. See ★*set-square.*—**Vaulting square,** in a vaulted building, one compartment taken horizontally, that is, the space between four points of support from which the vault springs. The nave or aisle of a church is said to be made up of so many vaulting squares.

square^1, *a.* **12.** In *golf*, said of a game when both sides are all even, neither being ahead.—**13.** Analogous to the side of a square, as in the phrase *square root.*—**All square.** (*b*) In *golf*, said of the players when the game is even, neither side being any holes ahead.—**Square bar,** a bar or shaft of square section: used often when several wheels are to be free to slide lengthwise upon the shaft as desired, but must turn with it when it revolves. It is much employed in traveling-cranes which are not electrical and in the gear-cases of the transmission mechanisms of motor-cars.—**Square by the braces,** said of a yard when the braces are so hauled upon that the yard is exactly at right angles to the keel.—**Square by the lifts,** said of a yard when the weight of the spar rests upon the lifts and remains perfectly horizontal, and at right angles to the mast.—**Square deep,** in *cricket*, noting a fielder's position at right angles to the wicket, and opposite to the batsman on either the 'on' or the 'off' side. *Hutchinson*, Cricket, p. 86. [Rare.]—**Square degree.** (*a*) A square area of the celestial sphere each side of which is one degree of a great circle. A square degree equals 3,600 square minutes and 12,960,000 square seconds. The entire surface-area of the celestial sphere equals 41,253 square degrees, that is, $4\pi \times (57.29578)^2$. (*b*) See ★*degree.*—**Square minute.** See ★*square degree.*—**Square second.** See ★*square degree.*—**Square wheel.** See ★*wheel*^{1}.

square^1, *v. t.* **11.** To mark with lines forming squares, as paper for mathematical use; mark off in squares. See *coördinate* ★*paper.*

> The use of *squared* paper by schoolboys is becoming universal. *Nature*, Dec. 17, 1903, p. 147.

II. *intrans.*—**To square up,** to pay up; pay arrears. [Colloq.]

> It was high time for the young gentleman in the parlour to *square up* or to seek accommodation elsewhere.
> *N. and Q.*, 10th ser., I. 62.

square^1, *adv.*—**To stand square to the ball,** in *golf*, to have the ball about midway between the feet, the feet being practically on the same plane: said of a player.

square-body (skwãr′bod″i), *n.* In *ship-building*, all that part of a vessel in which the frames are square to the center plane. See also *cant-body.*

square-butted (skwãr′but-ed), *a.* *Naut.*, said of a yard-arm when it is of considerable diameter and is cut off square at the end instead of tapering down fine.

squared (skwãrd), *p. a.* Made square; also, marked off in squares: as, *squared* paper. See *coördinate* ★*paper.*

square-drawn (skwãr′drân), *a.* Rolled with a square section, or passed through a square hole in a draw-plate: used of wire or rods and tubes. *The Engineer* (London), 1901, p. 277.

square-ended (skwãr′en″ded), *a.* 1. Having an end formed with a square cross-section.—2. Having the end-plane at 90° or at a right angle to the axis.

square-mark (skwãr′märk), *n.* *Naut.*, a piece of twine wound around the hauling part of a brace or lift at a certain point, used as a guide when squaring the yards.

squaremouth (skwãr′mouth), *n.* Same as ★*chiselmouth*.

square-ribbons (skwãr′rib″ons), *n. pl.* In *naval arch.*, the horizontal lines in the plans of a vessel.

square-rigger (skwãr′rig″ėr), *n.* A vessel carrying yards on her fore-, main-, and mizzenmasts; a vessel carrying yards on all her masts; a ship.

square-tail (skwãr′tāl), *n.* A fish of the family *Tetragonuridæ*, found in the open Atlantic.

square-threaded (skwãr′thred″ed), *a.* Having a thread with a rectangular section instead of the more usual triangular or sharp thread: said of a screw. The helical projection is formed by revolving a rectangle or square around a cylinder, and causing it to advance in one complete revolution a distance equal to the pitch parallel to the axis.

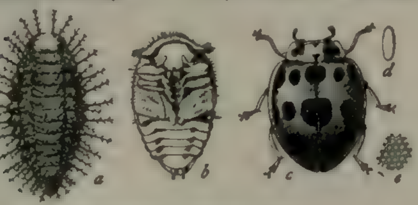
squaring-lathe (skwãr′ing-lāᴛʜ), *n.* A lathe for turning square or nearly square pieces, such as table-legs.

squaring-machine (skwãr′ing-ma-shēn″), *n.* In *marble-working*, an appliance for holding tiles on edge upon a rubbing-bed for the purpose of forming the edges, bringing the corners to a right angle, and making the tiles of a uniform size. The tile is automatically released from the bed when it is brought to the right shape and size.

squash^1, *n.* 4. An indoor or court game developed from a combination of lawn-tennis and court-tennis. The court is walled on three sides, and the players strike a ball alternately above a certain line on the back wall. The ball is similar to a tennis-ball of rubber covered with felt, but is made capable of bearing harder hitting because it is designed to be driven with great force against the walls.

squash^2, *n.*—**Squash-vine borer.** See ★*vine-borer*.

squash-beetle, *n.* 2. Any beetle which feeds on the squash-vine; especially, in the United States, the coccinellid *Epilachna borealis*.



Squash-beetle (*Epilachna borealis*).

a, larva; *b*, pupa; *c*, adult beetle; *d*, egg; *e*, surface of same: *a*, *b*, and *c* enlarged about two times, *d* about two and one half times, *e* highly magnified. (Chittenden, U. S. D. A.)

squat^1, *v. i.* 4. To settle on land obtained, from the government on special terms, for the purpose of raising stock. See *squattage* and *squatter*^{1}, 4. [Australia.]

squat^1, *n.* 5. *Naut.*, the settling of a vessel, when under way, in the water, particularly at the stern, as compared with its position at rest. The phenomenon occurs to some extent in every vessel under way at high speed, but it is of importance only in shallow water, the depth of which is not much greater than the draft of the vessel. In such cases, in large vessels, the sinking of the stern may be from 2 to 6 feet with very moderate speeds.

> To the loaded draft there should be added about four feet for "*squat*," when running at full speed, and four more for clearance in rough water, making a total of about forty feet necessary to meet modern requirements. It will soon be forty-five at present rate of growth.
> *Sci. Amer.*, Jan. 7, 1905, p. 7.

squat-lobster (skwot′lob″stėr), *n.* An Australian crustacean, *Themis orientalis*.

> Amongst other crustacea, the *squat lobster* (Themis orientalis) is, with giant prawns and quampi, or small golden-lipped pearl shell, obtained by trawling in the southern waters *Encyc. Brit.*, XXXII. 111.

squato (skwä′tō), *n.* A California fishermen's name for *Squatina squatina*, a shark of the family *Squatinidæ*.

squatter^2, *v. i.* 2. To make a noise like a flock of wild fowl flapping their wings against or through the water.

> Then we heard . . . Buldoo an' 'is friends *squatterin'* in the water like boys in the Serpentine.
> *R. Kipling*, The Three Musqueteers, in Soldiers Three, [p. 9.

squatterarchy (skwot′ėr-är-ki), *n.* Squatters collectively; also, the squatter rule. [Rare.]

> The *squatterarchy* of the Koorong rose up in a body and named its hero, martyr.
> *R. M. Praed*, Longleat of Kooralbyn, iii. Quoted in [E. E. Morris, Austral English.

squattocratic (skwot-ọ̄-krat′ik), *a.* Connected with or having the characteristics of squattocracy: as, "*squattocratic* impudence." *Melbourne Morning Herald*, Feb. 18, 1856, p. 4, quoted in E. E. Morris, Austral English. [Slang, Australia.]

Squaw winter. See ★*winter*^{1}.

squaw-bush (skwâ′bůsh), *n.* A name of *Cornus stolonifera*, *C. serica*, and *C. Canadensis*.

squaw-carpet (skwâ′kär″pet), *n.* Same as ★*mahala-mats*. [California.]

squaw-fish (skwâ′fish), *n.* A cyprinoid fish, *Ptychocheilus oregonensis*, found in fresh waters of the northwestern part of the United States. *Jour. Amer. Folk-lore*, April–June, 1902, p. 111.

squaw-flower (skwâ′flou″ėr), *n.* The plant *Trillium erectum*. [Vermont.]

squaw-grass (skwâ′grȧs), *n.* Same as *bear*-★*grass*, 2.

squaw-huckleberry, *n.* The squaw-huckleberry is now known to include several species, and by recent authorities is classed as a genus, *Polycodium*. *P. melanocarpum*, of mountain woods in the Southern States, bears copiously a juicy and palatable purple fruit, which gives it the name of *wild gooseberry*, borne also to some extent by other species. *P. candicans*, of the Alleghanies, has a large, light-colored glaucous fruit which is barely edible. *P. stamineum*, the common squaw-huckleberry, has a smaller green inedible fruit.

squaw-man, *n.* 2. An Indian who does woman's work; an effeminate. *Jour. Amer. Folk-lore*, Oct.–Dec., 1902, p. 259.

squaw's-carpet (skwâz′kär″pet), *n.* Same as ★*mahala-mats*.

squeaker, *n.* 5. A European water-beetle, *Pelobius tardus*, which is a very loud stridulator. They are sold as curiosities in the London markets. *Cambridge Nat. Hist.*, VI. 209.—6. Any stridulating crab, as the American lady-crab.

squeeze, *v. t.* 7. To compel to repurchase at disadvantage stock that has been sold short.—**A squeezing watch,** a name formerly given to a repeating watch, from the fact of its being made to strike by compressing or squeezing the side of the watch. *N. and Q.*, 9th ser., XI. 35.

> Lost or taken from a Lady's side . . . the last day of May Fair a gold *Squeezing Watch*.
> Lost coming out of the Play House in Drury Lane on the 18th Instant, a gold *Sweezing Watch* . . . ten guineas Reward. *British Apollo*, June 25–30, 1708.

squeezer, *n.*—**Alligator squeezer.** (*b*) A device used by druggists to compress and size corks to fit small bottles.

squeezing-bowl (skwē′zing-bōl), *n.* One of a set of two or more cylindrical bowls, or rollers, which act in contact for squeezing or pressing wash-water out of textile fabrics. *G. Duerr*, Bleaching and Calico-printing, p. 10.

squeezing-machine (skwē′zing-ma-shēn″), *n.* In *textile manuf.*, a washing-machine with two heavy cylindrical rollers between which cloth is passed for squeezing out water. *G. Duerr*, Bleaching and Calico-printing, p. 12.

squeezing-rollers (skwē′zing-rō″lerz), *n. pl.* Same as *nipping*-★*rollers*.

squelch, *v. i.* 2. To make a sound like that produced by treading in mud.

> "Beg y' pardon, sir," said a voice at the tent door. . . . There was an undecided *squelching* of heavy boots. . . . "Here, come in out of the rain till I 'm ready."
> *R. Kipling*, Only a Subaltern, in Soldiers Three, [p. 123.

Squibb's urea apparatus. See ★*urea*.

squib-cracker (skwib′krak″ėr), *n.* Same as *squib*, *n.*, 3. *Beau. and Fl.*, Philaster, ii.

squiffy (skwif′i), *a.* Tight; tipsy; drunk. [Slang.]

> While something 's doing underneath my vest,
> That makes me think I 'm *squiffier* than I looked.
> *Wallace Irwin*, Love Sonnets of a Hoodlum, xv.

> "'Should n't wonder if he thought we got tight."
> "I never got *squiffy* but once — that was in the holidays."
> *R. Kipling*, Stalky & Co., p. 20.

squint, *n.*—**Convergent squint.** Same as *convergent strabismus* (which see, under *strabismus*).

squire^1, *n.* 6. The schnapper when two years old. See ★*schnapper*. *E. E. Morris*, Austral English.

squirrel-frog (skwur′el-frog), *n.* A small green tree-frog, *Hyla squirrella*, found in the southern United States.

squirt, *v. t.* 3. To force (lead or other metal) by hydraulic pressure into the form of rods or pipes; to force through a small hole under pressure as in the manufacture of carbonaceous paste into filaments for glow-lamps or into pencils for arc-lamps.—**Squirted carbon,** an arc-light carbon made by forcing a carbonaceous paste through a hole of proper diameter and heating the rod thus formed to a high temperature.—**Squirted filament,** a filament for a glow-lamp made by forcing carbonaceous paste through a small hole and carbonizing the cylindrical thread thus formed by heating it to incandescence.

squirt-can (skwėrt′kan), *n.* A small oil-can with a tapering spout and a flexible bottom. By compressing the bottom with the thumb, the volume of the interior is slightly reduced, and a drop or fine jet of oil is projected or flows from the tip of the spout. Larger cans pour the oil out, but these will not do so except at a very slow rate and with very limpid oil. *Trans. Amer. Inst. Elect. Engin.*, 1902, p. 591.

squirting (skwėr′ting), *n.* The act denoted by the verb 'squirt'; specifically, the process of forcing a viscous material through a small hole under pressure, as in the making of the filaments of glow-lamps. See ★*squirt*, 3.

> The plastic mass is then inserted in a press and forced through a small hole of requisite diameter, this process being the same as used in "*squirting*" incandescent lamp filaments.
> *Elect. World and Engin.*, May 21, 1904, p. 981.

S. R. I. An abbreviation of the Latin *Sacrum Romanum Imperium*, Holy Roman Empire.

S. R. S. An abbreviation of the Latin *Societatis Regiæ Socius*, Fellow of the Royal Society.

SS. (*c*) See *Collar of SS.*, under *collar*.

s. t. An abbreviation (*a*) of the Italian *senza tempo*, without marked time; (*b*) of *short ton*.

sta (stä). [It., 'stand,' impr. of *stare*, stand.] In *music*, let it stand as written.

staatsraad (stäts′räd), *n.* [D.] The council of state. [Dutch South Africa.]

stab, *v. t.* 5. In *bookbinding*, to perforate near the back folds (the assembled sections of an unbound book). This operation is immediately followed by the insertion of the thread or wire which secures the sections together.

stab, *n.* 4. In *bacteriol.*, a culture of bacteria produced by stabbing the inoculating needle into the solid medium. See ★*culture*.

> The early surface-growth in the glucose agar *stab* presents a whitish, heaped up center.
> *Jour. Exper. Med.*, Oct. 1, 1900, p. 80.

5. In *billiards*, a foreshortened stroke, causing the cue-ball, for some special reason, to stop in the place of the one it set in motion.—6. See the extracts.

> The various Trade Unions of the compositors, in all parts of the country, have, for over a century, formally recognised both the "scale" of piecework rates and the "*stab*" or time wages. *Webb*, Indust. Democracy, I. 229.
>
> As a matter of fact most straightforward setting-up of ordinary book matter and daily newspaper work is done by the piece, whereas corrections and special jobs difficult of calculation are done by "*stab*" men.
> *Webb*, Indust. Democracy, I. 300.

Stab culture. See ★*culture*.

Stabat Mater. 3. A sequence regarding the Virgin Mary in contemplation of the infant Jesus. It first appeared in 1495, but has not been incorporated into a regular liturgy. It is more fully known as the *Stabat Mater speciosa*, to distinguish it from the *Stabat Mater dolorosa* (see def. 1).—4. A musical setting of this Christmas sequence, as in Liszt's "Christus."

stabile (stab′il), *a.* [L. *stabilis*, < *stare*, stand. See *stable*^{1}.] Fixed; firm: noting, in *electrotherapeutics*, an electrode which is kept applied to one part, as distinguished from a *labile* electrode, which is moved about over the surface.

stabilist (stab′i-list), *n.* [L. *stabilis*, stable, + *-ist*.] One who is keenly interested in maintaining social order.

> After the professionals come the *stabilists*, or those who stake most on good order. . . . They are firm upholders of such standards as affect property and contract.
> *E. A. Ross*, Social Control, p. 363.

stability, *n.*—**Cross-curves of stability.** See ★*cross-curve*.—**Curve of stability.** See ★*curve*.—**Dynamical stability,** in *naval arch.*, the work done in inclining a vessel from the upright or position of equilibrium to the inclination considered.

> Before concluding these remarks on the hypothesis of unresisted rolling, a brief exposition of the principles of *dynamical stability* must be attempted. On the assumption that no account shall be taken of the effect of fluid resistance, *dynamical stability* may be defined as the "work" done in heeling the ship from her upright position to any angle of inclination; the amount of work done, of course, varying with the inclination.
> *White*, Manual of Naval Arch., p. 158.

Kinetic stability stability of motion. Bodies moving under such conditions that when subjected to a slight temporary disturbance they tend to return to their undisturbed path are said to have kinetic stability. The motions of vibrating bodies and certain motions of a spinning top exhibit kinetic stability.

> The criterion of *kinetic stability* proposed by Klein and Sommerfield is as follows:—"If the undisturbed path be the limiting form of the disturbed path when the impulses are indefinitely diminished it is said to be stable, but not otherwise." *Encyc. Brit.*, XXVII. 571.

Molecular stability, permanence of condition as regards the arrangement of the molecules: said of metals which, by repeated annealing, have been brought into a state in which further changes of dimensions or structure do not occur.—**Range of stability**, in *naval arch.*, the maximum angle measured from the upright to which a vessel can be inclined without upsetting. This is the angle at which its righting ★couple (which see) becomes zero.

> The length (OX), measuring the inclination at which the ship becomes unstable, determines what is known as the *range of stability* for the ship, and this is an important element of safety. *White*, Manual of Naval Arch., p. 128.

Secular stability, stability of the permanent type possessed under certain conditions by a continuously moving system. The conditions of secular stability are that the potential energy of the system, added to that portion of its kinetic energy which is related to its momentum, shall be a minimum.—**Statical stability**, the stability of a body at rest and in equilibrium; specifically, in *naval arch.*, the effort which a vessel makes to return to the upright or position of equilibrium when inclined by an extraneous force, measured by the righting ★couple (which see).

stabiloplast (stab'i-lọ̄-plȧst), *n.* [L. *stabilis*, firm, + Gr. *πλαστός*, verbal adj. of *πλάσσειν*, to mold.] A name given to the colored elæoplasts, of certain diatoms, which do not vary in number or position. See ★*sparsioplast*, ★*placoplast*, and ★*libroplast*.

stable^{2}, *a.* **4.** In *phys.*, being in equilibrium such that no displacement, distortion, or molecular or chemical change can be produced without the expenditure of work: said of a body which, when displaced, tends to return to its former position, or, when distorted, to its former shape, also of a substance which resists molecular or chemical change.

staccato, *a.* **II.** *n.* In *music*, the act, process, or result of singing or playing on an instrument in a staccato manner.

Stachychrysum (stak-i-krī'sum), *n.* [NL. (Bojer, 1837), < Gr. *στάχυς*, an ear of grain, a spike, + *χρυσός*, gold. The name alludes to the yellow color of the flowers in the type species, *S. chrysostachyum* (*Acacia chrysostachys* of Sweet).] A genus of dicotyledonous plants of the family *Mimosaceæ*. See *Piptadenia*.

stachydrine (stak'i-drin), *n.* [*Stac*(*hys*) + *hydr*(*ogen*) + *-ine*^{2}.] A colorless, crystalline, deliquescent, basic compound, $(CH_3)_2N.C_9H_6COOH.H_2O$, contained in the sap of the tubers of *Stachys tuberifera*. It melts at 210° C. when anhydrous.

stachyose (stak'i-ōs), *n.* [Gr. *στάχυς*, an ear of grain, + *-ose*.] Same as ★*manneotetrose*.

stack^{1}, *n.* **9.** In *gambling* and *banking games*, twenty chips or counters.—**10.** A group of retorts set together in the furnace for the manufacture of coal-gas.—**11.** That part of a blast-furnace which extends from the boshes to the throat.

stack^{1}, *v. t.*—**To stack chips**, in *gaming*, to pile chips one on the other, so that twenty are in each pile.

stacking-swivel (stak'ing-swiv"l), *n.* A hook at the upper band of a military small arm, used for fastening it to others in stacking arms when the bayonet is not of such shape that it may be used for this purpose.

stadia, *n.*—**Stadia work**, in *surveying*, the surveying work or operations conducted by the stadia method. See *stadia*, 3.

stadic (stā'dik), *a.* [*stad*(*ia*) + *-ic*.] Of or pertaining to a stadia, or connected with stadia work. *Nature*, March 28, 1901, p. 514. *Encyc. Dict.*

stadion (stā'di-on), *n.* Same as *stadium*, 1 and 2.

stadium, *n.* **3.** (*b*) In *zoöl.*, same as *stage*, 9.—**4.** In *entom.*, same as ★*instar*^{2}.

staf, *n.* A simplified spelling of *staff*.

staff^{1}, *n.*—**Chief of staff.** See ★*chief*.—**General staff corps.** See ★*corps*^{2}.—**Non-commissioned staff**, non-commissioned officers not attached to any company, as a sergeant-major, quarter-master sergeant, etc.—**Octave staff**, in *musical notation*, a peculiar form of staff, designed to provide a fixed place for each of the twelve semitones of an octave, so that they can be indicated by notes without any sharps or flats. Three such staffs, connected, supply places for all the tones used in vocal music. The system has never come into general use.—**Personal staff**, the personal aides of a general officer in the United States army.—**Staff corps.** See ★*corps*^{2}.—**Staff department.** See ★*department*.—**Staff system**, in *railroading*, a block system in which, in place of block-signals, the control of the right of way is given to the engineer, who, on entering a block, is given by the signalman a staff, as proof of his right of way over the block and as tangible evidence that the block has been declared clear for his train.

staff^{2} (stȧf), *n.* [Said to be from G. *staffieren*, to fit out. See *stuff*, *n.*] In *building*, plastering in portable sheets or slabs, prepared for nailing on a frame. It is made by mixing the mortar with a durable fibrous material, as shavings, hemp, and the like. First employed at the Paris Exposition of 1878.

staff-gage (stȧf'gāj), *n.* A staff graduated upward in feet and tenths, and so placed that its zero-mark will lie below the lowest tides: employed for measuring the range of tides.

Staffordshire delf. See ★*delf*^{2}.

staff-ride (stȧf'rīd), *n.* A course of instruction in the field for officers of the general staff.

> It may be remarked, however, that "*staff-rides*," as exercises on the ground without troops have come to be called, are just as effective a means of teaching strategy as field-days are of teaching tactics; in fact, a better means, for they bear a far closer resemblance to strategical work on a campaign than do the mimic battles of the manœuvre ground. *Encyc. Brit.*, XXXIII. 7.

Stag cult, in *Gr. antiq.*, a primitive worship of the stag which later developed into that of Artemis Elaphia.

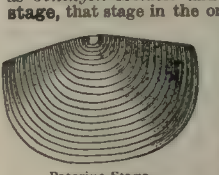
stag, *v. t.* **2.** To cut off (trousers at the knee, or boots at the ankle). [Local, U. S.]

stag-beetle, *n.*—**Giant stag-beetle**, an American lucanid beetle, *Lucanus elephas*, which inhabits the southern United States and the West Indies. It is often two inches in length, with mandibles which in the male are an inch in length and branched like the antlers of a stag.

stage, *n.* **11.** In *geol.*, a stratigraphic division equivalent to and expressing the work done during an *age*.—**Bolderian stage**, one of the divisions of the Miocene Tertiary in Belgium and Holland.—**Brahmanian stage**, the lowest division in the classification of the Triassic rocks of the Mediterranean province, as adopted by the Austrian geologists.—**Burdigalian stage** [L. *Burdigala*, F. *Bordeaux*], a division of the Miocene Tertiary lying at the base of the series in France and taking its name from Bordeaux. It is equivalent to the Langhian stage in Italy, and in the great Paris Tertiary basin is represented by fluviatile deposits containing remains of *Dinotherium*, *Mastodon*, *Rhinoceros*, *Machærodus*, apes, and monkeys. In Aquitania the deposits are marine. The sea at this period stretched across Provence, ascended the valley of the Rhone and swept around the west end of the Alps, leaving behind as its record a series of conglomerates and sandy and marly deposits with characteristic shells. These strata have since been folded and faulted in the great movements of upheaval which gave its final form to the Alpine chain. *Geikie*, Text-book of Geol., p. 1267.—**Carinthian stage**, a division of the Triassic system in the Mediterranean province as recognized by the Austrian geologists. It lies below the Juvavian stage and above the Norian stage, and is regarded as equivalent to the Keuper and upper part of the muschelkalk in the German sections.—**Charmouthian stage.** See ★*Charmouthian*.—**Free stage**, dramatic composition and representation freed from the artificiality, traditions, customs, and conventionalisms that formerly prevailed. The name was applied to a new and successful departure in play-writing and play-acting inaugurated about 1885 by the French actor Antoine, who founded the Théâtre Libre in Paris, and which, almost simultaneously, was attempted in the Independent Theatre in London and the Freie Bühne ('Free Stage') in Berlin.

> These young men, however, so quickly gained the ear of the general public, that the need for a special "*free stage*" was no longer felt, and the Freie Bühne, having done its work, ceased to exist. Unlike the French Théâtre Libre and the English Independent Theatre, it had been supported from the outset by the most influential critics, and had won the day almost without a battle. *Encyc. Brit.*, XXVII. 520.

Georgian stage, the lower subdivision of the Cambrian system of North America. It is especially developed in the eastern mountain-ranges, where it consists of huge masses of shales, limestones, and quartzites bearing the *Olenellus* fauna. See ★*Olenellus*.—**Hanging stage.** (*a*) A scaffolding or platform suspended by chains, ropes, or rods for the use of painters or repairers. Specifically—(*b*) A plank hung horizontally over a ship's side for men to stand or sit upon while cleaning or painting the ship.—**Helvetian stage.** See ★*Helvetian*.—**Johannean stage**, a division of the Cambrian rocks in New Brunswick as classified by Matthew, lying above the Acadian and below the Bretonian, and taking its name from St. John, N. B. The strata are about 1,000 feet in thickness and contain a considerable fauna.—**Juvavian stage.** See ★*Juvavian*.—**Ladinian stage**, a division of the pelagic Trias of the Mediterranean basin, constituting a stage at the base of the Upper Trias and equivalent in meaning to the Noric stage.—**Levantine stage**, a division of the upper Pliocene Tertiary in the Vienna basin.—**Liburnian stage**, the basal division of the Eocene Tertiary rocks in the southern and southeastern Alps. It embraces, in descending order, the Upper Foraminiferal limestone (marine), the Cosina beds (fresh-water), and the Lower Foraminiferal limestone (marine).—**Mediterranean stage**, the marine strata of Miocene Tertiary age in the Vienna basin, comprising a great variety of subdivisions and contrasted with the Sarmatian stage overlying, in which the fossils indicate a diminution of salinity in the waters.—**Noric stage**, a division of the Alpine Trias, following the period of the muschelkalk, at the close of which two great biological provinces were established in the northern and southern Alps, which continued during the remainder of Triassic time.—**Oeningen stage**, a division of the Miocene Tertiary, consisting of fresh-water limestones typically exposed at Oeningen, on Lake Constance, Switzerland. These beds are remarkable for their fossils, especially the insects and plants. "In these strata so gently have the leaves, flowers and fruits fallen, and so well have they been preserved, we may actually trace the alternation of the seasons by the succession of the different conditions of the plants. . . . Judging from the proportion of [insect] species, the total insect fauna may be presumed to have been then richer in some respects than it now is in any part of Europe. Nor did the large animals of the land escape preservation in the silt of the lake. We know, from bones found in the Molasse, that among the inhabitants of that land were species of tapir, mastodon, rhinoceros and deer. The woods were haunted by musk-deer, apes, opossums, three-toed horses, and some of the strange, long extinct Tertiary ruminants akin to those of Eocene times. There were also frogs, toads, lizards, snakes, squirrels, hares, beavers and a number of small carnivores. On the lake the huge *Dinotherium* floated, mooring himself perhaps to its banks by the two strong tusks in his under jaw. The waters were likewise tenanted by numerous fishes, crocodiles and chelonians." *Geikie*, Text-book of Geol., pp. 1270, 1271. Also known as *Oeningen Molasse* and *Tortonian stage*.—**Paterina stage**, that stage in the ontogenetic development of all brachiopods which is marked by the acquisition of the embryonic shell or protegulum, which bears a very close resemblance to the adult shell of a primitive genus, *Paterina* or *Kutorgina*, found in the Lower Cambrian rocks. In this stage the shell is unornamented, of semicircular outline, with a straight or arched hinge-line, and without cardinal area; and growth proceeds by peripheral additions to the lateral or posterior margins. In the succeeding nepionic and neanic stages the generic and specific characters are acquired. This *Paterina* type of embryonic shell is found only in the *Brachiopoda*, and its possession by members of that class is hence a phylembryonic characteristic of the *Brachiopoda* as a whole.—**Pontian stage**, a name given by some authors to the uppermost member of the Miocene Tertiary series of southern Europe: by others it is considered to be synonymous with *Messinian*, the basal stage of the Pliocene in the same region.—**Poteau stage**, the uppermost member of the upper coal-measures of western Arkansas and Oklahoma, consisting of a series of shales and sandstones with some coal-beds, in all 3,500–5,000 feet in thickness.—**Pottsville stage**, the basal stage of the coal-measures or Pennsylvanian series of the Appalachian region, consisting of conglomerates, sandstones, shales, and coal-beds, aggregating several thousand feet in thickness and lying above the Mauch Chunk red shale. The series is divided from below upward into the Pocahontas, Sharon, Conoquenessing, Mercer, and Homewood formations.—**Richmond stage**, the uppermost stage of the Lower Silurian formation in the interior or Appalachian basin of North America, succeeding the Lorraine stage and typically represented in Ohio and Indiana, taking its name from Richmond, Indiana.—**Sannoisian stage**, in *geol.*, the lowest division of the Oligocene Tertiary in the Paris basin.—**Sheridan stage**, the Equus beds: so named from their development in Sheridan county, Nebraska.—**Stage positions**, imaginary points upon the stage of a theater used as a guide to the actors in forming the groups that occur in the action of the play. The most important stage position is of course the center: all the other positions are fixed and named with reference to it. The stage positions are as follows: *center*, a point at the exact center of the stage, as it stands after the scene is set, and equally distant from the sides of the scene and from the front of the stage, called the *curtain line*, and the back of the visible scene; *right center*, a point half-way between center and the right-hand side of the scene; *left center*, a point half-way between center and the left-hand side of the scene; *up center*, a point at the extreme back of the scene and behind center; *down center*, a point on the curtain line in front of center; *down right*, a point on the curtain line at the extreme right of the visible scene; *down left*, a point on the curtain line at the extreme left of the scene; *up right*, a point at the extreme right and at the back of the scene; *up left*, the corresponding opposite point at the back of the scene. The four positions 'down right,' 'up right,' 'up left,' and 'down left' form a more or less rectangular figure (according to the plan of the scene) within which all the action of the play takes place. When the performer passes a line drawn through these points, or if he moves below the curtain line, he is said to be *out of the picture*. *Down right center* is a point on the curtain line half-way between down center and down right; *down left center*, a point on the curtain line half-way between down center and down left; *up right center*, a point half-way between up center and up right; *up left center*, a point half-way between up center and up left. Two imaginary lines, drawn one from up right to down right and the other from up left to down left, form the right side and the left side of the stage. Each of these lines is divided into four conventional points called *entrances*, named and numbered, from down right to up right and from down left to up left, as follows: *right first entrance*, *right second entrance*, *right third entrance*, and *right fourth entrance*; *left first entrance*, *left second entrance*, *left third entrance*, and *left fourth entrance*. These entrances may not all be actual entrances (real doors, gates, or passageways in the scenery), and the scene may not include them all. 'Right' or 'left' means in all cases the performer's right hand or left: sometimes called *stage right*, *stage left*. *Up stage* is at or toward the back; *down stage*, at or toward the front. The *curtain line* is an imaginary line drawn across the stage from one side of the proscenium opening to the other, and just in the rear of the opening. The lower border of the curtain, when down, is parallel to the curtain line. The action of the play is presumed to be above (behind) the line, as any action below (before) it lacks the proper illumina-



Paterina Stage.
(From Zittel's "Palaeontology.")

tion, appears out of proportion to the rest of the stage picture, and thus tends to destroy the stage illusion. See *theater*.— **Sweating stage,** the third stage, following the decline of the fever, in the malarial attack.— **To take the stage.** See the extract.

> Again, certain technicalities, which the trained actor knows by experience, or which the untrained may divine intuitively, will always affect an audience. Thus, what we call '*taking the stage*' on a heroic line is certain to induce a burst of applause; an exit exactly timed after a comedy speech will be rewarded in the same way, but if one takes but one step too far down the stage or miscalculates the distance to the door by a step, the applause will not be forthcoming. *The Grand*, Oct., 1905, p. 463.

stage-pumping (stāj′pum″ping), *n.* A system of pumping the water from deep mines, in which the lift from the bottom is divided into steps or stages, so that the water is raised by a series of pumps from level to level, instead of being forced to the surface in one operation. The stress on the pipe which discharges the water is less than if the head on one pump only were the depth of the shaft, and each pump is lighter than if the total head had to be overcome at once.

stage-setting (stāj′set″ing), *n.* Arrangement of scenery and property upon the stage of a theater.

> The *stage-setting* consists of rows of clipped cypresses, each advancing a few feet beyond the one before it. *E. Wharton*, Italian Villas, p. 72.

stagger, *v. t.*— **Staggered riveting.** See ★*riveting.*

stagger, *n.*— **Sleepy staggers,** a non-contagious disease of horses, the cause of which is unknown; it is associated with the ingestion of moldy or musty hay and grain. More commonly called *forage-poisoning* or *cerebrospinal meningitis*. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 79.

stagger-spokes (stag′ėr-spōks), *n. pl.* Spokes set alternately on one side and the other of the plane of a wheel.

staggery (stag′ėr-i), *a.* Staggering; inclining to stagger or fall. [Colloq.]

> I kept on passing old run-down houses; sometimes a tired-out looking frame building that was as *staggery* as its shed and so old they was both dark to match. *O. D. Stewart*, Partners of Providence, xxxiv.

stag-head (stag′hed), *n.* A diseased condition of trees in which the topmost branches become dead and bare. It is usually regarded as due to an insufficient water-supply, but may be caused by parasites or other injuries. See *stag-headed*.

stag-hunter (stag′hun″tėr), *n.* One who engages in the chase of the deer; one who follows a pack of staghounds. *Encyc. Dict.*

stagily (stā′ji-li), *adv.* Theatrically; with extravagance of action or emphasis.

> The rather perfunctory and *stagily* improbable rescue of Lance Carlyon from a watery grave in the secret chambers. *Pall Mall Gazette*, Nov. 13, 1900, p. 4.

stagnin (stag′nin), *n.* [*stagn*(*ate*) + *-in*².] A substance which is formed during the autolytic digestion of splenic tissue and has hemostatic properties.

Stagodontidæ (stag-ọ̄-don′ti-dē), *n. pl.* [NL., < *Stagodon*(*-t-*), the type genus, + *-idæ*.] A family of extinct marsupial mammals, containing species of small size, having the molar teeth with low, rounded crowns, as if solidified from a drop of liquid. Known from specimens from the Laramie Cretaceous of the United States. *Marsh*, 1889.

Stahl ear. See ★*ear*¹.

stahlstone (stäl′stōn), *n.* [G. *Stahl*(*berg*) (see def.) + E. *stone*.] Siderite (iron carbonate) from the Stahlberg, Müsen, Germany.

stain, *n.* 6. (*b*) Specifically, a solution of a dye used in microscopical work to render more readily visible various structures, and for purposes of differentiation.— **Ehrlich's triple stain,** a dye for staining blood-corpuscles and other cells, composed of acid-fuchsin, orange G, and methyl green in alcohol and water.— **Giemsa's stain,** a staining mixture containing methylene azure and methylene blue in combination with eosin: a valuable polychrome dye which is extensively used in hematological studies.— **Gram's stain,** a method of staining by which the organisms (bacteria) are first stained with gentian-aniline water, then decolorized with Lugol's solution (an iodine preparation), placed in alcohol until no more color is extracted, and dried and mounted. Some organisms, when thus treated, hold the original color of the gentian violet, while others lose it. The method is thus of use in the recognition of different types of bacteria.— **Hasting's stain,** a modification of Romanowsky's stain: used in the study of the blood.— **Jenner's stain,** a stain used in the study of the blood. It is a 0.5 per cent. solution of eosinate of methylene blue in absolute methyl alcohol.— **Leishman's stain,** a modification of Romanowsky's stain: used in the study of the blood.— **Neisser's stain,** a method of staining the diphtheria organism. First the bacilli are colored with a solution of methylene blue (20 cubic centimeters of an alcoholic solution of the dye, 950 cubic centimeters of distilled water, and 30 cubic centimeters of glacial acetic acid), and then counterstained with a 0.2 per cent. solution of vesuvin. In this manner the bacilli appear brown and show from two to four blue granules near the poles.— **Neutral stain,** a dye containing both an acid and a basic stain, necessary for coloring a neutrophilic cell or tissue.— **Nocht's stain,** a modification of Romanowsky's stain: used in the study of the blood.— **Plasma stain.** See ★*plasma-stain*.— **Romanowsky's stain,** a stain which, in its many modifications (Ziemann's, Nocht's, Giemsa's, Leishman's, Wright's), is essentially an eosin methylene-blue mixture which contains methylene azure, the latter being derived from the methylene blue. The stain is especially well adapted for the study of the malarial and allied organisms.— **Silver stain,** in *glass-painting*, a yellow color applied to the surface of the plain glass, with which it unites in a very permanent way. It is a chief element in the decorative work of the fifteenth century and later.— **Specific stain,** in *histol.* and *cytol.*, a staining solution which has a definite and marked affinity for particular cells or tissues or parts of such elements. For example, Sudan III is a specific stain for fat; eosin one for the oxyphilic granules found in certain leucocytes; methyl green, a specific nuclear dye.— **Triacid stain,** a polychrome stain devised by Ehrlich for the study of the blood. It is composed of methyl green, acid-fuchsin, and orange G or aurantia, in such proportions that a neutral mixture is obtained. The term 'triacid' is referable to the fact that all three basic amino groups of the methyl green have been saturated by acid radicals of the acid-fuchsin and the orange G.— **Van Gieson's stain,** a counterstain of picric acid and acid-fuchsin, used after staining with hematoxylin.— **Wright's stain,** a stain used in the study of blood: a modification of Leishman's stain.— **Ziemann's stain,** a modification of Romanowsky's stain: used in the study of the blood.

stainability (stā-na-bil′i-ti), *n.* [*stainable* (*-bil-*) + *-ity*.] In *histol.*, the ability to take up a stain: said of cells or tissues.

stainer, *n.* 4. An insect that causes stains, as the cotton-stainer.— **Apple-wood stainer,** an American scolytid beetle, *Pterocyclon mali*. Also called *pin-borer* on account of the minute exit-holes it makes in bark.

staining-jar (stā′ning-jär″), *n.* In *cytol.* and *embryol.*, a jar in which series of animal or plant sections, mounted on glass slides, are submitted to the action of a staining solution for the purpose of differentiating the parts of their cells or tissues.

stair, *n.*— **Hanging stairs,** stairs which are not supported directly from below, as by a wall or columns, yet are not self-supporting, as where the string-pieces are sufficient in themselves, but which are carried on brackets projecting from the wall or on rods from the roof. Stone stairs of which one end of each step is built into the wall, and which rest one upon the other by slight bearings at the top, are sometimes called *hanging stairs*.— **Schroeder's stair figure.** See ★*figure*.— **Spiral stairs,** stairs composed entirely of winders; steps of which the flight has a greater width on the outside and a smaller (sometimes coming to a point) at the center of the circular plan. They may be built about a central column called a newel; or free with an open well in the heart of the stair, in which case they are called *open-newel stairs*. They may be built of stone or wood; in a stone spiral stair it is usual to build each step of a single block with the outer end built into the wall of the tower which contains the stair.

stair-gage (stãr′gāj), *n.* An attachment to a carpenter's steel square used to give any pitch or angle required in cutting braces, rafters, stairs, etc.

stairway, *n.*— **Moving stairway.** See ★*escalator*.

stake¹, *n.* 6. The post or arm which carries the fixed or stationary jaw of a riveting-machine, and holds up the rivet against the pressure which upsets the metal and forms the head.— **To drive stakes,** specifically, to stake a claim out or off; hence, to settle; establish oneself. See *stake*¹, *v. t.*, 4. [Colloq.]

> "Well, after drifting about several years I finally *drove stakes* on the Spokane River. I carried people across and kept a general store. It struck me there ought to be some money in furs. *G. Morris*, in Outing, Feb., 1906, p. 605.

To plant at stake or **at the stake,** in tea-growing, to plant at the point (marked by a stake) where the bush is to stand.

> A favourite method is *to plant* out with germinated seed "*at stake.*" *Claud Bald*, Indian Tea, p. 54.

stake², *n.*— **Club stakes,** the amount always played for in any game of cards when there is no special understanding to the contrary.

stake-presidency (stāk′prez″i-den-si), *n.* The office of president of a stake of the Mormon Church. The president, with two counselors, presides over the spiritual affairs of the church in the stake locality. See *stake*², 5.

staking-iron (stā′king-ī″ėrn), *n.* In *currying*, an upright blade at the end of a stake or post over which the skin is drawn back and forth to soften it. *Mod. Amer. Tanning*, p. 201.

staking-machine (stā′king-ma̤-shēn″), *n.* A machine for softening leather, in which a blade is drawn back and forth over the skin or hide. *C. T. Davis*, Manuf. of Leather, p. 273.

stalactite, *n.* 4. In decorative architecture of certain schools, a pendent ornament with sharp edges and generally one of many in a group.

stalagma (sta̤-lag′mä̤), *n.* [Gr. στάλαγμα, a drop, < σταλάσσειν, drop, drip. See *stalagmite*.] Same as *stalagmite*. [Rare.]

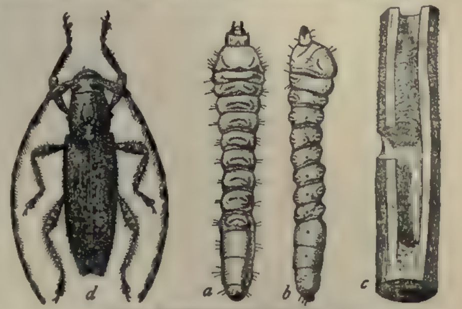
Stalagmite marble. Same as *onyx marble* (which see, under *onyx*).

stale³, *a.*— **Stale demand** or **claim.** See ★*demand*.— **To go stale.** (*a*) To be the worse for age, or lack of freshness and interest; become flat, or insipid; lose initiative. (*b*) To be overtrained; be injured by the strain of long training, so that the response to stimulus, mental or physical, is impaired: said of horses and athletes, and also used figuratively.

> In 1892, the Unionist administration having *gone stale*, it was turned out. *W. T. Stead*, in Rev. of Revs., May, 1903, p. 574.

stalk², *n.*— **Abdominal stalk.** See ★*abdominal*.

stalk-borer, *n.*— **Cotton stalk-borer,** a cerambycid beetle, *Ataxia crypta*, whose larva bores in the stalks of cotton in the southern United States.— **Larger corn stalk-borer.** See ★*borer*.— **Rice stalk-borer,** the larva of an American crambid moth, *Chilo plejadellus* It bores into rice-stalks near the base.— **Smaller corn stalk-borer.** See ★*borer*.— **Wheat stalk-borer,** the larva of an American noctuid moth, *Achatodes zeæ*. It bores into the stalks of wheat, corn, potatoes, and many other plants.



Cotton Stalk-borer (*Ataxia crypta*).

a, larva from above; *b*, larva from side; *c*, tunneled cotton-stalk showing exit hole; *d*, adult beetle: *a*, *b*, and *d*, enlarged. (Howard, U. S. D. A.)

stalk-chopper (stâk′chop″ėr), *n.* A tool or machine designed for use in cutting the stalks of plants.

> This may be accomplished economically by cutting the stalks into pieces by means of a machine known as a *stalk chopper*, followed by burning, or the plants may be uprooted with a plow commonly used for that purpose in clearing cotton fields in the spring and then treated in the same manner. *Yearbook U. S. Dept. Agr.*, 1901, p. 378.

stalk-cure (stâk′kūr), *v. t.* To cure (tobacco) with the leaves still on the stalks: opposed to ★*leaf-cure*.

> The net financial returns amounted to $32.89 for the *stalk-cured* and $53.55 for the leaf-cured or Snow process. *U. S. Dept. Agr.*, Rep. 63, p. 26.

stalk-worm (stâk′wėrm) *n.* The larva of an American crambid moth, *Crambus caliginosellus*, which feeds on tobacco-stalks, where tobacco has been planted on grass-lands. It also feeds on corn and grasses. Also called *tobacco root-worm*.

stall¹, *n.* 10. Same as *cot*¹, 4. See also *finger-stall*.

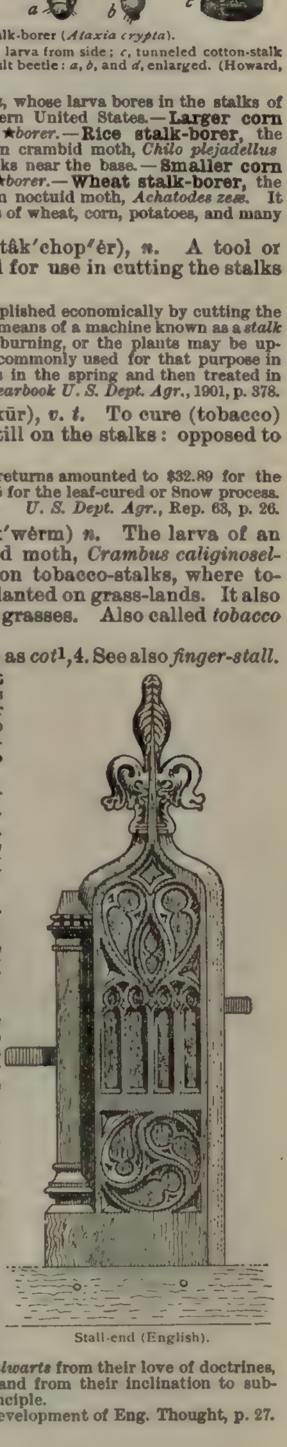
stall², *n.*— **Front stall,** one who makes acquaintances in order to introduce them to sharpers; the 'hat-raiser' in a bunco game. [Slang.]

stall-end (stâl′end), *n.* In ecclesiastical furniture, the end of a stall, usually richly carved.

stall-keeper (stâl′kē″pėr), *n.* The keeper of a book-stall or other stall.

> The *stall-keepers* generally offered to his notice any English book which they thought likely to take his fancy. *Southey*, Doctor, cxii.

stall-work (stâl′wėrk), *n.* In ecclesiastical furniture, the carved work of choir-stalls.



Stall-end (English).

stalwart, *n.* 3. An ascetic, dogmatic, and strenuous person: noting a social type. [Rare].

> I shall call them *stalwarts* from their love of doctrines, dogmas, and creeds, and from their inclination to subordinate policy to principle. *Patten*, Development of Eng. Thought, p. 27.

stalwartism, *n.* 2. As a social creed and tendency, devotion to principles of self-restraint, frugality, and religious and political dogmatism. See ★*stalwart*, *n.*, 3.

> In the eighteenth century, *stalwartism* became a political force through the democratic ideals which developed in harmony with frugal ideas.
> *Patten*, Development of Eng. Thought, p. 29.

stamp, *n.*—**Commission of stamps.** See ★*commission*1.—**Gravity stamp,** a massive pestle lifted by mechanically driven cams and allowed to fall by its own weight upon rock and ore in a mortar at its foot: used for crushing ores to sizes which fit the particles for further treatment of concentration and extraction.—**Local stamp,** in *psychol.*, the characteristic coloring of cutaneous impressions at different parts of the surface; the local sign.

> If we touch the skin of the cheek, the sensation of pressure has a very characteristic stamp which is especially conditioned by the absence of a firm substructure, the flaccidity of the skin, and the insertion in the skin of muscular fibres. . . . In accordance with Lotze's precedents these "*local stamps*," characteristic of sensations of pressure, are also designated as "local signs."
> *T. Ziehen* (trans.), Introd. to Physiol. Psychol., p. 76.

Pneumatic stamp, a form of pestle driven by a crank-motion which raises it and delivers its blow upon rock and ore in a mortar at its base. Since the crank would not deliver a dead or inelastic blow on the rock, and the thickness in the mortar must be variable, the crank connecting-rod is not attached directly to the pestle, but drives the latter through a pneumatic cylinder. The piston is attached to the crank, and the cylinder to the pestle or stamp, or vice versa. Compression of the air above or below the piston causes powerful dead blows to be delivered, and relieves the pin and bearings from shock, providing also for variable thickness of the layers of material.—**Stamp copper, tax.** See ★*copper*1, ★*tax.*—**Trading-stamp.** See ★*trading-stamp.*

stampee (stam-pē′), *n.* [*stamp* + *-ee*1.] An old local name for restamped subsidiary coins in the islands of St. Vincent and Trinidad.

Stampian (stam′pi-an), *a.* and *n.* [L. *Stamp*(*æ*) (whence *Étampes*) + *-ian.*] **I.** *a.* In *geol.*, noting a group of Oligocene Tertiary deposits in the Étampes district of France, intermediate in age between the Aquitanian above and the Tongrian or Sannoisian below.

II. *n.* The Stampian group.

stamping-machine, *n.* 2. In *shoe-manuf.*, a press for stamping a trade-mark or the name of the maker on the sole of a shoe; a bottom-stamping machine.

stamp-licker (stamp′lik″ėr), *n.* One who licks postage or other stamps or moistens them with the tongue.—**Stamp-lickers' tongue.** See ★*tongue.*

stamp-rock (stamp′rok), *n.* In *mining*, ore or quartz which has to be stamped in the process of separating the metal.

stamp-weed (stamp′wēd), *n.* Same as ★*butter-print*, 2.

stance, *n.* 4. In *golf*, the position of a player's feet, in addressing the ball.

stanchion, *n.*—**Beam-stanchion.** See ★*pillar*, 13.—**Box-section stanchion,** a stanchion or upright post or column, used in bridge-building and in ship-building, made up of four longitudinal steel or iron plates riveted together at the edges by the aid of angle-irons. The stanchion thus resembles a long box, whence its name.—**Deck-stanchion.** See ★*pillar*, 13.—**Hold-stanchions** (*naut.*), the vertical props or supports, usually of cylindrical metal rods or tubes, which extend from the bottom of the vessel to the hold-beams.—**Hollow stanchions** (*naut.*), the props or supports for deck-beams, etc., which are made from a rolled shape, similar to an ordinary gas-pipe, but of heavier proportions.—**Man-rope stanchion,** a deck-stanchion which holds the end of a man-rope.

stand, *v.* **I.** *intrans.*—**To stand by.** (*c*) In *law*, to remain silent and unprotesting while another's interest is suffering. A duty of disclosure is implied.—**To stand clear,** *naut.*, to keep out of danger.—**To stand for.** (*b*) To mean; represent: as, A *stands for* apple.

> His worst quarrel with Gus and her friend, Clara Hopkins . . . came about because the new member refused to tell what the initials "*stood for.*"
> *J. C. Lincoln*, Partners of the Tide, iv.

To stand pat. See ★*pat*2, *adv.*

II. *trans.*—**To stand trial.** See ★*trial.*

stand, *n.* 6. (*b*) In *agri.*, the state or condition of a crop in respect to the number and uniformity of plants that occupy a given area. A good stand of corn is one that has the proper or requisite number of plants on the area and in which the plants are of similar size and vigor. (*c*) In *forestry*, the trees of a given area collectively, either all or those of a particular species, grade, etc. A pure stand is one composed exclusively of a given species, as of spruce, etc.—13. In *calico-printing*, a color-mixture used as a standard or base from which other shades are made by the addition of starch-thickening or -paste. Also called *standard.*—**Bold stand,** in *division loo*, when the pool is a simple and every one is obliged to play his hand.—**On stand,** in *law*, a term expressing the right of an outgoing tenant of a farm to sell manure thereon to his successor, though he may not remove it. It is *on stand* and may not lawfully be used until sold. This right is by no means universal.—**Stand method.** See ★*method.*—**Stand table,** in *forestry*, a tabular statement of the number of trees of each species and diameter class upon a given area.—**To take a,** or **one's, stand.** (*a*) To rest upon something as a support or ground in argument or resolution: as, *to take one's stand* upon the Constitution. (*b*) To adopt a definite position with regard to some matter that is in dispute or is undecided; adopt and express a positive and definite view or resolve.

standard2. **I.** *n.* 5. In *hort.*, a fruit-tree that grows to its normal size, that is, is not dwarfed; in Great Britain, a tree or other plant that is grown to a single trunk, in distinction from one that is grown in bush form.—6. In *forestry*, a tree from 1 to 2 feet in diameter, breast-high.—7. Same as ★*stand*, 13.—8. A wholesale unit of measurement for timber. A standard of pine timber is equal to 720 feet of 11 inches × 3 inches cross-section. Also, the standard sizes of planks, as St. Petersburg, Quebec, etc. *Lockwood*, Dict. Mech. Engin. Terms.—**Absolute photometric standard,** a photometric standard the definition or specification of which is based directly upon some absolute system of units.—**Barometric standard,** the standard adopted by any institution for measuring atmospheric pressure. See *standard* ★*pressure.*—**Bureau of Standards.** See ★*bureau.*—**Color standard.** See ★*color.*—**Light standard.** See ★*light*1.—**Matthiesen's standard,** a practical unit of resistance, the resistance of a copper wire $\frac{1}{16}$ of an inch in diameter and one mile in length, at 70° F. Also called *Matthiesen's mile standard. Elect. World and Engin.*, Nov. 14, 1903, p. 816.—**Methven standard,** an Argand lamp with a Methven screen, used in the photometry of gas-flames. See *Methven screen*, under ★*light standard.*—**Mile standard.** See *Matthiesen's* ★*standard.*—**Pentane standard.** See ★*pentane.*—**Platinum standard.** Same as *Violle's platinum standard.* See ★*light standard.*—**Thermometric standard,** the standard adopted by an institution for measuring temperatures. The international standard of the International Bureau of Weights and Measures at Sèvres is the gas-thermometer reduced to an ideal thermodynamic scale.—**Violle standard,** in *photom.*, the platinum standard of light devised by Violle. See ★*light standard.*

II. *a.*—**Standard pressure.** See ★*pressure.*

stand-by, *n.* **II.** *a.* Standing; fixed. See the extract.

> The actual cost of generation, i.e., the cost of coal, oil, etc. These are the chief items which go to make up what are called the Standing or *Stand-by* Charges. Other items which might fairly be added to the *stand-by* charges are the rent, rates, and taxes, and a part of the management expenses. . . . He [Mr. Wright] also includes *stand-by* coal charges used for banking fires, etc., and all wages of workmen.
> *Jour. Brit. Inst. Elect. Engineers*, 1899–1900, p. 680.

stand-cask (stand′kȧsk), *n.* A more or less ornamental cask in a liquor-dealer's establishment, intended to be filled and placed in such a way that the contents can be drawn off through a faucet or spigot into other receptacles to be sold.

standfast (stand′fȧst), *n.* That which stands firm, showing strength and resistance to change; something strongly rooted either physically or mentally.

> The travellers swarm forth from the cars. . . . It seems as if the whole world, both morally and physically, were detached from its old *standfasts* and set in rapid motion. And, in the midst of this terrible activity, there sits the old man . . . so subdued, so hopeless, so without a stake in life, and yet not positively miserable.
> *Hawthorne*, Mosses from an Old Manse, Old Apple Dealer, p. 223.

stand-galley (stand′gal″i), *n.* Same as *standing galley* (which see, under *galley*).

stand-hand (stand′hand), *n.* In *écarté*, a hand on which it is right to play without proposing; also, one on which it is right to refuse, or play without giving cards: usually called ★*jeu de régle* (which see).

> The player who makes the highest declaration becomes the *stand-hand.* If a player declares Nap, i. e., that he plays for all five tricks, he becomes the *stand-hand*, as no higher declaration can be made.
> *Amer. Hoyle*, p. 297.

standing-bolt (stan′ding-bōlt), *n.* A bolt screwed into a threaded hole in a fixed surface and threaded on its projecting end to receive a nut.

standing-vise (stan′ding-vīs), *n.* 1. A form of bench-vise so large, and at such a height from the floor, that the operator must stand while at work.—2. A form of heavy vise attached to a bench at one side and standing upon a leg which reaches to the floor. Also called *leg-vise.*

stand-pat (stand-pat′), *a.* Characterized by the principle of 'standing pat.' See ★*pat*2, *adv.*, 2. [U. S. political slang.]

stand-patter (stand′pat″ėr), *n.* One who 'stands pat'; one who refuses to consider any change or reform of the existing status or policy, especially reform of the tariff. See *to stand* ★*pat.* [U. S. political slang.]

> The vehement and numerous protests of disappointed manufacturers and indignant "*stand-patters*"—even those within the Cabinet—are not having the slightest effect on the President. *N. Y. Tribune*, May 18, 1905.

stand-pattism (stand-pat′izm), *n.* The principles or conduct of the stand-patters. *N. Y. Sun*, Jan. 19, 1906. [U. S. political slang.]

stand-pipe, *n.* 8. A fixed vertical pipe for furnishing water to the upper part of a high building in case of fire. The stand-pipe may be connected to a high-pressure water-main or may be dependent on a hose from a fire-engine for its supply.

> It has become the practice to erect at convenient points within the building steel *stand-pipes*, generally 6 inches in diameter, extending from the pavement to the roof, provided at each storey with double branches and plugs of the dimension and pitch of screw to receive the regulation fire-hose connexion.
> *Encyc. Brit.*, XXVI. 440.

standstill, *n.* 2. The state of standing still; a state of immobility.

> One may be permitted to doubt whether any style of starting can be considered thoroughly satisfactory which does not permit the horses to be started from "motion" instead of a "*stand-still.*" *Athenæum*, July 9, 1904, p. 40.

To gallop to a standstill. See ★*gallop.*

stang1, *n.* 4. A bar or pole, in a kind of warp-dressing machine, over which the warp passes.

stang5 (stang), *n.* A Siamese coin.

> The Bangkok Times understands that a gold coinage law is being drafted for Siam, and that the measure may become law within the year. It is under this law that it is proposed to reintroduce the *stang*—a copper coin this time, not nickel as before. Matters have not developed sufficiently far yet, however, for orders to be given for the manufacture of the coins.
> *Daily Cons. and Trade Rep.*, Sept. 3, 1907, p. 6.

stanhope, *n.*—**Double stanhope,** a carriage with a body composed of two stanhope bodies, with the brackets cut away and the seats facing each other. There is a driver's seat on iron supports at the front and a footman's foot-board at the rear.

Stanley's actinometer. See ★*actinometer.*

stannate, *n.*—**Sodium stannate.** See ★*sodium.*

stannel, *n.* See *staniel.*

Stannic chlorid, $SnCl_4$, a compound of tin and chlorin, used in dyeing as a mordant, but not to as large an extent as formerly.—**Stannic oxid.** See ★*oxid.*

stannofluoride (stan-ǫ-flö′ǫ-rid), *n.* [L. *stannum*, tin, + E. *fluoride.*] A double salt consisting of stannic fluoride united to the fluoride of a more basic metal: as, potassium *stannofluoride*, K_2SnF_6.

Stannous chlorid, $SnCl_2$: used in the same way as ★*stannic chlorid.*

Stansfield's formula. See ★*formula.*

stapeal (stā′pę-al), *n.* and *a.* [NL. *stape*(*s*) (see *stapes*) + *-al*1.] One of the bones of the gill-cover of fishes: same as ★*opercular. Starks*, Synonymy of the Fish Skeleton, p. 515.

stapedectomy (stap-ę-dek′tō-mi), *n.* [NL. *stapes* (assumed stem *staped-*) + Gr. ἐκτομή, excision.] An operation for the removal of the stapes in the middle ear.

stapes, *n.* 2. A bandage for the foot forming figure-of-eight turns around the ankle.

staphyleaceous (staf″i-lę-ā′shius), *a.* [NL. *Staphyleace*(*æ*) + *-ous.*] Belonging or pertaining to the *Staphyleaceæ.*

staphyledema (staf″i-lę-dē′mä), *n.*; pl. *staphyledemata* (-ma-tä). [NL., < Gr. σταφυλή, the uvula, + οἴδημα, swelling.] Edematous swelling of the uvula.

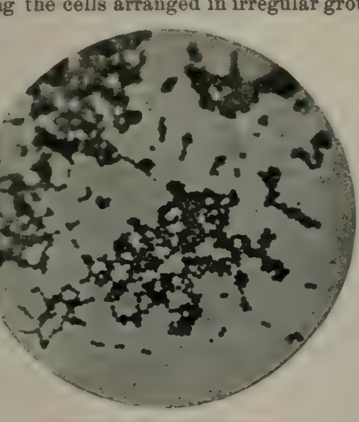
staphylinic (staf-i-lin′ik), *a.* [*staphyline* + *-ic.*] Of or relating to the uvula or to the palate.—**Staphylinic index.** See ★*index.*

staphylococcal (staf″i-lǫ-kok′al), *a.* [*staphylococc*(*us*) + *-al*1.] Of or pertaining to staphylococci.

staphylococcic (staf″i-lǫ-kok′sik), *a.* [*staphylococc*(*us*) + *-ic.*] Same as ★*staphylococcal.*

staphylococcomycosis (staf″i-lǫ-kok″ǫ-mī-kō′sis), *n.* [NL., < *staphylococcus* + *mycosis.*] A morbid state of the skin due to the presence of staphylococci. *Med. Record*, July 25, 1903, p. 144.

Staphylococcus (staf″i-lǫ-kok′us), *n.* [NL. (Rosenach, 1884), < Gr. σταφυλή, a bunch of grapes, + κόκκος, a berry (see *coccus*).] 1. An invalid generic name applied to certain species of pus-forming bacteria, of which *Micrococcus* ('*Staphylococcus*') *pyogenes* is the most common.—2. [*l. c.*; pl. *staphylococci* (-sī).] Any member of this group which is characterized by having the cells arranged in irregular groups.



Staphylococcus pyogenes aureus.
Magnified 1,000 times.
(From Buck's "Reference Handbook of the Medical Sciences.")

—**Staphylococcus botryomyces,** a pathogenic microorganism belonging to the class of micrococci which are virulent for mice, guinea-pigs, sheep, and horses. In the latter animal it produces the affection of the severed end of the spermatic cord known as ⋆*botryomycosis* (which see).

staphylodialysis (staf″i-lọ̄-dī-al′i-sis), *n.* Same as ⋆*staphyloptosis.*

staphylolysin (staf-i-lol′i-sin), *n.* [Gr. σταφυλή, a bunch of grapes (see *Staphylococcus*), + E. *lysin.*] A bacteriolysin which results on immunization with staphylococci.

staphyloplastic (staf″i-lọ̄-plas′tik), *a.* [*staphyloplast(y)* + *-ic.*] Of or relating to staphyloplasty.

staphyloptosis (staf″i-lop-tō′sis), *n.* [NL., < Gr. σταφυλή, uvula, + πτῶσις, a falling.] Elongation of the uvula.

staphylorrhaphic (staf-i-lọ̄-raf′ik), *a.* [*staphylorrhaph(y)* + *-ic.*] Of or pertaining to the operation of staphylorrhaphy.

staphylotoxin (staf″i-lọ̄-tok′sin), *n.* [Gr. σταφυλή, a bunch of grapes (see *Staphylococcus*), + E. *toxin.*] Same as ⋆*staphylolysin.*

staple¹, *n.* 7. In *bookbinding*, a clenched wire used to bind together the sections of a book.—8. In *iron ship-building*, an angle-bar bent and welded so as to form approximately a right angle in two places so that the bar has the outline of a flattened U. A *box-staple* is an angle-bar similarly bent and welded into an approximately rectangular outline.

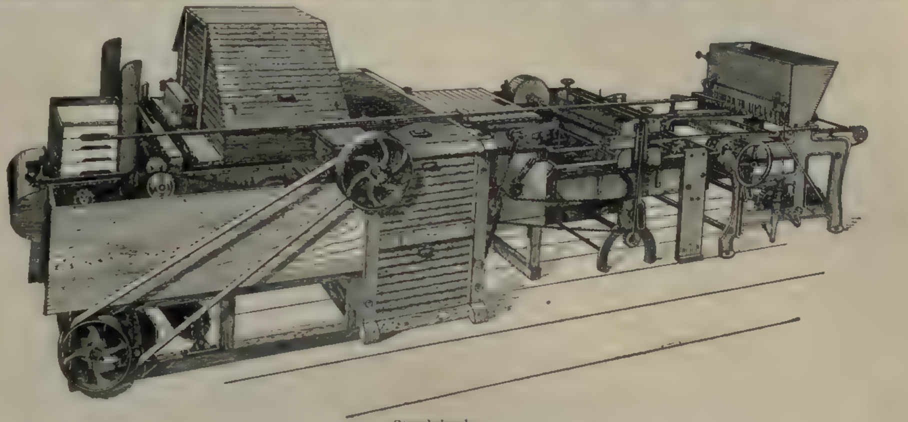
staple¹, *v. t.* 2. In *iron ship-building*, to make or fit (an angle-bar) in the form of a staple. See ⋆*staple*¹, *n.*, 8.

staple-knee (stā′pl-nē), *n.* An iron knee welded in the form of a staple, having one arm secured to the upper and the other arm to the lower deck-beam, while the body is bolted to the ship's side.

stapling-machine (stā′pling-ma̤-shēn″), *n.* The wire-stitching machine used by bookbinders.

star¹, *n.* 8. A book-name for humming-birds of the genus *Calothorax, Oreotrochilus*, and related genera.—**Carbon stars,** stars of Secchi's fourth group, the spectra of which have absorption-flutings sharply defined at the lower edge and fading out toward the blue, attributed to carbon or one of its compounds. They are few and not brilliant. The star known as '152 Schjellerup' is the type.—**Cepheid star.** See ⋆*Cepheid.*—**Dark star,** a body in mass and dimensions of the same order as other stars in the same region, but shining only feebly or not at all; a star which has not yet attained luminosity or has outlived it. Such a body is at present discoverable only by its effect upon some visible star with which it forms a binary couple. In the Algol class of variable stars the dark one discloses its existence by regular eclipses of its partner, and from the duration and other phenomena of the eclipse, combined with the spectroscopic observations of the motion of the visible star, it is possible to compute the dimensions, mass, and density of both components. Other examples are the faint companions of Sirius and Procyon, which are thousands of times less luminous than their brilliant primaries, but have a mass not very greatly inferior. Long before telescopes had become powerful enough to make them visible, Bessel had inferred their existence from the peculiar motions of the larger stars. Isolated dark stars seem to be hopelessly beyond the possibility of detection; but while less than 100 dark stars are certainly known at present, there is no improbability in the suggestion of Bessel that the dark stars are at least as numerous as those that shine; they may even greatly outnumber them, as some maintain.—**Greenwich stars,** originally, the stars used for lunar computations in the nautical ephemeris. At present the number given in the almanac is greatly increased, and is not limited to those utilized for lunar observations.—**Helium star,** a star in the spectrum of which the lines of helium are characteristic. They are often called *Orion stars*, because several of the leading stars in that constellation belong to this class and supply typical examples. The helium stars stand at the summit in Lockyer's temperature classification of the stars.—**Hydrogen star,** a star of Secchi's class I, in the spectrum of which the hydrogen lines are specially conspicuous, those of other substances being faint or absent.—**Longitude star.** See ⋆*longitude.*—**Nautical stars,** certain stars made use of by navigators for determining the latitude and longitude of a ship at sea.—**Nebulous star.** (*b*) A small, strongly condensed nebula, which appears like a badly defined star in a small telescope, but shows its true character in one sufficiently powerful.—**Order of the African Star.** See ⋆*order.*—**Orion stars.** See *helium* ⋆*star.*—**Oxygen star,** one of the stars which show in their spectra lines due to the presence of oxygen.—**Ruddy star,** any star of reddish color. Such stars are rare as compared with white and yellow stars, but several hundred are known.—**Runaway star,** a star which has an extraordinary velocity, as indicated by the greatness of its angular proper motion, combined with the smallness of its parallax. The one to which the appellation was first applied is 1830 Groombridge.

> The velocity of a number of stars has been calculated, and, as this can be done by independent methods, the results may be taken as fairly reliable. The speed of some of the so-called "*runaway stars*," like 1830 Groombridge, indicates a stellar system vastly more extensive than the one hundred million suns, which was the assumed figure when the *runaway stars* got their name. On the basis of such an estimate, it was thought that the attractive force of the whole stellar system was insufficient to hold such stars in leash, and that they would dash into the depths of space and be lost forever. Such a view now appears untenable.
>
> *C. Snyder*, New Conceptions in Sci., p. 76.



Starch-buck.

Secchi's types of stars, the four types or classes into which Secchi divided stellar spectra: the earliest classification and still recognized as practically convenient.—**Silicon star,** a star in the spectrum of which the lines of silicon are especially conspicuous.—**Solar star,** a star the spectrum of which essentially resembles that of the sun.—**Star class,** a class (of persons or things) marked with or bearing a star as a distinguishing mark. See the extract.

> The principle of the "*star class*," so successfully tried since 1879 in the convict prisons, has been extended to the local prisons; a prisoner never previously convicted is designated as a "star," and absolutely segregated from his fellows at chapel, labour, exercise, and quarters occupied. *Encyc. Brit.*, XXXII. 8.

Star connection, current, in *elect.* See ⋆*polyphase.*—**Star formation.** See ⋆*formation.*—**Star magnitude.** See ⋆*magnitude.*—**Star of Bethlehem.** (*c*) A star, or a light called a star, which in the gospel of Matthew is stated to have guided the wise men of the East to the manger at Bethlehem. As to its nature and its reality, opinions are divided.—**Star polygon.** Same as *stellated polygon.*—**Stars of Verheyen,** a radiating plexus of veins on the surface of the kidney.—**Stars of Winslow,** a stellate plexus of capillaries giving origin to the venæ vorticosæ of the choroid coat of the eye.—**Triple star,** three stars so close as to appear single to the naked eye. They usually form a physically connected system.—**Wolf-Rayet star,** a star with a peculiar spectrum, which consists of light and dark bands, especially a bright one in the blue, and a number of bright lines attributable, many of them, to hydrogen and helium. Over a hundred of these stars are now known, all but one (γ Argus) small, and all in or near the Milky Way. They take their name from the astronomers who discovered the first of them in 1867.—**Zone of stars,** the stars contained within a zone included between two given parallels of declination.—**Zone star,** a star which belongs to a zone catalogue of stars included between two parallels of declination.

star¹, *v. t.* 5. To cut with radiating incisions: said with reference to a chronic ulcer which may be so cut through the base and edges in order to loosen up adhesions, and so promote healing.

starboard. I. *n.*—**Put the wheel to starboard!** a common but misleading expression or command meaning not necessarily that the wheel shall be turned toward the starboard side of the vessel, but that it shall be revolved so that the tiller shall go to the starboard side.

II. *a.*—**To have the starboard sheets aft.** See ⋆*aft*¹.

starbowl (stär′bōl), *n.* A hemispherical mass of refined metallic antimony which has been cast in an iron bowl as a mold and which shows on the surface the stellate markings due to crystallization.

star-candle (stär′kan″dl), *n.* The French standard candle or *bougie de l'étoile.* See *standard* ⋆*candle.*

starch², *n.*—**Moss starch.** Same as *lichenin.*—**Soluble starch,** a colorless dextrorotatory pulverulent compound prepared by the action of glycerol, dilute acids, or diastase on starch. It is insoluble in alcohol, but dissolves in warm water and separates out when the liquid cools.—**Tapioca starch,** that variety of starch which is found in cassava- or manioc-root. The characteristic forms of tapioca are produced by drying the starch on heated plates. This causes many of the granules to burst; consequently the starch is somewhat soluble in cold water.

star-chart (stär′chärt), *n.* A chart which shows the stars in a certain portion of the sky. *Smithsonian Rep.*, 1890, p. 180.

starch-buck (stärch′buk), *n.* In *candy-making*, a machine for separating the candied creams, syrups, pastes, or conserves used as filling for chocolate candies from the starch-molds in which they are cast in the depositing-machine. The wooden trays containing the starch-molds filled with the cast candies are placed in the starch-buck and automatically dumped; then the empty tray is removed, refilled with fresh starch, and made ready to be used again. The mixed candies and starch are separated, the starch is removed, and the candies are thoroughly cleaned and delivered ready for the final coating with chocolate. It is often combined with other machines. In the illustration it is shown at the left of the large machine, and performs the first of several continuous operations in candy-making. The trays containing the filled starch-molds are placed in the machine at the left, the contents dumped, the candy is cleaned, the starch removed, and the trays are refilled, passed on to the starch-printer shown in the middle of the machine, and then to the depositing-machine shown at the extreme right. The trays of filled molds are then transferred by hand to the cooling- and drying-rooms, where the candies are hardened so that they may be readily released from the molds. The next step is to transfer them to the starch-buck, when the whole process is repeated, except that the candies are removed from the machine as fast as they are cleaned, when they may be conveyed to the dipping-machine or the coating-machine, to be covered with chocolate.

starcher, *n.* 2. In *laundry-work*, a machine for saturating collars, cuffs, and parts of shirts and other garments with hot starch, preparatory to passing them through an ironing-machine. The simplest machine is a tumbling-barrel in which collars and cuffs are placed with a small quantity of starch, the rolling motion of the barrel distributing the starch over the goods. In more complicated machines the goods are fed to endless tapes or conveyers of some openwork fabric, and carried through a tank holding starch, and then between stripping-rolls which remove the surplus starch. In other machines distributing-rolls spread the starch on the goods.

starch-printer (stärch′prin″tėr), *n.* In *candy-making*, a form of molding- or printing-press used to form molds for candy in trays filled with starch. Plaster-of-Paris formers suspended from a horizontal plate are pressed into the soft starch to form the required cup-shaped molds, the starch being pressed firm enough to retain the shape of the molds when filled with hot candy in the depositing-machine. In the illustration under ⋆*starch-buck*, a starch-printer stands between the starch-buck and the depositing-machine.

starch-sheath (stärch′shēth), *n.* See ⋆*phlœoterma.*

starch-tree (stärch′trē), *n.* [*starch* + *tree.*] One of a class of trees of temperate zones, consisting chiefly of hardwoods, in which during the winter the starch of the wood remains unaltered and that of the cortex is converted into glucose and unknown bodies. *A. F. W. Schimper* (trans.), Plant-Geog., p. 436.

starchy^2, *a.* 2. Of a powdery texture due to the predominance of starch: said chiefly of the more amylaceous (soft) wheats: opposed to ★*horny.*

star-connected (stär′kǫ-nek″ted), *a.* Said of a polyphase apparatus, such as a transformer, in which one end of each of the windings is connected to a common neutral point while the free ends make contact with the terminals of the line-wires.

star-count (stär′kount), *n.*. Enumeration of the number of stars visible in the field of a given telescope: either the total number or the number of stars of each magnitude separately.

> For simple *star-counts*, we have only to substitute *star-counts* by magnitudes over selected areas of the sky.
> *A. M. Clerke*, in Smithsonian Rep., 1891, p. 104.

star-current (stär′kur″ent), *n.* In *elect.*, the current in a star-connected polyphase circuit.

stare-about (stãr′ạ-bout″), *n.* One who stares about from idle curiosity; one who has the curiosity of a greenhorn.

> Yea, under the gallows at executions,
> They stick not the *stare-abouts'* purses to take.
> *Ben Jonson*, Bartholomew Fair, iii. 1.

starer, *n.* 2. *pl.* A pair of eye-glasses; a pince-nez. [Slang.]

> She sat with the *starers* she had taken off lying in her lap, absently rubbing their glasses with her pocket-handkerchief. *R. Broughton*, Waif's Progress, p. 128.

star-finder (stär′fin″dėr), *n.* A pointer or tube with a rough equatorial mounting, designed to facilitate the finding of a given star from the data on a star-map.

star-fungus (stär′fung″gus), *n.* Same as *earth-star.*

star-gage (stär′gāj), *v. t.* To count the stars visible in the field of a given telescope. See the extract.

> We may now describe the process of photographic *star-gauging.* It consists in the enumeration, by magnitudes or half magnitudes, of the stars down, say, to the fifteenth magnitude, self-pictured from distinctively situated patches of the sky.
> *A. M. Clerke*, in Smithsonian Rep., 1891, p. 105.

star-gazer, *n.*—**Electric star-gazers,** a name of species of fishes of the genus *Astroscopus*, of the family *Uranoscopidæ.*—**Sand star-gazers,** fishes of the family *Dactyloscopidæ*, living on sandy shores of tropical seas.

star-grass, *n.* 2. The Australian *Chloris truncata.* See ★*finger-grass.*

star-hyacinth, *n.* 2. The star-of-Bethlehem, *Ornithogalum umbellatum.* [Pennsylvania.]

> Of the *star hyacinth*, or star of Bethlehem, we hear no more until the third volume of the Memoirs is published.
> *J. Lorain*, Pract. of Husbandry, p. 138.

star-image (stär′im″ạj), *n.* The small circular (apparent) disk of a star as seen in a telescope or as formed on a photographic plate.

> Owing to the error inherent in the *star-images*, the probable error of a position of Eros derived from a number of measures of four images on one plate is not nearly so small as the above measures suggest.
> *Nature*, June 9, 1904, p. 135.

Staring coat. See ★*coat*^{2}.

star-jelly (stär′jel″i), *n.* A common name for any of the gelatinous blue-green algæ which appear suddenly upon the surface of the ground after a rain or heavy dew, popularly believed to have fallen from the stars.

Starksia (stärk′si-ạ̈), *n.* [NL. (1896), named after Edwin C. *Starks*, an American ichthyologist.] A genus of blennioid fishes found in the Gulf of California.

star-ledger (stär′lej″ėr), *n.* A record of certain star-observations in ledger form. *Nature*, June 9, 1904, p. 135.

starling-stone (stär′ling-stōn), *n.* A kind of petrified wood which shows, in a cross-section, markings suggesting the speckled plumage of a starling.

star-of-Bethlehem, *n.* 3. In Australia, a plant of the lily family, *Chamæscilla corymbosa.*—4. In Tasmania, *Reya umbellata*, an ornamental liliaceous plant having greenish-white flowers.

star-quartz (stär′kwârts), *n.* A variety exhibiting asterism; asteriated quartz.

starring (stär′ing), *n.* A manufacturers' name for the refining of crude metallic antimony by which the purified metal exhibits on solidification a starlike crystalline surface.

star-scattered (stär′skat″ėrd), *a.* Scattered like the stars. [Rare.]

> And when like her, oh Sákí, you shall pass
> Among the Guests *Star-scatter'd* on the Grass,
> And in your joyous errand reach the spot
> Where I made One—turn down an empty Glass!
> *Fitzgerald*, tr. of Omar Khayyam, Rubaiyat, ci.

starship (stär′ship), *n.* The state or condition of being a star, as the chief actor in a dramatic company.

> It must be now some nine or ten years since [this actor] took on the yoke of syndicated *star-ship.*
> *H. Tyrrell*, in The Forum, Jan.-March, 1904, p. 412.

star-shower (stär′shou″ėr), *n.* A shower of meteors. See *meteoric showers. Knowledge*, Nov., 1903, p. 255.

star-system (stär′sis″tem), *n.* In *astron.*: (*a*) A system composed of a multitude of stars apparently set off by themselves from the rest of the stellar universe. (*b*) A binary or multiple star.

start^1, *n.*—**Flying start** (*naut.*), a racing start, now in general use, in which upon the firing of a preparatory gun the yachts are supposed to be under way and manœuvering for position, ready to cross the line upon the firing of a second or starting gun.

starter, *n.* (*f*) In *cribbage*, the cut card.

star-thistle, *n.* A native star-thistle (known also as *Texas thistle*) is *Centaurea Americana*, giving trouble from Texas to Kansas as an annual or perennial weed of cultivated ground; elsewhere planted for its rose or flesh-colored (sometimes white) flowers, and known under the name of *basket-flower.* A book-name is *American centaury.*

starting-bar, *n.* 2. Same as ★*gee-throw.*

starting-box (stär′ting-boks), *n.* In *elect.*, a starting-rheostat or an autotransformer.

starting-crank (stär′ting-krangk), *n.* A crank used for starting machinery; specifically, in an internal-combustion motor, the crank by which the motor-shaft is turned, by hand, to draw in a charge of the mixture, compress it, and cause the first ignition. The engine will not, as a rule, start from rest until this starting process is performed upon it from without.

starting-cylinder (stär′ting-sil″in-dėr), *n.* 1. A cylinder of comparatively small size by which the mechanism of a much larger engine may be put in motion.—2. The cylinder of a barring-engine.—3. A cylinder controlling the valve-gear of a larger engine and used to operate the gear in starting.

starting-gate (stär′ting-gāt), *n.* In *racing*, a gate which opens automatically when the horses are ready to start.

> Perhaps the most interesting of the writer's remarks concern the comparatively novel invention called "the *starting-gate*," upon which he looks with anything but a favourable eye, to judge from his concluding words. "I suppose," says he, "it has . . . 'come to stay,' and we must make the best of it, but it adds greatly to the uncertainty of results, and I agree with the remark I read the other day that it renders some good horses absolutely useless for racing purposes."
> *Athenæum*, July 9, 1904, p. 40.

starting-gear (stär′ting-gēr), *n.* Any mechanical arrangement by which engines or other forms of machinery are started from rest: usually operated by hand in small units, but by power in larger ones. The valves of many engines, for example, can be liberated from the mechanism which drives them when at work and steam admitted by hand-levers to the cylinders,; or pilot-valves or pilot-engines may be furnished to operate the main valves; or the engine may be started by a barring-engine and steam gradually admitted through the main distribution system; or, again, under other systems, clutches and fast-and-loose pulleys, sliding- or clash-gears, and many others may be called starting-gear.

starting-lever (stär′ting-lev″ėr), *n.* The lever attached to and operating a starting-gear; specifically, in vertical-beam engines with lifting poppet-valves, such as side-wheel marine engines, the lever which operates a supplementary rock-shaft by which the valve-rods are lifted in starting slowly from rest: used also for working the engine backward when it is not designed to operate in either direction by its own valve-gear.

starv, *v.* A simplified spelling of *starve.*

Star-wheel motion. See ★*motion.*

star-wound (stär′wound), *a.* In *elect.*, said of a polyphase alternating-current winding in which one terminal of each of the coils is connected to a common neutral point while the free ends are in circuit with the mains. See ★*star-connected.*

stasis, *n.* 1. In *pathol.*: (*b*) Same as *stagnation.*

> No muscular tissue was detected in the walls of the diverticula, and hence the conclusion seems justifiable that they were mucosal hernias through the muscularis in consequence of the pressure produced by the *stasis* of the secretions within the appendix.
> *M. H. Fischer*, in Jour. Exper. Med., Jan. 15, 1901, p. [347.

stat. An abbreviation (*b*) of the Latin *statim*, immediately; (*c*) of *statuary.*

state, *n.* 18. In *biol.*: (*a*) Figuratively, a community of colonial organisms, such as a hive of bees. A state, in which the bond of union is not organic but social, is contrasted by Haeckel with a cormus or cormidium, such as a siphonophore, in which the bond of union is organic.

> The bees sacrifice the welfare of the individual . . . to the advantage of the *state*, in that they kill their drones when they have become useless.
> *Eimer* (trans.), Organic Evolution, p. 275.

(*b*) An aggregation of cells which exhibits centralization, interdependence, divergent specialization, and division of labor.

> In all cases except that of the lowest organisms the descendants of one cell unite to form communities or *states.*
> *Arnold Lang* (trans.), Compar. Anat., p. 1.

Critical state. See ★*critical.*—**Equation of state.** See ★*equation.*—**Everglade State,** the State of Florida.—**Special state,** in the kinetic theory of gases, the state or condition of a gas which is attained when the distribution of the velocities of its molecules is that known as the Maxwell-Boltzmann distribution. See *Maxwell-Boltzmann* ★*law of the distribution of velocities.*—**State's attorney.** See ★*attorney*^{1}.

state-line (stāt′līn), *n.* The boundary line of a state; the boundary line between two states.

statement, *n.* 3. In *law*, a formal narration of facts or an averment in judicial proceedings, as the allegations of a complaint or answer in a cause.—**Statement of defense.** See ★*defense.*

static, *a.* 3. In *art criticism*, monumental; stable; simply posed. [Rare.]

> His [Giotto's] art is too *static;* his figures are too well realized as mass and not sufficiently well articulated.
> *B. Berenson*, in Burlington Mag., III. 19.

Static action, head. See *dynamic* ★*action*, ★*head.*—**Static hysteresis,** hysteresis of a dielectric when subjected to fluctuations of electrostatic stress.—**Static interrupter,** in *elect.*, a device for the protection of apparatus in high-tension circuits from sudden surges of current. It consists of a choke-coil in the line-circuit and a condenser between the line and the core or base of the machine.—**Static sensation, sense, stress.** See ★*sensation*, etc.

Statical stability. See ★*stability.*

staticodynamic (stat″i-kọ-dī-nam′ik), *a.* Pertaining to social processes which modify without wholly transforming or transmuting the existing social order. *E. A. Ross*, in Amer. Jour. Sociol., IX. 796.

staticokinetic (stat″i-kọ-ki-net′ik), *a.* Pertaining to sociological theories which emphasize the mechanical distinction between social forces in equilibrium and social forces in equilibration, that is, producing change.

> The *statico-kinetic* school might also with considerable propriety be called the Spencerian school.
> *L. F. Ward*, Outlines of Sociol., p. 192.

station, *n.* 6. (*b*) In *phytogeog.*, the spot at which a plant has been collected or a species has been observed to occur.—10. (*d*) In the *Meth. Ch.*, a single church supplied with a fixed pastor: distinguished from a circuit. See *circuit*, 9.—14. In *zoöl.*, the particular district or districts inhabited by a given group of animals. See ★*area.*—**Agricultural experiment station.** See ★*agricultural.*—**Central station.** Same as ★*communication-room.*—**Generating station,** in *elect.*, an establishment for the production of a current for supplying power or light or both.—**Load diagram of a station.** See ★*load*^{2}.—**Station error.** See ★*error.*—**Station of a planet,** the cessation of a planet from moving in longitude when it seems to come to rest before reversing its motion. The first and second stations of a superior planet are respectively those which take place before and after opposition. The morning and evening stations of an inferior planet are respectively those which take place while the planet is west and east of the sun. The point of station (or stationary point) is the position of the planet at its station with respect to the sun. Thus the point of station for Jupiter is (nearly) at trine. The 'arc of the first station' is half the arc of retrogradation; the 'arc of the second station' is 180° plus half the arc of direct motion.—**Station of the moon,** a lunar mansion (which see, under *lunar*).—**Stations of the cross.** See ★*cross*^{1}.—**To keep station,** in *naval manœuvers*, to keep the proper distance ahead of one ship and behind another; keep the proper relative position in the squadron. At night this is done by means of speed-lights on the next ship ahead, to which the pace is adjusted.

> "Oh, that 's nothing," said a gentleman of twenty-two. "Wait till we have *to keep station* tonight. It 's my middle watch." . . . The leading ship has slowed down a certain number of revolutions . . . but she has not changed her speed-lights in time. We slide out to the

right. . . . Our next ahead lies on our port bow. . . . Our next astern is alongside of us. . . . The avenging electric [signal] spells out the name of our next ahead . . . and then — "Why don't you *keep station?*"
R. Kipling, A Fleet in Being, iii.

Zoölogical station, an observatory or laboratory, situated upon the ocean or the shore, equipped with appliances for collecting, observing, and experimenting upon marine animals and plants. Zoölogical stations are often joined to stations for the propagation of food-fishes, and are wholly or in part devoted to the study of problems relating to fisheries.

stationarily (stā'shọn-ạ-ri-li), *adv.* In a stationary position; without moving. [Rare.]

Torches were used in the funeral procession generally . . . while wax tapers were burnt *stationarily* at the "month's mind." *N. and Q.*, 10th ser., I. 196.

stationarity (stā-shọn-ar'i-ti), *n.* [*stationar*(*y*) + *-ity.*] The state or condition of a system in which the motions of its parts conform to the definition of stationary motion.

Stationary flat, -flat card, vibration, etc. See ★*flat*^{1}, etc.

stationer, *n.*—**Shop stationer,** a stationer whose business is carried on in a shop. An old division was into *running*, or *flying stationers*, who were peddlers and hawkers, and *shop stationers.*

Direct . . . to Alexander Ogstouns, *Shop Stationer*, at the foot of the Plain-stones, at Edinburgh, on the Northside of the Street.
A. Lang, Adventures among Books, p. 283.

station-jack (stā'shọn-jak), *n.* In Australia, a pudding much used by the 'hands,' consisting of meat boiled in a jacket of flour paste.

The great art of bush-cookery consists in giving a variety out of salt beef and flour . . . let the Sunday share be soaked on the Saturday, and beat it well . . . take the . . . flour and work it into a paste; then put the beef into it, boil it, and you will have a very nice pudding, known in the bush as '*Station-jack.*'
The Emigrant's Guide to Australia, pp. 111–112, [quoted in E. E. Morris, Austral English.

station-keeping (stā'shọn-kē"ping), *n.* See the extract, and *to keep* ★*station.*

Away we fled to take up station at such and such a distance from our neighbours ahead, and astern. . . . The end of it was a miracle to lay eyes. . . . But our Captain . . . bade me observe how slack we were . . . "Now we 're all over the shop. The ships have n't worked together, and *station-keeping* is n't as easy as it looks."
R. Kipling, A Fleet in Being, i.

Statistical equilibrium, method. See ★*equilibrium*, ★*method.*

statocyst (stat'ọ-sist), *n.* [Gr. στατός, standing, fixed (static), + κύστις, bladder, cyst.] An organ in certain animals, such as crustaceans and jellyfishes, which enables its owner to orient itself in a definite position with respect to gravity.

It has been conclusively proved by Kreidl's beautiful experiment that in the Crustacean Palæmon the sense of verticality depends on the pressure of heavy bodies on the inside of cavities now known as *statocysts*, and formerly believed to be organs of hearing. The point of the experiment is that when the normal particles are replaced by fragments of iron the Palæmon reacts toward the attraction of a magnet precisely as it formerly reached towards gravity. *Nature*, Sept. 8, 1904, p. 468.

statocyte (stat'ọ-sīt), *n.* [Gr. στατός, standing, fixed (static), + κύτος, hollow.] One of the sense-cells in the walls of a statocyst; one of the cells, in animals or plants, containing statoliths.

We must add to this a very important consideration — namely, that we know from Nemec's work that an alteration in the position of the statoliths does stimulate the *statocyte.* *Nature*, Sept. 8, 1904, p. 468.

statogenesis (stat-ọ-jen'e-sis), *n.* [NL., < Gr. στατός, < ἱστάναι, cause to stand (see *static*), + γένεσις, generation.] The state or condition of equilibrium in organisms considered as a means of bringing about evolution. *J. A. Ryder.* [Rare.]

statogenetic (stat"ọ-jẹ-net'ik), *a.* [*statogene*(*sis*) (*-t-*) + *-ic.*] Bringing about development by means of rest or equilibrium.

The *statogenetic* factors of development are therefore of just as much importance as the kinetogenetic, or those involving motion. *J. A. Ryder*, Biol. Lectures, 1895, p. 47.

statogenetically (stat"ọ-jẹ-net'i-kạl-i), *adv.* By means of statogenesis, or in a statogenetic way.

statogeny (stạ-toj'e-ni), *n.* [Gr. στατός, standing, + -γένεια, < -γενής, -producing.] Same as ★*statogenesis.*

statolith (stat'ọ-lith), *n.* [Gr. στατός, standing, + λίθος, stone.] 1. A small stony secretion or an accumulation of particles of sand contained in an open or closed sensory sac or lodged in a sensory pedicel of some actively locomotor invertebrate (cœlenterate, ctenophore, worm, mollusk, or arthropod), and so situated that it enables the animal possessing it to become oriented with reference to the center of the earth by responding to the pressure it exercises through the pull of gravity.— 2. In *bot.*, a movable starch-grain occurring in the cell sap of some cells, supposed to correspond in function with bodies so named found in the statocysts of animals. See ★*statoplast.* —**Statolith theory**, the view originated by Haberlandt and Němec that the upward curving of a plant-stem when laid horizontally occurs as a response to a stimulus administered to the sensitive cell-wall by statoliths which, when the cell is prostrated, fall from the base to the now horizontal side. *Nature*, Sept. 8, 1904, p. 467.

statoplast (stat'ọ-plȧst), *n.* [Gr. στατός, standing, fixed (see *static*), + πλαστός, verbal adj. of πλάσσειν, form, mold.] In *bot.*, same as ★*statolith.*

I would suggest the word *statoplast* in place of the cumbersome expression movable starch-grains.
F. Darwin, in Nature, Sept. 8, 1904, p. 468, note.

stator (stā'tọr), *n.* [L. *stator*, a stayer, a supporter: used, in *elect.*, in the sense of a stationary part.] The stationary element of an electric machine, more particularly of an induction-motor.

The high pressure current is taken only to the *stators* of the high tension motors; the rotors of these machines are used to supply low tension three-phase current to the *stators* of the low tension motors.
Nature, April 23, 1903, p. 588.

Stator armature. (*a*) An armature of a dynamo or motor that remains at rest during the operation of the machine. (*b*) An immovable element of a machine which is also its armature. *Houston*, Dict. Elect.

status, *n.*—**Régime of status.** See ★*régime.*—**Status convulsivus,** a condition in which a series of convulsive attacks follow one after another, with no interval of rest.—**Status epilepticus,** a state in which one epileptic attack follows another in almost uninterrupted succession, the intervals, when they occur, being passed by the patient in a semicomatose condition.—**Status lymphaticus,** a state of lowered vital resistance in the young in which slight injuries may produce rapidly fatal shock. It is usually associated with persistence and enlargement of the thymus gland.

statute, *n.*—**Real statutes,** legislative acts which refer to property rather than to persons, referring to the latter only in relation to property.—**Restraining statute,** a legislative act which limits the common law; also, one which restricts the powers of a corporation.—**Revised statutes,** a classified compilation and revision of the permanent and general statutes in force when compiled. Such revised statutes supersede the original statutes, save for omission and discrepancy. In many of the United States the revised statutes are known as *codes.*—**Statute of accumulations,** in *Eng. law*, an act, otherwise known as the Thellussion Act, passed under George III., whereby a legacy, or gift, cannot stand untouched at interest longer than twenty-one years after the testator's or grantor's death. —**Statute of distributions.** See *distribution.*—**Statute of Wills.** See *will*^{1}.—**Statutes at large.** (*a*) Laws given in full, with no condensation or abridgment. (*b*) A compilation of all statutes enacted by a legislature during a session or a series of sessions. The United States Statutes at Large run consecutively from March 4, 1789. *Session laws, pamphlet laws, public laws*, and *general public laws* are other names for statutes at large.

stauractine (stâ-rak'tin), *n.* [Gr. σταυρός, a cross, + ἀκτίς (ἀκτιν-), a ray.] In the nomenclature of the spicular elements of sponges, hexactinellid spicules of the dermal sponge-layer in which two of the arms are atrophied, leaving the remaining four in the form of a cross. Also *stauractin.* *Jour. Roy. Micros. Soc.*, April, 1905, p. 190.

staurion (stâ'ri-on), *n.*; pl. *stauria* (-ạ̈). [NL., < MGr. σταυρίον, dim. of Gr. σταυρός, a cross.] In *craniom.*, the point of intersection of the transverse and median palatine sutures. *Von Török.*

stauroplegia (stâ-rọ-plē'ji-ạ̈), *n.* [NL., < Gr. σταυρός, a cross, + πληγή, a stroke.] Paralysis of the upper extremity of one side and of the lower extremity of the opposite side.

Stauroscopic eyepiece. See ★*eyepiece.*

Staurosporæ (stâ-rọ-spō'rē), *n. pl.* [NL., < Gr. σταυρός, a cross, + σπορά, a seed (spore).] A name given by Saccardo to artificial divisions of various families and orders of fungi, especially those of the *Pyrenomycetes* and *Fungi Imperfecti*, to include the genera which have the spores angular, forked, or stellate.

stave, *n.* **4.** The porter-bar used to start and hold massive forgings which are undergoing treatment in a furnace or under a hammer or press. The part to be made is welded to the stave or porter-bar, and when completed the latter is cut off. [Eng.]

stave-cutter (stāv'kut"ėr), *n.* A tool or machine for cutting staves either radially from a bolt or by shaving it circumferentially.

stavewood, *n.* **3.** In Australia, *Flindersia Schottiana*, one of the trees called *Queensland yellow-wood.*

staving^2 (stā'ving), *a.* Excellent; exceeding: as, we had a *staving* good time. *Dialect Notes*, II. vi. [Slang.]

staxis (stak'sis), *n.* [Gr. στάξις, a dropping, < στάζειν, drop, let drop.] In *pathol.*, hemorrhage.

stay^1, *n.*—**Keep full for stays.** See ★*full*^{1}.—**Quick in stays,** *naut.*, said of a vessel when it goes from one tack to the other quickly in tacking. In the opposite case, it is said to be *slow in stays.*—**To refuse stays,** *naut.*, said of a vessel when it fails to tack — when it balks at going about.

stay^2, *n.*—**Stay law,** a statute suspending or limiting for a time extreme judicial measures for the collection of debts or other legal remedies.—**Stay of execution.** See ★*execution.*—**Suborbital stay,** a name applied by Gill to the third suborbital bone of fishes when it is large and extends toward or to the preoperculum. This condition occurs in the gurnards and their allies, which are known as the mail-cheeked fishes.

stay^2, *v. i.* **7.** In *poker*, to come in when an ante has been raised.—**Touch and stay,** in *law*, words in a policy of marine insurance giving the insured vessel the right to stop at the port or ports named, but not the right to trade there without forfeiting the insurance.

stay-bar, *n.* **3.** Same as *stay-rod*, 1.

stay-beam (stā'bēm), *n.* In any machine or structure, a member used to secure stiffness and strength, usually by its resistance to flexing strains, but also by strengthening against tension or buckling; a reinforce-bar.

stay-bolt, *n.* Specifically, in locomotive-boilers, the bolt screwed into the parallel plates of the water-legs, or the crown-sheet and the wagon-top sheets, riveted over at both ends, and serving to keep each from deformation by pressure.

The [pneumatic] *stay-bolt* cutter, which is simply a powerful pair of nippers, designed to remove by a single movement the surplus ends of locomotive *stay-bolts.*
Encyc. Brit., XXXI. 803.

stay-boom (stā'böm), *n.* In *lumbering*, a boom fastened to a main-boom and attached upstream to the shore to give added strength to the main-boom.

stay-fastening (stā'fȧs"ning), *n.* In *mech.*, any fastening for a stay. It may be riveted, pinned to a socket single or double, or screwed and headed over.

stay-joint (stā'joint), *n.* In a pantograph apparatus for enlarging or reducing reproductions from originals, that joint in the rhombus frame which is diagonally opposite the point used in following the lines of the original; specifically, the joint so situated in a pantograph used for drawing from microscopic originals, where the joint is opposite, diagonally, to the tube carrying the microscope tube and objective lens.

In the "*stay-joint*" (diagonally opposite to the object-point, or microscope) of the pantograph is a rounded knob, which moves to and fro in the rotations about the fixation-point.
Jour. Roy. Micros. Soc., Aug., 1905, p. 510.

stay-knot (stā'not), *n.* A knot employed in ligating an artery. Two ligatures are placed side by side and each is tied once with itself; then the two are taken together and the second half of the knot is tied with the double strand. *Buck*, Med. Handbook, I. 543.

stay-nut (stā'nut), *n.* A thin nut fitted on the end of the external surface of a stay-tube, enabling the latter to hold the flat head of the tube-sheet from bulging outward under the internal pressure. See ★*stay-tube.* *D. K. Clark*, Steam Engine, IV. 666.

stay-peak (stā'pēk), *n.* See ★*peak*^{1}.

staysail, *n.*—**Foretopmast-staysail,** a head-sail that sets on the foretopmast stay.—**Main-staysails,** the fore-and-aft sails which set between the main- and foremasts.—**Main storm-staysail,** a storm-sail set on the mainstay.—**Maintopmast-staysail,** a sail which sets between the foremast and mainmast. A flying maintopmast-staysail has two sets of halyards, as it is square on the head. It also has a tack and sheet to trim it down. One set of halyards leads through a block at the head of the mainmast and the other through a block at the fore lower masthead.

stayship (stā'ship), *n.* Any fish of the family *Echeneididæ*, formerly supposed to stop ships by fastening to them. *Stand. Dict.*

stay-stitching (stā'stich"ing), *n.* In *sewing-machine work*, a method of sewing with a two-needle machine in which a stay or tape is sewed down over a seam to strengthen it: used in staying gaiters, corsets, etc. The machine feeds the stay to the fabric or leather and sews both edges down at the same time. Stay-stitching is also done with a special two-needle machine, without the use of a stay or reinforcing tape, by making a flat stay-stitch across the seam.

stay-tap (stā'tap), *n.* A specially long tap, usually from 15 to 20 inches in length, though sometimes reaching 2 or 3 feet, used for tapping or threading the holes which receive the stay-bolts in the stayed surfaces of locomotive and marine boilers. The threads in both surfaces must be parts of the same screw in order that the threaded bolt may enter the thread in the second surface while fitting on the thread in the first. The lower end of the stay-tap is not screwed, but turned smooth in order to keep the tap truly concentric with the holes in both the inner and outer shells.

stay-tube (stā'tūb), *n.* In a boiler of the fire-tube design, a tube of specially heavy gage or stock, fitted to receive nuts on the ends, which project through both tube-sheets, so as to serve as a through-stay to prevent these flat surfaces from bulging under internal pressure. *Thurston*, Manual of Steam-Boilers, p. 39.

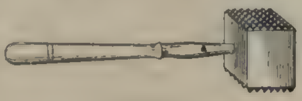
S. T. B. An abbreviation of the Latin *Sacræ Theologiæ Baccalaureus*, Bachelor of Sacred Theology.

steady¹, *n.* **4.** A young man who is the 'steady company' of a young woman; also, the young woman in the same relation to the young man. [Slang.]

steak, *n.*—**Cross-rib steak**, a steak of beef cut from the fore quarter just above the leg.—**Delmonico steak**, a small steak of beef cut from the hind quarter and having no tenderloin. A similar cut for roasting is called a *Delmonico roast.*—**Flank steak**, a steak of beef cut from the hind quarter on the inside of the flank.—**Skirt steak.** See ★*skirt-steak.*

steak-hammer (stāk'ham″ėr), *n.* A hammer having a broad face divided into points or projections, used in beating steak; a steak-maul.

steak-maul (stāk'mâl), *n.* A wooden maul having a large square head with two corrugated faces, used in pounding steaks to soften and break up the fiber.



Steak-maul.

steal¹, *v. t.* **11.** In *cricket*, to gain (a run) and increase the score because of the slowness of the fielders: said of the batsman.—**12.** In *golf*, to hole (a long, unlikely putt) so that the ball just drops into the hole.

steal¹, *n.* **2.** In *golf*, a long putt which wins a hole.

stealer-plate (stē'lėr-plāt), *n.* In *iron shipbuilding*, the end-plate of a strake of outside or inner-bottom plating which is dropped out as the girth of the vessel narrows toward the ends.

steam, *n.*—**Anhydrous steam.** Same as *dry steam.*—**Combined steam**, a mixture of superheated steam and wet steam sometimes advantageously employed to minimize the evils of boiler corrosion on the one hand and of priming on the other.—**Greasy steam**, steam with which a heavy oil or a grease has been mixed to furnish lubricant for the valves of the engine.—**Primary steam**, steam from the boiler, ready to enter and do work in the high-pressure or first cylinder in the series of a multiple-expansion engine.—**Secondary steam**, steam which has done its work in the high-pressure or first cylinder of a multiple-expansion engine and, having been exhausted therefrom, is ready to do work in the second cylinder of the series.—**Superdried steam**, superheated steam, or steam heated to a temperature above that of saturated steam at that pressure. The moisture which may have been present previous to the saturation temperature is dried out, and then additional heat is supplied. [Not in use in the United States.]—**Surcharged steam**, steam charged with heat above the quantity normal to it at that pressure; superheated steam. [Not in use in the United States.]—**Tertiary steam**, steam which has passed through the high-pressure or first stage of expansion in a multiple-expansion engine, and has been exhausted also from the cylinders of the second stage, and is about to enter upon the expansive working of the third stage in one or more cylinders.—**To raise steam.** See ★*raise*¹.

steam-arm (stēm'ärm), *n.* A metal-planing machine, invented by James Nasmyth: so called because the tool has a reciprocating movement, being driven by a steam-cylinder.

steam-auger (stēm'â″gėr), *n.* A device for removing ashes and the tarry deposit (with dust) from the fire-tubes of steam-boilers. A steam-jet at high pressure receives from a suitable nozle a spiral or helical motion, when introduced at the end of the tube, and acts both mechanically and as a solvent to remove the clogging material.

steam-balance (stēm'bal″ans), *n.* **1.** Any device or apparatus in which the pressure of steam is used to oppose and balance a weight or spring or other force.—**2.** A steam-accumulator in which steam, acting on a piston, balances a water-pressure upon a plunger or second piston acting in the opposite sense.—**3.** A steam-cylinder, in a vertical engine, with a piston to balance the weight of the piston-rod and connecting-rod, so that the up and down strokes may be of equal power.—**4.** A steam-cylinder with a piston to balance or reduce the pressure by which a slide-valve is held to its seat by the working pressure on its back.—**5.** The weighted lever of a boiler safety-valve which tends to hold the valve on its seat against the steam-pressure underneath it. [Rare in U. S.]

steam-barrel (stēm'bar″el), *n.* A radiator or collection of pipes (arranged in cylindrical form) for heating by steam. *M. W. Travers*, Exper. Study of Gases, p. 106.

steam-bath (stēm'bȧth), *n.* A piece of apparatus, much used in chemical laboratories, consisting of a vessel, commonly of sheet-copper, with double walls between which steam is caused to circulate, a practically fixed temperature being thus maintained in the interior of the vessel where materials to be dried or otherwise affected by heat are placed.

> When the aminotriazole was warmed in an excess of benzoyl chloride without a solvent, on the *steam-bath*, it dissolved and then suddenly precipitated out as a solid cake. *Amer. Chem. Jour.*, Jan., 1903, p. 78.

steam-blast (stēm'blȧst), *n.* **1.** A strong current of steam issuing at high pressure from an orifice.—**2.** A current of steam issuing from an orifice in such a way as to induce or cause a current of air to flow with it, as in the exhaust-nozles of a locomotive by which air and gases are caused to flow through the tubes and out through the stack.

steam-blower (stēm'blō″ėr), *n.* **1.** A device or apparatus for causing air to move or for creating a draft, as in a chimney, by a jet of steam. The jet is usually central in the axis of a tube of larger cross-section; the rush of steam at high velocity entrains with it the air or gas and thus causes a flow.—**2.** Any air-moving apparatus, such as a fan or other blower, driven by a steam-motor.

steam-calorimeter (stēm'kal-ọ-rim″ẹ-ter), *n.* See ★*calorimeter.*

steam-casing (stēm'kā″sing), *n.* A hollow wall around a chamber, through which steam is caused to circulate; a steam-jacket.

steam-chest, *n.* **1.** Steam-chests may be cast in one piece with the cylinder casting, or may be bolted to the latter by stud-bolts and nuts. The lid or bonnet is always made separate and bolted to the sides to give access to the valve and seat. When made in one casting, the bonnets must be constructed to admit of introducing the valves through them and of having all work of fitting and finishing done. In large upright engines of the beam type used for paddle-wheel and pumping practice, the steam-chests are separate for upper and lower ends, connected by side-pipes, which have an expansion-joint near one end to allow for variations of length by temperature. Sometimes also called *valve-chest.*

3. A name incorrectly given to a steam-chamber or dome of a land-boiler, or to the steam-chimney of a marine boiler.

steam-chimney, *n.* The type is much used on riverboats, having the advantage that the part of the boiler near to the deck-structures is no hotter than the steam in the dome, while the gases in the central portion may be much hotter. The height of the dome removes the steam-outlet a considerable distance above the water-line, diminishing the dangers from priming in rough weather, or the mechanical entrainment of water into the engine. Slight superheating may result with low-pressure steam.

steam-drier (stēm'drī″ėr), *n.* An apparatus or plant for removing moisture from lumber, cloth, air, etc., by heat conveyed from a boiler to coils of pipe. A circulation of air, either natural or forced by a fan, carries away the moisture vaporized out of the material by the heat. To raise the temperature of air is to increase its capacity to carry moisture without tendency to precipitate it, and this principle is made use of in the steam-driers to cause the air to absorb moisture from other objects. *Jour. Brit. Inst. Elect. Engin.*, 1903–04, p. 965.

steam-driven (stēm'driv″n), *a.* **1.** Driven directly by the pressure of steam, either at boiler-pressure or while expanding, or by the impact of a jet of steam.—**2.** Propelled by a steam-engine: as, a *steam-driven* motor-car.

steam-drum (stēm'drum), *n.* **1.** A vessel, usually a cylinder with curved ends, for collecting the steam from a boiler. Such a receptacle is almost always used on a water-tube boiler to permit a sufficient volume of steam to be accumulated so that the pressure will not fluctuate as steam is taken intermittently by the engine.—**2.** A pipe or cylinder on top of or above a steam-boiler and connected thereto by a short neck, serving as a dome to allow the flow of steam from the water to be slow enough therein to permit entrained water to settle at the bottom and be drained back. It is usually horizontal, or nearly so, and one drum may be connected to several boilers. It is much used in batteries of several sectional boilers in one block, and when so used a throttle-valve is placed in the pipe between the boiler and the drum to allow one boiler to be put out of use while the others are in action.

steam-drying (stēm'drī″ing), *n.* **1.** The use of steam-driers to remove moisture from objects.—**2.** The elimination from steam-vapor of any moisture in the form of water or mist. For every pressure and temperature steam which is called 'dry' is in equilibrium of tendency to condense back to water and to vaporize any water accidentally present. If the temperature rises such water will become steam and the vapor become drier. If the temperature falls some steam will go back to water, but the steam remaining uncondensed is dry as before. Further effort to dry results in superheating.

steam-eater (stēm'ē″tėr), *n.* An engine or apparatus which consumes a great deal of heat in performing its functions, requiring a powerful evaporating apparatus to keep it supplied with hot steam. Such consumption may be normal for the size of the apparatus, or it may be unnecessarily wasteful and therefore costly. *Jour. Brit. Inst. Elect. Engin.*, 1899–1900, p. 581. [Colloq.]

steam-edge (stēm'ej), *n.* That edge of a sliding-valve which, in relation to the side of the port or opening which it controls, acts to limit the size of the free passage of steam from the boiler to the engine-cylinder, and cuts off or closes such supply and opening at the proper time.

steam-engine, *n.*—**Central-valve steam-engine**, a form of steam-engine in which the pistons are annular and the valve is located in the line of the cylinder-axes. The engine is usually vertical, multiple-expansion, and single-acting, and runs at high speed with considerable economy. It has been much used for electric lighting and central power-stations.—**Cross-compound steam-engine**, a compound steam-engine in which the two or more cylinders are placed side by side or parallel, so that each requires a connecting-rod, as distinguished from a tandem engine, in which two or more pistons are connected to and act on the crank by means of one connecting-rod. The cranks are usually at 90° or quartering to make the turning effort more uniform and eliminate a dead-center. The side-by-side arrangement makes it easy to locate reheaters between the cylinders, and the connecting- or cross-pipe serves as a receiver.—**Fan steam-engine**, a steam-turbine which has tangential steam-jets acting on dished blades which are attached to a revolving wheel.—**Left-hand horizontal steam-engine**, a steam-engine which has the fly-wheel at the left of a center-line through the cylinder, when looking from the cylinder toward the shaft; or one which has the steam-cylinder on the left hand of one who faces the crank-disk.

steamer-keir (stē'mėr-kēr), *n.* A horizontal cylindrical chamber of iron, like a boiler, one end of which is provided with a strong iron door: used in bleacheries for steaming cloth.

steam-evaporator (stēm'ẹ̄-vap″ọ̄-rā-tọ̈r), *n.* An evaporator employing the heat of steam.—**Continuous steam-evaporator**, an apparatus for boiling, concentrating, or drying, the operation of which is not intermitted for the withdrawal of the material under treatment or for the charging of new stock.

steam-hauler (stēm'hâ″lėr), *n.* A form of traction-engine running on a portable bed or track, used for hauling logs over rough ground. It is equipped with a spiked metal belt which runs over sprocket-wheels replacing the driving-wheels, and is guided by a sled turned by a steering-wheel upon which the front end rests.

steam-header (stēm'hed″ėr), *n.* A pipe, cylinder, or other tubular chamber with a number of side-outlets from which a series of pipes may be supplied with steam, as from a common supply: used in the construction of sectional boilers of water-tube design, in which a number of generating tubular units deliver steam into a chamber transverse to them; also in supplying steam to a number of pipes in a radiator coil used in steam-heating.

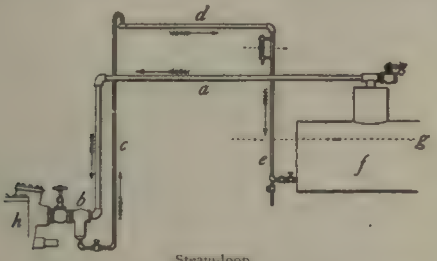
steam-heater (stēm'hē″tėr), *n.* **1.** A heater the temperature of which is maintained by the circulation of hot steam within it, as in a coil or radiator for heating the air of buildings.—**2.** A device for heating food or plates, in which hollow shelves have steam circulating between their walls.—**3.** A device for heating or boiling water or other liquids, in which steam in coils or hollow plates is circulated within the liquid to be heated.

steam-jacket (stēm′jak″et), *v. t.* To apply a steam-jacket to or surround with one; furnish with hollow walls within which hot dry steam may be circulated to supply heat: used of engine-cylinders, feed-water heaters, cookers, sterilizers, and other devices where heat is to be maintained against condensation, radiation, or other losses.

> He [Bryan Donkin] studied the effects of 'cylinder condensation' and of the two correctives of that serious form of wasted energy, superheating and *steam-jacketing*, and invented the 'revealer' to reveal the then mysterious changes occurring in the interior of the engine-cylinder.
> *Science*, March 28, 1902, p. 515.

steam-lead (stēm′lēd), *n.* The amount the steam-port is open when the piston of an engine reaches its extreme travel at the end of one stroke and is ready to begin its next stroke in the opposite sense. To give this opening of the port before the stroke of the piston begins, the valve must lead or be in advance of the phase of the piston; or the valve-crank or eccentric must lead the engine-crank at an angle in excess of 90°. It procures full boiler-pressure on the piston through a practical opening of the port when the stroke begins, and helps by this effective pressure to arrest the motion of the reciprocating parts and relieve the crank-pin from strain. *Whitham*, Const. Steam Engin., p. 170.

steam-loop (stēm′löp), *n.* A device or apparatus for removing water of condensation from a steam-pipe and returning it to the steam-boiler without the use of a pump or trap, even if the boiler is not enough below the engine to utilize gravity for the purpose. From a separator near the engine a pipe-riser enters the top of a horizontal run at an elevation sufficient to operate the system. From this horizontal run a vertical pipe descends into the water-space of the boiler below the water-line. The condensation in the riser is not liquid water; the water in the drop-leg to the boiler is liquid. Hence the boiler-pressure will balance a longer leg of mixed steam-gas and water than of liquid water in the drop-leg. A flow toward the boiler from the overhead horizontal pipe will therefore take place as water is lifted by dry-steam pipe pressure up the riser, since the drop-leg pressure is less than that on the engine side by the pressure due to the height of the liquid water column in the drop-leg. The longer the drop-leg the more effective is the elimination from the bottom of the separator. *Thurston*, Manual of Steam-Engine, II. p. 81.



Steam-loop.

a, pipe for live steam; *b*, separator; *c*—*e*, the steam-loop, of which *c* is the pipe-riser, *d*, the horizontal run, and *e*, the drop-leg; *f*, boiler; *g*, water-line; *h*, engine-cylinder.

steam-meter (stēm′mē″tėr), *n.* A meter designed to measure and record the weight or quantity of steam which passes through a pipe or to an engine.

steam-packing (stēm′pak″ing), *n.* In *mach.*: (*a*) Any material used in a joint to make it steam-tight. (*b*) The material used in a stuffing-box to keep steam from leaking through an opening in which a rod slides in and out. (*c*) A form of packing for steam-pistons in which the packing-rings in the piston are forced out against the bore of the cylinder by pressure of steam admitted into the grooves behind or inside of the rings. The rings may be made in sections to yield easily to this radial pressure.

steam-pocket (stēm′pok″et), *n.* A place below the water-level of a boiler where steam accumulates or is formed and does not pass away quickly.

steam-point (stēm′point), *n.* In *phys.*, that point on the thermometric scale which corresponds to the temperature of steam under a pressure of 76 centimeters of mercury. *Philos. Trans. Roy. Soc.* (London), 1903, ser. A, p. 122.

steam-separator (stēm′sep″a̤-rā-tọr), *n.* A device for eliminating water from steam, or oil from steam, when the steam is moving to a point at which it is convenient to have it dry or clean. Steam-separators may be based on the difference in weight of water and steam, the water accumulating at the bottom of the separator and dry steam being led off from the top; or the current of steam may receive a gyratory motion in the separator whereby particles of greater density, such as oil and water, are sent centrifugally to the sides and the steam is led from the center. Another device is to oppose corrugated surfaces as baffles on which oil and water adhere and are drained while the steam moves on unaffected; or the separation may be made by a filtering process with or without a chemical reaction. Separators are used to prevent the entrance into the cylinder of entrained or primed water from the boilers, and to prevent fouling and clogging of the condenser surfaces and passages by oil and grease from the condensing-engine cylinders.

Steamship license. See ★*license.*

steam-shovel (stēm′shuv″l), *n.* A digging-, dredging-, or excavating-machine, driven by steam in its own engine from its own boiler: usually mounted on a car to run upon the rails of a track and used in mining, canal, and railway work. Called *steam-navvy* in England. It is essentially the same as the dredge, but is operated on land instead of from a boat. See cut at *excavator*.

> This material is a glacial boulder formation of clayey consistency which required blasting before it could be handled with *steam shovel*. It puddled well and formed a watertight fill which set hard in the embankment almost like concrete.
> *Elect. World and Engin.*, Oct. 1, 1904, p. 555.

steam-stamp (stēm′stamp), *n.* A pestle on the upper end of which is a steam-cylinder by which it is lifted and which gives striking energy to its blow upon rock and ore in a mortar at its foot: used for crushing rock and ore.

steam-style (stēm′stīl), *n.* In *calico-printing*, a process by which, the dye and mordant having been mixed and printed together upon the cloth, the color effect is developed and fixed by exposure to an atmosphere of steam.

steam-thawing (stēm′thâ″ing), *n.* **1.** In *mining*, a method used in cold climates, as in Alaska, for softening frozen gravel so that it can be worked after frost has hardened the surface. Pipes tipped with steel nozles are driven down from four to six feet and dry steam at 120 pounds' pressure is forced through them. The pipes, called 'points,' are inserted one to every square yard. The alternative plan (called 'fire-setting') is to use wood fires, which are unsatisfactory, the smoke being objectionable, while the thawing, if uncontrolled, may soften the frozen roof of workings underneath and cause accidents.—**2.** A method of thawing out the frozen water in gutters, leaders, or underground pipes and softening the congealed condensation in gas-pipes by means of heated steam from a portable steam-boiler. *Pop. Sci. Mo.*, July, 1902, p. 235.

steam-valve, *n.* **2.** Specifically, an admission-valve; a valve for admitting steam to the inlet of a cylinder, as distinguished from an exhaust-valve.

steamway (stēm′wā), *n.* A channel or passage in a cylinder or valve-chest of an engine, usually cast with it by coring, through which steam may pass in or out of the cylinder from the boiler or toward the exhaust-pipe. *D. K. Clark*, Steam Engine, II. 458.

steapsinogen (stē-ap-sin′ọ-jen), *n.* [*steapsin* + *-o-* + *-gen.*] The proenzym of the fat-splitting ferment of the pancreas.

steariform (stē′a̤-ri-fôrm), *a.* [Irreg. < Gr. *στέαρ*, stiff fat, tallow, suet, + L. *forma*, form.] Resembling stearin or hard fat.

stearin, *n.*—**Cocoanut, cotton-seed stearin.** See ★*cocoanut*, ★*cotton-seed*.—**Solar stearin**, the solid fat left on subjecting lard to pressure without artificial heating, lard-oil being removed. It is used in the manufacture of candles.—**Vegetable stearin**, a name given to the solid portion of cotton-seed oil. It consists essentially of compounds of glycerol with palmitic and stearic acids.

stearinsulphuric (stē″a̤-rin-sul-fū′rik), *a.* Same as ★*sulpholeic*.

stearolauretin (stē″a̤-rō-lâ′re-tin), *n.* [Irreg. < Gr. *στέαρ*, stiff fat, tallow, suet, + L. *laurus*, laurel, + *-et-* + *-in²*.] A compound said to be present in the fat of the sweet-bay, *Laurus nobilis*.

stearolaurin (stē″a̤-rọ-lâ′rin), *n.* Same as ★*laurostearin*.

stearolic (stē-a̤-rol′ik), *a.* [*stear(in)* + *-ol* + *-ic.*] Noting an acid, a colorless compound of the acetylene series, $CH_3(CH_2)_7C:C(CH_2)_7$-COOH, prepared by the action of alcoholic potassium hydroxid on bromoleic acid. It crystallizes in long prisms and melts at 48° C.

stearoxylic (stē″a̤-rok-sil′ik), *a.* [*stear(in)* + *ox(ygen)* + *-yl* + *-ic.*] Noting an acid, a colorless compound, $CH_3(CH_2)_7CO.CO(CH_2)_7$-COOH, prepared by the action of fuming nitric acid on stearolic acid. It crystallizes in plates and melts at 86° C. Also called 9, 10-*diketostearic acid*.

stearrhea (stē-a̤-rē′ä̤), *n.* [NL. *stearrhœa*, < *στέαρ*, stiff fat, tallow, suet, + *ῥοία*, flowing.] Same as *seborrhea*.

steatadenoma (stē-a̤-tad-e-nō′mä̤), *n.*; pl. *steatadenomata* (-ma̤-tä̤). [NL., < Gr. *στέαρ* (*στεατ-*), stiff fat, tallow, suet, + NL. *adenoma*.] Adenoma of the sebaceous glands.

steatite, *n.* **2.** A gem or seal, cut in steatite.

> This is a small lenticular seagreen *steatite* . . . engraved with a cuttle fish, above which is a tunny-fish to the right.
> *H. B. Walters*, in Jour. of Hellenic Studies, XVII. 68.

Cupric steatite, a mixture of pulverized steatite or talc and sulphate of copper, used to dust over plants as a fungicide.

steatitis (stē-a̤-tī′tis), *n.* [NL., < Gr. *στέαρ* (*στεατ-*), stiff fat, + *-itis*.] Inflammation of adipose tissue.

steatocele (stē′a̤-tọ-sēl), *n.* [*στέαρ* (*στεατ-*), stiff fat, + *κήλη*, a tumor.] A fatty tumor in the scrotum.

steatolytic (stē″a̤-tọ-lit′ik), *a.* [Gr. *στέαρ* (*στεατ-*), stiff fat, + *λύσις* (*λυτ-*), dissolving, + *-ic.*] Same as ★*lipolytic*. *Buck*, Med. Handbook, III. 474.

steatopathic (stē″a̤-tọ-path′ik), *a.* [Gr. *στέαρ* (*στεατ-*), stiff fat, + *πάθος*, disease, + *-ic.*] Noting any disease of the sebaceous glands.

sted, stedy. Simplified and former spellings of *stead*, *steady*.

steel. **I.** *n.*—**Acid steel**, steel produced in a vessel or hearth, in either the Bessemer or the open-hearth process, in which the slag and linings are silicious. Such steels must be made from ores low in phosphorus or else the product is likely to be brittle and unreliable in the cold. See *steel¹*, 1.—**Air-hardening steel**, a steel which is hardened by cooling ordinarily in the air, as distinguished from ordinary tool-steel, which must be rapidly cooled from above a red heat in order to have a hard cutting-edge. See *self-hardening* ★*steel*.—**Aluminium steel**, steel containing a very small percentage of aluminium added for the purpose of stopping the evolution of carbon monoxid and other occluded gases from the molten steel. There are two theories to account for this function of aluminium: that the aluminium decomposes the gases and absorbs the oxygen, for which it has a strong affinity, and that aluminium increases the solubility of the gases in the steel and thereby prevents the formation of blow-holes and bubbles. The proportion of aluminium is determined by the grade of steel, the amount of occluded gases, and other factors, but it usually varies from one eighth to three quarters of a pound to a ton of steel. An excessive amount of aluminium makes the metal set very solid and produces 'pipes' in the ingots.—**Basic steel**, steel made by the basic process. See *steel¹*, 1.—**Bronze steel.** See ★*bronze-steel*.—**Cement-steel.** Same as ★*cementation-steel*.—**Chrome steel.** The ordinary chrome steel used for armor-plates and armor-piercing projectiles contains from about 2 to 2.75 per cent. of chromium, but in some file-steels the amount of chromium reaches 3 per cent. Up to the introduction of the aluminothermic process of Goldschmidt (see ★*aluminothermics*) chrome steel was prepared in crucibles or in electric furnaces by the addition of ferrochromium to molten mild steel, an operation of considerable difficulty on account of the refractory nature of the ferrochromium. The chrome steel produced by this method contained sometimes over 1 per cent. of combined carbon. By the Goldschmidt process chromium is produced in an almost pure state and added to steel without perceptibly increasing its percentage of carbon. Besides armor-plates and projectiles, chrome steel is used for tires, springs, rock-crushing machinery, and safes. The effect of chromium on steel when added in small quantities is to raise its strength and hardness without seriously diminishing its ductility. When added in too large quantities it produces brittleness.—**Chromium-aluminium steel**, an alloy steel containing chromium and aluminium in varying proportions.—**Chromium-nickel steel**, steel containing 2 per cent. of nickel and about 1 per cent. of chromium. It is used principally for armor-plate and for armor-piercing shells.—**Cold-rolled steel**, steel to which, after it is rolled hot to approximately the required thickness, a very smooth surface and a very accurately gaged thickness are imparted by first chemically cleaning the surface and then rolling it cold between smooth-surface rollers.—**Electric steel process.** See ★*process*.—**Granulated steel**, steel made from pig-iron by a process in which the first step is the granulation of the iron to give the steel a uniform structure.—**Gun-steel**, steel used for guns. Crucible-steel and nickel-steel are largely used for that purpose.—**Hadfield's manganese-steel**, a name frequently given to manganese-steel from its inventor, Robert A. Hadfield.—**Hard steel**, steel to which has been added manganese, phosphorus, or carbon to increase its hardness, or resistance to abrasion, and to raise its elastic limit.—**High-carbon steel**, steel with a high percentage of carbon: usually containing more than .65 or .75 per cent. of carbon.—**High-speed steel**, an alloy steel suitable for cutting-tools working at a very high speed. Tools made of ordinary carbon-steel lose their temper as soon as the heat generated by the friction of the work rises above about 300° C. High-speed steel, on the other hand, retains a cutting-edge at a temperature more than twice as high as ordinary carbon-steel, and often does its work while its edge is red-hot; consequently the speed of the lathe or other machine can be increased from one to three times the usual limit. A speed of 500 cutting-feet per minute has been attained, working upon mild-steel forgings. The composition of high-speed steel varies in accordance with the uses for which the tools are intended. The chief constituents are tungsten, silicon, chromium, molybdenum, and manganese. The proportion of carbon is usually below 1 per cent. Tools of high-speed steel are used chiefly for making roughing-cuts in the lathe or planer. The valuable properties of high-speed steel are attributed to the alloying element and the special heat treatment to which it is subjected. Thus, in one process, it is first heated to about 1,000 degrees C., then rapidly cooled in a bath of molten lead, where it is kept for about 10 minutes, and then allowed to cool slowly in lime or some other inert non-conducting body. For some purposes the steel when quite cool is reheated to visible red and allowed to cool in the open air. In other (more recent) processes the steel is hardened by heating nearly to melting and then cooling in a blast of air, after which the strains are removed by reheating to a temperature below a red heat.—**High steel,** steel containing a percentage of carbon above .60, or of other hardeners, such as phosphorus, silicon, or manganese, by which it is made of high tensile strength and elastic limit but at the expense of ductility and toughness. Such steel will temper and harden.—**Low steel,** mild steel; steel low in carbon.—**Machinery steel,** low-carbon steel suitable for making parts of machines, but not cutting-tools, since it cannot be tempered.—**Manganese-nickel steel,** an alloy steel which contains manganese and nickel.—**Mushet steel,** a variety of self-hardening steel, so called from the fact that its first development was due to the metallurgist of that name. It contains tungsten and manganese.—**Natural steel.** (*a*) Steel made by refining cast-iron directly. (*b*) Steel made from the ore by a direct process.—**Open-hearth steel,** a form of mild steel, so named because produced in an open-hearth furnace by the Siemens-Martin process. It is called *acid steel* when the lining of the hearth is of acid material and *basic steel* when the lining is of basic material. See *steel*1, 1.—**Overheated steel,** steel which has been heated to a temperature considerably above that of recalescence and has consequently acquired a coarse crystalline structure which materially weakens it. This defect may be remedied by forging the metal while hot.—**Phosphorus steel,** steel containing an amount of phosphorus in excess of its carbon.—**Pressed steel,** steel which has been subjected to pressure by mechanical means while in a fluid state and undergoing the process of solidification in a mold. The pressure is usually applied by hydraulic presses, and results in a diminution of height in the proportion of one and a half inches to the foot. The steel is made more dense and blow-holes and other defects are less likely to occur. Gases forming in the mass of steel by chemical reaction are mechanically expelled from it.—**Raw steel,** steel produced by partial decarburization of cast-iron in an open-hearth furnace.—**Scrap-steel,** any non-salable pieces of steel from previous manufacture or industrial use, such as crop-ends of rails, ends of billets and blooms, or broken stock, used in open-hearth steel-manufacture as an addition to the bath of melted pig-iron to reduce the percentage of carbon therein by increasing the weight of metallic iron without adding a corresponding weight of carbon.—**Self-hardening steel,** steel which hardens itself and does not require the heat treatment necessary for ordinary high-carbon steel. (See *air-hardening* ★*steel*.) In the trade self- and air-hardening steels are usually classed together. A distinction exists between them, however, in that some steel which hardens in the air may be softened by extremely slow cooling, whereas true self-hardening steels are not made soft by any process, though their hardness is appreciably lessened by rapid cooling from a very high temperature (almost at the melting-point), the same treatment which makes ordinary steels harder than glass. The best known of the self-hardening steels is Mushet's self-hardening steel, containing up to 8 per cent. of tungsten, together with 2–5 per cent. of manganese, and 1.50–2.25 per cent. carbon. This was extensively used for heavy work in cutting-tools. Hadfield's manganese-steel is another well-known self-hardening steel. This is used for armor-plate, burglar-proof safes, jaws of rock-crushers, etc. It is so hard that it will stand great wear and cannot be machined.—**Siemens-Martin steel,** steel made in the open-hearth furnace with regenerators by the Siemens modification of the Martin process. See *steel*1, 1.—**Silicon-nickel steel,** an alloy-steel containing silicon and nickel.—**Soft steel,** steel with a low elastic limit, ductile and not brittle; mild steel: its properties are due to a low percentage of carbon and phosphorus.—**Steel road.** See *steel* ★*roadway*.—**Structural steel.** (*a*) Steel of toughness and ductility as well as of strength, suitable for use in structures such as roofs, bridges, trestles, towers, buildings, and the like. (*b*) Such steel rolled in the shapes adapted for these uses, such as angles, tees, channels, I-beams, T-beams, Z-bars, and deck-beams.—**Tincture of steel,** a hydro-alcoholic solution of ferric chlorid; tincture of iron. It is tonic and hematinic.—**Tool steel,** steel proper containing carbon enough to allow of hardening or tempering: distinguished from *mild* or *structural steel*, which is almost destitute of carbon, incapable of being hardened or tempered, and rather to be viewed as well-purified wrought-iron rendered uniform by fusion.—**Tungsten-chromium steel,** an alloy of steel containing tungsten and chromium in varying proportions. The steel is used in the manufacture of high-speed cutting-tools. See *high-speed* ★*steel*.—**Tungsten-manganese steel,** an alloy steel containing varying proportions of tungsten and manganese. See *air-hardening* ★*steel*, *self-hardening* ★*steel*, and *high-speed* ★*steel*.—**Vanadium steel,** special steel containing vanadium. While the effect of vanadium on steel has not yet been thoroughly investigated, it has been proved that one or two tenths of one per cent. of vanadium added to mild or low-carbon steel raises the elastic limit and tensile strength. As vanadium has a very high melting-point, it is added to steel usually in the form of ★*ferro-vanadium* (which see).—**Whitworth's compressed steel,** steel compressed while in a fluid state by the process patented by Sir Joseph Whitworth in 1865. The steel is cast into molds with forged steel hoops, and a pressure of from 6 to 15 tons per square inch is applied for the purpose of preventing the occluded gas from escaping from the molten metal and forming blow-holes or pipes. See *compressed steel*.—**Wolfram steel,** steel containing tungsten as an alloying element to give special hardness and strength.

II. *a.*—**Steel alloy.** See ★*alloys*.—**Steel cage,** the steel framework or skeleton for a building, as set up before the brick or stone casing is added.—**Steel luster, wire.** See ★*luster*2, ★*wire*1.

steel-concrete (stēl′kon″krēt), *n.* See *reinforced* ★*concrete*.

steel-faced (stēl′fāst), *p. a.* Faced with steel; specifically, in *etching* and *engraving*, treated by a process by which, in the electrotype bath, a thin coating of steel is deposited on a copper plate, rendering it much more durable. Steel-facing may be removed and renewed.

> *Steel-faced* it may be printed over and over again practically without a limit, for as soon as the steel face should wear off, the plate can be again immersed in the electrotyper's bath and a new coat of steel be deposited.
> *Singer and Strang*, Etching, Engraving, etc., p. 61.

steelhead, *n.* **3.** A large trout, *Salmo rivularis*, of the Pacific coast of the United States.

> The small catch of *steelhead* is the result of a state law which restricted the fishing for this species to the use of hook and line, thus preventing professional fishermen from operating nets.
> *W. A. Wilcox*, in Rep. U. S. Fish Com., 1905, p. 52.

steeling, *n.* **3.** In general, the operation of overlaying, tipping, or facing with steel. It is usually done to a softer and tougher metal in order that the required hardness, resistance to abrasion, or tempering quality may be secured by the steel face or point. It was formerly practised more than now, because steel of the desired properties was much more costly than iron, and the solidity or mass was given by iron, and the steel quality secured at the working-face only. Ax-heads were made with a steel bit or cutting-edge on a wrought-iron head; rails were faced with steel on their tops; armor-plate was steel-faced.

steel-iron (stēl′ī″ẽrn), *n.* **1.** Iron, or metal made by puddling or some other non-fusion process, which contains enough carbon to possess the hardening and tempering quality and some other properties of steel.—**2.** Iron which is a mechanical mixture of iron and steel, as respects its properties, by reason of incomplete manufacture into either.—**3.** Steel-faced iron.

steelyard2, *n.*—**Crane steelyard,** a steelyard suspended on the hoisting-rope of a derrick or crane the hook of which is the hoisting-hook of the crane, so that objects can be weighed while being hoisted.

steely-bug (stē′li-bug), *n.* The grape-vine flea-beetle (which see, with cut, under *flea-beetle*). *E. G. Lodeman*, The Spraying of Plants, p. 306.

steenbras (stān′bräs), *n.* [Cape D. *steenbras (?), < D. *steen*, stone, + *brasem*, bream.] A South African sparoid fish, *Dentex rupestris*.

steenstrupite (stēn′strup-īt), *n.* Same as *steenstrupine*.

steep2, *n.* **4.** Same as *brasque*.—**5.** *pl.* The solutions or baths in which metals are dipped preparatory to electro-plating.

steeping-pool (stē′ping-pöl), *n.* A pool for steeping or retting flax, hemp, etc.

> That the fiber can be disintegrated and separated from the stalks by steeping in water, like flax and hemp, or jute (as is practiced in India), is well understood, but the *steeping pool* should be avoided if possible.
> *U. S. Dept. Agr.*, Rep. No. 6, p. 29.

steeping-vat (stē′ping-vat), *n.* A vat in which the indigo-plant is steeped in water in order that it may ferment and decompose. The resulting solution of indigo white is run by gravity into the beating-vats, which are situated on a lower level.

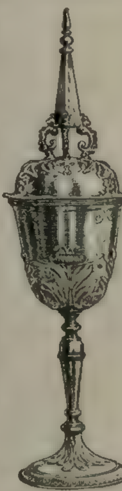
steeple (stē′pl), *v. i.*; pret. and pp. *steepled*, ppr. *steepling*. To rise above other buildings or objects as a steeple or a spire.

> They have adopted what they call 'the Chicago method' in putting up these *steepling* hives.
> *J. Ralph*, in Harper's Mag., Feb., [1892, p. 427.

steeplechase, *n.* **2.** In *billiards*, primarily, an exhibition stroke in which the cue-ball is lifted from the table and made to jump, the cue having first been laid flat upon the table. It can be fair, but is liable to be foul (a push), and on Nov. 28, 1905, the English Billiard Association, called upon to rule it out of regular billiards, enacted equivocally that, "properly made, it is fair." It is neither recognized nor needed in American billiards.

steeple-compound (stē′pl-kom″pound), *a.* See ★*tandem-compound*.

steeple-cup (stē′pl-kup), *n.* A silver standing cup having on its cover a pyramidal, steeple-like crest.

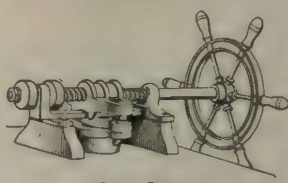


Steeple-cup.

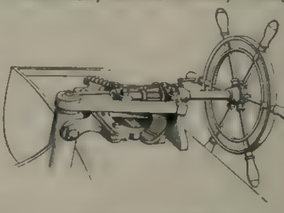
Steerage officer. See ★*officer*.

steerageway, *n.*—**To make steerageway,** to have speed enough to be controlled by the rudder: said of a ship.

steerer, *n.* **4.** A machine for controlling the rudder of a boat or yacht. It consists essentially of a hand steering-wheel which controls the rudder-head by means of a screw or by gearing. In the screw type the wheel is on a screw-arbor carrying a large nut having wings at right angles with the screw. Each wing has a slot, and the rudder-head carries corresponding wings, one of which carries a steel pin that fits in the slot at either the right or the left of the rudder-head. Turning the wheel causes the nut to travel on the screw, and its motion, through the pin, causes the rudder-head to turn to the right or left. In the rack-and-pinion type the rudder-head supports a quadrant having at its outer edge a quadrant-rack. The wheel controls an arbor which carries a pinion that meshes into the quadrant-rack, and any motion of the wheel causes the quadrant and the rudder to turn to the right or left.



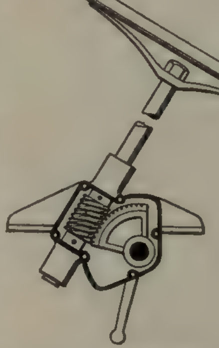
Screw Steerer.



Rack-and-pinion Steerer.

steering-engine (stēr′ing-en″jin), *n.* In *shipbuilding*, an engine for moving the rudder and steering by steam, hydraulic, or electric power on large steamers. As usually fitted, the engine follows the motion of the steering-wheel on the bridge or other steering station, so that the effect is the same as if the rudder were moved or stopped directly by the steering-wheel. This is accomplished in steam and hydraulic engines by a distributing valve on the engine controlled by suitable shafting or ropes from the steering-wheel. When the valve is opened in one direction by turning the wheel, the engine in moving tends to close the valve so that the engine stops when the wheel stops. Electric steering-engines are complicated in their controlling mechanism and have been little used.—**Steering-engine room,** a compartment on a ship in which the steering-engine is placed. In a war-ship, this is usually in the extreme after part of the vessel under the protective deck.

steering-gear, *n.* **2.** (*a*) The mechanism used in motor-cars to steer the pair of wheels which guide the car. Most motor-cars are steered by the control of the front wheels, which is given by mounting these wheels upon steering-knuckles on the front axle; the knuckles are held in position by links or rods connected to a sector, the latter being controlled by a screw on the post of the steering-wheel. If a lever tiller is used, the knuckle-arms are linked to an arm on the tiller upright or post. The wheel-steerer is preferred, since it is a self-locking or irreversible gear and is much less trying to the operator on long runs. (*b*) In traction-engines and road-rollers, a gear operated by chains wound upon a drum and drawing the front axle out of parallel with the rear or driving axle. This drum may be driven by worm and screw by hand, or it may be driven by power by reversing clutches or gear. (*c*) The handle-bar and connected parts for steering a tricycle, motor-cycle, or bicycle.—**Steam steering-gear,** the steam-driven machinery by which the rudder of a vessel is operated. There are several types. Those which are placed at the stern of the vessel operate directly upon a quadrant or sector attached to the rudder-post; those more directly under the pilot-house or wheelman's position operate through chains and rods to pulleys and purchases at the tiller. In either form some flexible element must be introduced to prevent shocks of wave-impact from wrecking the machine or its mountings. A very usual design is a reversing-engine having two cylinders with cranks at 90° so as to avoid a dead-center. The valves are driven by a reversing link-motion, the motion of the pilot's wheel to port throwing the link downward, as for forward motion, and the turning of the wheel to starboard causing



Steering-gear.

the engine to reverse. The steering-chains are coiled upon a drum turned by this engine, and one chain is wound up by one motion while the other is unwound, and vice versa. To make the motion of the pilot's wheel resemble the ordinary hand-steering movements, the turning of the chain-drum draws the link up or down to mid-gear again if the wheel of the helmsman is held still, and the motion of the drum ceases. The engine keeps on winding the rudder-chain as long as the helmsman moves his wheel, but when he stops the engine stops. This feature is secured in all steering-gears, but different means are used in different designs.

steering-knuckle (stēr′ing-nuk″l), *n.* That part of the front axle of a motor-car which furnishes the bearing for front wheels. Each wheel fits upon one arm of a knuckle, the other being connected by links to the steering-wheel mechanism. The knuckle is supported in a strong yoke at the end of the axle proper, so that the vertical plane in which the wheels turn can be turned at any desired angle with the long axis of the vehicle and turn the latter in the desired direction. The wheels turn on the knuckle-arm by ball-bearings.

The front axle is provided with ball-bearing *steering knuckles*, which assures the maximum solidity and great ease of steering. *Sci. Amer. Sup.*, Aug. 27, 1904, p. 23953.

steering-lever (stēr′ing-lev″ėr), *n.* A hand-lever for operating a steering mechanism.

When you have the *steering-lever* in your hand and can speed ahead at your own pleasure by simply pressing a button, or lever . . . it is truly a new and delightful sensation. *Hiscox*, Horseless Vehicles, p. 20.

steering-stand (stēr′ing-stand), *n.* In *shipbuilding*, a pedestal or support for a small steering-wheel on a bridge or other steering-station. In the stand are gear-wheels and the upper part of the shafting by which the motion of the wheel is transmitted to the steering-engine.

steering-telegraph (stēr′ing-tel″ẹ̄-gráf), *n.* See ⋆*telegraph*.

steering-wheel, *n.* **2.** A wheel by which the driver of a motor-car alters the direction of the front or rear pair of wheels, thus steering the car.

steer-shaft (stēr′sháft), *n.* A controlling-rod for putting any part of a mechanism into a desired position and holding it there, as in valve-gear, governing mechanisms, and the like.

Stefan's law. See ⋆*law*¹.

stegnosis (steg-nō′sis), *n.* [NL., ‹ Gr. *στέγνωσις*, obstruction of the bowels or pores, ‹ *στεγνοῦν*, obstruct, make tight, ‹ *στεγνός*, contracted from *στεγανός*, tight, water-tight, close.] Obstruction in an excretory or secretory canal.

stegnotic (steg-not′ik), *a.* [Gr. *στεγνωτικός*, ‹ *στέγνωσις*, obstruction.] Suppressing secretion; constricting.

stegoceph (steg′ọ̄-sef), *n.* [*stegoceph*(*alian*).] A stegocephalian.

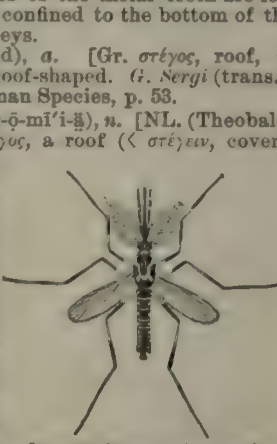
stegocrotaphous (steg-ọ̄-krot′a-fus), *a.* [Gr. *στέγειν*, cover, + *κρόταφος*, the side of the head, + *-ous*.] Having the temporal fossa roofed over with bone, as it is in most turtles, and in the rare mammal *Lophiomys*. Contrasted with ⋆*therocrotaphous*.

The turtles have a *stegocrotaphous* skull, unlike all other reptiles save the Cotylosauria, Procolophonia, etc. *Williston*, in Proc. U. S. Nat. Mus., XXXII. 488.

stegodont (steg′ọ̄-dont), *a.* [NL. *Stegodon* (*-odont-*).] Pertaining to or having the characters of the elephant subgenus *Stegodon*, in which the ridges of the molar teeth are low and the cement confined to the bottom of the intervening valleys.

stegoid (steg′oid), *a.* [Gr. *στέγος*, roof, + *εἶδος*, form.] Roof-shaped. *G. Sergi* (trans.), Var. of the Human Species, p. 53.

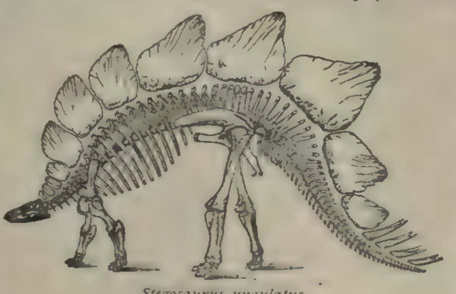
Stegomyia (steg-ọ̄-mī′i-ạ̈), *n.* [NL. (Theobald, 1901), ‹ Gr. *στέγος*, a roof (‹ *στέγειν*, cover), + *μυῖα* a fly.] **1.** An important genus of mosquitos having the palpi short and four-jointed in the female and long and five-jointed in the male. They are black in color, marked with silvery white. The head is completely clothed with broad, flat scales. About 40 species are known. *S. fasciata* (*calopus*) is the transmitter of yellow fever and is known as the *yellow-fever mosquito*. The genus is of tropical and subtropical distribution.—**2.** [*l. c.*] A mosquito of this genus.



Stegomyia fasciata (*calopus*), male. (Howard, U. S. D. A.)

stegorrhine (steg′ọ̄-rin), *a.* [Gr. *στέγος*, a roof, + *ῥίς* (*ῥιν-*), nose.] In *craniom.*, having a high bridge of the nose, like man. *Von Török.*

Stegosaurus, *n.* **1.** It was characterized by a very small skull with a diminutive brain-cavity (not more than one tenth the capacity of the neural cavity in the sacrum and relatively the smallest known in any land vertebrate), large nostrils, edentulous premaxillæ, and numerous and spatulate teeth. The vertebræ were amphicœlous. The sacrum consisted of four fused vertebræ, sometimes with one or more lumbars added in front. The anterior caudal vertebræ were the largest of all and bore strong chevron-bones. The fore limbs were short and stout and the hind limbs long and massive, the femur being from 5 to 6 feet in length. The foot was 3-toed, with a fourth toe rudimentary. The dermal armature consisted of a double row of enormous erect flattened bony plates extending from the back of the head almost to the tip of the tail, the largest being over the pelvis. Essentially complete skeletons show that the animal attained a length of almost 40 feet.



Stegosaurus ungulatus. Restoration. Marsh. (From Dana's "Manual of Geology.")

stegurous (ste-gū′rus), *a.* [Gr. *στέγος*, a roof, + *οὐρά*, tail.] Referring to a type of tail structure, in bony fishes, in which the vertebral column terminates in front of the tail-fin with a vertebra bearing a broad vertical fan-shaped plate which is formed by the fusion of several fin-supports and hemapophyses. This terminal plate generally incloses a short upwardly directed remnant of the notochord or a bony style (urostyle).

stein² (stīn), *n.* [G. *stein*, stone.] An earthenware mug, especially one designed to hold beer.

Steindachneria (stīn-däk-nē′ri-ạ̈), *n.* [NL., named after Dr. Franz *Steindachner*, an Austrian zoölogist.] A genus of macruroid fishes found in deep seas.

Steinegeria (stī-ne-jē′ri-ạ̈), *n.* [NL., named after Leonhard *Stejneger*, of the U. S. National Museum.] A genus of fishes of the family *Steinegeriidæ*, found only in the Gulf of Mexico.

Steinegeriidæ (stī″ne-jẹ̄-rī′i-dē), *n. pl.* [NL., ‹ *Steinegeri*(*a*) + *-idæ*.] A family of fishes related to the *Bramidæ*, found in the Gulf of Mexico.

stele³, *n.* **2.** In *bot.*, the axial cylinder of a stem, beginning as the plerome (see *plerome*, 2, and *plerome-sheath*) and passing into the older tissues which supply the vascular tissue of the plant.

Stelgis (stel′jis), *n.* [NL., ‹ Gr. *στελγίς*, a variant of *στλεγγίς*, a scraper.] A genus of fishes of the family *Agonidæ*, found in deep waters off the California coast.

Stelgistrum (stel-jis′trum), *n.* [NL., ‹ Gr. *στέλγιστρον*, a variant of *στλέγγιστρον*, a scraper.] A genus of cottoid fishes found in Bering Sea.

stelic (stē′lik), *a.* [*stel*(*e*)³ + *-ic*.] Of or pertaining to a stele. See ⋆*stele*³, 2.

stella, *n.* **2.** A cross-shaped bandage.

Stellar heat, nebula, parallax, etc. See ⋆*heat*, etc.

Stellate ganglion. See ⋆*ganglion*.

Stellenbosch (stel′en-bosh), *v. t.* [See the extract.] To 'send to Coventry'; side-track. [Slang.]

In the early days of the Boer war (1899–1902) Stellenbosch was one of the British military bases, and was used as a "remount" camp; and in consequence of officers being sent back to it when they had not distinguished themselves at the front, the expression "to be *Stellenbosched*" came into general use; so much so, that in similar cases officers were spoken of as "*Stellenbosched*" even if they were sent to some other place altogether. *Encyc. Brit.*, XXXII. 851.

Stellerina (stel-ẹ-rī′nạ̈), *n.* [NL., named after Georg Wilhelm *Steller*, a naturalist and explorer, the first to study the fishes of Bering Sea.] A genus of agonoid fishes found in rather deep water off the coasts of Oregon and California.

Stelleroidea (stel-ẹ-roi′dẹ̄-ạ̈), *n. pl.* [NL.] A group or class of *Echinodermata* including the starfish, brittle-stars, sand-stars, basket-fish, and branching-stars. All are characterized by a flattened, stellate body consisting of a central disk bearing radiating arms, by radiately arranged genital organs, by not having the body attached by the aboral surface, and by having the podia usually limited to the lower surface of the body.

Stellifer (stel′i-fėr), *n.* [NL., ‹ L. *stellifer*, bearing stars, ‹ *stella*, star, + *ferre*, bear.] A genus of sciænoid fishes. All of the species are rather small and all are found in American waters.

stellino (stạ̄-lē′nọ̄), *n.* [It., ‹ *stella*, ‹ L. *stella*, a star.] A silver coin of Florence, struck under Cosmo de' Medici (1537–74). The name alludes to a star (a mint-mark) on the obverse.

stellium (stel′i-um), *n.*; pl. *stellia* (-ạ̈). [NL., ‹ L. *stella*, a star.] In *astrol.*, a crowd of planets in an angle. See ⋆*doryphory* and ⋆*satellitium*, 2.

stelth, *n.* A simplified spelling of *stealth*.

stem¹, *n.*—**Stem analysis.** See ⋆*tree analysis*.—**Stem density,** in *forestry*, the extent to which the total number of trees in a given forest approaches the total number which the index forest of the same age and composition contains. It is ordinarily expressed as a decimal, 1 being taken as the numerical equivalent of the stem density of the index forest.

stem-blight (stem′blīt), *n.* A fungous disease of plants which attacks the stem. Stem-blight of the peach is due to *Phoma Persicæ*, that of the potato is attributed to *Fusarium acuminatum*, and that of rye to *Leptosphæria herpotrichoides*.

stem-borer (stem′bōr″ėr), *n.* An insect the larva of which bores in the stems of plants.—**Clover stem-borer,** an American erotylid beetle, *Languria mozardi*, whose larvæ bore in the stems of red clover.—**Lima bean stem-borer,** the larva of an American phycitid moth, *Monoptilota nubilella*, which bores into the stems of Lima beans.

stem-form (stem′fôrm), *n.* The form that determines the stem; the ancestral form.

Darwin was inclined to believe that articulate speech came at an early period in the history of the *stem-form* of man. *Nature*, Sept. 26, 1901, p. 545.

stem-gall (stem′gâl), *n.* A gall upon the stem of a leaf.—**Strawberry-leaf stem-gall,** an elongate gall occurring on the leaf-stems of the strawberry-plant. It is evidently a cynipid gall, but the adult insect is unknown.

stem-mark (stem′märk), *n.* A mark or symbol used to indicate the stem or family to which the owner belongs. *H. Haddon*, Evolution in Art, p. 254.

stem-mat (stem′mat), *n.* A thick, heavy mat secured to the stem of a towboat to protect the side of a vessel against which the boat is pushed or rested in docking.

stemmer² (stem′ėr), *n.* [*stem*¹ + *-er*¹.] One who removes stems; especially one who separates the midribs from the leaves of tobacco.

stemming² (stem′ing), *n.* The act of removing the mid-rib ('stem') from a tobacco-leaf. See *stemmed* ⋆*tobacco* and ⋆*stemmer*².

stem-mother (stem′muᴛʜ″ėr), *n.* The foundress of a summer colony of *Aphididæ* which is herself born of a winter egg; any female plant-louse that hatches in the spring from a winter egg. The first spring generation of any species is composed of stem-mothers.

During the last week in April the *stem mothers* of an aphis, determined by Mr. Th. Pergande to be a species of Myzus, were found depositing young with A. mali. These *stem mothers* were large, globular, bluish-black, slightly pruinose, and the young were of a light-brown color. *Proc. Ass'n Econ. Ent.*, 1900, p. 68.

stemonaceous (stē-mọ̄-nā′shius), *a.* [NL. *Stemonace*(*æ*) + *-ous*.] Belonging or pertaining to the *Stemonaceæ*.

stem-ossicle (stem′os″i-kl), *n.* Any one of the calcareous elements composing the stem or column of a pelmatozoan echinoderm. Called *columnals* in Bather's terminology.

stem-pole (stem′pōl), *n.* See ⋆*polarity*, 1 (*c*).

stem-rot (stem′rot), *n.* A fungous or bacterial disease affecting the stems of various plants. That of the carnation is due to a species of *Rhizoctonia*; that of the clover to *Sclerotinia Trifolium*; that of the cucumber to *S. Libertiana*; that of the egg-plant and sweet potato to *Nectria Ipomœæ*; and that of tobacco to *Botrytis longibranchiata*.

stem-sawfly (stem'sâ"flī), *n.* Any sawfly of the family *Cephidæ*. The larvæ of these insects live in the stems of plants and in the tender shoots of trees and bushes. *Cambridge Nat. Hist.*, V. 504.

stem-winding (stem'wīn"ding), *a.* Wound by turning the stem, and not by a key: said of a watch.

stenciling, stencilling (sten'sil-ing), *n.* 1. The act of using or the process of marking with a stencil; also, the markings, collectively, so produced.—2. Specifically, in *ceram.*, the act or process of reserving spaces or patterns on the ware in ground-laying. A stencil, composed of rose-pink water-color mixed with sugar or common molasses, is painted on the places which are to be reserved. When thoroughly dry, boiled linseed-oil is laid over the entire surface, and when this has become dry the ware is immersed in a tub of clear water. After being allowed to soak for a few moments the stenciling medium is easily removed by light touches of a soft tuft of cotton, leaving the reserved patterns clear and clean.

stenciling-press (sten'sil-ing-pres), *n.* A printing-press employing stencils instead of type. The stencil, perforated in minute holes arranged in the form of letters, is placed in the press and ink is pressed through the perforations, stenciling the letters on the paper: used in addressing-machines.

stencil-machine (sten'sil-ma̤-shēn"), *n.* A simple form of type-writer for cutting letters and figures in sheets of oiled paper to form stencils for marking packing-boxes. It consists of a revolving horizontal wheel of steel supported at the center, in a suitable frame, and carrying stamps for cutting out the stenciled letters and a lever for pressing each stamp through the paper as it is brought in turn, by the revolution of the wheel, under the lever. It has a graduated table to guide the paper as it passes under the stamp and to hold it firmly in place as each letter is stamped.

stender-dish (sten'dėr-dish), *n.* A shallow circular glass dish with an accurately ground glass cover, used in microscopic work.

> A simpler and more striking method is to float a quantity of these spores on the surface of water half filling a *stender dish*; then cover and shake vigorously for a moment. *Bot. Gazette*, Jan., 1904, p. 12.

stenellipsoid (sten-e-lip'soid), *n.* [Gr. *στενός*, narrow, + E. *ellipsoid*.] In *anthrop.*, a narrow cranium of ellipsoid form. *G. Sergi* (trans.), Var. of the Human Species, p. 51.

stenion (sten'i-o̤n), *n.*; pl. *stenia* (-a̤). [NL., < Gr. *στενός*, narrow.] In *craniom.*, one of the points on the alisphenoid at which the skull is narrowest. *Von Török.*

stenobathic (sten-ọ-bath'ik), *a.* [Gr. *στενός*, narrow, + *βάθος*, depth, + *-ic*.] Having a narrow range of depth: said of animals living in the water between definite limits of depth, as contrasted with ★*eurybathic* (which see).

> Similarly, in regard to depth, species have been classed as eurybathic and *stenobathic*, but, since increased depth practically means diminished temperature, these are probably merely expressions of the same fact in another form. *Encyc. Brit.*, XXXIII. 934.

stenobregmate (sten-ọ-breg'mạ̄t), *a.* [Gr. *στενός*, narrow, + *βρέγμα*, the front part of the head.] In *craniom.*, having a laterally compressed high vertex, like the Eskimo. *J. C. Pritchard.*

stenocardiac (sten-ọ-kär'di-ak), *a.* [Gr. *στενός*, narrow, + *καρδία*, heart, + *-ac*.] Relating to or affected with angina pectoris.

stenocephalic (sten-ọ-se-fal'ik), *a.* [Gr. *στενός*, narrow, + *κεφαλή*, head, + *-ic*.] 1. Same as *stenocephalous*.

> By dolichocephalic, chamaecephalic and *stenocephalic* crania within the race we understand those of individuals having their *B/L*, *H/L* and *B/H* indices below the racial mean; by brachycephalic, hypsicephalic, platycephalic crania, those of individuals having the corresponding indices above the mean.
> *C. D. Fawcett*, in Biometrika, Aug., 1902, p. 462.

2. Specifically, belonging to one of the divisions of cranial forms given by Aitken Meigs, and characterized by merocephalic form, with receding forehead, triangular crown, and flat occiput.

stenocephalus (sten-ọ-sef'a̤-lus), *n.*; pl. *stenocephali* (-lī). [NL., < Gr. *στενός*, narrow, + *κεφαλή*, head.] A narrow type of skull. *G. Sergi.*

stenochromy, *n.* The art of printing several colors at one impression: (4) by printing colors (from separately inked plates) successively on an elastic cylinder and then transferring the combined impressions upon the desired surface of paper or metal. See *Orloff* ★*process*.

stenocoriasis (sten"ọ-kọ-rī'a̤-sis), *n.* [NL., < Gr. *στενός*, narrow, + *κόρη*, pupil, + *-iasis*.] Narrowing of the pupil of the eye.

stenocranial (sten-ọ-krā'ni-a̤l), *a.* [Gr. *στενός*, narrow, + *κρανίον*, skull, + *-al*¹.] In *anthrop.*, characterized by or exhibiting a skull of less than medium width. *W. R. Macdonell*, in Biometrika, March–July, 1904, p. 240.

stenocrotaphy (sten-ọ-krot'a̤-fi), *n.* [Gr. *στενός*, narrow, + *κρόταφος*, temple, + *-y*³.] In *anthrop.*, narrowness of the temples, particularly constriction of the region of the temporal fossæ. *Jour. Anthrop. Inst.*, July–Dec., 1901, p. 258.

stenografer, stenografic, stenografy. Amended spellings of *stenographer*, etc.

stenometer (ste-nom'e-tėr), *n.* [Gr. *στενός*, narrow, + *μέτρον*, measure.] A distance-measurer consisting of a small telescope with a divided object-glass and a micrometer-screw for moving the half-lenses. At the distant point a rod is placed carrying two targets a known distance apart. The observation consists in making their images coincide by turning the screw and reading the micrometer-head, as in heliometer work.

> The rivers were meandered by using a prismatic compass for directions and a *stenometer* for distances.
> *Rep. U. S. Geol. Surv.*, 1900-01, p. 168.

stenostegnosis (sten"ọ-steg-nō'sis), *n.* [NL. in form, < Steno (? see def.) + Gr. *στέγνωσις*, obstruction; but apparently an error for **stenostenosis*.] Stricture of Steno's duct.

stenostenosis (sten"ọ-ste-nō'sis), *n.* [NL., < Gr. *στενός*, narrow, + *Steno* (Steno's duct) + *-osis*.] Same as ★*stenostegnosis*.

stenothermal (sten-ọ-thėr'mal), *a.* [Gr. *στενός*, narrow, + *θέρμη*, heat.] In *zoöl.*, incapable of enduring a great range of temperature; not found in places differing greatly in their temperature: contrasted with ★*eurythermal*.

> In relation to temperature the wide-ranging species are termed eurythermal, the limited, *stenothermal* (Moebius); the terms are useful to record a fact, but are not explanatory. *Encyc. Brit.*, XXXIII. 934.

stenothorax (sten-ọ-thō'raks), *n.* [NL., < Gr. *στενός*, narrow, + *θώραξ*, thorax.] A narrow chest.

stentando (stān-tän'dọ), *a.* [It., ppr. of *stantare*, toil, labor, be in want, < ML. **abstentare*, freq. of L. *abstinere*, abstain. See *abstain*.] In *music*, same as *ritenuto*, but with heavy emphasis on the tones.

step, *v. t.* 6. In *elect.*, to raise or lower (the voltage of an alternating-current circuit) by means of transformers: see *to* ★*step up* and *to* ★*step down*.

> The current is furnished to a sub-station, one compartment of which contains the company's transformers, etc., which *step* the pressure down to 2,000 volts and deliver the current to the 2,000-volt bus-bars in the municipality compartment.
> *Elect. World and Engin.*, Aug. 8, 1903, p. 230.

Stepped up, arranged in steps.

> The terraces being *stepped up* with revetments wherever the natural features of the ground had not availed, to maintain the earth in position.
> *S. B. Miles*, in Geog. Jour. (R. G. S.), XVIII. 480.

To step down, in *elect.*, to lower (the voltage of an alternating-current circuit) by transformation.—**To step up,** in *elect.*, to raise (the voltage of an alternating-current circuit) by transformation.

step, *n.* 13. In *mach.*: (*c*) The radial distance on a cone or step-pulley of a machine between the belt-face on one diameter and the belt-face on the next larger or smaller. Twice the step is the difference in the diameters of the successive belt-surfaces. In England also called the *fall*.—15. In *math.*, a change of place without rotation. *Clifford.*—**Fifth step,** in *acoustics*, the interval of the perfect fifth (vibration-ratio $\frac{3}{2}$) when used as a measure for precise tone-determination. See *third* ★*step*.—**In step,** in *elect.*, having the same frequency and continually in the same phase: said of two or more alternating currents or alternating-current generators or motors.—**Step-and-platform topography.** See ★*topography*.—**Step by step.** (*c*) One step after another; one step at a time; slowly and methodically; in *physics*, used to designate various methods of measurement, as in the determination of magnetization where the magnetizing force is increased discontinuously a step at a time and the induction is measured at each stage. Step-by-step methods are also frequently employed in the determination of the wave-form of alternating currents and in many other cases.—**Step-by-step method.** Same as *point-to-point* ★*method*.—**Step-by-step telegraph,** a method of telegraphic signaling in which the pointer of the receiving instrument moves discontinuously, step by step, over a dial marked with the various characters of the alphabet.—**Third step,** in *acoustics*, the interval of the natural major third (vibration-ratio $\frac{5}{4}$) when used as a measure for precise tone-determination: compare *fifth* ★*step*. In ancient musical theory it was supposed that only such intervals were correct as could be attained by the use of fifth steps, but it is now held that the use of third steps, alone or with fifth steps, is not only valid but necessary, since the consensus of musical opinion as early as the sixteenth century began to discard the tuning of certain intervals by the ancient system. Up to that time theorists had held, for instance, to the Pythagorean third, derived by taking four fifth steps upward from the starting-tone (discarding the octaves), with the vibration-ratio $\frac{81}{64}$. This was so dissonant that it was useful neither alone nor in the formation of the major triad. The adoption of the natural third step at once made feasible a better theory of the scale and of all triads. All the recognized intervals of modern theory (over 100 within the octave) are definable in fifth steps and third steps, or some combination of them.

step-bearing (step'bãr"ing), *n.* In *mach.*, a bearing which carries a vertical shaft; the bearing in which the weight of a vertical shaft is supported. *Sci. Amer. Sup.*, Aug. 13, 1904, p. 23925.

step-down (step'doun), *n.* and *a.* I. *n.* In *elect.*, a transformer or other device for lowering the potential in an electric circuit.

II. *a.* Serving to convert a current of higher voltage into one of lower voltage: said specifically of transformers and allied devices.—**Step-down transformer,** in *elect.*, a transformer with more turns in the primary than in the secondary coil so that the secondary voltage is lower than that of the primary circuit; a transformer used to step down from higher to lower voltage. *Science Abstracts*, VI., sec. B, p. 22.

Stephanian (stē-fā'ni-a̤n), *a.* and *n.* In *geol.*, noting the uppermost division of the Carboniferous system in Europe where it is developed as lagoon deposits: used in contrast to the *Uralian*, which notes the marine sedimentation of the same period.

Stephanoberycidæ (stef"a̤-nọ-be-ris'i-dē), *n. pl.* [NL., < *Stephanoberyx* (*-beryc-*) + *-idæ*.] A family of berycoid fishes containing only one genus and two species, found in deep seas.

Stephanoberyx (stef"a̤-nọ-ber'iks), *n.* [NL., < Gr. *στέφανος*, a crown, + NL. *Beryx*.] A genus of berycoid fishes of the family *Stephanoberycidæ*.

Stephanocrinus (stef-a̤-nok'ri-nus), *n.* [NL., < Gr. *στέφανος*, a crown, + *κρίνον*, a lily. See *crinoid*.] The only genus of the crinoid family *Stephanocrinidæ*, an aberrant representative of the order *Larviformia*, in which the calyx is small and compact and consists of three basal, five radial, and five interradial plates, the radials being deeply forked, very short biserial arms arising from them. It occurs in the Silurian rocks of America and Bohemia.

stephanoscope (stef'a̤-nọ-skōp), *n.* [Gr. *στέφανος*, a crown, + *σκοπεῖν*, view.] An instrument devised by Dove (1847) for demonstrating the formation by interference of the small coronal rings of color seen around any source of light. It consists essentially of a series of close concentric circles scratched by a diamond point on glass. Oertling substituted a rectangular network of straight lines and gave the plate a rapid rotation in its own plane.

stephanozygomatic (stef"a̤-nō-zī-gọ-mat'ik), *a.* [*stephan*(*ion*) + *zygomatic*.] In *craniom.*, relating to the stephanion and the zygomatic arches. *Amer. Anthropologist*, Jan.–March, 1901, p. 38.—**Stephanozygomatic index.** See ★*index*.

step-log (step'log), *n.* A log or piece of timber cut roughly into steps so as to produce a kind of ladder. Evidences of its use are found among the remains of primitive man.

step-motion (step'mō-sho̤n), *n.* Discontinuous motion by a succession of stages or steps, as of a pointer around a dial in the dial telegraph or of the type-wheel in certain systems of printing-telegraphy, or of the sliding-contact devices in certain automatic controllers for electric machinery.

steppage (step'āj), *n.* The act of stepping.—**Steppage gait.** Same as *stepping* ★*gait*.

steppe, *n.* 2. In *phytogeog.*, xerophilous grassland. This formation as met with at high elevations is distinguished as *alpine steppe*. *A. F. W. Schimper* (trans.), Plant-Geog., p. 162.—**Steppe disease.** See ★*disease*.

steppe-lake (step'lāk), *n.* A shallow temporary lake on a subarid plain, such as those which occur on steppes.

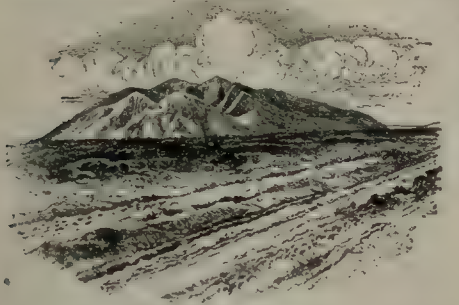
> Lake Zyma, the only lake of any size in Morocco, was carefully examined. It is a typical *steppe-lake*, becoming in summer little more than a sheet of salt.
> *Geog. Jour.* (R. G. S.), XVIII. 92.

stepping-line (step'ing-līn), *n.* Same as *bearding-line*.

step-pyramid (step′pir″a̤-mid), *n.* Same as *stepped pyramid* (which see, under *stepped*).

The ziggurat or *step-pyramid*, which forms so marked a feature in Babylonian worship.
Athenæum, Sept. 19, 1903, p. 387.

steptoe (step′tō), *n.* [Origin obscure.] A hill or mountain surrounded and isolated by a large flow or plain of lava. [Northwestern U. S.]



Steptoe, Big Butte, Idaho.

The border of the plains contours around the enclosing mountains, converting valleys into bays, spurs into headlands and outlying knobs into '*steptoes.*' . . . The most remarkable examples of the latter forms are two dissected rhyolitic volcanoes, of which the highest, Big Butte, rises 2,350 feet over the plains. *Science*, April 24, 1903, p. 672.

step-up (step′up), *n.* and *a.* **I.** *n.* In *elect.*, a transformer or other device for increasing the voltage in an electric circuit. *Elect. World and Engin.*, Nov. 21, 1903, p. 864.

II. *a.* Serving to convert a current of lower voltage into one of higher voltage: said specifically of transformers and allied devices. *F. B. Crocker*, Elect. Lighting, II. 149.—**Step-up transformer**, in *elect.*, a transformer the secondary coil of which contains more turns than the primary, so that the secondary voltage is higher than that of the primary circuit; a transformer used to step up from lower to higher voltage. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 125.

step-way (step′wā), *n.* A flight of steps; a stairway.

At Cnossus we have traces of a southern *stepway* and entrance.
A. J. Evans, in Jour. Roy. Inst. of Brit. Architects, [Dec. 20, 1902, p. 104.

step-wise (step′wīz), *a.* In the manner of steps; by regular ascent.

The balustrade of its upper flight rising *step-wise*, and showing at intervals the sockets of its colonnade.
A. J. Evans, in Jour. Roy. Inst. of Brit. Architects, [Dec. 20, 1902, p. 101.

steradian (stẹ̄-rā′di-a̤n), *n.* [Also *stereradian*, prop. **stereoradian*, < Gr. *στερεός*, solid, + L. *radius*, radius, + *-an.*] A unit of solid angular measure; the solid angle subtended at the center by that part of a sphere which is equal to the square of its radius, hence by the unit surface on a sphere of unit radius. *Halsted.*

Stercoral abscess, an abscess communicating with the intestine and containing pus and fecal matter.—**Stercoral ulcer**, an ulcer of the intestinal mucous membrane due to the pressure of hard lumps of fecal matter.

stercorin (stėr′kọ̄-rin), *n.* [L. *stercus* (*-or-*), dung, + *-in*2.] An organic substance obtained from the feces: probably an impure form of cholesterin.

stercorolith (stėr′kọ̄-rọ̄-lith), *n.* [L. *stercus*(*-or-*), dung, + Gr. *λίθος*, stone.] An intestinal calculus formed about a center of fecal matter.

steregon (ster′ẹ̄-gon), *n.* [Prop. **stereogon*, < Gr. *στερε(ός)*, solid, + *γωνία*, an angle.] In *geom.*, the whole amount of solid angle around a point in space.

stereo. An abbreviation (*a*) of *stereotype*; (*b*) of *stereotyping*.

stereo-agnosis (ster″ẹ̄-ọ̄-ag-nō′sis), *n.* [Gr. *στερεό*, solid, + *ἀ-* priv. + *γνῶσις*, knowledge. See *agnostic.*] In *mental pathol.*, the inability to apprehend the form of objects by touch, although the peripheral tactual sensitivity is unimpaired or but little reduced. See ★*stereognostic*.

stereobinocular (ster″ẹ̄-ọ̄-bī-nok′ụ̄-lä̤r, -bin-ok′ū-lä̤r), *a.* [Gr. *στερεός*, solid, + E. *binocular.*] Of or pertaining to that form of binocular field-glass in which the interobjective is greater than the interocular distance, thus increasing the stereoscopic effect above that of normal vision.

stereocentric (ster″ẹ̄-ọ̄-sen′trik), *a.* [Gr. *στερεός*, solid, + *κέντρον*, center, + *-ic.*] The term applied, in organic chemistry, to a formula which has been suggested for benzene. It purports to represent the arrangement in space of the carbon and hydrogen atoms in the molecule, and shows one bond of each carbon atom to be directed toward a common center.

A discussion of the various possible space formulæ of benzene and a reply to Graebe's objections to the *stereocentric* representation. *Nature*, July 3, 1902, p. 238.

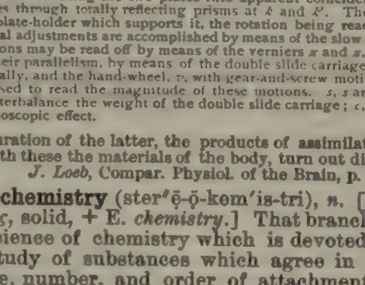
stereochemical (ster″ẹ̄-ọ̄-kem′i-ka̤l), *a.* [Gr. *στερεός*, solid, + E. *chemical.*] Of or pertaining to stereochemistry, or the arrangement of atoms in space.

For the inheritance of form the conditions are not very different. The egg is not the bearer of the form of the full-grown animal, but of certain chemical substances, especially of ferments. According to the *stereochemical* configuration of the latter, the products of assimilation, and with these the materials of the body, turn out differently. *J. Loeb*, Compar. Physiol. of the Brain, p. 202.

stereochemistry (ster″ẹ̄-ọ̄-kem′is-tri), *n.* [Gr. *στερεός*, solid, + E. *chemistry.*] That branch of the science of chemistry which is devoted to the study of substances which agree in the nature, number, and order of attachment of the atoms constituting the molecule, but are believed to differ in the relative position of these atoms in space, as assumed by a hypothesis put forward by Van't Hoff and Le Bel; that branch of chemistry which deals with the relative arrangement in space of the atoms or groups constituting a molecule.

Hardly a decade had elapsed since the general admission of the doctrine of valency when a fundamental deepening of the same was announced, which our science owes to two savants, working independently of each other—to Le Bel and van't Hoff. These chemists, considering those substances which turn the plane of polarization of light, arrived at views which soon led to a result until then thought to be out of reach, a conception of the aggregation of the atoms within the molecules in space. Thus a field of study was created which van't Hoff called "la chimie dans l'espace" and which we now call *Stereochemistry*. *V. Meyer*, in Smithsonian Rep., 1890, p. 366.

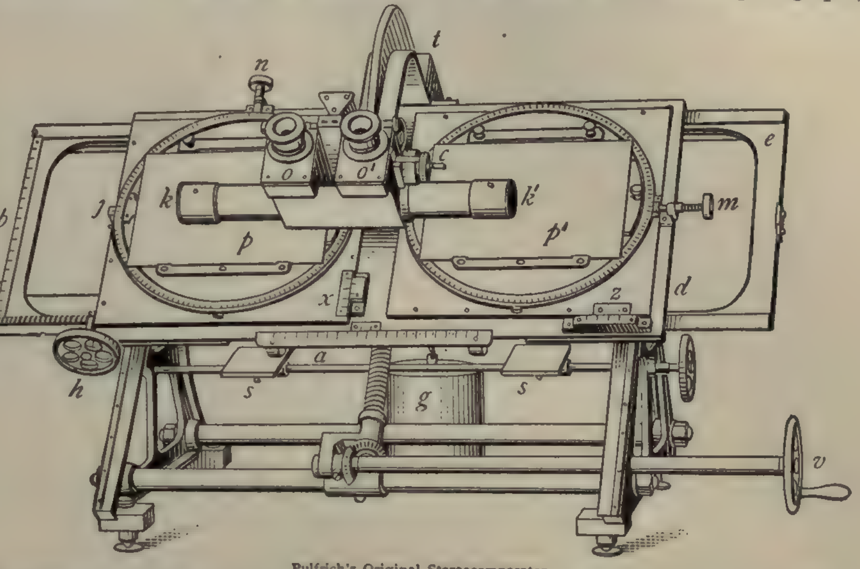
stereochromoscope (ster″ẹ̄-ọ̄-krō′mọ̄-skōp), *n.* [Gr. *στερεός*, solid, + E. *chromoscope.*] A form of stereoscope by which the reproductions are seen stereoscopically in their natural colors.



Stereochromoscope.

Two stereoscopic images, placed at *Ss*, axially to the oculars, are viewed by means of light passing through them, the translucent screens at *Ee*, and the platinum mirror *M*. One screen is red, the other blue, and the positives are obtained from negatives secured by the use of appropriate color-screens. A third picture, *S′s′*, is placed above a green screen *E′e′*, and the light reflected from the mirror *CD* passes through the screen and picture, but is reflected from the mirror *M*. The two images *Ss*, in combining, give the sensation of one solid image, and as the images are seen against the colored screens placed at *Ee* and *E′e′*, the combination of colors takes place at the same time.

stereocomparator (ster″ẹ̄-ọ̄-kom′pā-rā-to̤r), *n.* [Gr. *στερεός*, solid, + NL. *comparator.*] **1.** An instrument, invented by Pulfrich in 1901, which utilizes the principle of the stereoscope in the comparison of pairs of photographs, as of a given stellar field, or of the sun, made by the same camera with a short interval of time between them. The stereocomparator optically superposes the two plates, and the images all lie apparently upon an even surface; but any object which has moved between the two exposures becomes at once conspicuous by apparently lying before or behind that surface.



Pulfrich's Original Stereocomparator.

The plates, *p* and *p′*, which are to be compared, are placed on the double slide carriage, *de*, and viewed with a Helmholz reflecting stereoscope which is supported by the bracket *t*. The stereoscope may consist simply of two sets of mirrors which by reflection bring the two plates into apparent coincidence, or it may consist of broken binoculars, *o* and *o′*, which view the plates through totally reflecting prisms at *k* and *k′*. The plate *p* is adjusted to agree in position-angle with *p′* by a rotation of the plate-holder which supports it, the rotation being read off by means of the divided circle and index *j*. The vertical and lateral adjustments are accomplished by means of the slow motions *m* and *n*, *m* moving *p′* laterally, *n* moving *p* vertically. These motions may be read off by means of the verniers *x* and *z*. The adjusted plate pairs may be shifted about without a disturbance of their parallelism, by means of the double slide carriage. The hand-wheel, *h*, with rack-and-pinion motion, moves the plates laterally, and the hand-wheel, *v*, with gear-and-screw motion, moves them up and down. The scales with verniers, *a* and *b*, may be used to read the magnitude of these motions. *s*, *s* are mirrors for reflecting light through the plates; *g*, a weight used to counterbalance the weight of the double slide carriage; *c*, a micrometer which may be used to measure the magnitude of any stereoscopic effect.

In No. 5, vol. xii., of Popular Astronomy, there appears a translation of a paper communicated to the Astronomical Society of Belgium by Dr. G. van Biesbroeck, in which the author traces the evolution of, and describes, the *stereo-comparator* invented by Dr. Pulfrich.
Nature, June 2, 1904, p. 110.

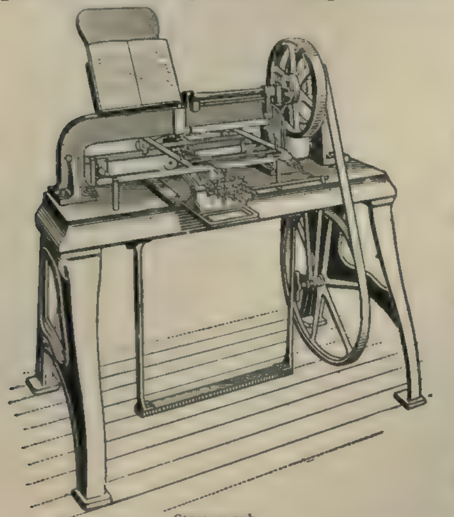
2. A stereoscope of greatly extended interobjective distance by means of which it is possible to make exact measurements of the distances of objects pictured: used in topographical surveying.

stereognosis (ster″ẹ̄-og-nō′sis), *n.* [NL., < Gr. *στερεός*, solid, + *γνῶσις*, knowledge, < *γνῶναι*, know.] In *psychol.*, apprehension by touch of the form or corporeality of objects. See ★*stereognostic*.

stereognostic (ster″ẹ̄-og-nos′tik), *a.* [Gr. *στερεός*, solid, + *γνωστικός*, < *γνῶναι*, know. See *gnostic.*] In *psychol.*, pertaining to the apprehension of form or of the corporeality of objects by touch: as, *stereognostic* perception, *stereognostic* memory. The term was introduced by H. Hoffmann in 1883. *Amer. Jour. Psychol.*, XII. 268.

stereogram, *n.*—**Parallax stereogram**, in *photog.*, a positive transparency, invented by F. E. Ives, which consists of narrow stripes alternately derived from the two halves of a stereogram. In front of this composite positive, but not quite in contact, there is fixed a line-screen which is so adjusted that each eye sees its appropriate set of stripes. *Wall*, Dict. of Photog., p. 483.

stereograph, *n.* **2.** A machine for making the embossed or raised points used in New York point-printing for the blind upon sheet-metal plates, the plates being designed for use in an embossing-press for transferring the points (characters, letters, etc.) to paper. It is an adaptation of the kaleidograph and differs from it in employing a fly-wheel, operated by a foot-pedal or other power, to operate the embossing mechanism, the selection of the points and their position being controlled by the operator by means of the keyboard. See ★*kleidograph* and ★*point-printing.*—**3.** In *craniom.*, an instrument for drawing orthogonal projections of skulls. *Topinard*, Anthrop., p. 268.—**Broca's stereograph**, an apparatus devised by Broca for making outline drawings of skulls.



Stereograph.

stereo-isomer (ster″ẹ̄-ọ̄-ī′sọ̄-mėr), *n.* [Gr. στερεός, solid, + ἴσος, equal, + μέρος, part.] An isomer which differs from the other of the two isomeric bodies, not by a difference in the order of connection of the atoms of the two isomers, but by a difference in the arrangement in space of the two. Thus maleic acid,

$$\begin{matrix}\mathrm{H{-}C{-}COOH}\\ \Vert\\ \mathrm{H{-}C{-}COOH}\end{matrix}$$

, and fumaric acid,

$$\begin{matrix}\mathrm{H{-}C{-}COOH}\\ \Vert\\ \mathrm{COOH{-}C{-}H}\end{matrix}$$

, have the same structure, that is, the same order of connection of the atoms, but in one two hydrogen atoms are believed to be adjacent in space, while in the other a carboxyl group is adjacent to a hydrogen atom: these bodies are accordingly called stereo-isomers.

Work on these bodies was chiefly directed towards the preparation of *stereoisomers* and the effecting of the Beckmann rearrangement. On the basis of Hantzsch and Werner's theory of stereoisomerism (syn and anti) produced by a doubly-linked nitrogen atom, as in the oximes, the halogen imido ethers might exist in the two stereoisomeric forms.
Amer. Chem. Jour., April, 1903, p. 294.

stereo-isomeric (ster″ẹ̄-ọ̄-ī-sọ̄-mer′ik), *a.* Pertaining to the isomerism of chemical compounds due to differences in the relative arrangement, in the molecule, of its constituent atoms or groups. See ★*stereo-isomer. Nature*, July 7, 1904, p. 239.

stereo-isomeride (ster″ẹ̄-ọ̄-ī-som′ẹ-rid), *n.* [*stereo-isomer* + *-ide.*] Same as ★*stereo-isomer. Nature*, July 7, 1904, p. 239.

stereo-isomerism (ster″ē-ọ̄-ī-som′ẹ-rizm), *n.* [*stereo-isomer* + *-ism.*] That kind of isomerism which is produced, not by a difference of order of connection between the atoms of the molecule, but by a difference in their arrangement in space: sometimes called *geometrical isomerism.* See ★*stereo-isomer.*

The succeeding subsection deals with the stereoisomeric carbon-nitrogen compounds, such as the oximes, and is followed by a subsection on the substances that owe their *stereoisomerism* to the configuration of nitrogen atoms. *Nature*, Aug. 11, 1904, p. 341.

stereom (ster′ẹ̄-om), *n.* Same as ★*stereome*, 2.

stereome, *n.* **2.** The hard tissue of the body of invertebrates. Also *stereom.*

Among wants long felt, at least by animal morphologists, is some word that shall express for Invertebrata the idea that the word bone expresses for Vertebrata. . . . Driven back on cumbrous periphrases, I therefore venture to suggest the adoption of the word *Stereom* (*στερέωμα*, that which has been made solid). This word was used by Aristotle ("De Anim. Part.," ii. 9) for the hard as opposed to the soft tissues of the body.
F. A. Bathe, in Nature, Feb. 12, 1891, p. 345.

Originally the calcareous substance of the plates (*stereom*) was pierced by irregular canals, more or less vertical, and containing strands of the soft tissue (stroma) that deposited the *stereom*, as well as spaces filled with fluid. *Encyc. Brit.*, XXVII. 622.

stereomeric (ster″ẹ̄-ọ̄-mer′ik), *a.* Same as ★*stereo-isomeric. Rev. Amer. Chem. Research*, VIII. 309.

Stereometric product. See ★*product.*

stereomicrometer (ster″ẹ̄-ọ̄-mī-krom′e-tėr), *n.* [Gr. στερεός, solid, + E. *micrometer.*] A device for the precise measurement of stereographs.

stereophantascope (ster″ẹ̄-ọ̄-fan′tạ-skōp), *n.* [Gr. στερεός, solid, + φάντα(σμα), appearance, + σκοπεῖν, view.] A binocular form of bioscope or kinetoscope in which a series of stereoscopic views exhibiting the successive phases of a moving scene are shown, giving the semblance of motion together with the effect of perspective. *J. Marey*, in Smithsonian Rep., 1901, p. 318, note.

stereophoroscope (ster″ẹ̄-ọ̄-fōr′ọ̄-skōp), *n.* [Gr. στερεός, solid, + φέρειν (φορ-), bear, + σκοπεῖν, view.] A form of phenakistoscope in which stereoscopic views are used.

stereophotograph (ster″ẹ̄-ọ̄-fō′tọ̄-gråf), *n.* [Gr. στερεός, solid, + E. *photograph.*] A product of stereophotography; a stereoscopic photograph.

stereophotographic (ster″ẹ̄-ọ̄-fō-tọ̄-graf′ik), *a.* Of or pertaining to stereophotography. *Geog. Jour.* (R. G. S.), May, 1908, p. 537.—**Stereophotographic surveying**, a method of surveying or, more specifically, of topography, in which various points in the region to be mapped are located by taking photographs from stations of known position with a stereocamera of great interobjective distance, and locating the points to be determined on these photographs with a stereocomparator.

stereophotography (ster″ē-ọ̄-fọ̄-tog′rạ-fi), *n.* [Gr. στερεός, solid, + E. *photography.*] Stereoscopic photography; the making of stereoscopic pictures by means of photography, using either a stereoscopic camera or a common camera; in the latter case two pictures are taken from points of view which correspond in distance apart to the space between the eyes. *Nature*, Oct. 8, 1903, p. 546.

stereophotomicrograph (ster″ẹ̄-ọ̄-fō″tō-mī-krọ̄-gråf), *n.* [Gr. στερεός, solid, + E. *photomicrograph.*] A photograph of microscopic objects taken with a stereoscopic camera. *Nature*, Nov. 14, 1907, p. 46.

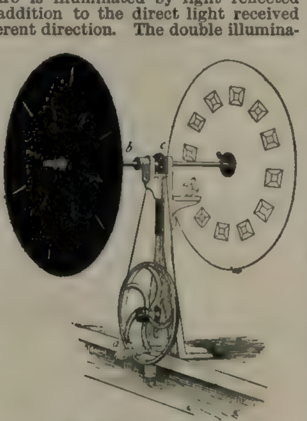
stereoplanigraph (ster″ẹ̄-ọ̄-plan′i-gråf), *n.* [Gr. στερεός, solid, + E. *planigraph.*] A form of stereocomparator by means of which the trigonometrical data needed in the survey of a region may be obtained from the measurement of stereoscopic photographs.

stereoplanula (ster″ẹ̄-ọ̄-plan′ū-lạ̈), *n.*; pl. *stereoplanulæ* (-lē). [NL., < Gr. στερεός, solid, + NL. *planula.*] A solid planula. *Stand. Dict.*

stereoplasm, *n.* **3.** The denser or more solid portion of the protoplasm of the cell, as distinguished from the more fluid portion, or hygroplasm. *Nägeli*, 1884.

Stereornithes (ster-ẹ̄-ôr′ni-thēz), *n. pl.* [NL., < Gr. στερεός, solid, + ὄρνιθες, pl. of ὄρνις, bird.] A group of extinct birds, including some of gigantic size, the remains of which are found in the Santa Cruz formation, Miocene, of Patagonia. They have a large head; a high, compressed, and powerful beak; and a desmognathous palate; and are distantly related to the herons and the *Seriema. Moreno and Mercerat*, 1891.

stereoscope, *n.* **2.** An instrument resembling a catheter with a bell-like extremity, used in the diagnosis of stone in the bladder or of bullets and other foreign substances in the body.—**Achromatic mirror stereoscope**, a stereoscope in which the picture is illuminated by light reflected from a mirror in addition to the direct light received upon it from a different direction. The double illumination imparts a proportionate brilliancy to the photographs and to the perfection of the stereoscopic slide. *E. L. Wilson*, Cyclopædic Photog., p. 20.—**Münsterberg's stereoscope**, in *exper. psychol.*, a stroboscopic device for producing the stereoscopic effect. *Psychol. Rev.*, Jan., 1894, p. 56.



Münsterberg's Stereoscope.

a, handle for rotation of the two disks, *b* and *c*; *b*, disk furnished with slits (for the two eyes) through which the disk *c* is observed; *c*, disk furnished with alternating right-eye and left-eye stereoscopic diagrams.

stereoscopism (ster′ẹ̄-ọ̄-skō-pizm), *n.* [*stereoscop(e)* + *-ism.*] The impression or effect of solidity obtained by binocular vision; stereoscopic effect.

Stereospondyli (ster″ẹ̄-ọ̄-spon′di-lī), *n. pl.* [NL., < Gr. στερεός, solid, + σπόνδυλος, a vertebra.] A suborder of the stegocephalous *Amphibia* having completely ossified vertebræ sometimes perforated for the passage of the notochord, and teeth highly complicated by infolding of the dentine as in the *Labyrinthodontidæ*, which see. See also ★*Mastodonsaurus.*

stereospondylous (ster″ẹ̄-ọ̄-spon′di-lus), *a.* Pertaining to or having the characters of the *Stereospondyli.*

stereostatics (ster″ẹ̄-ọ̄-stat′iks), *n.* [Gr. στερεός, solid, + E. *statics.*] The science of solid bodies in equilibrium.

stereotaxis (ster″ẹ̄-ọ̄-tak′sis), *n.* [NL., < Gr. στερεός, solid, + τάξις, disposition.] Same as ★*thigmotaxis.*

stereotelemeter (ster″ẹ̄-ō-tẹ̄-lem′e-tėr), *n.* [Gr. στερεός, solid, + τῆλε, afar, + μέτρον, measure.] A stereotelescope of great interobjective distance and provided with eyepiece scales or other devices for the determination of the distances between objects in the field of view.

stereotelescope (ster″ẹ̄-ọ̄-tel′e-skōp), *n.* [Gr. στερεός, solid, + E. *telescope.*] A binocular telescope the interobjective distance of which is several times the interocular distance. In the *stereotelescope*, the optical system for the left eye of which is shown in Fig. 1, the axis of the objective *o* is at right angles to that of the eyepiece *e*. The beam of light from the object to be observed is totally reflected in the right-angled prism *p*, passes through the objective, and suffers three successive total reflections in the prism *p′*, after which it passes through the eyepiece to the eye of the observer. A similar and symmetrically placed system serves the right eye. The general form of the instrument is shown in Fig. 2. By rotating the two arms of the telescope about the joint *j* the interobjective distance *oo* may be varied (as shown in Fig. 3) without changing the interocular distance *ee*. The stereotelescope is frequently employed in military operations as a range-finder, in which case scales are fitted to the eyepieces by the stereoscopical combination of which, in looking through the instrument, the distance of any object in the field of view can be accurately determined.

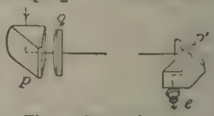


Fig. 1. Stereotelescope.

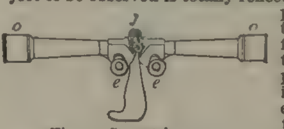

Fig. 2. Stereotelescope.

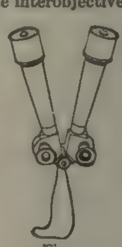

Fig. 3. Stereotelescope.

stereotomist (ster-ẹ̄-ot′ọ̄-mist), *n.* [*stereotom(y)* + *-ist.*] One who is versed in stereotomy or the cutting of solids; specifically, one who cuts building-stones; a stone-cutter.

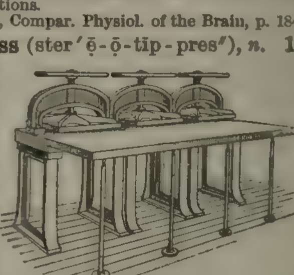
Gothic architects were wonderfully skilful *stereotomists.*
M. G. Van Rensselaer, Handbook of Eng. Cathedrals, p. 32.

stereotropic (ster″ē-ọ̄-trop′ik), *a.* [Gr. στερεός, solid, + τρόπος, a turning, + *-ic.*] Pertaining to or exhibiting stereotropism or growth or movement in relation to the point of contact with a foreign body. See ★*stereotropism.*

stereotropism (ster-ẹ̄-ot′rọ̄-pizm), *n.* [Gr. στερεός, solid, + τρόπος, a turning, + *-ism.*] The growth or movement of an organism in relation to the point of contact with a foreign body. *Positive stereotropism* is growth or movement toward and *negative stereotropism* growth away from such a point of contact.

Many plants and animals are forced to orient their bodies in a certain way toward solid bodies with which they come in contact. I have given this kind of irritability the name *stereotropism.* Like the positive and negative heliotropism and geotropism, there is also a positive and negative *stereotropism*, and there are also stereotropic curvations.
J. Loeb, Compar. Physiol. of the Brain, p. 184.

stereotype-press (ster′ẹ̄-ọ̄-tīp-pres″), *n.* **1.** A screw-press with a flat bed and a raising and lowering platen for drying the matrix on the form while under pressure. Also called *drying-table*, *drying-press*, and *matrix-drying press.*—**2.** A newspaper press which prints from stereotype plates.

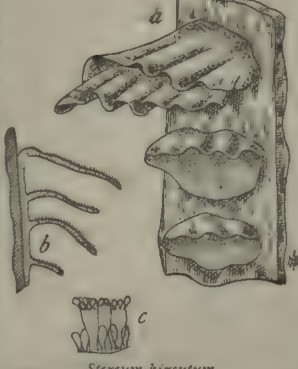


Stereotype Matrix-drying Press.

stereotypy, *n.* 2. Persistence, in the insane, of a single idea or trend of thought. *Buck*, Med. Handbook, V. 100.

stere-radian, *n.* See ⋆*steradian.*

Stereum (stē′rẹ-um), *n.* [NL. (Persoon, 1796), ‹ Gr. στερεός, solid, hard, firm: referring to the texture of the plants.] A large genus of hymenomycetous fungi of the family *Thelephoraceæ*, having the pileus usually coriaceous or woody, and the hymenium smooth. The plants are either resupinate and adnate or pileate. About 250 species have been described. They are widely distributed and grow on dead wood. *S. hirsutum* is a common species, usually saprophytic, but occasionally acting as a wound-parasite.



Stereum hirsutum.

a, several pilei of the fungus; *b*, sections through the same; *c*, basidia bearing four spores each.

steric (ster′ik), *a.* [Irreg. ‹ Gr. στερεός, solid, + *-ic.*] Pertaining to an arrangement in space: applied especially to the arrangement of atoms in the molecule of a compound.

> Stereochemical formulas are confessedly more than reaction formulas, and the *steric* conception of the so-called double and triple union asserts that these actually exist in the sense the words imply, and are not merely names for unknown conditions.
>
> *H. N. Stokes*, in Smithsonian Rep., 1898, p. 301.

Steric hindrance, in *organic chem.*, the hindrance of a reaction owing to the arrangement in space of the atoms of the molecules of one of the reacting compounds. *Nature*, Oct. 17, 1907, p. 609.

steril, *a.* A simplified and former spelling of *sterile.*

Sterile clinker. See ⋆*clinker.*

sterilizability (ster″il-ī-za-bil′ị-ti), *n.* The quality of being sterilizable; capacity for being sterilized.

> Simplicity, cheapness, and easy *sterilisability* are claimed for the syringe; also that it can be used with one hand, and can be laid down when full or even inverted. *Jour. Roy. Micros. Soc.*, Oct., 1903, p. 680.

sterilizable (ster′i-lī-za̤-bl), *a.* [*steriliz*(*e*) + *-able.*] Capable of being sterilized.

> Some of the earliest electric sigmoidoscopes were not *sterilisable*, as the electric light and connexions were an integral part of the tube. *Lancet*, June 25, 1904, p. 1782.

sterilizer, *n.* 2. A washing-machine having a steam-tight vessel in which infected fabrics can be washed in boiling water, with or without disinfecting liquids, and through which live steam may be passed to kill all germs. It is also fitted with ventilating-pipes for carrying away odors.—**Bacteriological sterilizer**, a double-walled Russia iron oven the interior temperature of which can be raised, by the aid of gas-flames, high enough to destroy bacterial organisms.—**Maiche's sterilizer**, an apparatus for sterilizing water. The water is heated to a temperature high enough to destroy germ life, and is then cooled on its way to the receiving-tank. *Jour. Trop. Med.*, June 15, 1903, p. 192.—**Steam-sterilizer**, specifically, a jacketed vessel for sterilizing culture-vessels or surgical instruments with steam: used in bacteriological laboratories and hospitals.

stern², *n.*—**Elliptical stern**, a form of stern in which the upper part above the knuckle of the stern is approximately an elliptical cone enlarging upward from the knuckle, and the surface below the knuckle is a continuation of the forms of the ship's bottom. This is the form used on the majority of modern merchant ships.—**Round stern**, a form of stern in which the upper part aft is given a rounded form without flat surfaces.—**Square stern.** Specifically, a form of stern in which the upper part of the vessel aft is ended in a large flat surface nearly vertical and square to the central longitudinal plane. See cut showing square-stern under *sheer-hulk.*—**Torpedo-boat stern**, a form of stern in which the under-water surface near the stern is broad and nearly flat, ending in a knuckle at about the water-line. Above this knuckle the surface is of an approximately conical shape, the conical surface being inclined inward and upward. The horizontal sections of this part are sometimes elliptical and sometimes ogival. Sometimes called *torpedo-stern*, and much used on torpedo-boats and other small high-speed boats.

> The boat is thirty-one feet six inches long over all, and is built with the Lozier *torpedo stern*; on account of being designed for use in the shallow waters of the Florida coast, the draft is but twenty-four inches. The beam is nine feet, rather more than the average, but it makes the boat unusually roomy for its length.
>
> *Amer. Inventor*, March 1, 1904, p. 104.

Sternal callosity, cartilage. See ⋆*callosity*, ⋆*cartilage.*

Sternaspidæ (stėr-nas′pi-dē), *n. pl.* [NL., ‹ *Sternasp*(*is*) + *-idæ.*] A family of polychætous annelids, represented by the single genus *Sternaspis*, formerly classed among the gephyreans.

sternebra (stėr′nẹ-bra̤), *n.* [NL.] See *sterneber.*

stern-frame, *n.* Specifically, in *iron ship-building*, the frame at the stern of a screw-steamer, in the aperture of which is placed the screw-propeller. It includes the following parts: the after, outer, or rudder-post; the inner, body, propeller, or stern-post; the arch or bridge-piece uniting them above; and the sole-piece uniting them at the bottom. The frame is made of a heavy iron or steel forging, the parts being welded or scarfed and riveted, or, more frequently in modern practice, it is a heavy steel casting in one or two parts. The screw-shaft passes through the boss of the propeller-post, and the rudder is hung to the rudder-post. The sole-piece forms a prolongation of the keel to which it is riveted. Also called *propeller-frame.*

Sternias (stėr′ni-a̤s), *n.* [NL., ‹ Gr. στέρνον, the breast, the chest.] A genus of cottoid fishes found only in the northern Pacific.

stern-line (stėrn′līn), *n.* A mooring line run over the stern of a vessel.

stern-mat (stėrn′mat), *n.* A mat hung over the stern of a ship to take chafing.

sternodynia (stėr-nọ-din′i-a̤), *n.* [NL., ‹ Gr. στέρνον, the breast, + ὀδύνη, pain.] Same as *sternalgia.*

stern-tube (stėrn′tūb), *n.* A tube or pipe in the shell of a ship at the stern, below the water-line, through which passes the tail-shaft or aftermost section of the propeller-shaft.

stern-walk (stėrn′wâk), *n.* A stern gallery such as was built on old line-of-battle ships.

stern-wave (stėrn′wāv), *n.* One of the waves set up at the stern of a vessel in motion of the same general character but of less pronounced form than the ⋆bow-wave (which see). Besides the diagonal waves diverging from the stern, there is a series of transverse waves, of gradually diminishing size, following the vessel and traveling at the same speed.

> That is to say, "the height of the waves made, and the amount of the resistance caused will be at the maximum or minimum according as the crests of the bow-wave series coincide with the crests or troughs of the natural *stern-wave* series."
>
> *White*, Manual of Naval Arch., p. 461.

Sterrholophus (ste-rol′ọ-fus), *n.* [Gr. στερρός, stiff, + λόφος, a crest.] Same as ⋆*Ceratops* (which see).

steso (stā′sọ), *a.* [It., pp. of *stendere*, ‹ L. *extendere*, stretch out, extend: see *extend.*] In *music*, extended; slow: as, *steso moto*, with a slow movement.

stetefeldtite (stet′ẹ-fel-tīt), *n.* [Named after C. *Stetefeldt*, a mining engineer.] A mineral substance of uncertain homogeneity, consisting chiefly of the oxid of antimony with that of copper and that of iron, and water: found in Nevada.

stethal (stē′tha̤l), *n.* An old name for *octadecyl alcohol.*

stethendoscope (ste-then′dọ-skōp), *n.* [Gr. στῆθος, the breast, + ἔνδον, within, + σκοπεῖν, view.] A modified form of fluoroscope employed in examination of the chest by means of X-rays.

stethogoniometer (steth″ọ-gō-ni-om′e-tėr), *n.* [Gr. στῆθος, the breast, + E. *goniometer.*] A device employed in recording the configuration of the chest.

stethorrheuma (steth-ọ-rū′ma̤), *n.* [NL., ‹ στῆθος, breast, + ῥεῦμα, rheum.] Same as *pleurodynia.*

stethospasm (steth′ọ-spazm), *n.* [Gr. στῆθος, the breast, + σπασμός, contraction.] Irregular and involuntary contraction of the chest muscles.

stethylic (ste-thil′ik), *a.* [*steth*(*al*) + *-yl* + *-ic.*] Pertaining to a methane derivative with 15 carbon atoms in the molecule. Also *octadecylic.*—**Stethylic alcohol**, a colorless compound, $C_{18}H_{37}OH$, of the methane series, contained, in combination with acids, in spermaceti. It crystallizes in large silvery lustrous plates, melts at 59° C., and boils at 210.5° C. under 15 millimeters pressure.

stew¹, *n.*—**Brunswick stew**, a stew of squirrels (sometimes chicken) and vegetables.

Stewartia (stṳ̄-är′ti-a̤), *n.* [NL. (Linnæus, proposed in 1746, established in 1753), named in honor of John *Stuart* (1713–92), third Earl of Bute, an English statesman and patron of botany.] A genus of plants belonging to the family *Theaceæ.* See *Stuartia.*

stew-meat (stū′mēt), *n.* A butchers' term for beef cut into small pieces from different parts, lean meat and a small proportion of fat together, and used in making beef stew.

Sthenic emotion. See ⋆*emotion.*

stibianite (stib′i-a̤-nīt), *n.* [*stibi*(*um*) + *-an* + *-ite*².] A hydrated oxid of antimony from Australia, derived from the alteration of stibnite.

stibide (stib′īd), *n.* [*stib*(*ium*) + *-ide.*] A compound of antimony with a more electropositive element or radical.

stibine (stib′in), *n.* [*stib*(*ium*) + *-ine*².] 1. Antimoniureted hydrogen (SbH_3), a colorless gas of disagreeable odor, poisonous if respired, and burning in the air with a bluish flame: it deposits metallic antimony in spots on a piece of cold porcelain pressed down upon the flame. The gas also deposits the metal by passage through a glass tube heated at one point.—2. A general term for any compound of antimony with an electropositive or alkyl radical, as triethyl-stibine, $Sb(C_2H_5)_3$.

stibiodomeykite (stib″i-ọ-dọ-mā′kīt), *n.* [*stibium* + *domeykite.*] A variety of domeykite from Keweenaw county, Michigan, containing a small amount of antimony.

stibioferrite (stib″i-ọ-fer′īt), *n.* [*stibium* + L. *ferrum*, iron, + *-ite*².] A mineral substance of a yellow color and resinous luster from Santa Clara, California, which forms a coating on stibnite. It consists largely of the hydrated oxid of antimony.

stibiotantalite (stib″i-ọ-tan′ta̤-līt), *n.* [*stibium* + *tantalum* + *-ite*².] A mineral which contains chiefly the oxids of tantalum, niobium, and antimony: found in water-worn fragments in the tin-bearing gravels of Greenbushes, West Australia.

stibonium (sti-bō′ni-um), *n.* [NL., ‹ *stibium* + *antimonium.*] A hypothetical compound of antimony, SbH_4, known in the form of certain organic derivatives.

stich², *n.* and *v.* A simplified spelling of *stitch.*

Stichæus (sti-kē′us), *n.* [NL., ‹ Gr. στίχος, a row.] A genus of blennioid fishes found in arctic seas.

stichochrome (stik′ọ-krōm), *a.* and *n.* [Gr. στίχος, a row, + χρῶμα, color.] **I.** *a.* Having the color in rows: applied, in *neurol.*, to a form of nerve-cell in which the Nissl bodies are arranged in nearly parallel lines. *Buck*, Med. Handbook, II. 336.

II. *n.* A somatochrome nerve-cell in which the stainable cytoplasmic substance is arranged in the form of striæ which run parallel with the contour of the cell-body and concentrically with the cell-nucleus.

> *Stichochromes* or cells in which the chromatic substance is arranged in more or less distinctly parallel rows, the direction of the rows usually bearing some relation to the contour of the nucleus and to that of the periphery of the cell body. To this group belong such cells as the large cells of the ventral horn of the cord, the spinal-ganglion cells, some of the cells of the cornu Ammonis, and some of the cells of the cerebral cortex.
>
> *Jour. Exper. Med.*, Oct. 1, 1901, p. 552.

stick¹, *v. t.*—**To stick up.** (*a*) In *cricket*, to perplex; nonplus (the batsman). (*b*) To cook (cutlets or steaks) by spitting them on long sticks with a piece of bacon at the end. The sticks are stuck in the ground, close to leeward of the fire. See ⋆*sticker-up*, 2. [Australian.]

> To men that are hungry *stuck-up* kangaroo and bacon are very good eating.
>
> *Mrs. Meredith*, My Home in Tasmania, I. 55, quoted [in E. E. Morris, Austral English.

(*c*) To 'hold up'; rob. [Australian.]

> Look here, I know this man Kettle a lot better than you do. He wants the pay very badly. And when it comes to *sticking up* the cable station, you 'll see him do the work of any ten like us.
>
> *Cutcliffe Hyne*, A Master of Fortune, vi.

(*d*) Hence to be importuned by a beggar; be forced to give in charity. [Australian.]

> There is no poverty here, or very little; you never get *stuck up* for coppers in the streets of the towns.
>
> *E. W. Hornung*, Bride from the Bush, xix.

(*e*) To bring (a kangaroo) to bay. [Australian.]

> We knew then that she had "*stuck up*" or brought to bay a large forester. If middle-sized she would have killed him. *Rolf Boldrewood*, Old Melbourne Memories, iii.

(*f*) To stop (without idea of violence). [Australian.]

> This [waterfall] '*stuck* us *up*,' as they say here concerning any difficulty.
>
> *S. Butler*, First Year in Canterbury Settlement, p. 68, [quoted in E. E. Morris, Austral English.

(*g*) To pose; puzzle: as, "I was *stuck up* for an answer." [Australian.]

> The professor seems to have *stuck up* any number of candidates with the demand that they should 'construct one simple sentence out of all the following.'
>
> *The Australasian*, Jan. 2, p. 33, quoted in E. E. Morris, [Austral English.

stick², *n.* **4.** A material of syrupy consistence obtained by cooking mixed city garbage and other refuse material with steam, removing grease and water by expression from the liquid product, skimming off the grease, and evaporating the watery residue. It is mixed with some of the solid matter from the same garbage or with chemicals, and used as a 'filler' or subordinate ingredient in fertilizers.

stick³, *n.* **13.** Rum, brandy, or any other liquor when used as a 'stiffener' or flavoring in 'soft' drinks: as, tea with a *stick* in it. [Slang.]—**To eat stick,** to receive a thrashing. [Slang.]

> "If he does n't [show the way], *he eats* more *stick.* I think," said Captain Tazzuchi, with a wide smile, "that he 'll take us there the quickest road."
>
> *Cutcliffe Hyne*, A Master of Fortune, x.

stick-candy (stik'kan″di), *n.* Candy made in the form of sticks.—**Stick-candy machine,** a machine in which engraved, fluted, crimped, or corrugated rolls are used in forming hard candies into sticks, ornamental rods, or other forms.

stick-caterpillar (stik'kat″ėr-pil-ạ̈r), *n.* Any one of the twig-like or stick-like geometrid larvæ.

stick-dice (stik'dīs), *n.* A gambling game of the North American Indians, played with sticks bearing different marks. These sticks are tossed up, and the casts are counted according to the marks that are up. In some cases the sticks have the form of parts of an arrow, and suggest that at one time the game may have been played with arrows. *Amer. Anthropologist*, Jan.–March, 1903, p. 60.

sticker¹, *n.* **4.** In *wood-working*, another name for a molding-machine: often described by the work done, as *door-sticker, sash-sticker;* and also by the number of cutter-heads employed and the work done, as *one-side, two-side,* or *four-side sticker*, meaning that the machine cuts a molding on one, two, or four sides of any piece of wood. The sash-sticker is also adapted to plowing out and boring the groove for the sash-cord, when it is called a *sash-sticking and -plowing machine:* often called *sticking-machine.* It is essentially a molding-machine employing cutter-heads in various positions and is used for a great variety of work. See *molding-machine*, 1.—**5.** A needle with a double lance-shaped point, used for pricking the skin to secure a drop of blood for examination. *Buck*, Med. Handbook, I. 39.—**6.** In *cricket*, a batsman who plays entirely on the defensive; a 'stone-waller.' *Hutchinson*, Cricket, p. 190. [Slang.]

sticker-up (stik'ėr-up), *n.* **1.** One who sticks up. See *to* ★*stick up* (*b*). [Australia.]—**2.** Also the meat itself: as, our *sticker-up* consisted only of ham. *Mrs. Meredith*, My Home in Tasmania, I. 55, quoted in E. E. Morris, Austral English.

> Pounds of rosy steaks . . . skilfully rigged after the usual approved fashion (termed in Bush parlance a '*sticker-up* '), before the brilliant wood fire, soon sent forth odours most grateful to the hungered way-worn Bushmen.
>
> *G. T. Lloyd*, Thirty-three Years in Tasmania and Vic-[toria, p. 103, quoted in E. E. Morris, Austral English.

3. A highwayman or bush-ranger; one who sticks up and plunders mail-coaches, etc., killing his victims if necessary (?). See *to* ★*stick up* (*c*). [Australia.]

> They had only just been liberated from gaol, and were the *stickers-up*, or highwaymen mentioned.
>
> *W. J. Barry*, Up and Down, p. 197, quoted in E. E. [Morris, Austral English.

sticking², *n.* **3.** In *billiards*, the act or operation of landing the cue-ball close to a cushion for safety. *W. Broadfoot*, Billiards, p. 278.—**4.** In *cricket*, batting entirely on the defensive; batting not to make runs, but to keep in. *R. H. Lyttelton*, Cricket and Golf, p. 122.

sticking-knife (stik'ing-nīf), *n.* A knife used for sticking or stabbing animals in butchering.

sticking-tommy (stik'ing-tom″i), *n.* A portable candlestick having a sharp point that can be thrust into the wood of a wall or floor to hold it temporarily in any desired position.

stickleback, *n.*—**Alaska stickleback,** *Gasterosteus cataphractus*, found from San Francisco to Alaska and Kamchatka.—**Brook stickleback,** *Eucalia inconstans*, found in fresh waters from New York to Kansas.—**California stickleback,** *Gasterosteus microcephalus*, found in the Pacific coastwise streams of the United States.—**Common Eastern stickleback,** *Gasterosteus bispinosus*, of the east coast of the United States.—**European stickleback,** *Gasterosteus aculeatus*, of northern Europe.

sticktoitive (stik-tö'ị-tiv), *a.* [*stick to it* (persist) + *-ive.*] Persistent; indomitable. [Local, U. S.]

sticktoitiveness (stik-tö'ị-tiv-nes), *n.* The character of being sticktoitive. *Dialect Notes*, III. iii. [Local, U. S.]

stick-up (stik'up), *n.* A name for a certain member of a gang of burglars. Same as ★*sticker-up*, 3. See the quotation, and ★*yeggman.* [Thieves' slang.]

> The man . . . is declared to be a typical "yeggman of the *stick-up*" class. He is of massive proportions, has an abundance of brown hair, and a pair of piercing steel-gray eyes. The "*stick-up*" is always a powerful man, whose duties are to intimidate intruders and kill them, if necessary, while the others are at work on a safe.
>
> *N. Y. Times*, Jan. 2, 1905.

stick-work (stik'wėrk), *n.* In *base-ball*, the work of batting; also, the use of clubs in other games. [Slang.]

Stictaceæ (stik-tā'sẹ-ē), *n. pl.* [NL., < *Stict*(*a*) + *-aceæ.*] A family of gymnocarpous lichens, named from the genus *Sticta* (which see).

stictaurin (stik-tâ'rin), *n.* [*Stict*(*a*) *aur*(*ata*) (see def.) + *-in*².] A lustrous golden orange-red to reddish-brown compound, $C_{36}H_{22}O_9$(?), contained in the lichens *Sticta aurata, Candelaria vitellina, C. concolor,* and *Gyalolechia aurea.* It forms large crystals which melt at 211–212° C. and are probably monoclinic.

Stictis (stik'tis), *n.* [NL. (Persoon, 1799), < Gr. *στικτός*, pricked, spotted.] A genus of discomycetous fungi having the ascocarps sunken in the substratum and the disk at first covered, the covering rupturing at maturity and forming angular segments. The spores are filiform, hyaline, and many-celled. Over 70 species are known. They are widely distributed and occur on dead herbaceous or woody stems and branches.

stif, *a.*, *n.*, and *v.* A simplified spelling of *stiff.*

stiffener, *n.* (*c*) In *iron ship-building*, one of a series of angle-bars, Z-bars, or other shapes, riveted to plating, particularly to the plating of bulkheads, to give them the necessary stiffness or rigidity. Stiffeners are called *vertical stiffeners* or *horizontal stiffeners*, according to the way they are arranged on the bulkhead.

stiff-joints (stif'joints), *n.* Milk-sickness.

stiffness, *n.* **2.** Specifically, the power or ability of a vessel to oppose great resistance to inclination from the upright from the pressure of wind on the sails or other external forces.

> For most ships the angles of steady heel under canvas lie within the limits for which the metacentric method holds; and consequently this method may be used in estimating the "*stiffness*" of a ship, i. e. her power to resist inclination from the upright by the steady pressure of the wind on her sails.
>
> *White*, Manual of Naval Arch., p. 84.

stifle-out (stī'fl-out), *n.* Same as *stifle*², 2. *U. S. Dept. Agr.*, Rep. on Diseases of the Horse, 1903, p. 338.

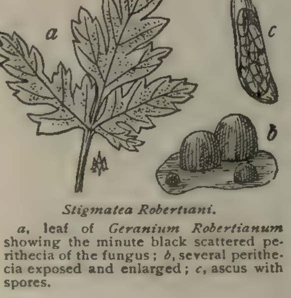
stigma¹, *n.* **7.** In *geom.*, a point so connected with another, called the *index*, that motion of the index in a plane through their join causes definite motion of the stigma in this plane.

stigmat (stig'mat), *n.* [G. *stigmat*, < Gr. *στίγμα*(*τ*-), a mark. See *stigma*, ★*anastigmatic*, etc.] An anastigmatic lens or objective.

> "Single" lenses, such as the elements forming Gray's Double *Stigmat*, which are practically rectilinear.
>
> *Photo-miniature*, Sept., 1901, p. 245.

Stigmatal cord. See ★*cord*¹.

Stigmatea (stig-mā'tẹ-ạ̈), *n.* [NL. (Fries, 1849), < Gr. *στίγμα*, a mark, spot.] A genus of minute parasitic pyrenomycetous fungi, having separate perithecia arising beneath the epidermis of the host, and hyaline or slightly greenish two-celled spores. About 20 species are known. *S. Mespili* has been suspected of being the ascigerous form of *Entomosporium maculatum*, which causes leaf-blight of the pear. *S. Robertiani* occurs on *Geranium Robertianum* in Europe and America.



Stigmatea Robertiani.

a, leaf of *Geranium Robertianum* showing the minute black scattered perithecia of the fungus; *b*, several perithecia exposed and enlarged; *c*, ascus with spores.

stigmatic¹, *a.* (*d*) (2) Possessing a stigma; stigmatose: said of angiosperms as contrasted with gymnosperms and perhaps in other connections.—**Stigmatic geometry.** Same as ★*stigmatics.*

stigmatic² (stig-mat'ik), *a.* [*stigmat* + *-ic.*] In *photog.*, pertaining to or of the character of a stigmat or anastigmat, a combination of lenses corrected for astigmatism.

> A distinctly new type of anastigmatic objective, involving several new principles of construction, was invented. . . . It was brought out in three series . . . under the name of "*Stigmatic.*"
>
> *Encyc. Brit.*, XXXI. 696.

Stigmatic lens, a photographic objective or lens system consisting of a front combination of three lenses and a back combination of two lenses, each combination achromatic, designed with special reference to freedom from astigmatism.

Stigmaticæ (stig-mat'i-sē), *n. pl.* [ML. *stigmaticus.* See *stigmatic*¹.] That (ecological) division of flowering plants in which the pollen is received upon a stigma; the angiosperms.

stigmatics (stig-mat'iks), *n.* In *geom.*, the doctrine of the relations of a stigma to its index. See ★*stigma*¹, 7.

stigmatism (stig'mạ-tizm), *n.* [*stigma*(*t*-) + *-ism.*] The condition in which stigmata are present.

stigmatosis (stig-mạ-tō'sis), *n.* [NL., < Gr. *στίγμα*(*τ*-), a spot, + *-osis.*] A skin-disease marked by spots of superficial ulceration.

stigmatypy (stig'mạ-ti-pi), *n.* [Gr. *στίγμα*(*τ*-), a spot, + *τύπος*, type.] The art or process of making typographic portraits with small types that have round dots of different sizes on their faces. These faces are combined to convey a notion of light and shade by their unequal degrees of blackness.

stigmonose (stig'mọ-nōs), *a.* [Gr. *στιγμή*, prick, point, + *νόσος*, disease.] A diseased condition of the leaves and young growth of plants, especially carnations, produced by sucking-insects and mites. The reserve proteids and sugars being thus removed, oxidizing enzyms increase and the growing cells lose their chlorophyl and die. *U. S. Dept. of Agr.*, Div. Veg. Physiol. and Pathol., Bulletin 19, 1900, p. 7.

stigmonym (stig'mō-nim), *n.* [Gr. *στίγμα*, spot, + *ὄνυμα*, name.] A pseudonym in which dots take the place of letters. See ★*syncopism. Stand. Dict.*

stil, *a.*, *n.*, *v.*, and *adv.* A simplified spelling of *still.*

stilbene (stil'bēn), *n.* [Irreg. < Gr. *στίλβειν*, glitter, + *-ene.*] A colorless compound, $C_6H_5CH{:}CHC_6H_5$, prepared by the action of heated lead oxid on toluene. It crystallizes in large monoclinic plates, melts at 124° C., and boils at 306–307° C. Also called *toluylene* and *symmetrical diphenylethylene.*—**Stilbene color.** See ★*color.*

Stilbiscus (stil-bis'kus), *n.* [NL., irreg. < Gr. *στίλβειν*, glitter, + dim. *-ισκος.*] A genus of eels of the family *Murænesocidæ.* There is one known species from the Bahamas.

Stilbum (stil'bum), *n.* [NL. (Tode, 1790), < Gr. *στιλβός*, shining.] A genus of hyphomycetous fungi giving name to the family *Stilbaceæ*, and having the hyphæ united into a stipe which bears a small head from which the conidiophores arise bearing small hyaline unicellular conidia. About 100 species have been described, most of which are regarded as saprophytic, though *S. flavidum* is considered to be the cause of the American coffee-disease.

stile¹, *n.*—**Diminished stile,** in a framed door, a stile which is wider at one place than at another, as where it is broad below the lock-rail and narrower above.

stile-borer (stīl'bōr″ėr), *n.* A wood-working machine which bores holes for mortises in the stiles for doors or windows.

stiletto-fly (sti-let'ọ-flī), *n.* Any dipterous insect of the family *Therevidæ.* The popular name is derived from the slender form of these flies. *Comstock*, Manual of Insects, p. 464.

still², *n.*—**Cheese-box still,** a still of boiler-plate iron or steel, shaped somewhat like a cheese-box, for the distillation of crude petroleum. *Sadtler*, Handbook of Indust. Chem., p. 20.—**Dorn's still,** a form of apparatus for distilling and rectifying alcoholic liquors; one of the early arrangements for utilizing the heat given out in condensation of the vapor by applying it to heat up the wash to be distilled.—**Pine-wood still,** the still in which refuse wood of the long-leaf pine is distilled with water for the production of an inferior kind of spirits of turpentine. See ★*spiritine.*—**Pistorius's still,** a form of apparatus for distillation much used in Germany in distilling and rectifying spirit from grain, and especially that from potatoes.—**Tar-still.** (*a*) The still in which the second stage of the distillation of crude petroleum is carried out, yielding in the distillates lubricating-oils and paraffin-scales, and leaving coke as a final residue. (*b*) The wrought-iron still in which either coal-tar or wood-tar is in the crude state submitted to fractional distillation in order to separate the various useful products obtainable.—**Wash still,** a still for the distillation of the original fermented liquor, as distinguished from one used to redistil the condensed product from the former. —**Weldon still,** the form of still, of stone flags cemented together, devised by Walter Weldon for the purpose of making chlorin for bleaching-powder, using his regenerated manganese or Weldon mud. See *Weldon* ★*mud.*—**Whisky-still,** the still, usually of hammered copper, in which whisky is distilled from the fermented mash or wort. There are many forms, of varying simplicity or complexity.

still-hunt (stil′hunt), *n.* [*still-hunt, v.*] 1. A hunt for game carried on by stalking or from ambush.—2. In *politics*, a secret canvass carried on somewhat after the methods of a still-hunt for game, with precautions against publicity.

still-hunting (stil′hun″ting), *n.* Stalking; also hunting from ambush. See *still-hunt, v.*

As a companion to the preceding excellent volume and its fellow in the same series, "The Deer Family," Mr. Van Dyke's "The Still-Hunter" may be heartily commended. . . . It deals in considerable detail with the technique of stalking—or "*still-hunting*" as our American friends term this kind of sport. *Nature*, July 21, 1904, p. 267.

Still's disease. See ★*disease.*

stillwater (stil′wâ″tėr), *n.* That part of a stream which has such slight fall that no current is apparent: opposed to ★*quick-water.* Also *deadwater.*

stilt, *n.*—**Banded stilt,** *Himantopus pectoralis*, an Australian species with a dark band across the breast.—**Black-winged stilt,** *Himantopus himantopus*, a species widely distributed over Europe, Asia, and Africa, distinguished when adult by having the entire head and neck white.

stilt-bug (stilt′bug), *n.* Any one of the slender plant-bugs of the family *Berytidæ*. *Comstock*, Manual of Insects, p. 143.

stimie, *n.* See *stymie.*

stimulation, *n.*—**Areal stimulation,** in *psychophys.*, stimulation of an area or extended portion of a sense-organ: opposed to *punctual stimulation.* *E. B. Titchener*, Exper. Psychol., I. i. 57.

stimulator, *n.* Specifically—2. In *exper. psychol.*, any instrument employed to furnish the stimulus in a psychological experiment; especially, the instrument used in the reaction experiment to give the sensory stimulus to which response is made by the reactor.

We must consider, in order, the chronoscope, the instruments for its control, the *stimulator*, and the reaction key. *E. B. Titchener*, Exper. Psychol., II. i. 142.

stimulin (stim′ū̦-lin), *n.* [L. *stimul(us)*, a spur, + *-in*^{2}.] A name given by Metchnikoff to a hypothetical substance present in immune sera which stimulates the leucocytes to phagocytosis.

stimulose, *a.* 2. In *entom.*, furnished with stinging-hairs, as certain caterpillars, for example, the saddleback caterpillar.

stimulus, *n.* 6. In *entom.*, a stinging-hair.—**Areal stimulus,** in *psychophys.*, a stimulus which affects an area of a sense-organ; an extended stimulus.—**External stimulus,** in *psychol.*, a stimulus of a special sense; a process of movement in the outside world which, after it has acted upon the sense-organ and, as excitation, been conducted to the brain, is accompanied by a mental process of sensation. The external stimulus is opposed sometimes to the internal stimulus of organic sensation, sometimes to the excitation process into which it is transformed after affecting an organ of special sense.—**Internal stimulus,** in *psychol.*: (*a*) A process of stimulation set up within a sense-organ, consisting in a change of the state of that organ; the normal stimulus to organic sensation. (*b*) The continuation in sense-organ, nerve, and brain of a process of stimulation externally initiated; the physiological excitation which is aroused by the action of an external stimulus. *W. Wundt* (trans.), Human and Animal Psychol., p. 16.—**Method of constant stimuli.** See ★*method.*—**Method of doubled stimuli.** See ★*method.*—**Stimulus releaser,** in *psychophys.*, same as ★*stimulator*, 2. *J. M. Baldwin*, Dict. Philos. Psychol., I., p. 614.

stimulus-unit (stim′ū̦-lus-ū″nit), *n.* In *psychophys.*, the unit of a physical scale of which the different values represent different intensities of stimulus.

The way to determine this is obviously to set out, not from a definite *stimulus-unit*, but from the unit of sensation. *W. Wundt* (trans.), Human and Animal Psychol., p. 37.

stimy (stī′mi), *n.* In *golf*, the position of a ball on a putting-green when it is directly between the hole for which an adversary is playing and his ball at any distance over six inches between the two.

stimy (stī′mi), *v. t.*; pret. and pp. *stimied*, ppr. *stimying.* In *golf*, to force to play a stimy. To stimy one's opponent is so to play one's ball as to bring it into a position between his ball and the hole, the two balls being more than six inches apart.

sting^1, *v. t.* 6. To 'stick' for a dinner, a railway fare, or the like. [U. S. college slang.]

An undergraduate is no longer "stuck" for a dinner, a seat at the play, a railroad ticket; he is "*stung.*" *Kansas City Daily Star*, April 21, 1903.

stingareeing (sting′ga̤-rē-ing), *n.* Fishing for sting-rays or stingarees.

It has been recently discovered—by the writer of the animated article in the 'Field' on "Fishing in New Zealand" [London, Nov. 25, 1871], that '*stingareeing*' can be made to afford sport of a most exciting kind. *Hutton and Hector*, Fishes of New Zealand, p. 121.

sting-bladder (sting′blad″ėr), *n.* A sea-bladder; a Portuguese man-of-war, *Physalia.*

stinger^2 (sting′ėr), *n.* [Compare *stingo.* Prob. < *sting*^{1}, *v.*, + *-er*^{1}; but a Malay origin (*satenga, s'tenga*, half, *i. e.*, 'half-and-half') has been suggested.] An alcoholic drink.

Two "*stingers*" were brought. Now a "*stinger*," it should be known, . . . a noggin of Scotch whiskey enlivened by much or little, according to individual taste, of the local buzz-water. *S. Bonsal*, in Scribner's Mag., Jan., 1901, p. 106.

stinging-capsule (sting′ing-kap″sū̦l), *n.* Same as *stinging-cell.*

sting-ray, *n.*—**California sting-ray,** *Myliobatus californicus*, a very common ray of mud-flats along the California coast.—**Common sting-ray,** *Dasyatis centrura*, found in abundance from the coast of Maine to Cape Hatteras.—**Round sting-ray,** any ray of the genus *Urolophus.* These fishes are small sting-rays, but the most vigorous and dangerous of the group. Most of them are confined to warm and tropical parts of America.—**Southern sting-ray,** *Dasyatis say*, found from Carolina to Brazil and occasionally as far north as New York.—**Spotted sting-ray,** *Aëtobatus narinari*, widely distributed in tropical seas.

stink-bells (stingk′belz), *n.* The Californian *Fritillaria agrestis*, an ill-smelling species, in some places occupying grain-fields, the bulb being so deep as to escape the plow.

stink-brand (stingk′brand), *n.* Same as *stinking smut.* See *smut*, 3 (*b*).

stinker, *n.* 3. Same as *stinkhorn.*

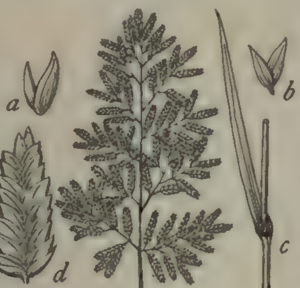
A *stinker* (which is the trivial name of the phallus impudicus). *Southey*, Doctor, cxxvii.

stink-fish (stingk′fish), *n.* A sparoid fish, *Boops salpa*, found about the Cape of Good Hope.

stink-fly (stingk′flī), *n.* Any golden-eyed lace-wing fly: so called on account of their very disagreeable odor. See *Chrysopa.*

stink-gland (stingk′gland), *n.* One of the various special glands, differently located, which occur in *Myriapoda* and numerous insects, and which secrete a liquid of an offensive odor. Also called *glandulæ odoriferæ.* See *defensive* ★*glands.* *Cambridge Nat. Hist.*, VI. 257.

stink-grass (stingk′gräs), *n.* A handsome but ill-smelling and nearly worthless grass, *Eragrostis major*, native in Europe and Asia and widely introduced in waste and cultivated, chiefly sandy, lands in the United States. Also called *candy-grass, skunk-grass*, and *pungent meadow-grass.* This name is also given to the similar but smaller species *E. Eragrostis.*



Stink-grass (*Eragrostis major*).
a, floret; *b*, glumes; *c*, leaf and culm; *d*, spikelet.

stink-pot, *n.* 5. A name given by sailors to the giant petrel, *Ossifraga gigantea*, on account of its rank, musty smell.

stinkweed, *n.* 3. The penny-cress, *Thlaspi arvense.* It is an ill-smelling plant and renders unfit for use the milk of cows which eat it, while beef-cattle must be removed from pasture containing it two or three weeks before slaughter. It is more troublesome in Canada than in the United States. See ★*French weed* (*b*).

stinkwood, *n.*—**Mexican stinkwood,** *Pseudosmodingium perniciosum.* See ★*cuajiote*, 1.

stipes, *n.* 2. (*a*) Also, the stalk of the halter of a dipterous insect.

stipites (stī′pi-tēz), *n.* Plural of *stipes.*

stipple-paper (stip′l-pā″pėr), *n.* A special drawing-paper having a coated and embossed surface which can be removed by scraping with a knife to intensify the high lights of a picture.

stippling, *n.* 2. In *ophthalmol.*, an appearance of the retina as if thickly dotted with light and dark points.

The general appearance of this eye-ground presents to the examiner's eye a peculiar appearance, as of a very small irregularly figured carpet, somewhat like a mosaic of small light and dark spots; this is called the *stippling* of the retina. *Med. Record*, July 11, 1903, p. 49.

stipulated (stip′ū̦-lā-ted), *p. a.* Same as *stipulate*^{2}.

stipulatio (stip-ū̦-lā′shiō), *n.* [L.] The highest form of contract under the civil law. It was oral and formally entered into through interrogatories before a magistrate or public officer, and was thus made definite to both parties. It could be released for fraud or deceit only, and by the same formality.

stirpiculturist (stėr-pi-kul′tū̦r-ist), *n.* [*stirpicultur(e)* + *-ist.*] One who devotes himself to the improvement of the breed or stock in animals; hence, one who desires to secure the improvement, physical and mental, of the human race.

If we examine the cause of an American citizen's distrust of the immigrant we find that it varies according to the citizen's point of view. The mechanic fears cheap competition, resulting in low wages; the *stirpiculturist*, noting the poor physique and low mental caliber of some of the immigrants, fears race degeneration. *A. J. McLaughlin*, in Pop. Sci. Mo., Jan., 1903, p. 231.

stirrup-iron, *n.* 2. An iron strip to hold the end of a beam or girder.

stirrup-plate (stir′up-plāt), *n.* In *naval arch.*, an iron plate which joins the keel and stern-post, and is bolted through them.

stirrup-vase (stir′up-vās), *n.* Same as ★*pseudamphora.*

Among the painted ware "*stirrup vases*" were specially abundant, some with magnificent decorative designs. *Athenæum*, Jan. 28, 1905, p. 115.

stitch, *n.* 10. Same as *suture.*

The side-knot, or "square" *stitch*, in rendering a retaining suture unnecessary, is superior to the topknot or "circular" *stitch.* *Phil. Med. Jour.*, Jan 31, 1903, p. 197.

Hudson stitch. See extract under ★*tee*^{6}.—**Interrupted stitches.** See *interrupted* ★*suture.*—**Kensington stitch,** in *embroidery*, a long and a short outline-stitch, appearing alternately, mostly on the right side.—**Stitch abscess.** See ★*abscess.*

stitch, *v. t.* 4. In *weaving*, to unite by concealed threads, either warp or filling or both, (two or more fabrics), so that they shall appear as one, forming a two-ply, three-ply, etc., fabric.—5. In *bookbinding*, to pass a thread or flexible wire through perforations made near the back fold of the assembled sections of (an unbound book).

stitch-bird (stich′bėrd), *n.* A small perching bird, *Pogonornis cincta*, found in the North Island, New Zealand, the clicking note of which is supposed to resemble the word *stitch.* The nest is small and open. *Pop. Sci. Mo.*, Jan., 1903, p. 223.

stitcher, *n.* Specifically—2. The operator or the machine that stitches together the sections of an unbound book.

stitching, *n.*—**Circular stitching.** See *spiral* ★*stitching.* **Figure-of-eight stitching.** Same as ★*brier-stitch.*—**Overedge stitching.** See ★*overedge.*—**Spiral stitching,** in *sewing-machine work*, a method of sewing in which the fabric is continually rotated under the needle and the stitching is laid down in spiral lines. When the sewing is in complete circles it is called *circular stitching.*

stit-tse (stit′ze), *n.* Same as *Kamloops* ★*trout.* *Jordan and Evermann*, Fishes of N. and M. Amer., p. 499.

stivy (stī′vi), *a.* [Corrup. of *stifling.*] Stifling; close. [Slang.]

By this means I get you out quietly into the air and away from those *stivy* chambers. *E. Yates*, Kissing the Rod, ix.

Stizolobium (stī-zō̦-lō′bi-um), *n.* [NL. (Patrick Browne, 1756), < Gr. *στίζειν*, prick, + *λοβός*, pod: so named from the barbed hairs on the pods of some of the species.] A genus of leguminous plants. See *Mucuna.*

S. T. L. An abbreviation (*a*) of the Latin *Sacræ Theologiæ Licentiatus*, licentiate in sacred theology; (*b*) of the Latin *Sacræ Theologiæ Lector*, reader or professor of sacred theology.

S. T. M. An abbreviation of the Latin *Sacræ Theologiæ Magister*, master of sacred theology.

Stoa basileios, stoa basilike, the king's portico, specifically the stoa or porch in which the king-archon of ancient Athens transacted the business of his office. It was on the western side of the Agora, at the foot of the mound on which the Theseum stands. It probably consisted of a wall at the back and a colonnade facing the Agora. The name passed to the Roman and medieval basilica. (See *basilica*^{1}, 1.)

stock^1, *n.* 9. (*k*) The handle attached to the wooden cup that secured the inking-ball used in early hand-press printing.

At his burial in an obscure part of Islington churchyard, many of the printers boys called devils, made a noise like such, with their ball *stocks* carried thither for that purpose. *Southey*, Doctor, cxiv.

(*l*) Same as ★*head-stock*, 2.—35. In *geol.*, a large columnar intrusion of eruptive rock, the length and breadth of which are roughly equal. A stock may be the deep-seated and uneroded portion of a volcanic neck or plug. Compare def. 32.

> Notwithstanding the spectacular nature of these sample phenomena observed in different quarries, the forces engaged in their production are almost insignificant compared with those which must be produced in the shell of country-rock concentric with the molar contact of a still molten *stock* or batholith. The latter forces may be compared with the force of compression which has so often developed peripheral cleavage and schistosity concentric with molar contacts of *stocks* and batholiths; but fracture is the necessary product of the one kind of energy applied suddenly, as rock-flowage is the product of the other applied slowly and for a much greater period of time.
> *Amer. Jour. Sci.*, Aug., 1903, p. 117.

36. The material removed from a quarry which is of suitable size to be worked into marketable articles.—**37.** *pl.* A moldy defect sometimes found on wool and woolens that have been stored while damp in a warm, badly ventilated room. *Georgievics* (trans.), Chem. Technol. of Textile Fibers, p. 40.—**Stock brick.** See ★*brick*2.—**Stock culture.** See ★*culture.*—**Stocks and bowls.** See ★*bowl*2.—**Ten-weeks stock.** See *Matthiola* and *stock*1, 26.

Stockbridge limestone. See ★*limestone.*

stock-broker, *n.*—**Inside stock-broker, outside stock-broker.** See the extract.

> Before proceeding to deal with some of the operations favoured by bucket-shops, it is necessary to point out the difference between "inside" and "outside" men. The *inside stockbroker* is an intermediary who obtains a commission from his client—whose agent he is—for carrying out a legitimate transaction; the *outside man* [stockbroker] gambles against the client for whom he purports to act. The first is governed by a representative and exceedingly severe Committee, whilst the latter is only ruled by his own sweet will and conscience; the first has to show his bona fides and have substantial guarantors before he can start business, whilst the other only needs plenty of assurance, occasionally backed by a little capital. *The Strand*, Oct., 1905, p. 349.

stock-distributor (stok'dis-trib″ụ̄-tọr), *n.* In a *blast-furnace*, a machine used to receive the coal, limestone, and ore, collectively known as stock, and distribute it evenly inside the furnace. It consists essentially of a revolving hopper and spout inclosed in the gas-tight cap of the furnace. When filled with stock from the skips or barrows it revolves and deposits its load in a spiral path over the burning mass of stock in the furnace. See *blast-furnace.*

stock-farming (stok'fär″ming), *n.* Stock-raising. Stock-farming may include an element of dairy-farming, but the word refers distinctively to the production of cattle and hogs for their meat, horses for trotting or work, sheep for wool and mutton, etc.

stock-feed (stok'fēd), *n.* **1.** The apparatus or device in an automatic or semi-automatic machine by which the material to be operated on is supplied to the tools or processes for fabrication. *The Engineer* (London), March 8, 1901, p. 249.—**2.** The carriage which feeds logs or wood bolts to the sawing- or cutting-tools.

stock-frost (stok'frôst), *n.* Same as *ground-ice* or *anchor-ice.* *Nature*, Jan. 30, 1908, p. 295. [Local, Eng. (Norfolkshire).]

stockholder, *n.* **2.** A proprietor of stock, that is, of herds of cattle or flocks of sheep; a grazier. *E. E. Morris*, Austral English. [Australia.]

> The most negligent *stock-holders* now carefully house their wool, and many take the trouble to wash their sheep. *E. Curr*, Account of Van Diemen's Land, p. 83.

stock-hut (stok'hut), *n.* The shelter or hut of a stock-man in the bush. [Australia.]

> We crossed the Underaliga creek a little below the *stock-hut*, and encamped about a mile beyond it.
> *C. Sturt*, Two Expeditions into the Interior of Southern [Australia, II. 21.

stocking-feet (stok'ing-fēt), *n. pl.* The feet covered only with stockings (without shoes): chiefly in the phrase, 'in one's *stocking-feet.*' *Dialect Notes*, III. iii. [Colloq., U. S.]

stocking-thread (stok'ing-thred), *n.* Same as *stocking-yarn.*

stock-keep (stok'kēp), *v. i.* To herd stock: a word fashioned after *bar-keep*, etc. [Colloq., Australia.]

> 'What can you do, young man?' 'Well, most things,' answered the Australian, with quiet confidence; 'fence, split, milk, drive bullocks, *stock-keep*, plough.'
> *Rolf Boldrewood*, Colonial Reformer, x.

stock-keeper (stok'kē-pėr), *n.* The manager or herdsman of a cattle-station; a shepherd; a herdsman. *E. E. Morris*, Austral English. [Australia.]

stock-line (stok'līn), *n.* The level of the charge (or stock) in a blast-furnace. *Phillips and Bauerman*, Elements of Metallurgy, p. 283.

stock-rail (stok'rāl), *n.* In *railroading*, either of the two rails of a main or line track. At a switch one stock-rail may be continuous and the other continuous with the connecting-rail of the siding or crossover. See *switch*, 2, *frog*2, 2, and ★*adhesion-rail.*

stock-riding (stok'rī″ding), *n.* In Australia, the occupation of a stock-rider; the work of a cow-boy; riding herd.

> Like other Australian aborigines, the Kŭrnai have a natural aptitude for *stock-riding.* I have also known among them good shearers and reapers.
> *Fison and Howitt*, Kamilaroi and Kurnai, p. 260, note.

stock-room, *n.* **2.** A room, usually in a hotel, where travelers for business-houses show their samples and take orders.

stock-route (stok'röt), *n.* In Australia, a right of way through the land of a squatter which he is legally obliged to leave unobstructed for the use of cattle or sheep on their way to distant parts of the country. If the squatter fences his land he must provide slip-rails or other arrangement for their free passage. *E. E. Morris*, Austral English.

stock-saw (stok'sâ), *n.* One of the saws in a mill by which lumber is sawed from the log into the standard or stock sizes.

stock-whip (stok'hwip), *n.* A herder's whip. It has a short handle and long thong.

> The *stock-whip*, with a handle about half a yard long and a thong of three yards long, of plaited bullock-hide, is a terrible instrument in the hands of a practised stockman. Its sound is the note of terror to the cattle; it is like the report of a blunderbuss, and the stockman at full gallop will hit any given spot on the beast that he is within reach of, and cut the piece clean away through the thickest hide that bull or bison ever wore. He will strike a fly or a spot of mud on a hillock at full speed.
> *W. Howitt*, Tallangetta, I. 100.

stodge (stoj), *n.* [Also *studge.*] **1.** Any thick, satisfying food; a stiff, thick mass of a semi-liquid nature. *Eng. Dial. Dict.*—**2.** Thick, slimy mud; a wet, muddy condition. *Eng. Dial. Dict.*—**3.** A fat, thick-set person; a deformed person. *Eng. Dial. Dict.* [Dial. in all uses.]

stodge (stoj), *v. t.* and *i.*; pret. and pp. *stodged*, ppr. *stodging.* [*stodge, n.*] **I.** *trans.* **1.** To make heavy, full, and stupid by cramming with surfeiting or coarse food. [Dial., Eng.]

> The most robust of appetites for clerical lives cannot but confess itself—well, *stodged* is the only word, we fear. *Athenæum*, Feb. 2, 1901, p. 134.

2. To mix into a thick, liquid mass; stir up. *Eng. Dial. Dict.* [Dial.]

II. *intrans.* To walk with short, heavy steps; walk with the feet sticking in mud; stick fast in mud. *Eng. Dial. Dict.* [Dial.]

stodginess (stoj'i-nes), *n.* The character of being stodgy; heaviness; dullness; crudeness. [Colloq., Eng.]

> The bulk of the reviewing to-day is in no sense log-rolling. It is conscientious enough, as conscientious as work can be that is turned out very hurriedly and within a few hours of the publication of a book. *Stodginess* is its worst feature. *Bookman*, June, 1899, p. 360.

stodgy, *a.* **4.** Dull; stupid; crude; thick-headed: as, a *stodgy* way of looking at things. [Colloq., Eng.]

stoicheiological (stoi-kī-ọ-loj'i-kạl), *a.* [*stoicheiolog(y)* + *-ical.*] Relating to stoicheiology or the doctrine of elements. *G. S. Hall*, Adolescence, II. 114.

stoicheiology, *n.* **2.** In *histol.*, the science of the tissue-elements; cytology.

stoicheiometry, *n.* **2.** The study of the properties of each of the characters of an organism in relation to inheritance. See the extract.

> It is reasonable to infer that a science of *Stœchiometry* will now be created for living things, a science which shall provide an analysis, and an exact determination of their constituents.
> *Bateson and Saunders*, Rep. Evol. Com. Roy. Soc., 1902, [I. 159.

stoke-hold (stōk'hōld), *n.* The space below the decks of a steam-vessel where the boilers are located and fired; a stoke-hole. The stoke-hole may be constructed with air-tight bulkhead doors, so that a forced draft sent by fans or blowers into the hold finds its way out through the ash-pits and fuel-beds of the furnaces. This is the closed stoke-hold system. If the air comes in by natural means through openings for ventilation, the stoke-hold is 'open,' and no tight bulkhead doors are needed.

> The spaces occupied by the machinery almost necessarily form large compartments amidships; but in recent war-ships the *stoke-holds* have each been divided into two by means of a middle-line bulkhead.
> *White*, Manual of Naval Arch., p. 33.

stokery (stō'kėr-i), *n.*; pl. *stokeries* (-iz). [*stok(e)* + *-ery.*] A place where firing or stoking is done. [Eng.]

> In the south-east side of the Inch very complete remains of baths were found, with two brick-built hypocausts and a *stokery.*
> *Rep. Brit. Ass'n Advancement of Sci.*, 1901, p. 791.

Stokes-Adams disease. See ★*disease.*

Stokesian (stōks'i-ạn), *a.* Of, pertaining to, or due to Sir George Gabriel Stokes (1819–1903), an eminent British mathematician and physicist: as, a *Stokesian* theorem, principle, or law.

Stokes's law. See ★*law*1.

stolon, *n.*—**Genital stolon,** in echinoderms, same as ★*axial organ.*

stolonal (stō'lọn-ạl), *n.* [*stolon* + *-al*1.] Of or pertaining to a stolon.—**Stolonal thecæ.** See ★*theca.*

stolonization (stō″lon-i-zā'shọn), *n.* [*stolon* + *-iz(e)* + *-ation.*] The act of producing stolons or runners.

> *Stolonization* occurs as in Aurelia, but much less freely, as does also the origin of buds from the stolons. Budding from the side of the polyp was not observed in Cyanea, its small size probably rendering such process difficult. *Science*, April 11, 1902, p. 571.

stomach, *n.*—**Chylific stomach.** Same as ★*mid-intestine.*—**Colliers' stomach.** See ★*collier*1.—**Hour-glass stomach,** a ring-like contraction of the wall of the stomach dividing the organ into two cavities.

stomachache (stum'ạk-āk), *n.* Pain in the stomach; gastralgia; commonly, any pain in the abdomen, especially colic.

stomach-mouth (stum'ạk-mouth), *n.* The entrance to the proventriculus of the honey-bee. *A. S. Packard*, Text-book of Entom., p. 309.

stomalgia (stọ-mal'ji-ạ̈), *n.* [NL., < Gr. *στόμα*, mouth, + *ἄλγος*, pain.] Same as ★*stomatalgia.*

stomapyra (stō-mạ-pī'rạ̈), *n.* [NL., < Gr. *στόμα*, mouth, + *πῦρ*, fire.] Aphthæ.

stomatalgia (stō-mạ-tal'ji-ạ̈), *n.* [NL., < Gr. *στόμα(τ-)*, mouth, + *ἄλγος*, pain.] Neuralgic pain in the mouth.

stomatitic (stō-mạ-tit'ik), *a.* [*stomatit(is)* + *-ic.*] Relating to or affected with stomatitis.

stomatoblast (stō'mạ-tọ-blȧst), *n.* [Gr. *στόμα(τ-)*, mouth, + *βλαστός*, germ.] One of the cells from which the larval pharynx of certain marine annelids is developed. *Torrey.*

stomatognath (stō'mạ-tọ-gnath), *n.* [Gr. *στόμα*, mouth, + *γνάθος*, jaw.] See the extract.

> I would suggest the word "*stomatognath*" as a convenient term by which to refer to the various chitinous, or calcified, or siliceous "teeth" or "jaws" occurring as specialized thickenings of the lining of the stomodæum, such as the teeth or jaws of Annelids, including Leeches; the "teeth" in the gastric mill of Crustacea; the elements of the "mastax" of Rotifers; the individual members of the radular apparatus of Mollusca; and possibly, also, the horny teeth of Cyclostome fishes. The word was used by me some years ago, in a course of advanced lectures on the Annelida that I gave in the University of Oxford; and it appears to me that some such word would be useful in referring to these and kindred structures.
> *W. B. Benham*, in Proc. Zool. Soc. London, 1900, p. 982, [note.

stomatomalacia (stō″mạ-tọ-ma-lā'si-ạ̈), *n.* [NL., < Gr. *στόμα*, mouth, + *μαλακία*, softness.] Progressive ulcer of the mouth; cancrum oris.

stomatorrhea (stō″mạ-tō-rē'ạ̈), *n.* [NL. *stomatorrhœa*, < Gr. *στόμα(τ-)*, mouth, + *ῥοία*, flowing.] Salivation.

stomatose (stō'mạ-tōs), *a.* Same as *stomatous.*

stomidium (stọ-mid'i-um), *n.*; pl. *stomidia* (-ạ̈). [NL., < Gr. *στόμα*, mouth, + dim. *-ιδιον.*] A pore which indicates the position of a rudimentary tentacle in an alcyonarian.

stomochord (stō'mọ-kôrd), *n.* [Gr. *στόμα*, mouth, + E. *chord.*] A forward dorsal diverticulum of the gut in the collar region of *Enteropneusta* which pushes before it the wall of the preoral body-cavity. It is a complex structure possessing paired lateral pouches and a ventral convexity.

> The Notochord.—This structure, which occurs in the embryos of all Vertebrata, and persists in many of them throughout life, has always been recognized as one of their chief morphological characters. It is not disputed that this is homologous with the notochord of Amphioxus, and only a few authorities refuse to admit some relationship between the latter and the "notochord" of Enteropneusta, for which Willey's term "*stomochord*" will here be used. The *stomochord* is a forward dorsal diverticulum of the gut in the collar region, which pushes before it the wall of the præ-oral body cavity or protocœle.
> *Encyc. Brit.*, XXIX. 251.

stomochordal (stō-mọ-kôr'dạl), *a.* [*stomochord* + *-al*1.] Of or pertaining to the stomochord; provided with a stomochord.

stomodæum, *n.* **2.** In anthozoans, the sac-like pharynx, or so-called stomach.

Stomodeal canal. See ★*canal*^{1}.

stomoxyid (stọ-mok′si-id), *n.* and *a.* **I.** *n.* A member of the dipterous family *Stomoxyidæ*.

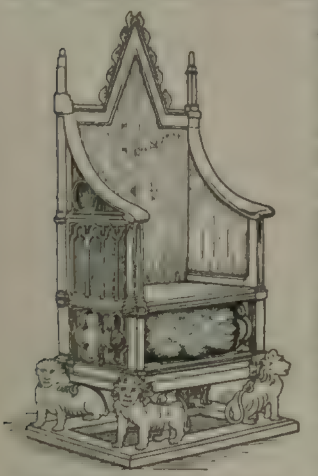
II. *a.* Having the characters of or belonging to the family *Stomoxyidæ*.

stone. **I.** *n.*—**Armenian stone.** (*a*) See *Armenian.* (*b*) An imitation stone made up of red, yellow, blue, and green glass in small particles, which is cut in brilliant form and extensively sold by Armenian and Syrian dealers.—**Back stone,** a cast-iron prism placed on the back edge of the bottom of a lead-ore hearth and surmounted by the nozle of the twyer.—**Black stone,** a rock, usually a basalt, of especially dark color but whose other characters are either imperfectly known or unnecessary to take into account.

> It stands upon an eminence well above the leveled and buried ruins of the ancient city, and though, to reach it from the western mountains, one must pass over the great *black-stone* belt, it is in the midst of a limestone region and is of the purest white.
> *H. C. Butler*, Architecture and Other Arts, p. 76.

Discoidal Stone.
(In U. S. Nat. Museum.)

Ceramic stone. See ★*ceramic.*—**Ceremonial stone.** See ★*ceremonial.*—**Cotham stone,** a division of the White Lias rock of southwestern England, commonly known as the ★*landscape-marble* (which see) and belonging to the upper or Rhætic member of the Triassic series.—**Dimension stone.** (*b*) Stone cut to a standard size, or to the size specified on drawings.—**Discoidal stone,** a stone of discoidal shape with concave surfaces, sometimes perforated in the center, found quite frequently among archæological remains in North America. Such stones were used in games, but may have served other purposes as well.—**Fish-eye stone.** See *apophyllite* and ★*fish-eye.*—**Gibraltar stone.** Same as *onyx marble.*—**Hercules stone,** a lodestone.—**Porcelain stone.** See ★*porcelain*^{1}.—**Portland stone.** (*b*) In the eastern United States, a chocolate-colored sandstone or brownstone which is quarried at Portland, opposite Middletown, Connecticut.—**Semiprecious stone,** a mineral which may be cut and polished so as to be decorative and fit for jewelry, but is not of great rarity and consequent cost. Thus agates and jaspers, carnelians and sardonyx, are usually classed as semiprecious, and turquoises, except at certain times and places. Some varieties even of the most precious stones may be so classed: thus, Burmese sapphires are semiprecious as compared with the true Indian sapphire, the difference being a mere matter of color and luster.—**Smoky stones,** precious stones, more particularly diamonds, which in consequence of internal imperfections lack perfect transparency.—**Stone of Cronus,** in *Greek antiq.*, a bætylic or sacred stone which was exhibited at Delphi as the stone which, according to the legend, Rhea had substituted for the infant Zeus, her son by Cronus, in order to preserve him from being destroyed by his father.—**The stone of Scone,** a block of stone lying in a frame or box under the seat of the coronation chair in Westminster Abbey. The tradition is that it was the stone which served Jacob for a pillow (Gen. xxviii. 11), that it was taken to Scone in Scotland, where the Scottish monarchs sat on it when they were crowned, and that it was brought from Scotland by Edward I., by whose orders the chair was made to contain it. It is a historical fact that the chair has been used continuously since the time of that king.—**Thulite stone,** a mixture of thulite and quartz which has a pink or rose color: used for small ornaments.



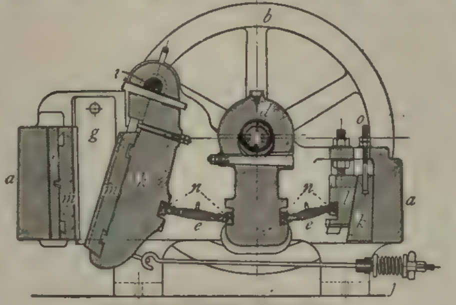
Coronation Chair with Stone of Scone.

II. *a.*—**Stone china.** See *ironstone* and *white* ★*granite.*

stone-bolt (stōn′bōlt), *n.* Two sets of wheels, joined by a pole below the axles, used for carrying stone. [Local, U. S.]

stone-carrier (stōn′kar″i-ėr), *n.* Same as *stone-lugger.*

stone-crusher, *n.* It consists, usually, of two or more jaws of hardened or chilled metal which are brought together to a gaged distance by a toggle-joint or other system of levers. The rock is fed in to the upper end of these jaws, which are inclined to each other, and as the movable jaw recedes from the fixed one and advances toward it by the toggle action, the rock feeds itself downward and is crushed by the nip of the jaw. The first crusher was designed by Blake of New Haven, Connecticut, and first patented in 1858. In connection with crushers there are usually sizing-screens,—revolving hollow barrels with perforated sides,—by which the crushed material is mechanically sorted. Crushers are much used in the building of permanent roads, the manufacture of concrete and cement, as well as in mining and the separation of ores.



Blake Stone-crusher, sectional view.

a, a, main frame; *b,* fly-wheel; *c,* crank-shaft; *d,* pitman; *e, e,* toggles; *f,* fixed jaw; *g,* cheek; *h,* movable jaw; *i,* jaw-shaft; *j,* rubber spring; *k,* wedge; *l,* toggle-block; *m, m,* jaw-plates; *n, n,* toggle-bearings; *o,* wedge-nut.

stone-fish, *n.* **2.** A scorpænoid fish, *Synancidium horridum*, living in Australian waters.

stone-flagged (stōn′flagd), *a.* Paved with flagstones. *E. Wharton*, Italian Villas, p. 53. [Rare.]

stone-hand (stōn′hand), *n.* In *printing*, the compositor who imposes pages of type on the stone and secures them in the chase for electrotyping or printing. Also called *stoneman.*

stone-ice (stōn′īs), *n.* Same as *fossil* ★*glacier.*

stone-lifter (stōn′lif″tėr), *n.* A common name of *Kathetostoma læve*, a fish belonging to the family *Uranoscopidæ.* [Australia.]

stoneman, *n.* **2.** In *printing*, same as ★*stone-hand.*

> Front and tail margins can be most accurately made by the *stoneman*, for they cannot be predetermined with precision by guesswork.
> *De Vinne*, Mod. Book Composition, p. 301.

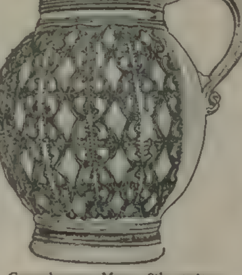
stone-mill, *n.* **3.** A flouring-mill in which stones are used in place of rollers. [Rare.]

stone-pheasant (stōn′fez″ạnt), *n.* See ★*pheasant.*

stone-waller (stōn′wâl-ėr), *n.* In *cricket*, a batsman who plays entirely on the defensive, that is, whose object is merely to keep the ball out of his wickets. [Colloq.]

> With them [able batsmen] was associated Scotton, most patient of *stonewallers.* *Encyc. Brit.*, XXVII. 278.

stoneware, *n.*—**Coblenz stoneware,** salt-glazed gray stoneware with blue ornamentation, made extensively at Coblenz, Germany, and vicinity in the seventeenth, eighteenth, and nineteenth centuries.—**Frechen stoneware,** brown salt-glazed stoneware made at Frechen, near Cologne, Germany, in the sixteenth century. The bellarmine, a jug with a bearded mask on the front of the neck, is a familiar example of Frechen ware.—**Grenzhausen stoneware,** a gray stoneware with incised and embossed decoration, usually embellished with blue and purple enamels, made at Grenzhausen and Höhr, near Coblenz, Germany, since the sixteenth century.—**Kreussen stoneware,** a dark, metallic brown stoneware with relief decorations of apostles, etc., usually enriched with brightly colored enamels, red, blue, yellow, and white, made at Kreussen, Bavaria, in the seventeenth and eighteenth centuries.—**Limburg stoneware.** See *Raeren* ★*stoneware.*—**Raeren stoneware,** a variety of grès de Flandres with a lustrous brown salt-glaze and applied relief decorations, made at Raeren, near Aix-la-Chapelle (in the ancient duchy of Limburg), during the sixteenth and seventeenth centuries. Among the most characteristic objects are jugs with relief friezes representing peasant dances. Also called *Limburg stoneware.*—**Siegburg stoneware,** a variety of stoneware of white clay with molded reliefs, made at Siegburg, near Bonn, Germany, in the sixteenth century. The best-known forms of this ware are the tall, tapering flagons, or cannettes, and the baluster-shaped jugs with funnel-shaped tops.



Grenzhausen Mug, 18th century.
(In the Pennsylvania Museum, Philadelphia.)

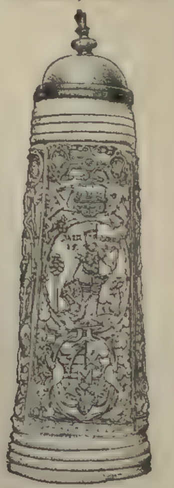
Raeren Jug, 1597.
(In the Pennsylvania Museum, Philadelphia.)



Siegburg Cannette, 1589.
(In the Pennsylvania Museum, Philadelphia.)

stonewood (stōn′wụd), *n.* The broad-leaved tea-tree (which see, under *tea-tree*). The Australian silver-tree, *Tarrietia Argyrodendron*, is also sometimes known by this name.

stonework, *n.* **2.** In *printing*, the imposing of pages of type on a surface of stone and the securing of them in the chase for electrotyping or printing.

> Correct *stone-work* depends primarily on properly justified lines and exact make-up, but the stone is not the place to remedy the grosser faults made by the compositor. *De Vinne*, Mod. Book Composition, p. 306.

stoning-jack (stō′ning-jak), *n.* In *leather-manuf.*, a jack with a glass or stone at the end of an arm which moves back and forth over the leather to remove the wrinkles. *C. T. Davis*, Manuf. of Leather, p. 185.

stonite (stōn′īt), *n.* [*ston*(*e*) + *-ite*^{2}.] A trade-name for an explosive consisting of 68 per cent. nitroglycerin, 8 per cent. potassium nitrate, 20 per cent. kieselguhr, and 4 per cent. wood-meal.

stook, *n.* **2.** A shock of Indian corn. [Northern U. S., especially New England.]

> If the corn is cured and husked, the bundles are carried together and set up in large shocks or *stooks*, as commonly known in New England. *Book of Corn*, p. 180.

stool, *n.* **8.** (*c*) In wooden ships, one of the pieces of plank bolted to the quarters for the purpose of forming and erecting the galleries; also, one of the ornamental blocks for the poop lanterns to stand on abaft. *Knowles*, Naval Architecture. (*d*) In *iron ship-building*, a small foundation or seating for the support of some part of the machinery, as the shaft-bearings, pumps, etc.

stool-pigeon, *n.* **3.** One who looks over the hand of a card-player and signals its contents to a confederate.

stop^1, *v. t.* **16.** See *to stop down a lens*, under *stop*^{1}, *v. t.*

stop^1, *n.* **18.** In games such as newmarket and pope-Joan, a card which is left in the stock and stops the run of a sequence which is played. Certain named cards are sometimes arbitrarily agreed on for stops.

> A *Stop* is a card which baulks or stops the further play in a sequence. It may be the highest card of a suit; or a card next lower in sequence to the card led in a suit already played. For example: Suppose a Seven of Hearts has already been led, and the sequence played up to the King, which is a *Stop*; then the Six of Hearts, being the highest remaining card of that suit, is necessarily a *Stop.*
> *Amer. Hoyle*, p. 331.

19. In *mech.*, an obstacle, such as a pin, peg, or block, placed so as to limit in a definite manner the movement of any part of a machine or instrument.

> The cock is quarter stopped so that when it is turned in one direction as far as the *stop*, it is full open and in communication with the inside of the meter.
> *W. J. Dibdin*, Public Lighting, p. 94.

20. In *wrestling*, a counter to any particular hold.—**21.** In *boxing*, a guard that prevents a blow from reaching home.—**Accessory stop**, in *organ-building*, a stop-knob which controls some mechanical contrivance, such as a coupler, the tremulant, the bellows-signal, etc., which is not a true stop, since it does not have a set of pipes connected with it. See *stop*1, *n.*, 6. Often called an *accessory*, absolutely, or a *mechanical stop*.—**Automatic stop**, a device, in railroad signal systems, by which the failure of an engineer or motorman to observe a danger-signal and stop his train is followed by a cutting off of the power, or an application of brakes to the train independent of his action. Such stops are usually levers which normally lie out of the path of the train when the signals are at safety. When the signal stands in the danger position, the lever rises or swings so as to hit either a valve or an electric switch, or break a fragile piece of pipe, and stop the train.—**Emergency stop**, in a railway-train fitted with a continuous brake, the stoppage of the train by such an application of the brake as brings the full power of the brake-system into action upon the brake-shoes. This stops the train in the shortest possible distance or time, but with ordinary adjustment of the levers the stop is so sudden as to be uncomfortable to passengers. Distinguished from a *service* ★*stop*.—**Manual stop**, in *organ-building*, a stop or set of pipes that belongs to one of the partial organs controlled by or played from a manual keyboard: opposed to a *pedal stop*, which belongs to a partial organ controlled by or played from a pedal keyboard.—**Mechanical stop.** See *accessory* ★*stop*.—**Rudolph's system of stops**, a series of photographic lens-stops in which $\frac{1}{50}$ (f) is the smallest aperture. In this series the exposures corresponding to the stops are inversely related, other things being equal, as the numbers by which they are distinguished.—**Service stop**, in a continuous train-brake system, the arrest of the motion of the train by applying the brakes in the usual or ordinary manner, by which the inertia of the moving mass is gradually overcome. It is used in regular service to bring trains to rest at stations or for other regular stops, by a gradual or step-by-step increase in the braking power, so as to avoid jars or shocks, and to cause the least discomfort to passengers and least injury to the cars of the train. In air-brake service it is effected by successive reductions of the pressure in the continuous train-pipe, with intervals for the equalization of air-pressure in the pipe between reductions. A gradually increasing pressure is thus exerted on the brake-levers and the brake-shoes which bear against the wheels, and a retarding force is exerted which gradually increases in effect as compared with the diminishing living force of the moving mass, until the energy is entirely absorbed and the train stops. See *emergency* ★*stop*.—**Sounding stop**, in *organ-building*, a real stop or set of pipes, or the stop-knob for such a stop: opposed to *accessory* ★*stop*.

stop-bead (stop'bēd), *n.* In *carp.*, a strip secured to the jamb of a door to stop it at the right point when closed: used when there is no rebate cut in the solid frame.

stop-board (stop'bōrd), *n.* In *athletics*, the rim surrounding the circle which marks the position of the shot-putter or hammer-thrower in making his attempt.

stop-gage (stop'gāj), *n.* An instrument for setting the nippers of a cotton-combing machine which hold the cotton while the combing-needles pass through it. *Thornley*, Cotton Combing Machines, p. 152.

stop-gate, *n.* **2.** A valve of large size, of the type which slides across the opening it controls. In large sizes for pipe it is also called *gate-valve* and *stop-valve*.

> In article 12 the closing of the *stop-gate* is instantaneous, and the kinetic energy of the moving water is absorbed by the elastic compression of the water itself (the pipe being supposed fixed and its possible distension neglected). *Science*, Jan. 10, 1902, p. 66.

stop-guard (stop'gärd), *n.* In *archery*, a catch upon the inside of a shooting-glove, or finger-tips, to fix the place of the drawing fingers upon the bowstring.

stoping, *n.* **2.** A method by which intrusive igneous masses are supposed to make a way for themselves by breaking off blocks of the overlying rock and passing them downward and backward until wholly or partially absorbed. See the extract.

> Daly has recently urged that lavas work out reservoirs and enlarge passageways for themselves by detaching masses of rock from the roofs and sides of the spaces already occupied by them, these masses either melting and mingling with the lava, or else sinking to lower positions in the column. This process he designates *stoping*.
> *Chamberlin and Salisbury*, Geol., I. 603.

stoping-bar (stō'ping-bär), *n.* In *quarrying*, a telescopic bar of steel having a jack-screw at one end, used as a support for a rock-drill. The bar, by means of the screw, is firmly wedged between the walls of a shaft or tunnel, the rock-drill being adjustable at any angle and in any position upon the bar. A stoping-bar used vertically between the floor and roof of a tunnel or drift is called a *drifting-column*. A modification of a stoping-bar, having a separate support for the drill and moving upon the bar, is called a *shaft-bar*.

stop-joint (stop'joint), *n.* A device which limits motion in any jointed apparatus.

> The common form [of support] is a simple steel sole plate of sufficient size to support the foot and the toes, if their muscles are paralyzed, attached to a light upright provided with a calf band. The upright is usually applied on the inner side of the leg where it is least noticeable. At the ankle there is a "*stop joint*," which allows dorsiflexion but prevents the toe-drop.
> *Buck*, Med. Handbook, IV. 234.

stop-key (stop'kē), *n.* In *lock-making*, a safety-key which, when placed in its lock, may serve to prevent the use of a master-key or any other key from the opposite side of the door.

stop-motion, *n.*—**Back-stop motion**, in *cotton-manuf.*, a mechanism in a sliver-drawing machine for stopping it if one of the sliver-ends breaks.

stop-needle (stop'nē″dl), *n.* A surgical needle with a shoulder which allows it to penetrate into the tissues only to a certain depth.

stop-nut (stop'nut), *n.* A nut used on an adjusting-screw to limit motion in one direction, either of the screw itself or of some part moving upon the screw.

> The saddle is adjusted in and out by *stop-nuts* and bolted down on the knee by four bolts with swing handles, as shown. *Elect. World and Engin.*, Jan. 30, 1904, p. 242.

stop-off (stop'ôf), *n.* The leaving of a train at a station, before the destination is reached, with the privilege of resuming the journey on a subsequent train and with the original ticket; the privilege of 'stopping off,' or 'over,' in this way. [U. S.]

> If a sufficient number join the station and desire the organization of a party to make the trip together, such organization will be undertaken and the trip will be made by one of the northern transcontinental routes with the usual *stop-offs* in the mountains.
> *Science*, April 22, 1904, p. 676.

stop-order, *n.* **2.** An order issued out of the court of chancery on petition of one having an assigned or other interest in funds in the hands of the paymaster-general of that court, staying the payment thereof. Any person who has a lien on funds in court may obtain a stop-order. [Eng.]

stopper, *n.* **4.** In the Bahamas, either of two trees, (*a*) the red rodwood, *Eugenia axillaris*, and (*b*) the marlberry, *Icacorea paniculata*. See *marlberry*.—**Check-stoppers**, a series of short lengths of rope, called 'stops,' fastened to an anchor-cable, or other chain, and designed to part in turn as the cable runs out, but to serve as a check to the natural rapidity of its motion.—**Dog-stoppers**, collectively, ropes secured to the mainmast, bitts, hatch, etc., as auxiliary to the deck-stoppers, and which take their respective names according to the place they occupy on deck.—**Hatch-stopper**, a strong rope fastened in the hatch to assist the deck-stopper. Iron stoppers are employed as hatch-stoppers, being situated in the corners of the hatches, with compressors on the lower deck. Iron levers, controlled by a tackle, compress the chain-cable and stop it from running.—**Lanyard-stopper**, a short length of rope with a large knot in one end and a rope lanyard of a smaller sized rope, while the other end of the stopper has a large hook or shackle. The latter secures into an eye-bolt in the deck, and the lanyard is wound about the cable and stopper, while the knot keeps it from slipping.—**Lever-stopper**, an iron casting holding one link of chain which is kept in place by the use of a turn-screw, or lever. See *hatch*-★*stopper*.—**Mechanical-stopper**, a contrivance for checking the running out of a cable, and also for controlling the running in of a cable when it is being stowed in the chain-lockers.—**Rope-stopper.** Same as *lanyard*-★*stopper*.

stopping-off (stop″ing-ôf'), *n.* In electroplating, deposition on the exposed portions of a surface the remainder of which is protected by a non-conducting coat of varnish or wax.

stop-ridge, *n.* **2.** In drains and other piping, a ridge which prevents one section slipping too far over another at the joints. Examples have been found in excavations of prehistoric Cnosus in Crete. *A. J. Evans*, in An. Brit. School at Athens, 1901–02, p. 14.

stop-shaft (stop'shȧft), *n.* A mechanism that will lock or stop the motion of a shaft either lengthwise or when it has traversed a certain part of a revolution, or a multiple of such part: used in printing-presses, gear-cutters, and other machines.

stop-swing (stop'swing), *n.* In club-swinging, the act of bringing the club against the opposite arm, thus reversing its swing.

storage, *n.*—**Capillary storage-capacity**, the quantity of moisture that can be held in a given volume of soil in the shape of capillary films surrounding the particles of soil. This capacity increases from the surface down to the ground-water level in accordance with the laws of capillarity.—**Storage reservoir.** See ★*reservoir*.

storage-boom (stōr'ạj-böm), *n.* A strong boom used to hold logs in storage at a saw-mill. Also *holding-boom*.

storage-cell (stōr'ạj-sel), *n.* An electric accumulator.

storage-track (stōr'ạj-trak), *n.* In *railroading*, any track at a drill-yard or terminal yard on which loaded or empty cars are stored for cleaning, or safe-keeping between runs.

store3, *n.* **5.** An animal bought to be fattened for the market; store cattle. *E. E. Morris*, Austral English. [Australia.]

> They then, if '*stores*,' pass to the rich salt-bush country of Riverina.
> *W. H. L. Ranken*, Dominion of Australia, xiii.

storesin (stō'rez-in), *n.* [*sto*(*rax*) + *resin*.] An amorphous compound, $C_{36}H_{55}(OH)_3$, the chief constituent of the resinous balsam storax.

storm, *n.*—**Espy's theory of storms**, the explanation of the method of the formation and maintenance of storms as due to the evolution of latent heat by the condensing moisture of ascending moist air, whereby the cloud becomes specifically lighter than the surrounding air at the same level, thus forming an up-draft and a continued process of condensation. With the addition of the whirlwind tendency where the air flows inward and upward, Espy's theory forms the foundation of modern meteorology.—**Law of storms.** See ★*hurricane distance*.

storm-beach (stôrm'bēch), *n.* A beach the form of which has been determined by a storm of unusual strength. *Geikie*, Text-book of Geol., pp. 381, 580.

Stormberg beds. See ★*bed*1.

storm-breeder (stôrm'brē″dėr), *n.* A day or condition of weather regarded as likely to 'breed' or produce a storm: said, usually, of warm moist days of winter or hot hours or days of summer.

storm-clock (stôrm'klok), *n.* A meteorograph; specifically, the self-registering meteorological apparatus devised and named by Sir Francis Ronalds.

storm-coat (stôrm'kōt), *n.* A waterproof coat or mackintosh; also, a heavy ulster.

storm-energy (stôrm'en″ėr-ji), *n.* The energy within a storm, or the sum total of the vis viva of the moving air and falling rain; the total or average prominent characteristics of a system of cyclonic winds. A storm of great energy is one having strong winds and heavy rain.

storm-jib (stôrm'jib), *n.* A small jib made of heavy canvas and used in bad weather.

stormward, stormwards (stôrm'wärd, -wärdz), *a.* and *adv.* **I.** *a.* Turned toward or facing the storm.

> So every year that falls with noiseless flake
> Should fill old scars up on the *stormward* side.
> *Lowell*, The Oak, st. 4.

II. *adv.* Moving toward the storm; in such a way as to face the storm.

> The team made little progress *stormward*, for the blizzard was raging more furiously and they had left the shelter of the woods. *N. Y. Times*, April 11, 1888.

storm-wave (stôrm'wāv), *n.* A wave of water piled up on a coast or at sea by strong ocean winds.

story2, *n.*—**Lower story, upper story.** (*b*) In *forestry*. See ★*two-storied*.

stoss-side (stos'sīd), *n.* [G. *stoss*, a thrust, push, knock (*stossen*, thrust, push), + E. *side*.] The side (of a hill, etc.) that receives (or has received) the thrust of a glacier, or other impulse. *R. D. Salisbury*, in Geol. Surv. of New Jersey, 1891, p. 47.

Form of hill after it has been worn by glacial ice. The movement of the ice was from *a*, the stoss-side, to *b*.

> There was also more rapid erosion upon the north or *stoss side* of hills than upon the southern or lee side, against which the ice-currents had little chance to scour.
> *Bulletin Amer. Geog. Soc.*, XXX. 225.

stott, *v. i.* See *stot*2. *W. J. Travis*, Practical Golf, p. 134.

stotter (stot'ėr), *n.* [*stot*2 + *-er*1.] In *golf*, a ball that stots or bounces: generally used in some such expression as 'a good *stotter*,' meaning a ball that possesses resiliency and bounces well upon being dropped on a hard, flat surface. *W. Park, Jr.*, Game of Golf, p. 52.

stouker (stou'kėr), *n.* [Also *stowker*; a dial. form of *stalker*, < *stalk*, handle, + *-er*1.] A workman in a pottery who makes and attaches handles, feet, and spouts to vessels. [Eng.]

stouking (stou'king), *n.* [Also *stowking*; a dial. form of *stalking*.] The making and attaching of handles and spouts to vessels. [Eng.]

stovaine (stō'vạ̈-in), *n.* [*stove*1, *n.*, + *-a-* + *-ine*2: an arbitrary rendering into English of F. *Fourneau* ('stove'), the name of the discoverer.] The hydrochlorid of benzoylethyldimethylaminopropanol, $CH_3C(C_2H_5)(OC_7H_5O)CH_2N(CH_3)_2HCl$: a local anesthetic resembling cocaine but weaker in its effect and less poisonous. *Sci. Amer.*, Dec. 14, 1907, p. 443.

stove^1, *n.* 7. A chamber in which hides are dehaired.— **Cowper's stove,** a stove used to heat the blast for the iron blast-furnace by means of the waste heat from the same furnace. It consists of a circular wrought-iron tower about 100 feet high and from 25 to 30 feet in diameter, lined with fire-brick. The body of the stove is occupied by a checkerwork of fire-brick shaped to form hexagonal channels. Each blast-furnace is accompanied by four hot-blast stoves. At any one time three of these stoves are occupied by burning the waste gases from the blast-furnace within the channels described. The effect of this combustion is to heat the fire-brick of the channel to a very high temperature. The fourth stove, having been previously heated as described, is used for the passage of the blast from the blowing-engine to the furnace. It thus gives up the heat impounded in its fire-brick to the air. When this stove has become somewhat cooled by this process, the air is switched through another of the stoves. *Jour. Soc. Chem. Industry*, 1893, p. 311.—**Hanging stove** (*naut.*), a stove suspended from a deck-beam to keep it free of the deck. **Hot-blast stove,** the oven or inclosed chamber, usually now of fire-brick, in which air is heated on its way from the blowing-cylinders to the blast-furnace in which iron is smelted.— **Massick's and Crooke's hot-blast stove,** a stove which has a wide combustion-chamber in the center and a heating-chamber divided by radial and concentric walls into annular passages. The gases enter the chimney after having passed through three sets of tubes.— **Napier's stove,** a stove for heating ordinary dwelling-rooms by means of solid fuel, which is very economically used. It consists essentially of two concentric cylinders, in the inner of which the fuel is burned, while the gaseous products of combustion are carried from top to bottom of the space between this and the outer cylinder before passing off to the chimney. — **Pistol-pipe stove,** a hot-blast stove with a single vertical pipe divided longitudinally and bent over in the form of a pistol-stock. The cold air entering one division descends through the other, and after becoming heated by the furnace passes off to the twyers.— **René Duvoir stove,** a hot-air stove or furnace much used in France for heating houses and factories. The hot gases from the fireplace are carried off through a number of cast-iron pipes around which circulates the air to be heated, which is then distributed by flues to the various rooms of the building.— **Reservoir stove.** (*a*) A stove having a reservoir for coal; a self-feeder. (*b*) A stove having a tank or reservoir for hot water.— **Spoor's stove,** a stove for domestic warming of rooms, in which the hot gases from the fire are made to pass upward and downward round the circumference of the fireplace before reaching the chimney, and the round grate can be turned on an axis in order to remove ashes.— **Talabot stove,** a hot-air stove, designed by M. Talabot, and used to heat the Chambre des Deputés in Paris. The air to be heated was passed through a number of horizontal cast-iron pipes set in an arched fireplace of brick.— **Tinners' stove.** See ★*tinner*.— **Whitwell's stove,** a stove for heating the blast on its way from the blowing-engine to the iron blast-furnace. It is lined with fire-brick. It is distinguished from the Cowper stove by the fact that the air must make several passes up and down through the Whitwell stove, whereas, in the Cowper stove, it makes one pass up and back.

stove^1, *v. t.* 1. (*f*) In the manufacture of explosives, to dry (the granulated powder) by exposure to warm air in a 'stove' or drying-room fitted with shelves under which run lines of steam-pipe. A similar drying process is applied in the manufacture of smokeless powder to remove any remains of acetone.

> All cordite, after pressing, is dried in stoves. . . . The object of the *stoving* is to remove the acetone and any moisture from the cordite. *Encyc. Brit.*, XXXII. 24.

3. In *wool-bleaching*, to expose (woolen yarn or cloth) in a dampened condition to the fumes of burning sulphur, and hence to the action of sulphurous acid, in a closed, usually wooden, building. The same treatment is sometimes applied to silk.

stove^2, *pret.* and *pp.*— **Stove up,** said of iron forgings or bars which are locally heated and then struck in the direction of their length; upset. The effect of this is to increase the diameter at the heated part, but at the expense of the length. The metal for heads of bolts is often secured by upsetting, as well as the parts of bridge-rods which are to carry the screw-threads when it is desired that the rod at the bottom of the threads shall be as strong as or stronger than the body of the bar.

stove-blacking (stōv′blak″ing), *n.* A preparation of graphite or plumbago used to rub over the surface of iron stoves, in order to give it a glossy appearance and to protect the iron from rusting.

stove-bolt (stōv′bōlt), *n.* A small bolt with a slot in the head for a screw-driver and with a square nut on the screw.

stove-lid (stōv′lid), *n.* A cover, usually a circular disk, fitting an opening in the top of a cooking-stove or range.

stove-lifter (stōv′lif″tėr), *n.* A tool for lifting a stove-lid from the stove.

stove-mat (stōv′mat), *n.* A mat (usually circular) of asbestos cloth used to place on a cooking-stove.

stover^1, *n.* (*b*) In American agriculture, the stalks of Indian corn collectively, after removal of the ears but including the leaves, used as fodder.

stove-shelf (stōv′shelf), *n.* A metallic shelf over the back part of a cooking-stove or range, often attached to the rising-pipe. It is intended to be in the rising currents of hot air around the stove and to carry plates to be warmed, or to keep cooked food warm until it is called for.

stow^1, *v.* II. *intrans.* To conceal one's self on a ship (with a view to a free passage): with *away*. See *stowaway*.

> [He] . . . opened his campaign by *stowing away* in one of [the ship's] boats.
> *R. Kipling*, Bonds of Discipline, in Traffics and Discoveries, p. 38.

stowker, *n.* Same as ★*stouker*.

stowking, *n.* Same as ★*stouking*.

str. A contraction of *steamer*.

strabometry (strā-bom′e-tri), *n.* [NL. *strab*(*ismus*) + *-o-* + Gr. μέτρον, measure.] The measurement of the degree of strabismus.

Strad^2 (sträd), *n.* An abbreviation of ★*Stradivari*.

straddle-mill (strad′l-mil), *n.* A revolving milling-machine cutter, either solid or made up of several cutters set side by side in a gang, which will cut or finish the top and sides of the work at the same time, when it is presented to the cutters in the plane in which they revolve, or at right angles to their common axis. This can only be done when the outside cutters have cutting-edges on their inside faces, or appear to straddle the work. The straddle-mill generally faces the top and sides of the work at the same time.

Stradivari, Stradivarius (strä-di-vä′rē, strad-i-vā′ri-us), *n.* The name of Antonio Stradivari (Latinized *Stradivarius*) of Cremona (d. 1737), a famous violin-maker, applied to a violin or similar instrument made by him.

straggle, *v.* II. *trans.* To rough-dress (a stone for grinding) by a wriggling motion of the dressing-tool, so as to give a roughened surface; rag.

straight^1, *n.* 4. In *geom.*, a straight line.— 5. In *trap-shooting*, a perfect score.

> In the 10-bird event W. . . . and C. each made a *straight*. *Forest and Stream*, Feb. 21, 1903, p. 160.

Alternate straight, in *poker*, a sequence of alternate cards, such as 2, 4, 6, 8, 10: usually played to beat two pairs.—**Basal straights,** in *geom.*, the four straight lines touched by a range of conics.—**Brocard straight,** the straight line determined by the Brocard points Ω, Ω′. —**Dutch straight,** in *poker*, an *alternate* ★*straight* (which see).—**Euler's straight,** the straight line on which are the centroid, G, the orthocenter, H, and the circumcenter, O, of any triangle ABC.—**Figurative straight,** the straight line at infinity on which all points at infinity on a plane lie.— **Frégier straight** of a point P, the polar of the Frégier point F of P. F is the cointersection point of chords of the conic which subtend a right angle at the fixed point P of the conic. F is on the normal at P.— **Harmonic straights.** Same as *harmonic flat pencil*. See *harmonic pencil*.— **Harmonic straights of a ruled system,** in *projective geom.*, four straights cut in four harmonic points by one (and so by every) guide-straight.—**Inside straight,** in *poker*, a sequence which is broken in the middle, such as 5, 6, 8, 9, or 3, 5, 6, 7.— **Lemoine straight,** the polar of the Lemoine point of a triangle with respect to its circumcircle.— **One-end straight,** in *poker*, a four-card straight which only one card will fill, such as A, K, Q, J. — **Open-end straight,** in *poker*, a four-card straight which is open at both ends, so that either of two cards will fill it, such as 5, 6, 7, 8.—**Pascal straight,** in *geom.*, the straight line on which intersect the three opposite pairs in any complete set of connectors of a hexastigm whose dots are in a conic.—**Sheaf of straights.** See ★*sheaf*^{1}.—**Simson straight** of a point P on the circumcircle of triangle ABC, the bearer of the feet of the three perpendiculars from P to the sides of ABC.—**Space of straights.** See ★*space*.

straightaway, *a.* II. *n.* A race-course which is without turn or curve; also a race which is run without turning or curving.

> The discovery of this new course is a matter of importance to all interested in the mile *straightaway*, because it will offer an opportunity for the record to be lowered oftener than once a year, thus making it possible for this country to keep up with record developments abroad.
> *Automobile Topics*, May 27, 1905, p. 447.

straight-bolt (strāt′bōlt), *n.* A soldering-bit or copper 'iron' the axis of which is in line with the shank and handle.

straight-bred (strāt′bred), *p. a.* Descended from a given breed without mixture of other blood; pure-blooded: applied to cattle and other domesticated animals.

> The Gazette is asked for information in reference to certain so-called "pure" or "*straight-bred*" strains of pedigreed cattle; particularly those spoken of as "pure Cruickshank" Short-horns. In this latter case the term "pure" or "straight" is properly applied only to such cattle as have been bred on both sides from stock descending from animals bred by the late Amos Cruickshank, of Sittyton farm, Aberdeenshire, Scotland, without admixture of blood from other herds.
> *Rep. Kansas State Board Agr.*, 1901–02, p. 57.

straight-edge, *n.* 2. A wooden board or metal strip, with an edge accurately planed, used in irrigation for laying out ditches in connection with a level or plumb-bob and in place of a surveyor's level.

> The pioneer irrigators in planning a ditch use a *straightedge* or board a rod long (16.5 feet), on one end of which is a block projecting one-half of an inch or an inch. When this board is placed horizontally, the lower projecting point will thus indicate a fall of one-half of an inch or an inch to the rod. By this means points are determined at intervals of a rod where stakes may be driven into the ground, marking out the course of the ditch upon a slightly ascending or descending grade, according as the work is begun from the lower or upper end.
> *Sci. Amer. Sup.*, Jan. 10, 1903, p. 22599.

straightening-roll (strāt′ning-rōl), *n.* A machine, allied to the bending-roll, used in straightening out bent or wrinkled metal plates or sheets. It consists of three lower rolls and four upper rolls placed in housings immediately above them, all being geared together.

straightest (strā′test), *a.* and *n.* I. *a.* Superlative of *straight*.

II. *n.* Specifically, in *spherics*, a great circle, the analogue of the straight, being unbounded but determined by any two points not opposites.

straight-field (strāt′fēld), *n.* In *geom.*, the ∞^2 straight lines on a plane.

Straight-over draft. See ★*draft*^{1}.

straight-rail (strāt′rāl), *n.* In *carom billiards*, a straightforward movement by which, with the aid of the parallel cushion, three balls are carried around the table. A limit was placed upon it in 1879, and since that time it has been little played, and generally for exhibition only.

straights-geometry (strāts′jē-om″e-tri), *n.* Geometry with the straight line as element.

straight-sheaf (strāt′shēf), *n.* In *geom.*, the ∞^2 straights on a point.

straight-spoken (strāt-spō′ken), *a.* Straightforward and truthful in speech. [Colloq.] *Dialect Notes*, III. iii.

straightway (strāt′wā), *a.* Permitting something, as a fluid, to pass without changes of direction: used of valves or fittings for pipe. —**Straightway valve.** See ★*valve*.

strain^1, *v. t.* 14. In *photog.*, said of a lens when an object is brought so near that the image appears distorted.

> But if brought nearer than a certain point, the lens will be what is termed "*strained*," and the image will become dreadfully distorted. It is for this reason that long focus lenses are specially constructed for obtaining large images. *Woodbury*, Encyc. Dict. of Photog., p. 262.

strain^1, *n.*— **Components of a strain,** six quantities continuously variable from point to point, which determine the positions of the particles of a body when it is strained. They are quantities in terms of which the extensions and contractions of all the lines joining particles of a body which are near together can be expressed. —**Dielectric strain,** the mechanical effect upon a dielectric of the stress exerted by an electrostatic field of force.— **Differential strain,** a strain caused by a variable or a moving load.— **Elongation strain,** the percentage of elongation of a piece of material being tested in a testing-machine. It is the amount of stretch expressed as a fraction whose numerator is the amount of stretch in the test-specimen and whose denominator is the length between the gage-marks on the specimen within which the observed amount of stretch is measured.— **Intrinsic strain,** in *phys.*, an internal strain affecting a portion of a solid but not producing deformation of the body as a whole, as the strains produced within a mass of glass which has been suddenly cooled.— **Irrotational strain.** Same as *pure strain* (which see, under *strain*^{1}).— **Level of no strain.** See ★*level*^{1}.— **Magnetic strain,** the mechanical effect of the stress exerted by a magnetic field. See *magneto-striction*.— **Optical strain,** any deformation of an isotropic medium which renders it doubly refracting; any strain which affects the optical properties of a transparent medium.— **Strain-energy method,** a method of calculating the deflection of a beam or structure, which involves finding the energy necessary to do the work of deflecting the beam by a given amount. If the load is not applied for a long enough period, the deflection will not reach the maximum attainable with the given load.— **Strain sensation,** in *psychol.*, a kinesthetic sensation, having the quality of strain, and referred by most authors to the sensory nerve-endings of the tendons.

> When we are trying to remember a name or are pondering a difficult problem we notice the presence of *strain-sensations*.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 247.

Tensile strain. See ★*tensile*.

strain^2, *n.* 1. (*b*) In *agri.* and *hort.*, a group of cultivated plants derived from a race which does not differ from the original race in visible taxonomic characters, but into which has been bred some intrinsic quality, such as a tendency to yield heavily, or a better adaptability to a certain environment. If a breeder by the careful selection of blue-stem wheat should produce a sort of blue-stem which differs from the original race only in the ability to give greater yields, it would be called a strain of blue-stem. *H. J. Webber*, in Science, Oct. 16, 1903, p. 502. Compare ★*race*^{3}, 5 (*c*).—7. A name given in Ireland to long masses of half-molded peat before the latter is cut up into briquets for drying and subsequent burning. The peat is excavated from the bog, and by a machine is torn, comminuted, kneaded, and pressed, leaving the machine in continuous rods or bars (strains). On drying, the strains shrink to about half their size when wet.

The machine digs out, elevates, and drops into the dump-cars a ton of raw peat every five minutes. It is transported to the machine, conveniently located at the edge of the bog, which tears, pulverizes, kneads, and presses the plastic mass out into long masses or "*strains*," which are cut into sections a foot long and dried in the open air to hard, tough blocks, which resist rain and bear transportation to any distance.
Sci. Amer. Sup., May 21, 1904, p. 23735.

strain-diagram (strān'dī″ạ̈-gram), *n.* See ★*diagram*.

strainer, *n.*—**Macomb strainer,** in *ship-building*, a fitting forming part of a suction-pipe for bilge-water. The inlet-pipe is attached near the top of the strainer-casing, the outlet-pipe at the bottom. In the interior, between the inlet and the outlet, is a strainer in the form of a basket which can be removed for cleaning by taking off a water-tight cover which forms the top of the casing.

strainer-cooler (strā'nėr-kö″lėr), *n.* Same as ★*scrap-hopper*.

straining-head (strā'ning-hed), *n.* In a testing-machine for metals and other materials, the part which is operated by power to produce stress in the test-piece and cause the strain of which its deformation is the measure. This head may be actuated by hydraulic pressure or by screws, one end of the test-piece being fastened to the head by a holder or wedges, while the other is held in a similar holder in a part connected to the weighing-levers and scale-beam.

straining-screw (strā'ning-skrö), *n.* The screw, or one of a pair of screws, in a machine for testing the strength and resistance of materials, by which the power is applied to produce deformation; or, one of the screws by which the movable head is adjusted in such machines to fit them for different lengths of test-piece.

strain-insulator (strān'in″sụ̄-lā-tọr), *n.* See ★*insulator*.

strain-quadric (strān'kwod″rik), *n.* The quadric surface whose axes coincide with the axes of the strain and in length are proportional to the tangents of the angles whose sines are the quotients of old radii vectors by new ones in the same directions.

strain-slip (strān'slip), *n.* Slipping along a plane of fracture, as in rocks, whereby a strain is eased.

The second cleavage being of the nature of *strain-slip*, its development along the axial planes of the folds is of interest, and is briefly discussed.
Nature, March 12, 1908, p. 454.

strait^1, *n.* 7. *pl.* See *cod-liver oil*.

strake^2, *n.*—**Bilge strake.** See ★*bilge-strake*.—**Ceiling-strakes,** in *naval arch.*, the strakes worked below the lower deck-clamps.—**Deck-strakes,** in *naval arch.*, deck-planking.—**Passing strake.** See *shift of* ★*butts*.—**Raised strake,** a strake between two adjacent sunken strakes which laps over the mat the edges and is separated from the frames by liners of the same thickness as the sunken strakes. See cut under ★*liner*^{2}, 5.—**Sunken strake,** a strake of plating in direct contact with the frames. Also called *inner strake*.

strand^1, *v. i.* 1. Specifically, in *law*, to ground: said of the running of a vessel by accident upon the sands or rocks so that she is helpless there for some time.

strand-line (strand'līn), *n.* A shore-line; also, a shore-line from which the sea or a lake has receded.

But it is in Scotland that the former "*strand-lines*' are most abundantly and most clearly developed. . . . Where most fully developed, as near Tain, they are at least five in number, and follow each other in successive platforms at heights of about 15, 25, 50, 75, and 100 feet.
Encyc. Brit., XXVIII. 648.

strand-looper (strand'lö″pėr), *n.* [*strand* + D. *looper*, runner.] One living on the coast and getting his living largely along the shore. *Jour. Anthrop. Inst.*, 1900, p. 47.

The inquiry starts from a series, unfortunately limited in numbers, of skulls of the race known as the *Strandloopers* found in caves along the south-eastern seaboard. These constitute a group more pure than that of the Bushmen, and apparently quite distinct from that of the Hottentots. The up-country Bushmen are intermediate between the *Strandloopers* and the Hottentots. The latter, again, present dimensions between the up-country Bushmen and the Bantu, and in many characters they approach the Negroes of British Central Africa more closely than the Kafir tribes of the east coast.
Nature, Jan. 2, 1908, p. 211.

strand-plant (strand'plant), *n.* A plant belonging to, or characteristic of, the vegetation of the strand of the sea. See the extract.

Dr. Holtermann describes three other formations of *strand-plants* besides the mangroves, viz., first the plants of moist sand, which fall into two categories, (1) those growing on the edge of the sea, absorbing salt water, and possessing water-tissue; (2) those growing further from the sea, with fresh bottom-water, which have no special xerophilous adaptations. Secondly, the dune plants, a highly xerophilous type; and, thirdly, the plants growing on salty mud, which have internal water-tissue, and resemble succulent desert-plants in many anatomical features. *Nature*, Feb. 6, 1908, p. 313.

stranger, *n.* 8. A name in Victoria and Tasmania for a labroid fish, *Odax richardsoni*. Also called *rock-whiting*. *E. E. Morris*, Austral English.—**Strangers' cold.** See ★*cold*.

strangle, *n.* 3. In *wrestling*, a hold by which the wrestler's breathing is hampered.

strangler-tree (strang'glėr-trē), *n.* Either of two tropical American trees, *Clusia rosea* and *C. alba*, which grow usually as parasites on other trees, often killing them. The roots spread over the trunk and downward until the ground is reached, when other roots are formed, and the tree comes finally to be supported by its own trunk. See ★*aralie*, ★*cupay*, and *Clusia*.

strap, *n.* 8. In *mach.*: (*a*) The narrow band which surrounds the disk of a steam-engine eccentric and forms the bearing-surface for the eccentric-rod. It is usually separate from the latter and bolted to it, generally in two parts to permit adjustment for wear. (*b*) An enveloping band of steel, somewhat U-shaped, which passes around the outside of the brasses at the ends of a steam-engine connecting-rod, and, by means of bolts, wedges, and gib and key, makes a solid unit of the connecting-rod end or stub, while providing for easy adjustment or renewal as wear occurs upon the bearings on the pins. *F. R. Hutton*, Power Plants, p. 340.—9. In *iron ship-building*, a narrow strip of plate or a bar with a wide flange used to unite two parts to each of which the strap is riveted. See also ★*butt-strap* and ★*seam-strap*.

strap-bar (strap'bär), *n.* 1. The bar which carries the belt-fork on a counter-shaft combination or similar place, where a belt is to be shifted from a fast to a loose pulley on a shaft. The bar is guided by slots in brackets projecting from the hangers, and may be moved in the direction of its length by cords over pulleys or by a lever. [Eng.]—2. One of the bars connecting the first transverse bar of a cupel-hearth with the frame or test-ring. *Phillips and Bauerman*, Elements of Metallurgy, p. 701.

strap-bolt, *n.* 2. A lug-bolt with round threaded portions at both ends, so that the strap part may be bent into U-shape around some element and the latter be drawn against the surface through which the threaded ends pass.

strap-brake (strap'brāk), *n.* A brake in which the frictional contact surface is a flexible metal strap surrounding a cylindrical bearing surface, instead of a shoe or block bearing or a small surface only.

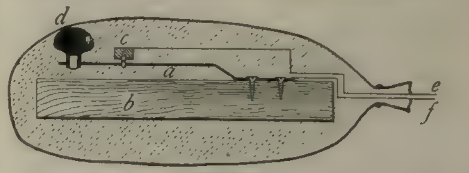
strap-copper (strap'kop″ėr), *n.* Copper in flat bands. *Amer. Inventor*, June 1, 1904, p. 246.

strap-driven (strap'driv″n), *a.* 1. Same as ★*belt-driven*. [Eng.]—2. Driven by means of a narrow metal band surrounding the driving part, as of an eccentric-rod. *The Engineer* (London), Feb., 1901, p. 124.

strap-fork (strap'fôrk), *n.* A device with two prongs for guiding a driving-belt from one pulley to another on a machine. *Thornley*, Cotton Combing Machines, p. 7.

strap-iron (strap'ī″ėrn), *n.* A form of flat iron in which the thickness is small compared with the width, being small enough to make the ductile stock bend easily around corners when used as a tie or strap for securing packages, such as bundles of shingles, hay-bales, and the like. *Trans. Amer. Inst. Elect. Engin.*, Oct., 1904, p. 665.

strap-key (strap'kē), *n.* In *exper. psychol.*, a noiseless break-key used in experiments on tapping. An elastic brass strip, mounted on a wooden block, carries a button for the finger; a platinum point on its upper surface is in contact with a platinum plate on a brass stop fixed above it; and the whole key is incased in a rubber bag packed with felt. A very small pressure on the button breaks the circuit without noise. *Scripture*, Exper. Phonetics, p. 529.



Strap-key.

a, elastic brass strip mounted on wooden block, *b*. *c*, brass stop to keep free end of *a* from rising beyond the desired height (platinum points, attached to *a* and *c*, insure contact); *d*, button, pressure on which breaks contact; *e*, *f*, wires projecting from the rubber bag.

strap-loop (strap'löp), *n.* A flat band or strap bent to form a loop, or to be used as a clip by securing the two ends.

strapping^1, *n.* 4. In *surg.*, the application of strips of adhesive plaster, one overlapping the other so as to cover the surface and make pressure upon it: a method employed in the treatment of ulcers and open wounds.

strapping-machine (strap'ing-mạ̈-shēn″), *n.* See ★*sandpapering-machine*.

strapping-motion (strap'ing-mō″shọn), *n.* Same as ★*governing-motion*.

strap-rail (strap'rāl), *n.* A flat rail laid upon a continuous longitudinal sleeper.

strap-wire (strap'wīr), *n.* A wire or bar of rectangular cross-section sometimes used in the construction of armature-coils for electric generators and motors.

strascicando (strä-shẹ-kän'dō), *a.* [It., ppr. of *strascicare*, drag, parallel to *strascinare*, drag, freq. verb ult., ‹ L. *trahere*, drag. See *tract*^{1}.] In *music*, in a drawling, dragging manner.

strascicato (strä-shẹ-kä'tō), *a.* [It., pp. of *strascicare*, drag. See ★*strascicando*.] Same as ★*strascicando*.

strascino (strä'shẹ-nō), *n.* [It., ‹ *strascinare*, drag. See ★*strascicando*.] In *music*, a slurred, drawling effect in passing from one tone to another. Compare *portamento*.

stratal (strā'tạ̈l), *a.* [*stratum* + *-al*^{1}.] Related in some way to strata.

strategos (stra-tē'gos), *n.* [Gr. *στρατηγός*, the leader of an army, a general. See *strategus* and *strategy*.] A war-game or kriegspiel. See *kriegspiel*.

stratic (strat'ik), *a.* [*strat*(*um*) + *-ic*.] Same as *stratigraphic*. [Rare.]

straticulation (strạ-tik-ụ̄-lā'shọn), *n.* [**straticulat*(*e*), *v.*, + *-ion*. See *straticulate*, *a.*] The apparent stratification which appears in glacial ice.

(d) Slipping along planes of bedding or *straticulation*, or those of the blue bands.—This slipping has been shown to be a fact in several glaciers, by Forel (1889); among them, the Bossons Glacier at Chamouni. In the lower part of a glacier these planes have a dip up stream, and as a consequence the mass of the glacier above, as it flows along, rises by slipping along one or more of the planes of lamellar structure.
Dana, Manual of Geol. (4th ed.), p. 246.

stratify, *v. t.* 2. To preserve (tree-seeds) by spreading them in layers alternating with layers of earth or sand.

Stratigraphic geology, the study of the chronological succession of the great formations of the earth's crust and the sequence of events of which they contain the record; stratigraphy. It determines the order of succession of the various plants and animals which in past time have peopled the earth, and thereby seeks to unravel the story of the earth as made known by the rocks of the crust. Further, by comparing the sequence of rocks in one country with that in another, materials are furnished for determining the successive stages in the geographical evolution of the various portions of the earth's surface. Also called *historical geology* or *geologic history*.

stratiomyid (strat″i-ọ̄-mī'id), *n.* and *a.* I. *n.* A member of the dipterous family *Stratiomyidæ*.

II. *a.* Having the characters of or belonging to the family *Stratiomyidæ*.

strato-cumulus, *n.* See ★*cloud*^{1}, 1.

stratum, *n.* (*c*) In *archæol. excavations*, one of the layers of deposits left by successive civilizations, as in the overlying cities at Hissarlik, the ancient Troy.—**Correlate strata.** See ★*correlate.*—**Stratum moleculare,** the outermost layer of the cerebral cortex.—**Stratum mucosum.** Same as *rete mucosum.*—**Stratum vasculare,** the muscular wall of the uterus between the mucous and the peritoneal membranes.

stratus, *n.* See ★*cloud*^{1},1. The International Conference at Innsbruck in Sept., 1905, officially adopted the following for international use: "Instead of 'raised fog in a horizontal layer' *stratus* should be defined as 'a uniform layer of cloud similar to fog but which does not rest on the ground': the complete absence of details distinguishes the stratus from other compact forms of cloud."—**Stratus maculosus,** the mackerel-cloud or mackerel-sky.

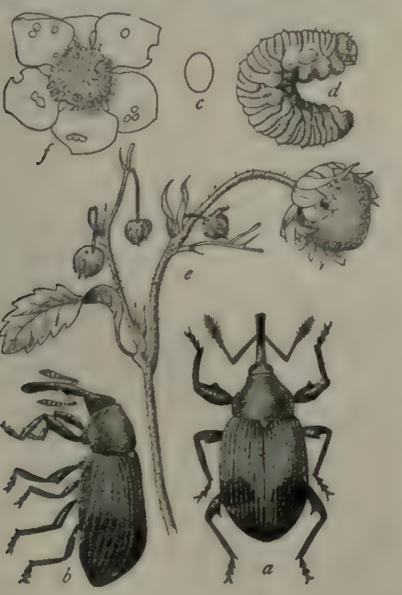
straw^{1}. **I.** *n.*—**Broom-straw.** See *broom-★sedge.*

II. *a.*—**Straw ring,** a ring of plaited straw used in chemical laboratories to support a round-bottomed vessel, such as a flask or capsule, in an upright position.

straw-bass (strâ'bås), *n.* The large-mouthed black-bass, *Micropterus salmoides.*

strawberry, *n.*—**Crushed strawberry.** (*b*) In *ceram.*, a glaze of Chinese porcelain; a variety of peach-bloom.—**Indian strawberry.** (*a*) *Duchesnea Indica.* Also called *mock strawberry* and *yellow strawberry.* (*b*) The strawberry-blite, *Blitum capitatum.*—**Leaf-blotch of strawberry.** See ★*leaf-blotch.*—**Mock-strawberry.** Same as *Indian* ★*strawberry* (*a*).—**Neat strawberry leaf-roller.** See ★*leaf-roller.*—**Spotted strawberry leaf-beetle.** Same as *spotted* ★*paria.*—**Strawberry blond,** a red-haired person. [Slang, U. S.] *Stand. Dict.*—**Strawberry false-worm.** Same as ★*strawberry-slug.*—**Strawberry leaf-beetle.** See ★*leaf-beetle.*—**Strawberry leaf-spot.** See ★*leaf-spot.*—**Strawberry root-louse.** See ★*root-louse.*—**Strawberry span-worm.** Same as *horned* ★*span-worm.*—**Yellow strawberry.** Same as *Indian* ★*strawberry* (*a*).

strawberry-beetle (strâ'ber-i-bē″tl), *n.* **1.** In America, the little curculionid, *Anthonomus signatus*, a small blackish beetle which lays its eggs in the developing buds of the strawberry. Also called the *strawberry-weevil.*—**2.** An Australian curculionid, *Rhinaria perdix*, whose larva bores into the crown and leaf-stalks of the strawberry.



Strawberry-beetle (*Anthonomus signatus*).

a, adult from above; *b*, same from side; *c*, outline of egg; *d*, larva; *e*, strawberry spray showing work in bud and stem; *f*, open bud showing egg and punctures: *a*, *b*, *c*, and *d* greatly enlarged. (After Chittenden and Riley, U. S. D. A.)

strawberry-blight (strâ'ber-i-blīt), *n.* See ★*blight.*

strawberry-bug (strâ'ber-i-bug), *n.* **1.** An insect, *Lygus pratensis*, which produces the so-called buttoning of strawberries.—**2.** The flea-like negro-bug, *Corimelæna pulicaria.* See *negro-bug.*

strawberry-fern (strâ'ber-i-fèrn), *n.* See ★*fern*^{1}.

strawberry-mildew (strâ'ber-i-mil″dū), *n.* See ★*mildew.*

strawberry-slug (strâ'ber-i-slug), *n.* The larva of an American saw-fly, *Harpiphorus maculatus.* It eats the leaves of the strawberry. Also called *strawberry false-worm.*

straw-boss (strâ'bos), *n.* A subforeman in a logging-camp. [Colloq.]

straw-knife (strâ'nīf), *n.* A knife used for splitting and cutting straws.

straw-lily (strâ'lil″i), *n.* See ★*lily.*

straw-plait (strâ'plāt), *a.* Pertaining to or consisting of plaits or braids of straw; pertaining to the plaiting of straw into braids for the manufacture of bonnets and hats.

> [There is] an early reference to the *straw-plait* industry in Miss Agnes Strickland's 'Queens of Scotland,' where the story goes that Mary, Queen of Scots, imported the art into Scotland from Lorraine.
> *N. and Q.*, 10th ser., III. 413.

straw-plaiting (strâ'plā″ting), *n.* The trade of plaiting straw for bonnets, etc. See *Dunstable straw*, under *straw*^{1}.

straw-shoes (strâ'shöz), *n.* A man of straw. See *man of straw* (*b*), under *man.*

> An advocate or lawyer who wanted a convenient witness knew by these signs [a straw in one of the shoes] when to find one, and the colloquy between the parties was brief. 'Don't you remember?' said the advocate (the party looked at the fee and gave no sign; but the fee increased, and the powers of memory increased with it)—'To be sure I do!' 'Then come into court and swear it.' And *straw-shoes* went into court and swore it. Athens abounded in *straw-shoes.* *Bouvier*, Law Dict.

strawsonizer (strâ'so̤n-ī-zėr), *n.* [*Strawson*, the name of the inventor, + *-iz*(*e*) + *-er.*] A horse machine for distributing seeds, manures, insecticides, etc., operating by means of a strong blast from a fan. *H. J. Webb*, Advanced Agriculture, p. 38. [Eng.]

straw-worm, *n.*—**Barley straw-worm,** an American joint-worm, *Isosoma hordei*, which affects barley. See *joint-worm*, 2.

stray^{1}, *n.* **5.** In wireless telegraphy, a disturbance due to fluctuating differences of potential between the top of the antennæ of a receiving station and the earth which sometimes affects the recording instrument and interferes with signaling. Also called an *X.*

> This transforming device serves to effect an electrical connection between the open-circuit resonator and the local primary circuit, thus permitting the difference of potential between the upper strata of air at the top of the antennæ and that of the earth—always the cause of *strays* or "X's" in simple resonators—to equalize without giving rise to oscillations in the closed circuit, and therefore preventing false indications being registered on the tape.
> *Elect. World and Engin.*, Aug. 1, 1903, p. 173.

streak^{2}, *n.* **8.** In *turpentine-making*, the portion of a bled pine-tree from which the resin exudes.—**Dry streak.** Same as *dry* ★*face.*—**Medullary streak.** Same as *medullary furrow* (which see, under *medullary*).

streaked, *a.* **3.** In *geol.*, noting a flow-structure in some igneous rocks marked by parallelism of discontinuous layers. *Geikie*, Text-book of Geol., p. 131.—**Streaked thecla.** See ★*thecla.*

streak-plate (strēk'plāt), *n.* A small tablet, usually of unglazed porcelain, on which minerals are rubbed in order to show the color of the powder or streak. *Brush and Penfield*, Determ. Mineral. and Blowpipe Anal., p. 228.

stream, *n.*—**Hair stream,** the general pattern of the hair on an animal, mapped out by the direction of the hair as an ocean current is indicated on a chart.

> The constantly locomotive life of the horse does afford adequate reason for a reverse direction of the *hair-stream.*
> *Proc. Zool. Soc. London*, 1902, p. 148.

Molecular streams, streams of molecules thrown off from the cathode of a vacuum-tube and moving in straight lines.—**Self-purification of streams.** See ★*purification.*—**Stream jam,** in *lumbering.* Same as *center* ★*jam.*—**Stream terrace.** See ★*terrace*^{1}.—**Superglacial stream,** a stream of water flowing upon the surface of a glacier.

> The water [which flowed over the surface of the ice often formed more or less well-defined streams, which from their position are known as *superglacial streams.*
> *R. D. Salisbury*, in Geol. Surv. of New Jersey, 1891, [p. 87.

streamer, *n.* **1.** (*e*) In *elect.*, the visible brush-discharge emanating from parts of an electric circuit at very high potentials. Also called *corona.*

streamer-cloud (strē'mėr-kloud), *n.* The streamer of false cirrus from a thunder-head; the banner-cloud or smoky streamer from the summit of a high mountain-peak.

stream-piracy (strēm'pī″rạ-si), *n.* See ★*piracy*, 3.

streamway (strēm'wā), *n.* The course occupied by a stream of water.

streep^{2} (strāp), *n.* [D., a stripe, a streak: see *stripe.*] In Holland, the name given to the millimeter of the metric system. *C. H. Haswell*, Mech. and Engin. Pocket-book, p. 52.

Street virus. See ★*virus.*

street-lamp (strēt'lamp), *n.* A gas or other lamp used for illuminating a street.

street-sprinkler (strēt'spring″klėr), *n.* Same as *watering-cart*, 2.

street-washer (strēt'wosh″ėr), *n.* **1.** A faucet or tap on the outside of a dwelling or just inside its street-wall, to which a hose may be attached for washing the sidewalks or watering the roadway.—**2.** A cart or tank on wheels carrying a supply of water, which can be wheeled to desired parts of the street and there used for cleaning the pavement. In many forms the water is forced from a closed tank by means of air-pressure in order that it may flow with greater velocity from the nozles and remove dirt more effectively. It is used on asphalt, brick, or other impervious pavements.

stremma (strem'a̤), *n.* [NL., < Gr. *στρέμμα*, a twist, strain, sprain, < *στρέφειν*, twist, turn.] A sprain.

stremmatograph (strem'a̤-tọ̄-gråf), *n.* [Gr. *στρέμμα*(*τ*-), a twist, strain, + *γράφειν*, write.] A machine or apparatus designed to produce autographically a diagram which makes visible to the eye the deformations of a test-piece in a testing-machine or of a structure under stresses from its load; a strain-diagram apparatus. The ordinates are usually the deformations, and the abscissæ the stresses or loads. For structures the apparatus may be attached to the fixed ground, while the pencil or pen is attached to the part which deflects. For measuring small deflections, as in railway rails and in test-specimens, the deformations have to be greatly magnified.

> The *stremmatograph* was designed to record autographically the strains in the base of the rails under moving trains. A series of *stremmatograph* tests have been made under moving trains in service, principally upon the 80- and 100-pound rails, having three-tie points, of the New York Central & Hudson River Railroad.
> *Science*, May 8, 1903, p. 734.

strength, *n.* **13.** In *milling*, the bread-making quality of flour; the adhesive quality of the gluten in the flour. This, when the flour is made into dough, causes the dough to retain the carbonic-acid gas which results from the reaction of the yeast, and gives the dough greater power to rise and make a larger and finer loaf.

> This difference of price is due to the greater "*strength*" of the flour made from such foreign wheats, meaning by "*strength*" the capacity to make more and larger loaves for equal weights of flour used.
> *Knowledge*, March, 1904, p. 43.

Dielectric strength. Same as *disruptive* ★*strength.*—**Disruptive strength,** in *elect.*, the ability of an insulating material to withstand high electric pressures without puncture by an electrostatic spark and the loss of insulating quality caused thereby. The disruptive strength has no direct relation to the insulation resistance: many very perfect insulators, as air, have only moderate disruptive strength, while others, as mica and rubber, though of lesser insulation resistance, have far greater disruptive strength. Disruptive strength is tested by applying high voltage. Also called *dielectric strength.*—**Strength of a vortex,** the cross-section of the vortex multiplied by its angular velocity.—**Strength of field.** See ★*field.*—**Tensile strength.** See ★*tensile.*—**Transverse strength,** in a girder, lintel, joist, or the like, strength to resist a transverse strain. See *transverse strain*, under *transverse.*—**Ultimate tensile strength,** the tensile strength of a substance as measured by the load, in kilograms per square millimeter or tons per square inch, necessary to produce rupture.

strengthen, *v. t.*—**Strengthening card.** See ★*card*^{1}.

strepitant (strep'i-tant), *a.* [L. *strepitans* (*t*-), ppr. of *strepitare*, make a great noise.] Noisy; boisterous; impetuous. [Rare.]

> Three makes rejoinder, expansive, explosive;
> Four overbears them all, strident and *strepitant.*
> *Browning*, Master Hugues of Saxe-Gotha, xvi.

strepitus (strep'i-tus), *n.* [L. See *strepitous.*] A noise: noting any sound heard on auscultation of the chest.

strepsilin (strep'si-lin), *n.* [NL. *strepsilis* (see def.) + *-in*^{2}.] A substance found in the lichen *Cladonia strepsilis.* It becomes bright olive-green upon the addition of chlorid of lime.

streptobacilli (strep″tọ̄-ba-sil'ī), *n. pl.* [NL., < Gr. *στρεπτός*, twisted, bent, + NL. *bacillus.*] In *bacteriol.*, bacilli arranged in chains.

streptococcal (strep-tọ̄-kok'a̤l), *a.* [*streptococcus* + *-al*^{1}.] Pertaining to or caused by streptococci.

> We know that immunity to *streptococcal* infection is short and that second attacks are common. Many people exposed to scarlet fever infection get sore-throats repeatedly but not scarlet fever, and streptococcus scarlatinæ has been isolated from such cases.
> *Lancet*, April 4, 1903, p. 946.

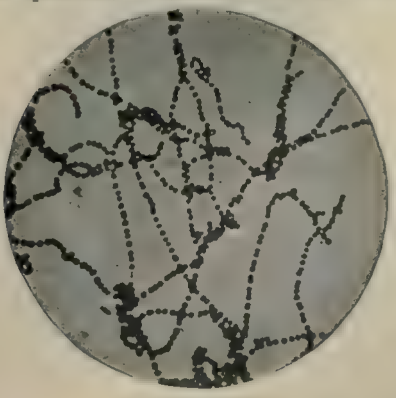
streptococcic (strep-tọ̄-kok'sik), *a.* [*streptococcus* + *-ic.*] Same as ★*streptococcal.*

> A similar method of treatment in cases of rheumatism arising from staphylococcic or *streptococcic* infection.
> *Lancet*, July 4, 1903, p. 24.

streptococcous (strep-tọ̄-kok'us), *a.* [*streptococcus* + *-ous.*] Same as ★*streptococcal.*

> The behaviour of the blood in *streptococcous* infections.
> *Encyc. Brit.*, XXXI. 558.

Streptococcus (strep-tọ̄-kok′us), *n.* [NL. (Billroth, 1874), ‹ Gr. *στρεπτός*, twisted, + *κόκκος*, a berry.] 1. A genus of bacteria belonging to the family *Coccaceæ*. The cells are spherical, frequently forming chains; flagella are wanting. Division is in but one direction. The species are mostly associated with pathogenic conditions of animal tissues. *S. pyogenes* is a common pus-forming species.



Streptococcus pyogenes.
Magnified 1000 times.
(From Buck's "Reference Handbook of the Medical Sciences.")

> In non-complicated cases I have found frequently a variety of *streptococcus* which generally, although not quite constantly, shows some characters different from the typical *Streptococcus pyogenes*.
> *A. Castellani*, in Jour. Trop. Med., June 1, 1903, p. 167.

2. [*l. c.*; pl. *streptococci* (-sī).] A bacterium of the genus *Streptococcus*.

> *Streptococci* characteristic of sewage and sewage-polluted waters apparently not hitherto reported in America. During the last few years the brilliant researches of bacteriologists connected with the Local Government Board of England have revealed two new organisms which, with the Bacillus coli communis, are likely to be of great service in tracing the history of water pollution. These are the Bacillus enteritidis sporogenes of Klein, and the sewage Streptococcus of Houston; so that now with three forms, all apparently characteristic of a sewage flora, the sanitary bacteriologist finds himself in a position to form a reliable opinion of the antecedents of any water submitted to him for examination.
> *Science*, May 23, 1902, p. 827.

streptocolysin (strep-tọ̄-kol′i-sin), *n.* [*streptoco*(*ccus*) + E. *lysin*.] A bacteriolysin which is directed against streptococci.

streptospirilli (strep″tọ̄-spī-ril′ī), *n. pl.* [NL., ‹ Gr. *στρεπτός*, twisted, + **spirilla* (see *Spirillum*), dim. of *spira*, a coil.] Spiral bacterial cells arranged in chains.

streptostylicate (strep-tọ̄-stil′i-kāt), *a.* Same as *streptostylic*.

streptothricial (strep-tọ̄-thrish′al), *a.* [Erroneously formed from *Streptothrix*. The normal form would be **streptotrichal*.] Relating to some form of *Streptothrix*.

> Examination of the pus revealed the presence of an abundant *streptothricial* growth in the form of mycelial tufts and scattered threads, some of which stained homogeneously by Gram's method and some of which showed a condition of segmentation or sporulation.
> *Lancet*, April 18, 1903, p. 1102.

stress^1, *n.* 6. In *elect.*, electromotive force; difference of potential; pressure: as, a *stress* of 2000 volts.—**Dielectric stress.** Same as *electrostatic* ★*stress*.—**Direct stress,** a simple stress; a simple tension, compression, or shear; a stress which acts directly without involving other stresses in the piece under consideration, such as would be involved, for instance, in the bending of a beam.—**Electrostatic stress,** the stress to which a dielectric is subjected when in an electrostatic field of force. Also called *dielectric stress*.—**Ellipse of stress.** See ★*ellipse*.—**Magnetic stress,** the stress exerted by a magnetic field upon iron or other matter within the field. The deformation due to magnetic stress is called *magnetostriction*.—**Maximum stress,** the greatest stress to which a body, used as a member in any mechanical structure, is to be subjected. The maximum stress, whether tensional, compressional, or shearing, bears a definite ratio to the breaking-stress, that ratio being the reciprocal of the factor of safety.—**Negative stress.** (*a*) A tensile stress: so called because tension is often indicated on a strain-sheet by a minus sign. (*b*) A stress in the direction opposite to the usual stress to which a piece in a structure is subjected. In this case the negative stress may be either tension or compression.—**Principal planes of stress,** the three planes in which the axes of the stress lie by pairs.—**Principal stress,** the stress along one of the three axes of the stress.—**Static stress,** the stress exerted by an electrostatic field.—**Stress-director-quadric,** the quadric surface the squares of whose axes are the principal stresses.—**Tensile stress.** See ★*tensile*.—**Unit stress,** the stress of unit force per unit area; in the c. g. s. system, one dyne per square centimeter. Thus, the pressure of the atmosphere is about 10^6 units of stress.—**Working stress,** the amount of stress to which any material may be subjected in every-day work and repeated strain, as determined by calculation and experiment. It is less than the stress at the elastic limit by an amount determined by the factor of safety selected.

stress-ellipsoid (stres′e-lip″soid), *n.* The ellipsoid whose axes are the principal stresses.

stressful (stres′fůl), *a.* Distressing; wearing; subject to severe stress and strain of any kind.

> Their life is hard, no doubt, but not *stressful*, and they suffer more from nerve-sluggishness than from any form of enforced psychical activity.
> *D. S. Jordan*, in Pop. Sci. Mo., May, 1901, p. 93.

stretch, *v. i.*—**Wet stretching,** a process of removing the stretch from belt leather by subjecting the skin to tension while it is wet. *C. T. Davis*, Manuf. of Leather, p. 409.

stretch, *n.* 12. The traverse of the spindle-carriage of a spinning-mule.—13. Capability of being stretched; elasticity; capacity for yielding.

> Some years ago I was talking with a Maine guide about snowshoes. This man made those he used and he said: "The trouble with the snowshoes you buy is that the *stretch* is not taken out of the filling as it should be."
> *Forest and Stream*, Feb. 21, 1903, p. 144.

stretch-bench (strech′bench), *n.* A device for thoroughly stretching hides used for lace-leather, and rendering them even in thickness. *C. T. Davis*, Manuf. of Leather, p. 544.

stretchberry (strech′ber″i), *n.* The bristly greenbrier or bamboo-brier, *Smilax Bona-nox*, so called in Texas from the elastic tissue contained in the pulp of the berries, which is put into chewing-gum to render it durable.

stretcher, *n.* 1. (*g*) In *hat-making*, a machine for working and stretching the felted cap used to make a felt hat, either to form the brim or to bring the crown to the right shape; a brim-stretcher or crown-stretcher.

stretcher-bar (strech′ėr-bär), *n.* A bar or beam over which hides are drawn to remove wrinkles and give an even thickness. *C. T. Davis*, Manuf. of Leather, p. 544.

stretcher-course (strech′ėr-kōrs), *n.* In *masonry*, a course in stones or bricks which are laid in the direction of the length of the wall; stretchers without headers.

stretching-frame, *n.* 3. A frame on which hides are tacked, so adjusted that the tension can be increased until the hide is thoroughly stretched. *C. T. Davis*, Manuf. of Leather, p. 441.

stretching-machine, *n.*—**Wet-stretching machine,** a machine for removing the stretch from belt leather while wet. *C. T. Davis*, Manuf. of Leather, p. 409.

stretching-mule (strech′ing-mūl), *n.* Same as *stretcher-mule*.

stria, *n.*—**Acoustic striæ.** Same as *striæ acusticæ* (which see, under *stria*).—**Conothecal striæ.** See ★*conothecal*.—**Stria mediale,** a white tract which passes longitudinally over the dorsal surface of the callosum. Also known as *nerve of Lancisi*.—**Stria terminalis** (tænia chorioidea, tænia semicircularis), a narrow light-colored band of tissue in the lateral ventricle between the nucleus caudatus and the optic thalamus. It is continuous with the white tissue of the roof of the descending cornu.

striate, *a.* 3. Of or pertaining to the corpus striatum.

striation, *n.*—**Striation of Baillarger,** in *neurol.*, a layer of nerve-fibers between the large and small pyramidal cells of the cerebral cortex. Also called *Baillarger's line*.—**Tabby-cat striation,** in *pathol.*, the presence of reddish streaks on a grayish foundation: noting an appearance sometimes seen in the heart-muscle and other tissues post-mortem.

> The left ventricle was pale, hypertrophied, and showed *tabby-cat striation*. *Lancet*, May 30, 1903, p. 1509.

striatodecurrent (strī-ā″tọ̄-dē̤-kur′e̤nt), *a.* Partly striate and partly decurrent, as the gills of certain agarics which extend down the stem for a short distance and gradually terminate in slight ridges.

stricken, *p. a.*—**Stricken field,** a fought battle.

> But do you not fear the consequences of being found with one whose very name whispered in this lonely street would make the stones themselves rise up to apprehend him—on whose head half the men in Glasgow would build their fortune as on a found treasure, had they the luck to grip him by the collar—the sound of whose apprehension were as welcome at the Cross of Edinburgh as ever the news of a *field stricken* and won in Flanders?
> *Scott*, Rob Roy, xxi.

Stricklandian code. See ★*code*.

strickle (strik′l), *v. t.*; pret. and pp. *strickled*, ppr. *strickling*. In *founding*, to sweep; form to a round surface by means of a templet or sweep.

stricture, *n.*—**Annular stricture,** a narrowing of the lumen of a tubular organ by a ring-shaped constriction.—**False stricture,** a narrowing of the lumen of a tubular organ by a localized muscular contraction.—**Organic stricture,** a permanent stricture due to contraction of the tissues which constitute the walls of the tube: distinguished from a *spasmodic stricture* (which see, under *spasmodic*).

stricturotomy (strik-tụ̄-rot′ọ̄-mi), *n.* [L. *strictura*, stricture, + Gr. *-τομια*, ‹ *ταμεῖν*, cut.] Operative treatment of a stricture by cutting.

stride, *n.*—**In his,** or **its, stride,** in *racing*, in the horse's natural pace; hence, figuratively, with ease.

> Acting on this opinion, Ostwald has introduced physical theories, applicable to chemical facts, "*in his stride*," as it were. *Nature*, Dec. 25, 1902, p. 171.

stridence (strī′dens), *n.* [*striden*(*t*) + *-ce*.] The character of being strident.

> For compound tones corresponding to the whole series, odd and even, there is in every case minimum intensity, brilliancy, and *stridence* with $\delta=\frac{3}{4}$, and maximum with $\delta=\frac{1}{4}$. *S. P. Thompson*, in Smithsonian Rep., 1890, p. 355.

stridency (strī′de̤n-si), *n.* Same as ★*stridence*.

stridulate, *v. i.*—**Stridulating apparatus.** Same as *stridulating-organ*.

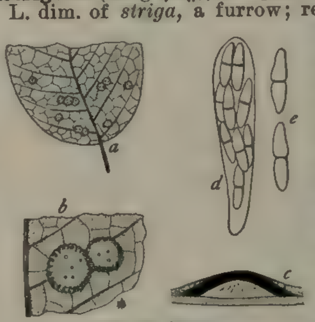
strigal (strī′ga̤l), *a.* [*strig*(*a*) + *-al*^{1}.] Of, pertaining to, or of the nature of, a striga.

strigil, *n.* 3. In *entom.*: (*a*) A pectinated spur on the legs of certain insects (bees, wasps, ants, bugs, etc.), used for removing foreign substances from the surface of the body. See *strigilis*. (*b*) A curious asymmetrical organ composed of rows of black, closely packed, comb-like plates found on one side of the dorsal surface of the terminal abdominal segments of the males of certain *Corisidæ*.

strigilation (strij′i-lā-sho̤n), *n.* [See *strigilate*.] Friction with a strigil or flesh brush; rubbing; scraping with a strigil.

strigovite (strig′ọ̄-vīt), *n.* [NL. *Strigov*(*a*) (‹ G. *Striegau*) + *-ite*^{2}.] A silicate of aluminium and iron, allied to the chlorites, which occurs in aggregates of dark-green hexagonal crystals, in Striegau, Silesia.

Strigula (strig′ụ̄-lạ̈), *n.* [NL. (Fries, 1821), ‹ L. dim. of *striga*, a furrow; referring to the furrows in the thallus of some species.] A genus of pyrenocarpous lichens, having the thallus small and crustaceous, the perithecia simple, hemispherical, and covered with the thallus, and the spores hyaline, fusiform, and several-celled. About 25 species are known, occurring on thick evergreen leaves in tropical and subtropical regions. *S. elegans* is a variable and widely distributed species, with a whitish or greenish furrowed thallus.



Strigula elegans.
a, thallus, less than half natural size; *b*, thallus, enlarged nearly three diameters; *c*, vertical section through perithecium; *d*, theca containing spores; *e*, spores.

Strigulaceæ (strig-ụ̄-lā′sē̤-ē), *n. pl.* [NL., ‹ *Strigula* + *-aceæ*.] A family of pyrenocarpous tropical lichens named from the typical genus *Strigula*.

strigulated (strig′ụ̄-lā-ted), *a.* [L. *strigula* for *strigilis*, a scraper. See *strigilis*.] In *entom.*, very finely strigose or strigate.

strike, *v.* I. *intrans.* 22. To crystallize: said of boiling sugar syrup.—**Striking velocity.** See ★*velocity*.—**To strike out.** (*e*) In *tanning*, to put out with a slicker. See *to put out* (*c*), under *put*^{1}, *v. t.*

II. *trans.* 43. In *masonry*, to regulate (a mortar joint) by removing with the trowel the superfluous mortar. A joint may be struck flush with the wall or at a certain angle.—44. To plant as a slip; to cause to strike in sense I., 16.

> Small plants 6 or 8 inches high with leaves to the pot, may be *struck* as late as August, and prove very effective.
> *Plant World*, Feb., 1903, p. 45.

45. Of tobacco, to take down from the laths after curing: sometimes with *down*.—**Struck up,** in *numismatics*, an expression which indicates the completeness with which the metal of a coin or medal fills the die.

> Sometimes the type is quite at the edge of the coin, sometimes it is confused and not fairly *struck up*.
> *Percy Gardner*, Types of Greek Coins, p. 21.

To strike below, to lower into the hold, as cargo.

> I remember one of the stevedores in London joking about them [heavy cases] when they were *struck below*.
> *Cutcliffe Hyne*, A Master of Fortune, ix.

To strike out. (*e*) To hoist up from the hold and out on the dock, as cargo.

> The winch chains sang as they *struck out* cargo, and from . . . New Orleans below and beyond, came tangles of smells. *Cutcliffe Hyne*, A Master of Fortune, xi.

strike, *n.* **20.** The discovery of a vein of ore, especially of a paying one. See *strike, v. t.*, 10.

This great *strike* further enhances the value of the mine and is one of the greatest *strikes* made in any copper property in recent years because of the self-fluxing character of the ore.
Circular, quoted in N. Y. Eve. Mail, Feb. 10, 1906.

Sympathetic strike, a cessation of work by a body of employees, not on account of grievances of their own against their employer, but for the purpose of bringing pressure to bear upon him or upon some other employer in behalf of other workmen who are on strike or have been locked out. Thus bricklayers sometimes strike because their employer receives bricks from a firm whose workmen are on strike.

strike-barrel (strīk′bar″el), *n.* A barrel in which fish are 'struck down,' that is, headed up and stored away. See *to strike down* (*b*), under *strike, v. t.*

strike-figure (strīk′fig″ụ̈r), *n.* Same as *percussion-figure* (which see, under *percussion*).

strike-joint (strīk′joint), *n.* In *geol.*, a joint in inclined beds which runs parallel with the strike: contrasted with ★*dip-joint. Geikie*, Text-book of Geol., p. 660.

strike-pinion (strīk′pin″yọn), *n.* A gear on a cotton-roving machine which alternately strikes into mesh with another gear, thereby regulating the traverse of the roving on the bobbin.

striker, *n.* **1.** (*j*) In *billiards*, the one whose turn it is to play. *W. Broadfoot*, Billiards, p. 327.
2. (*f*) The beveled plate on a door-jamb used to guide the latch.
5. In *leather-manuf.*, a solution applied after the leather is colored to fix or fasten the shade and give it a more uniform appearance. *Flemming*, Practical Tanning, p. 307.

strike-valley (strīk′val″i), *n.* In *phys. geog.*, a valley eroded along a belt of weak strata, and therefore following their trend or strike.

The second type of valley is of minor importance on account of slight development, and can be classed as *strike valleys*.
Geog. Jour. (R. G. S.), XV. 652.

striking, *n.* **3.** The taking down of the cured tobacco-plant from the tiers for stripping. See ★*stripping*, 10.

striking-circle (strī′king-sėr″kl), *n.* In *field-hockey*, the space in front of each goal made by drawing a line 4 yards long parallel to the goal-line and then drawing the ends of this line around in a curve, forming a quarter-circle, until they reach the goal-line at a point 15 yards from the center of the goal. This complete half-circle is the striking-circle.

striking-fork (strī′king-fôrk), *n.* A British term for the fork or V-shaped arrangement by which the sides of a belt are pressed to one side or the other so as to shift the belt from a fast to a loose pulley. Called in the United States a *belt-shifter. The Engineer* (London), March 1, 1901, p. 223.

striking-hammer (strī′king-ham″ėr), *n.* A hammer used by quarrymen for striking a rock-drill.

striking-knife (strī′king-nīf), *n.* A rough-faced hammer for pounding newly tanned hides.

striking-reed (strī′king-rēd), *n.* In *acoustics*, a reed set in vibration by impact; a percussion-reed.

striking-wheel (strī′king-hwēl), *n.* Same as ★*strike-pinion. Nasmith*, Cotton Spinning, p. 196.

string, *n.* **15.** A defect sometimes observable in articles of glass, arising from a small bit of solid glass which has fallen into the melting-pot, or been taken up at the end of the blowpipe, and failed to fuse and become uniformly mixed with the rest of the material, so that a slender ridge is formed on the surface of the blown article.—**16.** In *stair-building*, same as *string-piece*.—**One-string shift, two-string shift.** See *shifting* ★*pedal*.—**To follow the string,** to curve slightly with concave belly when unstrung: said of a bow. Long-continued use or inferior quality may cause a bow to follow the string.

string, *v. t.* **11.** To fool or deceive. [Slang.]—**To string a bet.** See ★*bet*^{2}.

string-alphabet (string′al″fạ-bet), *n.* An alphabet in which the letters are denoted by knots of various forms and combinations made in a string: used by the blind.

string-drill (string′dril), *n.* See ★*drill*^{1}.

stringer, *n.* **4.** (*b*) In *iron ship-building*, a longitudinal member built of plates and bars in the interior of a vessel which reinforces and supports the framing above the turn of the bilge. Similar members below the turn of the bilge are called *keelsons*. See ★*keelson*, 2.—**9.** In *geol.*, a narrow vein or dike.

Fossiliferous sandstone dikes are found to occur in basal Eocene clays in Tennessee and Kentucky. The dikes have no definite orientation. They vary in width from mere *stringers* to masses several feet in width.
Science, April 1, 1904, p. 522.

Bilge-stringer. See ★*bilge-stringer*.—**Deck-stringer,** the outer strake of plating forming the boundary of a deck at the sides. This plating is made heavier than the rest of the deck-plating (if there is any). It is scored out to permit the frame to pass through it and united to the outside plating by short angle-bars between the frames.—**Hold-beam stringer,** a heavy stringer analogous to a deck-stringer in vessels having widely spaced hold-beams instead of a lower deck.—**Hold-stringer** or **side-stringer,** one supporting the framing between the bilge and the lower deck. In vessels having ordinary frames, such stringers are usually composed of intercostal plates united to the outside plating by short angle-bars. The inner edges of the intercostal plates project beyond the frames and are united by continuous lines of longitudinal angle-bars, bulb-bars, or other shapes. In vessels having web-frames in the hold, the construction is somewhat different (see cut under ★*web-frame*).—**Panting-stringer,** one fitted in the bows to resist panting of the large flat surfaces of plating in that region.—**Side-stringer.** Same as *hold*-★*stringer*.

stringer-plate (string′ėr-plāt), *n.* In *ship-building*, a plate forming part of a stringer. See *stringer*, 4.

Sometimes, where a lower deck does not extend throughout the whole length, but is broken for some reason, its *stringer plate* is continued in order to form a stiffener.
White, Manual of Naval Arch., p. 366.

string-figure (string′fig″ụ̈r), *n.* A game played with a string which is generally tied in a loop and passed over the fingers of both hands. By means of complicated arrangements of the string, figures are made intended to represent various objects. The game of cat's-cradle is a kind of string-figure. Games of this kind are found over almost all the world.

We employ the term "*string-figures*" in those cases in which it is intended to represent certain objects or operations. The "cat's cradle" of our childhood belongs to this category. "Tricks" are generally knots or complicated arrangements of the string which run out freely when pulled. Sometimes it is difficult to decide which name should be applied. *Haddon and Rivers*, in Man, Oct., 1902, p. 146.

string-galvanometer (string′gal-vạ-nom″e-tėr), *n.* A sensitive form of galvanometer devised by Einthoven for the measurement of rapidly fluctuating currents such as occur in telephonic circuits. It consists of a very fine conducting fiber (sometimes a quartz fiber which has been silvered) stretched at right angles to the lines of force of a magnetic field. Movements of the fiber across the lines of force due to the action of the field are observed by means of a microscope or are photographed upon a moving film.

string-interrupter (string′in-tẹ-rup″tėr), *n.* A device for the rapid and periodic making and breaking of an electric circuit by means of a platinum point, or stylus, attached to a stretched string or wire and dipping into mercury at each vibration of the string.

string-line (string′līn), *n.* An imaginary line which crosses a billiard-table from second 'sight' to second 'sight,' and comprises one fourth (the head in most countries, but the foot in Great Britain), to serve as a balk.

Stringocephalus (string-gō-sef′ạ-lus), *n.* [NL., erroneously for **Strigocephalus*, < Gr. *στρίγξ* (*στριγ-*), an owl, + *κεφαλή*, head.] A genus of terebratuloid brachiopods which have shells of large size with a long loop following the margin of the dorsal valve, a median ventral septum, and a very long cardinal process. The genus is very characteristic of the Middle Devonian (*Stringocephalus* limestone) of Europe. See ★*limestone*.

string-proof (string′pröf), *n.* In *sugar-manuf.*, a method of testing boiling sugar syrup to ascertain when it reaches a condition in which it begins to strike, or crystallize, and the degree of crystallization at any stage of the process. A drop of the hot syrup is placed on the thumb, allowed to cool, and touched by the forefinger; then the finger and thumb are drawn apart. The syrup draws out into filaments, the degree of crystallization being indicated by the breadth, length, and consistency of the threads or strings. *Touch-proof* or *touch* is the same test applied to the syrup at another stage in the boiling, when, on separating finger and thumb, the syrup forms a thin film which, when examined by transmitted light, shows the size of sugar crystals suspended in the syrup.

string-pump (string′pump), *n.* See ★*pump*^{1}.

string-quartet (string′kwâr-tet″), *n.* **1.** A quartet of stringed instruments of the viol class, that is, usually, two violins, a viola, and a violoncello.—**2.** A composition for such a quartet.—**3.** All the viol instruments in an orchestra, collectively.

string-stop (string′stop), *n.* In *organ-building*, a stop with pipes which give tones suggesting those of bowed instruments, as the gamba, the violina, etc.

stringy, *a.* **5.** Said of cotton that is imperfectly scutched.

The cotton which is struck off by the beater blades of the scutcher should be removed away from the beater's course immediately; any delay at this stage may cause the fibres to become contorted into very curious shapes, and such cotton is then termed *stringy*. *Stringy* cotton is very difficult to work up in the subsequent processes.
Hannan, Textile Fibres of Commerce, p. 115.

striola (strī′ọ-lạ̈), *n.*; pl. *striolæ* (-lē). [NL., dim. of *stria*. See *stria*.] A delicate or faint stria.

The disk bears numerous transverse *striolæ*, which become deeper towards the sides.
Annals and Mag. Nat. Hist., May, 1903, p. 454.

striolate, *a.* **2.** In *biol.*, delicately or minutely striate. *Proc. Zool. Soc. London*, 1899, p. 860.

striolated (strī′ọ-lā-ted), *a.* Same as ★*striolate. Proc. Zool. Soc. London*, 1901, p. 38.

strip^{1}, *v. t.* **17.** To remove the mold from (an ingot) after casting the latter, in steel-making processes where fluid steel is cast in metallic molds with continuous walls. The heat of the fluid steel expands the molds from within, but the contraction of the steel is greater than that of the mold, and the latter can be stripped off the yellow-hot ingot after the solidification has gone far enough to allow this. If the ingot sticks to the mold, it is loosened by sledge-blows, or hydraulic pressure may be applied to a ram or stripper to force the ingot out while the mold is kept from moving.

The electric ingot-*stripping* crane is an important device used when the casting is done in molds upon the cars. *Sci. Amer. Sup.*, Dec. 20, 1902, p. 22542.

To strip down, to divest (a vessel) of some or all of her rigging. See *to* ★*strip to a gantline*.—**To strip to a gantline,** to unbend sail, unreeve the running gear, send down spars, and strip even the lower masts of their standing rigging, so that nothing in the way of shrouds, stays, or cordage remains with the exception of a whip or tackle from the deck to each lower masthead for convenience in getting into the tops when the vessel is to be re-rigged. This whip or tackle is sometimes called a *gritline* instead of a *gantline*.

strip^{1} (strip), *n.* That which is stripped off; specifically, the short fibers of cotton or wool removed, manually or mechanically, from the carding-surfaces of a carding-machine; a kind of waste. Also called *stripping*.

strip^{2}, *n.* **6.** One of the two sections of a tobacco-leaf left by the removal of the midrib: used mostly in the plural and opposed to *leaf*. See *stemmed* ★*tobacco* and quotation under ★*shipper*, 4.—**7.** *pl.* A commercial name for crude rubber cut into long, narrow sheets, or lump-rubber that has been sliced by machinery. See ★*rubber*^{1}, 3.—**Mexican strips,** a trade-name for a good grade of crude india-rubber, the product of *Castilloa elastica*, brought, in strips nearly black on the outside, from Mexico.—**Strip-covering machine.** See ★*strip-machine*.—**Strip method,** that method of conservative lumbering in which reproduction is secured on clean-cut strips by self-sown seed from the adjoining forest.—**Strip stand method,** in *forestry*, a modification of the stand method in which reproduction cuttings are not made simultaneously throughout the stand, but the stand is treated in narrow strips at such intervals that reproduction cuttings are generally going on in three strips at one time, one being in the removal stage, one in the seeding stage, and one in the preparatory stage.—**Strip survey.** See ★*valuation survey*.

striped, *a.*—**Striped gopher,** the thirteen-lined spermophile, *Spermophilus tridecimlineatus*: so named on account of its conspicuous white stripes.

strip-machine (strip′mạ-shēn″), *n.* In *paper box manuf.*, a machine for covering paper boxes with paper for decorative purposes. The machine feeds the strips of paper (one or two) from a roll, coats them on one side with glue, removes the surplus glue, dries them in part, guides them to the blank box, and, when by one revolution of the box they have covered each side and end, cuts them off and feeds them to the next box placed in the machine by the operator.

stripper, *n.* **1.** (*d*) A knife for cutting sugar-cane. (*e*) In *sheet-metal work*, an attachment to a press designed to strip off the blank after it has been perforated, punched, drawn, or otherwise treated, release it from the dies, and allow it to be removed or to fall by gravity out of the press. It is sometimes stationary and fixed to the press, and is sometimes connected directly with the mechanism of the press and moves with it.
2. A card so trimmed that it can be withdrawn from the pack at will.—**3.** In *dairying*, a cow that is about to run dry or cease giving milk.

Who has not seen the vicious old *stripper* that kept a score of her betters moving, out of a shed, or away from a feed-rack or watering-place, accommodations which, apart from the horns of this daughter of the devil, were ample for the well-being of all?
Rep. Kansas State Board Agr., 1901–02, p. 294.

Rotary stripper, a machine for harvesting grass-seed by stripping the seed-heads from the stalks.

> The seed is harvested during July, and in two ways—some still employ mowing machines, cutting the grass as hay and cocking or stacking after the grass is dry, while the new method is to harvest the seed by stripping with a *rotary stripper* like the one used for harvesting the blue-grass seed. *Yearbook U. S. Dept. Agr.*, 1901, p. 246.

stripper-comb (strip′ėr-kōm), *n.* A rapidly oscillating comb for stripping the accumulations of short fiber from the revolving-top flats of a cotton-carding machine.

stripping, *n.* 5. Same as ★*strip*¹.—6. In *textile-coloring* and *-finishing*, the process of removing color from material either to lighten the tint or to prepare the fabric to receive a different color.—7. In the preparation of raw silk for use, the removal of sericin or silk-gelatin from the surface of the fibers by working them for a longer or shorter time in soap solutions heated nearly to the boiling-point.—8. In the manufacture of toilet-soap, the reduction of stock soap in bars to thin ribbons or strips by passage through a slicing-machine and rubbing-rollers. These strips, dried and ground, are afterward compressed into bars or tablets, yielding what is known as *milled soap*.—9. In *electrotyping*, the removal of the wax mold from the copper duplicate it has produced, usually by the agency of heat on an iron table made for this purpose.—10. In the tobacco industry: (*a*) The operation of pulling the leaves from the stem and tying them in 'hands,' which takes place after drying but for which the material must be damp. (*b*) The same as ★*stemming*, 3.

stripping-table (strip′ing-tā″bl), *n.* In *electrotyping*, a flat iron table with an attachment for heating which gradually melts the wax mold that has formed the copper shell of an electrotype plate. A gutter at the end of the table returns the melted wax to the wax-kettle.

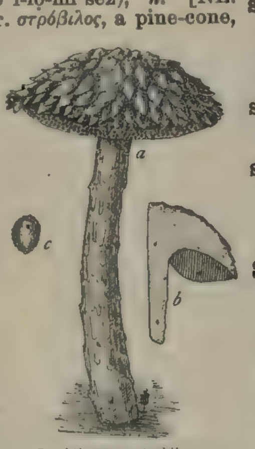
> After the cases have been used to make electrotype shells, they are put upon the *stripping tables* which melt the wax. The wax is collected in a gutter, which empties into the wax kettles. A variable temperature within moderate limits is desirable according to the amount of work to be done. *Elect. World and Engin.*, Jan. 9, 1904, p. 85.

strip-stitching (strip′stich″ing), *n.* In *sewing-machine work*, the sewing of a band or strip upon a fabric by means of a multiple-needle machine which makes two or more lines of stitching at the same time. In corset-making the strip is turned and folded at the edges automatically in advance of the stitching.

strisciando (strē-shē-än′dō), *a.* [It., ppr. of *strisciare*, creep, glide.] In *music*, creeping or gliding.

Strobic disk. See ★*disk*.

Strobilomyces (strob″i-lọ-mī′sēz), *n.* [NL. (Berkeley, 1851), < Gr. *στρόβιλος*, a pine-cone, + *μύκης*, fungus, referring to the cone-like scales on the pileus.] A genus of pore-fungi of the family *Boletaceæ*, having the pileus with a rather tough flesh and provided with floccose scales. The pores are uniform and white or gray, and the spores blackish. Only a few species are known. *S. strobilaceus* is an edible species frequently found in the forests of Europe and North America.



Strobilomyces strobilaceus.

a, single plant; *b*, section of a portion of the pileus and stem, showing the pores; *c*, single spore highly magnified.

strobograph (strob′ọ-gráf), *n.* [Gr. *στρόβος*, a whirling, + *γράφειν*, write.] An instrument which records observations made by means of a stroboscope (which see). The effects of the periodic variations in the motions under observation are reproduced for permanent record by photographing on a sensitized surface the phenomena caused by the intermittent or periodic recurrence of the reflection of light from the moving elements. The periodic illumination may be by a flashing light, or by the passage of openings in front of the photographic plate or film.

> Instruments for stroboscopic observation are called stroboscopes, and instruments which record stroboscopically are called *strobographs*. *Elect. World and Engin.*, April 9, 1904, p. 678.

strobographic (strob-ọ-graf′ik), *a.* [*strobograph* + *-ic*.] Pertaining to, or recorded by, a strobograph: applied to a record of, or to a method of recording, periodic phenomena by means of a series of regularly recurring instantaneous exposures. See ★*strobograph* and *stroboscope*.

Stroboscopic disk. See ★*disk*.

stroboscopical (strob-ọ-skop′i-kạl), *a.* Same as *stroboscopic*.

stroboscopy (strọ-bos′kọ-pi), *n.* [*stroboscop*(*e*) + *-y*³.] The study of periodic motion by means of a stroboscope.

stroke¹, *n.* 14. In *golf*, any movement of the ball caused by the player, except as provided for in the rule, or any downward movement of the club made with the intention of striking the ball.—15. In *function-theory*, a directed sect in an assigned plane. Two strokes are equal when they are of equal lengths and drawn along parallel lines in the same sense.—**Center stroke**, in *billiards*, a stroke in which the cue tip touches the striker's ball approximately at its center in avoidance of any false motion.—**Cutter-stroke**, a navy rowing-stroke, being a short, quick sweep of the oar, as used in a short, double-banked boat.—**Driving stroke**, in *billiards*, a stroke that sends the first object-ball to cushion and back for position with respect to the next and later shots.—**Drop stroke**, in *lawn-tennis*, a stroke by which the ball is caused to drop or curve downward.—**Fancy stroke**, a feathering and skipping of the flat part of the oar-blade over the surface of the water, possible only when the water is very smooth.—**Feathering stroke**, a stroke in which the blade of the oar is turned horizontal immediately after it leaves the water, and is kept so until it has been swept forward and is ready to be again dipped.—**Full stroke**, in *billiards*, the act of hitting an object-ball full with the cue-ball.—**Galley-stroke**, the stroke once used in the galleys of France and other European countries, in executing which the rowers rose to their feet as the oars were advanced, and sank back to their benches as the stroke was finished.—**Gig-stroke**, a long, sweeping stroke pulled with long oars in a single-banked boat. The stroke is followed by a two-second pause after the blade leaves the water, then the oar is swung forward and immediately dipped.—**Ground stroke**, in *tennis*, a stroke played on a bounding ball.—**Half a stroke**, in *golf*, a stroke given to a supposedly inferior player at every alternate hole.—**Half-cock stroke**, in *cricket*, a defensive stroke made by holding the bat halfway between the back and forward positions, that is, slightly in front of the popping-crease. *Hutchinson*, Cricket, p. 56.—**Long stroke**, one of very long sweep, such as is pulled in a gig.—**Man-o'-war stroke**, a rowing-stroke peculiar to the boats of naval vessels. See *cutter-* and *gig-* ★*stroke*.—**Penalty stroke**, in *golf*, a stroke added to the actual number of strokes played.—**Short stroke**, a short, quick rowing-stroke with no interval of rest when the blade leaves the water and is swung forward for a new stroke; a cutter-stroke.—**Spoon-stroke**, a rowing-stroke made with spoon-oars, the spooning part (consisting of the flats of the turned-up blades) being skimmed over the surface of the water when swept forward preparatory to a new dipping.—**Three-quarter stroke**, in *golf*, a stroke of less distance than a full stroke, but more than a half stroke.

stroke-hole (strōk′hōl), *n.* In *golf*, a hole at which, in handicapping, a stroke is given.

stroke-side (strōk′sīd), *n.* The side of the aftermost oar, which gives time to the others; the side of the after oar in single-banked boats, and always the starboard side in double-banked boats.

stromal (strō′mạl), *a.* [*strom*(*a*) + *-al*¹.] Relating to the stroma, or supporting tissue, of an organ.

stromatology (strō-mạ-tol′ọ-ji), *n.* [Gr. *στρῶμα*(*τ*-), a bed, + *-λογια*, < *λέγειν*, speak.] The history of successive geological formations: essentially the same as *stratigraphy*. [Rare.]

Strombolian (strom-bō′li-ạn), *a.* Pertaining to, or characteristic of, Strömboli or its eruptions.

> The fluidity of the basaltic magma of Stromboli is still great at the moment of eruption, although less than in the preceding case. The discharge of gases causes violent explosions, which throw into space fragments of the doughy magma, some of which fall upon the edges of the crater to flatten there, while other portions shape themselves in the air and fall as scoria, either in blocks or in fine dust. Rock fragments, already consolidated, caught in the magma, form elongated bombs. The ejected material shows its incandescence even in daylight, and at night forms admirable fireworks. Water vapor is often hardly apparent; when it is visible it forms white thin clouds. This type of explosion I designate with Mercalli the *Strombolian* type. *A. Lacroix*, in Smithsonian Rep., 1906, p. 224.

stromentato (strō-mān-tä′tọ), *a.* [It., < *stromento*, instrument. See *instrument*.] In *music*, with instrumental accompaniment. See *recitative*.

strong¹, *a.* 21. Tenacious, so that the particles when compressed separate with difficulty: used of molding-sand containing a large proportion of alumina or clay.—**Strong style**, in Greek pottery, the style of the black-figured vases which immediately preceded or was contemporaneous with the early red style. These vases have the fine drawing and technique of the red style. Red, white, and brownish purple are used with black.

strongbeam (strông′bēm), *n.* In *iron shipbuilding*, one of a number of extra strong widely spaced beams in the holds or machinery space of a merchant vessel to give support to the sides where there is great depth between the lowest deck and the turn of the bilge.

strongylhexactine (stron″jil-hek-sak′tin), *n.* [Gr. *στρογγύλος*, round, + *ἕξ*, six, + *ἀκτίς* (*ἀκτιν*-), a ray.] In the sponge-spicules, a hexactine with thick blunt arms.

strongylocephalus (stron″ji-lọ-sef′ạ-lus), *n.*; pl. *strongylocephali* (-lī). [NL., < Gr. *στρογγύλος*, round, + *κεφαλή*, head.] In *anthrop.*, a cranium spheroid in its general form, but narrowed in the region of the sphenoid fossa. *G. Sergi* (trans.), Var. of the Human Species, p. 36.

Strongyloides (stron-ji-loi′dēz), *n.* [NL., < Gr. *στρογγυλοειδής*, of round form or look, < *στρογγύλος*, round, + *εἶδος*, form.] A genus of parasitic worms. *S. intestinalis* is occasionally found in the human intestines.

strongyloidosis (stron″ji-loi-dō′sis), *n.* [NL. *Strongyloid*(*es*) + *-osis*.] Infection with nematoid worms of the genus *Strongyloides*, as Cochin China diarrhea in man. *Looss*, 1905.

strongylosis (stron-ji-lō′sis), *n.* [NL., < *Strongyl*(*us*) + *-osis*.] Infection with nematoid worms of the genus *Strongylus*.

Strongylus equinus, the type of the nematoid genus *Strongylus*; a round worm from 35 to 47 millimeters long, parasitic in the intestine of horses. Also called *palisade-worm*.

Strontia process. Same as *Scheibler's* ★*process*.

Strontium light. See ★*light*¹.—**Strontium process.** Same as *Scheibler's* ★*process*.

Strophalosia (strof-ạ-lō′si-ạ̈), *n.* [NL., < Gr. *στρόφαλος*, a top, < *στρέφειν*, turn.] A genus of protrematous brachiopods similar to *Productus*, but cemented by the umbo of the ventral valve, with both valves possessing a well-defined cardinal area. It occurs in the Paleozoic rocks from the Devonian to the Permian.

strophanthidin (strọ-fan′thi-din), *n.* [*strophanth*(*in*) + *-id* + *-in*.] A colorless compound, $C_{27}H_{38}O_7.2H_2O$, prepared by the action of dilute acids on strophanthin. It crystallizes in small needles which melt at 169–178° C. The anhydrous compound melts at 235° C.

strophe, *n.* 3. In *music*, one of the more or less complete divisions into which a piece in song or dance form is divided: analogous to *stanza* in verse.

Stropheodonta (strof″ē-ọ-don′tạ̈), *n.* [NL., < Gr. *στροφή*, a twist, + *ὀδούς* (*ὀδοντ*-), a tooth.] A genus of protrematous brachiopods with convexo-concave valves, generally much expanded, with cardinal areas bearing finely denticulate margins. It abounds in rocks of Silurian and Devonian age.

strophic, *a.* 2. In *music*, of a song or a piece in song form, having a similar treatment for successive stanzas. See ★*cyclical form*.

strophocephalus (strof-ọ-sef′ạ-lus), *n.*; pl. *strophocephali* (-lī). [NL., < Gr. *στροφή*, a turning, + *κεφαλή*, head.] A monster with misshapen and distorted head.

strophogenesis (strof-ọ-jen′e-sis), *n.* [NL., < Gr. *στροφή*, a turning, + *γένεσις*, generation.] The process of cell-multiplication by which the structure of the body of one of the higher organisms arises from a fertilized egg. *Haeckel* (trans.), Gen. Morphol., p. 104. [Rare.]

strophoid, *n.*—**Oblique strophoid**, the pedal of a parabola with regard to an arbitrary point of the directrix.

Strophomena (strof-ọ-mē′nạ̈), *n.* [NL., < Gr. *στροφή*, a twist, + *μήνη*, the moon, a crescent.] A genus of protrematous brachiopods having valves with reversed convexity, that is, the ventral concave, the dorsal convex, both broadly expanded, with well-developed cardinal area. The genus is now restricted, but has commonly included all forms with normal and with reversed convexity. It has been found only in the Lower Silurian rocks.

Strophulus albidus or **albus**, in *pathol.*, same as *milium*, 2.

struck, *p. a.* 2. Specifically, in *electrometal.*, thinly nickel-plated preparatory to the deposition of some other metal: said of a surface thus treated. *Houston*, Dict. Elect.

Structural chemistry, that branch of chemistry which treats of the arrangement or order of attachment of atoms in the molecules of compounds.

> *Structural chemistry*, moreover, is slowly acquiring the mastery over cholesterin by making use of the experience afforded by the synthetic study of the hydroaromatic substances. *Nature*, Oct. 24, 1907, p. 654.

Structural formula, iron, steel. See ★*formula*, etc.

structural-functional (struk″tṳ̄-ral-fungk′shọn-a̤l), *a.* In *psychol.*, pertaining both to the structure and to the functions of the mind: implying the points of view both of static and of dynamic psychology.

> The introduction contains an excellent discussion of general methodological subjects, including a fresh pronunciamento upon . . . the *structural-functional* psychology question. *Amer. Jour. Psychol.*, XII. 598.

structurality (struk-tṳ̄-ral′i̤-ti), *n.* Structural quality or character.

structure, *n.* **4.** (c) In *chem.*, the order of attachment of the atoms which constitute the molecule of a substance. It is expressed by a structural or constitutional formula. —**Bread-crust structure.** See ★*bread-crust.* —**Ellipsoidal structure**, in *geol.*, an original structure, preserved in certain ancient greenstones of volcanic origin, by virtue of which the rock tends to break up in ellipsoidal masses. Ellipsoidal differs from *spheroidal* structure in that it is an original structure of the lava, whereas the spheroidal is developed by weathering and is therefore secondary. This structure is common in the greenstones of the Lake Superior region.—**Eye-structure**, in *geol.*, a term descriptive of certain structures in foliated metamorphic rocks which exhibit the secondary minerals arranged in layers forking around much larger original grains. This lenticular structure suggests the name from its resemblance to the eye. The rocks are chiefly gneisses derived from porphyritic types, although the term is sometimes more widely applied. This is the 'augen'-structure of the German petrographers. See ★*augengneis*.—**Fan-shaped structure**, in *geol.*, the structure resulting from an eroded fan-shaped fold, that is, an anticline or syncline, so compressed that the strata form concentric loops, whose upper parts become eroded, leaving the strata radiating like the ribs of a fan.—**Flaser structure** [Prov. G. *flaser*, G. *flader*, streak, spot], in *petrog.*, a structure produced in metamorphic rocks by the development of small lenses of granular texture in a micaceous laminated mass.—**Fragmental structure**, in *geol.*, a term applied to those rocks which consist of fragments; a clastic structure, as in sandstones, shales, and volcanic tuffs.—**Onion structure**, in *petrog.*, a spheroidal parting or lamination of a rock whereby it separates into concentric layers like the parts of an onion. —**Spheroidal structure.** See *ellipsoidal* ★*structure.* —**Structure plane.** See ★*plane*^{1}.—**Vesicular structure**, in *petrog.*, the structure produced in lavas by the expansion of gas-bubbles, when the cavities are comparatively large, and fewer for a given volume of rock than in pumice.

struma, *n.*—**Struma suprarenalis**, an adenomatous tumor of the adrenal gland.—**Thymus struma**, persistence of the thymus gland beyond the age when it normally atrophies.

strumectomy (strö-mek′tọ-mi), *n.* [L. *struma*, a scrofulous tumor, + Gr. *ἐκτομή*, excision.] Excision of a goitrous tumor.

strumiprivous (strö-mi-prī′vus), *a.* [L. *struma*, a scrofulous tumor, + *privare*, deprive, + *-ous*.] Relating to or caused by destruction of the thyroid gland.

strumitis (strö-mī′tis), *n.* [NL., < L. *struma*, a scrofulous tumor, + *-itis*.] Inflammation of a goitrous tumor.

strumoderma (strö-mọ-dėr′mạ̈), *n.* [NL., < L. *struma*, a scrofulous tumor, + Gr. *δέρμα*, skin.] Same as *scrofuloderm*.

strumosis (strö-mō′sis), *n.* [L. *struma*, a scrofulous tumor, + *-osis*.] The condition of being affected with struma; scrofula.

Strumous cachexia. See ★*cachexia*.

strut^1, *n.* **4.** A condition (described in the quotation) of a freshly cut tobacco-plant, resulting from exposure to rain. [Southern U. S.]

> The plants also get in a "*strut*," — that is, they will not wilt, and if handled in such condition, great breakage of leaves ensues. *Killebrew and Myrick*, Tobacco Leaf, p. 313.

strut^2, *n.* **2.** In *iron ship-building*, a cast-steel or forged-iron support under water on each side at the stern of a twin-screw vessel close to the propeller. The strut usually has two arms resembling a V turned sidewise. At the apex of the V is a hub which contains a bearing through which the propeller-shaft passes, immediately abaft of which is the screw-propeller. The inner ends of the arms of the strut are riveted to the outside plating, or pass through it and are secured to the framing in the interior of the vessel. Also called *shaft-strut* and *shaft-bracket*.

strut-girder (strut′gėr″dėr), *n.* **1.** A girder or beam used as a compression-member in a structure.—**2.** A girder, usually of lattice form, of which the flanges are united by struts at right angles to the flanges and by diagonal braces: used commonly to resist both compression and a tendency to deflect under stress.

struthin (strö′thin), *n.* [Gr. *στρουθός*, soapwort, + *-in*^{2}.] An old name for *saponin*.

Struthiolithus (strö-thi-ol′i-thus), *n.* [NL., < Gr. *στρουθίων*, an ostrich, + *λίθος*, stone.] A generic term applied to struthious eggs, larger than those of living ostriches, which have been found in the superficial deposits of southern Russia and northern China.

strüverite (strö′vėr-īt), *n.* [J. *Strüver* + *-ite*^{2}.] A mineral, near rutile in crystalline form, consisting of titanium dioxid with ferrous niobate and tantalate. It is found in the pegmatite of Craveggia, northwest of Lake Maggiore.

strychninization (strik″nin-i-zā′shọn), *n.* [*strychnin(e)* + *-iz(e)* + *-ation*.] The process of bringing under the toxic influence of strychnine.

stryphnic (strif′nik), *a.* [Gr. *στρυφνός*, rough, harsh, astringent, + *-ic*.] Noting an acid, a pale-yellow compound, $C_4H_3O_2N_5$, prepared by the action of potassium nitrite and acetic acid on uric acid. It forms granular crystals.

stub, *n.* **8.** In *railroading*, any section or piece of track which ends at a station or a siding. The parallel tracks of the train-shed of a terminal station are *stub-tracks*.

stub-axle (stub′ak″sl), *n.* A short axle; specifically, the short axle fastened to one of the steering-knuckles on a motor-car.

stubbing-out (stub′ing-out″), *n.* The act of clearing a furnace before commencing another shift. *Phillips and Bauerman*, Elements of Metallurgy, p. 656. [British.]

stubble, *n.* **3.** Same as ★*stubble-cane*.

stubble-cane (stub′l-kān), *n.* Sugar-cane grown from the ratooning of the stubble, sometimes for several successive years. Opposed to *plant-cane* (see *sugar-cane*).

stubble-quail (stub′l-kwāl), *n.* See ★*quail*^{3}.

stuboy (stu-boi′), *exclam.* [*stub*, *st'*, arbitrary syl., + *boy*^{1}.] An exclamation used as a command to a dog to attack, and also in driving cattle or pigs, and the like. Also *stubboy*, *st'boy*. [U. S.]

> A gentleman of the generation preceding mine gave me this possible explanation. He says *stubboy* is a word he used to know on the farm, meaning to drive pigs. '*Stubboy, stubboy*,' says my informant, was the cry used in trying to force those obstinate beasts into the ways they should go. *N. Y. Sun*, Nov. 15, 1905.

stuboy (st-boi′), *v. i.* and *t.* [Also *stubboy*, *st'boy*: < *stuboy*, *exclam.*] To incite by the exclamation *stuboy!* as a dog to attack.

> Is "*st'boy*" truly rural? Well, so was Brooklyn once, and so is some of it still. Are there not even Brooklynites in remote green outskirts or dusty fringes of ambiguous suburbs who have *stubboyed* or still *stubboy!* At any rate, the word is a good, plain honest, robust fellow. *N. Y. Sun*, Nov. 15, 1905.

stub-track (stub′trak), *n.* See ★*stub*, 8.

stuck-finger (stuk′fing″gėr), *n.* Same as *trigger-finger*. *Buck*, Med. Handbook, IV. 526.

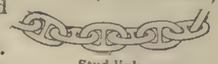
stud-bar (stud′bär), *n.* **1.** A bar or rod which acts as a stud, projecting from another machine-element or surface.—**2.** A bar which carries a stud, so that to the latter another machine-part may be attached.—**3.** A round bar or rod suitable for making studs.

stud-block (stud′blok), *n.* A rectangular or hexagonal block of steel or iron, resembling a nut of extra height. A hole is tapped through it, which fits the thread of studs of that diameter. Into that hole is screwed a set-screw or short bolt, which enters one half its depth. When the block is screwed on the end of a stud, it enters until the end of the stud bottoms on the end of the set-screw. Then a wrench or spanner on the outside of the block will screw the stud home, since the nut cannot turn farther on the stud. When the stud is home, the set-screw is backed off slightly, whereupon the block can be easily screwed off, leaving the stud in place. A stud-block of proper size will be required for each diameter of stud.

stud-bracket (stud′brak″et), *n.* A bracket or projecting element to support a stud; specifically, the projecting bridge, or part of a link in a reversing valve-gear, which forms the base for the stud by which the link is suspended.

studdingsail, *n.*—**Flying studdingsails**, extra studdingsails set between the masts: formerly used. They were also known as *save-all studdingsails*.—**Fore-studdingsail**, a sail set outside one of the square sails on the foremast.—**Studdingsail irons**, studdingsail-boom irons, which confine the boom to the yard: sometimes called *Pacific irons*.

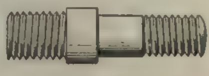
stud-link (stud′lingk), *n.* A link, of a chain, in which there is a stud which reinforces it.



Stud-link.

stud-nut (stud′nut), *n.* **1.** The nut which fits on a stud.—**2.** See ★*stud-block*.

stud-pin (stud′pin), *n.* **1.** A cylindrical pin projecting from a surface into which it is secured as a stud by being screwed. *D. K. Clark*, Steam Engine, II. 710. —**2.** A short bolt having two diameters, so as to form a shoulder. —**3.** A cylindrical pin having an enlarged round head.



Stud-pin.

stud-poker (stud′pō″kėr), *n.* A variety of poker in which the first card is dealt face down and then one face up. The 'down card' is then looked at, and the player having the highest card showing makes a bet if he chooses, and then the next on his left. Any player who refuses to 'see' this bet drops out. A third card is then dealt, and so on until each remaining in the pool has five. After the betting is brought to a call, the down cards are shown, and the best poker combination wins all.

stud-print (stud′print), *n.* A print to form a recess in a mold to receive the core required in the foundry-molding process, but which is attached to the pattern not by finishing nails or screws as is common. The print has formed a stud on the end by which it is attached to the pattern, and this stud fits a hole bored in the pattern at the desired point. It is obvious that a wide range of print sizes may be used provided only the stud is of the size to enter the hole in the pattern.

stud-screw (stud′skrö), *n.* **1.** A screw having a large cylindrical head so that the latter may act as a stud.—**2.** An English term for a set-screw.

stud-stay (stud′stā), *n.* Same as *stay-bolt*, except that the stud-stay may be secured by screwing at one end only. *W. S. Hutton*, Steam-Boiler Construction, p. 235.

stud-wheel (stud′hwēl), *n.* A wheel, pulley, or gear that turns on a stud-bolt. See ★*sun-wheel*, 2. *T. W. Fox*, Mechanism of Weaving, p. 63.

stuf, *n.*, *a.*, and *v.* A simplified spelling of *stuff*.

stuffing, *n.* **7.** In *textile-coloring*, the process of applying a mordant dyestuff to textile material that has not been previously mordanted. The color lake is subsequently formed, and fixed by an after-treatment or saddening with some mordanted principle.

stuffing-drum (stuf′ing-drum), *n.* A heated drum or wheel in which leather is placed with hot grease, which enters the leather. *C. T. Davis*, Manuf. of Leather, p. 221.

stuff-pump (stuf′pump), *n.* In *paper-manuf.*, a power-pump for lifting and conveying the mixture of water and fiber called 'stuff' from vats and other holders to the paper-machines; a stuff-handling pump.

stumba (stum′bạ̈), *n.* A waste product of the combings of schappe silk, forming the raw material of ★bourrette (which see).

stump, *n.* **14.** In a hinge which it is desired should fold in one direction only, the projecting lug on one half which engages with the face of the other and precludes the undesired motion.—**15.** The local name given to the tower of St. Botolph's Church, Boston, England. It is in perpendicular Gothic style, 288 feet high, and slightly resembles the tower of Antwerp Cathedral. *Architects' and Builders' Jour.*, May 20, 1908, p. 432.—**Middle stump.** See *stump*, 5.—**Stump age**, in *forestry*, the age of a tree as determined by the number of annual rings upon the face of the stump, without allowance for the period required for the growth of the tree to the height of the stump.—**Stump analysis.** See ★*tree analysis*.—**Stump height**, in *forestry*, the distance from the ground to the top of the stump, or from the root-collar when the ground-level has been disturbed. On a slope the average distance is taken as the stump height.—**To draw stumps.** See ★*draw*.

stumpage, *n.* **3.** The right to cut trees on the seller's land. Payment is based on the measurement of the logs as they are brought to the landing and piled ready for the drive. *Holman Day*, King Spruce, xi., note. [Maine.]

> A man who stole these lands at twenty cents an acre, buying tax titles, and has squat on his haunches and made himself rich sellin' *stumpage*, has got more 'n he deserved, even if half the timber is rottin' in the tops on the ground. *Holman Day*, King Spruce, p. 133.

II. *a.* Of or pertaining to stumps or stumpage; reckoned by stumps.

> The *stumpage* value of the above timber to the government, at an average of three cents gold per cubic foot, is

not far from three billion dollars, and it is easy to foresee that when the lumber industry reaches any considerable magnitude the receipts from it will form no inconsiderable part of the income of the government.
National Geog. Mag., April, 1905, p. 147.

stumper, *n.* 2. In *cricket:* (*a*) A fielder who stumps a batsman out, that is, one who, with ball in hand, puts down the wicket, if the striker, failing to hit the ball, is out of his ground. (*b*) A wicket-keeper. [Colloq.] *Hutchinson*, Cricket, p. 127.

stump-foot (stump'fu̇t), *n.* Same as *club-foot*, 1.

stump-jumper (stump'jum″pėr), *n.* An implement, used in Australia, for plowing cleared wheat-lands in which the stumps of trees have been left. Also *stump-jump plow*. *E. E. Morris*, Austral English.

stump-mast (stump'mȧst), *n.* A mast that has been broken off. Stump topgallant masts are masts which end close to the shoulder of the spar so that they are without poles.

stump-rooted (stump'rö″ted), *a.* Characterized by having a fleshy elongated root which is truncated below or terminates abruptly: as, *stump-rooted* carrots and parsnips. Sometimes (but improperly) also used in the sense of club-footed or club-rooted.

stump-turpentine (stump'tėr″pen-tīn), *n.* Same as ⋆*spiritine*.

Spirits of turpentine has, for many years, been made by the distillation of the refuse wood of the southern long-leaf pine tree. As much of it was made in a crude way and put on the market poorly refined, it is now . . . regarded as something different from spirits of turpentine and has received such names as wood spirits, spiritine, turpentine substitute, *stump turpentine*, etc.
Science, Feb. 17, 1905, p. 259.

stump-work (stump'wėrk), *n.* The peculiar high-relief embroidery made in England during the Stuart period. It had its origin in the raised work of Italy and Germany of the fifteenth and sixteenth centuries. Lace, brocade, satin, silver and silver-gilt thread, corals, feathers, and many other curious materials were carefully stitched together and raised on 'stumps' of wood, or wool pads in fantastic shapes. *Mrs. Head*, in Burlington Mag., IV. 168.

stun^1, *v. t.* 5. In *stone-cutting*, to injure by blows; bruise, as a stone, in such a way that splinters will drop off when the surface is cut or exposed to frost.

stun^1, *n.* 2. A patch on the surface of a block of stone where the material has been injured by a heavy blow. Compare ⋆*stun*^{1}, *v. t.*, 5.

Stundism (stu̇n'dizm), *n.* [*Stund*(*ist*) + *-ism.*] The teaching and practice of the Stundists.

Stundist (stu̇n'dist), *n.* [G. **stundist*, < *stunde*, hour. See *stound*^{1}. The name refers to their practice of Scripture-reading at stated hours during the week.] A member of a sect which sprang up among the South Russian peasantry about 1860, under the influence of German colonists. The sect has spread rapidly, and, despite persecution, has become a formidable power in affairs ecclesiastical and political. The members strive to get rid of the authority of both the state and the Orthodox Church, and, adopting the New Testament as their rule of faith, have rejected the priestly hierarchy, intercession of saints, image-worship, fasting, and the sacraments except baptism and communion. Manual labor is held to be necessary and is regarded almost as a religious act. Brotherly love is their one ruling doctrine. Tolstoi's teachings show the influence of the Stundists.

The legislation against the Protestant *Stundists* became almost as unbearable as that imposed on the Jews.
Encyc. Brit., XXV. 476.

stunt^1, *n.* 3. A feat; a performance of more or less difficulty, especially in athletics. [Colloq. or slang.]

Boys did some great *stunts* on and under water.
N. Y. Herald, Aug. 15, 1903.

stunt^2 (stunt), *n.* and *a.* [A corruption of E. *assistant.*] An assistant; assistant. [Anglo-Indian.]

Howbeit, do you, Sahib, take a pen and write clearly what I have said, that the Dipty Sahib may see, and reprove the *Stunt* Sahib . . . so young is he.
R. Kipling, Gemini, in Soldiers Three, p. 255.

Now there was an assistant commissioner—a *Stunt* Sahib, in that district, called yunkum Sahib.
R. Kipling, At Howli Thana, in Soldiers Three, p. 239.

stup (stup), *n.* [Also *stupp;* origin not ascertained; appar. < L. *stupa*, tow, etc.] 1. A pulverized mixture of clay and coke or coal.—2. The soot which deposits in the flues of furnaces for the extraction of mercury from cinnabar. It contains a considerable proportion of mercury, partly free and partly combined; it is therefore mixed with lime, molded into brick-like masses, and reburned to recover the metal.

stuporose (stū'pọ-rōs), *n.* Same as *stuporous*. *Buck*, Med. Handbook, V. 53.

sturgeon, *n.*—**Great sturgeon,** *Acipenser transmontanus*, a sturgeon of the Pacific coast from San Francisco northward, reaching a weight of 600 pounds.—**Oregon sturgeon.** Same as *white sturgeon*. See *sturgeon*.—**Sacramento sturgeon.** Same as *white sturgeon*. See *sturgeon*.

sturine (stū'rin), *n.* [ML. *stur*(*io*), sturgeon, + *-ine*^{2}.] A protamine, $C_{36}H_{69}O_7N_{10}$, similar in general properties to salmine. It is found in the testicles of the sturgeon.

stuttering, *n.*—**Labichoreic stuttering.** Same as ⋆*labichorea*.

stützite (stüt'zīt), *n.* [G. *stützit*, named (1878) after A. *Stütz*, who described in 1803 a mineral perhaps identical with this.] A silver telluride (perhaps Ag_4Te) occurring in hexagonal crystals of lead-gray color and metallic luster: probably obtained from Nagy-Ág, Transylvania.

stüvenite (stü've-nīt), *n.* [Named (1887) after E. *Stüven*, a mining engineer.] A hydrated sulphate of aluminium, magnesium, and sodium, occurring in slender acicular crystals. It is intermediate between mendozite and pickeringite and is found in Chile.

stycerin (stis'ẹ-rin), *n.* Incorrect for ⋆*stycerinol*.

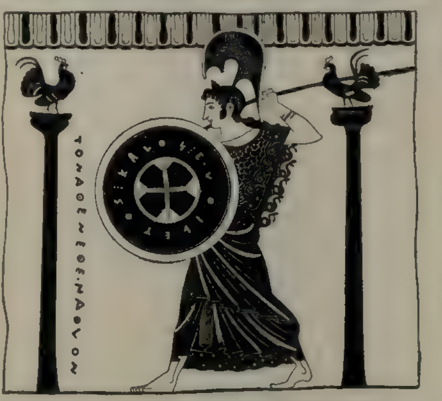
stycerinol (stis'ẹ-ri-nol), *n.* A bright-yellow, resinous, bitter compound, $C_6H_5CH(OH)CH(OH)CH_2OH$, prepared by the action of silver oxid and water on the corresponding dibromide.

Stygicola (sti-jik'ọ-lä), *n.* [NL., < Gr. Στύξ (Στυγ-), Styx, + L. *colere*, inhabit.] A genus of brotuloid fishes known only from cave streams in Cuba.

stylagalmatic (stī″la-gal-mat'ik), *a.* and *n.* [Gr. στῦλος, a pillar, + ἄγαλμα(τ-), a statue, + *-ic.*] **I.** *a.* In *arch.*, combining the figure of a statue with the duty of a supporting column.

II. *n.* A combined column and figure, either standing alone or engaged with a wall and carrying a weight of some kind on top of the figure, as a caryatid (which see).

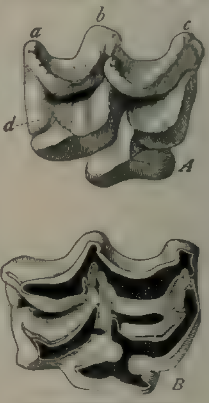
style^1, *n.* 2. (*b*) Specifically—(3) In certain phyllocarid and merostomatous crustaceans, the telson or caudal spine, which in the former is sometimes accompanied by two lateral spines, called *stylets* or *cercopods*. (*c*) Same as *stylet*, 2.



Athena from Black-figured Amphora, British Museum.

10. In *textile-printing*, the manner in which certain effects are produced. Thus, there are *pigment styles*, *discharge styles*, *resist styles*, *steam-mordant styles*, etc.—**A cappella style.** Same as *Palestrina* ⋆*style*.—**Black-figured style,** in the decoration of Greek vases, the practice of leaving the body of the vase in its natural color, or painting it white, cream-color, or red, and developing the decoration upon this in black varnish with occasional touches of brown, purple, or white. In the later 'red-figured' style a reverse method is followed. Black-figured vases may be dated between 600 and 450 B.C. For fifty years the two styles were practised side by side. It occasionally happened that both were used by the same painter. The black-figured decoration is retained in the Panathenaic amphoræ until 400 B.C. With the black-figured vases are sometimes included certain early wares of Naucratis, Cyrene, and especially Corinth, in which dark-colored decoration is used on a cream-colored ground, although these really belong to an archaic class by themselves.—**Caudal style,** one of the long processes borne by the anal segment of certain arthropods, as *Apus*.—**Chrome discharge style,** in *calico-printing*, a method (applicable to soluble dyestuffs) of padding the fabric with a dye and a chrome mordant, drying it, then printing it with the discharge (consisting of potassium ferrocyanide and an alkali, or mixtures of chlorates and bromates), and finally steaming it.—**Dyed style,** in *calico-printing*, the printing of cloth with certain metallic compounds, as red liquor or black liquor, which may be converted into insoluble coloring-matters, or lakes, by the application of dyestuffs.—**Empire style.** See ⋆*empire*.—**Extract style,** in *calico-printing*, the printing of a fabric with the mordant and coloring-matter in one operation, after which it is steamed in a suitable apparatus.—**Geometric style in Greek vases.** See ⋆*vase*.—**Le Gascon style,** in *bookbinding*, the style of Le Gascon, an eminent French binder, which is similar in framework to that of the Èves, but differs especially in the use of dotted instead of continuous lines for the detail. This produces a peculiarly soft, lace-like effect. *W. Matthews*, Modern Bookbinding, p. 76.—**Nouveau style.** See ⋆*art nouveau*.—**Palestrina style,** in *music*, a method or style of sacred composition similar to that perfected by Giovanni Pierluigi da Palestrina (died 1594), the famous Roman composer. This style is essentially vocal or a cappella, almost wholly contrapuntal or polyphonic, based on the medieval church modes and on subjects drawn chiefly from plain-song, and characterized not only by a profound sense of the words used, but by a studied exaltation of an ideal treatment of them. The style was in process of development before Palestrina's day and was successfully cultivated by several of his contemporaries, but is usually known by his name because of his intimate connection with the papal choir and of his conspicuous genius. In connection with discussions by the Council of Trent as to the purification of church music from various abuses, he is said to have successfully maintained the excellence of the polyphonic style by submitting examples that were generally approved. This style of music, as thus illustrated, and plain-song or the Gregorian style, are the only forms of music officially sanctioned in the Roman Catholic Church. Also *a cappella style*.—**Red-figured style.** See *black-figured* ⋆*style*.—**Steam style,** in *calico-printing*, a method of fixing by steam (upon the fiber of cotton, linen, and occasionally silk and woolen goods) adjective, or mordanted, colors used in the process of printing.—**Strong style.** See ⋆*strong*^{1}.—**Stuart style,** the name sometimes given to the artistic production of England which corresponds to the reign of the kings of the house of Stuart, James I. to James II. (1603-1688). The early part of the period continues the Elizabethan style, but is much affected by Dutch influences. The latter part of the century is characterized by the development of the English Palladian style. It comprehends all the activity of the architect Inigo Jones (1573-1652), and the early part of that of Sir Christopher Wren (1632-1723). It is a transition period rather than one having fixed motives and types.—**Turkey-red discharge style,** in *calico-printing*, a method of producing various colored patterns upon the cloth, previously dyed red, by printing it with colors which destroy the red in the parts printed, and leave upon those parts a different color.

style^2, *n.* 4. An elongated cusp or projection, lying on the periphery of a tooth and derived from outgrowths of the cingulum: often termed *pillar* or *buttress*. According to location these cusps have distinctive names. See ⋆*mesostyle*, ⋆*parastyle*, etc. See also cut at ⋆*tooth*, 1.



Molar Tooth of Horse.

A, unworn crown; *B*, worn crown; *a*, metastyle; *b*, mesostyle; *c*, parastyle; *d*, hypostyle.

Stylephoridæ (stī-le-for'i-dē), *n. pl.* [NL., < *Stylephorus* + *-idæ.*] A family of fishes based on a single specimen (preserved in the British Museum) taken in the West Indies in 1790.

Stylephorus (stī-lef'ọ-rus), *n.* [NL., irreg. < Gr. στῦλος, a pillar, + -φορος, < φέρειν, bear.] A genus of fishes of the family *Stylephoridæ*.

stylet, *n.* 3. Specifically—(*b*) Same as ⋆*cercopod*. Compare ⋆*style*^{1}, 2 (*b*) (3).—4. In fishes, one of the slender rays of bone on or above the base of the ribs; the epipleural. *Starks*, Synonymy of the Fish Skeleton, p. 525.

Stylina (stī-lī'nä), *n.* [NL., < Gr. στῦλος, a pillar, a stylus.] A genus of *Hexacoralla* growing in massive colonies, with corallites united by coalescent costæ and multiplying by costal gemmation. It is profusely abundant in the Triassic, Jurassic, and Cretaceous rocks.

Styliola limestone. See ⋆*limestone*.

stylion (stī'li-on), *n.*; pl. *stylia* (-ä). [NL., dim., < Gr. στῦλος, a pillar, a stylus.] In *craniom.*, the medial point on the base of the styloid process. *Von Török.*

stylization (stī-li-zā'shọn), *n.* [*stylize* + *-ation.*] The act or effect of stylizing.

The second notable characteristic of our group is a marked conventionality, not to say *stylization*.
H. S. Jones, in Jour. Hellenic Studies, XII. 377.

stylize (stī'līz), *v. t.*; pret. and pp. *stylized*, ppr. *stylizing*. [*style*^{1}, *n.*, + *-ize.*] To bring under the conditions of style; impress with the characteristics of style; conventionalize: in the decorative arts used to express the transformation which natural forms undergo in their adaptation to decorative motives, as in the use of the acanthus in Greek art, and the arum in Gothic.

These patterns are not numerous, and are in general a good deal *stylized*.
R. M. Dawking, in Jour. Hellenic Studies, XXIII. 252.

Linear ornament passes through vegetable to organic forms, mainly marine, which are finally *stylized* into heraldic conventions. . . . From first to last the persistent influence of a true artistic ideal differentiates Mycenaean objects from the hieratic or *stylized* products of Egypt or Phoenicia. *Encyc. Brit.*, XXXI. 58–59.

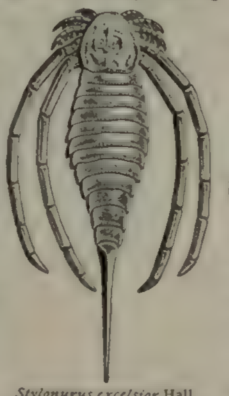
stylobation (stī-lọ̄-bā'shọn), *n.* [*stylobat(e)* + *-ion.*] The placing of a colonnade upon a continuous stylobate or pedestal.

stylolitic (stī-lọ̄-lit'ik), *a.* [*stylolite* + *-ic.*] In *petrog.*, containing or having the properties of stylolite. *Science*, April 8, 1904, p. 580.

stylomandibular (stī''lọ̄-man-dib'ū̦-lär), *a.* [*stylo(id)* + *mandibular.*] Noting a ligament or fibrous band which connects the angle of the lower jaw-bone with the styloid process of the temporal bone. *Proc. Zool. Soc. London*, 1897, p. 376.

stylometric (stī-lọ̄-met'rik), *a.* [*stylometer* + *-ic.*] Of or pertaining to the stylometer; measured by a stylometer.

Stylonurus (stī-lọ̄-nū'rus), *n.* [NL., irreg. < Gr. *στῦλος*, a pillar, a stylus, + *οὐρά*, a tail.] A genus of merostomatous *Crustacea* of the family *Eurypteridæ*, which often exceed one meter in length, and are characterized by their relatively small cephalothorax with large eyes and central ocelli, and their chelicerate preoral and five pairs of postoral appendages, of which the first bears pincers and the last two are greatly elongated, extending almost to the end of the long telson. The genus has been found in the Silurian and Devonian of Scotland and New York, and in the Catskill formation of New York and Pennsylvania.



Stylonurus excelsior Hall
(Restoration after Beecher.)

stylopid (stī'lọ̄-pid), *n.* and *a.* I. *n.* A member of the family *Stylopidæ*.

II. *a.* Having the characters of or belonging to the family *Stylopidæ*.

stylopine (stī'lọ̄-pin), *n.* [NL. *Stylop(horum)* + *-ine*¹.] A colorless alkaloid, $C_{19}H_{19}O_5N$, contained in yellow or celandine poppy, *Stylophorum diphyllum*. It crystallizes in needles and melts at 202° C.

stylopization (stī''lọ̄-pi-zā'shọn), *n.* The condition of being stylopized or penetrated by a stylops.

stylopterygium (stī''lop-te-rij'i-um), *n.*; pl. *stylopterygia* (-ä). [NL., < L. *stylus* (see *style*²) + NL. *pterygium.*] A hypothetical slender, simple limb-like appendage, without rays or appendages of any kind, supposed to be the first stage in the development of the vertebrate limb.

The earliest stage of the purely motor appendage was probably a simple styliform structure resembling the balancing organ of the Urodele or the limb of Lepidosiren, and from this *stylopterygium* had been derived along two divergent lines of evolution — the archipterygium and ichthyopterygium on the one hand and the cheiropterygium on the other.
Rep. Brit. Ass'n Advancement of Sci., 1901, p. 695.

stylus, *n.* 3. In a phonograph, a pointed part which rests on the diaphragm and is moved by the vibrations induced in the latter by sound-waves. It is used to produce the record of sounds upon the phonographic cylinders, and also to reproduce the sounds thus recorded.

stymie, *v.* and *n.* See ★*stimy*.

styphnic (stif'nik), *a.* Noting an acid, a sulphur-colored compound, $(\overset{1.\,3}{HO})_2C_6H(\overset{2.\,4\,6}{NO_2})_3$, prepared by the action of sulphuric and nitric acids on resorcinol. It forms large hexagonal crystals, melts at 175.5° C., and is a strong acid. Also called 2,4,6-*trinitroresorcinol* or 2,4,6-*trinitro*-1,3-*dihydroxybenzene*.

Stypodon (stip'ọ̄-don), *n.* [NL., < Gr. *στύπος*, a stump, + *ὀδούς* (*ὀδοντ-*), tooth.] A genus of cyprinoid fishes known from fresh-water streams of Mexico.

stypsis (stip'sis), *n.* [NL., < Gr. *στῦψις*, contraction, astringency, steeping in an astringent solution, < *στύφειν*, contract. See *styptic.*] The producing of a styptic effect; the effect produced.

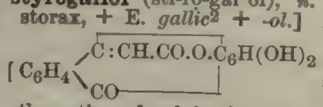
styptic, *n.*—**Chemical styptic,** a styptic which arrests hemorrhage by causing coagulation through chemical action, as iron subsulphate.—**Colloid styptic,** a solution of some styptic substance in a collodion-like liquid which is antiseptic and excludes the air when it has dried to a film; the collodium stypticum of the United States Pharmacopœia.—**Mechanical styptic,** a styptic which arrests hemorrhage by causing coagulation mechanically, such as punk or a pledget of cotton.—**Vascular styptic,** a styptic which arrests hemorrhage by inducing contraction of the wounded vessels, such as adrenal extract.

stypticin, stypticine (stip'ti-sin), *n.* [*styptic* + *-in*².] A trade-name of cotarnine hydrochlorid. It is used as a remedy for dysmenorrhea.

styracol (stī'ra̤-kol), *n.* [L. *styrax* (*styrac-*), storax, + *-ol.*] A substance obtained by the action of guaiacol on cinnamyl, used in the treatment of catarrhal troubles of the digestive and urinary tracts and in pulmonary diseases.

styrene (stī'rēn), *n.* [L. *styr(ax)*, storax, + *-ene.*] Same as *styrol*.

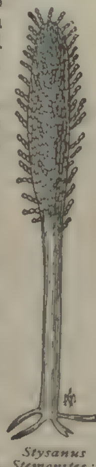
styrogallol (stī-rọ̄-gal'ol), *n.* [L. *styr(ax)*, storax, + E. *gallic*² + *-ol.*] A yellow dye,



$$\left[C_6H_4\begin{matrix}\diagup C:CH.CO.O.C_6H(OH)_2\\ \diagdown CO\end{matrix}\right.$$

, prepared by the action of sulphuric acid on a mixture of metahydroxybenzoic acid and cinnamic acid. It crystallizes in lustrous needles, melts at 260° C., resembles anthraquinone in appearance, and may be sublimed.

Stysanus (stī-sā'nus), *n.* [NL. (Corda, 1837).] A genus of hyphomycetous fungi, of the family *Stilbaceæ*, having the fertile hyphæ arranged in an erect, cylindrical, dark-colored stipe bearing mostly hyaline, catenulate, unicellular conidia. *S. Stemonites* is a common species on decaying herbaceous plants and is said to cause a rot of potatoes.



Stysanus Stemonites: enlarged.

suavastika, *n.* Same as *swastika*.

sub² (sub), *n.* [An abbreviation of *substitute.*] A substitute; specifically, one who is willing to serve as a substitute for a regular compositor on a newspaper. [Colloq.]

sub² (sub), *v. i.*; pret. and pp. *subbed*, ppr. *subbing*. [*sub*², *n.*] 1. To act as a substitute; specifically, to act as the substitute of another in a composing-room. [Colloq.] —2. To subirrigate. See ★*subbing*, 2.

sub. An abbreviation (*a*) of *subject*; (*b*) of *substitute*; (*c*) of *suburb*; (*d*) of *suburban*.

subacetabular (sub-as-e-tab'ū̦-lä̤r), *a.* Situated below the acetabulum.

The skiagraph revealed a hypertrophy of the acetabulum and the *subacetabular* region of the ilium.
Therapeutic Gazette, Jan., 1903, p. 53.

subadult (sub-a̤-dult'), *a.* [*sub-* + *adult.*] Nearly full grown; approaching the adult condition.

The October number of the Emu contains the photograph of a *subadult* Australian barn-owl in which large bunches of the nestling down are retained on the legs, thus communicating to the bird a most remarkable appearance. *Nature*, Dec. 3, 1903, p. 112.

subaërialist (sub-ạ̄-ē'ri-al-ist), *n.* In *geol.*, a supporter of the view that the processes of weathering, wind-erosion, etc., all primarily due to the atmosphere, are of paramount importance in earth-sculpture.

subaërially (sub-ạ̄-ē'ri-a̤l-i), *adv.* In a subaërial manner; by erosive processes acting on a land-surface or under the atmosphere.

It is not a typical "drowned valley." When compared with the exquisite valley-forms in south-west Ireland, which have been entered by the sea, it is seen that it is not a sufficient explanation to say that the channel is simply a *sub-aërially* carved valley depressed beneath the sea. *Geog. Jour.* (R. G. S.), IX. 537.

subalary (sub-ā'la̤-ri), *a.* [L. *sub*, under, + *ala*, wing, + *-ary.*] Situated below the wings.

subalate (sub-ā'lāt), *a.* [*sub-* + *alate.*] Somewhat wing-shaped; suggesting a wing: often applied to thin, triangular projections from a bone.

subandine (sub-an'din), *a.* Same as *subandean*. *Geog. Jour.* (R. G. S.), XVI. 189.

subantarctic (sub-an-tärk'tik), *a.* [*sub-* + *antarctic.*] Near, or just outside of, the Antarctic ocean.

Eleven others from the extralimital *subantarctic* waters are also considered. *Science*, Oct. 21, 1904, p. 536.

Subaqueous overwash plains. See ★*plain*¹.

subarid (sub''ar'id), *a.* [*sub-* + *arid.*] Climatically dry, but not in the extreme degree; moderately arid.

A situation typical of the *subarid* area known as the Great Plains. *Yearbook U. S. Dept. Agr.*, 1897, p. 92.

subarouse (sub-a̤-rouz'), *v. t.*; pret. and pp. *subaroused*, ppr. *subarousing*. In *psychol.*, to arouse in the form of an obscure disposition, rather than as a clear idea; predispose for. See the extract. [Rare.]

The exposure of the word "A" beginning a sentence *sub-arouses* many of its past associates, preferably substantives or descriptive adjectives.
Amer. Jour. Psychol., XII.

subarticular (sub-är-tik'ū̦-lä̤r), *a.* [L. *sub*, under, + E. *articular.*] Situated beneath an articulation or joint.—**Subarticular tubercle,** in *zoöl.*, a small prominence on the under side of the foot, at the point of articulation of the phalanges. The presence and arrangement of these tubercles are of importance in furnishing characters for the identification of some amphibians, especially tree-frogs. *Proc. Zool. Soc. London*, 1899, p. 67.

subastringent (sub-as-trin'je̤nt), *a.* Moderately astringent; suggesting astringency.

subatka (su-bat'kä̤), *n.* A name applied to *Alepisaurus æsculapius*, a fish found from Alaska southward to the coast of California.

subatom (sub-at'ọm), *n.* A definite part of an atom, if this assumed unit, for the most part looked upon as indivisible, is supposed capable under special conditions of undergoing division; a corpuscle. Also called *atomicule*. [Rare.]

The charged *sub-atoms* or particles of matter, . . . can . . . be made to circulate through a metallic tube or worm connected to earth. *Athenæum*, July 15, 1905, p. 85.

subatomic (sub-a̤-tom'ik), *a.* Of or pertaining to the relations of assumed particles or subdivisions of matter smaller than the atom: as, *subatomic* energy.

The cathode rays seem to consist of *subatomic* corpuscles, while such evidence as we have indicates that the positive electricity travels with particles of atomic magnitude, as in the case of electrolysis.
Astrophysical Jour., May, 1903, p. 259.

Experiments have been made with *sub-atomic* particles derived from one or other of these sources by a great number of physicists, such as Kaufman, Lenard, Simon, and Weichert in Germany, and Becquerel in France, with the result that Prof. Thomson's calculations as to the mass, charge, and speed of the moving particle, or, as we may now call it, the electron, have been independently and abundantly confirmed.
Athenæum, May 27, 1905, p. 661.

subatrial (sub-ā'tri-a̤l), *a.* Situated beneath the atrial cavity. *Parker and Haswell*, Zoology, II. 56.—**Subatrial ridge.** See ★*ridge*.

subattenuate (sub-a̤-ten'ū̦-āt), *a.* Somewhat attenuated, slender, thin, or delicate.

subauricular (sub-â-rik'ū-lä̤r), *a.* [L. *sub*, under, + E. *auricular.*] In *ornith.*, lying below the region of the ear: as, a *subauricular* spot of yellow.

subauriculate (sub-â-rik'ū̦-lạ̄t), *a.* Slightly auriculate or eared.

subbasal (sub-bā'sa̤l), *a.* Situated below the basal cell of a lepidopterous insect's wing.

The basal area of these wings irrorated with pearl-grey indicating two vague *subbasal* bands.
Proc. Zool. Soc. London, 1902, p. 48.

subbase (sub'bās), *n.* 1. A base or foundation-element, placed under the bottom of a machine or other apparatus, intermediate between the latter and the true foundation. It is used to lift the machine higher from the ground than it would be without it, and to do this without increasing the height of the masonry below, or making the machine itself inconveniently massive.

The whole turbine is complete in every detail, being mounted on an iron *sub-base*, has a pump for forcing lubrication through all the bearings, no oil being used in connection with the internal parts of the turbine.
Elect. Rev., Sept. 24, 1904, p. 489.

2. In general, anything going underneath a base or bed-plate.—3. A secondary base (of supplies) nearer or more accessible than the main base.

It is now stated that Mr. Peary's plan contemplates the construction of a strong wooden ship with powerful machinery, in which he will sail next July to Cape Sabine and, after establishing a *sub-base* there, force his way northward to the northern shore of Grant Land.
Science, Oct. 9, 1903, p. 478.

subbasement (sub'bās″mẹnt), *n.* A basement lower than the main basement of a building. In the largest modern buildings there are sometimes three or four of these, one below another.

A *sub-basement*, in which air circulates at a fairly uniform temperature, is also essential to dryness and constant temperature in the main basement where the larger permanent apparatus, for which stability is essential, is mounted. *Carnegie Inst. Yearbook*, 1902, p. 56.

subbifid (sub-bī'fid), *a.* Slightly forked, as is the tongue of a seal; somewhat bifurcate. *Parker and Haswell*, Zoology, II. 493.

subbing (sub'ing), *n.* 1. Acting as a 'sub.' [Colloq.]—2. Subirrigating. [Colloq.]

subbivalve (sub-bī'valv), *n.* An operculate univalve or gastropod shell.

subbrachycephal (sub-brak-i-sef'a̤l), *n.* In *craniom.*, a person with a subbrachycephalic head. *Deniker*, Races of Man, p. 316.

subbrachycephali (sub-brak-i-sef'a̤-lī), *n. pl.* Subbrachycephalic individuals or types. See *subbrachycephalic*. *Keane*, Ethnology, p. 179.

subbronchial (sub-brong'ki-a̤l), *a.* [L. *sub*, under, + E. *bronchial*.] In *ornith.*, situated beneath the bronchi.—**Subbronchial air-sacs**, a pair of air-sacs lying beneath the trachea.

subcæcal (sub-sē'ka̤l), *a.* Situated below the cæcum.

subcallosal (sub-ka-lō'sa̤l), *a.* Situated beneath the corpus callosum.—**Subcallosal layer.** See ★*layer*.

subcancellate (sub-kan'se-lāt), *a.* Somewhat cancellate or lattice-like.

subcapsuloperiosteal (sub-kap″sṳ-lō-per-i-os'-tẹ-a̤l), *a.* Situated beneath the capsule and the periosteum: noting a method of resection of a joint. *Buck*, Med. Handbook, VI. 909.

subcarbonaceous (sub-kär-bo̤-nā'shius), *a.* Having a somewhat brittle consistency resembling that of carbon (graphite): applied to the perithecia and stromata of various fungi.

subcarbonate (sub-kär'bo̤-nāt), *n.* A basic carbonate or one having the carbonic-acid radical partly replaced by oxygen or hydroxyl: as, bismuth *subcarbonate*, $Bi_2O_2(CO_3)$.

subcarbureted (sub-kär'bū-ret-ed), *a.* Combined with carbon in inferior proportion.

subcarinal (sub-ka-rī'na̤l), *a.* Situated below a carina. *Trans. Linn. Soc.*, Zool., June, 1902, p. 294.

subcarinate (sub-kar'i-nāt), *a.* Somewhat carinate or keeled. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 41.

Subcentral sulcus, an inconstant sulcus at the ventral end of the postcentral fissure. *Amer. Anthropologist*, 1901, p. 461.

subcerebellar (sub″ser-ẹ-bel'a̤r), *a.* Situated beneath the cerebellum. *Buck*, Med. Handbook, II. 250.

subcingulum (sub-sing'gṳ-lum), *n.*; pl. *subcingula* (-lä̤). 1. In medieval armor, a sash or belt worn under another. *Myrick*, Ancient Armor, Glossary.—2. A girdle formerly worn under the outer vestments by clerics, especially by bishops.

subcircular (sub-sėr'kṳ-lä̤r), *a.* Nearly, but not quite, circular.

In nearly every species the inceptive state is represented by a shell having a *subcircular* outline, with valves of slight convexity. *Amer. Jour. Sci.*, June, 1904, p. 415.

subclass, *n.* 2. In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*1), a division between class and order, based on the relative proportions of the two subgroups of the preponderant group of standard minerals.

subclass (sub'klȧs), *v. t.* To place in a *subclass* or secondary division of its class.

Accordingly the motive must be *subclassed* as sortilegic. *An. Rep. Bur. Amer. Ethnol.*, 1894–95, p. 72.

subcoastal (sub-kōs'ta̤l), *a.* In *phys. geog.*, of or pertaining to the shallow sea-bottom near the coast: as, *subcoastal* plains.

The *subcoastal* plains were described. They have a breadth of from 30 to 80 miles, or 300 miles off Newfoundland, reaching to a depth of 200 to 250 feet, with, in places, an outer terrace 200 feet lower. *Science*, Feb. 20, 1903, p. 298.

subconfluent (sub-con'flö-ẹnt), *a.* Partially united or fused: said of spots or other color-markings that have a tendency to run together. *Proc. Zool. Soc. London*, 1898, p. 431.

subconic (sub-kon'ik), *a.* Same as *subconical*.

subcontinental (sub-kon-ti-nen'ta̤l), *a.* Situated beneath a continent; of or pertaining to what underlies a continent.

Thus the *subcontinental* excess of temperature may make itself felt in regions where the rocks still retain a high temperature, and are probably not far removed from the critical fusion point. *W. J. Sollas*, in Nature, Sept. 13, 1900, p. 487.

subcontra (sub-kon'trä̤), *a.* In *acoustics*, lower than the contra-octave. See *subcontra* ★*octave*. *E. B. Titchener*, Exper. Psychol., I. i. 32.

subcoriaceous (sub-kō-ri-ā'shius), *a.* Somewhat or imperfectly coriaceous.

subcotyleal (sub-kot-i-lē'a̤l), *n.* [F. *subcotyléal*.] In *ichth.*, same as ★*angular*. *Starks*, Synonymy of the Fish Skeleton, p. 516.

subcruciform (sub-krö'si-fôrm), *a.* Somewhat cruciform; not perfectly cruciform. *Annals and Mag. Nat. Hist.*, Aug., 1903, p. 248.

subcrustal (sub-krus'ta̤l), *a.* In *geol.*, situated or operating below the earth's outer shell or crust: applied both to materials and to forces.

Volcanic outflow of *subcrustal* molten matter. *Geog. Jour.* (R. G. S.), XII. 545.

subcubical (sub-kū'bi-ka̤l), *a.* Nearly or somewhat cubical.

subcuboidal (sub-kū-boi'da̤l), *a.* Having somewhat the form of a cube; subcubical.

subculture (sub-kul'tṳr), *v. i.*; pret. and pp. *subcultured*, ppr. *subculturing*. In *bacteriol.*, to make a secondary culture in a new medium from an old culture.

Numerous colonies were obtained from the membrane on *sub-culturing*, while the milk below the membrane was sterile. *Nature*, quoted in Sci. Amer., Nov. 15, 1902, p. 326.

subcyaneous (sub-sī-ā'nẹ-us), *a.* Nearly cyaneous. *Annals and Mag. Nat. Hist.*, Dec., 1903, p. 612.

subdeltoid (sub-del'toid), *a.* 1. Same as *subdeltoidal*.—2. Situated beneath the deltoid muscle. *Buck*, Med. Handbook, VII. 205.

subdendroid (sub-den'droid), *a.* Slightly dendroid, or resembling or suggestive of a tree, in appearance. *Trans. Linn. Soc.*, Zool., June, 1902, p. 305.

subdental (sub-den'ta̤l), *n.* The anterior of the two large bones in the lower jaw of fishes, bearing the teeth; the dentary. *Starks*, Synonymy of the Fish Skeleton, p. 516.

subdeposit (sub-dẹ-poz'it), *n.* The lower one of two deposits.

subdepot (sub'de-pō″), *n.* *Mil.*, a secondary or branch depot, nearer the regiment than a depot.

To carry extra shoes upon the person is a considerable tax upon the soldier's strength, and *subdepots* for such supplies should be easily accessible. *Buck*, Med. Handbook, V. 796.

subdermic (sub-dėr'mik), *a.* Same as *hypodermic*. *Science*, Jan. 17, 1902, p. 117.

subdiaconate, *n.* II. *a.* Relating to the order or office of subdeacon.

subdiaphragmatic (sub-dī″a̤-frag-mat'ik), *a.* Same as *subphrenic*. *Buck*, Med. Handbook, I. 44.

subdiscal (sub-dis'ka̤l), *a.* Situated below the discal cell in the wing of a lepidopterous insect. *Proc. Zool. Soc. London*, 1902, p. 272.

subdiscoidal (sub-dis-koi'da̤l), *a.* Situated below the discoidal cell of an insect's wing. *Proc. Zool. Soc. London*, 1901, p. 228.

subdivide (sub'di-vīd″), *n.* In *phys. geog.*, a subordinate divide, as one between small streams in contrast with one between river systems.

When a plain or plateau or mountain region is well dissected numerous sharply defined *subdivides* are developed between the smaller rivers and their branches. *W. M. Davis*, Elem. Phys. Geog.

subdolichocephali (sub-dol″i-kō-sef'a̤-lī), *n. pl.* [NL.] Subdolichocephalic individuals or types. See *subdolichocephalic*. *Keane*, Ethnology, p. 179.

subdolichocephalism (sub-dol″i-ko̤-sef'a̤-lizm), *n.* The quality or condition of being subdolichocephalic.

The skull of the Chinese is, in fact, both longer and higher in proportion than those of all other yellow men. His cephalic index falls down to *subdolichocephalism* (the average indication of 142 skulls of the two sexes = 77.24) and its height slightly exceeds its width. *Smithsonian Rep.*, 1895, p. 515.

subdolichocephalous (sub-dol″i-kō-sef'a̤-lus), *a.* Same as *subdolichocephalic*. *Keane*, Ethnology, p. 321.

subdolichocephaly (sub-dol″i-ko̤-sef'a̤-li), *n.* Same as ★*subdolichocephalism*.

subdominant, *n.* II. *a.* Subordinate; submaximal or subnormal: said specifically of the stimuli which evoke marginal or obscure mental processes.

Those disturbances which are dominant become focal in consciousness, or the mind is fully conscious of such. Those that are *sub-dominant* bring about marginal or sub-conscious psychical states. *Buck*, Med. Handbook, III. 260.

Subdominant group. See ★*group*1.

subdrainage (sub-drā'nā̤j), *n.* 1. In *agri.*, drainage of water beneath the surface of the ground, in distinction from surface drainage.

The apple may be grown on almost any soil, but the best results are obtained on soils from which native forests have been cleared. Here the physical conditions are such as to afford both ample surface drainage and *subdrainage*, and the soils are well supplied with the various kinds of plant food essential for a healthy wood growth and finely developed, well-matured fruit crop. *Yearbook U. S. Dept. Agr.*, 1901, p. 594.

2. A subdivision of a drainage system.

More than three-fifths of Montana is drained by the Missouri and its tributaries. For statistical discussion this great basin is divided into four *subdrainage* basins. *U. S. Dept. Com. and Labor*, Bur. of Census, Bulletin [16, Irrig. in U. S., 1902, p. 60.

subdue, *v. t.*—**Subdued mountain.** See ★*mountain*.

subdurally (sub-dū'ra̤-li), *adv.* In a subdural manner; into the subdural space.

subecho (sub'ek″ō), *n.* In *whist*, a trump signal made after the partner has led trumps and the player has had no chance to complete a direct echo in the trump suit.

subelongate (sub-ẹ-lông'gāt), *a.* Somewhat elongate. *Annals and Mag. Nat. Hist.*, Feb., 1904, p. 103.

subencephalon (sub-en-sef'a̤-lon), *n.*; pl. *subencephala* (-lä̤). [NL., < L. *sub*, under, + Gr. ἐγκέφαλος, brain.] That portion of the brain which comprises the corpora quadrigemina, the pons Varolii, and the medulla oblongata.

subendymal (sub-en'di-ma̤l), *a.* Situated beneath the endyma, or membrane which lines the ventricles of the brain. *Buck*, Med. Handbook, II. 176.

subensiform (sub-en'si-fôrm), *a.* Somewhat ensiform. *Proc. Zool. Soc. London*, 1902, p. 95.

subentry (sub'en″tri), *n.* A subordinate entry; an entry made under another.

subependymal (sub-ep-en'di-ma̤l), *a.* Same as ★*subendymal*.

subepiglottic (sub-ep-i-glot'ik), *a.* Situated below the epiglottis.

subepiglottid (sub″ep-i-glot'id), *a.* Same as ★*subepiglottic*.

suberite (sū'bẹ-rīt), *n.* [NL. *suberites*, < L. *suber*, the cork-oak.] A sponge of the genus *Suberites* or of a related genus.

suberone (sū'bẹ-rōn), *n.* [*suber*(*ic*) + *-one*.] Cycloheptanone; a colorless oil, , prepared by the distillation of suberic acid with lime. It has an odor of peppermint and boils at 179–181° C.

subessive (sub-es'iv), *a.* [L. *sub*, under, + *esse*, be, + *-ive*.] In *gram.*, noting the case which expresses position *under*. *Amer. Anthropologist*, Jan.–March, 1903, p. 26.

subestuarine (sub-es'tṳ-a-rin), *a.* In *geol.*, partly estuarine: applied to deposits which were laid down in a coastal lagoon into which at times the ocean waters overran.

subexcite (sub-ek-sīt'), *v. t.*; pret. and pp. *subexcited*, ppr. *subexciting*. In *physiol.*, to predispose to activity; excite in a partial or nascent manner.

Pronunciation of an adjective . . . seems to *subexcite* association tracts representing substantives. *Amer. Jour. Psychol.*, IX. 580.

subextensibility (sub-eks-ten-si-bil'i̤-ti), *n.* A lessened degree of extensibility. *Buck*, Med. Handbook, IV. 515.

subfacies (sub-fā'shi-ēz), *n.*; pl. *subfacies*. [NL.] In *entom.*, the lower part of the facies.

subfalcate (sub-fal'kāt), *a.* Somewhat falcate.

subfibrous (sub-fī'brus), *a.* Imperfectly fibrous.

The mineral occurs commonly in long-bladed triclinic crystals and in bladed to *subfibrous* masses. *W. Tassin*, in Smithsonian Rep. (Nat. Mus.), 1900, p. 514.

subfissure (sub'fish″ṳr), *n.* A cerebral fissure which is concealed by the overlapping convolutions. *Buck*, Med. Handbook, II. 201.

subfix (sub'fiks), *n.* [*sub-* + *-fix* as in *suffix*, *affix*, etc.] A character written under another character or word; a subscript character.

As the *subfix* in plate LXIV, 48, is the character I have usually interpreted by u, this would give us some of the elements of the name Kukulcan and not Itzamna, as Seler and Schellhas suppose.
C. Thomas, in An. Rep. Bur. Amer. Ethnol., 1894–95, p. 225.

subflexuose (sub-flek'sụ̄-ōs), *a.* Somewhat or partly flexuose.

subfreshman (sub'fresh″man), *n.* A student who is nearly ready to enter college as a freshman. [U. S.]

Subfrontal fissure. Same as *inferofrontal* ★*fissure*.

subfunctional (sub-fungk'sho̤n-a̤l), *a.* Used to a certain extent: said of small or imperfectly developed parts that are of little use to the organism in which they are found, but correspond to full-sized useful organs in another species of animal or plant.

Hypohippus of the middle Miocene with *subfunctional* lateral digits . . . is an instance of arrested evolution owing probably to marsh dwelling habits which necessitated a spreading foot. *Amer. Nat.*, Jan., 1904, p. 6.

subgens (sub'jenz), *n.*; pl. *subgentes* (-jen'tēz). [NL.] A subdivision of a gens. In exogamic communities, members of various subgentes of the same gens are generally forbidden to intermarry. The subgens and gens differ from the gens and phratry in that the social and political function of the subgens is not as clearly differentiated from that of the gens as is the function of the gens from that of the phratry. The distinction is, however, only one of degree. In more complex forms of social organization, phratry, gens, and subgens may be found at the same time. In this case the subgens is a subdivision of the gens which may be more or less definitely differentiated from the whole gens.

subgerminal (sub-jėr'mi-na̤l), *a.* In *embryol.*, lying beneath the germ or embryo: said especially of cavities or structures in the yolk-laden eggs of birds and insects.—**Subgerminal cavity**, in *embryol.*, the cavity which lies beneath the developing embryo of vertebrates such as sharks, reptiles, birds, etc.

Subglacial till. See ★*till*^{4}.

subglobosely (sub-glọ-bōs'li), *adv.* Somewhat globosely. *Annals and Mag. Nat. Hist.*, April, 1904, p. 275.

subglobular, *a.* **2.** Same as ★*platycephalic*, 2. *Aitken Meigs.*

subgrad (sub'grad), *n.* [See ★*grad*.] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*^{1}), a division of a grad based on the proportions of the chemical bases in the minerals used in forming a grad.

subgyre (sub'jīr), *n.* A cerebral convolution in a fissure concealed by other overlapping convolutions. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 623.

subhedral (sub-hē'dra̤l), *a.* Having an imperfect crystalline form: said of phenocrysts in a rock which are intermediate between those having a well-developed form (*euhedral*) and those destitute of this (*anhedral*).

subhuman, *a.* **2.** Nearly or somewhat human.

Useful suggestions as to the origin of numerical concepts may be drawn from various *subhuman* animals.
W. J. McGee, in An. Rep. Bur. Amer. Ethnol., 1897–98, [p. 828.

subhumid (sub-hū'mid), *a.* Humid below the normal; having less than the normal or necessary amount of moisture. The subhumid region of the United States includes portions of North Dakota, South Dakota, Nebraska, Kansas, and Texas, where irrigation is sometimes necessary to successful farming.

The *subhumid* region is the strip of country running north and south between the arid region, where irrigation is absolutely necessary to the successful prosecution of agriculture, and those portions of the United States in which the rainfall is usually sufficient for agricultural purposes. It includes portions of North Dakota, South Dakota, Nebraska, Kansas, and Texas, and may be described as a region where irrigation is not always necessary, but where agricultural operations can not, with any assurance of success, be undertaken without it.
Yearbook U. S. Dept. Agr., 1896, p. 631.

subhyaline (sub-hī'a̤-lin), *a.* Somewhat hyaline. *Annals and Mag. Nat. Hist.*, Feb., 1904, p. 84.

subimposed (sub-im-pōzd'), *a.* Originated, as a river, in an underground, cavernous passage, and revealed by the erosion or falling in of the cover.

If a name were desired for this minor feature of the drainage of certain regions, it might be termed *subimposed*. *I. C. Russell*, Rivers of North America, p. 246.

subincandescent (sub-in-kan-des'e̤nt), *a.* Heated but not brightly luminous: said of the hydrogen forming the outer or coronal layer of the sun. *Geikie*, Text-book of Geol., p. 18.

subindex (sub'in-deks″), *n.* A specifying figure or letter following and slightly below a figure, letter, or symbol: as the 0 in x_0.

subindividual, *n.* **2.** One of a multitude of minute crystals of similar habit which unite, in parallel position, to form a large crystal or to coat the surface of a crystal of some other species.

subinfection (sub-in-fek'sho̤n), *n.* Secondary infection. *Jour. Exper. Med.*, Oct. 1, 1901, p. 642.

subinferior (sub-in-fē'ri-o̤r), *a.* In *ichth.*, lying toward, or slightly on, the under side: specifically applied to the position of the mouth which is subinferior when situated just below the most projecting part of the nose. In sharks the mouth is decidedly inferior. *Catalogue Fishes, British Museum*, I. 76.

subiniac (sub-in'i-ak), *a.* Lying beneath the inion; in *anthrop.*, relating or pertaining to that portion of the skull which is situated between the inion and the foramen magnum. *Amer. Anthropologist*, Jan.–March, 1901, p. 42.

subintegumental (sub-in-teg-ụ̄-men'ta̤l), *a.* Lying beneath the skin or outer covering of the body. *Buck*, Med. Handbook, IV. 318.

subintrant (sub-in'tra̤nt), *a.* [L. *subintrans*, ppr. of *subintrare*, enter into secretly, < *sub*, under, + *intrare*, enter. See *intrant*.] Anticipating: noting a malarial fever the paroxysms of which recur after progressively shortening intervals until at last a new one begins before the preceding one has fully run its course.

subirrigate (sub-ir'i-gāt), *v. t.*; pret. and pp. *subirrigated*, ppr. *subirrigating*. To irrigate beneath the surface of the ground. See ★*subirrigation*.

Where the subsoil transmits water freely, irrigation ditches may *subirrigate* large tracts of country without rendering them marshy. Thus farms may obtain an ample supply of water from ditches a half mile or more away without the necessity of distributing small streams over the surface. In the San Joaquin Valley of California, vineyards in certain localities are thus maintained in good condition, although water has not been visibly applied for many years. The closing of the ditches would, however, result in drying up the ground, and this obliges the farmers who are benefited by subirrigation to pay their share of the cost of maintaining the ditches, although they do not receive water directly.
Sci. Amer. Sup., Jan. 17, 1903, p. 22616.

subirrigation (sub-ir-i-gā'sho̤n), *n.* The application of water in such manner that it will reach the roots of agricultural crops without appearing at the surface. Under this term is also included natural subirrigation, or the occurrence of water beneath the surface (and of benefit to crops) due to natural causes. Subirrigation may be by percolation through sands or gravels, or through pipes or drain-tile suitably arranged. See the extract under ★*subirrigate*.

In one of the systems of *subirrigation* the water is carried through pipes 14 inches below the surface. These are broken every 10 inches and laid in beds of charcoal. These pipes run 20 feet apart east and west and are crossed every 280 feet by 4-inch water-tight supply pipes. At the junction of these pipes is a brick and cement box or pocket, into which all pipes empty. The bottom of this box is 21 inches below the surface, and the flow of the water is regulated by a system of plugs or cut-offs.
U. S. Dept. Com. and Labor, Bur. of Census, Bulletin [16, Irrig. in U. S., 1902, p. 25.

subj. An abbreviation (*b*) of *subject*; (*c*) of *subjective*; (*d*) of *subjectively*.

subject, *n.* **11.** In *geom.*, the figure cut by the picture-plane.

If the *subject* is an eject of an original, the cut of the *subject* is an image of the original.
Merriman and Woodward, Higher Mathematics, p. 72.

12. In *exper. psychol.*: (*a*) The observer or reactor; the person upon whom an experiment is made. (*b*) More correctly, the person, normal or abnormal in mental condition, who is subjected to a mental test or an examination of mental efficiency.

'Observer' should be the general term for the person on whom an experiment is tried. '*Subject*' should be used where this person is abnormal, and 'reactor' where some movement is required.
Jour. Philos. Psychol. Sci. Methods, April 28, 1904, p. [239.

Intermediate subject or **theme.** Same as *intervening subject* (which see, under *intervene*).—**Secondary subject** or **theme**, in *music*, either a counter-subject or the theme of an episode.—**Subject-catalogue.** See ★*catalogue*.

subjective, *a.* **4.** In *gram.*: (*a*) In Eskimo, noting the case expressing the subject of a transitive verb and the owner of an object. Also called *transitive*. (*b*) In other American languages, noting the case expressing the subject of a transitive or intransitive verb: used in languages in which these two forms are identical. Also called *agentialis*.—**Subjective utility.** See ★*utility*.

subjugular (sub-jö'gụ̄-lä̤r), *a.* Situated below the neck or jugulum: used in describing birds where a subjugular band may mark the boundary between neck and breast.

sublabial (sub-lā'bi-a̤l), *a.* In *herpet.*, noting one of the horny scales covering the lower lip. *Proc. Zool. Soc. London*, 1896, p. 615.

sublacustrine (sub-lạ-kus'trin), *a.* Situated or occurring beneath a lake.

The positions of the two *sublacustrine* cones were indicated, and it is clear from the soundings that a large mass of lava spread from the Wizard Island vent over the lake floor. *Science*, Feb. 7, 1902, p. 209.

sublamine (sub-lam'in), *n.* [*subl(imate)* + *(di)amine*.] A trade-name of ethylendiamine mercury sulphate. It has a red color, is readily soluble, and is used in surgery as a non-irritating substitute for mercuric chlorid.

sublaryngeal (sub-la-rin'jẹ̄-a̤l) *a.* Lying beneath the larynx. *Proc. Zool. Soc. London*, 1901, p. 281.

sublateral (sub-lat'e̤-ra̤l), *a.* In *entom.*, situated near the side of the body. *Proc. Zool. Soc. London*, 1902, p. 197.

sublethal (sub-lē'tha̤l), *a.* Not quite fatal: as, *sublethal* doses. *Philos. Trans. Roy. Soc.* (London), 1902, ser. B, p. 48.

sublibrarian (sub'lī-brā'ri-a̤n), *n.* An under librarian.

sublimant (sub'li-ma̤nt), *n.* [L. *sublimans* (*-nt-*), ppr. of *sublimare*, lift on high. See *sublimate*.] An agent which causes sublimation: thus, water, in the state of steam, brings other volatile substances with it from great depths in the rocks of the earth's crust.

The action of water [on lavas, rock, etc.] as a solvent and *sublimant*. *Geog. Jour.* (R. G. S.), XIV. 435.

Sublimation vein, in *geol.*, a vein filled in accordance with the sublimation theory. See *sublimation theory*, under *sublimation*.

subliminal, *a.* **2.** Subconscious; pertaining to the subliminal self or personality: as, a *subliminal* memory.

II. *n.* The subconscious; a supposed secondary self or consciousness below the level of the normal, waking life.

Of the *Subliminal*, he would say, we can give no ultra-simple account.
W. James, in Proc. Soc. Psychical Research, May, 1901, [p. 18.

sublimize (sub-lī'mīz), *v. t.*; pret. and pp. *sublimized*, ppr. *sublimizing*. [*sublim(e)* + *-ize*.] To elevate; etherealize; make sublime.

sublineate (sub-lin'ẹ̄-āt), *v. t.*; pret. and pp. *sublineated*, ppr. *sublineating*. [*sub-* + *lineate*. See *lineate*.] To underline.

sublineation (sub-lin-ẹ̄-ā'sho̤n), *n.* [*sublineat(e)* + *-ion*.] An underlining; the line so drawn: usually meaning an instruction to the printer to italicize a word so underlined.

Sublingual ganglion. Same as *submaxillary ganglion* (which see, under *ganglion*).

sublinguate (sub-ling'gwāt), *a.* Somewhat linguate or tongue-shaped.

sub-list (sub'list), *n.* [*sub*^{2}, *n.*, + *list*^{5}.] A list of 'subs,' or men who are willing to serve as substitutes for the regular compositors on a newspaper during their absence. [Colloq.]

sublittoral, *a.* **2.** Of or pertaining to the sea-bottom near the coast.

From a seismic map of the world, I should estimate that round the Pacific there are at least ten *sub-littoral* districts where earthquake-frequency may be about half that of Japan. *Milne*, in Geog. Jour. (R. G. S.), X. 133.

sublobule (sub'lob″ūl), *n.* A secondary division of a lobule. *Buck*, Med. Handbook, VII. 766.

subloreal (sub-lō'rē-a̤l), *a.* Lying below the lore: used especially in describing the markings of birds.

sublustrous (sub-lus'trus), *a.* Nearly but not perfectly lustrous. *Annals and Mag. Nat. Hist.*, Sept., 1903, p. 329.

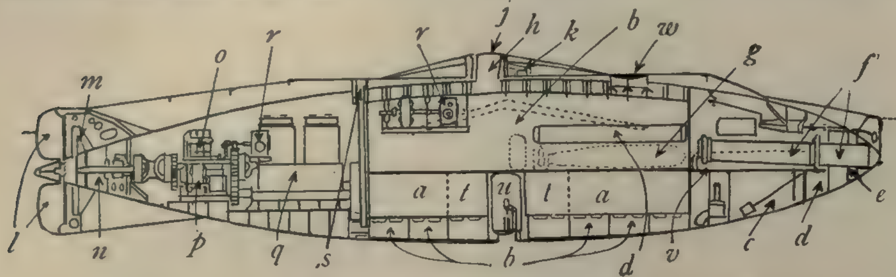
submain (sub'mān), *n.* In a system of drainage, a branch of a main which receives water from the minor drains. *James Muir*, Agriculture, p. 48.

submalleal (sub-mal'ē-a̤l), *n.* The posterior of the two bones in the lower jaw of fishes; the articulare. *Starks*, Synonymy of the Fish Skeleton, p. 515.

submanifold (sub'man″i-fōld), *n.* The selected elements of a partitioned manifold.

submarine. I. *a.*—**Submarine mine.** See ★*mine*2.

II. *n.* 2. A vessel designed to navigate either entirely under water or on the surface, with a crew contained within it and with its own motive power; specifically, a submarine torpedo-boat. The earliest submarine boats were moved by rowers in the interior, and descriptions of such boats are given in the seventeenth century. Numerous inventors have designed and built such boats, among them Bushnell and Fulton, but the first use of a submarine in actual warfare appears to have been during the American civil war. The Confederates built several boats called 'Davids,' one of which torpedoed the United States steamer Housatonic in 1864. Since then a number of submarine boats of various types have been constructed, but it was not until their construction was taken up in France about 1885 that such vessels began to be considered of real importance in naval warfare. Since then, the development of the submarine under the direction of the French Naval Administration has been continuous. In the United States, the Navy Department has adopted the type of boat developed by John P. Holland, of which 8 have been built and are in service (see cut); 4 improved submarines are under construction. Another type of boat has been invented by Simon Lake. In Great Britain, the boats first built were of the Holland type, which has since been developed further in that country. (See table showing submarines built and building in various navies under ★*navy.*) In all modern submarines, the boat, when under water, is propelled by an electric motor, the current for which is derived from storage-batteries. The means of propulsion at the surface are various: steam-engines and boilers fired with coke and with oil fuel have been used, and gasolene and petroleum engines are largely employed. The engines are also geared to electric generators in the boat, by means of which the storage-batteries can be recharged. In the smallest types of submarines electric propulsion is employed, both at the surface and beneath it, and the storage-batteries must be charged from shore or from another vessel. In the navigation of submarines, three conditions are recognized: (1) the *light condition*, when all the water-ballast is pumped out, hatches are open, and the vessel is propelled substantially as an ordinary boat; (2) the *awash condition*, when only the conning-tower is above water and the hatches and other openings are closed; (3) the *submerged condition*, when the boat is wholly under water except that the periscope may show at moderate depths of submergence. The passage from the light to the awash condition is effected by filling suitably arranged ballast-tanks with water. The total submergence and the regulation of the depth when submerged are now usually effected by a horizontal ★rudder (which see) at the stern, by which the vessel is inclined downward when under way and dives beneath the surface. In the Lake boat, so-called hydroplanes are used. These consist of a pair of horizontal rudders, forward and aft, on each side of the boat which, when inclined under way, cause the boat to submerge bodily. Screw-propellers on a vertical axis have also been used. The only offensive weapon carried by submarines at present is the automobile torpedo. Distinctions have been drawn between various types of submarines, as the *submersible* or *autonomous submarine boat*, also called *offensive submarine*; and the *submarine proper*, or *defensive submarine*. See ★*submersible*.



Submarine Torpedo-boat of the Holland Type.

a, a, storage-batteries; *b, b,* main ballast-tank; *c,* gasolene tank; *d,* torpedo compensating-tank; *e,* forward trimming-tank; *f,* torpedo-tube; *g, g,* torpedoes; *h,* conning-tower; *j,* water-tight hatch on top of conning-tower; *k,* steering-compass; *l,* ordinary steering-rudder, the horizontal diving-rudder not shown; *m,* screw-propeller; *n,* after trimming-tank; *o,* air-compressor; *p,* combined dynamo and motor; *q,* gasolene engine; *r, r,* periscope motors; *s,* ventilating-tube; *t,* auxiliary ballast-tank; *u,* adjusting ballast-tank; *v,* air-storage tanks; *w,* forward water-tight hatch.

submegacranous (sub-meg-a̤-krā'nus), *a.* In *craniom.*, having a skull of moderately large volume, from 1,960 to 2,110 cubic centimeters in males and from 1,740 to 1,840 cubic centimeters in females.

submegaprosopous (sub-meg″a̤-pro-sō'pus), *a.* In *craniom.*, having a skull which has a moderately large face the volume of which is from 650 to 710 cubic centimeters in males and from 535 to 575 cubic centimeters in females.

submergible (sub-mėr'ji-bl), *a.* and *n.* Same as *submersible*. [Rare.]

submersible, *a.* II. *n.* Something that may be submerged; specifically, a particular type of submarine boat. The term is derived from French usage and has been more or less vaguely employed. As generally understood, a submersible is a type of submarine torpedo-boat which can navigate for distances of several hundred miles with a considerable part of the hull out of water, using a steam or a gasolene engine, but which in action can be entirely submerged, and is then propelled by an electric motor. The storage-batteries can be recharged when exhausted by running the engine attached to a dynamo. The submarine proper is usually of comparatively small size, has only an electric motor for propulsion, and its storage-batteries must be recharged from shore or from another vessel. It has therefore a limited radius of action, and its function is defensive, while the submersible may be considered an offensive vessel; hence the names *offensive submarine* and *defensive submarine* sometimes used. See ★*submarine*.

For instance, a *submersible* of the "Narval" type and dimensions is for France not only a defensive, but an offensive weapon, and the partial sacrifice of submarine qualities in the design is warranted by the possibilities for offensive use. The same boat transferred to America would become purely defensive and would not be so well adapted to the conditions here as is the American type.
Sci. Amer. Sup., Feb. 7, 1903, p. 22658.

submesaticephalic (sub-mes″a̤-ti-se-fal'ik), *a.* In *anthrop.*, almost mesaticephalic.

submetamorphic (sub-met-a̤-môr'fik), *a.* Partially or incompletely metamorphosed. *Geikie*, Text-book of Geol., p. 906.

submeter (sub'mē-tėr), *n.* A small electric meter used to record separately the energy consumed in a portion of a circuit the whole energy of which is meantime measured by means of a larger instrument.

It is necessary either to instal duplicate wiring or to use *submeters*. *Nature*, Sept. 26, 1907, p. 554.

submicrocephalic (sub-mī″krọ-se-fal'ik), *a.* Approaching the conditions of microcephaly, particularly of pathological microcephaly.

submicrocephaly (sub-mī-krọ-sef'a̤-li), *n.* The condition of being submicrocephalic.

submicrocranous (sub-mī-krọ-krā'nus), *a.* In *craniom.*, having a skull of moderately small volume, from 1,640 to 1,800 cubic centimeters in males and from 1,510 to 1,600 cubic centimeters in females.

submicroprosopous (sub-mī″krọ-pro-sō'pus), *a.* In *craniom.*, having a skull which has a moderately small face the volume of which is from 520 to 570 cubic centimeters in males and from 440 to 475 cubic centimeters in females.

submolariform (sub-mọ-lar'i-fôrm), *a.* Having somewhat the shape or appearance of a molar tooth.

The third upper premolar has a broad internal cingulum, the fourth is *submolariform*.
Bulletin Amer. Mus. Nat. Hist., XVI. 197.

submorainic (sub-mọ-rā'nik), *a.* Pertaining to the surface or material under a moraine. *J. Geikie*, The Great Ice Age, p. 49.

submucosal (sub-mụ-kō'sa̤l), *a.* Lying beneath the mucosa or mucous coat of the intestine or other part. *Buck*, Med. Handbook, V. 638.

sub-Mycenæan (sub-mī-sẹ-nē'a̤n), *a.* Later than Mycenæan or the Mycenæan period.

It [bugelkanne] is found everywhere in the area, made of various local clays, and it long survived into the "Geometric" or *sub-Mycenaean* period.
Encyc. Brit., XXXI. 57.

submytiliform (sub-mī-til'i-fôrm), *a.* Having somewhat the form of the genus *Mytilus*.

subnacreous (sub-nā'krẹ-us), *a.* Somewhat nacreous.

subnasute (sub-nạ-sūt'), *a.* Slightly nasute, prolonged, produced, extended, or snouted.

subnodulose (sub-nod'ū-lōs), *a.* Somewhat nodulose. *Annals and Mag. Nat. Hist.*, Nov., 1903, p. 475.

subnotochordal (sub-nō'tọ-kôr-da̤l), *a.* Situated beneath the notochord.

subobsolete (sub-ob'sọ-lēt), *a.* In *descriptive zoöl.*, nearly obsolete.

Carina of the pronotum very slightly raised, *subobsolete* behind. *Proc. Zool. Soc. London*, 1902, p. 96.

suboctile (sub-ok'til), *n.* [L. *sub*, under (see *sub-*), + *octo*, eight, + *-ile.*] In *statistics*, a group containing one eighth of the total number of observations or observed objects arranged upon a curve of frequency: marked off as 'first' and 'last suboctile,' to the extreme right and the extreme left of the curve, beyond the first and last octiles respectively.

First *Suboctile.*—The image once seen is perfectly clear and bright. *E. B. Titchener*, Exper. Psychol., I. ii. 392.

subopaque (sub-ọ-pāk'), *a.* Nearly opaque. *Annals and Mag. Nat. Hist.*, Aug., 1904, p. 112.

subopercular, *a.* II. *n.* In *ichth.*, the suboperculum. *Starks*, Synonymy of the Fish Skeleton, p. 515.

suboptimal (sub-op'ti-ma̤l), *a.* [*suboptim(um)* + *-al*1.] In *biol.*, concerning or pertaining to a suboptimum.

This reaction is repeated as long as an effective supraoptimal or *suboptimal* temperature continues. The result is to prevent the organisms from entering regions of marked supraoptimal or *suboptimal* temperature, and to cause them to form collections in regions of optimal temperature. *Science*, Dec. 2, 1904, p. 751.

suboptimum (sub-op'ti-mum), *n.*; pl. *suboptima* (-mä). A somewhat lower temperature than that which is best suited for an organism or for a developing egg or seed. See *optimum*.

suborder, *n.* 3. In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*1), a division lower than order and higher than rang.

subordinationist (sub-ôr-di-nā'sho̤n-ist), *n.* [*subordination* + *-ist.*] One who holds the doctrine of subordinationism. The Eusebians or Semi-Arians were one kind of subordinationists.

suboxidation (sub-ok-si-dā'sho̤n), *n.* In *chem.*, oxidation in an incomplete or inferior degree. *Buck*, Med. Handbook, III. 234.

subpalatal (sub-pal'ạ-ta̤l), *a.* Situated below the fauces. *Scripture*, Exper. Phonetics, p. 305.

subpatellar (sub-pat'e-lä̤r), *a.* Situated beneath the patella.

subperforate (sub-pėr'fọ-rāt), *a.* Partially perforated. *Amer. Nat.*, March, 1904, p. 209.

subperiosteocapsular (sub-per-i-os″tẹ-ọ-kap'sụ-lä̤r), *a.* Same as ★*subcapsuloperiosteal*.

subpetaloid (sub-pet'a̤-loid), *a.* In the sea-urchins, or *Echinoidea*, noting ambulacra which are more elongated than the petaloid or circumscript ambulacra and in which the pairs of pores do not tend to close distally.

subphratric (sub-frā'trik), *a.* Of or pertaining to a subphratry. *Haddon*, Evolution in Art, p. 264.

subpiston (sub'pis″to̤n), *n.* An auxiliary piston, used for some purpose other than the receipt of the effort of the expanding or working fluid in a motor. Such are pistons by which compression is effected, clearances made to vary, pressures relieved from valves, weights of moving parts balanced, and the like.

The new steam motor of Leon Serpollet is designed much on the same principles of the straight line double cylinder gasoline engines. It is illustrated in Fig. 43 in part sectional elevation, plan view, end view and a section of the compression *sub-piston* and inlet port at the lower right hand corner of the cut.
Hiscox, Horseless Vehicles, p. 65.

subplanate (sub-plā'nāt), *a.* In *entom.*, nearly flat.

subplane (sub-plān'), *a.* Almost flat or plane.

subplatycnemia (sub-plat-ik-nē'mi-ä), *n.* [NL.] In *anthrop.*, a slight degree of platycnemia. *Amer. Anthropologist*, Jan.–March, 1901, p. 32.

subplatyhieric (sub-plat″i-hī-er'ik), *a.* In *anthrop.*, having a sacral index between 100 and 106. *Jour. Anthrop. Inst.*, 1900, p. 149.

subpodophyllous (sub-pod-ọ-fil'us), *a.* Lying beneath the fleshy leaves, or podophyllous tissue, within the wall of the horse's hoof.

Subpœna ad testificandum, in *law*, the ordinary subpœna in common law compelling the attendance of witnesses.

subpontine (sub-pon'tin), *a.* Situated beneath the pons Varolii.

subpotency (sub-pō'te̤n-si), *n.* The state of being subordinate in power; specifically, in *biol.*, the subordination of the influence of one parent to that of the other in inheritance.

The prepotencies or *subpotencies* of particular ancestors, in any given pedigree, are eliminated by a law that deals only with average contributions.
Encyc. Brit., XXXII. 210.

subpotent (sub-pō'te̤nt), *a.* Characterized by or exhibiting subpotency in inheritance.

subprone (sub-prōn′), *a.* Lying or extended almost horizontally.

Face *sub-prone*, protruding in a very marked beak-shaped projection of buccal orifice.
Jour. Roy. Micros. Soc., April, 1903, p. 130.

subprotector (sub-prō-tek′tọr), *n.* An officer in charge of the Australian aborigines, subordinate to the protector of aborigines.

Special magistrate and *sub-protector* of aborigines.
Geog. Jour. (R. G. S.), XIII. 325.

Subpubic angle, the angle formed by the meeting of the ischiopubic rami on each side at the lower extremity of the symphysis.

subpyriform (sub-pir′i-fôrm), *a.* Somewhat pyriform or pear-shaped. *Annals and Mag. Nat. Hist.*, April, 1904, p. 265.

subquadrately (sub-kwod′rạt-li), *adv.* Somewhat quadrately.

Head with a few very minute punctures, flavous, with four greenish spots placed *subquadrately.*
Proc. Zool. Soc. London, 1903, p. 33.

subradial (sub-rā′di-al), *a.* and *n.* **I.** *a.* In jellyfishes, such as *Aurelia*, situated between the adradial and the perradial or the interradial radii.

II. *n.* In the dicyclic *Crinoidea*, one of the upper series of calyx-plates. It includes basals and parabasals.

subradius (sub-rā′di-us), *n.*; pl. *subradii* (-ī). In *zoöl.*, a radius of symmetry midway between a perradius and an adradius or between an adradius and an interradius. See ★*radius of symmetry*. *Parker and Haswell*, Zoology, I. 129.

subrang (sub′rang), *n.* [See ★*rang*^{2}.] In *petrog.*, in the quantitative classification of igneous rocks (see ★*rock*^{1}), a division of a rang, based on the proportions of the chemical bases in the preponderant mineral group used in forming the rang.

subrectal (sub-rek′tạl), *a.* Situated below the rectum.

subregion, *n.*—**Europasian subregion.** See ★*Europasian*.—**Hawaiian subregion**, a zoogeographical region which includes only the Sandwich Islands.—**Manchurian subregion**, a zoögeographical division including Japan, the greater part of China, southern Manchuria, and Tibet, and extending across the Himalayas to the top of their southern slopes.—**Maorian subregion**, one of Sclater's zoögeographical divisions including New Zealand and the adjacent islands such as Norfolk, Chatham, Campbell, and Macquarie.—**Panarctic subregion**, a zoögeographical division which comprises that portion of the palearctic region which is included in northern Scandinavia, Russia, and Siberia. The fauna consists of typical northern animals. *Geog. Jour* (R. G. S.), X. 86.

subreptary (sub-rep′tạ-ri), *a.* [*sub-* + L. *reptare*, crawl.] Almost wholly adapted to crawling or creeping, as the foot of some pelecypod mollusks.

subrhombic (sub-rom′bik), *a.* Somewhat rhombic or rhomb-shaped.

Thus what would otherwise have been a single long chamber extending unobstructed from end to end, is divided into a large number of chamberlets. These are usually quite regular and have the shape of prisms with *subrhombic* section. *Amer. Jour. Sci.*, March, 1904, p. 234.

subrostral (sub-ros′trạl), *a.* Lying beneath the rostrum or beak, as in the shells of some *Mollusca* like the *Pelecypoda*, and in the *Brachiopoda*.

subrugulose (sub-rö′gụ-lōs), *a.* Somewhat rugulose. *Annals and Mag. Nat. Hist.*, May, 1903, p. 470.

subsagittate (sub-saj′i-tāt), *a.* Somewhat sagittate or arrow-shaped.

subscandent (sub-skan′dẹnt), *a.* In *bot.*, slightly climbing; of a habit approaching scandent.

In the latter there are two species of *Rhododendron*, one of *Gaultheria* (*subscandent !*) and eight of *Vaccinium* (mostly epiphytic !). *Science*, Nov. 15, 1907, p. 675.

subscaphocephaly (sub-skaf′ọ-sef-ạ-li), *n.* In *anthrop.*, a condition or form of the skull approaching scaphocephaly. *International Yearbook*, 1898, p. 236.

subselenodont (sub-sẹ-lē′nọ-dont), *a.* Noting the fact or condition of having the molar cusps or folds of enamel somewhat crescent-shaped or slightly resembling the condition found in the molar teeth of deer and cattle. See *selenodont*. *Proc. Zool. Soc. London*, 1902, p. 26.

subsellium, *n.* **2.** *pl.* In *Rom. law*, the lower seats where the judices and inferior magistrates sat in judgment.

subsept (sub′sept), *n.* A subdivision of a sept or of a tribal division.

subseptate (sub-sep′tāt), *a.* Having an incomplete septum.

subsequent, *a.* **4.** In *phys. geog.*, developed by headward erosion along a belt of weak strata: noting streams and their valleys that have been so developed.

That is, as a drainage system develops, streams originate, the directions of which are regulated by the hardness and solubility of the rocks. Such streams appear subsequently to the main topographic features in their environment, and are termed *subsequent* streams.
I. C. Russell, Rivers of North America, p. 185.

subserosa (sub-sẹ-rō′sä), *n.* [NL.] Subserous tissue. *Jour. Exper. Med.*, Nov. 29, 1901, p. 35.

subsesqui-. In *chem.*, a prefix in the names of some compounds, signifying the same as *sesquibasic*.

subset (sub′set), *n.* In *math.*, a proper part or the whole of the set: thus, a *subset* of S is a set every element of which belongs to S.

It may be possible to divide the set into a number of *subsets*, no two of which contain a common object.
Encyc. Brit., XXIX. 121.

Subsidiary coin. See ★*coin*^{1}.

subsilicate (sub-sil′i-kāt), *n.* A silicate in which, if it is viewed as a compound of silica with one or more basic oxids, the oxygen of the latter exceeds in amount that of the former, as silicious calamin ($Zn_2H_2SiO_5$ or $2ZnO.H_2O.SiO_2$), in which the oxygen ratio for $SiO_2 . 2ZnO + HO_2$ is 2 : 3.

subsimple (sub-sim′pl), *a.* Nearly simple; of plants, nearly without branches.

subsocial (sub-sō′shạl), *a.* Pertaining to that merely physical arrangement or grouping of organisms which is prerequisite to social life.

The dwelling together in a common habitat of a plural number of organisms of the same variety or species may be called a *Sub-Social* Grouping.
Giddings, Inductive Sociol., p. 5.

subsoil-plowing (sub′soil-plou″ing), *n.* See ★*plowing*.

subspinal (sub-spī′nal), *a.* Same as *subspinous*.—**Subspinal index.** Same as *infraspinous* ★*index*.

subspiracular (sub-spī-rak′ụ-lär), *a.* Situated below the spiracles. *Proc. Zoöl. Soc. London*, 1902, p. 304.

subsplintery (sub-splin′tėr-i), *a.* Imperfectly splintery in fracture. [Rare.]

The rich translucent green color, fine-grained *subsplintery* fracture, and brilliant luster when polished all strongly suggest jade. The polished surface shows minute pale streaks or flocculi, which still further heighten the resemblance.
Amer. Jour. Sci., Nov., 1903, p. 397.

substage, *n.* **2.** In *geol.*, one of the subdivisions of a stage or group.

substance, *n.*—**Contact substance.** See ★*contact*^{1}.—**Continuous substance**, in protoplasm, as an emulsion, the framework, matrix, or basis in which are relatively inert or passive objects of all sizes (*inclusions*); the ultimate protoplasm or real living substance. *G. F. Andrews*, Living Substance, p. 23.—**Depressor substance.** See ★*depressor*.—**Gray substance.** See ★*gray*.—**Hereditary substance** or **substance of heredity.** See ★*heredity*.—**Nissl substance**, the essential substance which composes the Nissl bodies of ganglionic cells. See *Nissl* ★*granules*.—**Substance of Schwann**, the sheath of myelin which surrounds the axis-cylinder of a nerve.

substandard (sub-stan′dạ̈rd), *a.* Less than the normal standard.—**Substandard risk**, insurance on the life of an individual the state of whose health is such as to impair his normal expectancy of life.

Substantia hyalina, the interstitial, more fluid portion of the cell protoplasm.—**Substantia opaca**, the reticulum of cell protoplasm: so called by Leydig.

Substantial compliance, in *law*, observance of the essentials of a law or rule without obeying all the formalities required.—**Substantial damages**, a sum awarded by the verdict of the jury as compensation for injuries proved, as opposed to nominal or punitive damages.

substantiality, *n.*—**Theory of substantiality**, in *psychol.*, the theory of a mind-substance; the view that the mind is a permanent being, and that mental states and processes are but the manifestations of its activity: opposed to the *actuality theory*, which defines the nature of mind as the immediate reality of these states and processes themselves. Also termed *substantialism*, *theory of mind-substance*. *J. M. Baldwin*, Dict. of Philos. and Psychol., II. 614.

substantiation, *n.* **2.** The production of material goods. [Rare.]

To designate those industries in which men engage for the purpose of producing kinds or substances, we need a technical term which will distinguish them from all other industries; for this purpose I use the word *substantiation*, which must here mean the artificial production of substances for human welfare. I have sought long and far for the best term.
J. W. Powell, in An. Rep. Bur. Amer. Ethnol., 1898-[99, p. xxxv.

substantify (sub-stan′ti-fī), *v. t.*; pret. and pp. *substantified*, ppr. *substantifying*. [*substanti*(*ve*) + *-fy*.] To convert into or use as a substantive. [Rare.]

substantive, *a.* **6.** In *biol.*, concerning or pertaining to the construction or constitution of the parts of the bodies of organisms, as contrasted with the symmetry or merism of these parts in relation to one another. *W. Bateson*, Study of Variation, p. 23.—**7.** *Milit.*, actual or real, as rank; having the actual rank of.

When *substantive* major, he was also granted the local rank of lieutenant-colonel, for which he subsequently passed the required examination.
Geog. Jour. (R. G. S.), XII. 530.

Substantive variation. See ★*variation*.

substation, *n.* **2.** A subsidiary station to supplement a main station.

This plant . . . has seven *substations* containing transforming machinery. The location of the main station, on the East River site, gives the best point for the equal distribution of power in moving cars.
Amer. Inventor, March 1, 1904, p. 104.

substillum (sub-stil′um), *n.* [L. *substillum*, a slight dropping, neut. of *substillus*, slightly dropping, < *sub*, under, + *stillare*, drip, < *stilla*, a drop.] A flowing by little drops.

substituent (sub-stit′ụ-ẹnt), *n.* [L. *substituens* (*-nt-*), ppr. of *substituere*, substitute.] That which substitutes; in *chem.*, an atom or atomic group which takes the place of another atom or group present in the molecule of the original compound. Thus in the compounds methane (CH_4) and methyl alcohol (CH_3OH), OH is said to be the substituent.

As with the mono-derivatives of benzol, so also with the disubstituted derivatives, the general rule holds true; wherever the *substituents* are groups well saturated, they will exert scarcely any retarding action upon the pulsations of the original molecule.
W. J. Hale, in Pop. Sci. Mo., Feb., 1908, p. 130.

substitute, *v. t.* **3.** In *chem.*, to replace (an atom or group) in the molecule of a compound by another atom or group. See ★*substituent*.

substitution, *n.* **8.** In *biol.*: (*a*) The assumption by one organ of a function which was at one time performed by another organ. Thus the swim-bladder in fishes shows "that an organ originally constructed for one purpose, namely, flotation, may be converted into one for a wholly different purpose, namely respiration." *Darwin*, Origin of Species, p. 148.

From what has been said, it is natural to expect that in some direction or another so vast an accumulation of facts must have extended the Darwinian teaching; and it is now quite clear that this has been the case with the two post-Darwinian principles known as '*Substitution*' and Isomorphism or 'Convergence.' The former may be exemplified by nothing better than the case of the Rays and Skates, in which, under the usurpation of the propelling function of the tail by the expanded pectoral fins, the tail, free to modify, becomes in one species a lengthy whiplash, in another a vestigial stump, etc.
Rep. Brit. Ass'n Advancement of Sci., 1902, p. 631.

(*b*) The acquisition by an organ of a secondary function which, at first performed incidentally, may gradually become the chief function if the primary function becomes useless or is performed by another organ. Thus "the little folds of skin which originally served as ovigerous frena, but which, likewise, very slightly aided the act of respiration, have been gradually converted by natural selection into branchiæ, simply through an increase in their size and the obliteration of their adhesive glands." *Darwin*, Origin of Species, p. 192.—**9.** (*a*) In *Scots law*, a technical enumeration of a series of heirs. (*b*) In *civil law*, the appointment, in a will, of a successor to a devisee or legatee; subrogation.—**Elliptic substitution**, a substitution of an idempotent group; that is, its powers make a group which may be infinite but which in that case is a group of infinitesimal substitutions, and at any rate returns into itself or tends to do so. An elliptic substitution with two fixed points is equivalent to multiplication by a root of unity, though this root may not be of any rational order. Opposed to *hyperbolic* and *loxodromic* ★*substitutions*.—**Fundamental substitution**, one of a set of independent substitutions which by their powers and products make up a group.—**Group of substitutions**, in *math.*, a set of distinct substitutions in which the product of any two is a substitution of the set.—**Homogeneous substitution**, the substitution for variable coördinates of new homogeneous coördinates.—**Homographic substitution**, a homographic transformation.—**Hyperbolic substitution**, a species of substitution in homographic transformation.—**Index of a substitution**, the sum of the exponents in its expression by a given set of fundamental substitutions.—**Infinitesimal substitution**, a substitution which removes a point to an infinitesimal distance only.—**Law of substitution.** See ★*law*^{1}.—**Loxodromic substitution.** If we invert the sphere into a plane by using a point of the sphere as center of inversion, the loxodrome becomes a double spiral; hence a substitution where z moves along an equiangular spiral and x moves along a double spiral is called *loxodromic*.—**Method of substitutions.** See ★*method*.—**Normal linear substitution**, a substitution $\left(z, \frac{az+b}{cz+d}\right)$ where $ad-bc = 1$.—**Parabolic substitution**, a linear transformation where the roots of the involved quadratic are equal.—**Real substitution**, in *math.*, one which could not convert a real into a neomonic, or the reverse.

substitution-vein (sub-sti-tū'sho̤n-vān), *n.* See ★*vein.*

substomatic (sub-stọ-mat'ik), *a.* Lying beneath the stoma: said of the space opening immediately into the stoma.

> For which reason also the possibility of representing *substomatic* and intercellular spaces was very much lessened. *F. E. Lloyd*, in Science, June 7, 1901, p. 888.

substration (sub-strā'sho̤n), *n.* [*substrat*(*um*) + *-ion.*] In *agri.*, a provided substratum. See *substratum*, 1.

> The contribution of nitrogen to the soil makes it more suitable as a *substration* for nitrophytes.
> *C. MacMillan*, Minn. Bot. Stud., Bulletin IX, p. 979.

subsulcus (sub″sul'kus), *n.*; pl. *subsulci* (-sī). A sulcus which is concealed within another.

subsulphate (sub-sul'fāt), *n.* A basic sulphate, or one in which the sulphuric-acid radical is partly replaced by oxygen or hydroxyl, as mercuric subsulphate or oxysulphate, $Hg_3O_2(SO_4)$.

subsulphid (sub-sul'fid), *n.* A basic sulphid, or one which contains sulphur in proportion less than normal.

subsuperficial (sub-sū-pėr-fish'a̤l), *a.* 1. Somewhat or partially superficial: said of the perithecia of fungi which are but partly buried in the surface of the matrix.—2. In *geol.*, beneath the surface of the earth.

> The superficial and *subsuperficial* temperatures.
> *Smithsonian Rep.*, 1899, p. 230.

subsutural (sub-sū'ṭụ-ra̤l), *a.* Situated below or near a suture: as, a *subsutural* spot. *Proc. Zool. Soc. London*, 1903, p. 37.

sub-Sylvian (sub-sil'vi-a̤n), *a.* Situated beneath the fissure of Sylvius. *Buck*, Med. Handbook, II. 137.

subtegminal (sub-teg'mi-na̤l), *a.* Lying beneath the tegmen, dome, vault, or disk of the crinoid calyx. See ★*disk*, 5 (*e*).

subtense, *n.*—**Bar-subtense,** an instrumental method in topographical surveying by which the unknown distance between two points may be calculated from the linear interval subtended, on a graduated rod or bar held at one of the points by the optical angle measured by an angular instrument placed at the other point.

> Then made a traverse of the valley on the *bar-subtense* method, working with a 6-inch theodolite, and checking all our measurements twice.
> *Geog. Jour.* (R. G. S.), X. 469.

Subtentacular canal. See ★*canal*^{1}.

subterrane, *n.* 2 In *geol.*, a terrane beneath an overlying terrane.

subterraqueous (sub-te-rā'kwē̤-us), *a.* In *geol.*, of or pertaining to that portion of the earth which lies below possible ground-water.

subtetanic (sub-tē̤-tan'ik), *a.* Not quite tetanic: noting convulsions similar to but less severe than those of tetanus. *Med. Record*, Feb. 7, 1903, p. 239.

subthalamic (sub-thal'a̤-mik), *a.* [L. *sub*, under, + *thalam*(*us*) + *-ic.*] Situated beneath the optic thalamus.

subthermal (sub-thėr'ma̤l), *a.* Below the normal body temperature.

> The valuable place of *subthermal* baths, given at temperatures below blood heat, has never been sufficiently emphasised as a mode of treatment at all the spas.
> *Nature*, June 13, 1907, p. 146.

subtotem (sub'tō″tem), *n.* A totem which is recognized by a portion or all of a clan, but which is of minor importance as compared to the true clan totem. *Haddon*, Evolution in Art, p. 264.

subtraction, *n.*—**Compound subtraction,** the subtraction of compound numbers.—**Geometrical subtraction,** the inverse of geometrical addition (which see, under *addition*).—**Vectorial subtraction,** the inverse of vectorial addition. See *addition of vectors*, under *addition.*

subtrapezoidal (sub-trap-ē̤-zoi'da̤l), *a.* Approximately trapezoidal.

subtremelloid (sub-trem'e-loid), *a.* Having a consistency somewhat of the nature of a fungus of the genus *Tremella.*

Subtrochanteric fossa. See ★*fossa*^{1}.

Sub-trolley conduit. See ★*conduit*^{1}.

subtruncate (sub-trung'kāt), *a.* Somewhat or almost truncate: specifically, in *ichth.*, said of a fish-fin.

subtuberant (sub-tū'be-ra̤nt), *a.* In *geol.*, noting areas of dome-shaped uplift produced by laccolithic intrusions below the surface. The word was coined by I. C. Russell on the analogy of the latter to the growth of tubers in the earth. *Volcanoes of North America.* p. 103.

subulipalp (sū'bụ-li-palp), *n.* and *a.* **I.** *n.* A member of the *Subulipalpi.*

II. *a.* Having the characters of or belonging to the *Subulipalpi.*

subumbilical (sub-um-bil'i-ka̤l), *a.* [L. *sub*, beneath, + *umbilic*(*us*) + *-al*^{1}.] Situated below the umbilicus. *Buck*, Med. Handbook, II. 499.

suburbanite (sub-ėr'ba̤n-īt), *n.* [*suburban* + *-ite*^{2}.] One who lives in the suburbs. [Colloq.]

> After passing the speed, temperature and insulation tests given above, a second insulation test, at from 3 to 5 turns the voltage, is given the motor while still warm, after which it is marked O. K. and goes forth to carry the *suburbanites*, and be submissive to the careless motorman.
> *Amer. Inventor*, May 1, 1904, p. 208.

suburbanize (sub-ėr'ba̤n-īz), *v. t.*; pret. and pp. *suburbanized*, ppr. *suburbanizing.* [*suburban* + *-ize.*] To render suburban in character. [Rare.]

> It is not surprising that this survival of Royal Enfield Chase should be abandoned, seeing that the district is rapidly becoming *suburbanised* and unfit for sport.
> *Daily Chronicle*, May 13, 1901, p. 5.

suburethral (sub-ụ-rē'thra̤l), *a.* [L. *sub*, beneath, + *urethra* + *-al*^{1}.] Situated beneath the urethra. *Buck*, Med. Handbook, I. 766.

subvitalized (sub-vī'ta̤l-īzd), *a.* Deficient in vitality; not normally vital.

subzonate (sub-zō'nāt), *a.* Somewhat zonate.

succah, succoth. See ★*sukkah.*

succession, *n.* 8. In *phytogeog.*, the sequence of one plant-formation upon another on the same ground in response to changes in the conditions. Successions result from a great variety of causes, such as the gradual enrichment of soil, the accumulation of humus in peat-bogs, volcanic action, etc., or human agency, as in deforestation, cultivation, etc. *F. E. Clements.*—9. In *hort.* and *agri.*, a continuous yield of the same crop, secured by planting either the same variety at intervals or different varieties requiring different periods for maturing at the same time. See ★*succession cane.*—**Impartible succession,** the custom, feudal in origin, by which tenements passed without division on the death of their holder to his heir or successor. *Maitland and Pollock*, Hist. English Law, II. 278.—**Perpetual succession,** in *law*, an unbroken but not necessarily unlimited succession; the continuing identity of a corporation however much the persons forming it may change.—**Succession cane,** stubble cane when continued two or more years from the same planting.

> It is doubtful whether one-half of the plant food applied to *succession canes* in commercial fertilizers, is recovered in the canes in the average season.
> *W. C. Stubbs*, Sugar Cane, p. 114.

Succession duty. See ★*succession tax.*—**Succession tax.** A succession tax is sometimes regarded as a tax on the right of succession and sometimes as a tax on the property transferred, the distinction being governed by the degree of consanguinity of the inheritor to the deceased. It varies in rate from one per cent. in the case of an infant, issue of the decedent, to ten per cent. in the case of an heir stranger to the blood; a husband or wife is not taxed. The age of the heir may also affect the rate of taxation, as may the amount of the estate. In New York an estate of less than $10,000 is untaxed. *Transfer tax* and *inheritance tax* are equivalent phrases. In Great Britain the terms *estate duty, legacy duty, death duty*, and *succession duty* are used.—**To grow in succession,** to plant at intervals for continuous supply.

> What is termed *growing* vetches "*in succession*" consists in making successive sowings so that the crops shall follow each other.
> *J. Wrightson*, Fallow and Fodder Crops, p. 208.

Successive light induction. See ★*induction.*

successoral (suk-ses'o̤r-a̤l), *a.* [*successor* + *-al*^{1}.] Of or pertaining to succession or inheritance, or to a successor or inheritor.

> It is natural in these epochs to consider the patrimony as the most sacred piece of property, worthy of being safeguarded in its integrity by tutelary laws, by *successoral* or feudal repurchase.
> *G. Tarde* (trans.), Laws of Imitation, p. 319.

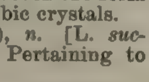
succinamic (suk-si-nam'ik), *a.* [L. *succinum*, amber, + *am*(*monia*) + *-ic.*] Pertaining to a chemical compound containing the group $H_2NCOCH_2CH_2CO$.—**Succinamic acid,** a colorless crystalline compound, $H_2NCOCH_2CH_2COOH$, prepared by the action of barium hydroxid solution on succinimide. It melts at 154° C.

succinctorium, *n.* Same as ★*subcingulum.*

succinellite (suk-si-nel'īt), *n.* [L. *succin*(*um*), amber, + *-ell* + *-ite*^{2}.] Succinic acid obtained by sublimation from amber in the form of white or colorless orthorhombic crystals.

succiniferous (suk-si-nif'e̤-rus), *n.* [L. *succinum*, amber, + *ferre*, bear.] Pertaining to an amber, or yielding it.

succinimide (suk-sin-ī'mid), *n.* [*succin*(*ic*) + *imide.*] A colorless compound,



$$\begin{matrix} CH_2.CO \\ | \\ CH_2.CO \end{matrix} \Big> NH,$$

prepared by the action of gaseous ammonia or succinic anhydrid. It crystallizes in rhombic octahedral plates, melts at 125–126° C., and boils at 287–288° C.

succinuric (suk-si-nū'rik), *a.* [*succin*(*ic*) + *uric.*] Noting an acid, a colorless compound, $H_2NCONHCOCH_2CH_2COOH$, prepared by the action of carbamide (urea) on succinic anhydrid. It crystallizes in small scales and melts at 203–205° C.

succisterene (suk-sis'te̤-rēn), *n.* [L. *succinum*, amber, + Gr. στερεός, solid, + *-ene.*] A colorless compound, $C_{15}H_{10}$, contained in the least volatile portions of the product obtained by the distillation of amber. It crystallizes in needles, melts at 160° C., and boils above 300° C.

succum, *v. i.* A simplified spelling of *succumb.*

succussatory (su-kus'a̤-tọ-ri), *a.* Possessing an up-and-down vibration of short amplitude, as if produced by a blow· descriptive of a variety of earthquake shock.

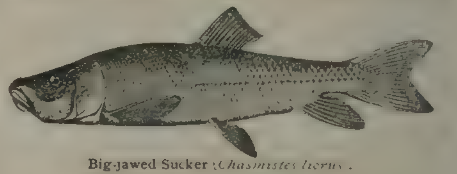
suche (sö'chā), *n.* [Peruv. Sp. *suche*, < Quichua *suki* (palatal *k*).] A name of a fish, *Trichomycterus dispar*, found in Lake Titicaca, Peru.

sucholotoxin (sū″kō-lọ-tok'sin), *n.* [L. *sus*, hog, + Gr. χολή, bile (see *cholera*), + E. *toxin.*] A slightly poisonous base found in cultures of the hog-cholera bacillus.

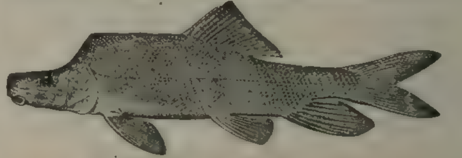
suckauhock, *n.* [Narragansett *suckáuhock* (Roger Williams), < *súcki*, black, + *hogki*, shell (Trumbull). Compare *sequannock* and *poquauhock.*] Black or dark-colored pieces of shell used by the Narragansett Indians for money; dark-colored or purple wampum.

sucker, *n.* 1. (*d*) (8) In New Zealand, a fish, *Diplocrepis puniceus*, of the family *Gobiesocidæ.*

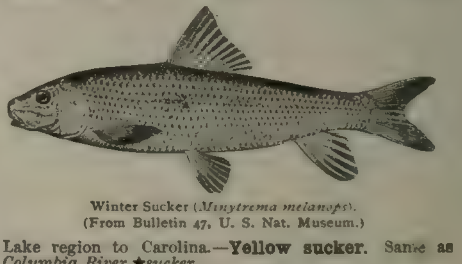
10. A lump of hard candy on the end of a stick.—**Big-jawed sucker,** a large-mouthed sucker, of the genus *Chasmistes*, found in the lakes of the great basins of Utah and Oregon, *C. liorus* of Utah Lake being the best-known species.—**Blue-headed sucker,** *Pantosteus delphinus*, found in the upper portion of the basin of the Colorado.—**Columbia River sucker,** *Catostomus macrocheilus*, of the Columbia River.—**Common sucker,** *Catostomus comersonii*, of the Great Lakes and west to Colorado.—**Eastern carp-sucker,** *Carpiodes cyprinus*, of streams of the Chesapeake Bay region.—**Fine-scaled sucker.** Same as *common* ★*sucker.*—**Flannel-mouthed sucker,** *Catostomus latispinnis*, of the Colorado river-basin.—**Humpbacked sucker.** Same as *razorback* ★*sucker.*—**Klamath Lake sucker,** *Chasmistes stomias*, of Klamath Lake, Oregon.—**Large-scaled sucker,** the golden red-horse.—**Long-nosed sucker,** *Catostomus catostomus*, of the Great Lakes, upper Missouri and Columbia rivers, and northward to Alaska.—**Lost River sucker,** *Deltistes luxatus*, of Klamath Lake and the Oregon River.—**Mountain sucker,** *Pantosteus jordani*, a sucker found only near Tempe, Arizona.—**Northern sucker.** Same as *long-nosed* ★*sucker.*—**Pedee sucker,** *Moxostoma pidiense*, found in the Great Pedee basin.—**Platte River sucker,** *Catostomus griseus*, of the upper Missouri River regions.—**Razorback sucker,** *Xyrauchen cypho*, of the Colorado river-basin.—**Red sucker.** Same as *long-nosed* ★*sucker.*—**Redfin sucker,** *Moxostoma crassilabre*, found in streams of North Carolina.—**Sacramento sucker,** *Catostomus occidentalis*, found in streams in California.—**Short-nosed sucker,** *Chasmistes brevirostris*, found in the Klamath lakes of Oregon.—**Tahoe sucker,** *Catostomus tahoensis*, of Lake Tahoe.—**Thick-cheeked sucker,** a fish of the Missouri River, *Moxostoma bucco*, belonging to the family *Catostomidæ.*—**White-nosed sucker,** *Moxostoma anisurum*, of the Ohio River and Great Lake region.—**Winter sucker,** *Minytrema melanops*, found from the Great Lake region to Carolina.—**Yellow sucker.** Same as *Columbia River* ★*sucker.*



Big-jawed Sucker (*Chasmistes liorus*).
(From Bulletin 47, U. S. Nat. Museum.)

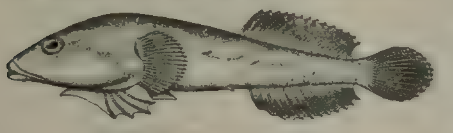


Razorback Sucker (*Xyrauchen cypho*).
(From Bulletin 47, U. S. Nat. Museum.)



Winter Sucker (*Minytrema melanops*).
(From Bulletin 47, U. S. Nat. Museum.)

suckfish, *n.* **3.** A common name of *Caularchus mæandricus*, of the family *Gobiesocidæ*, a fish found under rocks and in tide-pools on the Pacific coast of the United States.



Suckfish (*Caularchus mæandricus*).
(From Bulletin 47, U. S. Nat. Museum.)

suck-fly (suk′flī), *n.* A name given by Florida tobacco-growers to a capsid bug, *Dicyphus minimus*, which punctures tobacco-leaves and sucks the sap, causing them to wither. See ★*tobacco-bug*.

sucking (suk′ing), *n.* Specifically, in *ceram.*, absorption of the glaze from ware by the porous fire-clay saggar while in the kiln.

sucking-pad (suk′ing-pad), *n.* A small collection of fat over the buccinator muscle in each cheek of an infant, supposed to prevent the falling in of the cheeks when the child sucks.

sucoversed (suk-ọ̄-vėrsd′), *a.* [*su*(*b-*) + *coversed*.] Subcoversed.—**Sucoversed sine**, two minus the coversed sine; abbreviated *scs*; $scs\,\phi = 1 + \sin\phi$.

sucramine (sū-kram′in), *n.* [F. **sucramine*, < *sucre*, sugar, + *amine*.] A trade-name of the ammonium salt of saccharin.

sucrase (sū′krās), *n.* [F. **sucrase*, < *sucre*, sugar, + *-ase*.] A ferment which causes the inversion of sucrose.

sucrate (sū′krāt), *n.* [F. *sucre*, sugar, + *-ate*¹.] A general term applied, in organic chemistry, to compounds of metallic oxids with certain sugars such as glucose and saccharose. Also called *saccharate*, the more usual term.—**Calcium sucrate**, a compound of cane-sugar (sucrose) with lime. One molecule of sugar may unite with one, with two, or with three molecules of lime. The last of these compounds, $C_{12}H_{22}O_{11}.(CaO)_3$, is but slightly soluble in water, and hence its precipitation is utilized in working up molasses for the recovery of the cane-sugar it contains. Also called *calcium saccharate*.—**Copper sucrate.** See ★*copper*.

sucroclastic (sū-krọ̄-klas′tik), *a.* [F. *sucre*, sugar, + Gr. *κλαστός*, < *κλᾶν*, break.] A term applied to those ferments which cause the cleavage of disaccharides to simple sugars containing 6 atoms of carbon.

sucrol (sū′krol), *n.* [F. *sucre*, sugar, + *-ol*.] A trade-name for paraphenetol-carbamide, a colorless substance, crystallizing in shining needles, of intensely sweet taste, estimated as 200 times that of cane-sugar, without nutritive value, but used as a sweetening material to disguise the disagreeable taste of medicines. Also known as *dulcin* or *valzin*.

suction, *n.* **2.** The downward strain in a plow due to the depression given the share point in order to secure penetration. In a walking plow the suction is measured by the distance between the landside and a straight-edge touching the point of the share and the heel of the landside. Also *suck*.

suction-anemometer (suk′shọn-an-e-mom′e-tėr), *n.* A tube across the end of which the wind blows, producing a diminished pressure in the tube, the amount of diminution depending upon the shape and aspect of the opening. The measurement of this diminution leads to a knowledge of the velocity of the wind. The end of the tube is made in various shapes. Overduyn, Bourdon, and Arson use horizontal tubes of the Venturi pattern and measure the diminution of pressure at the contracted section (see *Venturi tube*). Fletcher, Hageman, and Abbe use vertical tubes and measure the diminution of pressure within the tube. Both Lind and Dines in their so called pressure-anemometers introduce suction in a subordinate capacity.

suction-basket (suk′shọn-bas″ket), *n.* The cylinder or cone with perforated sides, resembling the mesh of basketry, attached at the foot of a suction-pipe or -hose of a pumping-apparatus to act as a strainer.

suction-box, *n.* **2.** The chamber below the inlet-valves of a pump into which atmospheric pressure forces the water or other liquid when the pressure above the valves is made less by the suction stroke of pistons or plungers. The water or liquid goes through the inlet valves from the suction-box.

suction-hose (suk′shọn-hōz), *n.* Flexible hose or tubing, stiffened against collapse from external pressure by a helical wire, used as a suction-pipe for a fire-engine or other pump. Without the stiffening wires the sides would go together as soon as pressure within was less than the pressure without.

suction-inlet (suk′shọn-in″let), *n.* The mouth of a suction-pipe; the opening through which the charge of a pump or other machine is taken in.

suction-lift (suk′shọn-lift), *n.* The distance through which atmospheric pressure has to lift water for a pumping-apparatus on the suction side of the pistons or plungers. The limit is 32 feet at sea-level and usual barometer heights: but any leakage of air or any cause preventing the pressure on the water in the suction-pipe from being reduced to zero will reduce this limiting value. It is best not to count on much over 20 feet under practical conditions. *W. S. Hutton*, Steam Boiler Construction, p. 458.

suction-pump, *n.* **2.** As a piece of chemical apparatus, same as *filter-pump*.

suction-stroke (suk′shọn-strōk), *n.* The stroke of an engine or pump during which a charge is being drawn in; in an internal-combustion engine, the stroke during which the combustible charge is drawn in preparatory to being compressed before it is exploded.

Sudan I, II, III, G, and **R,** insoluble azo-compounds of a brown color, prepared from coal-tar derivatives. They are not used in textile coloring, but are used in coloring oils and varnishes, and as pigments.—**Sudan brown.** See ★*brown*, *n.*

sudcake (sud′kāk), *n.* In treating the waste liquors from wool-scouring, the residue left from hot-pressing the crude magma called "sake." Sudcake is used as a fertilizing material. See ★*sake*⁴, 2.

sudd, *n.* **2.** See ★*sadd*.

> To enclose the site of the permanent masonry dam, and to render it dry for the purpose of excavation and laying the masonry, temporary dams, known in Egypt as '*sudds*,' had to be formed both above and below the site of the permanent dam. At low Nile the river at the Assuan cataract divides itself into five channels, and this work was done in five sections. The down stream '*sudds*' were first made, and consisted of stones. After the rush of water had been thus stopped, the up-stream '*sudds*' were formed of bags of sand.
> *Rep. Brit. Ass'n Advancement of Sci.*, 1903, p. 763.

Sudis (sū′dis), *n.* [NL., < L. *sudis*, a kind of pike, lit. a stake.] A genus of fishes of the family *Paralepididæ*, found in deep waters of the Atlantic and Pacific.

sudoric (sū-dor′ik), *a.* [L. *sudor*, sweat, + *-ic*.] Of or pertaining to perspiration.—**Sudoric acid**, a compound, $C_5H_9O_7N$, said to be present in human perspiration. Also called *hidrotic* or *hidrotic acid*.

suds, *n. pl.* **3.** A manufacturers' name for various waste soap-liquors incidentally produced in the industries of wool- and silk-scouring, -bleaching, -dyeing, etc. These were formerly allowed to run off into river-courses, but, in view of their polluting effect on the water, measures are now adopted to at least partially prevent this pollution and recover some material of value from the suds. See *Yorkshire* ★*grease*, ★*sake*⁴, 2, and ★*sudcake*.

suède (swād), *a.* and *n.* [F., 'Swede.'] **I.** *a.* Of undressed kid: said of gloves.

II. *n.* Undressed kid. [Trade use.]

Suessonian (swes-sō′ni-an), *a.* and *n.* [L. *Suessones*, *Suessiones*, a people whose name survives in the modern *Soissons*.] In *geol.*, noting the lowest stage of the Eocene Tertiary in the northern Apennines.

suf., **suff.** Abbreviations of *suffix*.

Suffolk (suf′ọk), *n.* A breed of small, black pigs, named from the English shire in which it originated. The animals grow quickly and yield a large proportion of lean meat.

Suffolk Crag. See ★*crag*¹, 2.

suffragette (suf-rạ-jet′), *n.* [*suffrag*(*e*) + *-ette*.] A woman who advocates female suffrage. [Colloq.]

> March 20.—Seventy *suffragettes* are arrested for attempting to force their way into the British House of Commons.
> *Rev. of Revs.*, May, 1907, p. 539.

suffuze, *v. t.* An amended spelling of *suffuse*.

sugar, *n.*—**Corn-sugar.** Same as *glucose*.—**Hepatic sugar**, glycogen or animal starch.—**Leo's sugar**, a levorotatory sugar which was found in the urine of a diabetic patient: not identical with ordinary levulose. Also called *laiose*.—**Maize-sugar.** Same as *glucose*.—**Manna-sugar.** Same as *mannitol* or *mannite*.—**Pine-sugar.** Same as ★*pinite*2.—**Saffron-sugar.** Same as ★*crocose* or *glucose*.—**Wood-sugar.** Same as ★*xylose*.

sugar-almond (shụ̇g′ạ̈r-ä″mọnd), *n.* Almond praline. See *praline*.

sugar-ant (shụ̇g′ạ̈r-ant), *n.* The cosmopolitan little red ant, *Monomorium pharaonis*, common in houses and especially attracted by sugar.

sugar-beet (shụ̇g′ạ̈r-bēt), *n.* Any of the varieties of *Beta vulgaris*, the common beet, utilized for sugar manufacture. The qualities required are high sugar content, purity (relative freedom of the juice from mineral and organic substances other than sugar), and correctness of form. The beet should be of a long-conical shape, without branches, and should weigh about a pound, large sugar content and small size having been found to go together. Varieties in use yield 12 to 16 per cent. of sugar. Sugar-beets can be grown on nearly all kinds of soil, but require high fertility. The soil must be worked deeply to permit the descent of the tap-root. The sowing is in rows, preferably very early, followed by thinning when about four leaves have been put forth. The plants are first bunched by cutting across the rows, and the bunches are then thinned by hand. Close cultivation is required.—**Larger sugar-beet leaf-beetle.** See ★*leaf-beetle*.—**Sugar-beet belt**, that area in the United States over which temperature conditions are favorable to the production of the sugar-beet; namely, from southern New York and northern Pennsylvania to northern Nebraska and South Dakota, over large sections of Colorado, Utah, Wyoming, Montana, Idaho, Washington, and Oregon, and in California on the coast side. Large areas within the belt, however, are disqualified by local reasons.

sugar-bush, *n.* **3.** A pretty, flowering shrub, *Leucadendron melliferum*, native to South Africa. Its flowers are surrounded by a large involucre, which contains a honey-like liquor.

sugar-cane, *n.* In recent years sugar-cane has frequently been grown from seed and the seedlings, which present great variation, have been utilized for selection, but not for cropping.—**Sugar-cane agaric, borer, brand.** See ★*agaric*, ★*borer*, ★*brand*.

Sugar-coated liver, heart, etc., the presence of a thick fibrinous exudate on the serous surface of the liver, heart, etc., giving to the organ an appearance as if coated with icing.

sugar-color (shụ̇g′ạ̈r-kul″ọr), *n.* A trade-name of caramel in the form of a viscid concentrated solution in water of the consistence of very thick molasses.

sugar-food (shụ̇g′ạ̈r-föd), *n.* Same as ★*slop*¹, 6.

sugar-gum, *n.* **2.** See ★*gum*².

sugarine (shụ̇g′ạ-rin), *n.* [*sugar* + *-ine*².] A trade-name of methyl-benzoyl-sulphinide or methyl-saccharin.

Sugar-loaf sea, *naut.*, a pyramidal sea; a sea suggesting in form the old-fashioned sugar-loaf.

sugar-maple, *n.* **2.** See ★*maple*¹.

sugar-palm (shụ̇g′ạ̈r-päm), *n.* See ★*palm*².

sugar-pumpkin (shụ̇g′ạ̈r-pump″kin), *n.* One of several varieties of pumpkin (*Cucurbita Pepo*) highly prized on account of their sweet flesh; especially the small Nantucket sugar-pumpkin. Also called *negro squash* and *negro pumpkin*.

> Negro or Nantucket *Sugar Pumpkin*. The true old-fashioned black-warted, shelled pumpkin. It is a fine pumpkin for family use, the favorite for making pumpkin pies. It is a dark green when ripe, though the flesh is a rich orange yellow, very thick and sweet. It is an excellent winter sort, and will keep almost all the year round.
> *Trade Catalogue*, 1905.

sugar-sand (shụ̇g′ạ̈r-sand), *n.* **1.** An oil-drillers' name for a sandstone of saccharoidal or sugary texture. *Dialect Notes*, II. vi.—**2.** See the extract.

> In this connection there should be mentioned what is known among the farmers as "niter" or "*sugar sand*." This is a sand-like, gritty substance which is deposited during the process of evaporation of the sap [of the sugar-maple]; this deposition does not begin until the sap has been concentrated to a thin sirup of about eight pounds per gallon. This "niter" is removed from all good maple products by either allowing the sirup to settle or straining it through felt or other material; this should be done also if the sirup is to be concentrated for making sugar, otherwise the sugar will be gritty.
> *Jour. Franklin Inst.*, Oct., 1908, p. 265.

sugar-scale (shụ̇g′ạ̈r-skāl), *n.* The graduated scale of a polarimeter so evaluated as to give by direct reading the quantities of sugar corresponding to any given rotation of the plane of polarized light when a solution of the concentration required for the instrument is used.

sugar-water (shụ̇g′ạ̈r-wâ″tėr), *n.* A local term for the sweet sap drawn from a sugar-maple (which see, under *maple*¹).

Sugg burner. See ★*burner*.

suggestion, *n.*—**Collective suggestion**, in *psychol.*, a suggestion received similarly and simultaneously by a number of persons similarly situated.

> The principle of psychical action on which the above is based is one very familiar to students of psychology. It is that termed *collective suggestion*. This is the overmastering tendency to imitate the examples of others, to act in accordance with the ideas and feelings which we witness in those around us.
> *D. G. Brinton*, Basis of Social Relations, p. 38.

Simple suggestion, in *psychol.*, T. Brown's term for association of ideas: opposed to *relative suggestion*, which means judgment or comparison. *Brown*, Lectures on the Philos. of the Human Mind, p. 214.—**Terminal suggestion.** Same as *post-hypnotic suggestion.* *W. Wundt* (trans.), Outlines of Psychol., p. 273.

suicidigenous (sū″i-sī-dij′e-nus), *a.* [L. *suicidium*, suicide, + Gr. -γενής, -producing.] Marked by frequency of suicide. [Rare.]

> In the centre of Europe, from the northeast of France to the eastern borders of Germany, a *suicidigenous* area exists, where suicide reaches the maximum of its intensity, and around which it takes a decreasing ratio to the limits of the northern and southern states.
> *Buck*, Med. Handbook, VII. 551.

sui-mate (sū′ī-māt), *n.* [L. *sui*, of one's self, + E. *mate*^{2}.] See ★*self-mate.*

suit, *n.*—**Strong suit**, in *whist* and *bridge*, a suit in which a number of tricks can be made after the adverse trumps are out of the way.—**Suit of sails**, an outfit of sails; a set of sails.—**To bring suit**, to sue; seek a civil right by legal proceedings.—**To establish a suit**, to make all the remaining cards in a suit good for tricks, no matter who leads it.—**Union suit.** Same as ★*combination garment.*—**Weak suit**, in *card-playing*, a suit in which tricks are impossible or improbable.

suitcase (sūt′kās), *n.* A flat valise, light enough to be carried by hand, originally intended to contain a gentleman's evening clothes or 'dress-suit.' Also called a *dress-suit case.*

> Two *suitcases* filled to their limit with nearly 2000 bright silver Mexican half dollars, are now in the private office of . . . [the] Chief of Detectives.
> *N. Y. Times*, Dec. 24, 1905.

sukkah (sůk′ạ̈), *n.*; pl. *sukkoth* (sůk′ōt). [Also *succah*, pl. *succoth*: < Heb. *sukkah*, a booth.] A booth covered with branches: the plural stands for the Feast of Booths, or Tabernacles (Levit. xxiii. 42, 43; Deut. xvi. 13). See *Jewish* ★*festivals.*

sukkoth, *n.* Plural of ★*sukkah.*

suku (sö′kö), *n.* [Malay *sūkū*, a paw, leg, fourth part, *sūkū bangsa* ('fourth of a tribe'), a clan.] The clan or gens in Malay tribal society.

sulcal (sul′kạl), *a.* [*sulc*(*us*) + *-al*^{1}.] Of or pertaining to a sulcus. *Buck*, Med. Handbook, VII. 300.

sulcar (sul′kạ̈r), *a.* [*sulc*(*us*) + *-ar*^{3}.] Of or pertaining to a sulcus: as, the *sulcar* aspect of the body of anthozoans, which by some writers is called *ventral.* Compare ★*sulcular* and ★*asulcar.* *Trans. Linn. Soc.*, Zool., March, 1900, p. 527.

sulcular (sul′kụ-lạ̈r), *a.* [*sulcul*(*us*) + *-ar*^{3}.] Of or pertaining to a sulculus: as, the *sulcular* aspect of an anthozoan; dorsal. Compare ★*sulcar* and ★*asulcar.*

sulculus (sul′kụ-lus), *n.*; pl. *sulculi* (-lī). [NL., dim. of *sulcus*, a furrow.] In anthozoans, one of two ciliated grooves, the other being the sulcus, situated at the ends of the oval mouth.

> But one cannot speak of a sulcus and *sulculus* in this case, for the epithelium lining the tube is of the same character throughout.
> *G. C. Bourne*, in Trans. Linn. Soc., Zool., March, 1900, [p. 533.

sulcus, *n.* **2.** In anthozoans, one of two ciliated grooves situated at the ends of the oval mouth; a siphonoglyph. Compare ★*sulculus.*—**Ansate sulcus.** See *ansate* ★*fissure.*—**Anterior limiting sulcus.** Same as *fronto-orbital* ★*sulcus.*—**Coronal** or **sagittal sulcus**, according to G. Elliot Smith, a longitudinal fissure in the brain of the *Carnivora.* In the cephalic portion of its course it bends laterally at the level of the cruciate fissure. By most other observers this sulcus, or fissure, is termed the 'lateral fissure,' while the term 'coronal' is limited to a shorter fissure, anteriorly more or less vertical in direction, which may represent a disconnected portion of the lateral. *Trans. Linn. Soc.*, Zool., Jan., 1899, p. 336.—**Coronary sulcus**, a furrow on the surface of the heart which marks the location of the auriculoventricular septum.—**Cuneal sulcus**, a small sulcus usually present in the cuneus and lying parallel to the calcarine fissure.—**Diagonal sulcus.** Same as *fronto-orbital* ★*sulcus.*—**Ectosylvian sulcus**, a furrow or fissure forming, in some animals, the first arch around the Sylvian fissure. In many animals it disappears, having been merged with the Sylvian. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 399.—**Fronto-orbital sulcus**, a furrow which lies between the orbital sulcus and the lower end of the Sylvian fissure: very generally present in the brains of old-world monkeys, and occasionally found in American monkeys and in lemurs. Also called the *diagonal* and *anterior limiting sulcus.*—**General sulcus**, a small depression or fissure near the genu of the callosum.—**Infra-occipital sulcus**, a curved sulcus or fissure at the lower end of the simian sulcus in the brain of certain monkeys. Also known as *inferior occipital sulcus.* *Proc. Zool. Soc. London*, 1903, p. 18.—**Intercalary sulcus**, a furrow in the brain of mammals, situated above and parallel to the corpus callosum: of little morphological importance. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 332.—**Interhemispheral sulcus**, the space at the median line between the two cerebral hemispheres. Also known as the *longitudinal fissure.* *Proc. Zool. Soc. London*, 1903, p. 16.—**Intra-orbital sulcus**, an unimportant furrow, in the brains of certain mammals, homologized by Ziehen with the *presylvian* or *orbital sulcus* of other writers. *Trans. Linn. Soc.*, Zool., Feb., 1903, p. 406.—**Nasolabial sulcus**, the short groove or furrow on the median line from the nose to the upper lip.—**Parafloccular sulcus.** Same as ★*fissura flocculi.*—**Polar sulci**, a term used by Bolton to refer to the small and more or less semilunar fissures, which are nearly always found surrounding the posterior extremities of the calcarine fissure.—**Retrocentral sulcus**, a fissure of the brain behind and parallel to the fissure of Rolando.—**Sagittal sulcus.** See *coronal* ★*sulcus.*—**Sulcus frontomarginalis**, a sulcus on the mesal surface of the hemicerebrum. It is situated between the callosomarginal (supercallosal of Wilder) and the edge of the hemicerebrum. Beddard applies this term to a Y-shaped sulcus on the frontolateral aspect of the gorilla brain.—**Sulcus furcalis.** Same as ★*fissura prima.*—**Sulcus genualis**, a sulcus on the mesal aspect of the cerebrum near the genu of the callosum.—**Sulcus infrastriatus**, a sulcus in the occipital portion of the brain. It is also known as the *inferior occipital, lateral occipitotemporalis*, and the *later occipital.*—**Sulcus intrastriatus**, a term proposed by G. Elliot Smith for the post- or retrocalcarine fissure.—**Sulcus lacrymalis**, a depression in the lacrymal bone aiding in the formation of the lacrymal groove; also, a similar depression in the nasal process of the superior maxilla.—**Sulcus limitans.** (*b*) A furrow in the reptilian brain, separating the paraterminal body from the hippocampal formation. *G. Elliot Smith.*—**Sulcus lunatus**, a fissure in the human brain resembling the opercular or pomatic fissure in apes.

> In a recent number of the Anatomischer Anzeiger Prof. Elliott Smith published a most interesting forecast of an extensive work which he has in hand, dealing particularly with the occurrence in human brains of an occipital operculum; this occurrence had been considered previously as very exceptional, but Prof. Elliott Smith is able to show that this is far from being the case. The presence of such an occipital operculum implies the existence, in the cerebral hemisphere possessing it, of a sulcus, called by Prof. Elliott Smith the *sulcus lunatus*, which is strictly comparable to, if not absolutely identical with, the "Affenspalte" so typical of the brains of Simiidæ and Cercopithecidæ.
> *Nature*, Dec. 3, 1903, p. 105.

Sulcus of Monro, a groove in the wall of the third ventricle dividing the infundibulum from the optic thalamus.—**Sulcus postlateralis**, a small sulcus at the caudal end of the lateral fissure. It is sometimes independent and sometimes connected with the lateral fissure. It points toward the mesal surface. It is found in the brains of lemurs and *Carnivora.*—**Sulcus postnodularis**, an interlobar depression of the cerebellum between the nodule and the uvula.—**Sulcus postsylvius**, the postsylvian of Owen. Also termed the *parallel* or *supertemporal.*—**Sulcus prægracilis**, an unimportant fissure of the cerebellum.—**Sulcus præpyramidalis**, an interlobar depression of the cerebellum between the uvula and pyramid.—**Sulcus præstriatus**, a name proposed by G. Elliot Smith for the calcarine fissure.—**Sulcus primarius cerebelli.** Same as ★*fissura prima.*—**Sulcus rectus**, the ventral depression at the frontal portion of the base of the cerebrum in which rest the olfactory bulb and its crus. Also known as *olfactory fissure.*—**Sulcus suprasylvius.** See *suprasylvian* ★*sulcus.*—**Suprasylvian sulcus**, the second arched sulcus on the lateral surface of the cerebrum of *Carnivora.* Also termed *supersylvian.* Owen homologized it with the human parietal.

sulea (sö′lẹ-ạ̈), *n.* [E. Ind.] A fish, *Polynemus sele*, found in the Ganges and Bay of Bengal.

sulfate, *n.* and *v.* An amended spelling of *sulphate.*

sulfid, sulfide, *n.* See *sulphid.*

sulfinide, sulfoborite, sulfocerulic. See ★*sulphinide*, etc.

sulfosote (sul′fọ-sōt), *n.* [G. **sulfosot*, < *sulf*(*ur*) + (*creo*)*sote.*] A trade-name of a syrup consisting of a solution, in water, of 5 per cent. each of the potassium sulphonates of cresol and guiacol: used medicinally in cases of tuberculosis.

sulfur, *n.*, *a.*, and *v.* An amended (restored) spelling of *sulphur* (Latin *sulfur*).

sulfurate, sulfuret, sulfuric, etc. Amended spellings of *sulphurate*, etc.

suling (sö′ling), *n.* [Malay and Jav. *sūling.*] A Javanese direct flute or flageolet, usually having six holes.

sulla (sul′ạ̈), *n.* [Compare *soola* (clover): origin uncertain.] A clover-like plant, *Hedysarum coronarium*, cultivated for forage in southern Italy and northern Africa. In warm countries it is perennial. In the southern United States it has been less successful than alfalfa. See *Hedysarum.*

sulphamine (sul-fam′in), *n.* [*sulph*(*ur*) + *amine.*] The univalent radical $-SO_2NH_2$. The name is also used as a class name for compounds containing this group.

sulphaminol (sul-fam′i-nol), *n.* [*sulphamin*(*e*) + *-ol.*] A trade-name of a pale-yellow pulverulent compound prepared by the action of sulphur on certain compounds of the aromatic series: used in surgery as a substitute for iodoform.

sulphanilic (sul-fa-nil′ik), *a.* [*sulph*(*ur*) + *anil*(*ine*) + *-ic.*] Pertaining to sulphur and aniline, specifically to sulphanilic acid.—**Sulphanilic acid**, a colorless compound, $H_2\overset{1}{N}C_6H_4\overset{4}{S}O_3H.2H_2O$, prepared by the action of fuming sulphuric acid on aniline. It is deposited in monoclinic crystals, carbonizes at 280–300° C., and is also called *paraniline-sulphonic acid* or *paraminobenzene-sulphonic acid.*

sulphantimonate (sulf-an′ti-mọ-nạt), *n.* See ★*sulphantimonite.* Also *thio-antimonate.*

sulphantimonic (sulf″an-ti-mon′ik), *a.* [*sulph*(*ur*) + *antimon*(*y*) + *-ic.*] See ★*thio-antimonic.*

sulphantimonious (sulf″an-ti-mō′ni-us), *a.* See ★*thio-antimonious.*

sulphantimonite (sulf-an′ti-mọ-nīt), *n.* A salt of one of the assumed sulpho-acids of trivalent antimony, as Ag_3SbS_3 (also written $3Ag_2S.Sb_2S_3$), the mineral pyrargyrite, or $Pb_2Sb_2S_5$ ($= 2PbS.Sb_2S_3$), the mineral jamesonite. Compounds of this class are common among minerals, the metals usually present being silver, copper, lead, or mercury; similar compounds containing arsenic or bismuth, instead of antimony, are called *sulpharsenites* and *sulphobismuthites* respectively. Other related compounds of quintavalent antimony or arsenic are called *sulphantimonates* and *sulpharsenates*, as Cu_3AsS_4 ($= 3Cu_2S.As_2S_5$), the mineral enargite.

sulpharsenate (sulf-är′se-nāt), *n.* See ★*sulphantimonite.* Also *thio-arsenate.*

sulpharsenic (sulf-är-sen′ik), *a.* [*sulph*(*ur*) + *arsenic*, *a.*] Same as *thio-arsenic*, which is now the preferred term.

sulpharsenide (sulf-är′se-nid), *n.* [*sulph*(*ur*) + *arsen*(*ic*) + *-ide.*] A compound consisting of the sulphid and arsenide of one or more metals, as FeAsS ($= FeS_2.FeAs_2$), the mineral arsenopyrite or mispickel. Similar compounds containing selenium, tellurium, antimony, or bismuth, instead of arsenic, are called *sulphoselenides*, *sulphotellurides*, *sulphantimonides*, or *sulphobismuthides* respectively.

sulpharsenious (sulf-är-sē′ni-us), *a.* [*sulph*(*ur*) + *arsenious.*] See ★*thio-arsenious.*

sulpharsenite (sulf-är′se-nīt), *n.* [*sulph*(*ur*) + *arsen*(*ic*) + *-ite*^{2}.] See ★*sulphantimonite.*

sulphate, *n.*—**Conjugate sulphates**, certain aromatic principles, such as indoxyl, scatoxyl, and phenol, which appear in the urine in combination with mineral sulphates. Also called *ethereal* ★*sulphates.*—**Ethereal sulphates.** Same as *conjugate* ★*sulphates.*

sulphated (sul′fā-ted), *p. a.* Charged with or containing sulphates: as, a *sulphated* saline or *sulphated* aluminous mineral water.

sulphatine (sul′fạ̈-tin), *n.* [*sulphat*(*e*) + *-ine*^{2}.] A trade-name of a fungicide preparation consisting of sulphur, lime, and the sulphates of copper and calcium, intended for application to plants.

sulphating (sul′fā-ting), *n.* [*sulphat*(*e*), *v.*, + *-ing*^{1}.] In *electrochem.*, the formation of inert lead sulphate on the plates of a storage battery, which may occasion loss of power and damage to the battery.

sulphation (sul-fā′shọ̈n), *n.* Same as ★*sulphating.*

sulphatization (sul″fạ-ti-zā′shọ̈n), *n.* [*sulphat*(*e*) + *-iz*(*e*) + *-ation.*] Same as ★*sulphating.*

sulphato-. In *chem.*, a prefix to the name of a compound, signifying that it contains a sulphate as an ingredient, as the mineral leadhillite, a *sulphato*-carbonate of lead.

sulphaurate (sul-fâ′rāt), *n.* [*sulph*(*ur*) + L. *aurum*, gold, + *-ate*^{1}.] See ★*thio-aurate.*

sulphauric (sul-fâ′rik), *a.* [*sulph*(*ur*) + L. *aurum*, gold, + *-ic.*] See ★*thio-auric.*

sulph-hemoglobin (sulf″hem-ọ-glō′bin), *n.* [*sulph*(*id*) + *hemoglobin.*] A compound of hemoglobin and hydrogen sulphid.

sulphid, *n.*—**Double sulphid**, a compound in which sulphur is united to two different metals or radicals, as in the mineral chalcopyrite, a sulphid of copper and iron.—**Metallic sulphid**, a compound of a metal with sulphur. Many such compounds are found in nature (as the sulphids of lead, copper, mercury, zinc, etc.) and constitute valuable ores.

sulphid (sul′fid), *v. t.* [*sulphid*, *n.*] To convert into a sulphid, as in the case of silver tarnished by such conversion on the surface.

sulphidation (sul-fi-dā′shọ̈n), *n.* The replacement or impregnation of a rock with metallic sulphids. *Van Hise*, in U. S. Geol. Surv., Monographs, XLVII. 204.

sulphimide (sulf-ī′mid), *n.* [*sulph*(*ur*) + *imide.*] A substance obtained along with sulphamide in the preparation of that compound. Its composition is represented by the formula SO_2NH, but it has not been procured in a perfectly pure state.

sulphinate (sul′fi-nāt), *n.* [*sulphin*(*ic*) + *-ate*^{1}.] A general name, in organic chemistry, of salts of sulphinic acid.

sulphine (sul'fin), *n.* [*sulph*(*ur*) + *-ine*^{2}.] A name given, in organic chemistry, to compounds containing the group R_3SX, where R is a hydrocarbon radical such as methyl, CH_3, and X a halogen atom or hydroxyl radical. The compounds are also called sulphonium derivatives, and resemble, in general constitution and properties, the corresponding derivatives of ammonium.

sulphinic (sul-fin'ik), *a.* [*sulphine* + *-ic.*] Noting an acid, a hypothetical compound,  $O:S\begin{cases}H\\OH\end{cases}$, with the same empirical formula as hyposulphurous acid, of which it may be considered a possible form. The term is used as a class name, the sulphinic acids having the formula  $O:S\begin{cases}R\\OH\end{cases}$, where R is a hydrocarbon radical such as methyl, CH_3.

sulphinide (sul'fi-nid), *n.* [Formerly *sulfinide*; *sulphine* + *-ide.*] 1. Same as *saccharin.*— 2. A class name applied, in organic chemistry, to compounds containing the group  $R\begin{cases}\overset{1}{C}O\\\underset{2}{S}O_2\end{cases}NH$, where R is a bivalent aromatic hydrocarbon radical such as phenylene, C_6H_4. The compounds are also called *orthoanhydrosulphamine-carboxylic acids.*

sulphiodide (sul-fī'ọ-did or -dīd), *n.* Same as ★*iodosulphid.*

sulphite, *n.*—**Acid sulphite,** a salt, $NaHSO_3$, obtained by supersaturating a solution of sodium carbonate with sulphur-dioxid gas. It appears in small shining crystals. It is sold for use in photography as a lye. For its preparation in such cases tartaric acid is added to sodium sulphite.—**Sulphite process.** See ★*process.*

sulphmethemoglobin, sulphmethæmoglobin (sulf"met-hē-mọ-glō'bin), *n.* [*sulph*(*ur*) + *methemoglobin.*] A compound of methemoglobin with hydrogen sulphid. Also termed *methemoglobin sulphid.*

sulpho-. In *chem.*, a prefix to the name of a compound, signifying the presence in it of sulphur as a constituent. In those cases in which sulphur is looked upon as replacing oxygen the prefix *thio-* is now generally preferred.

sulpho-arsenic (sul"fọ-är-sen'ik), *a.* Same as ★*sulpharsenic.*

sulphobismuthid (sul-fọ-biz'muth-id), *n.* See ★*sulpharsenide.*

sulphobismuthite (sul-fọ-biz'muth-īt), *n.* See ★*sulphantimonite.*

sulphoborite (sul-fọ-bō'rīt), *n.* A hydrated sulphate and borate of magnesium occurring in colorless prismatic crystals at the salt-mines of Westeregeln, Germany.

sulphocarbamide (sul-fọ-kär'ba̤-mid), *n.* Same as ★*thio-urea.*

sulphocarbolate (sul-fọ-kär'bọ-lāt), *n.* A salt of phenol-sulphonic acid, $C_6H_4.HO.HSO_3$. The sulphocarbolates of sodium and zinc are used medicinally as antiseptics.

sulphocarbolic (sul"fọ-kär-bol'ik), *a.* Same as ★*phenolsulphonic.*

sulphocarbonate (sul-fọ-kär'bọ-nāt), *n.* See ★*thiocarbonate.*

sulphocarbonic (sul"fọ-kär-bon'ik), *a.* Same as ★*thiocarbonic.*

sulphocerulic (sul"fọ-sẹ-rö'lik), *a.* Same as *sulphoindigotic.*

Sulphocyanic acid. Now preferably called *thiocyanic acid.*

sulphocyanine (sul-fọ-sī'a̤-nin), *n.* The name of several direct cotton coal-tar colors (*sulphocyanine G, GR, 3R, 5R,* etc.), of similar composition, which dye unmordanted cotton dark navy-blue shades from a salt bath.

sulphogermanate (sul-fọ-jėr'ma̤-nāt), *n.* A compound of sulphur and germanium with a more electropositive element than either of these, as the mineral argyrodite ($4Ag_2S.GeS_2$), in which germanium was first discovered.

sulpholeate (sul-fō'lẹ-āt), *n.* A salt of sulpholeic acid.

sulpholeic (sul-fō'lẹ-ik), *a.* [*sulph*(*ur*) + *-oleic.*] Pertaining to sulphuric and oleic acids. —**Sulpholeic acid,** a colorless compound, $C_{18}H_{33}CH(SO_4H)COOH$, prepared by the action of concentrated sulphuric acid on oleic acid. The sodium, potassium, and ammonium salts are used for the dyeing of cotton goods and in calico-printing under the trade-names *alizarin-oil, Turkey-red oil, red oil,* and *olein.* Also called *stearinsulphuric acid.*

sulphonalism (sul'fọ-na̤l-izm), *n.* [*sulphonal* + *-ism.*] Addiction to the use of sulphonal; also the morbid state resulting therefrom.

sulphonate (sul'fọ-nāt), *v. t.*; pret. and pp. *sulphonated*, ppr. *sulphonating.* [*sulphonate, n.*] To convert a substance into a sulphonate, generally by the action of fuming sulphuric acid on an organic substance, replacing one or more atoms of hydrogen by a corresponding number of units of the sulphonic radical, $HO.SO_2$. This process is extensively used in the manufacture of artificial dyestuffs. —**Sulphonated azo color.** See ★*color.*

sulphonazurine, sulphonazurin (sul-fōn-azh'ṳ̄-rin), *n.* A direct cotton coal-tar color of the disazo type, derived from benzidine-sulphone-disulphonic acid. It dyes unmordanted cotton from a neutral or soap bath. Also *sulphoneazurine.*—**Brilliant sulphonazurine,** a direct cotton coal-tar color which dyes unmordanted cotton a bright blue from a salt bath.

sulphone (sul'fōn), *n.* [*sulph*(*ur*) + *-one.*] One of a group of organic compounds containing the divalent SO_2 group, united with two hydrocarbon radicals. Thus $(C_2H_5)_2SO_2$ is diethyl sulphone and $(C_6H_5)_2SO_2$ diphenyl sulphone.—**Sulphone azurine.** See ★*sulphonazurine.* —**Sulphone black, brown, colors.** See ★*black*, etc.

sulphonium (sul-fō'ni-um), *n.* [NL., < *sulph*(*ur*) + *-onium.*] A hypothetical univalent radical, $-SH_3$. Derivatives in which the hydrogen is replaced by hydrocarbon radicals, such as methyl, CH_3, are known and resemble the corresponding ammonium compounds in constitution and general properties.

sulphoparaldehyde (sul"fọ-pa-ral'dẹ-hīd), *n.* [*sulph*(*ur*) + *paraldehyde.*] A crystallizing compound, $C_6H_{12}S_3$. It melts at 46° C. and is used in medicine as a hypnotic. The correct name is *trithioacetaldehyde.*

sulphophosphoric (sul"fọ-fos-for'ik), *a.* See ★*thiophosphoric.*

sulphoproteid (sul-fọ-prō'tẹ-id), *n.* One of a number of albumins which contain a considerable amount of sulphur in loosely combined form, such as the keratins.

sulphoricinate (sul-fọ-ris'i-nāt), *n.* [Also written *sulforicinate.*] A thick, clear liquid compound prepared by treating castor-oil with concentrated sulphuric acid, adding sodium chlorid, and neutralizing the product with sodium carbonate. It does not dissolve in water, but readily forms with it an emulsion; it easily dissolves large quantities of phenol, menthol, etc.; hence its use in pharmacy. Also known by the trade-names *solvin* and *polysolvol.*

sulphoricinoleate (sul"fọ-ris-i-nō'lẹ-āt), *n.* A salt of sulphoricinoleic acid.

sulphoricinoleic (sul"fọ-ris-i-nō'lẹ-ik), *a.* Noting an acid, a derivative of ricinoleic acid, containing the sulphonic radical $HO.SO_2$, obtained as a product of the action of strong sulphuric acid on castor-oil. It is the principal ingredient of the alizarin-oil or Turkey-red oil used by dyers.

sulphosaccharate (sul-fọ-sak'a̤-rāt), *n.* A general term which has been applied in chemistry to certain compounds of sulphates with sugar. The most important member is the copper compound, which is a fine bluish-white powder.

sulphosalicylic (sul-fọ-sal-i-sil'ik), *a.* Derived from sulphuric and salicylic acids. —**Sulphosalicylic acid,** a crystalline acid, $C_6H_3(OH)(COOH)(SO_3H)$, made by the action of sulphur trioxid, or concentrated sulphuric acid, on salicylic acid. It melts at 120° C.

sulphoselenide (sul-fọ-sē'len-id), *n.* See ★*sulpharsenide.*

sulphostannate (sul-fọ-stan'āt), *n.* See ★*thiostannate.*

sulphostannic (sul-fọ-stan'ik), *a.* See ★*thiostannic.*

sulphosteatite (sul-fọ-stē'a̤-tīt), *n.* Same as ★*fostite.*

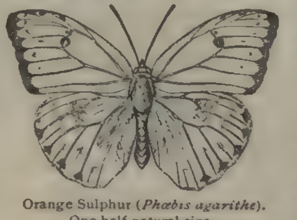
sulphotelluride (sul-fọ-tel'ụ-rid), *n.* See ★*sulpharsenide.*

sulphotungstate (sul-fọ-tung'stāt), *n.* See ★*thiotungstate.*

sulpho-urea (sul-fọ-ū'rẹ-ạ̈), *n.* Same as ★*thio-urea.*

sulphoxid (sulf-ok'sid), *n.* [*sulph*(*ur*) + *ox*(*ygen*) + *-id*^{1}.] A general name, in organic chemistry, of compounds of the formula R_2SO, where R is a hydrocarbon radical such as methyl, CH_3. They are formed by the oxidation of the thio-ethers with nitric acid.—**Tellurium sulphoxid,** a transparent red, amorphous, fusible, solid substance obtained by the direct union of tellurium and sulphur trioxid, decomposed by water with the formation of tellurium and sulphuric acid.

sulphur, *n.* 1. As an alchemistic term 'sulphur' had a general more or less vague meaning altogether distinct from that of the single substance brimstone. It seems, in large measure, to have carried with it the notion of what we now speak of as electronegative or acidifying character. Sulphuric acid was by some regarded as the sulphur philosophorum.—**Alcohol of sulphur,** an early name for carbon disulphid.—**Dainty sulphur.** See ★*dainty.*—**Lac sulphur** or **sulphur lac.** Same as *milk of sulphur* or *precipitated sulphur.*—**Lime, sulphur, and salt wash.** See ★*wash.*—**Little sulphur,** an American pierid butterfly, *Eurema euterpe*, occurring throughout the southern United States and rarely in southern New England, Ohio, and Wisconsin. Its larvæ feed on cassia and other leguminous plants.—**Neutral sulphur.** In certain sulphur bodies occurring in the urine the sulphur is not present in the form of sulphuric acid, namely, as a sulphate, but in organic combination. This fraction Salkowski designates as neutral, in contradistinction to the other or acid sulphur.—**Orange sulphur,** an American pierid butterfly, *Phœbis agarithe*, found in the southern United States. Its larvæ feed on cassia plants.—**Peroxid of sulphur,** sulphur heptoxid (S_2O_7), a substance produced by silent electrical discharge through a mixture of dry oxygen and sulphur dioxid and by other processes. It is a viscid, colorless liquid solidifying at 0° C., readily volatile and very unstable, decomposing into sulphur trioxid and oxygen when kept at ordinary temperature and quite rapidly on being heated. —**Red-barred sulphur,** an American pierid butterfly, *Callidryas philea*, of tropical distribution, and found also in Texas and the lower Mississippi valley.—**Sublimed sulphur.** Same as *flowers of sulphur.*—**Sulphur alcohol.** See ★*thio-alcohol.*—**Sulphur auratum** (properly *sulphur auratum antimonii*), antimony pentasulphid.—**Sulphur bacteria.** See ★*bacterium.*—**Sulphur base,** the sulphid of a more electropositive element or radical which by union with the sulphid of one more electronegative may form a sulphur-salt.—**Sulphur candle.** See ★*candle.*—**Sulphur-carrier,** a substance used to facilitate the taking up of sulphur by india-rubber in the process of vulcanization. Among the most useful of such materials are antimony pentasulphid and lead thiosulphate.—**Sulphur chlorid,** a compound of sulphur and chlorin. Three such compounds are known, S_2Cl_2, SCl_2, and SCl_4. Of these the first, sulphur monochlorid, is the most stable and most generally known. It is prepared by the direct action of gaseous chlorin upon heated sulphur, and appears as a yellow liquid of specific gravity 1.7, boiling at 138° C., fuming in the air, with irritant effect upon the eyes and nostrils, decomposed by water, and itself dissolving sulphur in large proportion: used in the vulcanization of india-rubber.—**Sulphur color.** See ★*color.*—**Sulphur dioxid.** Same as *sulphurous oxid.*—**Sulphur ether.** Same as ★*thio-ether.*—**Sulphur iodide.** See ★*iodide.*—**Sulphur trioxid,** sulphuric oxid or sulphuric anhydrid, SO_3. The production of this substance by passing sulphur dioxid and atmospheric oxygen over heated platinized asbestos, and its conversion into sulphuric acid by taking up the elements of water, form the basis of the recently developed 'contact process' for the manufacture of that important acid.



Orange Sulphur (*Phœbis agarithe*).
One half natural size.

sulphur, *v. t.*—**To sulphur up,** a manufacturers' term for the appearance, after a time, of an efflorescence of sulphur in microscopic globules on the surface of soft vulcanized india-rubber. Also known as *blooming.*

sulphur-acid (sul'fėr-as"id), *n.* Same as *thio-acid.*

sulphur-burner (sul'fėr-bėr"nėr), *n.* An apparatus for burning or oxidizing sulphur. It is only necessary to heat the sulphur to its igniting point in a blast of air.

sulphurea (sul-fū'rẹ-ạ̈), *n.* Same as ★*thio-urea.*

Sulphuric acid. See also ★*contact action.*

sulphur-salt, *n.* 2. A substance which may be regarded as made up of a sulphid of a relatively electropositive element or radical and a sulphid of one relatively electronegative, as the mineral zinkenite ($PbS.Sb_2S_3$). The term *thio-salt* is now preferred for such compounds.

Sulphuryl chlorid, a heavy colorless volatile liquid, SO_2Cl_2, obtainable by the interaction of sulphur dioxid and chlorin in sunlight, fuming in the air, and with strong irritant odor, decomposed by water with formation of sulphuric and hydrochloric acids.

sulphydro-. [*sulph*(*ur*) + *hydro*(*gen*).] In *chem.*, a prefix to the name of a compound, signifying that in it the radical SH may be viewed as replacing hydroxyl (OH). The prefix *thio-* is now preferred, as *thio*-glycolic acid instead of *sulphydro*-acetic acid.

sulvanite (sul'vā-nīt), *n.* [*sul*(*phur*) + *van*(*adium*) + *-ite*^{2}.] A sulphovanadate of copper occurring in bronze-yellow masses with metallic luster: found in South Australia.

sum^1, *n.*—**Arithmetical sum,** the result of uniting two or more quantities unchanged into one quantity.—**Sum in finite differences,** in *math.*, the sum of the values of a function obtained by giving to its argument successive values differing by unity, from the lower to the upper limiting value specified.—**Vectorial sum**, in *math.*, the vector from the beginning of the first to the end of the last of a set of vectors put end to end by translation without rotation.

sumac, *n.*—**Cape sumac**, a shrub or small tree of the sandalwood family, *Colpoon compressum*, native to Cape Colony and Natal. Its leaves are used locally for tanning light leathers and the heavy, fine-grained wood is used for fine cabinet work. See *Osyris*.—**Italian sumac**, a greenish powder made from the leaves of *Rhus coriaria*, used in tanning. *C. T. Davis*, Manuf. of Leather, p. 31.—**Spanish sumac.** Same as *Sicilian sumac*.—**Swedish sumac**, a substance prepared from the leaves of the bearberry, *Arctostaphylos uva-ursi*.—**Tyrol sumac**, a substance prepared from the leaves and stems of the wig-tree or smoke-tree, *Cotinus Cotinus*.—**Wig sumac.** Same as *wig-tree* and *Tyrol* ★*sumac*.

sumac, sumach (sū̱′mak), *v. t.*; pret. and pp. *sumaced*, *sumached*, ppr. *sumacing*, *sumaching*. [*sumac*, *sumach*, *n.*] In *leather-manuf.*, to treat with sumac. *C. T. Davis*, Manuf. of Leather, p. 216.

sumbody, *n.* An amended spelling of *somebody*.

Sumbul oleoresin. See ★*oleoresin*.

sumbulamic (sum-bū̱-lam′ik), *a.* Derived from sumbul oleoresin.—**Sumbulamic acid**, a yellow compound obtained from sumbul oleoresin. It crystallizes in yellow needles.

sumersault, *n.* An amended spelling of *somersault*.

sumerset, *n.* and *v.*. An amended spelling of *somerset*.

sumhow, *adv.* An amended spelling of *somehow*.

summarization (sum″a-ri-zā′shọn), *n.* [*summariz(e)* + *-ation*.] The act of summarizing or reducing to a concise statement; also, a summary; a compendium or abstract.

> In this week's 'Spectator' will be found a concise *summarization* of the present state of things in China.
> *Pall Mall Gazette*, Oct. 13, 1900, p. 1.

Summary court. See ★*court*.

summate (sum′āt), *v. t.*; pret. and pp. *summated*, ppr. *summating*. [L. *summatus*, pp. of *summare*, sum up.] To add; find the sum of a series; combine in a total: said of quantities.

> A change in one direction which is *summated* in proportion to the number of discs in the pile.
> *Nature*, July 26, 1900, p. 290.

summation, *n.*—**Summation theory**, a theory which derives any given phenomenon from the conjoint action of a number of less intensive (perhaps separately unnoticeable) phenomena of the same kind.

> If we are not satisfied with this '*summation' theory*, we may have recourse to a subsidiary hypothesis. We may suppose that the gaps in sensation are filled out by association. *E. B. Titchener*, Exper. Psychol., I. ii. 90.

Summation tone. Same as *resultant tone* (which see, under *resultant*).

summer¹, *n.*—**Old wives' summer, old women's summer**, a translation of the German *Altweibersommer*, the same as *St. Martin's summer*, a warm period in autumn in Europe, similar to the Indian summer of America.

summer-beam (sum′ėr-bēm), *n.* Same as *summer*², 2 (*c*), or *brest-summer*.

summit, *n.* **4.** In bivalves, the highest part of the shell; the region in which the hinge is situated.

summital (sum′it-ạl), *a.* [*summit* + *-al*¹.] Of or relating to a summit.

summit-opening (sum′it-ōp″ning), *n.* In the extinct *Blastoidea*, the open space at the summit of the calyx where the ambulacra meet. This area is paved with a number of minute calcareous plates, which may be regular or irregular in arrangement, but leave at each angle of the summit-opening a small passageway by means of which the ambulacra communicate with the peristome.

summons, *n.*—**Writ of summons.** Same as *summons*, 2.

summum jus (sum′um jus). [L. *summum*, highest, extreme, + *jus*, law.] Strict law or right, as distinguished from equity.—**Summum jus, summa injuria**, literally, extreme law is extreme wrong.

sump, *n.* **5.** In an electrolytic tank, a compartment separated from the rest by a low dividing-wall.

sumthing, *n.* and *adv.* An amended (restored) spelling of *something*.

sun¹, *n.*—**Elements found in the sun**, aluminium, antimony, arsenic, barium, bismuth, boron, bromine, cadmium, cæsium, calcium, carbon, cerium, chlorin, chromium, cobalt, copper, erbium, fluorin, gallium, germanium, glucinum, gold, holmium, hydrogen, indium, iodine, iridium, iron, lanthanum, lead, magnesium, manganese, mercury, molybdenum, neodymium, nickel, niobium, nitrogen, osmium, oxygen, palladium, phosphorus, platinum, potassium, praseodymium, rhodium, rubidium, ruthenium, scandium, selenium, silicon, silver, sodium, strontium, sulphur, tantalum, tellurium, terbium, thallium, thorium, thulium, tin, titanium, tungsten, uranium, vanadium, yttrium, zinc, zirconium.—**Equatorial acceleration of the sun.** See ★*acceleration*.—**Sun-and-planet motion.** Same as ★*jack-in-a-box motion*.—**Sun's way**, the path of the sun and solar system in space, directed approximately toward the constellation of Hercules. See *solar apex*, under *solar*¹.—**Sun thermometer.** See ★*thermometer*.—**The sun is high** (*naut.*), said of that body when it reaches the observer's meridian.

sun³ (sůn), *n.* [Jap. *szn*, < Chin. *ts'un*, the Chinese inch, regarded as equal to the middle joint of the finger.] A Japanese measure of length, equal to $\frac{1}{33}$ of a meter, or 1.19 inches.

sun⁴, *n.* An amended spelling of *son*¹.

sun-bed (sun′bed), *n.* A local name in England given to the hard upper limestone of the White Lias. Also called *Jews'-stone*.

sunburn, *n.* **3.** The injury to the leaves or bark of plants produced by the hot sun causing excessive or too rapid evaporation of the water content of the cells, and thus killing the tissues, which become brown. The tips and margins of rapidly growing leaves and the cambium layer of the bark of young trees are most frequently affected. Also called *sunscald*. Compare *heliosis*.

sunburst, *n.* **2.** Hence, a figure, or object, as in architectural ornamentation, jewelry, etc., resembling, or thought to resemble, the bursting forth of rays in all directions from the sun: as, a diamond *sunburst*.

> The most characteristic ornament of this architecture consists of the disks executed on flat surfaces, which appear upon the lintels of doors and windows and in many other places, upon churches, shops, private houses, and every other kind of building of every size, in all parts of the country. They are found in a thousand designs: some of them are symbolic and Christian, others are apparently only ornamental. The designs include *sunbursts*, five-, six- and eight-pointed stars, whorls, spirals, interwoven leaves and crosses of countless forms.
> *H. C. Butler*, Architecture and Other Arts, p. 32.

sun-cluster (sun′klus″tėr), *n.* A group or cluster of suns, that is, stars.

sun-cracking (sun′krak″ing), *n.* A trade-name for a defect in vulcanized india-rubber goods, due to atmospheric oxidation on exposure to light, and made evident by the appearance of cracks upon the surface.

sundang (sön-däng′), *n.* [Native, Phil. Islands.] A knife or bolo.

sundarband, *n.* See ★*sunderbund*.

Sunday, *n.*—**Advent Sunday**, the first Sunday in Advent.—**Cantate Sunday**, the fourth Sunday after Easter, so called from the introit of the mass of that day, beginning with the words, "Sing unto the Lord a new song."—**Reminiscence Sunday**, same as *Reminiscere Sunday*.—**Rorate Sunday**, the fourth Sunday in Advent, so called from the opening words of the introit of the day, "Rorate, cœli, desuper (Isa. xlv. 8).—**Rose Sunday**, the Sunday on which the Pope blesses the golden rose, the fourth Sunday in Lent.

sunderbund (sön′dėr-bönd), *n.* [Also *sundarband*; Anglo-Ind., from an undetermined Indian source.] **1.** *pl.* [*cap.*] The tract of intersecting creeks and channels and of swampy islands which constitutes the seaward part of the delta of the Ganges.—**2.** A distributary of a river on its delta; specifically, such a distributary of the Ganges or the Brahmaputra.

> Large and small streams or swampy *sûndarbands* of slowly moving waters. *Geog. Jour.* (R. G. S.), XVI. 238.

Sunderland luster. See *marbled* ★*luster*.

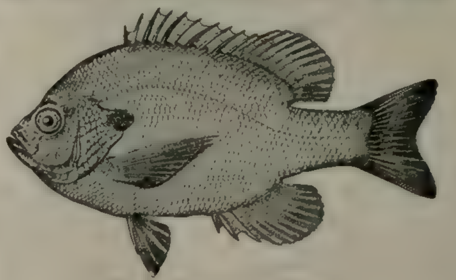
sundowner, *n.* **2.** A physician, holding some government office, who carries on a private practice in the afternoon when government office-hours are over. [Washington, D. C.]—**3.** One who lives toward the sundown or west. [Western U. S., slang.]

sun-dry (sun′drī), *v. t.* and *i.*; pret. and pp. *sun-dried*, ppr. *sun-drying*. To dry, or be dried, by the natural heat of the sun, without artificial heat.

> I must have the bed and bedclothes aired and put to *sun-dry*. *R. L. Stevenson*, Kidnapped, iii.

sundtite (sönt′īt), *n.* [Named after L. *Sundt*, a mining director.] Same as ★*andorite*.

sunfish, *n.*—**Banded sunfishes**, species of the genus *Mesogonistius*.—**Black-banded sunfish**, *Mesogonistius chætodon*, a sunfish found in fresh waters of the eastern United States. See cut under ★*Mesogonistius*.—**Blue sunfish**, a sunfish, *Lepomis pallidus*, one of the best known and most important, found in the Great Lakes, Mississippi valley, and elsewhere.—**Blue-spotted sunfish**, a common name of a small species of sunfish, *Apomotis cyanellus*, found from central Ohio to the Rio Grande.—**Common sunfish**, *Eupomotis gibbosus*, a sunfish found in the northern parts of the Mississippi valley, the Great Lake region to Maine, and southward east of the Alleghanies to Florida.—**Green sunfish.** Same as *blue-spotted* ★*sunfish*.—**Long-eared sunfish**, *Lepomis megalotis*, found from Michigan to Minnesota, South Carolina, and southwest to the Rio Grande.—**McKay's sunfish**, *Eupomotis euryorus*, known only from southern Michigan and northern Ohio and Indiana.—**Mud sunfish**, *Acantharcus pomotis*, found from New York to South Carolina. See cut at ★*Acantharcus*.—**Pygmy sunfish**, a fish of the family *Elassomidæ*.—**Red-eared sunfish**, *Eupomotis heros*, one of the sunfishes inhabiting streams from northern Indiana to Florida.—**Red-spotted sunfish**, *Lepomis humilis*, a fish found in fresh waters in Ohio and Kentucky and west to Texas and Dakota.—**Round sunfish**, a small sunfish, *Centrarchus macropterus*, found in the Mississippi valley.—**Scarlet sunfish**, *Lepomis miniatus*, a sunfish found in fresh waters from Texas to Florida.



Blue Sunfish (*Lepomis pallidus*).
(From Bulletin 47, U. S. Nat. Museum.)

Common Sunfish (*Eupomotis gibbosus*).
(From Bulletin 47, U. S. Nat. Museum.)

sung² (söng), *n.* [Chin. *sung*, in Canton *sung*, *tsung*, and *ts'ung*, the pine-tree.] The pine or fir, used as a decorative motive in Chinese art.

sungar, *n.* Same as ★*sangar*.

sun-glass, *n.* **2.** Same as ★*shade-glass*; a screen of colored glass attached to a sextant to diminish the apparent brightness of the sun.

Sung porcelain. See ★*porcelain*¹.

sunk-band (sunk′band), *a.* Noting the ordinary style of sewing books, in which the backs are sawed in three or five furrows to contain the bands of twine. The raised-band process is better, but more expensive. *W. Matthews*, Modern Bookbinding, p. 27.

sun-kiln (sun′kil), *n.* A vat for preparing potters' clay by exposing it to the action of the sun and the atmosphere, a process employed by English potters previous to the eighteenth century.

> Into the smaller vat a quantity of clay is thrown, and by a proper tool plunged in the water by agitation; . . . the fluid mass is next poured into a sieve, thro' which it runs into the largest vat, or *Sun Kiln*, until the whole surface is covered, to the depth of three or four inches, which is left to be evaporated by solar action.
> *Aiken*, quoted by S. Shaw, Hist. of the Staff. Potteries, [p. 18.

sunned (sund), *p. a.* Exposed to the sunlight, as for the purpose of toning down the harsh contrasts.

sun-pan (sun′pan), *n.* A pan or vat in which potters' clay is prepared. See ★*sun-kiln*.

sun-pillar (sun′pil″är), *n.* A parhelion or sun-dog having the form of a vertical column of light: seen usually in connection with other halo forms.

> This evening a *sun-pillar* was again visible at Swindon, not so brilliant or long-lived as that which recently attracted such widespread attention, but nevertheless quite definite. . . . It was of a clear yellow colour, and extended from the dull-red sun vertically upwards.
> *Nature*, April 10, 1902, p. 536.

sun-power (sun′pou″ėr), *n.* The amount of light radiated by a given star as compared with that radiated by the sun; or the brightness of the star compared with that of the sun, both being viewed from the same distance (easily calculated when the star's parallax is known).

In Fig. 2 the relative distances of all stars known to be within sixty light-years of our system are shown by placing the objects on a background formed by a map of the home counties, taking Greenwich as the point of departure, the "*sun-powers*" of the various stars being represented by a system of symbols. Fig. 3 similarly treats all those stars within 480 light-years, a map of N. W. Europe constituting the background. The scale employed for the stellar distances is an interesting one, which takes as its unit the distance of a star situated at one light-year from the solar system. Mr. Heath fortuitously discovered that by calling this unit one mile the sun's distance is almost exactly represented by one inch.
Nature, Sept. 28, 1905, p. 532.

sun-prism (sun'prizm), *n.* See ★*prism.*

sun-reflector (sun'rē-flek″tor), *n.* A large concave mirror or system of mirrors by means of which the sun's rays are focused upon the boiler of a solar engine. See cut under *solar engine.*

sun-scald, *n.* **2.** An injury to the bark caused by sudden exposure of a tree to strong sunlight. Also *scald.*—**3.** A burning of the skin due to exposure to the reflection of sunlight from the surface of smooth water.—**4.** Surfaces of water reflecting sunlight and causing sunscald. [Rare.]

There were days, though, clear and soft and warm, when it seemed a sin to do anything but loaf over the hand-lines and spank the drifting "*sun-scalds*" with an oar. *R. Kipling*, Captains Courageous, v.

5. Same as *scald-fish.*

sunset, *n.*—**Making sunset** (*naut.*), the ceremony performed at sundown of striking the colors.—**Red sunsets,** specifically, the remarkable red sky or red light that followed the regular twilight and preceded the morning during 1883–84, over the greater part of the north temperate zone, gradually fading away during 1885–86. They were demonstrated to be a direct consequence of the great volcanic eruption of Krakatua, between Sumatra and Java, by which an enormous mass of dust and vapor was projected into the upper atmosphere. Similar red sunsets followed an eruption of Skaptar Jökull, in Iceland, in 1783 and again in 1831, and, on a smaller scale, the eruptions of Pelée and Soufrière in the West Indies in 1902. They have also been seen in connection with other eruptions, as those of Vesuvius and Etna, and with the dusty winds of the Sahara. The red light was due to diffuse reflection of sunlight; the long continuance was due to the great altitude of this vapor, which allowed of the reflection of the light to the earth long after sunset.

sunshine, *n.*—**Bright sunshine,** specifically, in *meteor.*, sunshine bright enough to make a record on the Campbell-Stokes sunshine-recorder.

sunshine-receiver (sun'shīn-rẹ-sē″vėr), *n.* The platinum wire upon which the sun shines directly in using the Callendar sunshine-recorder.

sunshine-recorder, *n.*—**Callendar's sunshine-recorder,** a recorder in which the sun's rays fall directly upon the blackened absorbing surface of a resistance-coil. The resulting increase of temperature affects the transmission of an electric current, and therefore the position of the galvanometer needle and mirror.

sun-shower (sun'shou″ėr), *n.* A shower of rain from a passing cumulus cloud, without thunder or lightning and preceded and followed by full sunshine, on a warm summer day; a shower falling on a limited locality, while the surrounding country is evidently enjoying full sunshine.

sun-soap (sun'sōp), *n.* A term sometimes applied in the United States to soap made in a domestic way by mere exposure of the mixed fatty and alkaline materials to the heat of the sun's rays.

sun-spot, *n.* **2.** A freckle.—**3.** A spot on leaves produced by excessive heat of the sun. Compare *heliosis*, 1.—**Sun-spot curve,** a curve exhibiting the course of the rise and fall in the number and extent of sun-spots, and the dates of maximum and minimum since 1772.—**Sun-spot cycle,** the period of about eleven years in which the maximum frequency of sun-spots recurs.—**Wolf's relative sun-spot numbers,** the system of numeration devised by Professor R. Wolf of Zurich, to express the tendency to the formation of sun-spots. The number for any day is determined by adding together the number of spots visible on the sun and ten times the number of groups of spots. It is therefore an arbitrary number, but has been made the basis for many refined calculations as to the relation between sun-spot phenomena and terrestrial meteorology and magnetism.

sunstroke, *n.* **2.** Same as ★*folletage.*—**Electric sunstroke.** Same as *electric* ★*prostration.*

sun-tank (sun'tangk), *n.* A metallic tank in which castor-oil is exposed to the sun's rays in order to bleach it. *Sci. Amer. Sup.*, March 21, 1903, p. 22756.

sun-wheel, *n.* **2.** In *cotton-manuf.*, one of the gears or wheels of the 'differential' or 'equating' or 'jack-in-a-box' motion of a roving-machine, about the orbit of which other gears rotate. Also called a *stud-wheel.*

suovetaurilia (sū-ọ-vet-â-ril'i-ạ̈), *n. pl.* [L., < *sus*, pig, + *ovis*, sheep, + *taurus*, bull, + *-ilis*, neut. pl. *-ilia.*] In *Rom. antiq.*, a sacrifice offered to male deities, in which the victims were a boar, a ram, and a bull. The chief suovetaurilia were performed at the lustrum which followed the census every fifth year.

sup. An abbreviation (*a*) of *superfine*; (*b*) of *superior*; (*c*) of *superlative*; (*d*) of *supine*; (*e*) of *supplement*; (*f*) of *supra*; (*g*) of *supreme.*

Sup. Ct. An abbreviation (*a*) of *Superior Court*; (*b*) of *Supreme Court.*

super, *n.* **4.** One of the medium or middle sorts of a fleece of wool. *Hannan*, Textile Fibres of Commerce, p. 191.

super. An abbreviation (*a*) of *superior*; (*b*) of *superfine.*

superactivity (sū″pėr-ak-tiv'ị-ti), *n.* Extreme activity above that which is normal; hyperactivity.

The inhibition of the moto-neurones is on cessation of the stimulus followed by a *superactivity* in them accompanied by the discharge of impulses from them into the muscles they innervate, namely, the extensors.
Nature, Feb. 6, 1908, p. 333.

superalbal (sū-pėr-al'bạl), *a.* [L. *super*, above, + *alb*(*us*), white, + *-al*¹.] Situated in the upper portion of the white substance of the brain: noting certain veins. *Buck*, Med. Handbook, II. 258.

superalimentation (sū″pėr-al″i-men-tā'shọn), *n.* The giving of food in amount greatly exceeding that required to supply the normal waste of the tissues.

superaltar, *n.* **2.** A piece of oak wood about six inches square, having a cross on one side and the figure of a patron saint on the other. It was blessed and incased in gold or silver. It was, in the middle ages, covered with a purple pall during certain celebrations. *Maud R. Hall*, Eng. Church Needle-work, p. 39.

superambient (sū-pėr-am'bi-ẹnt), *a.* [L. *super*, above, + E. *ambient.*] Ambient or circulating above. [Rare.]

Damp soil serves to keep the *superambient* atmosphere damp. *Buck*, Med. Handbook, III. 265.

superb-dragon (sū-pėrb'drag″ọn), *n.* An Australian marine fish, *Phyllopteryx foliatus.* See ★*sea-dragon*, 3. *E. E. Morris*, Austral English.

supercalender (sū-pėr-kal'en-dėr), *v. t.* To give additional smoothness or glaze to (a fabric that has already received calendering).

A web of paper that has passed through the calenders attached to the paper-making machine is 'calendered' or 'machine-calendered.' When it is afterward passed through a gang of rapidly rotating cylinders alternately of iron and compressed paper, it is called 'super-calendered.'

supercalender (sū-pėr-kal'en-dėr), *n.* One of the rotating cylinders or rolls used in supercalendering paper. See ★*supercalender*, *v.*, and *supercalendered.*

supercapillary (sū-pėr-kap'i-lạ̄-ri), *a.* Noting passages in rocks or other solids which, if tubular, exceed .508 millimeters in diameter, and if sheet-like, .254 millimeters, and in which the ordinary laws of hydrostatics apply to the movement of water. *A. Daniell*, Textbook of Physics, p. 277.

supercarbonate (sū-pėr-kär'bọ-nāt), *a.* In reference to an alkaline carbonate, the same as *acid-carbonate* or *bicarbonate.*

supercarbonize (sū-pėr-kär'bọ-nīz), *v. t.*; pret. and pp. *supercarbonized*, ppr. *supercarbonizing.* To impregnate locally with carbon (a mass of steel) which should not elsewhere contain so high a percentage of carbon, or of carbon combined with the iron. This method is used in the case of armor-plates or other steel elements which must resist perforation, or impact, or abrasive attack on the surface exposed, but which would be inconveniently brittle if the hardening effect of a high percentage of carbon was operative all through the mass or thickness.

The plate in the course of manufacture is *supercarbonized*, that is, its face is impregnated with an additional amount of carbon, in a way similar to the well-known case-hardening process, whereby the outside face of the plate, when tempered in water, becomes intensely hard.
Sci. Amer., Dec. 12, 1903, p. 423.

supercarbureted (sū-pėr-kär'bụ-ret-ed), *p. a.* Combined with carbon in superior proportion.

supercentral (sū-pėr-sen'trạl), *a.* [L. *super*, above, + E. *central.*] Situated above the center; specifically, situated above the central sulcus of the brain. *Amer. Anthropologist*, Oct.–Dec., 1903, p. 623.—**Supercentral fissure.** See ★*fissure.*

supercerebellar (sū″pėr-ser-ẹ-bel'är), *a.* [L. *super*, above, + E. *cerebellar.*] Situated or occurring in the upper portion of the cerebellum. *Buck*, Med. Handbook, II. 249.

supercerebral (sū-pėr-ser'ẹ-bral), *a.* [L. *super*, above, + E. *cerebral.*] Situated or occurring in the upper portion of the cerebral hemispheres. *Buck*, Med. Handbook, II. 211.

Superciliary plate. Same as *superciliary shield.*

supercool (sū-pėr-köl'), *v. t.* To cool (a liquid) below its freezing-point without producing solidification. Also *overcool* and *undercool.*

The freezing point curve had been determined by Le Verrier, Le Chatelier, Campbell, and Guillet. All of these determinations had been made on cooling curves and there is considerable evidence of the effects of *supercooling.* *Jour. Phys. Chem.*, June, 1907, p. 425.

supercrust (sū'pėr-krust), *n.* [L. *super*, above, + E. *crust.*] The outer shell of the earth, consisting of sediments which have accumulated without undergoing metamorphism. *J. D. Dana*, Manual of Geol. (4th ed.), p. 441.

supercube (sū'pėr-kūb), *n.* In point-space of four dimensions, the regular supersolid whose faces are all squares.

A much better idea of the regular character of the "*super-cube*" or "eight-cell, as it is called by most writers, and of its connection with four-dimensional space can be acquired by choosing the plane of projection in such a way as to give the diagram a more symmetrical form, and by using two different stereoscopic projections instead of one. *Knowledge*, May, 1904, p. 92.

superdicrotic (sū″pėr-dī-krot'ik), *a.* Very markedly dicrotic. Also called *hyperdicrotic.*

superdistention (sū″pėr-dis-ten'shọn), *n.* Overdistention.

superenergetic (sū-pėr-en-ėr-jet'ik), *a.* Over-energetic; too energetic. [Rare.]

Dr. E. W. Scripture, in the Medical Record, May 11, 1907, describes a psychological and phonetic method of curing stuttering. He treats of *superenergetic* phonation, in which there is an excess of nervous discharge to the vocal organs, and tonic and clonic cramps at various points. *Alien. and Neurol.*, Nov., 1907, p. 495.

superenvironmental (sū″pėr-en-vī-rọn-men'tạl), *a.* [L. *super*, above, + E. *environmental.*] Being above or outside of the environment.

A broader axiom, however, applies to the general conditions of the universe which are *superenvironmental.*
Patten, Development of Eng. Thought, p. 402.

superessive (sū-pėr-es'iv), *a.* [L. *super*, above, upon, + *esse*, be, + *-ive.*] In *gram.*, noting the case expressing position *on.*

superextended (sū″pėr-eks-ten'ded), *a.* Distended beyond the normal. *Buck*, Med. Handbook, IV. 498.

superextensibility (sū″pėr-eks-ten-si-bil'i-ti), *n.* Capability of extreme extension. *Buck*, Med. Handbook, IV. 509.

superextensible (sū″pėr-eks-ten'si-bl), *a.* Capable of extreme extension. *Buck*, Med. Handbook, IV. 514.

superextension (sū″pėr-eks-ten'shọn), *n.* Extension beyond the normal line. *Buck*, Med. Handbook, IV. 496.

superfaced (sū'pėr-fāst), *a.* In *wool-manuf.*, highly finished, with a thick lustrous nap, as broadcloth. *C. Vickerman*, Woollen Spinning, p. 243.

superfatted (sū-pėr-fat'ed), *p. a.* Containing more fat than can combine with the amount of alkali present: noting certain soaps used for medicinal purposes. *Jour. Soc. Chem. Industry*, XI. 446.

superfeudation (sū″pėr-fū-dā'shọn), *n.* Same as ★*superinfeudation.*

superfissure (sū-pėr-fish'ụr), *n.* [L. *super*, above, + E. *fissure.*] A fissure of the brain resulting from the overlapping of one convolution by another. *Buck*, Med. Handbook, II. 179.

superfluent, *a.* **3.** In *geol.*, applied to a liquid which flows above something else, as fresh water upon salt at the mouth of the Amazon, or one lava-stream upon an older flow.

superfuse, *v. t.* **2.** To heat (a substance, such as a basaltic rock) far above its fusing-point, so that once in this condition it may remain long molten without cooling to solidification.—**3.** In *phys.*, to cool (a liquid) to a temperature below (its) melting-point without producing solidification; undercool.

It is generally possible to cool a liquid several degrees below its normal freezing-point without a separation of crystals, especially if it is protected from agitation, which would assist the molecules to rearrange themselves. A liquid in this state is said to be "undercooled" or "*superfused.*" *Encyc. Brit.*, XXVIII. 568.

superfusion (sū-pėr-fū'zhọn), *n.* [*superfuse* + *-ion.*] The act of superfusing or the state of being superfused. Specifically: (*a*) The state of being poured out or spread over. (*b*) The state of being heated above the fusing-point. (*c*) In *phys. chem.*, the state of a liquid which does not solidify, although cooled below the temperature at which the liquid and its solid phase are in equilibrium. An example is the cooling of water below the freezing-point without the formation of ice. See *supersaturated* ★*solution*. Also *surfusion*.

superglacial (sū-pėr-glā'shiạl), *a.* [L. *super*, above, + E. *glacial.*] Situated on or relating to the surface of a glacier; in *geol.*, of or pertaining to detritus, processes, etc., upon the surface of a glacier.

Eskers which have been formed by *superglacial* or englacial streams. *Bulletin Amer. Geog. Soc.*, XXX. 211.

superglacially (sū-pėr-glā'shiạl-i), *adv.* In a superglacial position; upon a glacier.

supergyre (sū'pėr-jīr), *n.* [L. *super*, above, + E. *gyre.*] Any cerebral convolution which overlaps another. *Buck*, Med. Handbook, II. 191.

superheat (sū'pėr-hēt), *n.* Excess of temperature of a vapor above the temperature at which it is saturated.

The economy at full load, with 64° F. *superheat*, . . . was 15·4 pounds per electrical horse power. *Engineering Mag.*, Feb., 1903, p. 756.

Supericornia (sū″pėr-i-kôr'ni-ä̤), *n. pl.* [NL., < L. *superus*, upper, + *cornu*, horn (antenna).] An old name for a series of heteropterous insects corresponding to the family *Coreidæ*, having the antennæ inserted on the upper parts of the sides of the head.

superimpose, *v. t.*—**Superimposed drainage**, in *geol.*, specifically, noting a system of drainage which has supplanted an older system, when the latter, having been extinguished, as, for example, by glacial drift, the former cuts down through the superficial deposits into the hard rocks beneath, and assumes directions without regard to the earlier system. These relations frequently occur within the region covered by the drift of the glacial epoch, and have little regard for the geological structure.

superinfeudation (sū″pėr-in-fū-dā'shọn), *n.* [L. *super*, above, + E. *infeudation.*] The creation of a new feudal estate out of another already established in feudal law.

superl. An abbreviation of *superlative*.

superlactation (sū″pėr-lak-tā'shọn), *n.* Secretion of an excessive quantity of milk.

superloreal (sū-pėr-lō'rē̤-ạl), *a.* [L. *super*, above, + E. *loreal.*] Placed above the lore. See *lore*^{4}, *n.*

superman (sū'pėr-man), *n.* [Trans. G. *uebermensch:* L. *super*, above, + E. *man.*] An imaginary superior being, the product of human evolution: conceived and vaguely characterized by Nietzsche: also used in a general sense. See the second extract.

We are left with the impression that the "satyr" or the "*superman*"—for they come to much the same thing—is an altogether sinister creation of a diseased mind. At no time is Nietzsche a Darwinian. With him it is never a struggle for life, but always for power. The love of power, however, may take strange forms, extending from the cruelty practised on others (whereof pity is a refined form) to "l'autocruauté de fakirs exaltés." The crowning development of this line of thought—if it can be called thought—is reached in the notion of a fury that has got beyond all consideration of an end, even of power. The "blond beast of prey" simply runs amuck. *Athenæum*, July 15, 1905, p. 73.

Relatively to the periods that precede, man is now in a recent epoch, prolonged as it may have been, in which a new story has been added to his nature, so that he is now a *super-man* to his ancient forebears. A new being is born out of and superposed on the old, and in a new sense the boy is father to the man, and far older. *G. S. Hall*, Adolescence, I. 47.

supermaxilla (sū″pėr-mak-sil'ä̤), *n.* The superior maxilla or upper jaw-bone.

supermystical (sū-pėr-mis'ti-kạl), *a.* Of extraordinary mystic significance.

They are as follows (the *super-mystical* numbers accentuated). *W J McGee*, in An. Rep. Bur. Amer. Ethnol., 1897–98, [p. 847.

supernally (sṳ̄-pėr'nạl-i), *adv.* In a supernal or supernatural manner; by supernormal means.

Glossolalia, singing, praying, poetizing, . . . acts all *supernally* motivated, were slowly subjected to a criticism. *G. S. Hall*, in Amer. Jour. Relig. Psychol. and Edu- [cation, May, 1904, p. 41.

supernational (sū-pėr-nash'ọn-ạl), *a.* [L. *super*, above, + E. *national.*] Above and beyond the merely national; belonging to humanity in general, not to men of any special nation.

supernatural, *n.* **2.** A supernatural being; a deity.

supernature (sū'pėr-nā″tụ̄r), *n.* [L. *super*, above, + E. *nature.*] That which is above nature; that which transcends the physical and material.

supero-anterior (sū″pe̤-rọ̄-an-tē'ri-ọr), *a.* Situated above and toward the front. *Proc. Zool. Soc. London*, 1903, p. 270.

superodorsally (sū″pe̤-rọ̄-dôr'sạl-i), *adv.* Above and toward the back: rarely used except in the case of animals which, like flounders, swim on one side. In most cases the superior side is the dorsal side. *Proc. Zool. Soc. London*, 1899, p. 1029.

supero-external (sū″pe̤-rọ̄-eks-tėr'nạl), *a.* Situated above and on the outer side. *Proc. Zool. Soc. London*, 1903, p. 269.

supero-internal (sū″pe̤-rọ̄-in-tėr'nạl), *a.* Situated above and within or toward the inner side.

superoposterior (sū″pe̤-rọ̄-pos-tē'ri-ọr), *a.* Situated above and behind. *Proc. Zool. Soc. London*, 1903, I. 270.

superordinate, *a.* **2.** In *zoöl.*, having the rank or value of a superorder; being above the rank of an order.

superorganism (sū-pėr-ôr'gạn-izm), *n.* [L. *super*, over, + E. *organism.*] In *sociol.*, a social organism. See the extract.

Many writers of late years have spoken of the social unit, the group or the nation, as an "organism." Some have further defined it as a "*superorganism*" or a "physio-psychic" organism. *D. G. Brinton*, Basis of Social Relations, p. 39.

superosculation (sū″pėr-os-kụ̄-lā'shọn), *n.* In *geom.*, the touching at more consecutive points than is usual for loci of the given order. *Science*, April 18, 1902, p. 625.

superoxid (sū-pėr-ok'sid), *n.* A term generally used in the same sense as 'peroxid,' signifying the presence of oxygen in more than normal proportion. Mendeléjeff has proposed to restrict the term 'superoxid' to compounds of the type of hydrogen dioxid, in which the oxygen atoms are assumed to be directly united to each other, thus distinguishing these from other peroxids.

superoxygenated (sū-pėr-ok'si-je-nā̤-ted), *p. a.* Containing oxygen in combination in larger proportion than is normal or than in previously known or referred-to compounds. *Amer. Chem. Jour.*, June, 1903, p. 579, note.

superpassage (sū-pėr-pas'ā̤j), *n.* Passage over or above; specifically, an overhead conduit or arrangement by which one irrigating canal or ditch is carried across over another. *H. M. Wilson*, Irrigation Engineering, p. 272.

superphosphate, *n.* **2.** (*b*) A trade-name of superphosphate of lime.—**Double superphosphate**, a trade-name of superphosphate of lime containing more than the usual proportion of soluble phosphate, made by treating the ordinary superphosphate with water, removing the undissolved calcium sulphate by filtration, and evaporating the solution, either alone or with addition of some easily acted on form of untreated phosphate. In this way as much as 80 or 90 per cent. of soluble phosphate may be secured, of course with an increase of cost, but with saving in carriage of the more concentrated material.

superradial (sū-pėr-rā'di-ạl), *a.* [L. *super*, above, + E. *radial.*] In some genera of the crinoids, such as *Haplocrinus*, where three out of five of the radial plates are transversely divided into two pieces, the upper of these pieces, to which the arm is attached.

superrostral (sū-pėr-ros'trạl), *a.* Lying above the beak or rostrum.

supersaturate, *v. t.*—**Supersaturated solution.** See ★*solution*.

supersecretion (sū″pėr-sē̤-krē'shọn), *n.* Same as *hypersecretion*.

supersedence (sū-pėr-sē'dẹns), *n.* [*supersede* + *-ence.*] The act of superseding.

supersedent (sū-pėr-sē'dẹnt), *n.* [L. *supersedens* (*-ent-*), ppr. of *supersedere*, supersede.] Any remedy the action of which on a part operates in a way to prevent or cure any morbid process in that part.

superseptal (sū-pėr-sep'tạl), *a.* [L. *super*, above, + *septum*, partition, + *-al*^{1}.] Situated above the septum: noting a brain-fissure above the tentorium cerebri.

supersession, *n.* **2.** The replacement of one thing by another.

It is not only to considerations of economy that the *supersession* of engraving by "process" is due. *Encyc. Brit.*, XXVIII. 266.

supersessive (sū-pėr-ses'iv), *a.* [L. *supersessus*, pp. of *supersedere*, forbear, omit, + *-ive.*] Superseding; rendering void.

For the supernatural, as commonly taken, denotes a cause or will outside as well as above Nature, opposed to it and *supersessive* of its laws. *Fairbairn*, Philosophy of the Christian Religion, p. 56.

supersilo (sū-pėr-sī'lō), *n.* [L. *super*, over, + E. *silo.*] A silo-cover with a deep outside rim, permitting it to sink with the settling of the silage. *Return of* [*British*] *Ensilage Commissioners* (1885), I. 6.

superspinous (sū-pėr-spī'nus), *a.* Lying above or over a spinous process.

superstandard (sū-pėr-stan'dä̤rd), *a.* Above the normal standard.—**Superstandard risk.** See ★*risk*^{1}.

supersuborder (sū″pėr-sub″ôr-dėr), *n.* In *zoöl.*, a division intermediate in grade between a suborder and an order. *R. W. Shufeldt*, in Amer. Nat., Jan., 1903, p. 33. [Rare.]

supersulphureted (sū-pėr-sul'fụ̄-ret-ed), *a.* Combined with sulphur in superior proportion.

supersulphurize (sū-pėr-sul'fụ̄-rīz), *v. t.*; pret. and pp. *supersulphurized*, ppr. *supersulphurizing*. To cause to combine with sulphur in superior, or more than usual, proportion.

supervacuation (sū″pėr-vak-ụ̄-ā'shọn), *n.* Evacuation of the bowels to an extreme degree: noting usually an intestinal flux.

supervenosity (sū″pėr-vē̤-nos'ị-ti), *n.* Excessive venous development, either local or general.

supervirulence (sū-pėr-vir'ọ̈-lẹns), *n.* Excessive and intensified virulence.

supervirulent (sū-pėr-vir'ọ̈-lẹnt), *a.* Of intensified virulence.

The immunity may be made to reach a very high degree by ultimately using cultures of intensified virulence, this "*supervirulent*" character being usually attained by the method of passage already explained. *Encyc. Brit.*, XXVI. 66.

Supervisors of election. See ★*election*.

supinate, *v.* **II.** *intrans.* To lie with the palm upward, as the hand; turn so that the palm is upward.

When we turn a screw . . . we always employ the *supinating* movement of the hand for the purpose. *Chambers' Encyclopædia*, V. 539.

suppedania (sup-ē̤-dā'ni-ä̤), *n. pl.* [NL., neut. pl. of *suppedaneus* (or LL. *suppedaneum*, a footstool), < L. *sub*, under, + *pes* (*ped-*), foot.] In *med.*, local applications made to the soles of the feet.

Suppl. An abbreviation of *supplement*.

supplement, *n.* **4.** In *alg.*, the supplement of any multiplicative combination E_m of the reference elements e_1, e_2 . . . e_n and of the mth order is that multiplicative combination E_{n-m} of the $(n-m)$th order which contains those reference elements omitted from E_m multiplied in such succession that $(E_m E_{n-m}) = 1$. The supplement of E_m is denoted by $|\,E_m$.

Supplementary determinant. See ★*determinant*.—**Supplementary twin.** See ★*twin*^{1}.

supply, *n.*—**Bureau of Supplies and Accounts.** See ★*bureau*.—**Compensation supply.** See ★*compensation*.

supply-pipe (su-plī'pīp), *n.* The pipe which conveys any fluid to the place where it is to be used, as distinguished from the discharge-, exhaust-, or drain-pipe which conducts fluid away; specifically, the pipe which takes steam to an engine, water to a house, gas to a burner, etc.

support, *n.* **11.** *pl.* In the *cloth trade*, blocking-boards or wrapping-boards.

supporter, *n.* **2** (*c*) An appliance which gives support to any part of the body, as the breasts or abdominal viscera.—**Supporter of combustion.** See ★*combustion*.

suppositor, *n.* **2** A tube with piston attachment, used for the introduction of suppositories into the rectum or vagina.

suppression, *n.* **5.** In *psychol.*, a phenomenon of binocular vision, consisting in the exclusive predominance of a single monocular image and the consequent disappearance of the other.

It may sometimes be observed that these phenomena of *suppression* do not extend to the entire image. *W. Wundt* (trans.), Human and Animal Psychol., p. 206.

suppurant (sup'ụ̄-rạnt), *n.* [L. *suppurans* (*-ant-*), ppr. of *suppurare*, form pus: see *suppurate.*] That which causes suppuration. *Buck*, Med. Handbook, II. 14.

Suppurative fever, pyemia, or any fever accompanying suppuration.

supra-acetabular (sū″prä̤-as-e-tab′ū̦-lär), *a.* Lying or situated above the acetabulum or cup-like socket for the head of the thigh-bone or femur.

supra-adoral (sū″prä̤-ad-ō′ra̤l), *a.* In echinoids or sea-urchins, situated above the adoral plates. See *adoral.*

supra-arytenoid (sū″prä-ar-i-tē′noid), *n.* A lateral process of the arytenoid cartilage, directed upward and backward. *Proc. Zool. Soc. London*, 1901, I. 284.

supra-associational (sū″prä̤-a̤-sō″ṣi-ā′sho̤n-a̤l), *a.* In *psychol.*, being above the level of association; apperceptive or conceptual.

> To assume a *supra-associational* intellectual activity . . . seems altogether unjustifiable.
> *W. Wundt* (trans.), Human and Animal Psychol., p. 345.

Suprabranchial chamber. See ★*chamber.*

supracæcal (sū-prä̤-sē′ka̤l), *a.* Lying above the cæcum or cæca. *P. Chalmers Mitchell*, in Trans. Linn. Soc., Zool., Oct., 1901, p. 188.

supracaudal (sū-prä̤-kâ′da̤l), *a.* and *n.* **I.** *a.* Lying above the tail. *Proc. Zool. Soc. London*, 1890, p. 180.

II. *n.* The hindmost horny plate on the carapace of a turtle: the 'caudal' of some authorities.

supracellular (sū-prä̤-sel′ū̦-lär), *a.* Being outside of, beyond, or not connected with, the cell.

> Evolution . . . is not only a cellular or cytological, but a *supracellular* or organic process.
> *F. A. Lucas*, in Science, June 7, 1901, p. 910.

supracerebellar (sū prä̤-ser-ē̦-bel′är), *a.* Situated on the upper surface of the cerebellum. *Buck*, Med. Handbook, II. 259.

supracerebral (sū-prä̤-ser′ē̦-bra̤l), *a.* Situated on the upper surface of the cerebral hemispheres. *Buck*, Med. Handbook, II. 259.

suprachoroid (sū-prä̤-kō′roid), *a.* Same as ★*suprachoroidal.*

suprachoroidal (sū-prä̤-kō′roi-da̤l), *a.* Situated on the outer surface of the choroid coat of the eye. *Buck*, Med. Handbook, III. 62.

supraciliary, *a.*—**Supraciliary shield,** one of the horny plates lying just above the eye and below the supraorbitals: much used in describing lizards and snakes.

II. *n.* In *herpet.*, one of the small scales which lie just above the eye and below the supraoculars. They are attached to the eyelid.

> Frontal much narrowed posteriorly, longer than frontoparietals and interparietals together, in contact with the three first supraoculars; five supraoculars, first longest; 10 or 11 *supraciliaries*, first largest.
> *Proc. Zool. Soc. London*, 1903, p. 125.

supraclavicula (sū″prä̤-kla-vik′ū̦-lä̤), *n.*; pl. *supraclaviculæ* (-lē). Same as *supraclavicle. Starks*, Synonymy of the Fish Skeleton, p. 521.

supracommissure (sū-prä̤-kom′i-ṣūr), *n.* A small commissure of the brain, crossing transversely anterior to the pineal body.

Supracondylar bridge, in *anat.*, a bar of bone, on the anterior face of the tibia, just above the tibiotarsal articulation, beneath which pass the tendons.

supracoracoid (sū-prä̤-kor′a̤-koid), *a.* Situated above the coracoid.—**Supracoracoid foramen.** See ★*foramen.*

supracotyloid (sū-prä-kot′i-loid), *a.* Situated above the cotyloid cavity of the hip-joint. *Buck*, Med. Handbook, IV. 693.

supracranial (sū-prä̤-krā′ni-a̤l), *a.* Situated on the upper surface of the cranium.

supracricoid (sū-prä̤-krī′koid), *a.* Lying above the cricoid: applied to a small cartilaginous element in the larynx of man and homologous with the procricoid of carnivores and other animals. *Jour. Roy. Micros. Soc.*, June, 1904, p. 298.

supradiaphragmatic (sū″prä̤-dī″a̤-frag-mat′ik), *a.* Situated above the diaphragm. *Buck*, Med. Handbook, I. 109.

supradorsal, *a.* **II.** *n.* The ossification from which the neural spine is developed; the eparcuale.

supraduodenal (sū′prä̤-dū-ọ-dē′na̤l), *a.* Situated above the duodenum. *Trans. Linn. Soc.*, Zool., Oct., 1901, p. 184.

supradural (sū-prä̤-dū′ra̤l), *a.* Situated above the dura mater. *Buck*, Med. Handbook, II. 250.

supra-ethmoid (sū-prä̤-eth′moid), *n.* In *fishes*, a dermal bone overlying the ethmoidal cartilage. See *ethmoid.*

supraforaminal (sū′prä̤-fọ-ram′i-na̤l), *a.* Situated above a foramen, specifically above the foramen magnum: as, the *supraforaminal* ridge.

> The *supraforaminal* ridge is but ill-defined.
> *Proc. Zool. Soc. London*, 1903, p. 259.

supraglabellar (sū″prä̤-glạ-bel′är), *a.* In *anthrop.*, relating to that region of the skull which is situated over the glabella.

supraglacial (sū-prä̤-glā′shia̤l), *a.* Same as ★*superglacial.*

supraglenoid (sū-prä̤-glē′noid), *a.* Situated above the glenoid cavity: noting a roughened tubercle of bone to which is attached the long head of the biceps muscle.

suprahepatic (sū″prä̤-hẹ-pat′ik), *a.* Situated above or on the upper surface of the liver.

supra-infundibular (sū″prä̤-in-fun-dib′ū̦-lär), *a.* Situated above the infundibulum.—**Supra-infundibular commissure.** See ★*commissure.*

suprajugular (sū-prä̤-jö′gū̦-lär), *a.* Noting a small, splint-like bone, occurring in a few species of birds, and lying on the superior side of the maxillary in the lachrymonasal fossa. It is particularly characteristic of the cormorants and snake-birds. *Proc. Zool. Soc. London*, 1898, p. 83.

supralabial, *a.* **II.** *n.* One of the series of horny plates covering the edge of the upper lip in reptiles, such as snakes and lizards. Same as *upper labial* or *superior labial:* correlated with *infralabial.* See cut under ★*shield. Biol. Bulletin*, Nov., 1904, p. 293.

supraliminal (sū-prä̤-lim′i-na̤l), *a.* **1.** In *psychophys.*, lying above the stimulus limen or differential limen; more than just noticeable.

> Fechner's own experiments with grey glasses . . . fall in strictness under a rudimentary form of the method of *supraliminal* differences.
> *E. B. Titchener*, Exper. Psychol., II. ii. 103.

2. In *psychical research*, lying above the subliminal; pertaining to or characterized by clear or normal consciousness.

> The *supraliminal* region, as Myers calls it, the classic-academic consciousness, . . . figures in his theory as only a small segment of the psychic spectrum.
> *W. James*, in Proc. Soc. Psychical Research, May, 1901, [p. 16.

supralinear (sū-prä-lin′ē̦-är), *n.* A scale-like dermal bone attached to the outer surface of the post-temporal; the supratemporal. It probably always carries a neural tunnel. *Starks*, Synonymy of the Fish Skeleton, p. 520.

supramalleolar (sū-prä̤-mal′ē̦-ō-lär), *a.* Situated above a malleolus.

supramamma (sū-prä̤-mam′ä̤), *n.* [NL.] In *anat.*, a mamma occurring between the normal mamma and the axilla. *Amer. Anthropologist*, Jan.–March, 1902, p. 172.

supramarginal, *a.* **II.** *n.* A horny plate or scale, forming part of the covering of the carapace of a turtle, interposed between the marginals and vertebrals. Found in some extinct species.

supramastoid (sū-prä̤-mas′toid), *a.* Situated above the mastoid process of the temporal bone.—**Supramastoid crest.** See ★*crest.*

supramaximal (sū-prä̤-mak′si-ma̤l), *a.* Being above or more than the maximal (temperature).

> It may be observed in this place that death at the *supramaximal* or subminimal may be due to changes of a very definite nature; but as Vines has indicated, this means very little. To say that death at the *supramaximal* is due to the coagulation of an albuminoid as suggested by Kuehne is insufficient.
> *Science*, June 23, 1905, p. 948.

suprameatal (sū″prä̤-mē̦-ā′tal), *a.* Situated above a meatus, especially the auditory meatus.—**Suprameatal process,** a projection from the skull just above the opening of the passage leading to the internal ear.—**Suprameatal tubercle,** a small projection lying just above the opening of the ear in the skull of birds. *Proc. Zool. Soc. London*, 1899, p. 15.

supramolecular (sū″prä̤-mọ-lek′ū̦-lär), *a.* Composed of an aggregation of molecules; of greater complexity than a molecule.

supranasal, *a.* **II.** *n.* In *herpet.*, a scute or scale lying just above the nasal. It is not always present. *Proc. Zool. Soc. London*, 1903, p. 125.

supranormal (sū-prä̤-nôr′ma̤l), *a.* Same as *supernormal.*

> On this showing there is nothing "*supranormal*" in "telepathy," as it is called. *Encyc. Brit.*, XXXII. 51.

supranuclear (sū-prä̤-nū′klē̦-är), *a.* Situated over or above the nucleus of the cell: opposed to ★*infranuclear. Buck*, Med. Handbook, V. 182.

supra-occipitine (sū″prä̤-ok-sip′i-tin), *n.* In *ichth.*, same as *superoccipital. Starks*, Synonymy of the Fish Skeleton, p. 510.

supra-ocular (sū-prä̤-ok′ū̦-lär), *a.* and *n.* **I.** *a.* Situated above the eyeball.

II. *n.* One of a series of scales lying above the region of the eye in reptiles. The supraoculars cover a portion of the skull while the supraciliaries are attached to the eyelid. *Proc. Zool. Soc. London*, 1903, p. 125.

supra-optimal (sū-prä̤-op′ti-ma̤l), *a.* [*supra-optim(um)* + *-al*¹.] Of or pertaining to a supra-optimum; above the optimal.

> The response [of ciliate infusoria], on coming into a region where the temperature is above or below the optimum, is by backing and turning toward a structurally defined side, followed by a movement forward. This reaction is repeated as long as an effective *supraoptimal* or suboptimal temperature continues.
> *Science*, Dec. 2, 1904, p. 751.

supra-optimum (sū-prä̤-op′ti-mum), *n.* [L. *supra*, above, + *optimum* (neut. sing.), best.] In *biol.*, a higher temperature than that which is best suited for an organism or a developing egg or seed. See *optimum.*

supra-oral (sū-prä̤-ō′ra̤l), *a.* In *ichth.*, situated just above the mouth, as a barbel.

Supra-orbital fontanelle. See ★*fontanelle.*—**Supra-orbital groove,** a semicircular depression on the superior face of the skull, above the eye, and containing a large oil gland. It is eminently characteristic of diving birds, though lacking in such forms as the cormorants, which have no external nostrils.—**Supra-orbital ledge,** in *ornith.*, the thin, overhanging portion of the cranium, just above the eye. It is well developed in the gulls.—**Supra-orbital ridge.** Same as *superciliary ridge* (which see, under *superciliary*).

suprapontile (sū-prä-pon′til), *a.* Situated above the pons Varolii.

suprapygal, *a.* **II.** *n.* A horny plate, found in some turtles, lying between the pygal, or terminal plate, and the neurals. *Annals and Mag. Nat. Hist.*, Jan., 1903, p. 116.

supraquantivalence (sū″prä̤-kwon-tiv′a̤-le̤ns), *n.* Preponderance; over-equivalence.

> Thus occupation is very especially suited to produce a *supraquantivalence* of certain ideas, but at the same time their affective color is expressed, in that momentarily the person's preponderating interest is turned to his occupation. *Alien. and Neurol.*, Feb., 1903, p. 50.

supraquantivalent (sū″prä̤-kwon-tiv′a̤-le̤nt), *a.* Preponderating; more than equivalent.

> We had previously considered as the basis of the *supraquantivalent* idea the frequent repetition, possibly intentional practice of definite trains of thought, a process, which must be recognized as of the greatest influence in the education of an individual, for which of late the apt expression of preparing the way has been employed.
> *Alien. and Neurol.*, Feb., 1903, p. 50.

Suprarenal extract, a preparation made from the suprarenal gland of the sheep or other animal, employed to control bleeding and to arrest abnormal secretion from the mucous membranes. See ★*adrenal extract.*

suprarenalin (sū-prä̤-ren′a̤-lin), *n.* [L. *supra*, above, + *renalis*, renal, + *-in*².] A trade-name for a preparation of the active principle of the adrenal glands. See ★*adrenalin* and ★*epinephrin.*

suprarenin (sū-prä̤-rē′nin), *n.* Same as ★*suprarenalin.*

suprascapular, *a.* **II.** *n.* Same as *post-temporal.*

suprascript (sū′prä̤-skript), *a.* [L. *supra*, above, + *script(um)*, pp. of *scribere*, write.] Superscript: written or printed on a line over another (word or letter): as, a *suprascript* letter.

suprasensual (sū-prä̤-sen′ṣū̦-al), *a.* [L. *supra*, above, + E. *sensual.*] **1.** Above or inaccessible to the physical senses. *F. Ratzel* (trans.), The History of Mankind, I. 41.—**2.** Extremely sensual. [Rare.]

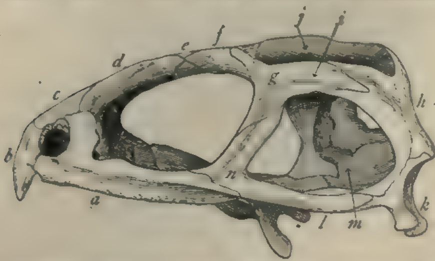
suprasensuous (sū-prä̤-sen′ṣū̦-us), *a.* Same as ★*suprasensual.*

Supraspinal vessel. See ★*vessel.*

suprasylvian (sū-prä-sil′vi-a̤n), *a.* and *n.* **I.** *a.* Situated above the Sylvian fissure.—**Suprasylvian fissure.** See ★*fissure.*

II. *n.* A suprasylvian process.—**Posterior suprasylvian.** Same as ★*postsylvian.*

supratemporal¹, *n.* **2.** A small neuromastic or dermal bone attached to the outer surface of the post-temporal in fishes. *Starks*, Synonymy of the Fish Skeleton, p. 520.—**3.** A bone of the cranium, lying back of the orbit, present in anomodont reptiles. Also called *prosquamosal*.—**Supratemporal arch**, the uppermost of the two bony arches, formed by the squamosal and postorbital, present in such a skull as that of *Hatteria* and some extinct reptiles. Its presence is the main character of the subclass *Diapsida*.—**Supratemporal fenestra, vacuity,** or **fossa**, the superior of the two openings present in such a skull as that of *Hatteria*. Correlated with *laterotemporal* or *infratemporal*.



Cranium of *Hatteria* (*Sphenodon punctatum*), showing the two temporal arches and two temporal fossæ.

(Drawn from the cranium of an old animal in which the teeth have become firmly united with the maxillary and then worn away.)

a, maxillary; *b*, premaxillary; *c*, nasal; *d*, prefrontal; *e*, frontal; *f*, postfrontal; *g*, postorbital; *h*, squamosal; *i*, supratemporal arch; *j*, supratemporal fossa; *k*, quadrate; *l*, laterotemporal or infratemporal arch; *m*, laterotemporal or infratemporal fossa; *n*, jugal.

supratemporal² (sū-prạ̈-tem′pọ-rạl), *a.* Above and exceeding earthly or temporal things; eternal.

supratonsillar (sū-prạ̈-ton′si-lạ̈r), *a.* Situated above the tonsil.

supratriangular (sū″prạ̈-trī-ang′gụ̄-lạ̈r), *a.* Situated above the triangular cell of a dragonfly's wing. *Proc. Zool. Soc. London*, 1902, p. 70.

Supratrochlear foramen. See ★*foramen*.

supraturbinal (sū-prạ̈-tėr′bi-nạl), *n.* The superior turbinate body.

supra-umbilical (sū″prạ̈-um-bil′i-kạl), *a.* Situated above the umbilicus.

supraxiphoid (sū-prạ̈-zī′foid), *a.* Lying above the xiphoid process.

Supt. An abbreviation of *superintendent*.

surahi (sö-rä′hē), *n.* [Also *surahe*; Pers. *ṣarāḥī*.] A Persian wine-bottle or carafe, usually of porcelain or pottery. *Marquand Cat.*, 1903.

suralimentation (sėr-al″i-men-tā′shọn), *n.* [F. **suralimentation*.] Same as ★*superalimentation*. *Med. Record*, July 11, 1903, p. 58.

suranal, *n.* **2.** A plate in the test of some echinoids, such as *Salenia*, lying in front of the anus.

surangular, *a.* **II.** *n.* A bone which takes part in the formation of each ramus of the lower jaw, lying on the outer side of the upper, posterior part of the jaw. It is found in vertebrates below mammals. *Amer. Nat.*, Feb., 1905, p. 61.

suranji (sö-rän′ji), *n.* [E. Ind.?] Same as ★*morindin*.

surcharge, *v. t.* **4.** To print or write officially a surcharge on the face of (a postage-stamp). See ★*surcharge, n.*, 6.

> I found the Major seated in a small room of the National Bank sorting out from a huge collection the stamps which were to be *surcharged*. For three hours I watched him, as with wonderful skill and discrimination he picked out bits of paper which were obsolete and which an accidental *surcharging* would have made of untold value, and set the whole world of collectors into a palpitating hysteria of speculation. *War's Brighter Side*, p. 436.

surcharge, *n.* **6.** Something, as a new valuation or status, officially printed on the face of a postage-stamp.

surd. I. *a.* **3.** (*b*) Containing or involving a surd: thus $[1 + (3)^{\frac{1}{2}}]^{\frac{1}{2}}$ is a surd expression but not a surd, since $1 + (3)^{\frac{1}{2}}$ is not a rational expression.

II. *n.* **1.** In *math.*: (*b*) An indicated root whose value is irrational, but whose radicand is rational, as $(2)^{\frac{1}{2}}$. A surd is *quadratic*, *cubic*, *of order n*, according as its exponent is $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{n}$.—**Similar surds**, those which are, or are reducible to, surds of the same order with their radicands exactly alike.

surdent (sėr′dent), *n.* [F. *surdent*, < *sur-* (< L. *super*), over, + *dent* (< L. *dens*), tooth.] A supernumerary tooth; one of the milk-teeth remaining after the appearance of the permanent teeth.

surdimutism (sėr-di-mū′tizm), *n.* [L. *surdus*, deaf, + *mutus*, mute, + *-ism*.] Same as *deaf-mutism*.

surdism (sėr′dizm), *n.* [L. *surdus*, deaf, + *-ism*.] Deafness in a child, of such a degree that he will probably be dumb.

surety, *n.*—**Surety for good behavior**, a pledge against future transgression of the law given with sureties by a petty offender to a magistrate.

surexcitation (sėr″ek-si-tā′shọn), *n.* [F. *surexcitation*, < L. *super*, over, + *excitare*, excite.] Excitation to an extreme degree; overexcitation.

> A *sur-excitation* of the imagination.
> *W. J. Sollas*, in Nature, Sept. 13, 1900, p. 484.

Surf barrier. See ★*barrier*.

surface, *n.*—**Acyclic surface.** See ★*acyclic*.—**Bifacial surface**, a surface with two sides or faces not running into one another, as contradistinguished from a *unifacial surface*, such as is produced by pasting together the two ends of a ribbon after a half-turn, so that from what was one side one now passes continuously to what was the other face without going over an edge.—**Bistellated surface**, a surface all the tangent planes of which pass through one or the other of two fixed points, as the surface of a cube.—**Caustic surface.** See ★*caustic*.—**Characteristic of a surface.** See ★*characteristic*.—**Clifford's surface** (unbounded, of finite extent and zero curvature), the locus of points at a constant distance from a given axis in simple elliptic Riemannian space.—**Connected surface**, a surface any two of the points of which can be joined by a continuous line which nowhere leaves the surface.—**Cuspidal point of a surface.** Same as *pinch point* (which see, under *pinch*).—**Cyclic surface.** (*b*) A surface upon which closed curves can be drawn that cannot contract to a point without leaving the surface.—**Doubly ruled surface**, in *geom.*, the ruled quadric surface.—**Energy surface.** See ★*energy*.—**Equidistantial surface.** See ★*equidistantial*.—**Homaloidal surface.** Same as *unicursal* ★*surface*. *Sylvester*.—**Index of a surface.** See ★*index*.—**Inextensible surface.** See *inextensible*.—**Isodynamic surface**, a curved surface imagined within a field of force connecting all points at which an equal force is exerted, but without regard to its direction of action.—**Möbius's surface**, an open, one-faced surface with only one edge: formed from a paper rectangle, ABCD, sufficiently long, the longer sides being AC, BD, by pasting the edge CD, after a half twist about the join of the mid-points of the sides AB, CD, so to the edge AB, that the point D coincides with A, and C with B.—**Monadelphic surface**, a simply connected surface.—**Multiply connected surface**, a surface not simply connected.—**Normal Riemann surface**, a Riemann surface stretched into the form of a sphere with handles.—**Octic surface**, a surface of the eighth degree or order.—**Osculating surface.** A surface whose equation contains *n* arbitrary parameters is said to osculate a given curve at a point, if it has there a contact of the highest order compatible with the number of arbitrary parameters. This order is at least $(n - 1)$.—**Polar reciprocal of a surface.** See ★*reciprocal*.—**Polar reciprocal surface.** Same as *polar surface* (which see, under *polar*).—**Rational surface**, a surface which can be brought into a one-to-one correspondence with a plane.—**Reflective surface**, in *phys.*, a surface, at which, on account of the difference in the indexes of refraction of the two media which it separates, reflection of light occurs.—**Surface-contact system**, a system of electric traction in which the current is transmitted to the cars through conductors on the surface of the roadway, sometimes through the rails themselves. In nearly all such systems the surface conductors are in short insulated sections and only that portion of the line which is immediately beneath the car is in circuit. Contact is automatically made with a set of concealed conductors under the surface as the car approaches and is automatically broken as the car leaves each section.—**Surface of symmetry**, in *geom.*, a surface with regard to which a figure is symmetrical.—**Topically ordinary surface.** See ★*ordinary*.—**Twist surface**, a surface on which the placing of a slender rod along the line of a plane section not only bends but twists the rod.—**Unicursal surface**, a surface of deficiency zero, the coördinates of whose points are expressible by rational functions of two parameters. Also called *homaloidal surface*. *Cayley*.—**Unifacial surface**, a surface on which it is possible to pass from one ray of a normal to the surface to the other ray without going through the surface or crossing its boundary. See *Möbius's* ★*surface*.—**Unilateral surface.** Same as *unifacial* ★*surface*.—**Warped surface**, a surface which may be generated by a straight line so moving that its consecutive positions are not coplanar.—**Weddle's quartic surface**, the locus of a seventh point through which pass quadric surfaces through six given points, when the eighth point through which these then must pass coincides with the seventh.

surface-beetle (sėr′fạ̄s-bē″tl), *n.* Any beetle of the family *Gyrinidæ*; a whirligig beetle.

surface-blow (sėr′fạ̄s-blō), *n.* A device in a steam-boiler or other inclosed vessel in which liquids are boiled under pressure, to enable the liquid to be blown off from the vessel at the surface where ebullition occurs. In steam-boilers which evaporate waters containing magnesia salts in solution, the chemical reactions under heat separate the base in the form of a hydrate which floats as a scum at or near the surface. To blow the water from the boiler from the bottom would not remove this floating material; oil from the lubrication of cylinders coming back to the boiler from the condensers and hot-well also floats, and should be blown to waste. The surface-blow is usually a pipe from the top or side of the shell, ending inside in a trumpet-shaped mouthpiece, and leading outward through the shell to drainage connections. By opening a valve in this pipe, the outrush into the mouthpiece entrains the surface water and any floating material. The trumpet shape enables the water to fall some inches in the boiler before the pipe is above the lowered water-line. Sometimes two or more such connections are used at different points of the length of the boiler. *Thurston*, Manual of Steam-Boilers, p. 446.

surface-bug (sėr′fạ̄s-bug), *n.* Any of the aquatic heteropterous insects found commonly on the surface of the water: applicable to the *Corixidæ*, *Notonectidæ*, *Nepidæ*, *Hydrometridæ*, and *Hydrobatidæ*.

surface-color, *n.* **2.** Color of bodies due to selective reflection. The ordinary colors of bodies are due to selective absorption, the light penetrating below the surface and being reflected from the interior. Light reflected from the surface is usually similar to the incident light; but in certain cases where the selective absorption is very marked there is great increase in the index of refraction for wave-lengths in the absorption-band and consequent increase in the reflecting power for these wave-lengths, and the body exhibits surface-color due to the preponderance of the rays thus strongly reflected. See ★*optical properties of metals*. *W. Watson*, Text-book of Physics, p. 564.

surface-fermentation (sėr′fạ̄s-fėr-men-tā″shọn), *n.* In *brewing*, the active fermentation, at a temperature of about 55° to 65° F., induced by the use of surface yeast. In it the greater part of the alcohol is produced, new yeast-cells are formed, and there is a rise of temperature, which must not be allowed to go too far. It is followed by the slower after-fermentation.

surface-flow (sėr′fạ̄s-flō), *n.* See ★*sheet*¹, 8.

surface-grinder (sėr′fạ̄s-grīn″dėr), *n.* A machine for producing truly plane surfaces by grinding. The piece is held firmly on a table or carriage moving on true-surface ways, and is passed back and forth under a rapidly revolving emery-wheel or other grinder. The truth of the ways on which the table moves is reproduced on the ground surface, in spite of varying hardness of the surface ground.

surface-planer (sėr′fạ̄s-plā″nėr), *n.* See *surface-plane*.

surface-plate (sėr′fạ̄s-plāt), *n.* A flat plate used by mechanics to test a surface which it is desired to make a true plane or perfectly flat.

surfacer, *n.* **2.** A rubbing- or polishing-machine used to finish the surface of a mosaic floor. It consists of a heavy horizontal disk, or rubber, supported upon a vertical shaft and operated by a small electric motor. The machine is mounted on a carriage, having rubber-tired wheels to prevent injury to the floor, and is fitted with a sand-box and water-tank, and with pipes for delivering the sand and water to the work. The machine is drawn over the floor by the operator.

3. One who produces a surface either truly plane or merely finished with a surfacing-machine.

surface-traction (sėr′fạ̄s-trak″shọn), *n.* **1.** Traction, as of street-railway cars, upon the surface of the ground: distinguished from *underground* traction.—**2.** In *math.*, the resultant, for any part of a surface bounding a portion of a body, of the stresses exerted on that portion by other portions of the body, or by portions of other bodies, in contact with it over the part of the surface.

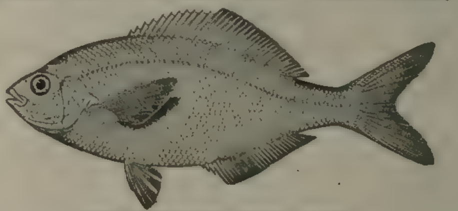
surfacing (sėr′fā-sing), *n.* **1.** In *mining*, the act of washing the 'dirt' on the surface of the ground for gold; gold-digging on the surface.

> I've been *surfacing* this good while, but quartz-reefin's the payinest game, now.
> *Mrs. Meredith*, Over the Straits, iv.

2. Wash-dirt or surface soil in which gold is supposed to be.

> They have been mopping up some rich *surfacing*.
> *Rolf Boldrewood*, Miner's Right, xv.

surf-fish, *n.*—**Common surf-fish**, *Embiotoca jacksoni*, a fish of the family *Embiotocidæ*, found from Vancouver Island to Todos Santos Bay.—**Striped surf-fish**, a name applied to *Tæniotoca lateralis*, a fish belonging to the family *Embiotocidæ*, found from Vancouver Island to San Diego.—**Wall-eyed surf-fish**, *Hyperprosopon argenteus*, a fish of the family *Embiotocidæ*, found on the Pacific coast of the United States.—**White surf-fish**, *Phanerodon furcatus*, an embiotocoid fish found on the coast of California.



White Surf-fish (*Phanerodon furcatus*).
(From Bulletin 47, U. S. Nat. Museum.)

surficial (sėr-fish′ạl), *a.* [*surface*, with form made to agree with *superficial*.] Of or pertaining to a surface; superficial; in *geol.*, relating to the phenomena of the land-surface, especially to the unconsolidated materials (drift, rock-waste) of the land-surface.

The term physiography, as generally applied in geological studies, has become associated with and is inclusive of glacial geology; and from the character of the

formations studied is sometimes referred to as superficial or *surficial* geology. The alternative use of the latter terms calls attention, also, to the fact that the field of its inquiries has not been generally regarded as extending deep into the earth's crust.
W. H. Hobbs, in Science, Oct. 23, 1903, p. 538.

The outflow from fissures may take place at any height on the mountain, and also beneath the sea level. If at the latter, the eruptions are submarine; if at the former, *surficial*, that is, subaerial.
J. D. Dana, Manual of Geol. (4th ed.), p. 272.

surficially (sėr-fish′al̤-i), *adv.* In a surficial manner. *J. D. Dana*, Manual of Geol. (4th ed.), p. 806.

surfit, *n.* and *v.* A simplified spelling of *surfeit*.

surf-perch (sėrf′pėrch), *n.* Same as *surf-fish*.

surfuse (sėr-fūz′), *v. t.*; pret. and pp. *surfused*, ppr. *surfusing*. In *phys.*, same as ⋆*superfuse*, 2.

surg. An abbreviation (*a*) of *surgeon*; (*b*) of *surgery*; (*c*) of *surgical*.

surge, *v.* **I.** *intrans.* **4.** In *elect.*, to oscillate violently: said of oscillatory rushes of current. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 746.

II. *trans.* To cause to rise and swell forth with a billowy motion.

Great organs *surged* through arches dim
Their jubilant floods in praise of him.
Lowell, A Parable, st. 4.

surge, *n.* **6.** In *elect.*, a sudden rush of current; specifically, the violent oscillations which may occur in alternating-current circuits when the conditions for resonance are fulfilled, or which may be set up in conductors by the inductive action of lightning.

surgeon, *n.*—**Blue surgeon**, *Teuthis cæruleus*, a fish of the West Indian fauna.—**Common surgeon**, *Teuthis hepatus*, a fish found from Florida to Bahia.—**Contract surgeon**, a surgeon without military rank, engaged to assist for a time in the medical department.

surgeon-major (sėr′jon̤-mā′jor̤), *n.* The senior surgeon in a regiment of the household troops of Great Britain.

surgery, *n.*—**Aseptic surgery**, surgery practised under conditions which prevent the admission of the micro-organisms of inflammation to the wound: distinguished from *antiseptic surgery*, in which germicides are used to destroy the micro-organisms already present.—**Bureau of Medicine and Surgery.** See ⋆*bureau*.—**Dental surgery**, operative dentistry.—**Major surgery**, the performance of capital operations (those requiring great skill or involving danger to life) and the treatment of very severe injuries.—**Minor surgery**, the performance of simple operations, bandaging, and other surgical procedures in the treatment of slight injuries or diseases that do not threaten life.—**Operative surgery**, the resort to cutting operations in the treatment of disease, as opposed to the use of mechanical devices, bandaging, or local applications of medicinal substances.—**Orificial surgery**, a system of surgical practice based on the assumption that many morbid states are due to reflexes originating at one of the orifices of the body, especially the anus.

Surg.-Gen. An abbreviation of *surgeon-general*.

surging, *n.* **2.** (*b*) The condition of resonance: applied to (1) electric circuits when capacity, inductance, and frequency are so related to one another that the capacity reactance neutralizes the inductive reactance and high currents may flow at destructive voltages; (2) synchronous apparatus when the electrical constants and the mechanical momentum are so related as to cause an oscillation of high amplitude and thereby an unsteady operation; (3) steam-engines when the periods of the swing of the governors are equal and the engines alternately take up and drop the load, thereby causing unsteadiness of operation of the electric machines driven by the engines. Also called *hunting*, *pumping*, and *resonance*.—**Surging of the atmosphere**, in *meteor.*, the general movement of the continental and oceanic subpermanent areas of high and low pressure to and fro about their mean positions. Such motions occupy several days, or even weeks, and determine the seasonal changes as well as the shorter periods of the weather.

Surinam cherry. (*b*) See ⋆*cherry*¹.

surinamine (sö-ri-näm′in), *n.* [*Surinam* + *-ine*².] Same as *ratanhine*.

surmise, *n.* **3.** (*a*) In *old Eng. law*, a suggestion. See *suggestion*, 5. (*b*) In *eccles. law*, an allegation in a libel.

suroxid (sėr-ok′sid), *n.* Same as ⋆*superoxid* or *peroxid*. [Rare.]

suroxidate (sėr-ok′si-dāt), *v. t.*; pret. and pp. *suroxidated*, ppr. *suroxidating*. In *chem.*, to superoxygenate or peroxidize. [Rare.]

surplus, *n.*—**Social surplus**, that part of the annual produce of nations which is in excess of requirements for maintaining the established plane of living, and may therefore be consumed in furthering progress. *Patten*, Heredity and Social Progress, p. 1.

surrender, *n.*—**Surrender of preference**, the turning into the general bankrupt estate of any assets one has received as a preferred creditor, for when the preference is voidable the creditor cannot otherwise prove his claim and share in the estate.

surrogate, *n.* **3.** Something that is substituted for another thing; something employed to serve the purpose or perform the functions of another.

It thus often happens that incomplete forms of money exist, which give the public much difficulty to classify and define. The expressions 'substitutes for money,' or '*surrogates*,' or 'representative money,' have arisen which depend for exactness upon the primary meaning assigned to the money on which they depend. The very functions of money need careful limitation.
Pop. Sci. Mo., July, 1905, p. 210.

4. Specifically, a substance used in industrial chemistry instead of some other of more or less similar properties and usually of greater value. Thus the product of the action of sulphur on colza-oil is sometimes used as a 'rubber surrogate' to mix with genuine vulcanized india-rubber.

The stearin left on the cloths in the filter press when the oil is refined is used for making butter and lard *surrogates* and candles.
U. S. Dept. Agr., The Cotton Plant, Bulletin, 1896, p. 372.

sursaturation (sėr″sat̤-ṳ̄-rā′shon̤), *n.* [F. *sursaturation*, < L. *super*, over, + *saturatio*(*n-*), saturation.] The condition of supersaturation in which a volume of gas or of space contains more vapor than is needed for complete saturation at the given temperature; a condition of unstable equilibrium as to the vapor tension.

sursum corda (sėr′sum kôr′dạ̈). [L., lit. "[lift] up [your] hearts."] In the *Rom. Cath. Ch.*, an invocation to the congregation by the priest in the mass just before the preface.

sursumduction (sėr-sum-duk′shon̤), *n.* [L. *sursum*, upward, + *ductio*(*n-*), drawing.] Upward movement of the eyeball. *Med. Record*, April 18, 1903, p. 610.

sursumversion (sėr-sum-vėr′shon̤), *n.* [L. *sursum*, upward, + *versio*(*n-*), version.] Same as ⋆*sursumduction*.

surtarbrand, *n.* See *surturbrand*. *Geog. Jour.* (R. G. S.), XIII. 488.

surtax, *n.* **2.** An additional or too great burden or strain, as on the nerves or other physical organs.

surv. An abbreviation (*a*) of *surveying* or *surveyor*; (*b*) of *surviving*.

survey, *n.*—**Biological survey.** See ⋆*biological*.—**Board of survey**, *naut.*, two or more officers appointed to survey property in order to ascertain its condition, and the cause, nature, and extent of damage. Should a merchant vessel put into port in a damaged condition, her master notifies the port authorities, and also his consul, if in a foreign port, and after noting a protest calls for an examination of his vessel and cargo in order that the damages may be appraised—this being known as a *survey*. Two shipmasters, or two other experienced men, are named to examine the hull, rigging, and hatches; and if the cargo is found in a damaged condition, two merchants familiar with the character of the cargo are named to examine it and to file a report as to whether it had been properly stowed and dunnaged. Should the vessel in question be a steamer, and the damage done affect only the boilers or machinery, the board of survey consists of at least a shipmaster and an engineer.—**Chained survey.** Same as *chain* ⋆*survey*.—**Chain survey**, a survey in which the linear measurements are made with a surveyor's chain.—**Coast survey.** (*a*) A hydrographic survey of a coast. (*b*) [*caps.*] The former name of the United States governmental bureau having charge of the national hydrographic and geodetic work. Now officially called the *United States Coast and Geodetic Survey*.—**Geological survey**, the investigation and description, usually with geological maps and sections, of a particular district, state, or country. The survey may be under private auspices or, as is usual, under a state or national government. As special branches of the government, surveys of this character are supported by nearly all the civilized nations, and are the most efficient and reliable means of acquainting the people with their mineral resources.—**Log-survey**, in hydrographic surveying, a survey in which the linear distances are determined by observing the interval of time in passing over the line to be measured by a boat or steamer whose speed is determined by log observations. *Geog. Jour.* (R. G. S.), X. 627.—**Running survey**, a continuous survey along a line, stream, or narrow strip of territory, made progressively while traveling or passing along a route or trip: usually also a rapid, and hence approximate, survey. *Geog. Jour.* (R. G. S.), XV. 202.—**Sanitary survey**, inspection of a region with a view to determine its sanitary condition and the presence or absence of factors influencing for good or ill the health of its inhabitants.

Epidemiology, bacteriology, sanitary chemistry and hydraulic engineering are called to assist in the solution of this problem, in conjunction with those physical data usually called a "*sanitary survey*."
Jour. Franklin Inst., Aug., 1905, p. 83.

Survey of a vessel. See *board of* ⋆*survey*.

surveying, *n.*—**Photographic surveying**, a method of surveying, particularly topographical surveying, in which the field data are secured or supplemented by measurements from one or more photographs of the same objects or series of points to be surveyed.

surveyor, *n.* **7.** A common name in Australia for a fish, *Serranus geometricus*.—**8.** Formerly an architect. [Eng.]

Among the four hundred persons and personages who composed the Prince's train, was a "*surveyor*" or, as we should say, an architect, named Inigo Jones.
W. J. Loftie, in Portfolio, N. S., XVI. 24.

Surveyors' compass, a surveying instrument mounted on a staff or tripod, in which sights or a telescope enable a line to be run at a desired angle with the magnetic meridian as given by a compass needle.

Surv.-Gen. An abbreviation of *surveyor-general*.

survivorship, *n.* **2.** (*b*) The probability that where several persons perished at practically the same time, as, by the same accident, one briefly outlived the others. This inference was based on medical science and, until recently, upon it was decided the disposition of rights or property affected. The rule of law now followed is that that person survives in whom the ownership vested at the time. A counterclaim must be proved. *Med. Record*, Feb. 28, 1903, p. 328.

susceptance (su-sep′tạns), *n.* In *elect.*, in alternating-current circuits, the wattless component of admittance defined as the ratio of the wattless current divided by the electromotive force. See ⋆*admittance*, 6.

susceptibility, *n.* **4.** In *med.*, an unusual predisposition toward infection or the attacks of infectious disease.

Susceptibility is very nearly allied to predisposition; it may perhaps be defined as acquired predisposition.
Lancet, April 4, 1903, p. 945.

5. In *elect.*, the ratio of the magnetization produced in a specimen of iron, or other material, to the magnetizing force.

The relation of the magnetization I to the magnetizing force H, and the ratio of I to H, which is called the *susceptibility* (*k*) of the material. *Encyc. Brit.*, XXVIII. 116.

suspender, *n.* **4.** In *Scotch law*, he who secures a suspension (which see).

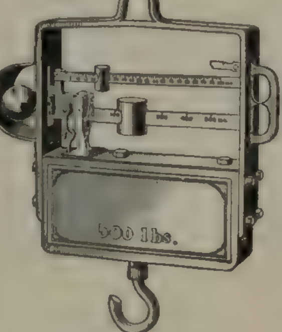
suspension, *n.* **7.** A fluid, containing bacteria or other cells, distributed in a more or less even manner.—**Eddying suspension**, suspension in the swirls or eddies of a stream of liquid.

Held floating for a time in *eddying suspension* and finally deposited. *Geog. Jour.* (R. G. S.), XVIII. 193.

suspension-link (sus-pen′shon̤-lingk), *n.* Same as ⋆*suspension-rod*.

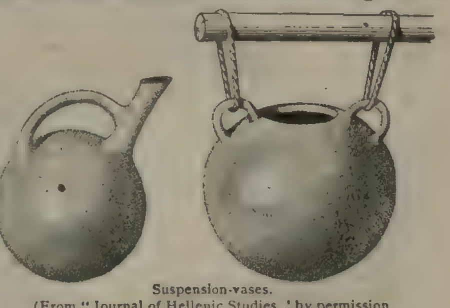
suspension-rod (sus-pen′shon̤-rod), *n.* A rod by which the weight of any fixed or movable mass is supported. Specifically: (*a*) One of the rods by which the floor or stiffening truss of a suspension-bridge is hung upon the supporting cables. (*b*) One of the rods by which the weights which close the valves of a Corliss steam-engine are connected to the arms on the valve-stems. (*c*) The link by which the weight of the slotted link is carried in the Stephenson link-motion valve-gear.

suspension-scales (sus-pen′shon̤-skālz), *n. pl.* Scales designed to be suspended from a traveling crane and used in weighing the load on the crane. They are very strong and massive and adapted to lifting and, at the same time weighing, heavy castings, machines, anchors, beams, and other parts of steel ships or buildings. They range in capacity from 500 to 40,000 pounds.



Suspension-scales.

suspension-vase (sus-pen′shon̤-vās), *n.* A vase with one or two handles so arranged that it may be hung without spilling its contents. Vases of this type are frequently found in Mycenæan excavations.



Suspension-vases.
(From "Journal of Hellenic Studies" by permission of the Council.

Suspensory bandage. (*b*) A bandage used to support any dependent part.—**Suspensory bones.** See ★*bone*1.—**Suspensory pharyngeal**, a small bone at the upper, inner end of the united branchial arches of a fish, from which run ligaments that connect the gill-arches with the cranium.

sussexite (sus′eks-īt), *n.* [*Sussex*, a county in New Jersey, + *-ite*2.] A hydrous borate of manganese, magnesium, and zinc (H(Mn,Zn,-Mg BO_4) occurring in white fibrous forms at Franklin Furnace, Sussex county, New Jersey.

sussultatory (su-sul′ta-tō̤-ri), *a.* [It. *sussultorio*, heaving, < L. *subsultare*, leap.] Exhibiting an up-and-down vibration of long amplitude, which causes a jumping movement: descriptive of a variety of earthquake shock.

Sustained working. See ★*working.*

sustainer, *n.* **2.** In *candle-making*, a little disk, usually of tin-plate or plaster of Paris, which serves to support in an upright position the wick of a night-light, and prevents its falling over when the light has nearly burned out.

Sustentacular cells. See ★*cell.*

sustoxin (sus-tok′sin), *n.* [Irreg. < L. *sus*, hog, + E. *toxin*.] A poisonous substance produced by the hog-cholera bacillus.

sutherly, suthern. Simplified spellings of *southerly, southern.*

suthron, *a.* and *n.* A simplified spelling of *southron.*

Sutton and Gull's disease. Same as *arteriosclerosis.*

suture, *n.*—**Circular suture**, a suture applied to the entire circumference of a divided organ, especially in the case of a divided intestine. *Stand. Dict.*—**Connell suture**, a form of suture for uniting two cut ends of intestine. The thread passes through all the coats of the gut and is tied in such a way that the knot lies within the lumen of the intestine.—**Czerny-Lembert suture**, a suture used for uniting the divided ends of the bowel after intestinal resection, made by stitching the serous coats of the two sections and then the mucous coats.—**Czerny suture**, a suture for uniting the divided ends of the bowel after an intestinal resection, made by passing the needle through the mucous coat only.—**Harelip suture**, a method of keeping the edges of a wound in apposition. A pin is passed through both lips of the wound, perpendicularly to the line of division, and then a thread is passed in figure-of-eight form over the free ends of the pin.—**Interrupted suture** or **stitches**, a suture in which each loop or stitch is tied separately, the thread not being continuous.—**Lembert suture**, a suture for closing a wound in the intestine. It is made by passing the needle in and out through the peritoneal and muscular coats of the bowel in a direction transverse to the long axis of the wound, across the wound, and then again in and out through the outer coats of the bowel, avoiding in all cases puncture of the mucous membrane.—**Nasopremaxillary suture.** See ★*nasopremaxillary.*—**Purse-string suture**, a suture passed in and out as a running stitch around the edge of a circular wound or opening. When passed, the two ends are drawn tight, closing the opening.—**Spheno-occipital suture**, the division between the basisphenoid and basioccipital bones. The condition of this suture, whether open or closed, is of considerable importance in determining whether a mammalian skull is adult or immature.

suturiform (sū-tṳ̄′ri-fôrm), *a.* [L. *sutura*, suture, + *forma*, form.] Resembling a suture. *Proc. Zool. Soc. London*, 1901, p. 227.

Suvio burner, Suvio heater. See ★*burner.*

s. v. An abbreviation (*b*) of the Latin *sub verbo*, under the word; (*c*) of the Latin *spiritus vini* or *vinosus*, spirit of wine; (*d*) [*caps.*] of the Latin *Sancta Virgo*, Holy Virgin; (*e*) [*caps.*] of the Latin *Sanctitas Vestra*, your Holiness; (*f*) [*caps.*] of *Sons of Veterans.*

svabite (sväb′īt), *n.* [Sw. *Svabit* (1891), named after A. von *Svab*.] A calcium arseniate from Sweden, analogous in composition to the calcium phosphate apatite, occurring in massive forms, also, rarely, in minute hexagonal prisms.

svastika, *n.* See *swastika.*

s. v. r. An abbreviation of the New Latin *spiritus vini rectificatus*, rectified spirit of wine.

s. v. t. An abbreviation of the Latin *spiritus vini tenuior*, proof-spirit.

S. W. An abbreviation (*a*) of *senior warden*; (*b*) of *southwest* or *southwestern*, specifically of *Southwestern Postal District*, London

Swab. An abbreviation of *Swabia* or *Swabian.*

swag, *v. i.* **3.** To tramp about in search of work, carrying one's swag. See *swagman*, 2. [Australia.]

> There was the solitary pedestrian, with the whole of his supplies, consisting of a blanket and other necessary articles, strapped across his shoulders — this load is called the '*swag*,' and the mode of travelling 'swagging it.'
> *T. McCombie*, Australian Sketches, p. 5, quoted in E.
> [E. Morris, Austral English.

swag-belly, *n.* **2.** The presence of a solid abdominal tumor.

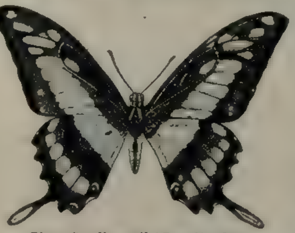
swaggie (swag′i), *n.* Same as *swagman*, 2.

swagsman (swagz′ma̤n), *n.*; pl. *swagsmen* (-men). Same as *swagman*, 2.

swallow2, *n.*—**Window swallow**, an English name for the common house-martin, *Chelidon urbica*, formerly much used.

swallow-fly (swol′ō-flī), *n.* Any one of several species of *Hippoboscidæ* which infest swallows, as *Stenopteryx hirundinis.*

swallowtail, *n.*—**Black swallowtail**, a large American papilionid butterfly, *Papilio polyxenes*, of wide distribution, whose larva feeds on the parsnip, caraway, and other umbelliferous plants. See ★*parsnip-butterfly.*—**Blue swallowtail**, an American papilionid butterfly, *Laertias philenor*, which has blackish-brown fore wings and hind wings with a bluish or greenish luster. It is widely distributed in the United States, and its larva feeds on black bindweed, Dutchman's-pipe, and Virginia snakeroot.—**Giant swallowtail**, *Papilio thoas*, a large black-and-yellow butterfly found in the southern United States, West Indies, and Central America. Its larvæ, known to the Florida orange-growers as *orange-dogs*, feed on the leaves of citrus-plants, prickly-ash, Lombardy poplar, and rue.—**Green-clouded swallowtail**, an American papilionid butterfly, *Papilio troilus*, which occurs in the Atlantic States and the Northwest Territories. Its larvæ feed on sassafras, spice-bush, and other plants.—**Zebra swallowtail**, a butterfly, *Iphiclides ajax*, a not uncommon species, greenish white with black bands, found in the Atlantic States.



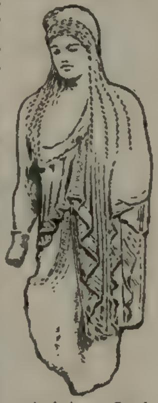
Giant Swallowtail (*Papilio thoas*).

swallow-tailed, *a.* **4.** In Greek female costume of the archaic period, noting the arrangement of the chiton or under garment, the plaits of which are so arranged that they fall in masses which resemble swallows' tails.

swamp1, *n.*—**Black-gum swamp, dark swamp.** See ★*black-gum.*—**Juniper swamp, light swamp.** See ★*juniper-swamp.*—**Swamp bay** (or **red bay**), **marl.** See ★*bay*1, ★*marl*1.—**Swamp sugar-pear.** Same as *grape-★pear* (*b*).

swamp1, *v. t.* **5.** In *lumbering*, to clear (the ground) of underbrush, fallen trees, and other obstructions preparatory to constructing a logging-road or opening out a gutter-road.—**To swamp it.** See the extract.

> Making a logging-road in the Maine woods is called "*swamping*" *it*, and they who do the work are called "swampers." I now perceived the fitness of the term. This was the most perfectly swamped of all the roads I ever saw.
> *Thoreau*, The Allegash and East Branch, in The Maine
> [Woods, p. 242.



Archaic Greek drapery. showing swallow-tailed arrangement.

swamp-cheeses (swomp′chēz″ez), *n.* Same as *honeysuckle-apple.*

swamp-clover (swomp′klō″vėr), *n.* See ★*clover.*

swamp-hawk (swomp′hâk), *n.* The New Zealand marsh-harrier, *Circus gouldi.*

swamp-hook (swomp′hu̇k), *n.* In *lumbering*, a large single hook used in handling logs, most commonly in skidding.

swampine (swom′pin), *n.* [NL. *swampina*, a former specific name, < E. *swamp* + L. *-ina*.] A pœcilioid fish, *Fundulus heteroclitus*, found on the Atlantic coast of the United States.

swamp-mallow (swomp′mal″ō), *n.* See ★*mallow.*

swamp-maple, *n.* **2.** The silver maple.—**3.** The mountain-maple.

swamp-millet (swomp′mil″et), *n.* See ★*millet*1.

swamp-mosquito (swomp′mus-kē″tō), *n.* See ★*mosquito.*

swamp-pheasant (swomp′fez″ant), *n.* The large Australian ground-cuckoo, *Centropus phasianellus*, which by its size, long tail, and spotted plumage suggests a pheasant. See ★*pheasant.*

swamp-pine, *n.* **2.** See *prickle-cone* ★*pine.*

swamp-sore (swomp′sōr), *n.* An ulcer of the leg sometimes seen in soldiers after long marching over swampy country.

swamp-turkey (swomp′tėr″ki), *n.* An Australian name for the large purple gallinule, *Porphyrio melanotus*, also known as the *swamp-hen.*

swan-hopper (swon′hop″ėr), *n.* One who hops or marks a privately-owned swan, so that its ownership can be recognized. Also *swan-upper, swan-marker.*

swan-neck (swon′nek), *a.* Bent or curved so that it somewhat resembles the S-shape of the curve of a swan's neck.

Swan's-down twill. Same as ★*cassimere-twill.*

swarm1, *n.*—**Buckwheat swarm**, in *apiculture*, a swarm of bees which issues when the buckwheat is in bloom.—**Maiden swarm.** Same as *virgin* ★*swarm.*—**Prime swarm**, a first swarm of bees; the swarm accompanied by the old queen.—**Virgin swarm**, a swarm of bees from a colony which has been a prime swarm in the same season.

swarm-catcher (swârm′kach″ėr), *n.* In *bee-keeping*, a woven-wire basket attached to a long handle, used to trap a swarm of bees which has escaped from a hive.

swarmer (swâr′mėr), *n.* **1.** One of a swarm.—**2.** Same as *swarm-spore.*

swarming-bag (swâr′ming-bag), *n.* A bag used like a ★swarming-basket.

swarming-basket (swâr′ming-bȧs″ket), *n.* A basket used for removing a swarm of bees to a new hive.

swarming-box (swâr′ming-boks), *n.* A box used like a ★swarming-basket.

swash1, *n.* **II.** *a.* See *swash-letters.*

> Printed . . . in a handsome italic font, with *swash* capitals and decorative initials.
> *Bookman*, Feb., 1906, p. 647.

swash-channel (swosh′chan″el), *n.* A channel between two sand-reefs or between a sand-reef and the mainland.

swastika, *n.* In the swastika proper the angles open to the right. In India, where the swastika has been most commonly used, and has been especially appropriated by several Buddhist sects, it is the symbol of general well-being, and may be applied to the sources of well-being, as the sun, the female generative principle, and fire. Its resemblance to certain primitive machines used to create fire make it probable that this is the origin of the symbol. The swastika is found in Tibet, China, Japan, and wherever Buddhism has gone in the Orient. It is found infrequently, if at all, in the remains of ancient Egypt, Chaldea, or Assyria. It is found throughout Europe from the earliest times until about the middle of the medieval period, possibly brought in by the Aryan migrations. In England and Scandinavia it takes the name 'fylfot' and in France, 'gammadion.' The use of the swastika was common during Mycenæan civilization in Greece, vast numbers having been found by Schliemann in the excavations at Hissarlik (the supposed site of ancient Troy). The appearance of the swastika among the aboriginal tribes of America strengthens the theory of their Asiatic origin.

> The makers and users of the *Swastika* in South and Central America and among the mound builders of the savages of North America, having all passed away before the advent of history, it is not now, and never has been, possible for us to obtain from them a description of the meaning, use or purpose for which the *Swastika* was employed by them.
> *T. Wilson*, in Smithsonian Rep. (Nat. Mus.), 1894, p. 957.

swat2 (swot), *v. i.* [Also *swot*: < *swat*3, *n.*] To work hard; toil; dig; grind. [Slang.]

> We had to *swot* rather during term. . . . Then there was the Summer term and we *swotted* more than ever.
> *E. Nesbit*, The Wouldbegoods, p. 4.

swat3 (swot), *n.* [Also *swot*: < *swat*1, sweat?] **1.** A difficult task; a hard job. [Slang.]

> I don't care for that way of writing very much. It would be an awful *swat* to keep it up.
> *E. Nesbit*, The Wouldbegoods, p. 292.

2. One who works hard; a dig; a grind. [School slang.]

swatty (swot′i), *n.* [*swat*3 + *-y*.] A soldier. [Slang.]

> A flat-faced *swatty* at Fort Johnson halted me. Now . . . for a full sized cowpuncher to be held up by a soldier is——. *H. W. Phillips*, Red Saunders, p. 4.

sway, *v. i.*—**To sway away**, *naut.*, to haul or pull so as to hoist or raise an object.—**To sway on end**, *naut.*, to raise to a perpendicular position.

sway-back (swā′bak), *n.* Excessive downward curvature of the spinal column in the dorsal region; lordosis: applied principally to horses.

sway-bar, *n.* **2.** A strong bar or pole, one of two which couple and hold in position the front and rear sleds of a logging-sled.

sway-brace (swā′brās), *n.* A diagonal bracing used to resist side- or swaying-strains.

swaybrace (swā′brās), *v. t.*; pret. and pp. *swaybraced*, ppr. *swaybracing*. To strengthen with a sway-brace.

> The two legs of the tower will be heavily *sway-braced*, and at the top they will be connected by deep lattice trusses and by a blunt arch designed to harmonize architecturally with the general treatment of the whole bridge.
> *Sci. Amer.*, Sept. 19, 1903, p. 202.

swaying (swā′ing), *n.* An act denoted by the verb 'sway': specifically, same as ★*sway-back.*

sweat, *n.* **9.** In *tobacco-manuf.* See ★*sweating,* 5.—**10.** Same as ★*chuck-luck* or ★*chucker-luck. Amer. Hoyle,* p. 458.—**Cold sweat.** (*a*) Perspiration with a sensation of chilliness. (*b*) A spontaneous fermentation of the tobacco leaf corresponding to the aging of wines. Where the ordinary sweating process has not been fully carried through this is intentionally maintained. See ★*sweating,* 5.

sweat, *v. i.* **7.** In *tobacco-manuf.,* to undergo the process of sweating. See ★*sweating.*—**To sweat out,** to win a game without taking any risks by waiting for the trifling points that fall to one's share: a term used especially in cinch and similar bidding games.

II. *trans.*—**Sweating the purser,** *naut.,* wasting the ship's stores. [Eng.]

sweat-bee (swet′bē), *n.* Any small bee of the family *Andrenidæ.*

The *sweat bees* of the genus Halictus and Andrena are very abundant and useful. At Washington, in the season of 1891, they far outnumbered all other insects [visiting pear-blossoms].
U. S. Dept. Agr., Div. Veg. Physiol. and Pathol., Bulletin 5, 1894, p. 79.

sweat-box, *n.* **3.** See the extract.

After the figs were dried they were placed in *sweat boxes* holding about 200 pounds each, where they were allowed to remain for two weeks, to pass through a sweat.
Yearbook U. S. Dept. Agr., 1900, p. 94.

sweating, *n.* **5.** Specifically, in the tobacco trade, the fermenting, in either the active or passive sense, of tobacco leaves, a process which follows that of curing or drying, and consists of further evaporation with chemical changes due, as shown by Loew, to the activity of two oxidizing enzymes. Three methods are recognized: (*a*) *Natural sweating* (or *sweat*) *in cases,* in which the material is packed in boxes and stored under cover without artificial heat, the process requiring about a year. (*b*) *Forced sweating* (or *sweat*) *in cases,* in which the tobacco is packed as before, but in which the temperature is kept at 100–110° F., the process requiring about six weeks. (*c*) *Sweating in bulk,* or *bulk-sweating,* in which the hands of leaves are laid in large piles which are repeatedly turned over during fermentation, covered only with blankets, the temperature being kept at 70–85° F.: this process also requires about six weeks. **6.** In the refining of paraffin from petroleum or bituminous shale, a process of fractional fusion in which the crude paraffin-scale in blocks is placed in a chamber heated by steam-pipes to a temperature a few degrees below the point at which the whole would melt, the more fusible part drained away, and the still solid portion afterward melted down at a higher temperature and decolorized by means of animal charcoal.

sweating-furnace (swet′ing-fėr″nās), *n.* A liquation-furnace used in metallurgy.

sweat-pad (swet′pad), *n.* A quilted pad worn under the round horse-collar to protect the horse's shoulder from injury.

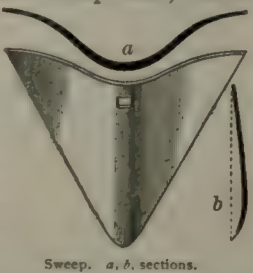
sweat-room (swet′röm), *n.* A room devoted to sweating tobacco. See ★*sweating,* 5.

swedge (swej), *v. i.* [Origin uncertain.] To depart; depart without paying; return nothing for value received: with *off.* [Sailor's slang, eastern U. S.]

"Seems kinder unneighbourly to let 'em *swedge off* like this," Salters suggested, feeling in his pockets.
"Hev ye learned French then sence last trip?" said Disko. . . .
"Let 's heave a dory over anyway."
R. Kipling, Captains Courageous, v.

Swedish clover. Same as ★*alsike.*—**Swedish cranberry.** See ★*cranberry.*—**Swedish gymnastics, movements.** See *Swedish* ★*movements.*

sweep, *v. t.* **11.** To form (a mold which has the profile made by a surface of revolution) by causing the profile, reproduced on the edge of a board, to revolve or sweep around an axis. See *sweep, n.,* 11.

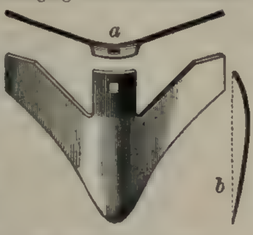


Sweep. *a, b,* sections.

sweep, *n.* **12.** (*a*) A light one-horse plow-stock equipped with a sweep blade, used in working cotton, etc. (*b*) A plow-shovel designed to destroy weeds and stir the surface of the soil between rows. It is of a triangular form. somewhat bent back at the sides, often expanded into wings (wing-sweep), sometimes to a breadth of 30 inches. The wings may be adjustable. [Southern U. S.]—**13.** In *thermodynam.,* any change in a material system, not in equilibrium, which brings it spontaneously into equilibrium; an irreversible process. Also called a *sweeping process.*—**Heel-sweep.** Same as *heel-*★*scrape.*—**Simple sweep,** in *thermodynam.,* the irreversible process by which a closed system settles into a state of thermal equilibrium.

The settling of a closed system to thermal equilibrium is called a *simple sweep.* Example.—The equilibrium of a mixture of oxygen and hydrogen in a closed vessel may be disturbed by a minute spark, and the explosion and subsequent settling of the aqueous vapor to a quiescent state without loss of heat constitute a *simple sweep.* The equilibrium of a gas confined under high pressure in one half of a two-chambered vessel may be disturbed by opening a cock which connects the two chambers, and the rush of gas into the empty chamber constitutes a *simple sweep.*
W. S. Franklin, in Science, Nov. 20, 1903, p. 647.

Steady sweep, in *thermodynam.,* an irreversible process undergone by a system subjected to a constant external disturbance incompatible with the establishment of thermal equilibrium.—**Trailing sweep,** in *thermodynam.,* an irreversible process by which a system tends toward a state of thermal equilibrium which it never reaches on account of continuously changing external conditions.—**Wing-sweep.** See definition 12 (*b*), above.



Wing-sweep. *a, b,* sections.

sweeper, *n.* **3.** One who or that which removes the scale of protoxid of iron from any plate or beam or other piece of steel or iron undergoing the process of rolling in the rolling-mill. If this scale were left on the surface of the piece, being cooler and harder than the hot metal it would be rolled into the surface at the next pass, or make a blister or pock-mark. In older practice, the scale was swept off by twig-brooms or besoms: water currents are much used with larger masses.

sweep-head (swēp′hed), *n.* The upper part or handle of a sweep. See *sweep,* 7.

Sweeping process. See ★*process.*

sweeping-table (swē′ping-tā″bl), *n.* A stationary buddle.

sweep-smelter (swēp′smel″tėr), *n.* One who collects the sweepings of precious metals from the shops where they are worked, and by melting and purification extracts the valuable residue.

sweet, *a.* **11.** In *mech.,* smooth; done without appearance of effort; easy; well-lubricated: as, a *sweet* run; a *sweet* cut.—**12.** In *mining,* free from deleterious gases.

sweetbread, *n.*—**Abdominal sweetbread,** the pancreas. See *sweetbread.*

sweet-bubby (swēt′bub″i), *n.* The sweet shrub, *Butneria florida.* See *Butneria.* [North Carolina.]

sweet-cup (swēt′kup), *n.* The fruit of any one of several species of *Passiflora,* especially *P. laurifolia* and *P. maliformis.* See *sweet calabash* and *water-lemon.*

sweeten, *v. t.* **8.** To wash (gold) with hot water after the parting process. *Phillips and Bauerman,* Elements of Metallurgy, p. 867.—**9.** See the extract.

But there 's more than engines to a ship. Every inch of her, ye 'll understand, has to be livened up and made to work wi' its neighbour—*sweetenin'* her, we call it technically.
R. Kipling, The Ship that Found Herself, in The Day's Work, p. 85.

sweet-grass, *n.* **2.** Same as *vanilla-grass.* [Northwestern U. S.]—**3.** Same as *sweet-flag.*

Sweetleaf family, the plant family ★*Symplocaceæ.*

sweetmeat, *n.*—**Gravesend sweetmeats,** a local name for shrimps. [Eng.]

sweet-roasting (swēt′rōs″ting), *n.* Same as ★*dead-roasting.*

sweetroot, *n.* **2.** The sweet-flag.

sweetsome (swēt′sum), *adv.* Sweetly; sweet. [Dial.]

She used to sing at church when she was a little gal, but I nivver h'ard her sing so *sweetsome* as she did then.
R. H. Groome, Aftermath: The Only Darter (ed. Mosher).

sweet-sucker, *n.* **2.** Same as *black-horse. Jordan and Everman,* Amer. Food and Game Fishes, p. 44.

sweet-water, *n.* **2.** In *sugar-manuf.,* exhaust-steam from the vacuum-pans which contains more or less entrained syrup.—**3.** A manufacturers' name for the aqueous solution of glycerin which is a by-product of the lime saponification of fats in preparing the fatty acids for candle-making.

swel, *v.* and *n.* A simplified spelling of *swell.*

swell, *v. t.*—**Swelled head,** self-conceit; abnormal self-esteem; 'big head.' [Slang.]

Mrs. Lane, conversing with "a great American editor," referred to what is known as the artistic temperament, whereupon he replied, "Artistic temperament! There is no such thing. It 's only another name for d—d bad manners and a *swelled head.*" "I was greatly interested," she says, "in this artless definition of the artistic temperament, and I went off deeply pondering as to what constitutes a *swelled head.* Now, *swelled head* and taking yourself seriously are much the same, only that *swelled heads* are common in all grades of society."
The Grand, Oct., 1905, p. 517.

swell-butted (swel′but″ed), *a.* Greatly enlarged at the base: applied to a tree. Also *bottle-butted* and *churn-butted.*

swelling, *n.*—**Calabar swelling,** a painless swelling about the size of a goose-egg, affecting the natives of Nigeria, which appears suddenly and disappears with equal rapidity without apparent cause.—**Giant swelling.** Same as ★*angioneurotic edema.*

swell-shark, *n.* **2.** *Catulus uter,* a California shark which has the peculiar habit of inflating its stomach with air when caught.

swerv, *v.* and *n.* A simplified spelling of *swerve.*

swet, *n.* and *v.* A simplified and former spelling of *sweat.*

swift[1], *n.*—**Whiskered swift,** *Macropteryx mystacea,* a large East Indian tree-swift having long curved white feathers on the sides of the head that suggest a mustache or whiskers.

swiften (swif′tn), *v. t.* and *i.* [*swift* + *-en.*] To make swift; become or grow swift or swifter. [Rare.]

swig[1], *v. i.* **3.** To pass through; slip along; swirl through.

And ebb of Yokohama Bay
Swigs chattering through the buoys.
R. Kipling, Rhyme of the Three Sealers, l. 8.

swill[1], *n.* **4.** Liquid in general; especially a liquid that leaks, gushes, or swills in. [Slang.]

The place was full of steam, too, from the *swill* slopping against the boiler fires.
Cutcliffe Hyne, McTodd, p. 94.

swilling-vat (swil′ing-vat), *n.* A trough, vessel, or vat in which a metal after treatment for some purpose is immersed to cleanse it, as the vat for washing plate after pickling, to be subsequently tinned.

swim[1], *v. i.* **7.** In *cricket,* to curve in the air: said of the ball. [Slang.]

swimmer, *n.* **7.** The light bag, usually cigar-shaped or fish-shaped, within an open net of cords, which incloses buoyant gas and is employed to support the machinery and crew of a dirigible balloon.

swimming-hair (swim′ing-hãr), *n.* One of the modified hairs on the legs of hydrachnid mites and certain aquatic insects.

swimming-paddle (swim′ing-pad″l), *n.* A long oar-shaped limb specially adapted for swimming, such as are found in sea-turtles and whales. They occur in their most typical form in those extinct reptiles the plesiosaurs and ichthyosaurs. *Parker and Haswell,* Zoology, II. 312.

swimming-plate, *n.* **2.** In ctenophorans, one of the combs or groups of large cilia fused at their proximal ends and arranged in meridional rows on the surface of the body. *Parker and Haswell,* Zoology, I. 200.

swine-chopped (swīn′chopt), *a.* Said of dogs in which the upper jaw protrudes beyond the lower: more commonly called *pig-jawed.*

swine-fever (swīn′fē″vėr), *n.* A term used indiscriminately in England for the two distinct diseases of swine which in the United States are separated under the names of *swine-plague* and *hog-cholera.*

swing, *v.* **I.** *intrans.* **7.** In *cricket,* to curve in the air: said of a ball. [Colloq.]—**8.** To be able to receive and operate upon, as a lathe or other tool in which the work must revolve without striking any part of the frame.—**9.** To be able to lift and transport, as a crane.

II. *trans.* **7.** To cause (a bowled ball) to curve in the air. [Colloq.]

swing, *n.* **11.** In *golf,* the manner in which the club is swung in the act of striking the ball.—**Yearly swing of the atmosphere,** the general accumulation of the atmosphere over the land in winter and over the ocean in summer as shown by changes in barometric pressure.

swing-bar (swing′bär), *n.* **1.** A bar fixed with a pivot so as to be easy of adjustment, as a bar that holds a gate or shutter in place.—**2.** A swingletree.

swing-cup (swing′kup), *n.* A porcelain wine-cup made by Chinese potters and decorated with figures of girls swinging.

swing-dingle (swing′ding″gl), *n.* In *lumbering*, a single sled with wood-shod runners and a tongue with lateral play, used in hauling logs down steep slopes on bare ground. Also called *loose-tongued sloop*.

swinge¹, *n.* **3.** The portion of a flail which falls upon the grain.

> That the threshing of oats and barley, or even of wheat, may be considerably expedited by having two *swinges* instead of one, put upon a flail.
> *T. Williamson*, Agricultural Mechanism, p. 296.

swing-faucet (swing′fâ″set), *n.* A faucet the valve of which is opened and shut by the moving of the faucet itself upon the supply-pipe in a horizontal rotary direction. When the faucet is swung inward above a basin or other receptacle, the valve opens; when it is swung back the valve closes.

swing-frame (swing′frām), *n.* A device on a roving-machine, centered upon the main driving-shaft, and sustaining the wheel or gear fixed to the bobbin driving-shaft.

swing-gate (swing′gāt), *n.* A swinging gate; specifically, a gate for drafting sheep: used in Australia. *E. E. Morris*, Austral English.

> Mr. Stangrove . . . has no more idea of a *swing-gate* than a shearing-machine.
> *Rolf Boldrewood*, Squatter's Dream, ix.

swing-hanger (swing′hang″ėr), *n.* In a car-truck, the bars which support the spring-plank and allow it to sway under the motion of the truck. See *car-truck*.

swinging-buoys (swing′ing-bois), *n. pl.* A collection of buoys placed in positions to assist the navigator or adjuster in turning a ship in a circle, this performance being known as 'swinging-ship.' It is undertaken to determine the errors of the compass on the different points.

swinging-rings (swing′ing-ringz), *n. pl.* Same as ★*flying-rings*.

swinging-valve (swing′ing-valv), *n.* A check-valve opening under pressure in one direction and closing under pressure from the other, in which the valve is hinged at one edge or side (usually the upper). When the valve hangs nearly vertical, its weight does not act to help to close it or to resist the pressure which opens it.

swinging-wheel (swing′ing-hwēl), *n.* Same as ★*sluing-gear*.

swingle-tow (swing′gl-tō), *n.* Same as *swingling-tow*.

swingle-wand (swing′gl-wond), *n.* Same as *swingle*¹, 1.

swing-rail (swing′rāl), *n.* A swinging rail. —**Swing-rail frog**, a railroad-track frog in which the stock- or line-rail is continuous and the siding-rail is in two parts, one part being free to swing sidewise over the line-rail until it meets the other part of the siding-rail. The siding-rail is raised above the line-rail and when in use carries the wheels of a car directly over the top of the line-rail. In its normal position the frog is clear of the line-rail, leaving it unbroken. The swing-rail of the frog is operated by the same mechanism that controls the switch. See *switch*, 2, and *frog*², 2.

swing-table, *n.* **2.** In *glass-manuf.*, a table on which plate-glass is cut and squared after it has been polished.

swing-team (swing′tēm), *n.* In a logging-team of six, the pair between the leaders and the butt team.

swipe, *v. t.* **3.** To snatch; steal by snatching; steal. [Slang.]

Swiss, *n.* **2.** A hireling soldier; more loosely, a hireling of any kind; a Switzer (which see).

> In the teeth of all the old mercenary *Swiss* of state; . . . in defiance of the whole embattled legion of veteran pensioners.
> *Burke*, American Taxation, p. 61.

switch, *n.* **2.** (*c*). In *elect.*, a device for opening or closing an electric circuit, for reversing the direction of the current in such a circuit, for shifting current from one branch of a circuit to another, or, in general, for making, breaking, or shifting electrical connections. Switches vary greatly in design according to the conditions to be met. In general a switch differs from a key (which is a device for the easy and rapid making or breaking of a circuit, as in telegraphic signaling) in that it is so constructed that the circuit when broken shall remain open and when made shall remain closed until the reverse operation is performed. A switch should be so constructed as to carry permanently without excessive heating the maximum current of the circuit in which it is placed, and the contacts should be of such low resistance that they will not become appreciably hot on the passage of the current. Good contact is sometimes secured by the use of a 'mercury-switch' in which the terminals of the lines to be connected are permanently attached to metallic capsules filled with mercury. When the circuit is to be closed connection between the mercury-cups is made by means of a short copper bar or link with ends bent downward so as to dip into the mercury. The volatilization of the mercury by the spark formed when the circuit is opened is a serious objection to mercury-switches and the 'knife-switch' is therefore more frequently used. It consists of a strip of copper, the knife, hinged at one end, or sometimes of two or more such knives mounted parallel to one another. The free end of the knife enters with considerable friction between the jaws of a copper clip when the circuit is to be closed, the friction serving to secure good contact between the metallic surfaces and to hold the knife in place. On high-tension circuits various devices are employed to prevent the formation of an arc when the circuit is open or to extinguish the arc when formed. One such device is the 'snap-switch,' in which, in order to make contact, a powerful spring is compressed and the switch is locked by a simple mechanism. When unlocked, the spring opens the switch with great suddenness, and the arc is of short duration. Sometimes a magnetic blow-out is used to extinguish the arc and sometimes an 'oil-break switch' is employed in which the opening of the circuit is made under oil. Automatic switches are frequently used in connection with electrical machinery. In the case of such switches the operation, whether it consist of the opening or closing of a circuit, the reversal of current, or the shifting of connections from one circuit to another, is done mechanically, either by the direct action of electromagnets or by mechanism released and set in motion by such magnets or otherwise.—**Air-break switch**, in *elect.*, any switch in which contact is made and broken in air, as distinguished from an 'oil-break switch,' in which contact occurs in oil.—**Double-break switch**, in *elect.*, a switch which, when opened, breaks the circuit, of which it forms a part, at two points instead of one.—**Double-pole switch.** Same as *double-break* ★*switch*.—**Double-throw switch**, in *elect.*, a switch so constructed as to close, at will, either of two circuits, according to the direction in which it is thrown.—**Facing-point switch**, on a double-track railroad, a switch or turnout so placed that the points of the switch or movable ends of the switch-rails point in the direction opposite to the motion of trains on that track: contrasted with *trailing-point* ★*switch*, in which the point of the switch or movable ends of the switch-rails point in the same direction as the movement of trains on that track.—**Feeder switch**, in *elect.*, a switch for opening or closing the circuit between a feeder and the bus-bars in an electric power or lighting station.—**Four-point switch**, in *elect.*, a switch which serves to make circuit through any of four lines connected to its contact points.—**Four-way switch.** Same as *four-point* ★*switch*.—**Jumping switch**, a form of self-acting switch used on mine-tracks.—**Knife-edge switch**, in *elect.*, a knife-switch. See ★*switch*, 2 (*c*).—**Mercury-switch**, in *elect.*, a switch in which the circuit is closed by immersing amalgamated metallic terminals in mercury-cups, thus insuring good contact, or in which the contacts are made between mercury and mercury. See ★*switch*, 2 (*c*).—**Multiple switch.** Same as *multiple* ★*switchboard*.—**Oil-break switch.** Same as ★*oil-switch*. See ★*switch*, 2 (*c*).—**On the switch**, by means of the electric switch: used of internal-combustion engines for motor-cars which can be started from rest by simply throwing in the switch upon the electric ignition circuit, with the spark-period adjusted so as to come late in the cycle. When the spark passes between the terminals in a compressed combustible mixture a working stroke is caused in that one cylinder, and aspiration and compression will be caused in the others, so that the motor starts without cranking by hand.

> The ability to start up a four-cylinder engine [of an automobile] *on the switch* is a great convenience, and a safeguard against damaged arms or wrists. It is not every time that a start is made that the engine is so obliging as to come into action on merely pressing over the switch.
> *Automobile Topics*, May 27, 1905, p. 482.

Plug-switch, in *elect.*, a switch in which connections are made by the insertion of metal plugs in holes between the switch-blocks, in a manner similar to that employed in many resistance-boxes.—**Reversing switch**, a switch for changing the direction of the current in an electric circuit. Reversing switches are usually arranged as in the diagram (Fig. 1), with the terminals of the line attached to *a* and *b* by changing the connection of *a* from + to –, and of *b* from – to +, the direction of the current in the circuit is reversed. Switches arranged as in Fig. 2 are also used. The points *a*, *a′* and *b*, *b′* are permanently connected as in the diagram. The switch allows simultaneous connection of *a* to + and of *b* to – or of *a′* to – and *b′* to +, thus reversing the current.—**Selector switch**, a switch used in telephone exchanges to connect automatically subscribers' lines.—**Stab-switch**, in *elect.*, a form of switch in which the poles are metal rings around the core of a hollow insulating cylinder. The circuit is closed by inserting a tapering rod of metal which makes contact with both rings.—**Swing-switch**, in *elect.*, a device used in the investigation of alternating currents for automatically making momentary circuit at an instant corresponding to any given point on the wave-curve.—**Three-point switch**, in *elect.*, a switch which serves to make circuit through any one of three lines connected to its contact-points.—**Tie-in switch**, in *elect.*, a switch for heavy currents used in central stations for connecting sets of bus-bars together.—**Tie-switch.** Same as *tie-in* ★*switch*.—**Time-switch**, in *elect.*, an automatic switch arranged so as to open or close a circuit at a given time, or to make some change in a circuit, such as the cutting out of resistance, after the lapse of a predetermined time.—**Trailing-point switch**, in *railroading*, a switch in which the switch-points, or movable points of the switch, are directed away from a coming train: contrasted with *facing-point switch*, in which the points are directed toward the train. See *switch*, 2 (*a*), and ★*crossover*, 2.—**Triple-pole switch**, in *elect.*, a switch designed for the opening or closing simultaneously of three separate circuits.—**Tumbler-switch**, in *elect.*, a switch with a metallic arm pivoted in the middle, or with two or more parallel arms thus pivoted, and making contact at either end by a rocking motion about the pivot.—**Two-point switch**, in *elect.*, a switch which serves to make circuit through either of two lines connected to its contact-points.—**Two-way switch.** Same as a *two-point* ★*switch*.

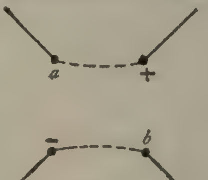


Fig. 1.

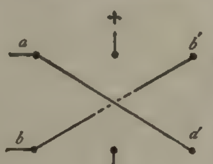

Fig. 2.

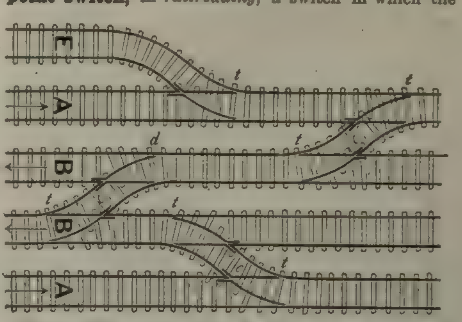

Diagram of four-track railroad with siding, showing trailing switches: *A*, *A*, tracks for east-bound trains; *B*, *B*, tracks for west-bound trains; *E*, siding; *t* - - *t*, trailing switches; *c*, *c*, *c*, crossovers connecting tracks; *d*, facing-point switch.

switch-blade (swich′blād), *n.* In *elect.*, the hinged strip of a metal in a knife-switch by the insertion of which between the jaws of the switch the circuit is completed. See ★*switch*, 2 (*c*).

switch-block (swich′blok), *n.* One of the two or more metal blocks between which the plugs of an electric switch are inserted to complete the circuit.

switchboard, *n.*—**Multiple switchboard**, in *telephony*, a form of switchboard for large exchanges which enables each operator to work independently of all the others in making any desired connection.

switch-clerk (swich′klėrk), *n.* A telephone operator. Also called *exchange clerk*.

switch-cord (swich′kôrd), *n.* In *telephony*, the flexible cord, to the ends of which metallic pegs are attached, used for making connections at the switchboard.

switch-gear (swich′gēr), *n.* **1.** The apparatus connected with or operating a switch upon an electric circuit.—**2.** The apparatus connected with or operating a railway switch, usually forming part of an interlocking mechanism.—**3.** A toothed wheel used to transmit motion or power to a switch of either of the above kinds.

switch-hole (swich′hōl), *n.* In *telephony*, one of the holes in the switchboard into which the connector pegs are inserted to bring two lines into communication.

switching, *n.* **4.** In *telephony*, the process by which the operator at the switchboard brings subscribers into communication.

switch-jack (swich′jak), *n.* The spring-jack, or switch-spring, used on telephone switchboards. It consists of a tube inserted in the switchboard and containing two springs with curved ends between which the connector peg enters.

switch-plate (swich′plāt), *n.* A form of switch apparatus for light cars such as are used in mines or factories, in which the wheels run on their flanges on a plate for a short distance at the diverging intersection of the tracks: the car can be directed by hand pressure to take one track or the other without movable point- or stub-rails, such as are required in a true switch.

switch-plug (swich′plug), *n.* A conical metal plug inserted between the blocks of certain forms of electric switch to complete the circuit. See ★*switch*, 2 (*c*).

switch-table (swich′tā″bl), *n.* A table or panel on which electric switch-terminals and -cables are secured, so that operators can be protected from risk or danger when making or breaking circuits.

> The generator *switchtable* and feeder panels may be noted in Fig. 2, while the ingenious method of protecting the attendants from the high-tension wires is illustrated in both views, at the switchboard gallery.
> *Elect. World and Engin.*, Nov. 7, 1903, p. 763.

switch-tower (swich′tou″ėr), *n.* In *railroading*, the cabin, building, or tower which contains the levers of a signaling-plant or the handles, buttons, etc., of an electric switch-system; a signal-tower (which see). See ★*signaling.*

swivel-anchor (swiv′l-ang″kor), *n.* An anchor provided with a swivel-ring in the upper end of the shank, so that the cable may have a tendency to keep itself clear and not get into kinks or turns.

swivel-frame (swiv′l-frām), *n.* 1. A frame for the axles of the truck-wheels of a locomotive which is fastened to the main frame only by a pin or swinging frame, thus allowing it to turn or swivel; the frame for a car-truck which is fastened to the car by a single bolt and hence can swivel.—2. In *swivel-weaving,* a movable frame for carrying a shuttle, attached to the front of the lay and raised and lowered by a cam, lever, or spring operated by a Jacquard.

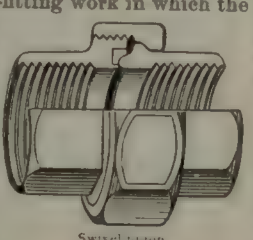
swivel-gate (swiv′l-gāt), *n.* In a gate-valve, a moving part which is secured at one edge so that it can swing across the opening through the valve on a pin or hinge, as distinguished from the moving part of such a valve which slides across the opening—the more common method.

swivel-pipe (swiv′l-pīp), *n.* A pipe so connected with another by a swivel-joint as to permit its being turned or swung around without interrupting the current of fluid flowing through it: used for fixed nozles of fire apparatus.

swivel-plate (swiv′l-plāt), *n.* A plate or surface forming a contact area, around which a second element may turn or swivel as a joint or reference area. *Thurston,* Manual of Steam-Engine, II. 672.

swivel-table (swiv′l-tā″bl), *n.* A table having a ball and socket or spherical joint with its support or pivot, so that it may have a universal motion for adjustment in any plane.

swivel-union (swiv′l-ū″nyon), *n.* A form of union-joint for pipe-fitting work in which the two halves forming the union may be screwed together in line, while the elements on the two pieces of pipe may be out of line. It is done by giving a spherical surface to the two parts which form the tight joint, while each half has an exterior spherical surface which adjusts itself to similar spherical surfaces in the parts of the nut.



Swivel union.

swivel-weaving (swiv′l-wē″ving), *n.* A method of weaving small weft-figures in a fabric by means of shuttles each one of which is driven by a rack and pinion. *T. W. Fox,* Mechanism of Weaving, p. 390.

swivel-weft (swiv′l-weft), *n.* Weft yarn used in the small shuttle in swivel-weaving. *T. W. Fox,* Mechanism of Weaving, p. 171.

sword[1], *n.* 6. (*b*) One of the standards upon which oscillates the slay or lathe of a loom. *R. Marsden,* Cotton Weaving, p. 66. (*c*) A bar or blade, in a measuring-machine, upon which cloths are rolled or wound.

sword-arm, *n.* 2. A parallel-sided arm or element on which fits a slider or block embracing the arm and bearing upon the outside edges: used to invert the construction of a slotted link, where the slider or block is within a slot, and the link embraces the block.

sword-dragonet (sōrd′drag″on-et), *n.* See ★*dragonet.*

sword-fern (sōrd′fėrn), *n.* See ★*fern*[1].

sword-grass. (*e*) In New Zealand, *Arundo conspicua.* See *New Zealand reed,* under *reed*[1]. (*f*) In Australia, *Cladium psittacorum.* See ★*cutting-grass.* (*g*) On the island of Guam, *Xiphagrostis floridula.* See ★*neti.*

sword-money (sōrd′mun″i), *n.* An early Chinese bronze coinage: so called from its form. Also called *knife-money.*

sword-stand (sōrd′stand), *n.* A receptacle for a sword; especially one intended to receive the city sword when the Lord Mayor of London attended one of the city churches. *Archæologia,* LIV. 58.

sword-weed (sōrd′wēd), *n.* On the island of Guam, the name of *Cassia occidentalis,* a low plant of the family *Cæsalpiniaceæ,* with sword-shaped pods. The seeds have been used as a substitute for coffee. See *negro coffee,* under *coffee.*

swot[2], *v.* and *n.* Same as *swat*[2].

swot[3], *n.* and *v.* See ★*swat*[3].

Syacium (sī-ā′si-um), *n.* [NL., < Gr. *σνάκιον,* dim. of *σύαξ,* a kind of fish.] A genus of flounders found chiefly in American and African waters.

sycamore, *n.*—**White sycamore.** (*b*) In Australia, *Polyscias elegans,* one of the trees called *native laurel.*

sychnodymite (sik-nod′i-mīt), *n.* [Gr. *συχνός,* many, + (*δι*)*δυμος,* twin, + *-ite*[2].] A sulphid of copper, cobalt, and nickel, $(Cu,Co,Ni)_4S_5$, occurring in steel-gray octahedral crystals, often twinned like polydymite: found in the Siegen mining district, Germany.

sycoceric (sik-ō-ser′ik), *a.* [*sycocer*(*yl*) + *-ic.*] Noting an acid, a colorless compound, $C_{17}H_{27}$-COOH, said to be formed by the oxidation of sycoceryl alcohol.

sycoceryl (sik-ọ-ser′il), *n.* [Gr. *σῦκον,* a fig, + *κηρός,* wax, + *-yl.*] In *organic chem.,* the term applied to the univalent radical $C_{18}H_{29}$, derived from sycoceryl alcohol or related compounds.—**Sycoceryl alcohol,** a colorless compound, $C_{18}H_{29}O$, contained, in combination, in the resin of *Ficus rubiginosa* from New South Wales. It is deposited in thin crystals and melts at 90° C.

sycocerylic (sik″ọ-sē-ril′ik), *a.* [*sycoceryl* + *-ic.*] Same as ★*sycoceric.*

sycoma (sī-kō′mạ̈), *n.*; pl. *sycomata* (-mạ-tạ̈). [Gr. *σύκωμα,* < *σῦκον,* a fig.] A pendulous growth from the skin having the shape of a fig.

syconoid (sī′kō-noid), *a.* [NL. *sycon* + *-oid.* See *Sycon.*] Resembling or having the characteristics of Haeckel's *Sycon* group of calcareous sponges; having no excurrent canals interpolated between the flagellated chambers and the gastral cavity: as, the *syconoid* type of canal system. Compare ★*leuconoid.*

sycose (sī′kōs), *n.* [Gr. *σῦκον,* fig, + *-ose.*] Same as *saccharin,* 2.

sycosis, *n.* 2. A fungous sore which resembles the pulp of a fig.

sydneium (sid-nē′yum), *n.* [NL., named for *Sydney,* Australia.] Same as ★*australium.*

syenite, *n.* 2. In the quantitative system of classification (see ★*rock*[1]), a proposed general field-term for a phaneric igneous rock composed of dominant feldspar of any kind, with subordinate amounts of mica, hornblende, pyroxene, or other minerals, and without a noticeable amount of quartz.—**Alkali syenite.** See *alkali* ★*granite.*—**Leucite-syenite,** a rare igneous rock, of granitoid texture and consisting of orthoclase and leucite, and of biotite, hornblende, or augite (one or several).

sylf, *n.* An amended spelling of *sylph.*

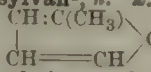
syllabic, *a.* II. *n.* See the extract.

> A determinative [attached to an ideographic sign] often indicates to the reader . . . radical change in the use of the sign. In this case the sign is said to be employed as a *syllabic.*
> *Encyc. Brit.,* XI. 800.

syllepsiology (si-lep-si-ol′ọ-ji), *n.* [Gr. *σύλληψις,* conception, pregnancy, + *-λογια,* < *λέγειν,* speak.] The physiology of conception or pregnancy.

syllepsology (sil-ep-sol′ọ-ji), *n.* Same as ★*syllepsiology.*

sylvan[1], *n.* 2. A colorless liquid compound,

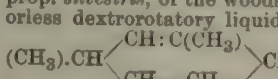


$$\left.\begin{array}{l} CH{:}C(CH_3) \\ | \\ CH{=\!=}CH \end{array}\right\rangle O$$

, produced by the distillation of pine-wood. It boils at 65° C. and quickly turns yellow in air. Also called 2- or *a-methyl furfurane.*

sylvan[2] (sil′vạn), *n.* Native tellurium.

sylvestrene (sil-ves′trēn), *n.* [L. *sylvestris,* prop. *silvestris,* of the woods, + *-ene.*] A colorless dextrorotatory liquid terpene, $H_2C{:}C$-



$$(CH_3).CH\left\langle\begin{array}{l} CH{:}C(CH_3) \\ CH_2{-}CH_2 \end{array}\right\rangle CH_2$$

, obtained from Swedish and Russian turpentine-oil. It boils at 176–177° C. Also called *active carvestrene.*

Sylvestrian[2], *n.* 2. A nun belonging to the order of the Sylvestrians in its flourishing period. See ★*Sylvestrian,* 3.—3. A member of a female order of Sylvestrians which exists in Perugia. The habit is composed of a gown, scapulary, cowl, and mantle of a dark-brown color.

II. *a.* Pertaining to the order of the Sylvestrians.

sylvical (sil′vi-kal), *a.* [Also, and properly, *silvical*; *sylvic, silvic,* + *-al*[1].] Same as *sylvic.*—**Sylvical rotation.** See ★*rotation,* 4.

sylvics (sil′viks), *n.* [Also, and properly, *silvics.* See *sylvic, a.*] 1. The science which treats of the life of trees in a forest.—2. The habit or behavior of a tree in a forest.

Sylvicultural rotation. Same as *sylvical rotation.* See ★*rotation,* 4.

sylviculturally (sil-vi-kul′tụ̈r-al-i), *adv.* In a way or manner relating to sylviculture. Also, and properly, *silviculturally.*

> *Silviculturally* of interest is the note that in a spruce stand undergrown with beech no beetles were found, although a neighboring stand was greatly damaged; the same immunity was found in a stand mixed with Tollkirsche.
> *Forestry Quart.,* Nov., 1903, p. 36.

sylvinite (sil′vi-nīt), *n.* 1. Same as *sylvine.*—2. A trade-name for an indefinite mixture of sylvine with common salt (halite).

sym. An abbreviation (*a*) of *symbol*; (*b*) of *symbolic.*

symbasic (sim-bā′sik), *a.* [*symbas*(*is*) + *-ic.*] Pertaining or relating to symbasis.

symbasis (sim′bạ-sis), *n.* [Gr. *σύν,* with, together, + *βάσις,* step (used in the sense of descent).] 1. The type of descent found in large groups of freely interbreeding organisms, such as natural species.—2. The normal biologic condition of free interbreeding among organisms of the same specific or subspecific group: distinguished on one side from too wide cross-breeding, and on the other from too narrow inbreeding. *O. F. Cook,* in Pop. Sci. Mo., May, 1903, p. 15.—3. Generation by the union of the sexual products of two individuals; cross-fertilization as distinguished from self-fertilization. [Rare.]

symbiosis, *n.*—**Mutualistic symbiosis,** that form of symbiosis in which two organisms, either plants or animals, live together in an intimate and reciprocally helpful relationship.—**Root-symbiosis.** See ★*root-symbiosis.*—**Theory of symbiosis,** the opinion that the nucleus and the cytoplasm of the cell are historically independent organisms which have found an advantage in commensalism or symbiosis: a term proposed by Watase.

symbiotical (sim-bī-ot′i-kạl), *a.* Same as *symbiotic.*

symbiotism (sim-bī′ọ-tizm), *n.* Same as *symbiosis.*

> The remarkable *symbiotism* between Algæ and Fungi.
> *Encyc. Brit.,* XXV. 272.

symblepharosis (sim-blef-ạ-rō′sis), *n.* Same as *symblepharon.*

symbol[1], *n.* 2. In *crystal.,* the *symbol of a face* is the mathematical expression defining its position with reference to the assumed crystallographic axes. The *symbols of Weiss* (1818) consist of the intercepts on the axes written out in full, as $a : nb : mc$ for the general case, the fundamental axial values being designated by a and b (lateral), and c (vertical): thus $a : \frac{3}{2}b : \infty c$ and $a : \frac{3}{2}b : 3c$ are special examples. The *Naumann symbols* (1830) are adapted from those of Weiss; the expression is abbreviated, the order is inverted, and certain distinguishing signs are added. For the examples given, Naumann's symbols are: general case, mPn (also $mP\bar{n}$, $mP\grave{n}$, etc.) or mOn (for the isometric system); further $\infty P\frac{3}{2}$, $3P\frac{3}{2}$. The *Dana symbols* (1850) are those of Naumann further abbreviated, as m-n (m-$\bar{n}$, m-$\grave{n}$ etc.), i-$\frac{3}{2}$, 3-$\frac{3}{2}$, etc. In the *Millerian system,* now generally adopted (introduced by W. H. Miller of Cambridge in 1852), the symbol consists of three indexes, which are either whole numbers or zero. For the general case, the symbol is hkl and the relation of the indexes h, k, and l to the axial intercepts is given by the full expression $\frac{1}{h}a : \frac{1}{k}b : \frac{1}{l}c$; this last can be derived from the symbol of Weiss if the coefficients are reduced to fractions having unity as their numerators. The Miller symbols for the special examples given above are 320, 321. Bravais (1866) suggested extending the Millerian system to hexagonal forms referred to four crystallographic axes; hence the *Bravais-Miller symbols* have the form $hkil$ (general), $11\bar{2}0$, $31\bar{2}1$, etc. When the indexes are included in brackets or parentheses, as {321}, (321), this expression is generally understood to be the *symbol of the form*—that is, to include all the faces which belong to it; thus the orthorhombic form {321} or (321) includes the eight faces 321, $\bar{3}21$, $\bar{3}\bar{2}1$, $3\bar{2}1$, $32\bar{1}$, $\bar{3}2\bar{1}$, $\bar{3}\bar{2}\bar{1}$, $3\bar{2}\bar{1}$: here as always in the Millerian system negative values are indicated by a sign placed over the index. The *zone-symbol,* from which the common relation of the indexes for all forms lying in the zone is deduced, is similar to that of a crystal form but is usually inclosed in square brackets: thus the zone-symbol $[11\bar{1}]$ means that for every face in the given zone the *zonal equation* $h + k = l$ holds good.—**Identity symbol.** See ★*identity.*—**Weierstrassian symbol,** the symbol p. The function

$$pu = \frac{1}{u^2} + \sum{}' \left[\frac{1}{(u-w)^2} - \frac{1}{w^2}\right]$$

is called the p-function.

symbolic, *a.* 4. Of or pertaining to ★*symbolism,* 4.

> In Daudet's latest work [La Petite paroisse, 1895] . . . here first he has adopted the *symbolic* method that . . . Ibsen also uses with such effect. The rhythmic recurrence of the little church marks every stage in the development of the theme over which it seems to preside.
> *B. W. Wells,* Modern French Lit., p. 485.

Symbolic geometry. See ★*geometry.*

symbolism, *n.* **4.** [*cap.*] The theories and practice of the Symbolist School. See ★*Symbolist, n.*, 2.

> In the series of plays which then followed he [Henrik Ibsen] anticipated the process of evolution which was to lead, both in France and Germany, through prosaic realism to an intensely imaginative treatment of everyday life, touched here and there with *symbolism*.
> *Encyc. Brit.*, XXVII. 520.

5. An abnormal mental state in which every occurrence is interpreted as a symbol of the subject's own sensations and thoughts.

symbolist, *n.* Specifically—**2.** [*cap.*] One of a group of French poets of which Verlaine was the most conspicuous member. The writers of this school undertook to express poetic sentiments indirectly by far-fetched metaphors, or even by the sound of words, and of letters, quite independently of their received signification. For instance, they asserted the suggestiveness of vowel-sounds as regards color, *o* suggesting red, according to some, while according to others it suggests blue. They also assumed a pre-established harmony between vowel-sounds and abstract ideas and between vowel-sounds and musical instruments, and dwelt much on the hidden influence which should exhale through "the inclosing envelope of the spoken word." See ★*decadent*. *B. W. Wells*, Modern French Lit., pp. 350–351.

> The Parnassians had borrowed from the plastic arts; the *Symbolists* aimed at the vagueness, mystery, suggestiveness of music, de la musique avant toute chose. The high priests of this movement were Paul Verlaine (1844–1896), remarkable much less for his theories than for his exquisite practice, in which he showed himself a lyric poet of the first order, comparable with Shelley and Heine, and not without certain affinities to the earliest French singers, such as Charles d'Orléans; and Stéphane Mallarmé (1842–1898), perhaps less remarkable for his practice than for his theory. . . . By far the most gifted of the disciples of the *Symbolist* school is M. Henri de Regnier (born 1864), the singer of Lendemains (1886), Aréthuse (1895), and Les Jeux rustiques et divins (1897).
> *Encyc. Brit.*, XXVIII. 497.

II. *a.* Of or pertaining to the Symbolists; characterized by symbolism.

> A reactionary movement, such as that which arose against the novel, appeared here also, and hence the *Symbolist* school came into being, which aimed at greater freedom, a less strict prosody, and a more musical poetry.
> *Encyc. Brit.*, XXVIII. 497.

symbolistic, *a.* **2.** Same as ★*symbolic*, 4.

> The poets, the pensive long-haired devotees of the *symbolistic* school.
> *F. B. Smith*, How Paris Amuses Itself, p. 42.

symbolophobia (sim″bọ-lọ-fō′bi-ạ̈), *n.* [NL., < Gr. *σύμβολος*, a symbol, + *-φοβία*, < *φοβεῖν*, fear.] A morbid dread lest one's every act may contain some hidden or symbolical meaning. *Baldwin*, Dict. of Philos. and Psychol., II. 296.

symcenter (sim-sen′tėr), *n.* [Irreg. < *sym-*(*metry*) + *center*.] A center of symmetry. One figure has a symcenter when, with regard to this point, every point on the figure has its symcentral point on the figure. Two figures have a symcenter when, with regard to this point, every point of each has its symcentral point on the other.

symcentral (sim-cen′tral̤), *a.* [*symcenter* + *-al*¹.] Having symcentry. *Halsted*, Elem. Synthetic Geom., p. 19.—**Symcentral figure,** a figure with a symcenter.—**Symcentral figures,** two figures capable of being so placed as to have a symcenter.—**Symcentral point** (to a given point with regard to a given symcenter), the point on the ray from the given point through the symcenter which ends the sect bisected by the symcenter.

symcentry (sim-sen′tri), *n.* [*symcenter* + *-y*³.] Symmetry with regard to a symcenter.

Symmachian, *n.* **II.** *a.* Pertaining to Symmachus, or to the sect of Ebionites supposed to have been named from him. See *Symmachian*.

symmachy (sim′a̤-ki), *n.* [*Symmach*(*us*) + *-y*³.] The doctrine of the Symmachians that the human body was created by the devil, not by God, and therefore should be subject to misuse. See *Symmachian*.

symmedian (si-mē′di-a̤n), *n.* and *a.* [*sym-* + *median*.] **I.** *n.* In a triangle, the isogonal to a median, that is, the straight line symmetrical to a median with regard to the angle-bisector.

II. *a.* In *geom.*, pertaining to symmedians.—**Symmedian point,** that point in which the three symmedians of a triangle concur.

symmelian (si-mē′li-a̤n), *a.* and *n.* [Gr. *σύν*, together, + *μέλος*, limb, + *-ian*.] **I.** *a.* Having the legs united and compounded on the middle line.

> In vertebrates such union is especially well known . . . producing the cyclopic, synotic, and *symmelian* conditions respectively.
> *W. Bateson*, Study of Variation, p. 458.

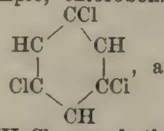
II. *n.* A vertebrate with the legs united and compounded on the middle line.

> The body of the *symmelian* ends posteriorly in an elongated lobe made up of parts of the posterior limbs compounded together by homologous parts.
> *W. Bateson*, Study of Variation, p. 459.

symmelus (sim′e-lus), *n.*; pl. *symmeli* (-lī). [NL., < Gr. *σύν*, together, + *μέλος*, limb.] A monster whose lower extremities are fused into one.

Symmetric equation. See ★*equation*.

symmetrical, *a.* **6.** In *organic chem.*, noting compounds which contain atoms or groups at equal relative intervals in the molecule: thus, for example, chlorobenzene, which has the formula



, and ethylene chlorid, $ClCH_2.CH_2Cl$, are both symmetrical compounds.

symmetry, *n.* **6.** In modern crystallography crystals are not only referred to certain systems (see *crystallography*) according to the relative lengths and inclinations of their assumed axes, but they are also further divided into classes, or groups, according to the kind and number of symmetry elements they possess. The *symmetry elements* are plane symmetry, axial symmetry, and centrosymmetry. A crystal has *plane symmetry*, or is symmetrical with reference to a certain plane, when every face, edge, and solid angle has a like face, edge, and solid angle similarly situated on the opposite side of this plane; or, in other words, when this plane divides the crystal into halves each of which is the mirror image of the other. A cube of galena has three like planes of symmetry parallel to and midway between each pair of opposite faces; it has also six other planes of symmetry, like among themselves, passing through each pair of opposite edges. A crystal has *axial symmetry*, or is symmetrical with reference to a certain line as an axis when the faces, edges, and solid angles are similarly placed about this line so that if the crystal be revolved through a certain angle about this axis all its parts again occupy the same position in space; this angle must be either one half (180°), one third (120°), one fourth (90°), or one sixth (60°) of a complete revolution. If the angle is 180°, or the crystal repeats itself twice in a complete revolution, it has *twofold* or *binary* symmetry and the axis is called a *dyad axis*; if 120°, or the crystal repeats itself three times, the symmetry is *threefold* or *ternary* and the axis is a *triad axis*; if 90°, or the crystal repeats itself four times, the symmetry is *fourfold*, *quaternary*, or *tetragonal*, and the axis is a *tetrad axis*; if 60°, or the crystal repeats itself six times, the symmetry is *sixfold* and the axis is a *hexad axis*. As already implied, fivefold symmetry, corresponding to a revolution of 72° about a *heptad axis*, is impossible among crystals. Symmetry with reference to a dyad axis is further distinguished as *digonal* or *di-digonal*, according to whether one pair or two pairs of like symmetry planes intersect in it. Similarly the symmetry with reference to a triad axis may be *trigonal* or *ditrigonal*, according to whether one or two sets of three like symmetry planes intersect in it; *tetragonal* and *ditetragonal* symmetry with reference to a tetrad axis, also *hexagonal* and *dihexagonal* symmetry with reference to a hexad axis, are similarly distinguished. Further, axial symmetry is sometimes distinguished (H. A. Miers) as polar, alternating, holoaxial, and equatorial. It is *polar* (also called *hemimorphic*, or *acleistous* (W. J. Lewis)) when there is no plane of symmetry normal to the symmetry axis. It is *alternating* when each pair of faces at an extremity of a crystal may be brought symmetrically above a similar pair at the other by a revolution of 60°, and yet the horizontal plane is not a symmetry plane. It is *holoaxial* when all the possible axes of symmetry are present but no planes of symmetry. It is *equatorial* if a plane of symmetry is normal to the axis of symmetry. Still further, a symmetry axis which is the only one of its kind, and one in which two or more symmetry planes intersect, is called a *principal axis* and a symmetry plane normal to it is a *principal plane*. A crystal has *centrosymmetry* when its faces, edges, and solid angles are symmetrical with reference to a central point; in other words, when every point on the surface of it has a similar point at an equal distance and on the opposite side from the center; this is true of ordinary triclinic crystals, as those of axinite. Entire want of symmetry, or *asymmetry*, is characteristic of one class of crystals only, belonging to the triclinic system. *Symmetry classes* or *symmetry groups*. Theoretical discussion has shown that all the possible types of crystals are included in thirty-two classes or groups; of these, twenty-three are represented among crystallized minerals and six more among crystallized artificial salts. As shown below, two of the symmetry groups belong to the triclinic system, three to the monoclinic system, three to the orthorhombic system, seven to the trigonal division of the hexagonal system (sometimes called the *trigonal system*), five to the hexagonal division (the hexagonal system proper), seven to the tetragonal system, and five to the isometric system. The thirty-two symmetry classes have been differently named by different authors. One method is to name each class after that form in it which has the general symbol (*hkl*), after Miller (see ★*symbol*¹, 2), as the hexoctahedral class of the isometric system; another method is to name each class after some prominent mineral species belonging to it, as the *galena class* or *galena type*. That class under each system which has the highest degree of symmetry and consequently the maximum number of faces belonging to a given form is often called the *holosymmetric* (or *normal*) *class* ('holosymmetric' here corresponds to the term 'holohedral' formerly in use). Each of the other classes of the system has a special grade of symmetry peculiar to itself and lower than that of the holosymmetric class, and, in consequence, it is also characterized by one or more peculiar types of crystal forms having either one half or one quarter of the faces belonging to the form having the same symbol in the holosymmetric (holohedral) class: hence these classes and the forms belonging to them were formerly called respectively *hemihedral* and *tetartohedral*, or in general *merohedral*. These terms are now but little used. The symmetry elements characteristic of each of the thirty-two symmetry classes are discussed in modern treatises on crystallography. In the following list the usual names of the classes are given, the classes being arranged, in general, in rising order, as to symmetry. *Triclinic system.* 1. Pediad, or asymmetric class; example, calcium hyposulphite (no representative among minerals). 2. Pinacoidal class (also normal); ex., axinite. *Monoclinic system.* 3. Domatic or clinohedral (also called gonioid); ex., clinohedrite. 4. Sphenoidal or hemimorphic; ex., tartaric acid. 5. Prismatic (also called normal and plinthoid); ex., gypsum. *Orthorhombic system.* 6. Bisphenoidal (also sphenoidal); ex., epsomite. 7. Pyramidal or hemimorphic (also acleistous pyramidal); ex., calamine. 8. Bipyramidal (normal); ex., barite. *Hexagonal system, trigonal division* (also called *trigonal system*). 9. Trigonal-pyramidal (acleistous trigonal, ogdohedral); ex., sodium periodate. 10. Trigonal trapezohedral (trapezohedral); ex., quartz. 11. Trigonal bipyramidal; no ex. 12. Ditrigonal-pyramidal (hemimorphic, acleistous ditrigonal); ex., tourmaline. 13. Ditrigonal bipyramidal (trigonotype); no ex. 14. Trigonal rhombohedral (rhombohedral, trirhombohedral, diplohedral trigonal); ex., dioptase. 15. Ditrigonal scalenohedral (scalenohedral, rhombohedral); ex., calcite. *Hexagonal system, hexagonal division.* 16. Hexagonal pyramidal (acleistous hexagonal, pyramidal hemimorphic); ex., nephelite. 17. Hexagonal trapezohedral (trapezohedral); ex., barium stibiotartrate and potassium nitrate. 18. Hexagonal bipyramidal (diplohedral hexagonal, pyramidal, tripyramidal); ex., apatite. 19. Dihexagonal pyramidal (acleistous dihexagonal, hemimorphic); ex., greenockite. 20. Dihexagonal bipyramidal (diplohedral dihexagonal, normal); ex., beryl. *Tetragonal system.* 21. Pyramidal (acleistous pyramidal, pyramidal hemimorphic); ex., wulfenite. 22. Bisphenoidal; no ex. 23. Scalenohedral (sphenoidal); ex., chalcopyrite. 24. Trapezohedral; ex., strychnine sulphate. 25. Tetragonal pyramidal (diplohedral tetragonal, pyramidal); ex., scheelite. 26. Ditetragonal, pyramidal (acleistous ditetragonal, hemimorphic); ex., iodosuccinimide. 27. Ditetragonal bipyramidal (diplohedral ditetragonal, normal); ex., zircon. *Isometric system.* 28. Tetrahedral pentagonal dodecahedral (tetrahedral tetartohedral); ex., ullmannite. 29. Pentagonal iscositetrahedral (plagihedral); ex., cuprite. 30. Diploidal (dyakisdodecahedral, pyritohedral); ex., pyrite. 31. Hexakistetrahedral (tetrahedral); ex., tetrahedrite. 32. Hexoctohedral (normal); ex., galena.—**Axial symmetry.** See ★*axial*.—**Central symmetry.** See ★*central*, 1.—**Cyclic symmetry,** in *alg.*, with respect to certain letters arranged in a given order, the property of being transformed into an identically equal expression when the first of these letters is replaced by the second, the second by the third, and so on, and the last by the first.—**Diagonal symmetry,** in diatoms, a condition of the valves in which the torsion amounts to 180°.—**Inverse symmetry,** in an individual organism, a race, or a species, a system of symmetry which is a mirror-image or reversed copy of that which is characteristic of the group that it represents. Læotropism in dexiotropic molluscan shells is the most familiar illustration of inverse symmetry.—**Major symmetry,** symmetry which includes all the parts of an organism in a single system.

> In Radial series, the *Major Symmetry* is built up by radial divisions of the first kind, producing segments whose adjacent parts are homologous, and related to each other as images. *W. Bateson*, Study of Variation, p. 89.

Minor symmetry, the sort of symmetry or merism in living bodies which is completed in a part of the body, such as the bilateral symmetry of one of the arms of a starfish.

> Patterns which are completed in the several organs or parts will be referred to as *Minor Symmetries*.
> *W. Bateson*, Study of Variation, p. 21.

Primary system of symmetry, the normal system of symmetry in an organism.

> [The] way in which such a Secondary system is related to the normal or *Primary system of Symmetry* of the body from which they spring, constitutes an instructive chapter in the study of Meristic Variation.
> *W. Bateson*, Study of Variation, p. 90.

Radius of symmetry. See ★*radius*.—**Secondary system of symmetry,** the abnormal repetition of parts in such a way that they lie outside the normal system of symmetry and are unbalanced by any parts within it.

> It will be shewn that such extra parts generally, if not always, make up a *Secondary system of Symmetry* in themselves. *W. Bateson*, Study of Variation, p. 90.

Surface of symmetry. See ★*surface*.—**Symmetry as to a plane,** when a sect from any point of the figure, if perpendicular to this plane and bisected by it, ends on the figure.

symmorph (sim′môrf), *n.* A character standing for the same notion as another but different in form.

sympathectomy (sim-pa̤-thek′tọ-mi), *n.* [Irreg. < *sympath*(*etic*) + Gr. *ἐκτομή*, excision.] Removal by a surgical operation of a section of the sympathetic nerve. *Med. Record*, May 30, 1903, p. 875.

sympathetectomy (sim-path-e-tek′tọ-mi), *n.* Same as ★*sympathectomy*.

> If *sympathetectomy* relieves intraocular tension, it does, as he asserts, through its influence on the circulation in the choroid and ciliary process, and the same may be said of iridectomy, which does not relieve tension immediately, showing that its influence is on the intraocular circulation. *Med. Record*, Aug. 3, 1907, p. 196.

Sympathetic strike. See ★*strike*.

sympathicectomy (sim″pa-thi-sek′tō-mi), *n.* [NL. *sympathicus*, sympathetic, + Gr. ἐκτομή, excision.] Same as ★*sympathectomy*. *Nature*, Dec. 11, 1902, p. 144.

sympathism (sim′pa-thizm), *n.* [*sympath*(*y*) + *-ism.*] An assumed occult influence of one mind upon another, inducing similarity of sensations and of emotions.

sympathy, *n.* – **Law of sympathy.** See ★*law*1.—**Organic sympathy,** in *psychol.*, sympathy as an inherited organic manifestation: opposed to *reflective* ★*sympathy*.

> The quick appearance of violent organic changes in the child, . . . the lack of any sufficient mental development, at the period when these reactions occur, to support a real sympathy of reflection,—all these indications serve to justify the opinion that we are dealing . . . with an inherited organic manifestation. . . . There is . . . an *organic sympathy* as well as a reflective sympathy.
>
> *J. M. Baldwin*, Social and Ethical Interpretations, p. [221.

Reflective sympathy, in *psychol.*, a form of sympathy which results from the growth of reflection; a social sympathy, conditioned upon the rise of the notion of self: opposed to *organic* ★*sympathy*.

> In organic sympathy, the relation is a matter of organic reaction due to natural selection, we may suppose; *reflective sympathy* reaffirms the social value of the reaction, utilizes it, and in discovering the relations of persons for itself, in a reflective and critical way, goes on to refine the reactions and embody them in the institutions of social life.
>
> *J. M. Baldwin*, Social and Ethical Interpretations, p. [224.

sympatric (sim-pat′rik), *a.* [*sympatr*(*y*) + *-ic.*] Of, pertaining to, or of the nature of, sympatry. See the extract under ★*sympatry*.

sympatry (sim-pat′ri), *n.* [Gr. σύν, with, together, + πάτρα, fatherland, native country.] See the extract.

> Finally there is a geographical distribution, of the utmost importance in the modification and origin of species and sub-species. Forms found together in certain geographical areas may be called Sympatric (συν, together; πατρα, native country). The occurrence of forms together may be termed *Sympatry*, and the discontinuous distribution of forms Asympatry.
>
> *Poulton*, Essays on Evolution, 1889–1907, p. 62.

Sympetalæ (sim-pet′a-lē), *n. pl.* [NL. (Alexander Braun, 1864). < Gr. σύν, with, together, + πέταλον, leaf, petal, + *-æ.*] A division of dicotyledonous plants embracing all those having a double floral envelop (calyx and corolla) with the parts of the inner (corolla) united, at least at the base. It is therefore coextensive with the *Metachlamydeæ*, because that series, unlike the series *Archichlamydeæ*, is not further subdivided, but it has a lower taxonomic rank, namely, that of a division. See ★*Metachlamydeæ* and *Gamopetalæ*.

symphilism (sim′fi-lizm), *n.* Same as ★*symphily*. *Nature*, Feb. 12, 1903, p. 351.

symphilous (sim′fi-lus), *a.* [Gr. σύν, together, + φίλος, friendly (see ★*symphily*), + *-ous.*] Of or pertaining to symphily. *Nature*, Feb. 12, 1903, p. 351.

symphily (sim′fi-li), *n.* [Gr. συμφιλία, mutual friendship, a false reading for συμφυλία (σύν, together, + φίλος, friendly), accordance, agreement, < σύμφυλος, of the same stock, cognate). See ★*symphilous*.] The occurrence in ant colonies of true guests which are tended by the ants and which usually give out a secretion of which the ants are fond. *Cambridge Nat. Hist.*, VI. 183.

symphonance (sim′fō-nans), *n.* [Gr. σύν, together, + φωνή, voice, + *-ance.*] Electric resonance. [Rare.]

symphonesis (sim-fō-nē′sis), *n.* [NL., < Gr. συμφώνησις, agreement, orig. agreement in sound, < συμφωνεῖν, agree, agree in sound: see *symphony*.] The 'ding-dong,' or onamatopœic, theory of language. *A. J. Ellis*, Philolog. Soc., 1872.

symphonetic (sim-fō-net′ik), *a.* [*symphonesis* (*-et-*) + *-ic.*] Pertaining to or exhibiting symphonesis.

symphony, *n.*—**Pastoral symphony,** in *music*, an instrumental movement, introduced into oratorios and cantatas dealing with the nativity of Jesus (as in Handel's "Messiah"), intended to suggest (the watch of the shepherds.—**Toy symphony,** a musical work like a symphony intended to be played on miniature or toy instruments. The best-known example was composed by Haydn in 1788.

symphorol (sim′fō-rol), *n.* [Gr. σύμφορος, beneficial, useful, + *-ol.*] A trade-name of sodium-caffein sulphonate. It is a colorless, odorless, bitter, pulverulent compound, and is used in medicine as a diuretic.

symphorol-lithium (sim′fō-rol-lith″i-um), *n.* A trade-name of lithium-caffein sulphonate. It is a colorless, odorless, bitter compound, and is used in medicine as a diuretic.

symphorol-sodium (sim′fō-rol-sō″di-um), *n.* A trade-name, same as ★*symphorol*.

symphorol-strontium (sim′fō-rol-stron″shi-um), *n.* A trade-name of strontium-caffein sulphonate. It is a colorless, odorless, bitter, pulverulent compound, and is used in medicine as a diuretic.

symphrase (sim′frāz), *n.* [Gr. σύν, together, + φράσις, speaking.] A word which, in origin or effect, is an agglutinated phrase or sentence; a word-sentence.

> The principles or canons governing the number, kind, and position of notional stems in *symphrases* or word-sentences. *Smithsonian Rep.*, 1893, p. 41.

symphrattic (sim-frat′ik), *a.* [*symphratt*(*ism*) + *-ic.*] Produced by pressure: a name suggested by A. W. Grabau for the regionally metamorphosed rocks.

> Dynamic or regional or pressure metamorphism (Druck metamorphose) i.e. symphrattism, resulting in the production of *symphrattic* rocks.
>
> *Amer. Geol.*, April, 1904, p. 238.
>
> Rocks of this type may be called *symphrattic* rocks.
>
> *Amer. Geol.*, April, 1904, p. 236, note.

symphrattism (sim-frat′izm), *n.* [Gr. συμφράττειν, press together, + *-ism.*] In *geol.*, the general process of regional metamorphism, which is largely due to pressure. *A. W. Grabau.*

Symphurus (sim′fū-rus), *n.* [NL. (Rafinesque, 1810), irreg. < Gr. συμφ(υής), grown together, + οὐρά, tail.] A genus of soles containing many species, rather widely distributed.

symphyllotriæne (sim-fil-ō-trī′ēn), *n.* [Gr. σύν, together, + φύλλον, a leaf, + τρίαινα, a trident.] In the sponge-spicules, a triæne in which the three similar arms are fused together into a disk.

symphyocephalus (sim″fi-ō-sef′a-lus), *n.*; pl. *symphyocephali* (-lī). [NL., < Gr. συμφυής, grown together, + κεφαλή, head.] A double monster which has a single head.

symphysia (sim-fiz′i-ä), *n.* [NL., < Gr. σύν, together, + φύσις, growth. Compare *symphysis*.] The union of parts normally separate.

symphysion (sim-fiz′i-on), *n.*; pl. ***symphysia*** (-ä). [NL., < Gr. σύμφυσις, a growing together. See *symphysis*.] In *craniom.*, the anterior upper terminal point of the symphysis of the lower jaw. *Von Török.*

symphysis, *n.*—**Mandibular symphysis,** the point of contact or of union of the two rami of the lower jaw or mandible. The rami may be merely in contact and the symphysis reduced almost to a point, as in *Echidna*, or the symphysis may extend for the greater portion of the jaw, as in the sperm-whale. Same as *symphysis mandibulæ*.

symphysodactylia (sim″fi-sō-dak-til′i-ä), *n.* [NL., < Gr. σύμφυσις, a growing together, + δάκτυλος, finger.] Fusion of two or more fingers.

Symphyta (sim′fi-tä), *n. pl.* [NL., < Gr. σύν, with, + φυτόν, a plant.] A series of hymenopterous insects including the phytophagous families.

sympiesospondyly (sim-pi-ē-sō-spon′di-li), *n.* [Gr. συμπίεσις, compression, + σπόνδυλος, vertebra, + *-y*3.] In *ichth.*, the abnormal crowding together and shortening of vertebræ. *Proc. Zool. Soc. London*, 1894, p. 100.

Symplocaceæ (sim-plō-kā′sē-ē), *n. pl.* [NL. (Miers, 1853), < *Symploc*(*os*) + *-aceæ.*] A family of dicotyledonous sympetalous plants of the order *Diospyrales*, the sweetleaf family, containing only the genus *Symplocos* (which see).

sympodial, *a.* 2. In *sociol.*, relating or pertaining to a process of irregular development of social groups analogous to the sympodial development in many plants.—**Sympodial classification.** See ★*classification*.

symposiac, *n.* 2. A convivial or humorous glee or catch.

sympsychograph (sim-sī′kō-gráf), *n.* [Gr. σύν, together, + E. *psychograph*.] A humorous and quasi-scientific term for an imaginary composite portrait, produced by the superposition of images of the same thing present at the same time in different minds. *D. S. Jordan*, in Pop. Sci. Mo., Sept., 1896, p. 601.

sympterygium (sim-te-rij′i-um), *n.*; pl. *sympterygia* (-ä). [NL., < Gr. σύν, together, + NL. *pterygium*.] The theoretical form, or type, from which the limbs of vertebrates have been derived.

symptom, *n.*—**Bechterew's symptom,** paralysis of the facial muscles for the automatic movements of expression, with retention of the power of voluntary motion.—**Localizing symptom,** a symptom, especially in disease of the brain or spinal cord, which serves to indicate the location of the lesion.—**Musset's symptom,** slight movements of the head synchronous with the pulsations of the heart. *Med. Record*, May 2, 1903, p. 713.—**Rational symptoms.** Same as *subjective symptoms*.—**Rumpf's symptom.** See *Rumpf's* ★*sign*.—**Trousseau's symptom,** the occurrence of a paroxysm when the motor nerve of a limb is compressed in tetany.

Symptomatic treatment. See ★*treatment*.

symptosis, *n.* 2. Progressive emaciation.

symtra (sim′trä), *n.*; pl. *symtræ* (-trē). [NL. *sym*(*me*)*tra*, fem. of *symmetrus*, < Gr. σύμμετρος, symmetric.] In *math.*, a symmetrical quadrilateral with a median as axis.

syn. An abbreviation of *synonym* or *synonymous*.

syn-2. In *chem.*, a prefix used to indicate that two groups or atoms in a compound are so situated in space that they can readily react with each other. See ★*anti-* (3).

synactic (sin-ak′tik), *a.* [Gr. συνακτικός, able to bring together, < συνακτός, brought together, < συνάγειν, bring together, < σύν, together, + ἄγειν, bring. The sense seems to imply association with *act*.] Same as *synergetic*.

synærema (sin-er′ē-mä), *n.* [NL., < συναίρεμα, equiv. to συναίρεσις, a drawing together, contraction. See *syneresis*.] Wrinkling or corrugation.

synæsthesia, *n.* 2. In Ribot's doctrine of sympathy, the agreement of emotional states. *Ribot* (trans.), Psychol. of Emotions, p. 231.

synagogual, *a.* See *synagogal*.

synalgic (si-nal′jik), *a.* [*synalg*(*ia*) + *-ic.*] Relating to or suffering from synalgia.

synangic (si-nan′jik), *a.* [*synang*(*ium*) + *-ic.*] Same as *synangial*. *Encyc. Brit.*, XXXI. 417.

synanthetic (sin-an-thet′ik), *a.* [*synanthesis* (*-thet-*) + *-ic.*] Pertaining to or exhibiting synanthesis.

synanthrin (si-nan′thrin), *n.* Same as *inulin*.

synanthrose (si-nan′thrōs), *n.* Same as *levulin*.

synaphymenitis (sin″a-fi-mē-nī′tis), *n.* [NL., < Gr. συναφής, connected, + ὑμήν, membrane, + *-itis.*] Same as *conjunctivitis*.

synaposematic (sin-ap″ō-sē-mat′ik), *a.* [*syn-* + *aposematic*.] In *biol.*, having the same aposematic or warning characteristics as other allied species; possessing common warning colors.

> In 1897 I pointed out that Müllerian resemblance is not true Mimicry at all, but rather an example of common Warning Colour, and with the assistance of Mr. Arthur Sidgwick the term *Synaposematic* was proposed as descriptive of it; the term Aposematic having been previously suggested for ordinary Warning Colours.
>
> *Poulton*, Essays on Evolution, 1889–1907, p. 223.

Synaposematic coloring, resemblance. See ★*coloring*, ★*resemblance*.

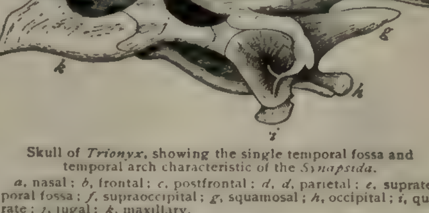
synaposematism (sin″ap-ō-sē′ma-tizm), *n.* [*synaposemat*(*ic*) + *-ism.*] The character of being synaposematic. See ★*synaposematic*.

> As a further illustration of what Poulton has aptly named "*synaposematism*," or the adoption of a common warning badge on the part of distasteful forms, we may take the wonderfully diverse assemblage that centres round the conspicuous and distasteful beetles belonging to the genus Lycus. This assemblage, in South Africa, contains wasps, Braconids, moths, a bug, and a two-winged fly, besides beetles belonging to three or four different families. I have myself seen several members of this group, heterogeneous in affinity though wonderfully similar in hue and pattern, on or about one tree at East London, in South Africa. Be it remarked that they were all conspicuous insects, and exposed themselves freely, so that there could be no question of a common cryptic coloration. The assemblage, beyond doubt, is mainly if not entirely synaposematic.
>
> *Nature*, Oct. 31, 1907, p. 676.

synapse (si-naps′), *n.* Same as ★*synapsis*. *Encyc. Brit.*, XXXI. 739.

synapsid (sin-ap′sid), *n.* and *a.* Same as ★*synapsidan*. *Amer. Nat.*, Feb., 1904, p. 102.

Synapsida (sin-ap′si-dä), *n. pl.* [NL., < Gr. σύν, together, + ἁψίς, an arch.] A subclass of *Reptilia* having the roof of the cranium solid, or with a single, large supratemporal



Skull of *Trionyx*, showing the single temporal fossa and temporal arch characteristic of the *Synapsida*.

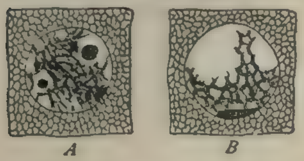
a, nasal; *b*, frontal; *c*, postfrontal; *d*, *d*, parietal; *e*, supratemporal fossa; *f*, supraoccipital; *g*, squamosal; *h*, occipital; *i*, quadrate; *j*, jugal; *k*, maxillary.

opening, the squamosal large, the quadrate reduced and fixed, and the coracoid and procoracoid separate or suturally united. Contrasted with *Diapsida*. *Osborn*, 1903.

synapsidan (si-nap′si-dạn), *a.* and *n.* Pertaining to, or having the characters of, the group of reptiles known as the *Synapsida*; a member of the *Synapsida*.

Synapsidan and mammalian types of shoulder-girdle. *Amer. Nat.*, Feb., 1904, p. 98.

synapsis (si-nap′sis), *n.* [NL., ‹ Gr. *σύναψις*, a joining, ‹ *συνάπτειν*, join, ‹ *σύν*, together, + *ἅπτειν*, touch.] **1.** Same as ★*mitapsis*.—**2.** The name originally applied by J. E. S. Moore, in 1892, to the contracted state of the nuclear skein occurring previous to the reduction of the chromosomes and to the formation of tetraspores, sperms, or eggs.—**3.** The anatomical connection between the processes or neuraxons of two or more nerve-cells. *Foster and Sherrington*, 1897.—**Late synapsis.** Same as ★*postsynapsis*.



Synapsis.

A, pollen mother-cell of a lily showing separation of chromosomes: *B*, the same cell after synapsis.

synaptic (si-nap′tik), *a.* [*synapsis* (*synapt-*) + *-ic*.] Of or pertaining to synapsis.

In the second, the identity of the original somatic chromosomes becomes lost during the *synaptic* rest, and these are then replaced by half the number of new ones, which, during their formation, become longitudinally split twice in planes at right angles to each other. *Nature*, Aug. 6, 1903, p. 335.

synaptically (si-nap′ti-kạl-i), *adv.* In a synaptic manner. *Encyc. Brit.*, XXV. 399.

synapticulum (sin-ap-tik′ụ̄-lum), *n.*; pl. *synapticula* (-lạ̈). [NL., ‹ Gr. *συναπτός*, joined, + L. dim. *-i-cŭlum*. Compare *synapticula*.] Same as *dissepiment*.

synaptiole (si-nap′ti-ōl), *n.* [Gr. *συναπτός*, joined, + *-i-ole*.] Same as *dissepiment*.

Synaptosauria, *n. pl.* It is within the subclass *Synapsida*; in it are included forms with a single temporal bar, as distinguished from the *Cotylosauria*, in which the temporal region is imperforate.

syncanthus (sin-kan′thus), *n.* [NL., ‹ Gr. *σύν*, with, + *κανθός*, the corner of the eye.] Immobility of the eyeball due to adhesion to the orbital structures.

Syncarpha (sin-kär′fạ̈), *n.* [NL. (De Candolle, 1810), ‹ Gr. *σύν*, together, + *κάρφος*, *κάρφη*, palet, chaff; in allusion to the cohesion of the chaff-scales of the receptacle in *S. gnaphaloides*.] A genus of suffruticose or herbaceous plants of the family *Asteraceæ*, characterized by their woolly stems and leaves and showy heads of flowers. The genus is related to *Helichrysum*, which it closely resembles in habit, but is distinguished by the plumose pappus of the flowers. Thirty-six species occur in temperate and tropical Australia, while twelve are found in the Cape region of South Africa.

syncephalic (sin-se-fal′ik), *a.* [*syncephalus* + *-ic*.] Of or relating to a syncephalus. *Buck*, Med. Handbook, VII. 685.

Synchirus (sin-kī′rus), *n.* [NL., ‹ Gr. *σύν*, together, + *χείρ*, hand.] A genus of cottoid fishes found off the northern Pacific coast of America.

synchisite (sin′ki-sīt), *n.* [Prop. **synchysite*, ‹ Gr. *σύγχυσις*, mixture, confusion, + *-ite*².] A fluocarbonate of the cerium metals and calcium, $CeFCa(CO_3)_2$, occurring in wax-yellow rhombohedral crystals. It is found in southern Greenland and is related to parisite.

synchondrosially (sin-kon-drō′si-ạl-i), *adv.* In a synchondrosial manner; by means of synchondrosis: said of bones that are attached to one another by cartilage. *Proc. Zool. Soc. London*, 1902, p. 291.

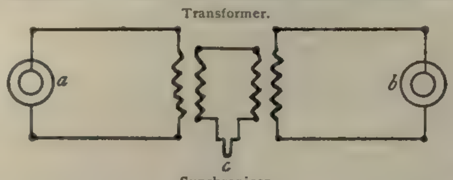
synchroneity (sin-krọ-nē′i-ti), *n.* [*synchron(ous)* + *-e-ity*.] Synchronism; the character or fact of being synchronous; specifically, in *geol.*, supposed synchronism in time of deposition of strata.

synchronic (sin-kron′ik), *a.* Same as *synchronical*.

synchronicity (sin-krọ-nis′i-ti), *n.* Synchronism. *Buck*, Med. Handbook, VIII. 152.

synchronistical (sin-krọ-nis′ti-kạl), *a.* Same as *synchronistic*.

synchronizer, *n.* **2.** In *elect.*, an apparatus for indicating when two alternating-current machines are revolving at the same speed. The device commonly employed consists of an incandescent lamp *c* simultaneously supplied with current from both machines, *a* and *b*, by means of a suitable stepdown transformer. See the diagram. The lamp pulsates in brightness so long as the machine differs in speed and the pulsations diminish in frequency as synchronism is approached. Another form called the *dial synchronizer* has a pointer on a dial which shows by its speed of revolution the departure from synchronism of the two machines. The speed of the pointer is equal to the difference in the frequencies of the machines and the point on the dial at which it comes to rest indicates the phase relations when synchronism is attained. The dial synchronizer also shows which of the two machines has the greater speed. *Trans. Amer. Inst. Elect. Engin.*, 1901, p. 918.



Synchronizer.

synchronizing-brake (sing′krọ-nī-zing-brāk″), *n.* A device for reducing the speed of an alternating-current motor so as to bring it into synchronism with other similar motors, or for regulating the speeds of such motors so as to maintain synchronism between them.

synchronizing-torque (sing′krọ-nī-zing-tôrk″), *n.* See ★*torque*.

synchronograph (sing′krọ-nọ-gráf), *n.* [Gr. *συγχονίξειν*, be of the same time, + *γράφειν*, write.] The apparatus used in the system of sine-wave telegraphy of Crehore and Squier. It includes a generator which gives an alternating current of sinusoidal wave-form and a frequency of several hundred reversals per second, and a synchronous transmitter which sends dots of the continental code by the suppression of single positive half waves, and dashes by the suppression of whole waves. *Sci. Amer. Sup.*, May 8, 1897, p. 17811.

synchronoscope (sing′krọ-nọ-skōp), *n.* [Gr. *σύγχρονος*, synchronous, + *σκοπεῖν*, view.] **1.** In *elect.*, same as ★*synchronizer*, 2.—**2.** An apparatus in which the principle of the revolving mirror is employed for the study of periodic phenomena.

synchronous, *a.* **2.** In *elect.*, in step with the alternations of the current.—**Synchronous converter, machine, vibrations.** See ★*converter*, 3, ★*machine*, ★*vibration*.—**Synchronous motor**, an alternating-current motor of a type that will maintain its motion only when in step with the current supplied to it. Such motors have therefore to be started and brought to the proper speed by some extraneous means.—**Synchronous transmitter**, a sending instrument used in sine-wave telegraphy. It consists of a make-and-break device in synchronism with the generator which supplies the signaling current. The adjustment is such that the circuit is opened and closed only at times of reversal when no current is flowing. See ★*synchronograph*.

synclase (sin′klās), *n.* [Gr. *σύν*, with, + *κλάσις*, a breaking.] A name suggested by A. Daubrée for small, obscure cracks in rocks produced by some internal mechanical or molecular action. *Geikie*, Text-book of Geol., p. 658.

Synclinal forms, petal-shaped forms in the solar corona, bounded by curved streamers which rise at different points on the solar surface and converge. *A. M. Clerke*, Problems in Astrophysics, p. 126.—**Synclinal line.** Same as *synclinal axis*.

synclinorial (sing-kli-nō′ri-ạl), *a.* [*synclinori(um)* + *-al*¹.] Pertaining to or connected with a synclinorium.

synclonus (sin′klō-nus), *n.* [NL., ‹ Gr. *σύν*, together, + *κλόνος*, violent confused motion.] Clonus involving several muscles.

syncope, *n.*—**Local syncope.** Same as *local asphyxia* or *Raynaud's disease*. *Jour. Exper. Med.*, Oct. 1, 1900, p. 104.

syncopism (sin′kọ-pizm), *n.* [*syncop(e)* + *-ism*.] Same as *syncope*, 1; especially syncope in which the omitted letters are represented by dots.

syncraniate (sin-krā′ni-āt), *a.* [Gr. *σύν*, together, + *κρανίον*, skull, + *-ate*.] Noting that type of skull in which certain vertebral segments are included: contrasted with *archæcraniate*, or that primitive type of skull in which vertebral segments take no part. *G. B. Howes*, in Smithsonian Rep., 1902, p. 591.

syncryptic (sin-krip′tik), *a.* [Gr. *σύν*, together, + *κρυπτός*, hidden, + *-ic*.] In *biol.*, pertaining to or of the nature of the resemblance between organisms that are concealed in the same way. See *syncryptic* ★*resemblance*.

syncytiolysin (sin-sit-i-ol′i-sin), *n.* [*syncytium* + *-o-* + *lysin*.] A lysin which causes the destruction of placental tissue. *Buck*, Med. Handbook, App., p. 539.

syncytioma (sin-sit-i-ō′mạ̈), *n.*; pl. *syncytiomata* (-mạ-tạ̈). [NL., ‹ *syncytium* + *-oma*.] A tumor composed of syncytial tissue. *Med. Record*, Oct. 5, 1907, p. 578.

syndactalia (sin-dak-tā′li-ạ̈), *n. pl.* [NL., ‹ Gr. *σύν*, together, + *δάκτυλος*, finger, digit, + *-alia*.] A comprehensive term for those birds, such as kingfishers and trogons, in which the proximal portions of two or more toes are united. It has no particular significance in classification.

syndactylia (sin-dak-til′i-ạ̈), *n.* [NL., ‹ Gr. *σύν*, together, + *δάκτυλος*, finger.] Same as *syndactylism*.

syndactylize (sin-dak′ti-līz), *v. t.*; pret. and pp. *syndactylized*, ppr. *syndactylizing*. [*syndactyl(ic)* + *-ize*.] To render syndactylic or syndactyl.

When two fingers are closely *syndactylised* the nails are also united. *Biometrika*, March, 1908, p. 27.

syndactyly (sin-dak′ti-li), *n.* [*syndactyl* + *-y*³.] Syndactylism.

It is characterized by symmetrical clefting of the feet, with complete *syndactyly* of the remaining two groups of toes, and an irregular though often symmetrical deformity of the hands. *Biometrika*, March, 1908, p. 37.

synderesis (sin-der′ẹ̄-sis), *n.* [Also *synteresis*, *sinteresis*; Gr. *συντήρησις*, preservation.] A technical term of the scholastic philosophy, signifying the innate principle in the moral consciousness of every man, which directs him to good and restrains him from evil. *Baldwin*, Dict. of Philos. and Psychol., II. 655.

syndesis (sin′de-sis), *n.* [Gr. *σύνδεσις*, a binding together.] The state or condition of being bound together; constriction.

syndesmectopia (sin″des-mek-tō′pi-ạ̈), *n.* [NL., ‹ Gr. *σύνδεσμος*, a ligament, + *ἔκτοπος*, out of place.] Dislocation, congenital or acquired, of a ligament.

syndesmitis (sin-des-mī′tis), *n.* [NL., ‹ Gr. *σύνδεσμος*, a ligament, + *-itis*.] Inflammation of a ligament.

syndesmoma (sin-des-mō′mạ̈), *n.*; pl. *syndesmomata* (-mạ-tạ̈). [NL., ‹ Gr. *σύνδεσμος*, a ligament, + *-oma*.] A tumor composed chiefly of connective tissue.

syndete (sin′dẹ̄-tē), *n.* [NL., ‹ Gr. *σύν*, together, + *δετή*, fagot, fem. of *δετός*, bound.] In alcyonarians, that region where the zoöids are joined together. Compare ★*apodete*. *G. C. Bourne*, in Trans. Linn. Soc., Zool., March, 1900, p. 522.

syndiagnostic (sin″dī-ag-nos′tik), *a.* [Gr. *σύν*, with, together, + E. *diagnostic*.] See the extract.

Forms having certain structural characters in common distinguishing them from the forms of other groups. Groups thus defined by the Linnæan method of Diagnosis may be conveniently called *Syndiagnostic* (*συν*, together; *διάγνωσις*, distinction). *Poulton*, Essays on Evolution, 1889–1907, p. 60.

syndiazo (sin-dī-az′ō), *a.* [*syn-* + *diazo*.] In *organic chem.*, noting those diazo derivatives which have the grouping $\begin{array}{r}\mathrm{R-N}\\ \|\\ \mathrm{XON}\end{array}$, where R is an aromatic hydrocarbon radical such as phenyl (C_6H_5), and X is hydrogen or an alkali metal.

syndicalism (sin′di-kạl-izm), *n.* [F. *syndicalisme*, ‹ *syndical*, relating to a *syndicat*, or trade-union.] The principles or methods of the syndicalists. See ★*syndicalist*.

The sudden rise of this new *syndicalism* precipitates what is perhaps only the inevitable evolution of all Socialism, peaceful or otherwise. It directly threatens the radicalism which has so long monopolized the political power of the French Republic for its own anti-clerical projects. Indeed, the new power is likely to prove of more immediate importance to the Republic than all the conflict of Parliament and government with Roman Catholic citizens, who have never known how to use either their votes or their legal rights of action. *S. Dewey*, in The Atlantic, Aug., 1907, p. 277.

syndicalist (sin′di-kạl-ist), *n.* [*syndical(ism)* + *-ist*.] See the extract.

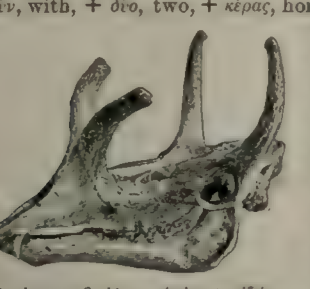
At the end of the twelve months, the *Syndicalist* movement—a sort of revolutionary, as distinguished from political, trade-unionism—has shown itself a power with which the State has to count for the future. The separate labor unions (*syndicats*), their regional and national federations, and the Bourses de Travail opened by the State for them in large cities, have realized an effective unity among themselves in one vast general labor confederation—Confédération Générale du Travail. This has grown so rapidly that already it directs rather than obeys the Socialist political party, of which indeed it vaunts its independence. It has succeeded in enlisting in its propaganda even the unions of government employees, such as school-teachers and postmen. *S. Dewey*, in The Atlantic, Aug., 1907, p. 276.

syndrome, *n.*—**Charcot's syndrome**, intermittent claudication (which see, under ★*claudication*).

syndromic (sin-drom′ik), *a.* [*syndrom*(*e*) + *-ic.*] Of or pertaining to the syndrome or aggregation of symptoms of any disease.

> The *syndromic* episodes, the extreme manifestations of dis-equilibrium, bring to light, by their exaggeration, the false psychic mechanicism which is found, though in less degree, among these degenerates.
> *Smithsonian Rep.*, 1890, p. 648.

Syndyoceras (sin-dī-os′e̤-ras), *n.* [NL., ‹ Gr. σύν, with, + δύο, two, + κέρας, horn.] A genus of extinct mammals, probably allied to the *Cervidæ*, bearing on its skull four curved horns in two pairs, the posterior rising above the orbits, the anterior resting on the nasalia, united at the base and curving outward. The canine teeth are far forward and strongly developed. Other parts of the skeleton are partly known. It is found in the *Daimonelix* beds of Miocene Tertiary in Nebraska.



Syndyoceras Cooki, one ninth natural size.

synecdochic (sin-ek-dok′ik), *a.* [Gr. συνεκδοχικός, ‹ συνεκδοχή, synecdoche.] Characterized by synecdochism; synecdochical.

> Thus incantation and sorcery through nail-parings, hair-combings, and other parts of the person (the *synecdochic* magic of Mason), and the wearing of scalps or fingers or teeth of slain enemies, first as charms and later as trophies, grow up as features in formal or ceremonial propitiation of mysterious powers.
> *An. Rep. Bur. Amer. Ethnol.*, 1894–95, p. 21.

synecdochism (si-nek′dō̤-kizm), *n.* [*synecdoch*(*e*) + *-ism.*] In *ethnol.*, the belief that part of an object or of a person is representative of the whole object or person, so that an act performed on the part has the same influence as the same act performed on the whole. Witchcraft by means of hair or parings of nails of the victim is an example of synecdochism.

> When, in the stage of amulet wearing and *synecdochism*, the warring tribesman slew an enemy, he sometimes mutilated the remains and even ate of the heart, not only in savage triumph, but mainly in order that he might gain the courage and strength of his quondam opponent; and partly as a trophy, but chiefly as a mystical talisman and constant invocation to the powers, he appended the scalp to his spear or belt, or strung the teeth in a necklace, or converted the erstwhile powerful hand into a gorget. *An. Rep. Bur. Amer. Ethnol.*, 1894-95, p. 23.

synechiological (si-nek″i-ō̤-loj′i-ka̤l), *a.* Of or pertaining to synechiology.

synechiology, *n.* **3.** In Herbartian philosophy, the metaphysical and epistemological doctrine of space and time.

synechism (sin′e-kizm), *n.* [Gr. συνεχής, continuous, + *-ism.*] That tendency of philosophical thought which insists upon the idea of continuity as of prime importance in philosophy and, in particular, upon the necessity of hypotheses involving true continuity. *Baldwin*, Dict. of Philos. and Psychol., II. 657.

synechologic, synechological (sin-e-kō̤-loj′ik, -i-ka̤l), *a.* Same as ⋆*synechiological.*

> Fechner's fourth point was connected with this inclusion of personal spirits in higher sparits and in the highest. It is his so-called "*synechological* view" of the soul
> *Encyc. Brit.*, XXX. 659.

synechology (sin-e-kol′ō̤-ji), *n.* Same as *synechiology.*

synecthry (sin′ek-thri), *n.* [Gr. σύν, together, + ἐχθρός, hostile, + *-y*^{3}.] The occurrence in ant-colonies of insects to which the ants are hostile, but which nevertheless succeed in maintaining their position as unwelcome guests: opposed to ⋆*symphily* (which see). *Cambridge Nat. Hist.*, VI. 183.

synepigonic (sin″ep-i-gon′ik), *a.* [Gr. σύν, with, together, + ἐπίγονος, descendant, + *-ic.*] See the extract.

> Forms which have been shown by human observation to be descended from common ancestors or from a common parthenogenetic or self-fertilizing ancestor. Such groups may be called *Synepigonic* (συν, together; ἐπιγονος, descendant). Breeding from common parents or from a common parthenogenetic or self-fertilizing parent may be spoken of as epigony or the production of Epigonic evidence.
> *Poulton*, Essays on Evolution, 1889–1907, p. 61.

synergastic (sin-ėr-gas′tik), *a.* [Gr. σύν, together, + ἐργαστικός, working.] Working together. See the extract.

> Another step in advance could be taken if we could accept Max Müller's *synergastic* or co-operative theory of language, which regards verbal roots as sounds which, in the infancy of civilization, were habitually uttered by numbers of men engaged in rowing, hammering, pile-driving, etc. If the first words of primitive man were such rhythmical accompaniments of arm and hand movements which, as we have seen, are directed chiefly by the left brain, the fact that the production of speech is governed by neighboring regions of the same hemisphere becomes less astonishing. I advance this hypothesis with some diffidence as I do not know how much vitality is retained by the co-operative theory which, I believe, has been abandoned by the majority of philologists.
> *H. Liepmann*, in Sci. Amer. Sup., Oct. 19, 1907, p. 251.

synergia (si-nėr′ji-ä̤), *n.* [NL. See *synergy.*] **1.** Same as *synergy.* Specifically—**2.** In *psychol.*, a coöperation of motor tendencies: opposed to *synæsthesia.* See the extract.

> If . . . we try to follow the evolution of sympathy, from its most rudimentary to its highest forms, we distinguish three principal phases. The first, or physiological, consists in an agreement of motor tendencies, a *synergia;* the second, or psychological, consists in an agreement of the emotional states, a synaesthesia; the third, or intellectual, results from a community of representations or ideas, connected with feelings and movements. *Ribot* (trans.), Psychol. of Emotions, p. 231.

synergic (si-nėr′jik), *a.* [Gr. συνεργός, working together, + *-ic.*] Same as *synergetic.* *Buck*, Med. Handbook, IV. 854.

synergist, *n.* **2.** One who or that which coöperates with another in the production of a certain effect. *Buck*, Med. Handbook, I. 597.

synergize (sin′ėr-jīz), *v. i.*; pret. and pp. *synergized*, ppr. *synergizing.* [Gr. συνεργός, working together, + *-ize.*] To act as a synergist. See ⋆*synergist*, 2. *Buck*, Med. Handbook, II. 15.

syngamic (sing-gam′ik), *a.* [*syngam*(*y*) + *-ic.*] Pertaining to or characterized by syngamy, in either sense of that word. *Poulton.* See the extracts under ⋆*syngamy*, 1 and 2.

syngamous (sing′ga̤-mus), *a.* [*syngam*(*y*) + *-ous.*] **1.** Same as ⋆*syngamic.*—**2.** Specifically, in *embryol.*: (*a*) Occurring at the time of the fertilization of the ovum. (*b*) Determined, as to sex, at the time when the ovum is fertilized.

syngamy (sing′ga̤-mi), *n.* [Gr. σύγγαμος, united in marriage, ‹ σύν, together, + γάμος, marriage.] **1.** Natural and fertile interbreeding.

> Forms which freely interbreed together. These may be conveniently called Syngamic (συν, together; γαμος, marriage). Free interbreeding under natural conditions may be termed *Syngamy;* its cessation or absence, Asyngamy (equivalent to the Amixia of Weismann).
> *Poulton*, Essays on Evolution, 1889–1907, p. 60.

2. The fertilization of the egg considered as a process of cellular or nuclear fusion. *Hartog*, 1903.

> Marcus Hartog points out that the term "fertilisation" as actually used is too ambiguous for scientific precision. In its first and older sense it denotes the starting into active cell-life and multiplication of a resting-cell, and should properly be regarded as one case of germination. In its second sense, regarded now-a-days as the "strict" sense, it denotes a process of cellular (or nuclear) fusion, and is better designated as "*syngamy.*"
> *Jour. Roy. Micros. Soc.*, Oct., 1904, p. 507.

syngenetic, *a.* **2.** In *geol.* See the extract.

> Two genetic terms have, however, found general acceptance after their recent introduction by Stelzner and Beck. The terms are *syngenetic* and epigenetic. The former comprise those deposits which originate simultaneously with the surrounding rocks either through the differentiation of magmas, through mechanical deposition, or through chemical precipitation in seas or lakes. In the epigenetic deposits, on the other hand, the ores formed by filling or metasomatic action are later than the encasing rocks.
> *Contrib. to Econ. Geol.*, U. S. Geol. Surv., Bulletin 213, [Dec., 1907, p. 750.

syngenic (sin-jen′ik), *a.* [Gr. συγγενής, born with, congenital, + *-ic.*] **1.** Same as *congenital.*—**2.** Same as *syngenetic.*

syngenism (sin′jē̤-nizm), *n.* [*syngen*(*ic*) + *-ism.*] The blending of egoism and sympathy, in devotion to a limited social circle or natural community rather than to all mankind. *Gumplovicz* (trans.), Outlines of Sociol., p. 155.

syngignoscism (sin-gig′nō̤-sizm), *n.* [Irreg. ‹ Gr. συγγιγνώσκειν, think with another, agree (‹ σύν, together, + γιγνώσκειν, know), + *-ism.*] Same as *hypnotism.*

synkaryon (sin-kar′i-o̤n), *n.*; pl. *synkarya* (-ä̤). [NL., ‹ Gr. σύν, together, + κάρυον, nut, kernel.] The paired nuclei which are found in certain stages of the life-cycle of the *Uredinales* and the higher *Basidiomycetes*, and whose union is regarded as an act of fertilization. Incorrectly *synkarion.* *R. Maire*, 1900.

> L. Petri reviews the work done on the basidiospore by Maire, Wager and other writers. He finds the two nuclei (the *synkarion*) present in the hyphæ of the trama, as described for other hymenomycetes; they are of extremely minute dimensions.
> *Jour. Roy. Micros. Soc.*, April, 1904, p. 222.

synkaryophyte (sin-kar′i-ō̤-fīt), *n.* [Gr. σύν, together, + κάρυον, nut, kernel, + φυτον, a plant.] The stage in the life-history of a fungus in which synkarya, or paired nuclei, are formed.

> We find here the first suggestion of that phase in the life-history, the *synkaryophyte*, which plays so important a part in the development in the Basidiomycetes.
> *Jour. Roy. Micros. Soc.*, Feb., 1904, p. 94.

synkinesis (sin-ki-nē′sis), *n.* [NL., ‹ Gr. συγκίνησις, motion together, commotion, ‹ σύν, together, + κίνησις, motion.] Synergetic movements of reflex origin.

synkinetic (sin-ki-net′ik), *a.* Of or pertaining to synkinesis.

synod, *n.*—**General synod.** (*a*) The first general organization of the synods of the Lutheran Church in the United States, formed in 1820. Membership was not dependent on strict adherence to the letter of the Augsburg Confession. (*b*) In the Reformed Dutch Church and in the Reformed German Church of the United States, a body composed of clerical and lay representatives from the classes, having complete supervision of the church and acting as the highest judicatory.—**Legatine synod,** a synod under the presidency of a papal legate.—**Particular synod.** (*a*) In the *Reformed Dutch Ch.*, a council of four ministers and four elders from each classis in a district, with supervisory powers. (*b*) In the *Lutheran Ch.*, the district council, composed of all the ministers and one lay representative from each congregation in the district. (*c*) In the *Reformed German Ch.*, a delegated body of ministers and elders from adjacent classes, subject to the general synod.

Synodical Conference. See ⋆*conference.*

synœcia^{1} (sin-ē′si-ä̤), *n. pl.* [Gr. συνοίκια, neut. pl., ‹ σύν, together, + οἶκος, house.] In *Gr. antiq.*, a public festival in Athens which commemorated the uniting by Theseus of all the towns of Attica under the leadership of Athens. Also *synoikia.*

synœcia^{2} (si-nē′shiä̤), *n.* [NL., ‹ Gr. συνοικία, a community.] A community; a body of people living together, as in a city or a city block: sometimes equivalent to the Latin *insula*, a city block.

synœcism (si-nē′sizm), *n.* [Gr. σύνοικος, living together, + *-ism.* See ⋆*synœcia*^{2}.] A living together in a community; a grouping together: a uniting.

> When the town was first formed in 470 B.C. by the "*synœcism*" of the neighbouring villages, the river Ophis flowed through the midst of it. *Encyc. Brit.*, XXX. 529.

> We would give much to know the details of the building of the city on the slopes of Ithome and the *synoecism* of Messenia.
> *J. F. Bury*, in Jour. Hellenic Studies, XVIII. 15.

synœcize (si-nē′sīz), *v. i.*; pret. and pp. *synœcized*, ppr. *synœcizing.* [*synœc*(*ism*) (see ⋆*synœcia*^{2}) + *-ize.*] To live together, or to cause to live together, in communities, cities, colonies, blocks, houses.

> If the only purpose of Megalopolis had been to *synoecize* the Maenalians and Parrhasians, a city one quarter as large again as Mantinea would have been ample for the need.
> *J. B. Bury*, in Jour. Hellenic Studies, XVIII. 16.

synorchism (sin-ôr′kizm), *n.* [Gr. σύν, together, + ὄρχις, testicle, + *-ism.*] A condition in which the two testicles are fused into one.

synotia (si-nō′ti-ä̤), *n.* [NL., ‹ Gr. σύν, together, + οὖς (ὠτ-), ear.] A monstrosity in which the face is absent, the two ears being united in the median line.

synotic (si-not′ik), *a.* [Gr. σύν, together, + οὖς (ὠτ-), ear, + *-ic.*] In *zoöl.*, pertaining to or exhibiting synotia, or the union and fusion of the ears on the middle line of the head, on either its upper or lower surface.

> A very similar series of variations occurs in regard to the ears of vertebrates, which in the *synotic* or cephalotic condition are compounded in the middle line to a varying degree. *W. Bateson*, Study of Variation, p. 458.

synovectomy (sin-ō̤-vek′tō̤-mi), *n.* [*synovia* + Gr. ἐκτομή, excision.] Excision of the synovial membrane of a joint. *Buck*, Med. Handbook, VI. 519.

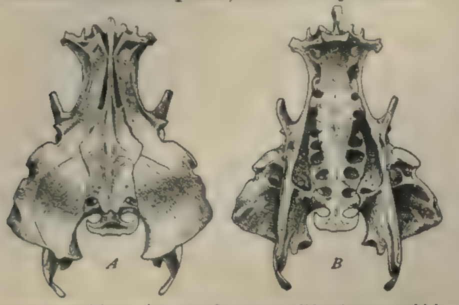
Synovial fringes. See *synovial folds*, under *synovial.*

synovin (si-nō′vin), *n.* [*synov*(*ia*) + *-in*^{2}.] A mucinous body found in the synovial fluid.

synrhabdosome (sin-rab′dō̤-sōm), *n.* [Gr. σύν, together, + ῥάβδος, rod, + σῶμα, body.] The composite colonial stock of the axonophorous graptolites, consisting of rhabdosomes. The typical form is the synrhabdosome of *Diplograptus*, where many rhabdosomes, each grown from a sicula, are arranged radially around the central organ.

synsacral (sin-sā'kral), *a.* [NL. *synsacrum* + *-al*¹.] Relating to, or forming part of, the synsacrum, or series of ankylosed vertebræ forming the so-called 'sacrum' of birds. See cut under ★*synsacrum*. *Proc. Zool. Soc. London*, 1903, p. 282.

synsacrum (sin-sā'krum), *n.*; pl. *synsacra* (-krä). [NL., < Gr. *σύν*, together, + NL. *sacrum*, sacrum.] 1. The composite sacrum in certain extinct reptiles, which may consist of any number of co-ossified vertebræ from three to ten. In the dinosaurs the number is greatest, while in the pterosaurs there are from three to six.—2. The mass of united vertebræ to which the pelvis is attached in birds. It consists of from ten to twenty vertebræ comprising dorsals, lumbars, true sacrals, and caudals, and is commonly termed the 'sacrum.'



Synsacrum of the road-runner, *Geococcyx californianus*, to which the ilia are attached.
A, dorsal view; *B*, ventral view.

> The most complete *synsacrum* is that of *Coua*, and is made up as follows: — 1 thoracic, 3 lumbar, 3 lumbo-sacral, 2 sacral, and 4 caudal, making 13 in all.
> *Proc. Zool. Soc. London*, 1903, p. 273.

Syntax china. See ★*china*¹.

syntaxis, *n.* 2. In *anat.*, same as *articulation*.

syntechnic (sin-tek'nik), *a.* [Gr. *σύντεχνος*, practising the same art, < *σύν*, together, + *τέχνη*, art.] Having or pertaining to functional similarity as leading to a sort of likeness between organisms. See *syntechnic* ★*resemblance*.

> Such likeness may be called *Syntechnic* Resemblance, incidentally produced by dynamic similarity, just as Syncryptic Resemblance is produced by static similarity.
> *Encyc. Brit.*, XXVII. 147.

syntectic, *a.* 2. See the extract.

> The sunken blocks must be dissolved in the depths of the original fluid, magmatic body, with the formation of a "*syntectic*" secondary magma. This very convenient name for a magma rendered compound by assimilation or by the mixture of melts, has been proposed by F. Loewinson-Lessing, Comptes Rendus, 7ᵉ session, Congrès géol. internat. St. Petersburg, 1899, p. 375.
> *Amer. Jour. Sci.*, July, 1908, p. 19.

synthermal, *a.* II. *n.* A line connecting places having the same temperature at the same moment of time; an isotherm based upon simultaneous observations, as distinguished from one based on synchronous local time observations.

synthesis, *n.* 3. In *Rom. antiq.*, a short garment, not known by any representations, worn instead of the toga at the Saturnalia and commonly at banquets.—**Asymmetric synthesis,** in *phys. chem.*, a synthesis of a compound containing an asymmetric carbon atom in such conditions that an excess of either the dextrorotatory or the levorotatory compound shall be formed. *Jour. Phys. Chem.*, Oct., 1904, p. 528.—**Synthesis of contiguity.** (*a*) Reduction of a dislocation, replacement of a hernia, or return to its normal position of a displaced organ. (*b*) In *chem.*, the union of two compound bodies to form a more complex one.

synthesizer (sin'the-sī-zėr), *n.* [*synthesiz*(*e*) + *-er.*] In *acoustics*, an instrument for the production of complex tones of predetermined composition. A form devised by Hallock consists of an electromagnetic arrangement for the production of fluctuating currents of the desired frequencies and for the simultaneous introduction of these into the circuit of a telephone.

synthetic, *a.* 4. In *chem.*, noting a substance made by artificial means, in the laboratory, in contradistinction to one produced without human agency, as in vegetables and animals. Thus indigo is produced from certain plants and may also be made artificially, or synthetically, from naphthalene.—5. In pictorial composition, noting an arrangement which tells a story or explains a situation.

> Pictures of the kind that used to be called "historic" and that we are now beginning to term "*synthetic.*"
> *C. Waern*, in Portfolio, XXVI. 15.

Synthetic division, in *alg.*, an abbreviated form of division, using, besides other contractions, detached coefficients.—**Synthetic touch,** simultaneous apprehension by touch of a number of impressions, as of a number of points in the Braille alphabet for the blind.

> The right finger precedes and apprehends a group of points simultaneously (*synthetic touch*), the left finger follows somewhat more slowly and apprehends the single points successively (analytic touch).
> *W. Wundt* (trans.), Outlines of Psychol., p. 108.

Synthetic type, an animal which combines characters of several groups. The extinct *Chalicotherium*, for example, has the teeth and general structure of an ungulate combined with clawed digi'ˢ somewhat like those of a sloth. See *Tillodontia*.

Synthetical variation. See ★*variation*.

synthetism (sin'the-tizm), *n.* [Gr. *συνθετισμός*, a putting together (of bones), < *σύνθετος*, put together. See *synthetic.*] In *surg.*, the complete treatment of a fracture from its reduction to the removal of the splints and restoration of the function of the limb.

synthetograph (sin-thet'ọ-gräf), *n.* [Gr. *σύνθετος*, compound, + *γράφειν*, write.] A composite drawing from two or more specimens of a new species.

synthol (sin'thol), *n.* [*synth*(*etic*) + *-ol.*] 1. A trade-name of a photographic developer said to be *diamino-orcinol hydrochlorid*, $\overset{1}{C}H_3C_6H(\overset{3.5}{O}H)_2(NH_2)_2.HCl$. — 2. A trade-name of a substance used as a substitute for alcohol.

syntonic² (sin-ton'ik), *a.* [Gr. *σύν*, together, + *τόνος*, tension, tone, + *-ic.*] In *elect.*, swinging together, or in resonance with each other, as the sender and the receiver in selective wireless telegraphy; pertaining to, or exhibiting, syntonism.

> I call this experiment pregnant, because it affords a hint of another possibility, namely, that of signaling inductively from one area to another, and using around those areas not merely circuits of wires, but *syntonic* circuits, which, therefore, are necessarily much more sensitive in their response one to the other.
> *S. P. Thompson*, in Smithsonian Rep., 1898, p. 241.

Syntonic telegraphy, wireless telegraphy by means of transmitters and receivers which are adjusted or tuned with reference to each other, so that the transmitters will affect receivers thus adjusted and no others and the receivers will respond only to oscillations of the particular frequency sent out by the transmitters in question.

syntonically (sin-ton'i-kal-i), *adv.* In a syntonic manner; in resonance with one another.

syntonism (sin'tọ-nizm), *n.* [*synton*(*ic*) + *-ism.*] The property of being syntonic or tuned or adjusted so as to respond only to electric oscillations of a selected frequency. Electric resonators or receivers for wireless telegraphy thus adjusted are said to be in syntonism.

> It seems to be not improbable that signals can be sent any distance, so long as the sending station can develop sufficient energy. The question of '*syntonism*,' by which it is proposed to assure the secrecy of messages, appears to be still sub judice, but is undergoing further investigation. *Rep. Brit. Ass'n Advancement of Sci.*, 1903, p. 761.

syntonization (sin"tọ-ni-zā'shọn), *n.* [*syntoniz*(*e*) + *-ation.*] The act or process of syntonizing; the adjustment of two electric circuits, as to frequency, so that the one will respond to electric oscillations set up in the other; electric tuning.

> Trustworthiness, clearness, the design of circuits and apparatus, and the possibility of successful *syntonisation* are factors of greater importance.
> *Nature*, July 16, 1903, p. 247.

syntonize (sin'tọ-nīz), *v. t.* [*synton*(*ic*) + *-ize.*] To adjust to syntonism; render syntonic. See ★*syntonism*. *Trans. Amer. Inst. Elect. Engin.*, Jan.–July, 1902, p. 575.

syntonizer (sin'tọ-nī-zėr), *n.* [*syntoniz*(*e*) + *-er.*] A device for the electric tuning or adjustment to resonance of circuits used in producing and receiving electric oscillations. See ★*syntonism* and ★*syntonic*².

> If we want to hear the Japs call, disconnecting ground wire entirely from *syntoniser* of the receiver brings them in strong; while with the ground wire on, as in receiving our stuff, the Japs come very faintly.
> *Nature*, June 16, 1904, p. 158.

syntony (sin'tọ-ni), *n.* [*synton*(*ic*) + *-y*³.] Same as ★*syntonism*.—**Electrical syntony,** the process of tuning the receiver of the apparatus for the transmission of electric waves, by adjustment of its capacity and inductance, so that it will respond by electric resonance to waves of a given frequency and to no others. See ★*syntonic telegraphy*.

syntoxoid (sin-tok'soid), *n.* [Gr. *σύν*, together, + E. *toxoid.*] A toxoid which has the same affinity for the corresponding antitoxin as the toxin proper.

syntropical (sin-trop'i-kal), *a.* Same as *syntropic*.

syntropy (sin'trọ-pi), *n.* [*syntrop*(*ic*) + *-y*³.] The condition of being syntropic; a condition in which several objects of a series are turned in the same direction, as the ribs of either side.

syntype (sin'tīp), *n.* [Gr. *σύν*, together, + *τύπος*, type.] In the nomenclature of types in natural history, any specimen of the original series (from which a species has been described and named) when there is no holotype: same as ★*cotype*.

Synxiphosura (sin-zī-fọ-sū'rä), *n. pl.* See *Synziphosura*.

sypher (sī'fėr), *v. t.* To make a sypher-joint between (parallel strips or planks).

syphering (sī'fėr-ing), *n.* Same as *sypher-joint*.

syphilelcosis (sif"i-lel-kō'sis), *n.* [NL., < *syphilis* + Gr. *ἕλκωσις*, ulceration.] Syphilitic ulceration.

syphilidography (sif"i-li-dog'ra-fi), *n.* [NL. *syphilis* + Gr. *-γραφια*, < *γράφειν*, write.] The description of syphilis: same as *syphilography*.

syphilitic, *a.* II. *n.* One who suffers from syphilis. *Med. Record*, Feb. 7, 1903, p. 228.

syphilized (sif'i-līzd), *p. a.* [*syphil*(*is*) + *-ized.*] Infected with syphilis, by heredity, accidentally, or experimentally.

syphilodermatous (sif-i-lọ-dėr'ma-tus), *a.* [*syphiloderma*(*t-*) + *-ous.*] Relating to or having a syphilitic lesion of the skin.

syphilomania (sif"i-lọ-mā'ni-ä), *n.* [NL. *syphilis* + Gr. *μανία*, mania.] Same as *syphiliphobia*.

syphilopathy (sif-i-lop'a-thi), *n.* [NL. *syphilis* + Gr. *πάθος*, disease.] Any syphilitic manifestation.

Syr. An abbreviation (*a*) of *Syria*; (*b*) of *Syriac*; (*c*) of *Syrian*.

Syracuse salt. See *Salina* ★*beds*.

syrigmus (si-rig'mus), *n.* [NL., < Gr. *συριγμός*, a piping sound, a ringing in the ears, < *συρίζειν*, pipe, hiss, ring. See *syringe.*] The sensation of ringing in the ears.

syringadenoma (si-ring"gad-e-nō'mä), *n.*; pl. *syringadenomata* (-ma-tä). [NL., < Gr. *σῦριγξ*, a pipe, + NL. *adenoma.*] Adenoma affecting the ducts of the sweat-glands.

syringe, *n.* 3. (*b*) In the head of a hemipterous insect, a chamber beneath the pharynx and extending to the grooves of the setæ in the beak. The salivary ducts open into it, and it is supposed to propel the product of the salivary glands toward the tips of the setæ.

syringe-engine (sir'inj-en"jin), *n.* A form of hand-pump used formerly as a fire-extinguisher, where a nozle at the end of the barrel was directed toward the fire, and the piston was forced inward, as a large syringe would be worked.

syringenin (si-rin'je-nin), *n.* [*syring*(*in*) + *-en* + *-in*².] An amorphous, bright rose-red compound, $(\overset{2}{C}H_3\overset{6}{O})_2C_6H_2(\overset{1}{O}H)\overset{4}{C}H:CH.CH_2OH$, prepared by the action of dilute acids on syringin.

syringobulbia (si-ring-gọ-bul'bi-ä), *n.* [Gr. *σῦριγξ* (*συριγγ-*), pipe, fistula, + *βολβός*, a bulb, + *-ia.*] A disease marked by the formation of cavities in the substance of the medulla oblongata. *Jour. Med. Research*, March, 1908, p. 127.

syringocystoma (si-ring"gọ-sis-tō'mä), *n.*; pl. *syringocystomata* (-ma-tä). [Gr. *σῦριγξ* (*συριγγ-*), pipe, fistula, + NL. *cystoma.*] A nodular tumor caused by overgrowth of the epithelium of the hair-follicles. *Jour. Med. Research*, March, 1908, p. 163.

syringomeningocele (si-ring"gọ-mẹ-ning'gọ-sēl), *n.* [Gr. *σῦριγξ*, a pipe, + *μῆνιγξ*, membrane, + *κήλη*, tumor.] A form of spina bifida.

syringomyelic (si-ring-gọ-mi-el'ik), *a.* Relating to syringomyelia.

> The report of the Clinical Research Association showed that the growth was of the nature of a central gliomatosis of the *syringomyelic* type, its features pointing rather to the acquired and rapidly developing variety than to the congenital form. *Lancet*, June 25, 1904, p. 1795.

syringomyelocele (si-ring-gọ-mī'e-lọ-sēl), *n.* [Gr. *σῦριγξ*, pipe, + *μυελός*, marrow, + *κήλη*, tumor.] A form of spina bifida in which the tumor contains a layer of spinal-cord matter pushed out by the fluid in the dilated central canal.

syringomyelus (si-ring-gọ-mī'e-lus), *n.* [NL., ‹ Gr. *σύριγξ*, pipe, + *μυελός*, marrow.] Dilatation of the central canal of the spinal cord with fibrous degeneration of the cord substance. *Lancet*, April 4, 1903, p. 942.

Syringopora (sir-ing-gop'ọ-rạ̈), *n.* [NL., ‹ Gr. *σύριγξ*, pipe, + *πόρος*, pore.] A genus of extinct tabulate corals composed of clusters of cylindrical corallites united at intervals by hollow connecting processes or horizontal expansions, and with rudimentary septa and funnel-shaped tabulæ. It abounds in Silurian, Devonian, and Carboniferous rocks.

Syringothyris (sir-ing-goth'i-ris), *n.* [NL., ‹ Gr. *σύριγξ*, pipe, + *θυρίς*, a door, a window.] A genus of spire-bearing telotrematous brachiopods, very similar to *Spirifer*, but having an internal tube or syrinx developed from the delthyrium. See ★*syrinx*, 6. It occurs in the Carboniferous rocks.

syrinx, *n.* 6. In some of the brachiopods, like *Syringothyris*, a split tubular structure developed from the deltidial plates, lying within the umbonal region of the ventral valve, and inclosing or forming a passage for the pedicle.

Syro-Arabian (sī″rọ-a-rā'bi-ạn), *a.* and *n.* Syrian and Arabian (Syriac and Arabic): a group-name in a classification of Semitic languages.

Syro-Chaldaic (sī″rọ-kal-dā'ik), *a.* and *n.* Same as ★*Syro-Chaldean.*

Syro-Chaldean (sī″rọ-kal-dē'ạn), *a.* and *n.* **I.** *a.* Relating to both Syriac and Chaldaic; Aramaic.

II. *n.* A person speaking both Syriac and Chaldaic.

syrphus-fly, *n.*—**Corn-feeding syrphus-fly**, an American syrphid fly, *Mesograpta polita*, which occurs commonly in the eastern United States and in the West Indies. Its larvæ feed on the pollen and leaves of corn. —**Root-louse syrphus-fly**, an American syrphid fly, *Pipiza radicum*, whose larva feeds on the woolly root-louse of the apple, *Schizoneura lanigera*.

syrup, *n.* 3. In *cookery*, a boiled solution of sugar and water in which fruits are often cooked.—**Compound syrup of licorice**, an aromatized syrup of licorice used to disguise the taste of quinine and other bitter medicines.—**Golden syrup**, a trade-name for a syrup for table use, produced from the molasses of sugar-refining by moderate dilution, filtration through animal charcoal, and reconcentration. It has a bright golden-yellow color, said to be sometimes improperly enhanced by the addition of chlorid of tin.—**Refiners' syrup** or **sugar-house syrup**, the uncrystallizable product left in the process of refining raw sugars. When of standard quality it should contain not more than 25 per cent. of water and not more than 6.5 per cent. of mineral matter (ash on burning).—**Syrup of lime**, a transparent, pale-yellow, alkaline syrup containing calcium hydroxid.

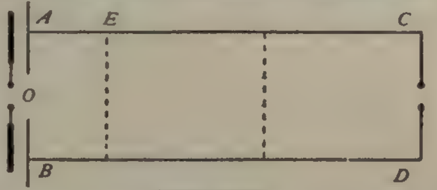
syrupous (sir'up-us), *a.* [*syrup* + *-ous.*] Of the consistence of syrup. *Buck*, Med. Handbook, VI. 412.

syst. An abbreviation of *system*.

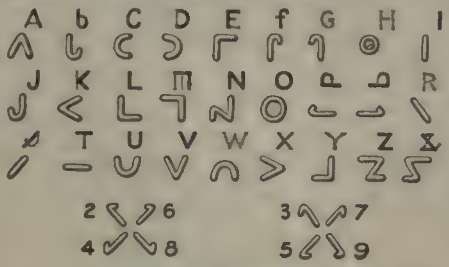
systatic, *a.* 2. Affecting several of the sensory faculties simultaneously.

II. *n.* A disease that involves several of the sensory faculties, or the several parts of the same faculty, as, for example, the organ of hearing and the auditory center in the brain

system, *n.*—**Ardois signal system.** See ★*signal.*—**Bertillon system**, a system of identification invented by Alphonse Bertillon, used principally for the identification of criminals. A number of uncorrelated measurements of the body, together with the color of the eyes, are recorded. The chance that any two individuals should have the same combination of values of these measurements is so slight that any individual can be recognized by the series of his measurements. The records of criminals are classified in relation to each of these measurements as *large*, *medium*, and *small*, and are arranged in the form of a catalogue, giving the class to which the individual belongs in a fixed order. In this manner each individual can be located, and then a new set of measurements of a suspect can be compared in detail with existing records, thus leading to proof or disproof of identity. —**Briovarian system**, in *geol.*, a division of Precambrian rocks in Brittany.—**Case system.** See ★*case*1.—**Central nervous system.** See ★*nervous.*—**Chevé system**, a method, much used in France, of teaching the rudiments of vocal music from numerical signs for the tones instead of from notes. The key-note of the scale is always 1, the dominant 5, and so on. These numerals are used only to guide the mind, as the singer names them by the syllable-names *do*, *re*, *mi*, etc. The inventor was Galin (d. 1821), but since the system was extended and advocated later by Paris and Chevé, it is often called the *Galin-Paris-Chevé system*. The method is closely similar to the English tonic sol-fa (which see), which borrowed some features from it.—**Compartment system.** See *stand* ★*method.*—**Constrained system.** See ★*constrain.*—**Culture system.** See ★*culture.*—**Galin-Paris-Chevé system.** Same as *Chevé* ★*system.* —**Geocentric system.** See ★*geocentric.*—**Gondwana system**, in *geol.*, an immense series of rocks of fluviatile origin south of the Marbada River in India. It is regarded as representing continuous deposition through successive periods of geologic time as expressed in other regions and even as bridging the almost world-wide hiatus between the Paleozoic and Mesozoic rock systems. The lower beds or Talchir conglomerates, consisting in considerable part of striated boulders believed to be of glacial origin, are regarded as of Carboniferous age. The Karharbari and Damuda beds, overlying, carry a *Glossopteris* or Permian fauna. The Chidra group is transitional in fauna from the Paleozoic to the Mesozoic, while the Panchet series, which succeeds, is probably Triassic, and the overlying beds at the top of the system are of Jurassic age. The Gondwana system extends into Afghanistan and probably also to eastern Africa.—**Haversian system**, the Haversian canals and their branches, with the Haversian lamellæ surrounding them. See *Haversian canal* and *Haversian lamellæ.*—**Intermediary systems**, the lamellæ of bone forming the interspaces or intervals in the Haversian system. See *lamella.*—**Lamb's system** (*naut.*), a method of arranging all of the outside plating of a vessel directly next to the frames, and fitting seam-straps on the outside of the plating in order to connect the various strakes.—**Lecher system**, in *elect.*, a system of wires used in the study of electric waves. It consists of two parallel wires of equal length, *AC* and *BD*, connected at one end to an oscillator, *O*. When the length of the wires is some multiple of a quarter wavelength, *AE*, of the electric oscillations, standing waves are set up in the system with well-marked nodes and loops. —**Marconi system**, the system of wireless telegraphy invented by Marconi. See *wireless* ★*telegraphy.*—**Moon system**, a form of alphabet for the blind invented by the Rev. William Moon about 1868. The forms of the letters and numerals are shown in the cut.—**Multiple-voltage system.** Same as ★*multivoltage system.*—**Multivariant system**, in *phys. chem.*, a thermodynamic system possessing more than two degrees of freedom, or in which more than two conditions may be changed independently. Compare ★*degree of freedom* (*b*) and ★*bivariant system.*—**Open system**, in wireless telegraphy, a system in which there is no attempt at syntonism or tuning of the apparatus —**Ordinal system**, in *math.*, an assemblage with the following properties: (1) of any two of its elements, one precedes and the other follows; (2) of two given elements, we can always determine which precedes; (3) if of any three elements, *a* precedes *b*, and *b* precedes *c*, then *a* precedes *c*.—**Orthogonal system of lines**, a combination of two systems of lines such that every line of either system is at right angles to all those of the other.—**Orthogonal system of surfaces**, a combination of systems of surfaces such that every surface of either system cuts all those not in that system at right angles.—**Participating system**, in tuning keyboard instruments, same as *equal temperament* (see *temperament*, 5): so called because two or more theoretical tones are represented by or participate in the same practical tone.—**Pennine system**, in *geol.*, a name of geographic significance proposed by Williams to supplant that of Carboniferous, and based upon the argument that the original Carboniferous system of Conybeare was founded upon the series of rocks which forms the Pennine mountain-chain of north England. As thus defined the Pennine system would include the Old Red Sandstone (basal and Devonian), mountain limestone, millstone-grit and associated shales, and the coal-measures. See *carboniferous.*—**Periodic system**, in *chem.*, the elements classified in the order of their atomic weights, in accordance with the periodic law of Mendeléjeff.—**Planetary system.** See *solar system*, under *solar*1.—**Rank of a system.** See ★*rank*2.—**Régie contract system.** See ★*régie.*—**Ruled system**, in *math.*, a regulus.—**Seed system**, one of the three great systems of forest management. Under it, reproduction is obtained from seed. Also called *high* or *seedling forest system.*—**Sexagesimal system**, a system in which each unit is sixty times the next smaller unit.—**Takaka system**, in *geol.*, the representative of the Silurian system in New Zealand, comprising lower shales with graptolites forming the Wanaka series, and an upper series of slates, sandstones, and limestones with Upper Silurian molluscan fauna forming the Baton River series. Both series are cut by eruptive rocks.—**Ternary system**, a triple star the components of which are physically connected.—**Three-wire system**, a system of electric wiring in which two constant-potential distributing lines have a common return-wire, thus effecting a considerable saving in the amount of copper used. The system is supplied by two generators in series, the positive terminal of one and the negative terminal of the other being connected to the outer mains. The other terminals are joined together and connected to the third or neutral wire.—**Tricyclic system**, in *chem.*, an arrangement of atoms in the molecule of a substance involving the union of three rings or closed chains of atoms, as in the case of anthracene, which may be viewed as the result of the condensation of three benzene rings.—**Universal system**, in the rating of stops or diaphragms for lenses, a system in which the number assigned to a stop indicates the square of the time of exposure for which it is designed.—**Vancouver system**, a name proposed by the Geological Survey of Canada for the great system of uplifts beginning at the south in the Olympic mountains, Washington, and extending northward through Vancouver and Queen Charlotte islands, and attaining its greatest development on the coast in southern Alaska, and finally terminating at the west in the Aleutian islands. *I. C. Russell*, Glaciers of North America, p. 32.—**Vigesimal system**, a system of counting or enumeration in which 20 is the base, the higher units being multiples of 20. The vigesimal system is always built up of groups of five and is derived from counting the fingers and toes. The term for twenty often signifies 'one man,' that is, the fingers and toes of one man.—**Wanganúi system**, in *geol.*, the representatives of the Pliocene Tertiary formation in New Zealand.



[Lecher System.



Moon System.

systematy (sis'te-mạ̈-ti), *n.* [*systemat*(*ic*) + *-y*3.] In *biol.*, same as *systematics*, *taxonomy*, or *classification*. *Annals and Mag. Nat. Hist.*, Nov., 1903, p. 534.

Systemic heart. See ★*heart*.

system-player (sis'tem-plā″ėr), *n.* One who plays against a banking game by following a systematic method of betting, instead of placing his money according to his fancy.

Systena (sis'tẹ̄-nạ̈), *n.* [NL. (Chevrolat, 1834), ‹ Gr. *σύστενος*, narrowing to a point.] 1. A genus of chrysomelid beetles comprising a number of species and confined to the western hemisphere. *S. frontalis* is an enemy to the grape in the United States and Canada.—2. [*l. c.*] A beetle of this genus.—**Red-headed systena**, an American chrysomelid beetle, *Systena frontalis*, which eats grape-leaves in the northern United States and Canada.

syzygy, *n.*—**Line of syzygies.** See ★*line*2.

szelong (shel'ong), *n.* [Pol. *szelang* = Russ. *shelegŭ*, etc., ‹ Goth. *skilliggs*, etc., = E. *shilling*.] The Polish solidus, first of silver or billon and subsequently of copper.

szmikite (shmik'īt), *n.* [G. *szmikit* (1887), named after I. *Szmik*, from whom it was received.] Hydrous manganese sulphate ($MnSO_4 + H_2O$) which occurs in whitish or reddish amorphous stalactitic forms: from Felsö-bánya, Hungary.

T 3. An abbreviation (*f*) of *territory*, *Testament*, *Thursday*, *Titus* (a book of the New Testament), *Tuesday*, *Turkish*; (*g*) in *med.*, of *tension of the eyeball*; (*h*) [*l. c.*] of *tome*, *ton*, *town*, *township*, *transitive*, *tun*, *tungsten*, and of the Latin *tempore*, in the time (of).

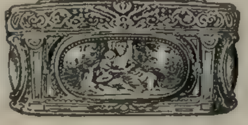
taal (täl or tâl), *n.* [D. *taal*, language, speech. See *tale*¹.] In South African Dutch territory, 'the language,' namely, the colonial form of Dutch there spoken.

tab² (täb), *n.* [Ar. *ṭāb.*] A game something like backgammon, popular in Egypt and Palestine, played with four sticks.

tabacosis (tab-a̤-kō'sis), *n.* [NL., < *tabacum*, tobacco, + *-osis.*] Chronic tobacco-poisoning caused by the inhalation of tobacco-dust.

tabasco (ta-bas'kō), *n.* [*Tabasco*, a state of Mexico.] 1. The trade-name given to a pungent sauce and to a catsup made from a variety of *Capsicum annuum* (see pepper) and said to be prepared by extracting the pulp of the ripe fruit and so treating it as to retain its flavor, strength, aroma, and color.—2. A name which has been applied by seedsmen to various forms of *Capsicum annuum.* The plant yielding the fruit from which the original tabasco sauce was made is described as 2½ feet high, with an erect, spreading habit; leaves often 4 inches long and 2½ inches wide, dark green, usually pubescent along the veins; fruit extremely pungent, oblong cylindrical, about an inch long, obtuse or acute, usually compressed at the base by the calyx, deep red when ripe, the unripe ones often drying to an orange color, frequently borne in twos. See ★*sauce.* *Rep. Missouri Bot. Garden*, 1898.

tabatière (tä-bä-tyãr'), *n.* [F.] 1. A snuff-box.—2. [F. *fosse tabatière*, 'snuff-box depression.'] A depression between the tendons of two extensor muscles of the thumb, noticed when the thumb is extended.



Tabatière.

tabbigan (tab'i-ga̤n), *n.* [Aboriginal Australian.] See ★*bullhead*, 1 (*f*).

Tabby-cat striation. See ★*striation.*

tabby-moth (tab'i-môth), *n.* Same as ★*grease-moth.*

tabellogram (tā̤-bel'ọ̄-gram), *n.* [L. *tabella*, a table, + Gr. *γράμμα*, a writing.] In *statistics*, a colored graphic table. *Philos. Trans. Roy. Soc.* (London), 1895, ser. B, p. 810.

tabergite (tab'ėr-gīt), *n.* [Sw. *Taberg* (see def.) + *-ite*².] A bluish-green chlorite allied to penninite: from Taberg, Vermland, Sweden.

Tabetic foot, neuritis. See ★*foot*, ★*neuritis.*

tabetiform (tā̤-bet'i-fôrm), *a.* [*tabet(-ic)* + L. *forma*, form.] Resembling tabes dorsalis or locomotor ataxia. *Buck*, Med. Handbook, V. 42.

tabi (tä'bẹ̄), *n.* [Jap.] A low sock of white or blue cotton worn by the Japanese. It has a thick sole and a separate part for the great toe.

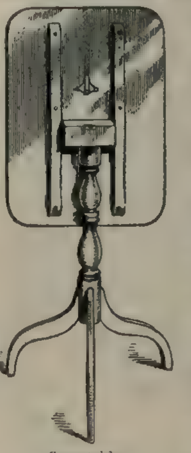
tabification (tā"bi-fi-kā'sho̤n), *n.* [L. *tabes*, a wasting, + *facere*, make, + *-ation.*] Emaciation.

tabl (tä'bl), *n.* [Ar. *ṭabl*: see *atabal.*] A small drum with one head, usually beaten with the hand: common in Mohammedan countries. See *atabal.*

table, *n.*—**Chronometer tables.** See ★*chronometer.*—**Harlequin table**, a name given to one of the complicated pieces of furniture invented in England in the eighteenth century.

> A magical table rightly called "*Harlequin*" has a sliding nest of drawers or "till" which can be raised to any height by means of intricate machinery.
> *K. W. Clouston*, Chippendale Period in Eng. Furniture, [p. 144.

Laying-on table, in *printing*, the inclined table that holds a pile of sheets of paper before printing. Better known in the United States as the *feed-board.* [Eng.]—**Periodic table**, in *chem.*, a classification in tabular form of the elements in accordance with the periodic law.—**Present-yield table**, in *forestry*, a tabular statement of the amount of wood at present contained in given trees upon a given area.—**Snap-table**, a table with the top hinged to a single support so that it may be placed in a horizontal or vertical position at pleasure.—**Stand table.** See ★*stand.*—**Thousand-legged table**, the name sometimes given to old-fashioned folding- or extension-tables which appear to have many supports.



Snap-table.

> On this account they are nowadays sometimes called *thousand-legged tables.*
> *J. W. Lyon*, Colonial Furniture of New England, p. 199.

Traveling table, a table or moving platform mounted on rollers or wheels and moving upon a track or around a center: used in manufacturing processes where a number of different men and processes are to operate upon one object of mass sufficient to make it troublesome or costly to move it from man to man. Thus a mold or flask can be made to pass from man to man as the table moves, ultimately reaching the furnace from which metal is poured to fill it.

> At the Baltimore works Walker's *travelling tables* present the moulds in rotation to the pouring ladle.
> *Encyc. Brit.*, XXVII. 237.

table-base (tā'bl-bās), *n.* Same as *water-table*, 1.

table-chair (tā'bl-chãr), *n.* An old English or Colonial piece of furniture which was used as a table or chair, the top turning back to a vertical position on a hinge. Also *chair-table.* *Lyon*, Colonial Furniture, p. 197.

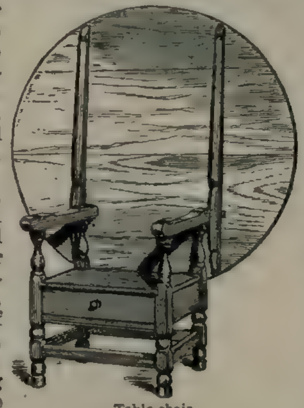


Table-chair.

table-cloth, *n.* 2. A horizontal sheet of cloud spreading over the top of Table Mountain, southwest of Cape Town, South Africa, and hanging down over the precipitous cliffs of the northeast front of the mountain. Its formation is due to the fact that the southwest winds bring just enough moisture to form cloud when they are pushed up to the height of the table-land that forms the summit of the mountain; and as these winds descend on the northeast front, the warming of the air, by compression or otherwise, evaporates the cloudy particles and gives a definite outline to the lower edge of the cloud.

table-engine (tā'bl-en"jin), *n.* A name for what is commonly called the direct vertical engine, in which the cylinder stood on a base-plate or table with the piston-rod going out at the top and imparting motion to the crank and fly-wheel shaft above, the latter being supported on frames resembling the letter A rising from the table or base.

table-feed (tā'bl-fēd), *n.* 1. That detail in the design of a machine-tool by which the work secured to a holding-chuck on a table is moved, in the feeding process, against or toward the path of the tool which is fixed relatively to the frame.—2. In *sheet-metal work*, an automatic feed-motion employing a table which slides on ways. The sheets to be punched are clamped to the table, and the table is timed to pass under the dies of the perforating-press at the speed required to meet the dies at every stroke, or at a variable speed where the perforations are distributed over irregular distances on the plate.

table-key (tā'bl-kē), *n.* A form of two-way switch used in telephony for making certain connections at the switchboard.

Table-land of erosion, a plateau which has been formed by the processes of uplift and erosion.

tableman, *n.* 3. A workman in a rolling-mill who has charge of the operation of the feeding-table by which the piece is delivered or fed to the rolls; or, one who works in connection with such a table.

table-plain (tā'bl-plān), *n.* A mesa within the valley of a river and carved out of the confluent alluvial fans of its tributaries by the sapping of the river itself and by the erosion of its affluents.

> Climatic conditions with which most of us are not very familiar are chiefly responsible for many of the bold and unusual relief effects that characterize the region through which the Rio Grande flows. The valley mesas, or *table-plains*, are among the most instructive of all of these topographic features. *Amer. Jour. Sci.*, Dec., 1907, p. 468.

table-stakes (tā'bl-stāks), *n.* A variety of poker in which no player can bet more than he has on the table in front of him when the cards are dealt, the betting limit of the game being what is on the board in front of the better.

Tablet triturate. See *triturate.*

table-tennis (tā'bl-ten"is), *n.* The game of tennis played upon a table, with smaller balls, nets, rackets, etc. Compare ★*ping-pong.*

table-vise (tā'bl-vīs), *n.* A general name for the form of vise which is attached to a bench or table by means of bolts or of a screw by which it can be permitted to swivel; a bench-vise: distinguished from a leg-vise, the older form now less in use.

tablier, *n.* 2. In *anat.*, the peculiar formation brought about by the large size of the labia minora of the vulva, which hang down between the small labia majora: found particularly among the Hottentots and Bushmen.

Tabora black. See ★*black.*

Tabular gemmation. See ★*calycinal gemmation.*

tabulator, *n.* 2. An attachment to a type-writer for so controlling the feed-motion of the carriage that it will stop automatically at certain prearranged positions or points in its traverse, the object being to enable the operator to arrange the print in vertical lines, as in drawing up a tabulated statement of accounts. By its use, tables of quantities, prices, and other items can quickly be arranged in columns for ready reference. The tabulator can be either fastened to the type-writer or may be an integral part of the machine, different methods being employed in different types of machines. The essential parts of the tabulator are a rack, having teeth spaced to correspond to the spacing of the letters made by the type-writer, and movable margin-stops which are controlled by a supplementary keyboard attached to the type-writer. A number of different types of tabulators are in use, all based on the general principle of controlling the traverse of the carriage of the type-writer in such a way that a key of the tabulator, when touched, automatically feeds the carriage a fixed distance and saves all the labor that would otherwise be spent in feeding the carriage the same distance step by step by means of the space-key. See ★*margin-stop* and ★*type-writer.*

taccaceous (ta-kā'shius), *a.* [NL. *Taccace(æ)* + *-ous.*] Belonging or pertaining to the *Taccaceæ.*

tachistoscope (ta-kis'tọ̄-skōp), *n.* [Gr. *τάχιστος*, superl. of *ταχύς*, swift, + *σκοπεῖν*, view.] In *exper. psychol.*, an apparatus which exposes to view, for a brief and accurately variable time, an object or small group of objects (letters, short words, etc.).

> Simple forms of the *tachistoscope* are the 'instantaneous' shutter; the falling screen which, in dropping,

allows a momentary view through its window of the objects arranged behind it; the swinging screen attached to a pendulum; and the rotating disk with adjustable slit or open sector. Wirth's mirror *tachistoscope* permits, in addition to the ordinary momentary exposure, the partial variation of a continuously presented object; a permanently visible virtual image is replaced, at stated intervals, by a real image which occupies precisely the same apparent position in space. Dodge's mirror *tachistoscope* employs the principle of total reflection to secure the direct superimposition of exposure field upon pre-exposure field, without visible movement.
E. B. Titchener, Exper. Psychol., I. ii. 200.

tachogram (tak′ọ̄-gram), *n.* [Gr. *ταχύς*, swift, + *γράμμα*, a writing.] The record of angular velocities, of a machine or engine, obtained by means of a tachograph.

tachograph (tak′ō-gråf), *n.* [Gr. *τάχος*, swiftness, + *γράφειν*, write.] A recording tachometer applied to shafting or wheels to register rotation-speed; a speed-indicator. Also *tachegraph*. *Nature*, Nov. 26, 1903, p. 95.

tachoscope (tak′ọ̄-skōp), *n.* [Gr. *τάχος*, swiftness, + *σκοπεῖν*, view.] An instrument which registers the number of revolutions made by a shaft in a certain time. It consists of a revolution-counter combined with a time-piece, there being an automatic cut-out for the revolution-counter.

tachyaphaltite (tak″i-a-fal′tīt), *n.* [Gr. *ταχύς*, swift, quick, + *ἀφαλτος*, springing off or back, + *-ite*^{2}. It flies to pieces when the gangue is struck.] An altered and hydrated form of a mineral resembling zircon, but containing considerable quantities of thorium: from Kragerö, Norway.

tachycardia, *n.*—**Essential tachycardia**, rapid heart-action not due to any discoverable organic disease. *Med. Record*, Feb. 7, 1903, p. 204.—**Reflex tachycardia**, rapid heart-action due to disturbances in other systems than the circulatory.

> Where, on the other hand, no clinical or pathological disease-changes are manifested in the structure of the heart, and where its rapid action is apparently due to causes outside the cardiac territory, whether those depend upon changes in the nervous system or passing temporary disturbances in the alimentary tract, the name *reflex* should be applied to the *tachycardia*.
> *Med. Record*, Feb. 7, 1903, p. 205.

tachydrite, *n.* See *tachhydrite*.

tachygen (tak′i-jen), *n.* [Gr. *ταχύς*, swift, + *-γενης*, -producing.] In *biol.*, a plant or animal organ which has developed suddenly or rapidly during the phylogenetic history of the species.

tachygenesis (tak-i-jen′e-sis), *n.* [NL., < Gr. *ταχύς*, swift, + *γένεσις*, genesis.] In *biol.*, the inheritance of a characteristic at an earlier stage of individual development than that at which it first appeared; acceleration of development. According to the theory of tachygenesis, new characteristics are first acquired by adult organisms; are inherited at earlier and earlier periods in the lives of their descendants; and, finally, the older characteristics are crowded out and dropped from the beginning of the embryonic history, thus making room for the new characteristics which are continually being added on to the organism during its adult life.

> This is in conformity with the law of *tachygenesis*, or acceleration in development, which is the key to the understanding of the taxonomic values of shell characters in gastropods. *Amer. Nat.*, Dec., 1902, p. 921.

tachygenetic (tak″i-jẹ̄-net′ik), *a.* Of or pertaining to tachygenesis; tachygenic.

tachygenic (tak-i-jen′ik), *a.* Same as ★*tachygenetic*.

> The sudden or *tachygenic* appearance of temporary structures, such as hatching spines, various setæ, spines, respiratory organs, so characteristic of dipterous larvæ, and of the protective colors and markings of caterpillars.
> *A. S. Packard*, Text-book of Entom., p. 708.

tachymetric (tak-i-met′rik), *a.* Relating to tachymetry; measured or ascertained by the tachymeter or by tachymetry.

tachyphore (tak′i-fōr), *n.* [Gr. *ταχ ς*, swift, + *οίρειν*, bear.] A name of a proposed system of electric traction in which the car is drawn forward by the magnetic action of a series of solenoids. The passing car automatically completes and then breaks the circuit through each of these in turn. Also known as the *port-electric railway system*. *Houston*, Dict. Elect.

tachyphrasia (tak-i-frā′ẓiạ̈), *n.* [NL., < Gr. *ταχύς*, swift, + *φράσις*, speaking.] Very rapid and voluble speech.

tachypnœa (tak-ip-nē′ạ̈), *n.* [NL., < Gr. *ταχίς*, swift, + *-πνοια*, < *πνεῖν*, breathe.] Very rapid respiration.

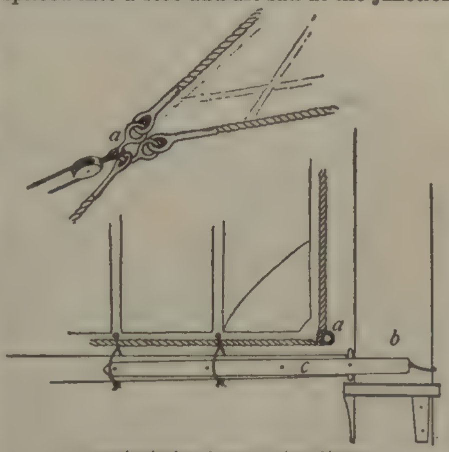
Tachysurinæ (tak″i-sū-rī′nē), *n. pl.* [NL., < *Tachysurus* + *-inæ*.] A subfamily of siluroid fishes characterized by having the nostrils close together and neither of them with a barbel.

Tachysurus (tak-i-sū′rus), *n.* [NL., irreg. < Gr. *ταχύς*, swift, + *οὐρά*, tail.] A genus of siluroid fishes. Most of them are from Central America.

tachythanatous (tạk-i-than′ạ-tus), *a.* [Gr. *ταχύς*, swift, + *θάνατος*, death.] Rapidly fatal. [Rare.]

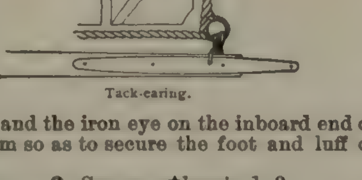
tack^1, *n.* **10.** Side: said of a speculator's relationship to the market. *Stand. Dict.*—**Midship tack**, an additional tack found on the middle foot of some courses, and used in calms and light airs to keep the foot of the sail standing forward, so as to prevent it from slapping back and chafing itself against the mast.—**Port tacks on board**, said of the tacks of the courses when the vessel is on the wind on the port tack.—**Slant tack**, the tack on which the long leg is made when sailing close-hauled.—**Starboard tack.** A vessel is said to be on the starboard tack when the wind is blowing against her starboard side, and to be on the port tack when the wind is blowing against her port side. When a square-rigged vessel is on the starboard tack, the starboard tacks of her courses are boarded to starboard, and when on the port tack the port tacks of her courses are boarded to port. In the case of schooners, sloops, etc., the terms 'starboard tack' and 'port tack' are borrowed, since such vessels have no tacks to board—the tacks of fore-and-aft sails always being against the after side of the respective masts, independent of the tack that the vessel is on.—**Starboard tacks on board**, said of the tacks of the courses when the vessel is on the wind on the starboard tack.—**To board a tack.** See ★*board*.—**To haul aboard the tack.** Same as *to haul aboard* (which see, under *aboard*^{1}).—**To make a tack** (*naut.*), to sail a leg; to make a board.—**To split tacks**, said of a vessel when in a race, on the wind, she goes about in order to pursue a different course from her opponent.

tack-cringle (tak′kring″gl), *n.* An iron ring spliced into a fore-and-aft sail at the junction of the foot and luff; also, the iron shapes spliced into the lower corners of square sails.



a, *a*, tack-cringles; *b*, mast; *c*, jaw of boom.

tack-earing (tak′ēr″ing), *n.* A length of rope passed several times through the tack-cringle and the iron eye on the inboard end of the boom so as to secure the foot and luff of a sail.



Tack-earing.

tacking, *n.* **2.** Same as ★*barring*^{1}, 2.

tacking-machine (tak′ing-ma-shēn″), *n.* In *shoe-manuf.*, a machine, allied to the nailing-machine, for cutting, twisting, corrugating, and bending wire into nails, tacks, and staples, driving the nails into shoe-heels and soles, and also tacking soles and uppers together. It is made in various forms.

tack-iron (tak′ī″ėrn), *n.* The iron bolt to which is shackled the block through which the tack is rove. The tack-irons for the main course are found to port and starboard in the deck; but the tack-irons for the fore course are found sometimes on the cat-heads, and again on bumpkins under the bows.

tackle, *n.*—**Boom-jigger tackle**, usually a small double and a single block, used for rigging studding-sail booms in and out on a lower yard.—**Boom-tackle**, a double purchase, as a rule, used in fore-and-aft vessels to guy out the spanker-boom when running free, so as to prevent that spar from jibing.—**Fore-and-aft tackle** (*naut.*): (*a*) Any kind of tackle that is used in the line of the keel. (*b*) A watch-tackle purchase used for stretching the backbone of an awning.—**Forestay tackle** (*naut.*), a tackle used in hoisting things in and out of a vessel.—**Half-watch tackle**, a watch-tackle. There is no difference in meaning between the two terms, both signifying a purchase composed of a double and a single block. The former was sometimes used because the power derived was considered equal to that of half the watch in hauling and hoisting.—**Hatch-tackle**, a double and single block (watch-tackle) used for hoisting articles from the store-rooms of a vessel.—**Jeer-tackle**, a heavy purchase which is used for sending lower yards up and down.—**Jigger-tackle**, a handy-billy (watch-) tackle used for various purposes about decks and aloft.—**Mast-head tackles** (*naut.*), tackles led from the mastheads to some external point when a vessel is in dock, to prevent it from falling over in the event of accident to the bilge-blocks and shores.

> The practical method of guarding against such accidents of course consists in carefully shoring, using *mast-head tackles*, or otherwise supporting the vessel externally, in order to prevent her from upsetting.
> *White*, Manual of Naval Arch., p. 125.

Sail-tackle, a purchase used for hoisting one of the upper sails from the deck to its yard, preparatory to bending. This is usually a double and a single block, which constitutes a watch-tackle.—**White's tackle**, a system of pulley-blocks in which the sheaves are of different diameters so computed that the varying path or speed of the rope in the successive passage from sheave to sheave shall cause each sheave to turn at the same number of revolutions in a given time. This makes the pins or bushings wear uniformly, so far as space traversed is responsible for such wear. Named from the designer.

tack-mold (tak′mōld), *n.* A mold, usually of copper, for casting the flat lugs used by plumbers to fasten pipe to a flat surface and known as tacks.

tack-puller (tak′pu̇l″ėr), *n.* A tool for drawing out tacks or small nails; a tack-claw.

tack-tackle, *n.* It is the purchase which is hooked into the hauling part of the tack, and by means of which the clue of the course is boused down toward the deck, and kept forward on the windward side when the ship is close-hauled.

tacky^2, *n.*—**Tacky party**, a social gathering of persons dressed in the rough serviceable clothes of ordinary wear. [Southern U. S.]

II. *a.* **1.** Unkempt; rough; shabby; ill-fed: said of persons or animals.—**2.** Bad; poor; miserable. [Slang.]

> That was the *tackiest* time I ever had and the tea was jay. *Town Topics*, March 27, 1902, p. 13.

Taconian (tā-kō′ni-an), *n.* In *geol.*, a name proposed by T. S. Hunt for what he supposed to be the uppermost member of the Archæan system of Precambrian rocks. The Taconian series of Hunt is now known to be in part of Paleozoic age, and the term is no longer used. See *Taconic system*, under *system*.

Taconic limestone. See ★*limestone*.

taconite (tā′kọ-nīt), *n.* [*Taconic* + *-ite*^{2}.] In *petrog.*, a name proposed by H. V. Winchell (1896) for cherty or jaspery rock, in places calcareous or quartzitic, associated with the hematites of the Masaba Range, Minnesota.

tactic, *a.* **2.** Of or pertaining to the motions of organisms in relation to external agents; exhibiting taxis.

Tactical unit. See ★*unit*.

tactics, *n.*—**Naval tactics**, the art and practice of manœuvering a fleet or squadron of war-ships.

tactil, *a.* A simplified spelling of *tactile*.

tactile, *a.* (*d*) In *art criticism*, noting the quality of solidity in nature, which is perfectly apprehended only by the sense of touch, and which is better represented by certain painters than by others. 'Tactile' in this sense is a translation of the German *taktisch*, used by Riegl in 1893.

> It is the *tactile* quality of the subject, rather than its illusionist possibilities, which has attracted the artist.
> *Eugénie Strong*, Roman Sculpture, p. 66.

Tactile cone. See ★*cone*.—**Tactile disks**, disk-shaped terminations of tactile nerves in certain locations; also, same as *Grandry corpuscles* (which see, under *corpuscle*).—**Tactile space.** See ★*space*.

tactilogical (tak-ti-loj′i-kạl), *a.* [*tacti(le)* + *logical*.] Tactual; pertaining to touch: as, *tactilogical* sensations. *Amer. Jour. Psychol.*, XIII. 578. [Rare.]

tactualist (tak′tụ̄-ạl-ist), *n.* [*tactual* + *-ist*.] **1.** One who holds that touch (including kinæsthesis) is the spatial sense *par excellence*, and that sight alone cannot acquaint us with the size or shape or distance or direction of objects. *G. M. Stratton*, Exper. Psychol. and its Bearing upon Culture, p. 128.—**2.** One who is motor-minded; that is, one who thinks, remembers, imagines, etc., predominantly in terms of kinesthetic sensations. [Rare.]

tactual-verbal (tak′tụ̄-ạl-vėr″bạl), *a.* **1.** Tending to think, remember, imagine, etc., in verbal ideas, and to experience these ideas in tactual, motor, or kinesthetic terms: as, the *tactual-verbal* type of mind.—2. Tending to represent words mentally in terms of kinesthetic sensations.

> The visual-verbal mind sees, the auditory-verbal hears, the *tactual-verbal* 'feels,' what words are coming.
> *E. B. Titchener*, Exper. Psychol., I. i. 197.

3. Having a verbal form, with tactual or kinesthetic contents: as, a *tactual-verbal* idea.

tactual-visual (tak′ṭū-ạl-viz″ụ-ạl), *a.* Compounded of sensations of touch and sight; noting a concurrence or association of visual and tactual impressions.

> Localisation may also be *tactual-visual*. *O* opens his eyes, as soon as he has heard the telephone click, and points with the rod in the direction from which he thinks that the sound comes.
> *E. B. Titchener*, Exper. Psychol., I. i. 180.

tadjerite (taj′ėr-īt), *n.* See ★*meteorite*.

tæniate, *a.* 2. Having narrow, ribbon-like markings running lengthwise of the body. [Rare.]

tænicidal (tē′ni-sī-dl), *a.* [L. *tænia*, tapeworm, + *-cida*, ‹ *cædere*, kill, + *-al*1.] Destructive to tapeworms. *Buck*, Med. Handbook, I. 446.

Tænioceras (tē-ni-os′ẹ-ras), *n.* [NL., ‹ Gr. *ταινία*, band, fillet, + *κέρας*, horn.] A genus of Carboniferous nautiloid cephalopods with discoidal shells the volutions of which have a trapezoidal section. Improperly written *Tænoceras* and *Tainoceras*.

tæniole (tē′ni-ōl), *n.* Same as *tæniola*.

> Four muscles, which extend up the *tænioles*, are the agents for contracting the stalk, while the margin is contracted by a circular muscle which passes round outside the insertion of the tentacles, and in contracting pulls the margin well over the tentacles, leaving only a hole in the centre, through which the tips of some of the tentacles appear. *Annals and Mag. Nat. Hist.*, Jan., 1904, p. 64.

Tæniotoca (tē-ni-ot′ō-kạ̈), *n.* [NL., ‹ Gr. *ταινία*, band, fillet, + NL. (*Embio*)*toca*.] A genus of embiotocoid fishes found on the western coast of the United States.

tæniotoxin (tē″ni-ọ-tok′sin), *n.* [Gr. *ταινία*, tapeworm, + E. *toxin*.] A poisonous substance occurring in tapeworms.

Taffeta ribbon. See ★*ribbon*.—**Tufted taffeta,** a silk fabric of taffeta (foundation) weave with a shaggy pile.

tahil (tä′hil), *n.* [Malay *tāhil*. See *tael*.] A unit of weight in the Straits Settlements, equal to one sixteenth of a catty, or about 1⅛ ounces avoirdupois.

tahsil (tä′sēl), *n.* [Hind., ‹ Ar. *taḥsīl*, collection.] In India, a subdivision of a district; the ultimate unit of administration. *Encyc. Brit.*, XII. 769.

tahsildar (tä-sēl-där′), *n.* [Also *tahseeldar*; Hind., ‹ Pers. *taḥsīldār*, ‹ Ar. *taḥsīl*. See ★*tahsil*.] In India, the chief (native) revenue officer of a subdivision of a district. *Yule and Burnell*, Hobson-Jobson.

tahuari (tä-hwä′rē), *n.* [S. Amer.] See ★*llanchama*.

taiaha (tī′ä-hä), *n.* [Maori.] A sort of club or staff about six feet long, carved at one end and frequently ornamented with feathers. It was used by Maori chiefs as a badge of office, and sometimes for fighting.

taihoa (tī′hō-ạ̈), *adv.* [Maori.] Presently; by and by; some time later; wait a bit. [New Zealand.]

tail1, *n.* 3. (*h*) The end of the fiber that is combed last on a combing-machine. *Thornley*, Cotton Combing Machines, p. 283.—10. The players on a side who are not counted on for runs, and who are consequently sent last to bat. *Hutchinson*, Cricket, p. 411.—**Tail hold.** See ★*hold*1.—**Tail of a gale.** See ★*gale*2.

tail1, *v. t.*—**To tail out,** to wind up the sale of gradually, or with prices tapering down, as in selling cattle. [Colloq.]

> Every intelligent feeder knows the value of uniformity; it enables him to sell his product without *tailing out* a lot at inferior price.
> *Rep. Kansas State Board Agr.*, 1901–02, p. 177.

tail-back (tāl-bak′), *v. i.* To move backward, as from the head to the tail: specifically, noting the rush of the flame of burning gas in a current of air backward against the flow of the current. This happens in any confined combustible mixture of gas and air when the rate of propagation of the flame in the mixture is faster than the velocity of flow in the duct or tube which confines and directs it. In Bunsen or other heating-burners it is called "back-firing," the flame retreating in the mixing-tube until it reaches the jet of gas.

tail-beam (tāl′bēm), *n.* In *flooring*, a piece of timber which is framed into a header; the third member in a piece of framing around a chimney or the like. Also called *tail-joist*.

tail-block, *n.* 2. The supporting block or end-piece for that end of the work which is farthest from the head-end or driving-mechanism, as in a lathe, or the carriage for logs, in a saw-mill.

tail-chain (tāl′chān), *n.* In *lumbering*, a heavy chain bound around the trailing end of logs, as a brake, in slooping on steep slopes.

tail-cord (tāl′kôrd), *n.* One of two pieces of cord on a Jacquard loom connecting hooks of the Jacquard with neck-twines operating heddles. *R. Marsden*, Cotton Weaving, p. 150.

tail-cutter (tāl′kut″ėr), *n.* A curved beveling-machine for cutting off and beveling the ends of stereotype plates. *Elect. World and Engin.*, Jan. 16, 1904, p. 139.

taildown (tāl′doun), *v. t.* To roll (logs) on a skidway to a point on the skids where they can be quickly reached by the loading-crew.

tailed1, *a.*—**Tailed cirrus,** small cirrocumuli or altocumuli from which snowflakes or fine rain-drops are falling slowly and drifting behind in the lower wind: analogous to the rain-streaks from larger cumuli.

tail-fan (tāl′fan), *n.* In macrurous crustaceans, the telson together with the appendages of the preceding segment. Also *tail-fin*.

tail-fin, *n.* 2. In crustaceans, same as ★*tail-fan*.

tail-head (tāl′hed), *n.* The base or root of the tail.

> The lines on each side of the back should be carried true to the last rib, with a loin thick, preferably inclined to raise some, followed by hooks well covered and smooth, and a long hind quarter, ending in a level *tail-head* and wide pin-bones.
> *Rep. Kansas State Board Agr.*, 1901–02, p. 89.

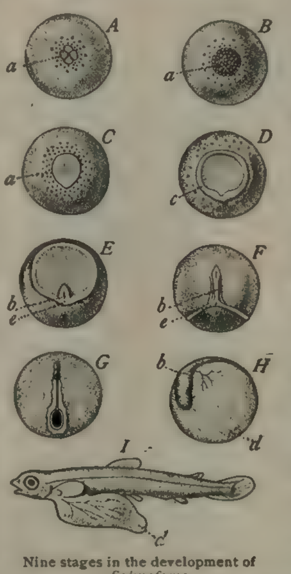
tail-hook, *n.* 2. Same as ★*dog*, 9 (*m*).

tail-house (tāl′hous), *n.* In *mining*, the building in which tailings are treated.

tailing1, *n.* 5. In *elect.*: (*a*) In *teleg.*, especially through cables, the discharge current due to the capacity of the line which continues to flow for an appreciable time after the signaling impulse has been received and modifies the character of the latter. *Trans. Amer. Inst. Elect. Engin.*, 1897, p. 95. (*b*) In *automatic teleg.*, a mark, on the recording-tape of a receiving instrument, which is not caused by the signaling impulse proper but by the discharge current from the line.—6. In prospecting for coal, the outcrop of a carbon-carrying stratum at the surface of the ground. Called also *smut* and *blossom*. The vein peters out at the surface, or tails away to nothing, but leaves a stain under weathering. [Eng.]

tail-joist (tāl′joist), *n.* See ★*tail-beam*.

tail-knob (tāl′nob), *n.* A small swelling consisting of an aggregation of cells at the posteromedian point of the blastodisc, or germ-ring, in the young fish embryo.



Nine stages in the development of *Salmofario*.

A–H, before hatching; *I*, shortly after hatching; *a*, blastoderm; *b*, embryo; *c*, thickened edge of blastoderm; *d*, yolk-sac; *e*, tail-knob. (*A–G* after Henneguy.)

(From Parker and Haswell's "Zoology.")

taille, *n.* 6. (*b*) Also applied to the tenor voice and to the tenor species of wind-instruments: as, *taille de basson*, the tenor oboe or tenoroon.

tail-light (tāl′-līt), *n.* Same as *tail-lamp*.

tail-lock (tāl′-lok), *n.* A crest of erect, stiff hairs on the center of the upper part of the tail: occurring more or less frequently in horses in their winter coat.

tail-mill (tāl′-mil), *n.* Same as ★*tail-house*.

tailor, *n.* 2. (*c*) A name in New South Wales of the fish *Pomatomus saltatrix*. It is called *skipjack* in Melbourne, a name by which it is also known in America, where it is more commonly called *bluefish*.

tailorage (tā′lọr-āj), *n.* 1. The products of tailoring, collectively.—2. The fit, general finish, and effect of the work of a tailor.

tailorize (tā′lọr-īz), *v. i.* and *t.*; pret. and pp. *tailorized*, ppr. *tailorizing*. 1. To follow the business of a tailor; fit as a tailor; fit closely and somewhat stiffly.—2. To make conventional; conventionalize. [Rare.]

tailor-made, *a.* Hence—2. Somewhat stiff and formal; conventional. [Rare.]—**A tailor-made girl,** a young woman who affects the tailor cut in clothes and is somewhat stiffly and mannishly dressed. [Colloq.]

tailor-shad (tā′lọr-shad), *n.* Same as *gizzard-shad*.

tail-piece, *n.* 1. (*f*) In *lock-making*, a sliding piece connecting the hub and the bolt and transmitting motion from one to the other. (*g*) In *printing*, a decorative design at the end of a chapter that has a short page: usually in the form of a reversed pyramid. (*h*) A casting or hollow chamber below the suction-valves of a large pump to which the several suction-pipes leading to the sinks or sumps may be bolted by flanged joints.

tail-rock (tāl′rok), *n.* Same as *tailings*. See *tailing*1, 3.

tail-rod (tāl′rod), *n.* A rod attached to the piston of an engine or pump and projecting through the head of the cylinder away from the crank. Such a rod helps to support and steady the piston, especially in an engine having a very long stroke.

> There are several novel features in regard to the power station, among them the method of making joints and piping, and an arrangement for recovering the cylinder oil from the water of condensation. The experiment has been tried of equipping one engine with *tail rods* and the other without *tail rods*. The experience with the *tail rods* indicates that it is possible to work the engine equipped with them at about 10 per cent. greater capacity. *Elect. World and Engin.*, Dec. 26, 1903, p. 1064.

tail-shaft (tāl′shȧft), *n.* 1. Any shaft working at the end of the series farthest from the head, or from the end, where the power is primarily applied.—2. In marine practice, the last or sternmost length of the propeller-shaft, or the portion which projects aft through the hull and to which the propeller is fastened.

tail-sheave (tāl′shēv), *n.* The sheave or drum at the bottom or inner end of a mine-haulage system or an inclined plane, on which the cars are operated by an endless rope. At the opposite end is the *head-sheave*, when the cars are operated partly by gravity.

tail-spindle (tāl′spin″dl), *n.* The spindle carrying the dead-center of the engine-lathe and located in the tail-stock farthest from the head.

tail-stem (tāl′stem), *n.* Same as *tail-piece*, 1 (*b*).

tail-twisting (tāl′twis″ting), *n.* The act of torturing an animal by twisting its tail; hence, the act of tormenting, in general; nagging. [Slang.]

> The Colonel's Wife talked and prayed by turns till she was tired, and went away to devise means for chastening the stubborn heart of her husband. Which, translated, means in our slang, '*tail-twisting*.'
> *R. Kipling*, Watches of the Night, in Plain Tales from [the Hills, p. 82.

tail-vise, *n.* 2. A leg-vise, or one which is supported partly upon an iron foot or leg reaching to the floor and partly by being secured to the edge of a bench: used by blacksmiths and others for rougher classes of work. Known also in Great Britain as the *standing vise*. [Eng.]

tainiolite (tī′ni-ọ-līt), *n.* [Gr. *ταινία*, band, + *λίθος*, stone.] A kind of lithium-mica occurring in colorless crystals having the form of strips or bands: its relations to the better-known species have not been determined: found in southern Greenland.

taipo (tī′pō), *n.* [Maori?] A New Zealand word for 'devil,' often applied by settlers to a vicious horse or as a name for a dog. *E. E. Morris*, Austral English.

takadiastase (tak-ạ-dī′ạ-stās), *n.* [*Taka*(*mine*), a Japanese chemist who first prepared it, + E. *diastase*.] A trade-name for a digestive ferment obtained by the action of *Aspergillus oryzæ* on rice. It is used in cases of starchy indigestion.

> The following ferments were used: *taka-diastase*, pancreatin, rennin, myrosin, invertin, emulsin, pepsin in acid solution, pepsin in alkaline solution, ingluvin, malt, and papain. *Jour. Med. Research*, July, 1907, p. 385.

Takaka system. See ★*system*.

Takatori pottery. See ★*pottery*.

take, *v. t.*—**To take a stand.** See ★*stand*.—**To take ground.** See ★*ground*1.—**To take harbor,** to put in to a harbor.

> We resolved *to take harbour*.
> *Defoe*, Captain Singleton, p. 37.

To take land (more, less, too much, etc.) in plowing, to increase, diminish, etc., the width of the furrow-slice: said of the plow or the plowman. [Eng.]—**To take the air.** (*e*) To measure the flow of air for ventilating or other uses in a duct or passage. (*d*) To receive the quantity of air intended, or to deliver it: used more commonly in the negative form of "not taking the air," when the apparatus is working poorly. Both terms are used specifically with regard to the operation of mines requiring artificial ventilation by fans or other devices.—**To take the back track.** See ★*track*2.—**To take up bees,** to kill bees, generally with burning sulphur, to get the honey. *Stand. Dict.*

take, *n.* 4. In *pathol.*, a successful inoculation or vaccination. [Colloq.]

> Ninety-eight per cent of "*takes.*"
> *Phil. Med. Jour.*, Jan. 31, 1903.

taker, *n.* 2. A cylinder on a wool-carding machine for taking the fibers from the feed-rolls to the main cylinder. Also called *licker-in* or *taker-in*.

taker-in (tā″kėr-in′), *n.* The cylinder, covered with card-clothing, which takes the fibers of wool or cotton from the feed-rolls to the main cylinder, or drum, of a carding-machine; a taker.

> The fibres of the lap sheet are combed or struck off by the *taker-in*, and carded or combed as they pass through the carding engine. When the fibres have been carded, they are combed from the doffer in a thin gauze-like web, and adhere to one another with a gossamer-like attachment, which holds the fibres together for the drawing processes. *Hannan*, Textile Fibres of Commerce, p. 116.

takin (tä′kin), *n.* [Native name.] A goat-like antelope, *Budorcas taxicolor*, related to the Rocky Mountain goat, found at a high altitude in the eastern Himalayas.

takkag (täk′äg), *n.* A Siamese three-stringed lute or guitar similar to the Burmese patola.

takosis (ta-kō′sis), *n.* [For **tekosis*, irreg. < Gr. τήκειν, melt, waste away, + *-osis*.] A contagious disease of goats, characterized by anemia and rapid emaciation, usually terminating fatally.

> At last a disease has been found that will kill a goat. . . . The new disease is called "*takosis.*" This is a new name for a new disease.
> *Kansas City Daily Times*, Oct. 26, 1903.

takyr (tä′kir), *n.* [Turki **takir*, Chagatai *taḳir*, < *taḳ*, smooth, plane.] In Turkestan, a flat clayey tract covered with water in the spring, but in the summer dry, with scant vegetation; a playa; a sebka.

> There are also wide spaces (*takyrs*), nearly horizontal, covered with clay, upon which water accumulates in the spring; in the summer they are muddy first, but later quite dry, and merely a few Solaneæ and bushes grow on their surface. *Encyc. Brit.*, XXX. 15.

tala2 (tä′lạ̈), *n.* [Native name.] An Argentine tree of the elm family, *Momisia pallida*, yielding a valuable wood used for making tool handles, casks, and barrels.

talæporiid (tal-ẹ̄-pō′ri-id), *n.* and *a.* I. *n.* A member of the lepidopterous family *Talæporiidæ*.

II. *a.* Having the characters of or belonging to the family *Talæporiidæ*.

talalgia (tạ-lal′ji-ạ̈), *n.* [L. *talus*, heel, + Gr. ἄλγος, pain.] Pain in the heel.

talang (tä′läng), *n.* [Philippine name.] See ★*mabolo*.

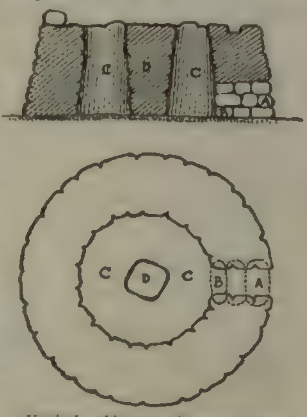
talangtalang (tä-läng-tä′läng), *n.* [Philippine name.] See ★*duguan*.

talara (tä′lạ-rạ̈), *n.* [Pol., also *talera* = Russ. *talerŭ*, < G. *taler*, *thaler*. See *thaler*, *dollar*.] A silver coin of Poland.

talaro (tä′lä-rō), *n.* [It. *talaro*, < G. *taler*, *thaler*. See *thaler*, *dollar*.] The designation of the Maria Theresa dollar of 1780, which is, or was, periodically restruck for the commerce of the Levant and Abyssinia.

Talavera pottery. See ★*pottery*.

talayot (tä-lä′yōt), *n.* [Balearic.] A name given by the natives of the Balearic Islands to certain prehistoric stone towers found in those islands. These towers are round or square with slightly sloping sides, but they are in such a ruined condition that the structure of their upper portion is doubtful. The interior was usually a simple chamber, but sometimes more complex. Their use is not known.



Vertical and horizontal cross-sections of a talayot.
A, *B*, entrance gallery; *C*, *C*, interior crypt; *D*, central pillar.

> There are no true dolmens in Sardinia, where they are replaced by the Nuraghi, abodes not of the dead but of the living, though possibly modelled on long vanished cromlech prototypes. To the same category belong the so-called *Talayots*, or "watch-towers" of the Balearic Islands, which date also from prehistoric times, and which are generally supposed to have been erected by the same race that built the Sardinian Nuraghi.
> *Keane*, Ethnology, p. 126.

Talbot's law, the Talbot-Plateau law. See ★*law*1.

talbotype (tâl′bō-tīp), *v. t.*; pret. and pp. *talbotyped*, ppr. *talbotyping*. To produce (a photographic image) on the surface of sensitized paper according to the talbotype method. See *talbotype*, *n.*

> To *talbot-type*.—To produce a photographic image on the surface of paper chemically prepared.
> *N. and Q.*, 9th ser., VII. 263.

talc-chlorite (talk′klō″rīt), *n.* An imperfectly defined mineral from Traversella in Piedmont, occurring in large hexagonal plates, perhaps a mixture of ripidolite and talc. Also applied to another mineral in the same locality, perhaps the same as leuchtenbergite.

talcium† (tal′si-um), *n.* [NL., < E. *talc*.] An early name for magnesium.

tale1, *n.*—**Canterbury tale,** a long and tedious tale or story; a fable; a cock-and-bull story: from Chaucer's "Canterbury Tales." *N. E. D.*

talebraric (tal-ẹ̄-brar′ik), *a.* Noting an acid, a pale-yellow crystalline compound, contained in the lichen *Lepraria latebrarum*.

talent1, *n.*—**All the talents,** a nickname given to the British ministry in office in 1806, which was conspicuous for its want of a man of genius, while including those possessed of "all the talents."

talent1 (tal′ẹ̈nt), *v. t.* To endow with talents. [Rare.]

> That Care and Zeal wherewith he hath Employed in his peculiar Opportunities, with which the Free Grace of Heaven hath *Talented* him to do Good unto the Publick.
> *C. Mather*, Magnalia, iv. § 6.

taligrade (tal′i-grād), *a.* [L. *talus*, ankle, + *gradi*, walk.] Walking on the outer side of the foot. The ant-eaters walk thus with their fore feet, while the extinct ground-sloths walked on the outer sides of their hind feet.

talipedic (tal-i-ped′ik), *a.* [NL. *talipes* (*ped-*) + *-ic*.] Clubfooted, as a person; twisted and distorted by club-foot, as a foot.

talipes, *n.*—**Talipes arcuatus,** a deformity of the foot marked by the presence of an exaggerated arch.—**Talipes calcaneocavus,** a combination of talipes calcaneus with talipes cavus.—**Talipes calcaneovarus,** a combination of talipes calcaneus with talipes varus.—**Talipes equinocavus,** a combination of talipes equinus with talipes cavus.—**Talipes equinovalgus,** a combination of talipes equinus with talipes valgus.—**Talipes plantaris,** a form of talipes cavus in which flexion of the foot is markedly restricted.—**Talipes planus,** flatfoot; a condition in which the arch of the foot is broken down.—**Talipes valgocavus,** a combination of talipes valgus with talipes cavus.—**Talipes varocavus,** a combination of talipes varus with talipes cavus.

talipomanus (tal″i-pom′ạ̈-nus), *n.* [NL., irreg. < *talipes* + *manus*, hand.] Club-hand; a deformity of the hand analogous to club-foot.

Talismania (tal-is-mā′ni-ạ̈), *n.* [NL., < E. *talisman*.] A genus of deep-sea fishes of the family *Alepocephalidæ*.

tallant (tal′ạ̈nt), *n.* The upper part of a rudder.

tall-boy, *n.* 2. Another name for a high-boy, a high chest of drawers. See *high-boy*, 2.

Tallerman treatment. See ★*treatment*.

tallingite (tal′ing-īt), *n.* [Named after R. *Talling*, who collected it.] A hydrated copper chlorid occurring in bright-blue incrustations: found in Cornwall, England.

tallochlor (tal′ọ̄-klōr), *n.* The green coloring-matter of Iceland moss, *Cetraria Islandica*.

tallow, *n.*—**Borneo tallow,** a solid fat obtained in Borneo from any one of several species of trees belonging to the family *Dipterocarpaceæ*, especially *Shorea aptera* and *Isoptera Borneensis*. It is used by the natives for cooking and is exported to Europe for lubricating purposes.—**Chinese tallow.** See *vegetable tallow*.—**Piney tallow.** See *piny*1.—**Whale tallow,** the still soft mass of imperfectly purified spermaceti obtained by the first pressing of the head matter from the cachelot whale.

tallow-cup, *n.* Tallow is much less used for lubrication than before the use of mineral oils became general. A goblet-shaped cup of cast-brass, with a cock in the part corresponding to the goblet-stem, was screwed into the cylinder-cover. When steam was shut off, and the engine running by its inertia, the cock could be opened, and on the aspiration stroke of the piston the pressure below the cock would be enough less than that of the atmosphere to cause the latter to press the tallow, softened by heat, down into the cylinder. In condensing-engines the lubrication could be done when the engine had steam on, provided the cock was opened on the exhaust stroke on that side of the piston.

tallow-weed (tal′ọ̄-wēd), *n.* A native forage plant, *Tetraneuris linearifolia*, of southern and western Texas. It is a low composite with narrow leaves and yellow heads, and springs up in January, when other feed is scarce. Its name is due to its remarkable fattening quality.

Tally4 (tal′i), *n.*; pl. *tallies* (-iz). [(*I*)*tali*(*an*).] An Italian: as, the *Tallies* are working on the railroad. *Dialect Notes*, II. vi. [Slang.]

tally-board (tal′i-bōrd), *n.* A smooth thin board used by a scaler to record the number or volume of logs.

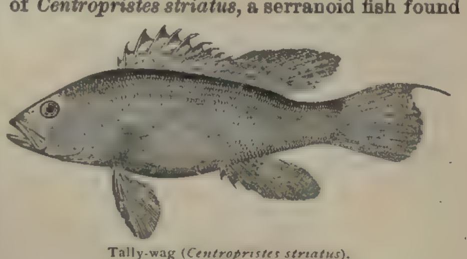
tally-card (tal′i-kärd), *n.* Any card on which a record is kept, especially of the scores in a game or of the coups in banking-games.

tallygalone (tal″i-gạ-lōn′), *n.* [Also *talleygalaun*, *tallagallan*: an aboriginal name.] A fish of New South Wales, *Myxus elongatus*, a genus of the family *Mugilidæ* (the gray mullets). Also called *sand-mullet*. *E. E. Morris*, Austral English.

tallying-machine (tal′i-ing-mạ-shēn″), *n.* A counting-machine used in counting or keeping tally of the number of passengers entering a boat, the number of parcels delivered or received at a warehouse or freight-yard, etc. It is held in the hand, a lever pressed by the thumb causing the machine to register on a dial the total number at each stroke of the lever.

tallyman, *n.* 5. In *forestry*, a man who records or tallies the measurements of logs as they are called by the scaler.

tally-wag (tal′i-wag), *n.* 1. A common name of *Centropristes striatus*, a serranoid fish found on the Atlantic coast of the United States.—2. A fish, *Centropristes ocyurus*, of the Gulf of Mexico. *Jordan and Evermann*, Amer. Food and Game Fishes, p. 397.



Tally-wag (*Centropristes striatus*).
(From Bulletin 47, U. S. Nat. Mus.)

Talma's disease. See ★*disease*.

talofibular (tā-lō-fib′ụ̄-lär), *a.* [*talus* + *fibula* + *-ar*3.] Relating to the astragalus and the fibula: noting a ligament.

talonic (ta-lon′ik), *a.* [A metathesis of (*ga*)*la*(*c*)*tonic*.] Noting an acid, a colorless levorotatory crystalline compound, $C_6H_{12}O_7$, prepared by the action of pyridine on galactonic acid.

talonid (tal′ọn-id), *n.* [*talon* + *-id*2.] The shelf-like heel developed at the posterior part of the crown of the lower molar teeth of mammals. An analogous structure occurs in the premolars. The talonid is least modified and may be most readily recognized in the lower molar of carnivorous and insectivorous mammals. The homologous structure in the upper teeth is called the talon.

talus-glacier (tā′lus-glā″shiėr), *n.* A body of loose debris that sometimes assumes a sort of slow flowing motion on a steep mountain-slope. *Chamberlin and Salisbury*, Geol., I. 221.

talus-slope (tā′lus-slōp), *n.* The slope formed by the talus or broken and fallen rock which gathers at the foot of a cliff and produces a surface of high inclination. *Geikie*, Text-book of Geology, p. 52.

tam (tam), *n.* [Abbrev. of *tam-o'-shanter*.] A knit or crocheted cap for outdoor wear, without a brim and usually with a ball or tuft of wool in the center of the crown: sometimes imitated in straw or cloth. See *tam-o'-shanter*.

Tam. An abbreviation of *Tamil*.

tamacoari (tä-mä-kō-ä-rē′), *n.* [Tupi *tamacuari*, *tàmacoarée*.] In northern South America, *Caraipa fasciculata*, a forest-tree of British Guiana and the upper Amazon belonging to the family *Clusiaceæ*, with glossy feather-veined leaves and clusters of fragrant white flowers. It yields the tamacoari ★balsam (which see).

tamal (tä-mäl′), *n.*; pl. *tamales* (tâ-mä′lās, E. pron. tạ-mä′liz). [Sp. Mex. and Cuban *tamal* (pl. *tamales*), < Carib *taumali*, *taomali*, the inner parts of a crab, or any piquant meat or sauce (1666, Davies); see *tomalley.*] A Mexican dish made of Indian corn and meat, seasoned with red peppers, wrapped in husks and roasted or steamed.

tamanous, *n.* See ★*tamanowus.*

tamanowus (tä-mä′nọ-wus), *n.* [Also *tamahnowus, tamanous;* Chinook jargon, < Chinook Indian *itamanoas*, supernatural power.] Among the Chinook and other Indians of Washington and British Columbia, a supernatural spirit or power; the power of the medicine-man; magic.

tamarao, *n.* Same as ★*tamarau.*

tamarau (tim-ä-rou′), *n.* [Phil.] A small wild buffalo, *Bos mindorensis*, found in the island of Mindoro, Philippines. Also *tamarao.*

Tamaricaceæ (tam″a̤-ri-kā′sẹ̄-ē), *n. pl.* [NL. (Lindley, 1836), < *Tamarix* (*Tamaric-*) + *-aceæ.*] A family of dicotyledonous choripetalous plants of the order *Hypericales*, the tamarisk family, typified by the genus *Tamarix* (which see) and the order *Tamariscineæ.*

tamariscineous (tam″a̤-ri-sin′ẹ̄-us), *a.* [NL. *Tamariscine*(*æ*) + *-ous.*] Belonging or pertaining to the *Tamariscineæ.*

tamarite (tam′a̤-rīt), *n.* [Cornish *Tamar*, a river so named in Huel Tamar, ‘Tamar mine,’ a locality in Cornwall.] A mineral occurring in green rhombohedral crystals in Cornwall, Saxony, and Hungary, a hydrated basic copper arseniate. Also known as *chalcophyllite.*

tamas (tä′ma̤s), *n.* [Skt. *támas*, darkness: see *tenebræ.*] In *Hindu philos.*, darkness, as one of the three gunas, or fundamental qualities incident to creation.

Tamashek (tam′a̤-shek), *n.* The Hamitic languages of the Sahara or Mauretania. *Keane*, Ethnology, p. 384.

tambaroora (tam-ba̤-rö′rạ̈), *n.* In Queensland, a game played with dice for a pool into which each player puts a sum agreed upon. Generally known as “A shilling in and the winner shouts.” *E. E. Morris*, Austral English.

> The exciting game of *tambaroora*. . . . Each man of a party throws a shilling, or whatever sum may be mutually agreed upon, into a hat. Dice are then produced, and each man takes three throws. The Nut who throws highest keeps the whole of the subscribed capital, and out of it pays for the drinks of the rest.
>
> *A. J. Boyd*, Old Colonials, p. 63, quoted by E. E. Morris, [Austral English.

tambo¹ (täm′bō), *n.* [Peruvian Sp., < Quichua *tampu.*] A building along the wayside for the use of travelers, sometimes furnishing both food and shelter, but usually only shelter. [Peru.]

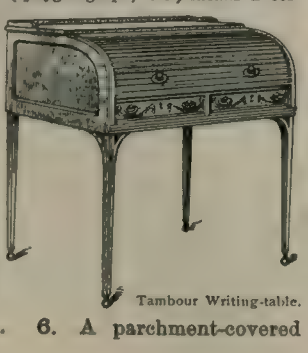
> One of the most interesting topics of study is the trails along which the seasonal and annual migration of tribes occurred, becoming in Peru the paved road, with suspension bridges and wayside inns or *tambos.*
>
> *Encyc. Brit.*, XXV. 377.

tambo² (tam′bō), *n.* Short for *tambourine:* referring to an end-man in a negro minstrel-show who plays on that instrument.

tambour, *n.* 6. An instrument for recording pulsations, consisting of a membrane stretched over a drum-like cylinder, or a ring, to which is attached a recording-needle.

> The respiratory movements were recorded by the *tambour* method; two *tambours* . . . were strapped to the animal's chest.
>
> *Philos. Trans. Roy. Soc.* (London), 1899, ser. B, p. 223.

Marey's tambour, in *physiol.* and *exper. psychol.*, an auxiliary recording-instrument implying the use of the graphic method with air-transmission. The tambour consists essentially of a very shallow metal funnel, the mouth of which is closed by a thin and tightly stretched sheet of rubber, while its smaller end is connected by thick-walled rubber tubing to a sphygmograph, dynamograph, pneumograph, plethysmograph, or the like. A light disk of metal, cemented to the rubber sheeting, carries a writing-lever, which is applied to the smoked surface of a kymograph drum. The whole recording system thus consists of an air column contained in a rigid tube which is bounded at both ends by elastic rubber membranes. A push upon the membrane of the particular instrument in use (sphygmograph, etc.) means a corresponding push upon the membrane of the tambour and a consequent rise of the writing-lever, which accordingly traces a pulse-curve, strength-curve, breathing-curve, etc., as the drum revolves.—**Tambour writing-table**, the name given by Hepplewhite to the roll-top desk, invented in France about 1750.



Tambour Writing-table.

tambourine, *n.* 6. A parchment-covered racket, resembling a battledore, with which the ball is thrown in the game of ★tamburello (which see).

tamburello (tam-bö-rel′ō), *n.* [It., a small drum.] A game of lawn-tennis played with tambourines or parchment-covered rackets resembling battledores. *N. and Q.*, 9th ser., XII. 434.

tamis-bird (tam′is-bėrd), *n.* [So called in allusion to the netted appearance of the bird's plumage: see *tamis.*] An English name for the guinea-fowl, *Numida meleagris.*

tamlung (tam′lung), *n.* [Siamese *tamlung, ta′mleung.*] A Siamese gold coin on which is stamped the picture of a pagoda, equivalent to 4 ticals or about $1.12 in United States gold.

Tam o'Shanter jug. See ★*jug*¹.

tampicin (tam′pi-sin), *n.* [*Tampico* + *-in*².] A resinous glucoside, $C_{34}H_{54}O_{14}$, contained in Tampico jalap, the root of *Ipomæa simulans*, from Mexico. It melts at 130° C.

tamping-bar, *n.* 2. A long iron bar for pressing or tamping the ballast under the ties of a railway-track. It has a heavy square flat head set at an angle on a curved stem and a pointed top or handle.

tamping-pick (tam′ping-pik), *n.* A track-layers' pick which has one arm finished like the end of a tamping-bar. See ★*tamping-bar.*

tampon, *n.*—**Tracheal tampon**, an inflatable rubber bag surrounding a tracheotomy-tube, used to occlude the trachea and so prevent the entrance of blood in operations on the mouth or upper air-passages.

tamure (tam′ö-rạ̄), *n.* [Maori.] A New Zealand fish, the ★schnapper (which see).

Tamworth (tam′wėrth), *n.* An English breed of pigs, having long legs and skull and a deep body. The general color is red, with some darker spots. Named from a town in Staffordshire where the breed originated.

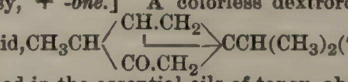
tan¹, *n.* 1. The term is often used to mean spent bark which has served for the manufacture of leather and is spread over streets to deaden the sound of vehicles, or over the floor of a riding-school or circus to diminish the danger of falls, or applied to clay land as a loosening material. It is also commonly used as fuel in tanneries.

tan⁶ (tän), *n.* [Chin. *tan*, a large earthen jar capable of holding a picul.] A Chinese unit of weight, a picul, equal to 133⅓ pounds avoirdupois.

tan⁷ (tän), *n.* [Jap.] A Japanese measure of surface, equal to .245 of an acre. *Hering*, Conversion Tables, p. 44.

tanacetin (tan-as′e-tin), *n.* [NL. *tanacetum*, tansy, + *-in*².] A bitter amorphous compound, $C_{11}H_{16}O_4$, contained in the leaves and flowers of the tansy, *Tanacetum vulgare.*

tanacetone (tan-as′e-tōn), *n.* [NL. *tanacetum*, tansy, + *-one.*] A colorless dextrorotatory liquid,



$$CH_3CH\left\langle\begin{matrix} CH.CH_2 \\ CO.CH_2 \end{matrix}\right\rangle CCH(CH_3)_2(?)$$

contained in the essential oils of tansy, absinthe, thuja, and sage. It boils at 203° C. Also called *thujone.*

Tanach, *n.* Same as ★*Tanak.*

tanago (tä′nä-gō), *n.* [Japanese name.] The surf-fish of Japan, *Ditrema temminckii*, of the family *Embiotocidæ.*

Tanagræan (tan-a̤-grē′a̤n), *a.* Same as ★*Tanagrine*².

Tanagrine² (tan′a̤-grin), *a.* [*Tanagra*, in ancient Bœotia, + *-ine*².] Of or pertaining to Tanagra in ancient Bœotia: usually applied to Greek terra-cotta figurines of which the most notable have been found in excavations on the site of Tanagra. See cut at *Tanagra figurine* under *figurine.*

Tanak, Tanach (tä′nak), *n.* The common name of the Hebrew Old Testament. The word is formed, with assistant vowels, from the Hebrew initial consonants of the names of the three divisions of the Old Testament, namely, *Torah*, the law (the Pentateuch), *Nebiim*, the prophets, and *Ketubim*, writings (Hagiographa).

tanana (ta-nä-nä′), *n.* [S. Amer.] A native name of a singing grasshopper in the valley of the Amazon. *Cambridge Nat. Hist.*, V. 319.

tanchord (tan′kôrd), *a.* [*tan*(*gent*) + *chord.*] Consisting of or relating to a tangent and a chord.—**Tanchord angle.** See ★*angle*³.

Tancredia (tan-krē′di-ạ̈), *n.* [NL.] A genus of teleodesmacean pelecypods with small *Donax*-like shells which are obliquely truncated posteriorly and attenuated anteriorly: found in the Triassic, Jurassic, and Cretaceous formations.

tandan (tan′dan), *n.* [Aboriginal Australian.] A catfish (see ★*catfish*, 7) or eelfish, *Copidoglanis tandanus.* *E. E. Morris*, Austral English.

tandem, *n.*—**In tandem.** (*a*) One behind the other. (*b*) In *elect.*, in series. *Electrochem. Industry*, April, 1904, p. 134.—**Tandem cart**, a dog-cart.—**Tandem play**, in *foot-ball*, a play in which a player running with the ball is guarded in front or behind, or both, by players of his own side.

tandem-compound (tan′dem-kom″pound), *a.* Noting a form of compound engine in which the cylinders are in line so that the pistons are fastened to one piston-rod. When the axis of the cylinders is vertical this arrangement is often called *steeple-compound.*

tang¹, *n.* 1. (*a*) (2) In *paleon.*, the stem of an arrow-head which is inserted into the shaft.

tang³, *n.*—**Black tang**, one of the brown seaweeds, *Fucus vesiculosus.*

tang⁶ (tang), *n.* [Origin undetermined.] A fish belonging to the family *Teuthididæ*, *Teuthis hepatus*, of the West Indian fauna.—**Blue tang**, a species of tang or surgeon-fish, *Teuthis cœruleus*, common from Key West to Bahia, differing from the others in its bright-blue color.—**Ocean tang**, a common name of *Teuthis bahianus*, a fish of the West Indian fauna.

tanga (tan′gạ̈), *n.* [Pg. *tanga*, Turki *tanga*, Marathi *tānk*, etc., < Skt. *ṭaṅka*, a weight (of silver), a stamped coin.] A current coin of Portuguese India, equal to 60 reis and one tenth of a rupee, equivalent to 2.03 United States cents.

tang-chisel (tang′chiz″el), *n.* Any chisel in which the tang of the blade is driven into the handle.

tangelo (tan′je-lō), *n.* [*tang*(*erine*) + (*pom*)*elo.*] A class of hybrids of the tangerine orange and the grape-fruit or pomelo. At least three of these hybrids have been secured by the United States Department of Agriculture.

tangent, *n.* 3. (*b*) One of the keys or finger-levers of the hurdy-gurdy.—4. In *railroading*, a straight piece of track beginning and ending at a curve.—**Cuspidal tangent**, the tangent at a cusp of a plane curve.—**Hyperbolic tangent**, hytan $x \equiv$ tanh $x = \frac{e^x - e^{-x}}{e^x + e^{-x}}$.—**Logarithmic tangent**, the logarithm of the natural tangent. Often, to avoid negative characteristics, the characteristic of the logarithm is printed 10 too large.—**Tangent balance.** (*b*) Same as *tangent galvanometer.*—**Tangent scale.** (*b*) In *phys.*, a scale graduated to read tangents of the angles of deflection of a galvanometer or similar instrument.—**Tangent screw.** (*b*) See ★*screw*¹.

tangential, *a.* 3. In *geol.*, specifically applied to strains in the earth's crust which are applied in a direction tangential to its surface.

> A study of the general structure shows a differential yielding of the strata at this point to the *tangential* stresses that produced the deformation of the Appalachian province. *Science*, June 3, 1904, p. 856.

tangentometer (tan-jen-tom′e-tėr), *n.* [*tangent* + *-o-* + Gr. μέτρον, measure.] A simple mechanical device for the approximate measurement of tangents and other trigonometric functions. *Nature*, Dec. 12, 1907.

tanghinin (tan′gi-nin), *n.* [*tanghin* + *-in*².] The active principle, in crystalline form, of tanghin (which see), the judicial poison of the Malagasies. Its analysis leads to the formula $C_{27}H_{40}O_8$. It produces the effects of a cardiac poison of the same class with ouabain and strophanthin.

tangi (tän′gi), *n.* [Maori *tangi*, cry, lament.] A Maori dirge or lamentation.

> Perhaps some old woman did a quiet *tangi* over his grave.
>
> *J. L. Campbell*, Poenamo, p. 191, quoted in *E. E.* [*Morris*, Austral English.

Tangible point, writing. See ★*point*¹, 31, ★*point system*, and ★*point-writing.*

tanginin, *n.* See ★*tanghinin.*

tangle-bar (tang′gl-bär), *n.* An apparatus made up of a series of hempen swabs attached to a bar, used in exploring the sea-bottom, and drawn over it by the movement of the vessel. The hemp-fibers entangle in them samples of the bottom growths.

> The *tangle-bar*, to sweep over rocky bottoms on which the other instruments would foul and often be lost. It is in effect a series of long swabs that will entangle in its hempen fibers almost anything from coral rock to fishes. It is probably the most effective all-around instrument for general work, and the least likely to fail or be lost. We found it invaluable in West Indian waters of moderate depths. *Science*, May 31, 1901, p. 843.

tangle-blade (tang′gl-blād), *n.* In *bot.*, same as *tangle*¹, 1.

tanglefoot, *n.* 2. Same as ★*bauera*, 2.

tanglement (tang'gl-mẹnt), *n.* An entanglement: the act of tangling or entangling; the knot or mixture of things thus tangled.

tanh. An abbreviation of *hyperbolic tangent.* See ★*tank*^{4}.

tania (tä'nẹ̄-ạ̈), *n.* [Native name.] See *tannier.*

taniwha (tä'nē-hwä), *n.* [Maori *taniwha* = Samoan *tanifa* = Fijian, a large shark.] A mythical Maori monster of some kind, especially a water-monster, often described as a huge fish of hideous aspect.

tank^1, *n.* **4.** In *glass-manuf.*, same as *tank-furnace* (which see, under *furnace*).—**5.** The stomach. [Slang.]

> I ain't no bloomin' Camomile [camel] . . . to tap me *tank* [stomach].
>
> *Sir Gilbert Parker*, Donovan Pasha, p. 333.

McGlashan's ballast-tank, an arrangement of side water-ballast tanks, named after the inventor, which extend about half the length amidships, and are formed by the extension of the inner bottom plating to a considerable height on the sides of the vessel.—**McIntyre tank,** in *iron ship-building*, a system of construction of a double bottom or ballast-tank adopted in early iron vessels and still sometimes used in small vessels: named from its designer. In this system the ordinary frame floors are retained and the side keelsons above the floors are increased in height and number so as to form fore and aft girders, to the upper flanges of which the tank-top, equivalent to the inner bottom plating, is riveted.—**Septic tank,** a tank, usually built of brickwork, masonry, or concrete, and large enough to hold something like 50,000 gallons, in which sewage is allowed to undergo putrefactive fermentation under the influence of anaërobic bacteria, a large part of the organic matter present being thus destroyed in the course of a day or two, and the remaining liquid prepared for further purification by filtration.

> The "*septic tank*-system" was devised by Cameron of Exeter in 1896. It consists in providing . . . a closed chamber or tank through which the sewage passes and in which the organic matters in the sewage are brought into solution by anaërobic organisms.
>
> *Encyc. Brit.*, XXIX. 379.

Water-tempering and -measuring tank, a device used in bakeries, generally attached to the wall near a dough-mixer, by which water can be measured and heated to any degree for use in the mixer.

tank^1, *v.* **II.** *intrans.* To fill up (with liquor); hence, to be drunk: usually with *up*. [Slang.]

> Bowlaigs would reepair back ag'in [with the bottle] to the Major, when they'd both *tank up* ecstatic.
>
> *A. H. Lewis*, Wolfville Nights, xv.

tank^4. An oral abbreviation for *hyperbolic* ★*tangent* (which see), being an accommodated pronunciation of the written abbreviation *tanh.*

tankage, *n.* **3.** The undissolved solids which settle to the bottom of the tank in which animal garbage is boiled with water, the grease being removed by skimming and the tank-water drawn off. (See ★*tank-water.*) Tankage is used in the manufacture of mixed fertilizers.

> Tank water, as is well known, is a by-product of rendering establishments produced in cooking, under pressure, the scraps of meats, bone, sinews, lungs, intestines, and other nitrogenous matter containing more or less fat; such cooking being continued for several hours, until the substances in the tank are decomposed to a great extent and the fat liberated. A large part of the nitrogenous matter remains in solution in the liquid produced from the solids introduced into the tank and from the condensed steam. The fats rise to the surface, while the undissolved matter, to a great extent, settles to the bottom of the tank. The liquid lying between the fat and the solids, or "*tankage,*" in the bottom of the tank is known as "tank water."
>
> *Census Bulletin* 190, June 16, 1902, p. 13.

tank-boiler (tangk'boi″lėr), *n.* A type of marine boiler in England in which the water and steam were contained in a single large enveloping shell of cylindrical shape or of a shape derived from the cylinder. The name was used to distinguish this type from the sectional or coil types, made up of tube units of small diameter.

tank-conductor (tangk'kọn-duk″tọr), *n.* A person who has charge of the crew which operates a sprinkler or tank, and who regulates the flow of water, in icing logging-roads.

tank-epiphyte (tangk'ep″i-fīt), *n.* See ★*epiphyte*, 1.

tanker (tang'kėr), *n.* Same as ★*tank-vessel.*

tank-head (tangk'hed), *n.* The end of a vessel used as a tank. When such tanks are cylindrical and must withstand pressure, the tank-head is often convex on one end and concave on the other. The convex end offers no tendency to deform under pressure, and the concave end can be more readily riveted or welded in place to close the vessel up.

tank-heater (tangk'hē-tėr), *n.* A sheet-iron cylinder extending through a tank or sprinkler, in which a fire is kept to prevent the water in the tank from freezing, while icing logging-roads in extremely cold weather.

tanking, *n.* **2.** The act of hauling water in a tank to ice a logging-road.

tank-liquor (tangk'lik″ọr), *n.* The first crude solution of carbonate of soda obtained by leaching in tanks the 'black ash' of the Leblanc process for making soda from common salt.

tank-plate (tangk'plāt), *n.* **1.** A form of cast-iron plate used in building up sectional tanks for holding water. The plates are thin, and are cast with stiffening ribs and with flanges, by which latter they are bolted together to form the sides and bottom. The plates may be of greater thickness and with more massive ribs where higher pressures are to be withstood, as in the bottom layers of deep tanks.—**2.** An inferior grade of wrought-iron plates, intended for use in tanks for water, oil, or similar liquids which are not to be exposed to heat or to high pressure. This quality should not be used for boilers. Less care is used in the selection of the stock and in its manufacture by faggoting and rolling, less frequent re-rollings are called for, so that the cinder is less completely expelled, and the thorough welding of the layers is less certain.

tank-runner (tangk'run″ėr), *n.* A common East Indian name for one of the jacanas, *Hydrophasianus chirurgus*, which frequents the 'tanks' or reservoirs.

tank-ship (tangk'ship), *n.* Same as ★*tank-vessel.*

tank-station (tangk'stā″shọn), *n.* A stopping-place on a railroad, provided with a tank for supplying locomotives with water. It is often detached from a regular way-station and outside the yard limits. [U. S.]

tank-steamer (tangk'stē″mėr), *n.* A tank-vessel propelled by steam. See ★*tank-vessel.*

> Oil from Baku, which was sent by *tank-steamer* on the Caspian to Petrovsk. *Geog. Jour.* (R. G. S.), XVI. 366.

tank-toggle (tangk'tog″l), *n.* A device for lifting tanks or other similar vessels in which is a hole of a diameter less than that of the tank, and where it is sought to avoid the use of slings around the outside. A bar of a length greater than the greatest diameter of the hole (for safety it should be more than twice) is attached at or near its middle point to a hook or chain. It can be inserted into the hole by making the bar nearly parallel to the chain, but when released it falls at right angles across the hole, and the tank can be safely hoisted.

tank-valve (tangk'valv), *n.* **1.** A valve admitting liquid to a tank.—**2.** A valve in the bottom or side of a tank by opening which the tank can be emptied; specifically, the valve in a railway water-tank for supplying locomotive-tenders by which the supply to the drop-pipe is controlled.

tank-vessel, *n.* The interior structure is made up of water-tight transverse and longitudinal bulkheads arranged to form a number of compartments or tanks in which oil, molasses, or other fluids can be carried in bulk. The top of the tanks is a water-tight deck, above which and opening into the tanks are ★expansion-trunks (which see). The fluid is pumped into and out of the tanks by a system of pipes and steam-pumps. In tank-steamers the machinery and boilers are separated from the oil tank-compartments by a coffer-dam formed by two complete transverse bulkheads about 4 feet apart, which is frequently filled with water. Also colloquially called *tanker.*

tank-waste (tangk'wāst), *n.* Same as ★*alkali waste.*

tank-water (tangk'wâ″tėr), *n.* The water containing solid matter in solution which is obtained on boiling meat scraps, slaughter-house offal, and mixed city garbage containing such materials, the melted grease being skimmed off from the surface and the undissolved solids allowed to deposit at the bottom of the tank. The residue left on evaporating *tank-water* is called *stick.* See ★*stick*^{2}, 4, and ★*tankage*, 3.

> The liquid lying between the fat and the solids, or "tankage," in the bottom of the tank is known as "*tank water.*" After the fat has been skimmed off, the water is drawn off from the tankage and disposed of in various ways. This *tank water* was for many years discharged into the sewers, although it is known to contain valuable nitrogenous matter, and even at the present day it is thus disposed of in almost all houses of small capacity.
>
> *Sci. Amer. Sup.*, Nov. 22, 1902, p. 22479.

tannage, *n.*—**Chrome tannage,** a method of manufacturing leather by 'tawing' the skins with a solution of a chromium salt, most commonly potassium bichromate, sometimes chrome-alum, along with common salt and a mineral acid, followed by exposure to the reducing action of a sulphurous acid bath. *C. T. Davis*, Manuf. of Leather, p. 282.—**Combination tannage,** a tannage made of two or more tanning-liquors, in which one supplements the other. *Flemming*, Practical Tanning, p. 70.—**Electric tannage,** treatment by an astringent liquor in connection with an electric current which hastens the process.—**Union tannage,** tannage by the use of a mixture of hemlock and oak bark. *C. T. Davis*, Manuf. of Leather, p. 34.

tannal (tan'al), *n.* [*tann-ic* + *-al*^{3}.] A trade-name of a basic aluminium tannate, $Al_2(OH)_4(C_{14}H_9O_9)_2.10\,H_2O$. It forms a brownish yellow powder and is used in surgery for dusting wounds.—**Soluble tannal,** a trade-name of a compound prepared by dissolving tannal in tartaric acid: used medicinally.

tannalbin (tan'ạl-bin), *n.* [*tann-in* + *alb(umin)* + *-in*^{2}.] A light brown odorless and tasteless powder obtained by precipitating a solution of egg-albumin with a solution of tannin, and washing and drying the precipitate: used as an intestinal astringent.

tannaspidic (tan-as-pid'ik), *a.* [*tann(ic)* + *Aspid(ium)* + *-ic.*] Noting a tannic acid which was formerly supposed to exist in the male fern.

tannate, *n.*—**Iron tannate,** a tannate which occurs with iron gallate in common writing-ink. The iron is generally present in both the ferrous and ferric states of combination.

Tanne graywacke. [*Tanne*, name of a town in the Harz Mountains.] In *geol.*, a member of the Lower Silurian series of the Harz Mountains of Germany.

tannenite (tan'ẹ-nīt), *n.* [G. *Tannen(baum)* + *-ite*^{2}.] A mineral found at the Tannenbaum Mines in Saxony and at some other localities, a bismuth and copper sulphid. Also known as *emplectite.*

Tanners' wool, wool that is removed by scraping, or otherwise, from the pelt of a sheep.

tannergram (tan'ėr-gram), *n.* [*tanner*^{2} + *-gram.*] In New Zealand, a telegram: so called on the reduction of the price to sixpence (a 'tanner') for twelve words. *E. E. Morris.* See the extract. [Slang.]

> *Tannergrams* is the somewhat apt designation which the new sixpenny telegrams have been christened in commercial vernacular.
>
> *Oamaru Mail*, June 13, 1896, quoted in E. E. Morris, [Austral English.

tannigen (tan'i-jen), *n.* [*tanni(n)* + *-gen.*] A trade-name of acetyl-tannin, a yellowish-gray powder without smell or taste, used medicinally as an astringent remedy by both external and internal application.

Tannin color. Same as *basic* ★*color.*

tanning, *n.*—**Combination tanning,** tanning by the use of a combination tannage. *Sadtler*, Handbook of Indust. Chem., p. 331.—**Mineral tanning,** the manufacture of leather from skins by treating them with certain metallic salts, principally those of aluminium and chromium.—**Still tanning,** tanning in which the skins are allowed to remain quiet instead of being agitated by paddles. Still tanning makes plumper leather. *Flemming*, Practical Tanning, p. 299.—**Tanning extracts,** concentrated preparations manufactured on a large scale for tanners' use by treatment, with water, of various kinds of bark or other vegetable materials containing tannin, removing the woody fiber or other inert solid matter, and evaporating the infusion or decoction to dryness or to the condition of a thick paste. Catechu is a product of this kind, and hemlock-bark extract, chestnut-bark extract, and others are extensively used.

tanning-drum (tan'ing-drum), *n.* A revolving drum or wheel in which hides or skins are tanned. *C. T. Davis*, Manuf. of Leather, p. 221.

tannite (tan'īt), *n.* [*tann(in)* + *-ite*^{2}.] A general name applied to compounds of metals with tannins.

tannoform (tan'ọ̄-fôrm), *n.* [*tann(ic)* + *form(aldehyde).*] Methylene ditannin, a loose reddish powder obtained by the condensation of gallotannic acid and formaldehyde. It is a dusting-powder and intestinal astringent.

tannol (tan'ol), *n.* [*tann(in)* + *-ol.*] A combining form used in organic chemistry to indicate a relationship to tannin.—**Asaresinol tannol.** Same as ★*asaresinotannol.*

tannopin (tan'ọ̄-pin), *n.* [*tann(in)* + *op(ium)*(?) + *-in*^{2}.] A brown slightly hygroscopic powder obtained by the condensation of tannin with hexamethylene-tetramine: used as an intestinal astringent and disinfectant.

tannosal (tan'ọ̄-sal), *n.* [*tann(in)* + *-ose* + *-al*^{3}.] Same as ★*creosal.*

tannose (tan'ōs), *n.* [*tanni(n)* + *-ose*, for *-osis*, implying disease.] An abnormal or diseased condition of certain plants characterized by an excessive production of tannin.

tanolin (tan'ọ̄-lin), *n.* A trade-name for a preparation, containing the chlorids of chromium and sodium, used in mineral tanning.

tanque (tän′kā), *n.* [Amer. Sp., = Pg. *tanque*, a pool, pond, tank. See *tank*^{1}.] A small pool or pond; also, a tank or large trough.

> The entire group at Costa Rica in 1894 were on good behavior. . . . They came to the *tanque*, usually in groups, rarely alone, always alert.
> *An. Rep. Bur. Amer. Ethnol.*, 1895–96, p. 155.

Tantalid (tan′ta-lid), *n.* [Gr. Τανταλίδης, son of Tantalus.] In *Gr. myth.*, a descendant of Tantalus, especially his son Pelops.

> The Greek legend, was that the *Tantalid* Pelops came over from his Lydian fatherland to Greece.
> *L. M. Mitchell*, Hist. of Ancient Sculpture, p. 154.

tantalofluoride (tan″tạ-lọ̄-flö′ọ̄-rid), *n.* [*tantalum* + *fluoride.*] Same as ★*fluotantalate.*

tantalum, *n.* Knowledge of this metal has been much increased by recent research. Brought to the elementary state by heating together sodium and an alkaline tantalofluoride and fused in an electric furnace, it appears as a solid of grayish-white color and metallic luster, like platinum, of specific gravity 16.64. It combines in a most remarkable way intense hardness with a high degree of ductility, so that it can be drawn into wire .05 millimeters in diameter having a resisting tensile stress ranging up to 93 kilos., or for fine wire 150 or 160 kilos., per square millimeter before breaking. It melts at 2,250–2,300° C., resists all the ordinary acids and alkaline solutions, is attacked by hydrofluoric acid and by fused caustic alkalis, and as thin wire burns, when heated in oxygen, with a bright white light.

> Henri Moissan has succeeded in reducing *tantalum* acid in the electric furnace with powdered carbon and has obtained *tantalum* in a fused state. Hitherto the metal had been known only as a more or less pure powder with a density of 10.50. The electrical product has a brilliant metallic appearance, and a density of 12.79. It is very hard, easily scratching glass and quartz, has a crystalline fracture, and is infusible in the oxyhydrogen blowpipe. Certain reactions class it with the metalloids rather than with the metals proper.
> *Sci. Amer.*, Sept. 19, 1903, p. 203.

Tantalus, *n.* **2.** [*l. c.*] A case containing decanters. It is locked so that the decanters are in plain sight, yet the contents cannot be removed without the owner's key.

tap^1, *n.* **5.** A tanners' pit, usually sunk below the surface of the tan-yard, in which bark is extracted with water and the process of tanning is carried out. Also called *leach* or *latch.* —**6.** The hole bored and threaded in a street-main of a water-works system, so that the service-pipe of the customer may be connected thereto.—**7.** In *elect.*, a branch line which taps the main circuit so as to divert a portion of the current; a shunt.

> It sometimes occurs that there is additional resistance at $x = o$, due to protective coils or lamps in the battery *taps.* *Elect. World and Engin.*, Feb. 6, 1904, p. 263.

Arents tap, an arrangement for drawing molten lead out of the crucible of a shaft-furnace. It is a channel running from the lowest part of the crucible wall inside to the top on the outside, where it is enlarged into a basin from which the lead is ladled into molds without disturbing the furnace. Also called *siphon-tap.*—**Tap-sized hole.** See ★*hole*^{1}.

tap^1, *v. t.* **4.** To cut an internal screw-thread in with a screw-cutting tool, hob, or tap: as, to *tap* a nut or a hole.—**5.** In *elect.*, to divert a portion of (the current) from a circuit by means of a branch circuit or shunt; to make electrical connection with (a circuit) at any point.—**To tap a buoy,** to empty a buoy of water that has leaked into it.—**To tap off,** to draw off by means of tapping: said of a furnace.

tapayagua (tä-pä-yä′gwä), *n.* [Central Amer.] A violent southwest wind, with rain and thunder, in Nicaragua and San Salvador.

tape^1, *n.*—**Circumference tape,** a measuring-tape marked in the same manner as the circumference scale and used for the same purpose. See ★*scale*^{3}.—**Wire tape.** (*a*) A measuring-tape in which the woven fabric is replaced by a thin, flat steel wire or strip, capable of being wound upon a reel and graduated as desired. (*b*) A measuring-tape which has one or more flexible wires woven into its length so that stretching may be prevented when the tape is used out of doors in wet weather. The steel tape has replaced this.

tape-check (tāp′chek), *n.* A plain-woven fabric in which two counts of yarn, fine and coarse, are used in the warp, and the same in the weft, arranged in such an order as to form corded checks. *R. Marsden*, Cotton Weaving, p. 108.

tapeinocephalism (tạ̄-pī-nọ̄-sef′ạ-lizm), *n.* [*tapeinocephal(y)* + *-ism.*] Same as *tapeinocephaly.*

tapeless (tāp′les), *a.* [*tape*^{1} + *-less.*] Without tape: noting a printing-machine that does not make use of tapes to sustain the sheet under impression or in process of delivery. Tapeless delivery of printed sheets is now done by many different methods. See *tape*^{1}, 3.

tape-machine (tāp′mạ-shēn″), *n.* A tape-sizing machine.

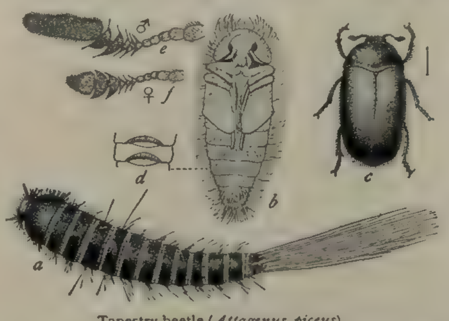
taper^2, *n.* **2.** A gradual decrease of power or capacity.

> Motor field rheostats of very high resistances and large *taper* in ampere capacity have become standard.
> *Elect. World and Engin.*, Feb. 18, 1905, p. 357.

tape-sizer (tāp-sī″zėr), *n.* One who attends a tape-sizing machine. *Webb*, Indust. Democracy, II. 478.

tapestry, *n.*—**Beauvais tapestry,** tapestry made at the royal factory in Beauvais, France, which was established by Louis XIV. in 1664, soon after the Gobelins in Paris. Beauvais tapestry is made by the basse-lisse method. See *basse-lisse.*—**Tapestry school.** See ★*school*^{1}.

tapestry-beetle (tap′es-tri-bē″tl), *n.* A cosmopolitan beetle, *Attagenus piceus*, of the family *Dermestidæ.* Its larva is a general feeder, destroying woolen goods, bird-skins, and insect collections, and also feeding on flour, meal, and seeds. Also called the *black carpet-beetle.*



Tapestry-beetle (*Attagenus piceus*).
a, larva; *b*, pupa; *c*, adult; *d*, dorsal abdominal segments of pupa; *e*, male antenna; *f*, female antenna: all enlarged.

tapeworm, *n.*—**Armed tapeworm,** the pork tape, *Tænia solium* (which see, under *tapeworm*).—**Double-pored dog-tapeworm,** *Dipylidium caninum* (Linnæus, 1758), a very common tapeworm of dogs, and occasionally found in children: characterized by the presence of a double set of organs for each segment. The fleas and lice of dogs form the intermediate hosts.—**Dwarf tapeworm,** *Hymenolepis nana* (Siebold, 1852), the smallest tapeworm found in man. It measures from 5 to 45 millimeters in length and is supposed (probably erroneously) to be identical with a species found in rats. It is especially common in children. Often incorrectly written *Hymenolepsis.*—**Fat tapeworm,** *Tænia saginata* (Goeze, 1782), the most common of the larger tapeworms of man: contracted through eating beef infected with beef-measles (*Cysticercus bovis*).—**Flavopunctate tapeworm,** *Hymenolepis diminuta* (Rudolphi, 1819), one of the smaller tapeworms from 10 to 60 millimeters long, common in rats, and occasionally found in man. The larval stage lives in meal-moths (*Asopia farinalis*), earwigs (*Anisolabis annulipes*), and certain beetles.—**Lanceolate tapeworm,** *Hymenolepis lanceolata* (Bloch, 1782), a common tapeworm in ducks and geese, but very rare in man.

tap-gate (tap′gāt), *n.* A small gate or opening arranged to tap or take water from an irrigating-ditch. *L. M. Wilcox*, Irrigation Farming, p. 408.

tap-grooving (tap′grö″ving), *n.* The cutting of the fluting or grooves in screws which are to be used as taps, so as to create cutting edges at various points in the helical surfaces.

taphephobia (taf-ẹ̄-fō′bi-ạ̈), *n.* [NL., irreg. < Gr. ταφή, burial, + -φοβια, < φοβεῖν, fear.] A morbid dread of being buried alive. Also *taphiphobia.* *Buck*, Med. Handbook, I. 141.

tap-holder (tap′hōl″dėr), *n.* A grip or clutch in a machine, or a special form of two-handled wrench, to receive and hold the square heads of taps when they are to be used in tapping and threading.

taphosote (taf′ọ̄-sōt), *n.* [*ta(nnic)* + *pho(sphoric)* + *(creo)sote.*] A trade-name of a grayish syrupy liquid containing tannic acid, creosote, and phosphoric acid: used in medicine, chiefly in cases of pulmonary tuberculosis.

taping (tā′ping), *n.* **1.** The sizing or dressing of cotton warp-yarn on a tape-machine.—**2.** In *sewing-machine work*, a method of sewing in which a tape is fed to a gaiter or other article and is stitched down. It is done on a two-needle machine (which see, under ★*sewing-machine*).

tapis^1, *n.*—**Tapis vert,** in *landscape gardening*, a closely clipped lawn; usually, in French gardens, a limited lawn cut to a definite figure.

tapis^2 (tä′pēs), *n.* [Tagalog and Bisaya *tapis.*] In the Philippine Islands, a broad sash of cotton or silk, about one yard wide and two yards long, worn by Tagalog and other Filipino women wrapped around the waist over the saya.

tapper^2, *n.* (*c*) A hammer for striking a bell or chime. (*d*) A device for restoring a coherer to its normal resistance, after this has been affected by electric oscillations, by means of a series of slight mechanical shocks.

> Mr. Marconi, in his original receiving instruments, placed an electromagnet under the coherer tube with a vibrating armature like an electric bell. This armature carries a small hammer or tapper, which, when set in action, hits the tube on the under side, and various adjusting screws are arranged for regulating exactly the force and amplitude of the blows. This *tapper* is actuated by the same current as the Morse printer, or other telegraphic recorder, so that when the signal is received and the metallic filings tube passes into the conductive condition and closes the relay circuit, this latter in turn closes the circuit of the Morse printer or other recorder, and, at the same time, a current passes through the electromagnet of the *tapper* and the tube is tapped back.
> *Pop. Sci. Mo.*, Sept., 1903, p. 450.

tapper^3 (tap′ėr), *n.* [*tap*^{1}, *n.*, + *-er*^{1}.] One who or that which operates a screw-cutting tap for threading holes.

tapper-back (tap-ėr-bak′), *n.* In *wireless teleg.*, a decoherer; a tapper. See ★*tapper*^{2} (*d*).

> In 1894 he [Sir Oliver Lodge] exhibited at Oxford his first "*tapper-back*," or automatic system of decohering the iron filings after each impulse. It was this ingenious discovery which has rendered it possible to develop wireless telegraphy to its present advanced stage of perfection.
> *Sci. Amer.*, Dec. 26, 1903, p. 483.

tappet^2, *n.*—**Negative tappet,** a form of tappet for operating a warp-harness of a loom one way only, either to lift it up or to pull it down. *T. W. Fox*, Mechanism of Weaving, p. 45.—**Positive tappet,** a form of tappet for operating a heddle-harness, either by lifting it up or by pulling it down, without the aid of secondary appliances. *T. W. Fox*, Mechanism of Weaving, p. 49.

tappet-bevel (tap′et-bev″el), *n.* A bevel on a loom-tappet that is employed in the heddle-shedding mechanism of a loom. *T. W. Fox*, Mechanism of Weaving, p. 49.

tappet-bowl (tap′et-bōl), *n.* A roller at the end of a tappet-arm for working the mechanism of a loom which propels the shuttle.

tappet-pin (tap′et-pin), *n.* Same as *tappet*^{2}.

tappet-plate (tap′et-plāt), *n.* A tappet or cam in a loom for operating the warp-harnesses. *T. W. Fox*, Mechanism of Weaving, p. 45.

tappet-wheel (tap′et-hwēl), *n.* A wheel provided with spurs or projections for intermittently acting on some other mechanism. *T. W. Fox*, Mechanism of Weaving, p. 52.

tapping-clay (tap′ing-klā), *n.* A form of loam or plastic clay used to close or plug the tapping-hole in a furnace through which the molten metal has been drawn.

tapping-hole, *n.* **2.** A hole, drilled in metal, of such a diameter that a full screw-thread may be tapped within it, the tapping cutting away only the metal required to form such a thread. Its diameter is therefore smaller than the nominal diameter of the tap or the screw to be inserted, by twice the depth of the thread.

tapping-pot (tap′ing-pot), *n.* A pot for the liquid metal received on tapping a furnace. *Phillips and Bauerman*, Elements of Metallurgy, p. 641.

tappoon (ta-pön′), *n.* [Sp. *tapon*, cork, plug, = OF. *tapon.*] A small movable dam of metal, wood, or cloth used temporarily to obstruct the flow of water in irrigation laterals or distributing-ditches, forcing the water to adjacent fields. *F. H. Newell*, Irrigation in U. S., p. 197.

tap-wire (tap′wīr), *n.* A wire connected at any point to an electric circuit to divert a portion of the current: as, the *tap-wires* of a trolley-line which at various points along the line convey current from the feeders to the trolley-wire.

tar^1, *n.*—**Acid tar.** See ★*acid.*—**Anhydrous tar,** tar which has been boiled to expel the water. It is mixed with burnt dolomite to form a paste for the lining of basic Bessemer converters. *Lockwood*, Dict. Mech. Engin. Terms.—**Beech tar,** a dark-colored tar-like liquid of strong creosote odor, obtained by the dry distillation of the wood of the beech (*Fagus sylvatica*). It is one of the sources of creosote.—**Black tar.** Same as *vitriol* ★*tar.* —**Blast-furnace tar,** tar obtained by cooling the waste gases from blast-furnaces in which bituminous coal is used as fuel.—**Coke-oven tar,** tar obtained in the working of those forms of coke-oven which provide for the condensation and recovery of the volatile products, such as the Jameson and the Simon-Carvé's ovens.—**Green tar,** a name given to tar from a petroleum-spring in Barbados because of its color. Also known as *Barbados tar.*—**Stockholm tar,** wood-tar produced by the smothered combustion of resinous pine-wood in conical pits with a covering of earth. It is the variety of tar most commonly used in connection with ship-building and for the preservation of cordage.— **Tar acne.** See ★*acne.*— **Tar camphor.** Same as *naphthalene.*— **Vitriol tar,** the black viscid material which settles to the bottom of a mass of the heavier distillate from shale-tar when it has been agitated with concentrated sulphuric acid and allowed to stand. Also called *black tar.*

tar⁴ (tär), *n.* [Also *tarr, tare,* Pg. *tara,* < Malayalam *tāram,* a copper coin.] A small silver coin formerly current on the Malabar coast, especially at Tellicherri and Calicut. Sixteen tars of Calicut equal one fanam; one tar of Tellicherri is equivalent to four reas, and one hundred tars equal one rupee.

Taractes (ta-rak'tēz), *n.* [NL., < Gr. ταράκτης, a disturber, < ταράσσειν, stir, stir up, disturb.] A genus of fishes of the open sea belonging to the family *Bramidæ.*

taragma (ta-rag'mạ̈), *n.* [NL., < Gr. τάραγμα, disquietude, < ταράσσειν, stir, stir up, disturb.] Same as *taraxis.*

tarakihi (tä-rä-kē'hẹ̄), *n.* [Maori.] See ★*morwong.*

taranakite (ta-ran'ạ-kīt), *n.* [*Taranaki* (see def.) + *-ite*².] A hydrated aluminium phosphate resembling wavellite: found in Taranaki, New Zealand.

tarand (tar'and), *n.* [See *tarandus.*] Same as *tarandus,* 1.

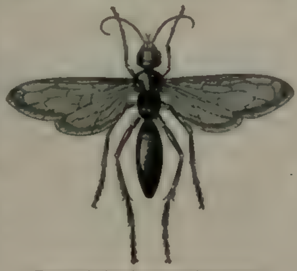
> A *tarand* is an animal as big as a bullock, having a head like a stag, or a little bigger, two stately horns with large branches, cloven feet, hair long like that of a . . . bear — and a skin almost as hard as steel armour.
>
> *Urquhart and Le Motteux,* tr. of Rabelais, Gargantua [and Pantagruel, iv. 2.

Tarandean (ta-ran'dẹ̄-ạn), *n.* [NL. *tarandus,* reindeer, + *-e-an.*] In *geol.,* a late division of paleolithic deposits in the postglacial series in France, characterized by the association of reindeer and human remains.

Tarandichthys (tar-an-dik'this), *n.* [NL., < *tarandus,* reindeer, + ἰχθύς, fish.] A genus of cottoid fishes of the deep waters of the North Pacific.

tarantula-hawk (ta-ran'tụ̄-lạ̈-hâk), *n.* A large pompilid wasp, *Pepsis formosa,* which inhabits the southwestern United States and Mexico. It stings the large tarantulas and stores them away in its burrows as food for its young.

tarantulism (ta-ran'tụ̄-lizm), *n.* [*tarantula* + *-ism.*] Same as *tarantism.*



Tarantula-hawk (*Pepsis formosa*).

tarapacaite (tä-rä-pä-kä'īt), *n.* [*Tarapacá* (see def.) + *-ite*².] A bright-yellow mineral consisting essentially of potassium chromate and occurring with the deposits of soda niter at Tarapacá, Chile.

taraspite (ta-rasp'īt), *n.* [*Tarasp* (see def.) + *-ite*².] A variety of dolomite from Tarasp, Switzerland.

tarata (tä'rä-tä), *n.* [Maori.] A small evergreen tree, *Pittosporum eugenioides,* of New Zealand, bearing masses of fragrant pale-yellow flowers, and yielding a tough white wood used in turning. Also called *lemon-wood, mapau,* and *maple.* See *hedge-laurel.*

tarau (tạ-rou'), *n.* Same as ★*thro*⁴.

taraxacerin (ta-rak-sas'e-rin), *n.* [NL. *tarax-ac(um)* + *(glyc)erin?*] A colorless crystalline compound, $C_8H_{16}O$, contained in the root of the dandelion (*Taraxacum*).

tarbuttite (tär'bu-tīt), *n.* [After Mr. Percy C. *Tarbutt* + *-ite*².] A basic zinc phosphate, $Zn_3P_2O_8.Zn(OH)_2$, which occurs in triclinic crystals, colorless or of pale tint, also in crystalline aggregates: found at the Broken Hill mines, Rhodesia.

tare⁴, *n.* **3.** The weight of a motor-vehicle without its load of cargo or passengers; also, the weight of the vehicle empty, without its fuel-supply or necessary equipment.

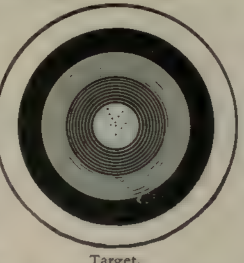
> It is in the direction of the *tare* limit, or weight [motor vehicles] when unladen, that the greatest difficulties have been found by manufacturers. *Encyc. Brit.,* XXXI. 17.

tarentola, *n.* **3.** A common name of the fish *Synodus saurus,* of the coasts of southern Europe, and also recorded from the Bermudas.

target, *n.* **2.** In *archery,* the five circles count as follows: gold center, 9; red, 7; inner white or blue, 5; black, 3; outer white, 1.

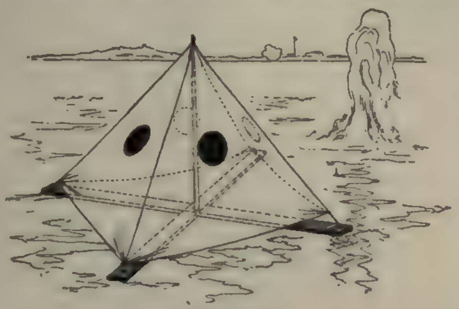
target-base (tär'get-bās), *n.* A line upon which targets are placed in an archery-ground. See ★*archery-ground.*

target-day (tär'get-dā), *n.* In *archery,* a day fixed by an archery club for shooting-contests: as, all Thursdays are *target-days.*



Target.

target-frame (tär'get-frām), *n.* Boards laid horizontally and crossed at right-angles, with a mast about twelve feet high secured to the center of this frame. The latter is stayed by ropes leading from the head of the mast to each one of the four corners of the crossed boards, and four triangular shapes of canvas are stretched from stay to stay, creating a pyramidal target.— **Small-arm target-frame,** a shape of sheet-iron painted with several inclosed squares as a target for rifle-firing.



Target-frame.

target-lantern (tär'get-lan'tėrn), *n.* Same as *target-lamp.*

target-list (tär'get-list), *n.* In *archery,* a list showing at what target each archer is to shoot in a shooting-match.

target-paper (tär'get-pā'pėr), *n.* In *archery,* a score or record of the entire performance at a shooting-match of all the archers assigned to a particular target. The records of all the target-papers are copied on a general record. See ★*transfer,* 7.

target-plate (tär'get-plāt), *n.* A plate so constructed and mounted with suitable backing that it may be used as a target for the heavy projectiles of guns of large caliber. Such plate must resist the impact effect of the projectile and absorb its living force, and must also withstand the disintegrating effect from heat and penetration.

target-practice (tär'get-prak'tis), *n.* Formal practice, under prescribed regulations, in shooting at a target with cannon or small arms.

target-range (tär'get-rānj), *n.* Same as *range,* 7 (*b*).

target-rifle (tär'get-rī'fl), *n.* A small arm made with care and accuracy to be used with special sights for shooting at a target in matches.

target-shyness (tär'get-shī'nes), *n.* In *archery,* nervousness which causes a shooter to discharge his arrow before his aim is perfected; inability to hold. See ★*hold*¹, 6 (*b*).

tarif, *n.* and *v.* A simplified spelling of *tariff.*

tariff, *n.*— **Dingley tariff** (named from Nelson *Dingley,* Jr., chairman of the Ways and Means Committee), a United States tariff established by the act of 1897.— **Wilson tariff** (from William L. *Wilson,* chairman of the Ways and Means Committee), a United States tariff established by the act of 1894. It made the average rate of duties somewhat lower than that which resulted from the McKinley tariff. The most important provision of the act was the free importation of raw wool. It became a law without the signature of President Cleveland.— **Zone tariff.** See the extract.

> In Hungary, Austria, and Russia a *zone-tariff* system is in operation, whereby the country is mapped out into zones, and the traveller pays according to the number of these he passes through, and not simply according to the number of miles he is conveyed.
>
> *Encyc. Brit.,* XXXII. 153.

tariric (tä-rir'ik), *a.* [*tariri* + *-ic.*] Noting an acid, a compound, $C_{18}H_{32}O_2$, contained, in combination with glycerol, in the oil from the fruit of certain plants of the genus *Picramnia* from Guatemala.

tariri-oil (tä-rē'rē-oil), *n.* A fixed oil obtained from the seeds of tariri, a Guatemalan shrub. It contains as glyceride the radical of tariric acid, isomeric with linoleic acid.

Tarletonbeania (tärl-tọn-bē'ni-ạ̈), *n.* [Named for *Tarleton* H. *Bean,* an American ichthyologist.] A genus of deep-sea fishes of the family *Myctophidæ.*

tar-lime (tär'līm), *n.* The impure lime, chiefly carbonate, mixed with bituminous empyreumatic impurities, which is present in crude brown calcium acetate obtained in the manufacture of pyroligneous or acetic acid by the destructive distillation of wood.

tar-macadam (tär'mak-ad'ạm), *n.* See ★*macadam.*

taro², *n.* **2.** A gold coin (*a*) of the Arab emirs of Sicily of the tenth and eleventh centuries; (*b*) of the Lombard dukes of the seventh century; (*c*) of the Two Sicilies under Norman rule in the fourth century; (*d*) of Amalfi in the eleventh century.

tarocco (tä-rōk'kō), *n.* [It.] An old Italian game of cards. There are seventy-eight cards in the pack: four suits of fourteen cards each, twenty-one independent cards or 'tarots,' which distinguish this game from all others, and one card called the 'matto' or 'fool,' from the figure which it bears. Beautifully illuminated packs of these cards are to be found in Italian collections.

tarpum (tär'pum), *n.* Same as *tarpon.*

tarsalgia (tär-sal'ji-ạ̈), *n.* [NL., < *tarsus* + Gr. ἄλγος, pain.] Pain in the region of the tarsus.

tarsectopia (tär-sek-tō'pi-ạ̈), *n.* [NL., < *tarsus* + Gr. ἔκτοπος, out of place.] Dislocation of one or more of the tarsal bones.

tarsitis (tär-sī'tis), *n.* [NL., < *tarsus* + *-itis.*] Inflammation of the edges of the eyelids.

tarsophyma (tär-sō-fī'mạ̈), *n.*; pl. *tarsophymata* (-ma-tä). [NL., < *tarsus* + Gr. φῦμα, a swelling.] **1.** Tumor of the tarsal region of the foot.— **2.** Tumor of the edges of the eyelids.

tarsoplasty (tär'sō-plas-ti), *n.* [NL. *tarsus* + Gr. πλαστός, formed, + *-y*³.] Plastic surgery of the eyelids.

tar-still (tär'stil), *n.* See ★*still*².

tartar¹, *n.*— **Vitriolized tartar,** an obsolete name for potassium sulphate.

Tartaric-acid print. See ★*print.*

tartarlithine (tär-tạ̈r-lith'in), *n.* [*tartar* + *lithium* + *-ine*².] A trade-name of an effervescent preparation of lithium hydrogen tartrate, LiOCOCH(OH)CH(OH)COOH. It is used in medicine as a solvent for uric acid.

tartralic (tär-tral'ik), *a.* [*tart(a)r(ic)* + *-al*³ + *-ic.*] Noting an acid, a colorless, amorphous, very deliquescent compound, $C_8H_{10}O_{11}$, prepared by heating tartaric acid, of which it is an anhydrid, at 140–150° C. Also called *ditartrylic acid.*

tartramic (tär-tram'ik), *a.* [*tart(a)r(ic)* + *am(monia)* + *-ic.*] Pertaining to ammonia and tartaric acid.— **Tartramic acid,** a colorless syrupy compound, $H_2NCOCH(OH)CH(OH).COOH$, prepared by the action of aqueous ammonia on diethyl tartrate.

tartramide (tär-tram'id), *n.* [*tartram(ic)* + *-ide.*] A colorless compound, $H_2NCOCH(OH)$-$CH(OH)CONH_2$, prepared by saturating ethyl tartrate with ammonia. It forms rhombic crystals.

tartrated (tär'trā-ted), *a.* [*tartrate* + *-ed*².] Containing or combined with tartaric acid.

tartrazin (tär'tra-zin), *n.* [*tart(a)r(ic)* + *azo-* + *-in.*] An artificial dyestuff, the sodium salt of disulphonated phenyl-osazone-dioxytartaric acid. It produces a bright-yellow color on wool, and may also be used on mordanted cotton.

tartrelic (tär-trel'ik), *a.* [*tart(a)r(ic)* + *-el* + *-ic.*] Noting an acid, a deliquescent crystalline compound, $C_4H_4O_5$, prepared by heating tartaric acid rapidly to 180° C. It is a monobasic acidic anhydrid of tartaric acid.

tartronic (tär-tron'ik), *a.* [*tart(a)r(ic)* + *-one* + *-ic.*] Noting an acid, a colorless compound, $HOCOCH(OH)COOH.\frac{1}{2}H_2O$, prepared by the reduction of mesoxalic acid. It crystallizes in prisms, when anhydrous sublimes at 110–120° C., and melts and decomposes at 185–187° C. Also called *hydroxymalonic acid.*

tartrophen (tär'trọ-fen), *n.* [*tart(a)r(ic)* + *phen(yl).*] A trade-name of a preparation of phenetidine and tartaric acid. Its medicinal use is similar to that of citrophen.

tartrovinic (tär-trọ-vin'ik), *a.* [*tart*(*a*)*r*(*ic*) + L. *vinum*, wine, + *-ic.*] Pertaining to ethyl tartaric acid or ethyl hydrogen tartrate. — **Tartrovinic acid**, a colorless, very deliquescent compound, $HOCOCH(OH)CH(OH)COOC_2H_5$, prepared by boiling tartaric acid with alcohol. It forms rhombic crystals and melts at 90° C. Also called *ethyl hydrogen tartrate* or *ethyl tartaric acid.*

taruca (tä-rö'kä), *n.* [Sp., < Quichua and Aymará of Peru and Bolivia *taruca;* also much used in the Spanish of those countries.] The deer of the Andes, *Cervus antisiensis.*

tarweed, *n.* 2. A viscid rosaceous plant, *Chamæbatia foliolosa*, with feathery leaves and strawberry-like blossoms, abundant in California. It fills the air with a not very pleasant balsamic odor. Also called *mountain misery* and *bear-clover.*

tarwhine (tär'hwin), *n.* [Aboriginal name in Australia.] A common name in Australia of *Chrysophrys hasta* and *Sparus sarba*, both sparoid fishes.

tarwood (tär'wůd), *n.* In New Zealand, the manoao, *Dacrydium Colensoi.* See ★*manoao.*

tasajo (tä-sä'hō), *n.* [Sp. *tasajo* = Pg. *tassalho*, appar. connected with the equiv. Cat. *tasco ;* origin uncertain.] Jerked beef; beef cut into strips and dried. [Spanish America.]

> The increase in the herds of recent years has caused the owners of saladero establishments in Argentina and Uruguay to try the working of factories in Paraguay for the preparation of *tasajo* (jerked beef) and the manufacture of extract of meat. *Encyc. Brit.*, XXXI. 461.

tashlik, tashlich (täsh'liċh), *n.* [Heb., < *shālak*, to cast or throw away.] An orthodox Jewish custom of shaking the skirts, on the afternoon of New-Year's day (Rash-ha-shanah), on the shores of a stream, river, or sea. One of the three verses (Micah vii. 18–20) recited at the performance of this custom has the word *ve-tashlik*, literally, "and thou wilt cast away (our sins)," hence the name.

tasimetry (tạ-sim'e-tri), *n.* [Gr. τάσις, stretching, tension, + -μετρια, < μέτρον, measure.] The art of measuring pressure ; the use of the tasimeter.

Tasm. An abbreviation of *Tasmania.*

Tasmanian bluebell. See ★*bluebell.*— **Tasmanian box.** Same as *native* ★*box.* See ★*box-thorn*, 2.— **Tasmanian bur, whip-tail.** See ★*bur*1, ★*whip-tail.*

tassel-fish (tas'l-fish), *n.* A name applied to fishes of the family *Polynemidæ*, from the fact that the lower rays of the pectoral fin are detached and filamentous. They are found in most warm seas.

> Several species of the *tassel fish* (Polynemus macrocohoir), from which isinglass is procured, have been taken by fishermen. *Encyc. Brit.*, XXXII. 110.

taste-beaker (tāst'bē"kėr), *n.* A taste-bud or taste-bulb; the end-organ of taste. *Taste-beakers* are oval bodies, formed of long fusiform cells which are arranged in cortical and medullary groups; the latter, into the one pole of which nerve-fibres have been traced, project through an opening left at the opposite pole between the cortical cells. They are most prominently distributed along the sides of the trenches round the circumvallate papillæ. *E. B. Titchener*, Exper. Psychol., I. i. 64.

taste-cup (tāst'kup), *n.* In *entom.*, one of the minute cups or pits found on the epipharynx of an insect. It has a peg in the center and is the termination of a nerve.

> The structure and armature of the epipharyngeal surface even besides the taste-pits, *taste-cups*, and rods, is very varied, the setæ assuming very different shapes. *A. S. Packard*, Text-book of Entom., p. 45.

taste-hair (tāst'hãr), *n.* Any one of the setæ or bristles in or near the mouth of an insect or other arthropod which are supposed to be gustatory in function. *Jour. Roy. Micros. Soc.*, April, 1905, p. 180.

taste-pit (tāst'pit), *n.* Same as ★*taste-cup. A. S. Packard*, Text-book of Entom., p. 45.

tastoanes (tä-stō-ä'nās), *n. pl.* [Sing. *tastoan:* an Amer. Sp. corruption of Nahuatl *tlatoani*, masters.] A sort of drama or play sometimes performed by the Indians of certain parts of Mexico. The performers are all masked, and the name of the play is derived from a certain class of performers called tastoanes. *Jour. Amer. Folk-lore*, April–June, 1902, p. 73.

tatami (tä-tä'mē), *n.* [Jap.] 1. A floor-mat about two inches thick, made of rice-straw bound together and covered on the upper surface with matting. The edges are usually bound with cloth.—2. A Japanese measure of surface, that of a mat 6 shaku in length by 3 shaku in width, or nearly 6 feet by 3 feet.

tatching-end, *n.* Same as *taching-end.*

tatil (ta-tēl'), *n.* [Hind. Ar. *ta'ṭīl*, a vacation, a holiday.] Locally in India, the period during which water may be used: employed in connection with the system of rotation or division of water according to short periods of time. *H. M. Wilson*, Irrigation Engineering, pp. 59, 60, 287.

tatouy, *n.* Same as *tatouay.*

tattoo3 (tat'ö), *n.* [Hind. *taṭṭū.*] In India, a native-bred pony or small horse. Also, by abbreviation, *tat.* See *tat*7.

> An' I heard a shout, an' thin I saw a horse an' a *tattoo* latherin' down the road, hell to shplit, under women . . . an' Dinah came. . . . The colonel's lady had lint her the *tattoo.*
> *R. Kipling*, "Love-o'-women," in Many Inventions, [p. 318.

tauari (tä-wä'rē), *n.* [Native name.] See ★*llanchama.*

tauidion (tâ-id'i-ọn), *n.* ; pl. *tauidia* (-ạ̈). [NL., < Gr. ταῦ, tau, the letter T, + dim. -ιδιον.] In the anatomy of the Devonian fish *Palæospondylus*, an element or region lying on the ventral surface of the skull just behind the ampyx, having the form of a T.

tauric2 (tâ'rik), *a.* [NL. *tauricus*, < Gr. ταῦρος, a bull. See *steer*2.] 1. Of or pertaining to bulls or steers.—2. [*cap.*] Of or pertaining to the constellation Taurus.

> The ancient Median calendar is next dealt with. Its starting-point seems to have been about B.C. 3000, when the sun was in Taurus at the vernal equinox. The adoption of this by the conquering Assyrians was probably the cause of their fondness for *Tauric* symbolism and our present familiarity with the Assyrian bull. *Nature*, Oct. 22, 1903, p. 593.

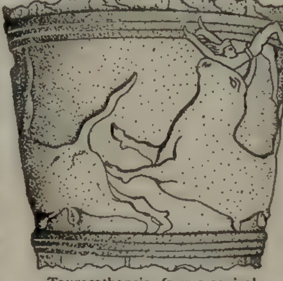
tauriscite (tâ'ris-īt), *n.* [G. *tauriszit*, named from L. *Taurisci*, an Alpine tribe which anciently inhabited the locality.] A doubtful mineral species stated to have the form of epsomite and the composition of melanterite: found in Switzerland.

taurite (tâ'rīt), *n.* [*Taur*(*ien*), southern Russia, + *-ite*2.] In *petrog.*, an ægirite-bearing soda-rhyolite having a spherulitic or micrographic texture in the ground-mass: occurring in the Crimea. *Lagorio*, 1897.

taurocarbaminic (tâ"rọ-kär-bạ-min'ik), *a.* [Gr. ταῦρος, bull, + E. *carbaminic.*] Noting an acid, an organic sulphur body, $C_3H_8N_2O_4S$, which has been found in urine.

taurocathapsia (tâ"rō-ka-thap'si-ä), *n. pl.* [Gr. ταυροκαθάψια.] A bull-fight or game with bulls.

> Two scenes refer to the *Taurokathapsia* — in the first a man who has apparently missed his grasp, is seen above a magnificently galloping bull, in the second he lies prostrate below the lower outline of another. *An. Brit. School at Athens*, VII. 102.



Taurocathapsia, from a conical Cretan vase.

taurocephalous (tâ-rọ-sef'ạ-lus), *a.* [Gr. ταῦρος, bull, + κεφαλή, head, + *-ous.*] Having the head of a bull; bull-headed: applied to rivers which, in Greek mythology, were represented with the heads of bulls.

taurylic (tâ-ril'ik), *a.* [Gr. ταῦρος, bull, + *-yl* + *-ic.*] Noting an acid, a compound, $C_7H_{14}O$, apparently a cresol, said to be present in human urine and in that of oxen and horses.

taushent (tâ'shent), *n.* [Also *torshent;* said to be of Massachusetts Algonkian origin.] The youngest child: a term of endearment. *Collections of the Mass. Historical Society*, VIII. 97. [Local, New England.]

Tautoga (tâ-tō'gạ̈), *n.* [NL., < E. *tautog.*] A genus of labroid fishes inhabiting the Atlantic coast of the United States.

tautogeneity (tâ-tọ-jẹ-nē'ị-ti), *n.* [Gr. ταὐτό, the same, + γένος, race, kind, + *-ity.*] In *biol.*, the fact or condition of the existence of a fixed or exact relation in form or size between two or more parts. [Rare.]

> *Tautogeneity*, a word introduced by Prof. Rolleston as a more correct term in this connection than 'correlation.' *Proc. U. S. Nat. Mus.*, XIII. 295.

tautogenize (tâ-toj'e-nīz), *v. i.*; pret. and pp. *tautogenized*, ppr. *tautogenizing.* [See ★*tautogeneity.*] In *biol.*, to bear an exact or fixed relation of size or form, as one part or organ to another. [Rare.]

Tautogolabrus (tâ"tọ-gọ-lā'brus), *n.* [NL., < *Tautoga* + *Labrus.*] A genus of labroid fishes of the Atlantic coast of North America from Labrador to Sandy Hook.

tautomer (tâ'tō-mėr), *n.* [Gr. ταὐτό, the same, + μέρος, part.] A substance which bears a tautomeric relationship to another. See ★*tautomerism* and ★*desmotropism. Amer. Chem. Jour.*, May, 1903, p. 406.

tautomeric (tâ-tọ-mer'ik), *a.* [*tautomer* + *-ic.*] Of or pertaining to ★*tautomerism* (which see): specifically applied to compounds which exhibit the phenomenon of reacting as if they had more than one constitution.

> There are ten possible *tautomeric* formulas for this phenylacetylurazole, and four possible positions for the acetyl group. *Amer. Chem. Jour.*, Dec., 1904, p. 606.

tautomerism (tâ-tom'ẹ-rizm), *n.* [*tautomer*(*ic*) + *-ism.*] In *organic chem.*, the phenomenon exhibited by certain compounds of reacting as if they possessed two different constitutions, that is, as if they consisted of two substances each structurally different from the other. For example, many compounds containing the group $-CH_2CO-$ behave as ketones toward some reagents, but act toward others as if they were unsaturated alcohols, $-CH:COH-$. In many cases both forms can be isolated. *Nature*, Sept. 17, 1903, p. 476. — **Virtual tautomerism**, in *organic chem.*, the phenomenon exhibited by tautomeric compounds of which the two forms cannot be isolated, and hence the valencies of the atoms concerned in the tautomerism appear to oscillate, as, for example, in the group XN : RNHY and XNH.R : NY. Also called *phasotropy.*

tautomery (tâ-tom'ẹ-ri), *n.* Same as ★*tautomerism.*

> It is not unfrequently the case that no constitutional or structural formula can be given to a substance which shall express all the pairs of radicals possible in its interactions, of which the best-studied example is that of ethyl acetoacetate. This state of things, known as *tautomery*, admits of no other interpretation than that there are really two substances existent, of which one only is known, the other or so-called "pseudoform" requiring the assumption of its existence as a transition-substance only. *E. Divers*, in Nature, Sept. 18, 1902, p. 503.

tautomorphous (tâ-tọ-môr'fus), *a.* [Gr. ταὐτό, the same, + μορφή, form, + *-ous.*] Of like shape: used specifically of two complementary crystal forms (see ★*form*2) one of which can be placed in the position of the other by a revolution of 180°. *W. J. Lewis*, Crystallography, p. 210.

tautonomy (tâ-ton'ọ-mi), *n.* [*tautonym* + *-y*3.] The use of tautonyms ; the fact of being tautonyms.

> Of the seven cases he would throw out from my list of twenty-one generic changes made necessary by the first species rule, Spinus may be saved by the rule of *tautonomy. J. A. Allen*, in Science, May 24, 1907, p. 827.

tautonym (tâ'tọ-nim), *n.* [Gr. ταὐτό, the same, + ὄνομα, ὄνυμα, name.] A name formed by repeating one word : as, *kiwi-kiwi*, the apteryx; *taro-taro*, the Orinoco bittern ; *awa-awa*, the milk-fish of Hawaii; specifically, in zoölogical and botanical nomenclature, a name in which the generic and specific names are the same : as, *Scomber scomber*, the mackerel ; *Cardinalis cardinalis*, the cardinal redbird ; *Vulpes vulpes*, the European red fox. These various animals were originally placed — mainly by Linnæus — each in a genus comprising species now regarded as belonging to different genera ; in establishing new genera the old specific name was applied to the new genus and a new specific name given ; this, by the rules of modern nomenclature, has been restored, the resulting name being a tautonym.

tautonymic (tâ-tọ-nim'ik), *a.* [*tautonym* + *-ic.*] Of or pertaining to a tautonym.

tavistockite (tav'is-tok-īt), *n.* [*Tavistock* + *-ite*2.] A hydrous phosphate of aluminium and calcium occurring in minute white acicular crystals in Tavistock, Devonshire.

taw4 (tou), *n.* [Heb. *tāw*, Gr. ταῦ. See *T* and *tau.*] The twenty-second and last letter (ת) of the Hebrew alphabet, corresponding to the English *t.* Its numerical value is 400.

tawhiri (tä'hwẹ-rẹ), *n.* [Maori.] A small tree, *Pittosporum tenuifolium*, which yields a soft, tough wood, and bears a profusion of white, fragrant flowers. Called *black mapau* by the settlers. [Australia.]

tawite (tä'vīt), *n.* [*Taw*(*ajok*), a locality on Kola peninsula, Finland, + *-ite*2.] In *petrog.*, a phaneric igneous rock with granular texture, composed of pyroxene and sodalite. *Ramsay*, 1894.

tawkee† (tâ'kẹ), *n.* [Also *tawkie, tawkim, tawko. tuckah*, etc. ; prob. first in Swedish of New Jersey (?), from a dialect of the Delaware group, Delaware (Lenâpé) *p'tukwi* or *p'tukqueu*, a round mass, = Cree *pittikwow*, round, globular.] The goldenclub, *Orontium aquaticum*; also, the Virginia wake-robin, *Peltandra Virginica*. *Jour. Amer. Folk-lore*, Oct.-Dec., 1902, p. 261. [New Jersey and parts of Pennsylvania.]

tax, *n.*—**Betterment tax**, an assessment imposed upon real property benefited by a public improvement, in proportion to the benefit received.—**Direct tax.** (*a*) See *tax*, 2. (*b*) Same as *collateral-inheritance tax*. See *collateral* and ★*death-duty*.—**Faculty tax**, one levied with a view to the earning capacity in a profitable profession or employment of the person taxed.—**Hospital tax** (*naut.*), a tax of 40 cents per month exacted by law from every person belonging to the crew of an American documented vessel, for the support of the marine hospital service. The law was repealed in 1884.—**Personal tax**, a tax, applying alike to persons and to corporations, upon personal rather than real property: not the same as poll-tax, which has no reference to property.—**Stamp tax**, a tax collected by the sale of revenue stamps to be affixed to the article to be made or sold.—**Tax bond**, a form of bond issued by a state or municipality in order to obtain funds for current expenses before the annual taxes fall due, when the bonds are retired. Such bonds are made a legal tender in payment of taxes.—**Tax certificate.** Same as *tax deed* or *tax lease* (which see, under *tax*); like them, it conveys the property sold or leased for unpaid taxes subject to redemption within a fixed time.—**Tax lien.** See ★*lien*^{2}.

taxaceous (tak-sā'shius), *a.* [NL. *Taxace*(*æ*) + *-ous*.] Belonging or pertaining to the *Taxaceæ*. *Jour. Roy. Micros. Soc.*, Feb., 1904, p. 78.

taxad (tak'sad), *n.* [L. *taxus*, the yew, + *-ad*^{1}.] A tree or shrub of the *Taxaceæ*. *Encyc. Brit.*, XXIX. 187.

taxameter (tak-sam'e-tėr), *n.* Same as ★*taximeter*.

Taxation of costs, in *law*, the fixing of the items and amount of costs in an action. They are included then in the judgment.

taxicab (tak'si-kab), *n.* [*tax* (for G. *taxe*, legal charge or fare) + *-i-* + *cab*.] A public 'cab' or carriage which carries a fare-indicator. See ★*taximeter*.

taximeter (tak-sim'e-tėr), *n.* [*tax* (for G. *taxe*, legal charge or fare) + *-i-* + Gr. *μέτρον*, measure.] A commercial name of an instrument for automatically recording and mechanically computing the tax or charge to be made for the use of a hired vehicle in accordance with a determined tariff for such charges.

> A metallic case incloses a dial, behind which the actuating mechanism is connected to a wheel of the vehicle, whose revolutions it counts and records. If the payment is to be by distance traversed, the reading-dial has figures which are the multiples of the distance at the agreed or legal rate of so many monetary units per mile or per kilometer. The dial therefore reads directly the charge to be made, and no record is made of such time as the wheels are not turning. If the rate is so much per hour of use, the distance-measuring mechanism is disconnected by a lever in the case, and a clock is thrown into gear with another reading-dial, which multiplies the elapsed time by the rate per hour, and both driver and passenger can read clearly the amount due under either system.
> *Sci. Amer.*, Oct. 15, 1904, p. 260.

taxinomic (tak-si-nom'ik), *a.* Same as *taxonomic*.

taxinomist (tak-sin'ọ-mist), *n.* Same as *taxonomist*.

taxinomy (tak-sin'ọ-mi), *n.* Same as *taxonomy*.

taxis, *n.* 6. The orientation, locomotion, or migration of a cell or of an organism in relation to an external substance or form of energy. *Positive taxis* is motion toward and *negative taxis* motion away from an exciting agent. In loose usage 'taxis' is included in 'tropism,' but in a stricter usage 'tropism' is restricted to growth, and 'taxis' is applied to locomotion. Both tropism and taxis are exhibited by animals and by plants, but taxis is more frequently observed in animals and tropism in plants. Different forms of taxis are designated by the character of the stimulating agent: such are *chemotaxis*, *phototaxis*, *thermotaxis*, *electrotaxis*, *rheotaxis*, *stereotaxis*, etc. Compare ★*tropism*.

> Some writers have used instead of tropism the word *taxis*. *M. F. Washburn*, The Animal Mind, p. 57.
>
> The mechanical interpretations of the tropisms and *taxes* as held by Loeb, Bethe and Uexkull.
> *Science*, Oct. 14, 1904, p. 487.

taxite (tak'sīt), *n.* [Gr. *τάξις*, arrangement, + *-ite*^{2}.] In *petrog.*, a name suggested by Loewinson-Lessing (1891), for lavas having a brecciated or schlieric appearance, due to parts having different colors, textures, or composition. When banded or streaked the texture is *eutaxitic*; when brecciated, it is *ataxitic*.

taxitic (tak-sit'ik), *a.* [Gr. *τάξις*, order, arrangement, + *-ite*^{2} + *-ic*.] In *petrog.*, having the characters of a taxite.

Taxocrinus (tak-sok'ri-nus), *n.* [NL., < Gr. *τάξις*, arrangement, + *κρίνον*, a lily (see *crinoid*).] A genus of flexible crinoids of the family *Ichthyocrinidæ*, common in all formations from the Silurian to the Subcarboniferous.

taxodont (tak'sọ-dont), *a.* [*Taxodont*(*a*).] In *conch.*, having the hinge-teeth of equal size, disposed in one or two rows: a condition found in some bivalve shells. The primitive hinge in most bivalves is taxodont, but the condition disappears with growth.

> A series of vertical crenulations or *taxodont* denticles.
> *Science*, Nov. 27, 1896, p. 771.

Taxodonta (tak-sọ-don'tạ̈), *n. pl.* [NL., < Gr. *τάξις*, arrangement, + *ὀδούς* (*ὀδοντ-*), tooth.] A group of prionodesmacean pelecypod *Mollusca* in which the hinge consists of alternating similar teeth and sockets arranged in a long series, as in the genera *Arca* and *Leda*.

taxometer (tak-som'e-tėr), *n.* Same as ★*taximeter*.

Taxonomic variation. See ★*variation*.

taxt, *p. a.* A simplified spelling of *taxed*.

tax-ward (taks'wârd), *n.* An annual payment made to a superior in Scotland, instead of the duties due to him under the tenure of ward-holding: now abolished. *Wharton*.

taylorite (tā'lộr-īt), *n.* [Named after W. J. *Taylor*, who analyzed it.] Sulphate of ammonium and potassium ($5K_2SO_4.(NH_4)_2SO_4$), occurring in yellowish-white crystalline lumps in the guano-beds of the Chincha islands.

Taylor's circle. See ★*circle*.

tayote (tī-ō'tạ̄), *n.* [Mex. *chayotl*.] In Porto Rico, a name for *Chayota edulis*.

tazewellite (tāz'wel-īt), *n.* See ★*meteorite*.

tazia (tä-zē'ạ̈), *n.* [Also *tazeea*: *ta'ziya*, mourning for the dead.] In India, the taboot or representation, in flimsy material, of the tombs of Hussein and Hassan, which are carried about in the Muharram processions. *Yule and Burnell*, Hobson-Jobson.

> The Mohurrum, the great mourning-festival of the Muhammadans, was close at hand. . . . Gilt and painted presentations of their [the martyrs, Hasan and Hussain] tombs are borne with shouting and wailing, music, torches and yells, through the principal thoroughfares of the City, which fakements are called *tazias*.
> *R. Kipling*, On the City Wall, in Soldiers Three, p. 313.

Tb. A symbol sometimes used for the chemical element terbium. *Tr.* is more common.

T-beam (tē'bēm), *n.* An iron beam whose cross-section resembles the letter T. See *girder*^{1}, 2, fig. *q*.

T-bit (tē'bit), *n.* In the island of Trinidad, in 1811, the central piece cut from the ring-dollar and stamped with a T: circulated as a shilling current.

T-bolt (tē'bōlt), *n.* A bolt having a head which is only as wide as the stock or shank of the bolt in one direction, though it may be of any width at right angles to this direction.

T-box (tē'boks), *n.* In *electric wiring*, a metal box inclosing the T-joint made at any point where a single wire is connected to one of the mains.

TC. [Abbreviation of *tuberculin contagious*.] A symbol proposed by Von Behring to designate a curative principle derived from the tubercle bacillus. This substance is taken up by the cells of the body and there transformed into an integral part of these cells: in this form it is termed ★*TX*. *Science*, Oct. 3, 1905, p. 476.

tc. An abbreviation of *tierce*.

tcharka, tscharka, *n.* See *charka*.

tchaviche, tchawytcha, *n.* See *chavicha*.

tche (che), *n.* [Chin.] An ancient Chinese flute having both ends closed and the embouchure in the middle, with three holes on each side of it.

> A curious ancient Chinese instrument, the *Tche*, described by Amiot, closed at both ends with an embouchure at the middle and holes symmetrically placed on each side dividing the whole length into thirds, quarters, and sixths; so, if the whole length is called 12, the mouth hole is at 6 and the finger holes at 2, 3, 4, 8, 9, and 10.
> *Smithsonian Rep.* (Nat. Mus.), 1900, p. 427.

tchetverik, tschetverik, *n.* See *chetverik*.

tchetvert, tschetvert, *n.* See *chetvert*.

tchetvertka, tschetvertka, *n.* See *chetvertka*.

tchung-kee, *n.* Same as *chunk*^{2}.

T-connection (tē'kọ-nek"shọn), *n.* In *elect.*, a device for obtaining a three-phase current by means of a generator or transformer having only two-phase coils, in which one terminal of one of the coils is connected to the middle point of the other while the three line-wires are attached to the three free ends of the coils.

T-connector (tē'kọ-nek"tọr), *n.* In *elect.*, a binding-post or connector for electrically joining three wires together where two of these wires are in line with each other and the other joins them at a right angle.

tcs. An abbreviation of *tierces*.

T. D. (tē-dē'), *n.* A white clay pipe with the initials T. D. on the bowl. Said to be due to a legacy left by the eccentric "Lord" Timothy Dexter of Newburyport, Mass., in order to perpetuate his name. By extension, *T. D.* means clay pipe. *Dialect Notes*, III. iii. [New England.]

Te. 2. In *med.*, an abbreviation of *tetanic contraction*.

T. E. An abbreviation of *topographical engineer*.

tea^{1}, *n.*—**American tea**, tea produced in the United States, at present almost exclusively on or near the Pinehurst estate at Summerville, South Carolina. Experiments conducted since 1889 by Dr. Charles U. Shepard seem to prove not only that large crops of good leaf can here be grown but that medium grades of both black and green tea can be manufactured at a profit. Negro children are successfully trained as pickers, and the manufacture at least of black tea is conducted by machinery, which is now asserted to be possible in the case of green tea also. A characteristic flavor of the Pinehurst tea is styled by experts "South Carolina."—**Basket-fired tea**, Japan green tea finished by firing (drying) over a charcoal fire in a deep round basket with a wicker bottom. This is essentially the old Chinese method, in India called *dholing*, the baskets being there known as *dholes*.—**Billy tea**, in Australia, tea made in a billy or tin kettle such as is used by the Australian bushmen.—**Black tea**, the most common type of tea, dark-colored from oxidation (fermentation), the encouragement of which both before and after rolling is the distinctive feature of the black-tea process. The essential operations are: *withering*, during which fermentation begins; *rolling* of the now flaccid leaf to burst its cells; *fermentation*, in which the now exposed cell-contents are left at proper temperature to oxidize; and *firing* or drying. The Chinese process includes two rollings before and two after fermentation, two pannings (warming in an iron vessel) alternating with the later rollings, and a sunning prior to firing, all of which, except one rolling, have, in India, been found dispensable. Hot-air drying has also been substituted for dholing or basket-firing (see ★*sirocco*, 2, *basket-fired* ★*tea*), and in fact the whole essential process is carried through by machinery. For kinds of black tea see *bohea*, *Ceylon* ★*tea*, *congou* ★*tea*, *India* ★*tea*, ★*pekoe*, ★*souchong*.—**Bush tea.** (*b*) Same as *billy* ★*tea*.—**Cape Barren tea**, in Tasmania, a rutaceous plant, *Correa alba*, the leaves of which have been used as a substitute for tea.—**Caravan tea**, a fine souchong formerly put up at Hankow for the Russian trade and transported by caravan to Nijni Novgorod as a distributing center.—**Ceylon tea.** (*b*) The tea produced in Ceylon, in character like the Indian, but of higher quality. Since 1870 the production has rapidly enlarged, amounting about 1900 to two thirds that of Hindustan.—**China tea**, tea grown in China, the original seat of tea-culture. China (including Formosa) still produces two thirds of the world's export and a much larger amount for domestic consumption.—**Congou tea**, the name of a large group of China black teas forming the chief part of the native consumption, theoretically corresponding to the congou leaf (see *tea*^{1}, 2). The leaf is smaller and thicker than in souchong and the flavor is characterized as 'fruity.' The extremely numerous varieties are divided into *kaisow* or *red-leaf*, *moning* or *black-leaf* (for one of which see *oopak*), and *new district* teas (those later known to commerce).—**Dragon's-pool tea**, a choice green tea prepared by sun-drying from the leaf of a celebrated garden near Hangchow called Loong Tsin ('dragon's pool' or 'well'). This is obtainable only locally and at a high price. Seed secured by the United States consul at Ningpo and planted by Dr. Shepard (see *American* ★*tea*) afforded a thrifty growth of bushes. Also *hyson pekoe*.—**Faced tea**, tea artificially colored, etc. See ★*face*^{1}, 7.—**Formosa tea**, the tea-product of the island of Formosa, consisting mainly of oolongs.—**Green tea**, tea manufactured by a process in which oxidation is excluded. Instead of being withered (see ★*withering*) the leaf is subjected to steaming (either in its own juice (roasting) or over water), this destroying the enzym and rendering the leaf flaccid for rolling. See ★*rolling*, 6. Steaming and rolling are sometimes alternated. The drying, which promptly follows, is either by basket-firing (see *basket-fired* ★*tea*) or in Japan also by ★pan-firing. The once-current belief that green teas are fired in copper pans has long been discredited. The flavor of green tea is technically styled 'pungent.' Green teas are much less produced than black, but are popular in the United States. They are known in trade by many district names (see *Moyune* ★*tea*, *Sunglo* ★*tea*): for classes based on character see *dragon's-pool* ★*tea*, *gunpowder tea*, under *gunpowder*, *hyson*, *hyson* ★*tea*, *imperial* ★*tea*.—**High-fired tea**, tea dried (fired) with a high (usually excessive) degree of heat.—**Hop tea**, an article prepared in England from the hop, used chiefly to blend with common tea.—**Hyson tea.** See *hyson*. Both hyson and young hyson appear to be made from the same pluckings, the former from the larger and less succulent leaves, which curl less in the rolling process, and young hyson from the smallest tender leaves, which yield a fine closely curled product. The name young hyson, however (Chinese *yu-chien*, before the rains), expresses literally a very early picking, while hyson suggests a picking in full spring.—**Imperial tea**, a green tea similar in make and quality to gunpowder tea, but prepared from the older leaves of the pickings and coarser grained; hence sometimes called *big gunpowder* and *pea-leaf*: also called *imperial* as used by the imperial household and wealthy Chinese.—**India tea**, tea produced in British India, in commercial quantity since about 1860, and in amount now next to China tea. There are eleven districts in which tea is grown, and which give their names to the varieties used and to the product; among them are Assam, Kumaon, Darjeeling, and Cachar and Kangra. The native Assam variety is found in hot jungles, growing sometimes 20 feet high and bearing a large, thin, pale green, or yellowish leaf, now said to produce the finest-flavored tea. The Assam plant, however, is usually hybridized with hardier China varieties or the coarser *Munipuri* indigenous. Unaltered China teas are also grown and there is a Cachar indigenous partly resembling Munipuri. India teas are mainly black, in general resembling Chinese congous and yielding a large tannin content. For the process of manufacture see *black* ★*tea.*—**Japan tea,** tea produced in Japan. Tea-culture in Japan dates from the ninth century and extends all over the islands, a considerable export being absorbed mainly by the United States and Canada. Japan teas are mainly green, yielding a light-colored liquor strong in thein rather than tannin, in the finer grades of a delicate, rich, peculiar quality. A close-twisted wiry leaf is largely aimed at (see *needle* ★*tea, spider-leg* ★*tea*). The product is classed under numerous names of localities and according to manufacture is mainly either pan-fired (including sun-dried) or basket-fired (see these terms under ★*tea*), with 'nibs' and 'dust' or 'siftings' as secondary categories. Minor quantities of green and black teas in various Chinese styles are exported.—**Kumo tea.** See *spider-leg* ★*tea.*—**Mandarin tea,** an aristocratic Chinese tea, with a very small dark, crisp, and tender leaf, lightly fired and highly scented.—**Moyune tea,** Chinese green tea grown on the plains of Mo-yuen near Sunglo, including the bulk of the best green tea exported. Local varieties are known as 'Nankin,' 'Pakeong,' and 'Oochaine.' Also called *garden teas,* as opposed to *hill teas.* Cf. *Sunglo* ★*tea.*—**Needle tea,** tea rolled into a needle-like form, as often in Japan.—**Pan-fired tea,** tea dried by the process called ★*pan-firing.*—**Post-and-rail tea,** bush tea: so called because large bits of the tea, or supposed tea, float about in the billy, which are compared by a strong imagination to the posts and rails of the wooden fence so frequent in Australia. *E. E. Morris,* Austral English.—**Russian tea,** tea served (hot or cold) with lemon and sometimes arrack or rum.—**Scented tea.** Scented teas form a distinct group containing both black and green kinds. They include fine teas, as pekoes, and caper-tea (see the latter and *mandarin* ★*tea*), and also low-grade teas meretriciously improved. The flowers used for scenting are those of the fragrant olive (see *Osmanthus*), the chulan, the cape jasmine (see *Gardenia*), and true jasmines (*Jasminum Sambac* and *J. officinale*).—**Spider-leg tea,** a fine grade of Japan basket-fired tea of needle-shaped make. Also called *kumo.*—**Sun-dried tea,** a class of Japan teas fired by hot panning (see ★*pan-firing*), but peculiarly colored from being previously dried in the sun.—**Sunglo tea,** Chinese green tea produced in the hill region of Sunglo, the original seat of green-tea production, where, however, the industry has greatly declined. Known to the trade as 'hill' or 'high-district' tea. See *moyune* ★*tea.*—**Tablet tea.** See *brick-tea.*—**Tea plant-bug.** See ★*plant-bug.*—**Tea-seed oil.** Same as *tea-oil.*

tea-ball (tē'bâl), *n.* A perforated ball, usually of silver, in which tea-leaves are placed to be immersed in boiling water, in preparing tea.

tea-biscuit (tē'bis″kit), *n.* See *biscuit,* 2.

tea-blight (tē'blīt), *n.* Any one of several Oriental heteropterous insects of the genus *Helopeltis,* as *H. theivora, H. bradyi, H. romundei,* and *H. antonii.*

tea-broom (tē'bröm), *n.* Same as ★*manuka.*

tea-cup, *n.*—**A tempest in a tea-cup.** Same as *a tempest in a tea-pot.*

tea-drier (tē'drī″ėr), *n.* An apparatus for extracting the moisture from tea-leaves or 'firing' them in the process of manufacture.

tea-dust (tē'dust), *n.* Finely comminuted tea as an incident of manufacture. See ★*tea-fannings.*

tea-fannings (tē'fan″ingz), *n. pl.* Tea in small scraps coarser than tea-dust but often included in that grade.

tea-hill (tē'hil), *n.* A hill on which tea grows or is growing.

> At I Bang there are three *tea-hills,* and from six to eight qualities of tea to each hill.
> *Geog. Jour.* (R. G. S.), XV. 489.

teaism (tē'izm), *n.* Same as *theism*^{2}.

> All suggests that excessive *teaism,* coffeeism, etc., predilection for tidbits, condiments, and desserts, to the prejudice of appetite for plain, wholesome nutritives, and all the special dislikes for standard foods now so common, if not themselves signs of arrest, at least jeopard the highest maturation of powers.
> *G. S. Hall,* Adolescence, II. 14.

Tea-kettle policy. See ★*policy*^{1}.

Tealby beds. See ★*bed*^{1}.

teallite (tē'līt), *n.* [Named after Dr. J. J. Harris *Teall,* director-general of the Geological Survey of Great Britain and Ireland.] A sulphostannate of lead ($PbSnS_2$) occurring in blackish-gray, inelastic, flexible folia, in Bolivia.

teamland (tēm'land), *n.* Same as *plow-land.* *N. and Q.,* 10th ser., I. 354.

team-man (tēm'mạn), *n.* A teamster. [Eng.]

> E—— D—— 17, *teamman,* was charged with taking twenty-seven partridge eggs out of nests on land.
> *The Field,* June 1, 1901, p. 761.

team-play (tēm'plā), *n.* In *foot-ball, basket-ball, hockey,* and similar sports, the art or practice of mutual assistance by members of one side.

tean^2, *n.* See *teen*^{1}.

Younger than spring, without the faintest trace
  Of disappointment, weariness, or *tean*
Upon the childlike earnestness and grace
  Of the waiting face.

W. V. Moody, Poems, p. 98.

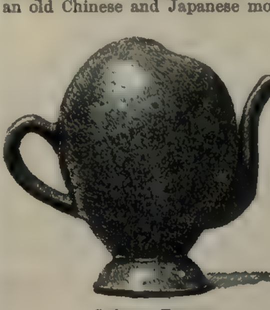
tea-party, *n.* **2.** Any disquieting occurrence or happening. [Colloq.]

> "No, my lad, but we've got a precious heap of disturbing to do on our own account before we've squared up for this *tea-party* [an attack by natives in Africa]. I'm going to drop down stream to somewhere quiet where we can fill up with wood."
> *Cutcliffe Hyne,* A Master of Fortune, iii.

3. Something easy to do or accomplish. [Colloq.]

> All the croquet players—except Mabel, who was winning—converged on Chatteris with cries of welcome. Mabel remained in the midst of what I understand is called a *tea-party,* loudly demanding that they should see her "play it out." *H. G. Wells,* The Sea Lady, v.

tea-pot, *n.*—**Cadogan tea-pot,** a tea-pot copied from an old Chinese and Japanese model, said to have been introduced into England by the Hon. Mrs. Cadogan, and extensively reproduced at Swinton in the latter part of the eighteenth century. It is almost egg-shape, somewhat flattened at the sides, having a closed top and no lid. A spiral tube passes through an opening at the base and extends to within half an inch of the top. The pot could be filled only by inverting it, and when reversed the contents could be emptied only through the spout.—**Tea-pot tail,** the tail of a setter when carried in a drooping manner like that of a collie: probably so styled as suggesting the handle of a tea-pot.



Cadogan Tea-pot.
(In the Pennsylvania Museum, Philadelphia.)

tear^2, *n.* **3.** (*c*) One of the masses of the gum resin which exude from *Balsamea Myrrha.* They are semi-transparent and reddish-brown, and range in size from small grains to that of an egg.

5. *pl.* The gum-disease of citrous trees; psorosis. [Colloq., Florida.]

tear-bottle (tēr'bot″l), *n.* The popular name for small antique glass bottles most of which were probably used to contain ointment. See *lacrymatory.*

tear-drop, *n.* **2.** A small air-cavity blown into glass.

> Immediately under the bowl at the top of the stem is an air cavity, known as a *tear-drop* . . . a frequent form of decoration. *C. H. Wylde,* in Burlington Mag., IV. 141.

tear-fault (tãr'fâlt), *n.* A differential or compound fault produced, during folding, by the sliding upon one another of several adjacent beds or strata. Each component movement is called a *lag-fault.* *J. E. Marr,* in Quar. Jour. Geol. Soc., 1906, p. lxxvi.

tear-grass (tēr'gràs), *n.* Same as *Job's-tears.*

teart (tē'ärt), *a.* A dialectal form of *tart*^{1}; as applied to land, sour.

> This disease, known as parasitic enteritis, is found to be persistently associated with certain pastures (called "*teart*" lands in the West of England) upon heavy moisture-retaining soils, the larvæ, in fact, living in the damp earth of these pastures, in mud, etc., and being thence transferred to the stomachs of their definitive hosts.
> *Lancet,* June 6, 1903, p. 1590.

tea-sifter (tē'sif″tėr), *n.* **1.** One who or that which separates the leaves of tea in accordance with their size, by passing them through sieves.—**2.** A sieve or strainer used in sifting dry tea-leaves or sorting them according to size.

tea-sorter (tē'sôr″tėr), *n.* An inspector of tea, by whom the varying qualities of tea-leaves are separated into groups and the proportion of the various sorts in any consignment is determined.

tea-tasting (tē'tās″ting), *n.* The occupation of a tea-taster. It involves fine discrimination of flavors, which are favorably described as 'aromatic,' 'fragrant,' 'fruity,' 'malty,' 'mealy,' 'mellow,' 'nosey' (fragrant), 'nutty,' 'piquant,' 'pungent,' 'toasty'; and unfavorably (at least in excess) as 'baked,' 'brassy,' 'burnt,' 'coarse,' 'earthy,' 'fishy,' 'grassy,' 'grippy,' 'herby,' 'metallic,' 'mousey,' 'raw,' 'smoky,' 'soapy,' 'sour,' 'tarry,' 'weedy,' 'wild,' 'woody.' Textures are described as 'crapy,' 'crispy,' 'satiny,' 'silky,' 'velvety,' etc.

tea-tree, *n.*—**Coast tea-tree,** *Leptospermum lævigatum,* a shrub common along the seacoast of Victoria and New South Wales, useful for arresting the progress of drifting sand. Also called *sandstay.*—**Mountain tea-tree,** *Pentagonaster peduncularis* (*Kunzea peduncularis* of F. von Mueller), a small tree of Victoria and New South Wales, the wood of which is used by the aborigines for their spears, waddies, and boomerangs.

tecalli (tā-kä'lẹ̄), *n.* [Nahuatl.] A very handsome banded alabaster, opaque, translucent, and sometimes transparent, found in the state of Puebla in Mexico, and largely worked into artistic objects for sale and export.

tech. An abbreviation (*a*) of *technical;* (*b*) of *technically;* (*c*) of *technology.*

Technical rotation. See ★*rotation.*

technocausis (tek-nọ̄-kâ'sis), *n.* [Gr. τέχνη, art, + καῦσις, a burning.] The use of the actual cautery as distinguished from that of chemical caustics.

technogeography (tek″nọ̄-jẹ̄-og'rạ-fi), *n.* [Gr. τέχνη, art, + γεωγραφία, geography.] The study of the effect of geographical environment on the technic arts of man.

technographer (tek-nog'rạ-fėr), *n.* One who is versed in technography or has a thorough and scientific knowledge of the details of an art, invention, etc.

> There are two ways of looking at human inventions, the one ethnographic, the other technographic. The ethnographer makes his home among tribesmen and tells the story of their industrial lives; the *technographer* pursues a single art over time and place until he knows it thoroughly.
> *Amer. Anthropologist,* Jan.–March, 1900, p. 164.

technographic (tek-nọ̄-graf'ik), *a.* [*technography* + *-ic.*] Of or pertaining to technography; having a systematic knowledge of the terms and details of an art or invention. See the extract under ★*technographer.*

technography (tek-nog'rạ-fi), *n.* [Gr. τέχνη, art, + -γραφια, < γράφειν, write.] The description and study of arts and industries in their ethnic distribution and historic development. *Smithsonian Rep.* (Nat. Mus.), 1899, p. 526.

technol. An abbreviation (*a*) of *technological;* (*b*) of *technology.*

technolithic (tek-nọ̄-lith'ik), *a.* [Gr. τέχνη, art, + λίθος, stone, + *-ic.*] In *anthrop.,* denoting stone implements shaped by man in accordance with definite designs. See ★*protolithic.* *J. W. Powell,* in An. Rep. Bur. Amer. Ethnol., 1895–96, p. lxvi.

> The use of objects without designed modification, like the Seri stone implements, has been studied by Mr. McGee, and he calls such unmodified implements protolithic, while the modified stone implements he calls *technolithic.* *An. Rep. Bur. Amer. Ethnol.,* 1897–98, p. xxi.

technologue (tek'nọ̄-log), *n.* Same as *technologist.*

> After defining the "*technologue*" as an intermediary between the savant and the mechanic, translating the discoveries of the former into the uses of the latter, Prof. Bovey tries to ascertain the controlling ideas common to all technical experts. *Nature,* April 6, 1905, p. 548.

tecolote (tā-kō-lō'tạ̄), *n.* [Nahuatl *tecolotl,* an owl.] A Nahuatl name for the owl, used in the southwestern United States, Mexico, parts of Central America, and other Spanish-speaking regions.

tecoretin, *n.* See ★*tekoretin.*

Tectobranchi (tek-tọ̄-brang'kī), *n. pl.* [NL. See *tectibranchiate.*] Applied by Gadow to those fishes in which the gills are covered by a bony flap or operculum: practically synonymous with *Teleostomi.*

tectocephaly (tek-tọ̄-sef'ạ-li), *n.* [L. *tectum,* roof, + Gr. κεφαλή, head, + *-y*^{3}.] The quality or condition of being tectocephalic. See *scaphocephaly.*

tectochrysin (tek-tọ̄-kris'in), *n.* [Gr. τηκτός, melted, molten, + χρυσός, gold, + *-in*^{2}.] A sulphur-colored compound, $C_{15}H_9O_3OCH_3$, prepared by the action of methyl iodide on chrysin and found in poplar-buds. It forms thick crystals and melts at 164° C. Also called *chrysin methyl ether* or *1,3-methoxyhydroxyflavone.*

tectonic, *a.* **2.** In *geol.,* relating to structure; structural: as, *tectonic* geology (structural geology); *tectonic* valleys, valleys due to geologic structure rather than to erosion.

> The *tectonic* line of the Andes is then apparently bent suddenly southward and reappears in Graham Land. It is probably continued round the southern Pacific, meeting the known end of the New Zealand line near Mounts Erebus and Terror. *Pop. Sci. Mo.,* Jan., 1902, p. 216.

> He lays particular stress on the violent earthquake which agitated the whole of Nicaragua in April, 1898, as to which he quotes the opinion of Dr. Sapper that its character was purely *tectonic,* as against the view of Major Dutton, that earthquakes in this region are mere incidents of the volcanic activity.
> *Geog. Jour.* (R. G. S.), XV. 648.

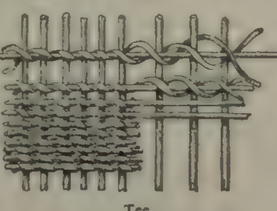
Tectospondyli (tek-tọ̄-spon'di-lī), *n. pl.* [NL., < Gr. τέκτων, a builder, + σπόνδυλος, vertebra.] A suborder of cyclospondylous sharks, found in most warm seas, and having characters between those of the sharks and those of the rays.

tectum (tek'tum), *n.*; pl. *tecta* (-tä̤). [L. *tectum*, a roof.] Same as *tectorium*. *Baldwin*, Dict. of Philos. and Psychol., I. 142.

tee^4, *n.* 2. (*d*) In *lumbering*, a strip of iron about 6 inches long, with a hole in the center, to which a short chain is attached: passed through a hole in a gate-plank, turned crosswise, and so used to hold the plank when tripped in a splash-dam.

tee^4 (tē), *v. t.*; pret. and pp. *teed*, ppr. *teeing*. [Also *T*; *tee*^{4}, *n.*] In *naval tactics*, to manœuver (a fleet) so as to place it across the head of the enemy's column of vessels, thus enabling the guns to be concentrated on the leading vessels of the enemy, who cannot reply effectively.

tee^6 (tē), *n.* [Pomo (Indian of California).] A method of making baskets applied by some California Indians; a twined lattice weave consisting of four elements—an upright warp of rods, a horizontal warp crossing these at right angles, and a regular plain twined weaving of two elements, holding the warps firmly together. The horizontal warp is on the outside of the basket.



Tee.
(Rep. U. S. Nat. Museum, 1902.)

> The lattice twined weaving, so far as the collections of the United States National Museum show, is confined to the Pomo Indians, of the Kulanapan family, residing on Russian river, California. Dr. Hudson calls this technic *tee*. This is a short and convenient word and may be used for a specific name.
> *Amer. Anthropologist*, Jan.–March, 1901, p. 117.

tee-bar, *n.* Same as *T-bar*.

teeing-ground (tē'ing-ground), *n.* In *golf*, a space marked out within the limits of which the ball must be teed.

tee-shot (tē'shot), *n.* In *golf*, any stroke played from a teeing-ground. *W. Park, Jr.*, Game of Golf, p. 7.

Teeswater cattle. The original shorthorn cattle which were the result of experiments in breeding carried on by the Colling Brothers in the Tees district, England.

> These *Durham*, *Teeswater*, or *Shorthorn* cattle, as they were variously called, were soon eagerly sought after.
> *Encyc. Brit.*, I. 387.

teet (tēt), *n.* [Appar. another spelling and sense of *teat*.] In *bee-keeping*, same as *pipe*^{1}, 5.

teeter, *v. i.* Hence—2. To move about foolishly and aimlessly.

> A quorum of the committee is away *teeterin'* about in their own affairs. *A. H. Lewis*, Wolfville Nights, xvii.

teetotum^2 (tē-tō'tum), *n.* [Made from *teetotal*.] See the extract.

> Even the newest form of peoples' café, the *Tee-to-tums*, are conducted so that expenses are covered. The unique institutions . . . combine the features of a coffee-house, supplying a variety of good food and non-alcoholic drinks, with those of a club, having numerous facilities for improvement and recreation. The patrons of each *Tee-to-tum* are organized by skilled social workers, who direct their amusements.
> *R. A. Woods*, in Scribner's Mag., April, 1892, p. 423.

teetsook (tēt'sök), *n.* [Amer. Ind.] A saddle-bag. [Western U. S.]

tegmen, *n.* 6. In crinoids, same as ★*disk*, 5 (*e*).—**Tegmen antri**, a thin plate of bone covering over the mastoid cells.

tegmentum, *n.* 3. The outer porous layer of the shell of polyplacophorous mollusks or chitons, which covers the inner porcelanous articulamentum.—**Tegmentum tympani.** Same as *tegmen tympani*. See *tegmen*, 4.

tegumental, *a.*—**Tegumental gland**, a gland lying in, or formed by modification of, the integument, as are the poison-glands of the catfish *Malapterurus*.

Teichmann's crystals. See ★*crystal*.

teichopsia (tī-kop'si-ä̤), *n.* [NL., < Gr. τεῖχος, a wall, + ὄψις, appearance.] The appearance as of zigzag lines before the eyes, a subjective visual disturbance occurring in migraine and other morbid states.

Tejon series. See ★*series*.

tekkana (te-kä'nä̤), *n.* [Aram. and Heb., < *tākkan*, make straight, mend.] A rabbinical ordinance, remedy, or regulation adding or abrogating certain laws for the religious well-being of the community.

tekoretin, tecoretin (te-kor'e-tin), *n.* [Gr. τήκειν, melt, + ῥητίνη, resin.] A fossil or semi-fossil resin, extracted by solution in alcohol from pine-wood found in marshes near Holtegaard in Denmark. It is colorless, crystallizable, and apparently identical with or closely allied to fichtelite.

tel^2, *v.* and *n.* A simplified spelling of *tell*^{1}.

tel. An abbreviation (*a*) of *telegram*; (*b*) of *telegraph*; (*c*) of *telegraphic*.

telæscin (te-les'in), *n.* A glucoside, $C_{18}H_{30}O_7$, prepared by the hydrolysis of the glucoside escinic acid.

telangioma (tel-an-ji-ō'mä̤), *n.*; pl. *telangiomata* (-ma̤-tä̤). [NL., < Gr. τέλος, end (?), + ἀγγεῖον, vessel, + *-oma*.] A tumor formed of a mass of dilated arterioles and capillaries.

telangiosis (tel-an-ji-ō'sis), *n.* [NL., < Gr. τέλος, end (?), + ἀγγεῖον, vessel, + *-osis*.] Any disease of the minute blood-vessels.

telautogram (tel-â'tọ-gram), *n.* [Gr. τῆλε, afar, + αὐτός, self, + γράμμα, a writing.] The facsimile record of writing or drawing produced by the receiving apparatus of the telautograph.

telautography (tel-â-tog'ra̤-fi), *n.* [*telautograph* + *-y*^{3}.] The process of transmitting writing or drawings in facsimile; the use of the telautograph.

> *Telautography.*—When handwriting or drawings are to be transmitted, they are executed with non-conducting ink on metal foil, which is laid around an insulating cylinder of the same dimensions as the receiving cylinder.
> *Elect. World and Engin.*, July 9, 1904, p. 61.

Telchines (tel'ki-nēz), *n. pl.* [Gr. pl. of Τελχίν.] In *Gr. myth.*, primitive workers in metal and magicians who were supposed to have been the first inhabitants of Crete and Rhodes.

> Strange demoniacal and superhuman beings, the Kyclops, the Dactyli, and *Telchines*.
> *L. M. Mitchell*, Hist. of Ancient Sculpture, p. 140.

teleautograph, *n.* Same as *telautograph*.

telecentric (tel-ẹ-sen'trik), *a.* [Gr. τῆλε, afar, + κέντρον, center, + *-ic*.] In *optics*, having its exit-pupil or entrance-pupil at an infinite distance: said of a lens system of which the aperture, or stop, is at a principal focus. *P. Drude*, Theory of Optics, p. 75.

telechirograph (tel-ẹ-kī'rọ-gràf), *n.* [Gr. τῆλε, afar, + χείρ, hand, + γράφειν, write.] A form of autographic telegraph, the photographic receiving instrument of which records messages in the handwriting of the sender. *Elect. World and Engin.*, June 20, 1903, p. 1055.

teleclexis (tel-e-klek'sis), *n.* [Gr. τέλος, end, completion, + ἔκλεξις, selection.] Artificial or intentional, as distinguished from unconscious or natural, selection. *L. F. Ward*, Pure Sociol., p. 361.

telecryptograph (tel-ẹ-krip'tọ-gràf), *n.* [Gr. τῆλε, afar, + κρυπτός, secret, + γράφειν, write.] 1. A form of printing telegraph, invented by Malcotti for use on private lines or on ordinary telephone lines, in which the sending device is operated by pressing lettered keys like those of the type-writer and the message at the receiving station is automatically recorded in printed characters. As the name implies, the device is intended further to permit of secret communication between stations.—2. A high-speed automatic printing telegraph brought out by Siemens and Halske in Berlin.

telectroscope (te-lek'trọ-skōp), *n.* [Gr. τῆλε, afar, + ἤλεκτρον (for 'electricity') + σκοπεῖν, view.] An electrical device proposed and experimented upon by Szczepanik for the production at a distant station of visible images of objects located at the transmitting station. See ★*telelectroscope*. *Sci. Amer. Sup.*, July 30, 1898, p. 18889.

teleëlectroscopy (tel"ẹ-ē-lek-tros'kọ-pi), *n.* [Gr. τῆλε, afar, + ἤλεκτρον (for 'electricity') + -σκοπια, < σκοπεῖν, view.] A seeing or photographing at a distance. A selenium cell, which conducts the current best when exposed to light, is connected by one or more wires with suitable apparatus for recording variations in intensity. Also *telephotoscopy*. *Wall*, Dict. of Photog., p. 233.

telefocal (tel"ẹ-fō'kal), *a.* [Gr. τῆλε, afar, + E. *focal*.] Relating to the focusing of distant objects: applied to lenses. [Rare.]

> As to the "*tele-focal*" powers of the new lens (if I may use the term), a comparison of the two views, marked A and B, will give some idea of its scope.
> *Jour. Franklin Inst.*, Sept., 1893, p. 216.

telefone, telefonic. Amended spellings of *telephone, telephonic*.

teleg. An abbreviation (*a*) of *telegram*; (*b*) of *telegraph*; (*c*) of *telegraphic*; (*d*) of *telegraphy*.

telegonic (tel-ẹ-gon'ik), *a.* Same as ★*telegonous*.

telegonous (tẹ-leg'ọ-nus), *a.* [Gr. τῆλε, afar, + -γενης, -producing, + *-ous*.] Pertaining to or illustrative of, or supposed to be due to, telegony.

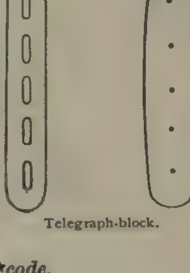
telegony (tẹ-leg'ọ-ni), *n.* [NL. **telegonia*, < Gr. τηλέγονος, born far away (from one's father or fatherland) (used as a person's name), < τῆλε, afar, + -γονος, -born.] In *biol.*, the supposed influence of a first sire upon the progeny subsequently borne by the mother to other sires. Most breeders are believers in telegony, although careful experiments have failed to show any scientific basis for their opinion.

> At present the scientific evidence is so distinctly unfavourable to belief in the occurrence of *telegony*, that to discuss suggested explanations or criticisms seems unnecessary. *Encyc. Brit.*, XXXII. 215.

telegraf, telegrafic, telegrafy. Amended spellings of *telegraph, telegraphic, telegraphy*.

telegraph, *n.* 3. In *cricket*, the score-board upon which numbers indicating the progress of the game are displayed. [Colloq.]—4. In *ship-building*, an apparatus for transmitting and receiving orders mechanically. An *engine-telegraph* consists of a dial on a stand on the bridge or pilot-house having a handle with a pointer attached which, by movement of the handle, is pointed to the desired order on the dial, as 'ahead full speed,' 'stop,' 'astern half speed,' etc. By a line of wires, a pointer on a similar dial in the engine-room is made to point to the same order and ring a gong. The engineer then manipulates a handle with its pointer to point to the same order on the engine-room dial, and by another line of wires a pointer on the dial on the bridge is moved, and if the order has been correctly received, it points to the same order as the pointer on the handle of the bridge-dial. A similar apparatus fitted for giving orders for steering from the bridge to the steering-engine room, or other steering-station, is called a *steering-telegraph*. 5. A chute or trough, usually of sheet-steel, by which coal or ore or refuse is carried by gravity from screens or other dressing machinery to the desired point of disposal. *Coal and Metal Miners' Pocket-book*. [Eng.]—**Postal telegraph**, in Great Britain and her dependencies, a telegraph service carried on by the government through the general post-office. A telegram posted with an ordinary post-office stamp upon it is taken, at the next collection, to the nearest telegraph-office. *Encyc. Brit.*, XIX. 577.—**Rowland's telegraph**, a multiplex printing telegraph with keyboard transmitters and automatic type-printing receivers invented by H. A. Rowland. In this system the so-called sine-wave method of transmitting is used and by means of a four-part commutator four messages are simultaneously sent over a single wire.—**Space-telegraph**, a wireless telegraph. See *wireless* ★*telegraphy*.—**Steering-telegraph.** See ★*telegraph*, 4.—**Type-printing telegraph**, an apparatus for telegraphing in which the message at the receiving station is automatically delivered in printed characters. *Sci. Amer.*, Nov. 7, 1903, p. 325.—**Wireless telegraph.** See ★*wireless telegraphy*.

telegraph-block (tel'ẹ-gràf-blok"), *n.* A number of small sheaves in a narrow, long shell, used for the purpose of making signals, so that several flags may be hoisted at one time.



Telegraph-block.

telegraphese (tel"ẹ-gràf-ēs'), *n.* [*telegraph* + *-ese*.] A very terse style, such as that in which telegrams are commonly written; a style marked by very short sentences. [Rare.]

> We rather relish the leisurely semicolons and sentences of the eighteenth century after being confronted with the "*telegraphese*" of many a modern stylist.
> *Athenæum*, Oct. 7, 1905, p. 469.

Telegraphic code. See ★*code*.

telegraphone (tẹ-leg'ra̤-fōn), *n.* [Gr. τῆλε, afar, + γράφειν, write, + φωνή, sound.] The magnetic phonograph, telephonograph, or magneto-phonograph of Poulsen. See *telephonograph*. *Nature*, Aug. 16, 1900, p. 371.

> The "*telegraphone*' is a "recording telephone," that is to say, a telephone that records and reproduces messages spoken into it.
> *Sci. Amer.*, April 25, 1903, p. 317.

telegraph-spoon (tel'ẹ-gràf-spön"), *n.* See ★*post-spoon*.

telegraphy, *n.*—**Electric space-telegraphy**, a name proposed by Lodge for wireless ★telegraphy.

> The general principles of *electric space-telegraphy*—or wireless telegraphy as it seems to wish to be called.
> *Sir Oliver Lodge*, in Jour. Brit. Inst. Elect. Engin., [1898, p. 799.

Electric-wave telegraphy. Same as *wireless ★telegraphy.*—**Induction telegraphy,** telegraphy by means of induced currents in parallel circuits, as in the systems for communicating with moving trains, where a line-wire is installed parallel to the track and the inductive effect of fluctuating currents in this wire operates a receiving apparatus on the train, and vice versa.—**Magnetic space-telegraphy,** a type of wireless telegraphy, devised by Lodge, in which the transmitting apparatus is a condenser in an oscillatory circuit of low frequency consisting of a horizontal coil of very large area. The receiver is a similar coil and condenser of like frequency with a telephone in the circuit.—**Ray telegraphy,** a system of wireless telegraphy in which short electromagnetic waves are focused upon a distant point by means of lenses having a high dielectric constant. *Sci. Amer. Sup.*, May 9, 1903, p. 22866.—**Space-telegraphy.** See *electric space-★telegraphy.*—**Spark telegraphy,** in *elect.*, a name sometimes used for *wireless ★telegraphy* (which see).—**Spherical telegraphy,** telegraphy by means of spherical waves through the free ether; wireless telegraphy.—**Weather telegraphy,** the systematic reporting by telegraph, and usually by cipher despatches, of weather conditions over any considerable region of country. *Nature*, March 31, 1904, p. 518.—**Wireless telegraphy,** the transmission of signals between points not connected by electrical conductors; specifically, the transmission of signals through space by means of electric waves; a system of telegraphy based upon the researches of Heinrich Hertz, who demonstrated that the oscillatory discharge of an electric circuit acting as a transmitter produces electric waves which are capable of setting up an oscillatory discharge in a similar receiving circuit. A method of utilizing these waves for the transmission of signals was devised by Guglielmo Marconi. His experiments were first made in Bologna in 1895, and they were continued in England from July, 1896, under the auspices of the British Postoffice. In March, 1899, communication was established across the English Channel between Dover, England, and Wimereux, France, a distance of 32 miles, the rate of transmission being about 20 words a minute. Signals were first successfully sent across the Atlantic ocean from Poldhu, Cornwall, to St. Johns, Newfoundland, on Dec. 12, 1901. In the meantime numerous other inventors and electricians entered the field, many of whom have contributed greatly to the development of the art. An important feature of most systems of wireless telegraphy is the use, both at the transmitting- and receiving-stations of aerial conductors (commonly called antennæ) supported by a mast or tower. On shipboard the aërial conductors usually consist of a group of parallel wires strung horizontally between the top masts and thence down to a deckhouse containing the sending- and receiving-apparatus. The distance to which signals can be transmitted depends upon the amount of energy radiated by the antennæ in the form of electrical oscillations of suitable wave-length (from 100 to 5000 meters). The transmitting-device, of which there are many modifications, usually consists of a power-circuit and an oscillatory circuit. The power-circuit contains an alternater, *a* (Fig. 1), sometimes of 50 kilowatts or more, and the primary coil, *p*, of a step-up transformer. The oscillatory circuit consists of the secondary coil, *s*, of this transformer, a condenser, *c*, and spark-gap, *g*, in multiple, and the aërial conductors, *o*. When the capacity and the inductance, *l*, of this circuit are properly adjusted, powerful oscillations of high frequency are set up and electric waves are sent out through space from the conductors. At the receiving-station electrical oscillations are set up by these waves in a similar set of aërial conductors, and although they are of very feeble intensity compared with those at the transmitting-station, they suffice to operate some one of the sensitive forms of receiving-apparatus employed. The receiver originally used by Marconi was the *coherer*, an instrument devised by Branly (1890) and based on the discovery by Munk (1835) that a mass of filings or other small metallic bodies so loosely packed as to be non-conducting became conducting under the action of the discharge from a Leyden jar. The coherer has since been almost entirely replaced by numerous more manageable devices, such as the various *electrolytic detectors* of Neugschwender, Aschkinass, Schlömilch, De Forest, Fessenden, Vreeland, and Brown; the *magnetic detectors* of Rutherford and Marconi; the *microphone* of Hughes; the *barretter* of Fessenden; the *audion* of De Forest; the *thermo-electric detector* of Austin; and the *carborundum detector* of Brandes. The detector is sometimes directly in circuit between the antennæ and the earth, as in Fig. 2, in which *o* is the set of antennæ, *d* is the detector, *e* is the earth, *b* a battery, and *t* a telephone; sometimes in the secondary circuit of a transformer the primary coil of which is in the circuit between the antennæ and the earth. The detector, whatever its form, serves as a sort of delicate relay to alter the current flow in a local circuit containing a battery and some convenient form of telegraphic receiving-instrument or a telephone. The electric waves from the antennæ of a station for wireless telegraphy are not all of the same frequency, but have a range of an octave or more. The intensity is greatest for a certain frequency, that of the so-called principal wave of the oscillatory circuit, and diminishes rapidly for longer or shorter waves. If, for example, the principal wave has a length of 600 meters the accompanying waves of 500 meters and 700 meters may have only one tenth of the intensity of the principal wave. By adjusting the frequency to which the receiving-circuit best responds to agreement with that of the transmitting-circuit,—a process termed *syntony*, which is analogous to the tuning of musical instruments,—the distance at which signals may be heard is greatly increased, while other instruments at nearer stations or on shipboard in the neighborhood of the sending-station will, if tuned to other frequencies, be comparatively undisturbed.

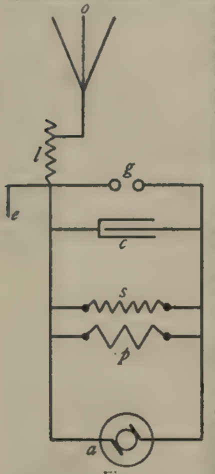


Fig. 1.

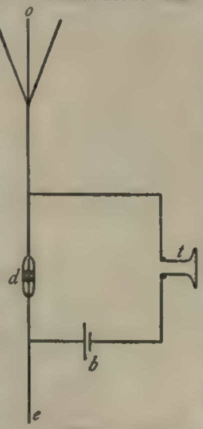

Fig. 2.

teleiochrysalis (te-lī-ọ-kris'ạ-lis), *n.* [NL., < Gr. τέλειος, complete, + χρυσαλλίς, chrysalis.] The hypopal stage of a trombidiid mite. Same as *hypopus*.

teleiophan (te-lī'ọ-fan), *n.* [Gr. τέλειος, complete, + -φανης, < φαίνεσθαι, appear.] Same as ★*teleiochrysalis*.

telekin (tel'ẹ-kin), *n.* [F. *telekin*, < Gr. τῆλε, afar, + κίν(ησις), motion.] A device for the electrical control of machinery from a distance; a telelectric regulator.

> The *telekin* is the name applied . . . to an apparatus by which the movements of a machine may be regulated from a distance, either by means of an ordinary electric telegraph or by electric waves impelled through the air without the aid of wires. The inventor distinguishes between a simple *telekin*, wherein only a single motion is considered, and a multiple *telekin*, which permits of a complexity of motions.
> *Sci. Amer. Sup.*, May 6, 1905, p. 24539.

telelectric (tel-ẹ-lek'trik), *a.* [Gr. τῆλε, afar, + E. *electric*.] Noting any device for producing mechanical motions or effects at a distance by electrical means: as, an organ with a *telelectric* attachment by means of which it may be played from a keyboard at a distance from the instrument.

> The advantages of an electrically equipped household were strikingly set forth in the exhibition of a model apartment. . . . In the parlor . . . was a piano automatically played by a *Tel-Electric* player, and, whenever desired, orchestral music furnished by the Telharmonic system could be had by closing a switch.
> *Sci. Amer.*, Oct. 12, 1907, p. 255.

telelectroscope (tel-ẹ-lek'trọ-skōp), *n.* [Gr. τῆλε, afar, + ἤλεκτρον (for 'electric') + σκοπεῖν, view.] A name proposed for electrical devices for the seeing of distant objects, in which radiation from the object at the transmitting-station is converted into electrical action of some sort, which in turn produces at the receiving-station a visible semblance of the object. No really practical scheme for these transformations has as yet been perfected although numerous methods have been proposed and some have been tried with partial success. See ★*telectroscope*.

telemetacarpal (tel-ẹ-met-ạ-kär'pạl), *a.* [Gr. τῆλε, afar, + E. *metacarpal*.] Possessing vestiges only of the distal portions of the first and fifth metacarpals: applied to certain deer: contrasted with ★*plesiometacarpal*. See ★*Telemetacarpi*.

> The fact of the plesiometacarpal and *telemetacarpal* limb characters so closely corresponding with the distribution of the Cervidæ in the Old and New Worlds would, in itself, have convinced me of their fundamental importance. *Proc. Zool. Soc. London*, 1878, p. 887.

Telemetacarpi (tel-ẹ-met-ạ-kär'pī), *n. pl.* [NL., < Gr. τῆλε, afar (distal), + NL. *metacarpi*, pl. of *metacarpus*.] A division of the deer family in which the distal portions of the first and fifth metacarpals are present, but there are no vestiges of the proximal ends: contrasted with ★*Plesiometacarpi*.

telemetrical (tel-ẹ-met'ri-kạl), *a.* [*telemeter* (*-metr-*) + *-ic* + *-al*¹.] Of, pertaining to, or produced by means of, the telemeter; telemetric.

> The peculiar long-range *telemetrical* measurement of each side of the polygonal perimeter.
> *Geog. Jour.* (R. G. S.), XVI. 330.

telemetrograph (tel-ẹ-met'rọ-gråf), *n.* [Gr. τῆλε, afar, + μέτρον, measure, + γράφειν, write.] An instrument for drawing plans, measuring distances, etc.

telemicroscope (tel-ẹ-mī'krọ-skōp), *n.* [Gr. τῆλε, afar, + E. *microscope*.] A magnifying instrument, invented by the Abbé Deschamps, for the observation of small objects, such as insects, from a distance. Its optical system consists of an objective composed of two achromatic lenses that are separated by a distance less than the principal focal distance of the most convergent lens, and therefore act as a single lens, and of a Dollond ocular with four plano-convex lenses. The eye-glass is made as convergent as possible to increase magnification and field without diminishing the definition.

telencephalon (tel-en-sef'ạ-lon), *n.* [Gr. τέλος, end, + ἐγκέφαλος, brain.] Same as *prosencephalon*.

telenegative (tel-ẹ-neg'ạ-tiv), *a.* [Gr. τῆλε, afar, + E. *negative*.] See the extract and *telephotographic* ★*lens*.

> As the human eye, in order to see better from a distance, uses telescopes, any ordinary photographic objective can be made to produce enlarged views of an object by the addition of a magnifying lens. This lens, called "*tele-negative*," need not be connected permanently with the ordinary objective (which is called "tele-positive"), a loose connection by means of a removable short tube being quite sufficient. Then the objective can be used at will both in connection with ordinary views and with telephotographs.
> *Sci. Amer. Sup.*, Sept. 30, 1905, p. 24861.

teleobjective (tel″ẹ-ob-jek'tiv), *a.* and *n.* [Gr. τῆλε, afar, + E. *objective*.] **I.** *a.* In *optics*, having an object-glass adapted to the photography of distant objects: as, a *teleobjective* camera. *P. Drude*, Theory of Optics, p. 94.

II. *n.* In *optics*, an objective for the photography of distant objects. It consists of a combination of a convergent with a divergent system so arranged as to obtain great focal length in a compact instrument.

teleodesmaceous (tel″ẹ-ọ-des-mā'shius), *a.* Pertaining to or having the characters of the *Teleodesmacea*.

teleodont (tel'ẹ-ọ-dont), *a.* [Gr. τέλος (τελεο-), completion, + ὀδούς (ὀδοντ-), tooth.] 1. Having mandibles of the highest development: said of certain stag-beetles.—**2.** Of or pertaining to the *Teleodonta*.

Teleodonta (tel″ẹ-ọ-don'tạ̈), *n. pl.* [NL., < Gr. τέλος (τελεο-), completion, + ὀδούς (ὀδοντ-), tooth.] In Dall's classification, a group of teleodesmacean pelecypod *Mollusca* presenting the most highly perfected type of hinge, comprising the superfamilies *Veneracea*, *Tellinacea*, *Solenacea*, *Mactracea*, *Myacea*, and *Adesmacea*.

teleogyrous (tel-ẹ-ọ-jī'rus), *a.* [Gr. τέλος (τελεο-), end, + γῦρος, circle, gyre, + *-ous*.] In *ornith.*, noting the fact or condition of having the free ends of the intestinal loops coiled into spirals.

> Lastly, the distal portion of any loop originally straight may be coiled up into a spiral, while the rest of the loop remains straight. This feature may be termed *teleogyrous*. *H. Gadow*, in Newton, Dict. of Birds, p. 144.

Teleological proof. See ★*proof*.

teleomitosis (tel″ẹ-ọ-mī-tō'sis), *n.* [Gr. τέλος (τελεο-), end, + NL. *mitosis*.] Complete or typical mitosis, or karyokinesis.

Teleoplacophora (tel″ẹ-ọ-plạ-kof'ọ-rạ̈), *n. pl.* [NL., < Gr. τέλος (τελεο-), completion, + NL. *Placophora*.] A suborder of polyplacophoran *Mollusca* characterized by the presence of pectinated teeth on the insertion-plates of the valves. It includes the genus *Chiton* and its allies of Tertiary and recent age.

teleoptile (tel'ẹ-op-til), *n.* [Gr. τέλεος, complete, + πτίλον, down (feathers).] One of the feathers that succeed the first down of a young bird. See ★*neossoptile* and ★*mesoptile*.

> *Teleoptiles*, whether Contour-feathers or Downs, are each originally preceded by a Neossoptile, the base of which is in direct continuity with the tips of the rami of its succeeding final feather.
> *H. Gadow*, in Newton, Dict. of Birds, p. 243.

teleoscope (tel'ẹ-ọ-skōp), *n.* [F. *téléoscope*, < Gr. τῆλε, afar, + σκοπεῖν, view.] An apparatus for vision at a distance by electrical means, proposed by Dussand in 1898, in which the change in the resistance of selenium when subjected to light was to be utilized for transmission. *Sci. Amer. Sup.*, July 2, 1898, p. 18793.

teleosteous (tel-ẹ-os'tẹ-us), *a.* Of or pertaining to the teleost fishes.

Teleotremata (tel″ẹ-ọ-trē'mạ-tạ̈), *n. pl.* See ★*Telotremata*.

telepath (tel′ẹ-path), *v. i.* and *t.* [*telepath*(*y*).] **I.** *intrans.* To communicate with another mind otherwise than through the senses. See *telepathy.* [Rare.]

> Just as the humble peasant, . . . puts herself in spiritual communication with a higher power, so may we not find a way to *telepath* to minds that are attuned to ours?
> *Sci. Amer. Sup.*, May 9, 1903, p. 22863.

II. *trans.* To communicate (a message or thought) to another mind without the intermediation of the senses.

telepath (tel′ẹ̄-path), *n.* [*telepath*(*ist*).] A believer in, or student of, the doctrine of telepathy; a telepathist.

> The book . . . contains . . . a chapter headed "The Spirit Rappers, the *Telepaths* and the Galvanometer."
> *Nature*, Jan. 7, 1904, p. 219.

telepathize (tẹ̄-lep′ạ̈-thīz or tel′ẹ̄-path-īz), *v. i.* and *t.*; pret. and pp. *telepathized*, ppr. *telepathizing.* [*telepath*(*y*) + *-ize.*] **I.** *trans.* To impress on or communicate to another mind by telepathy.

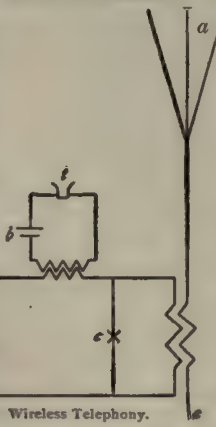
II. *intrans.* To use telepathy.

telephone, *n.*—**Exchange-telephone,** the form of telephone used by operators at the switchboard, as distinguished from the ordinary forms of receiver.—**Long-distance telephone.** (*a*) A telephone transmitter designed with special reference to use between distant stations, as distinguished from the instruments for local service. (*b*) An interurban telephone system.—**Reaction telephone,** a telephone the action of which is enhanced by currents induced in a coil attached to the diaphragm.—**Telephone exchange,** the office of a telephone system, where all the various lines are brought to a central switchboard and communication between subscribers is effected. In the case of automatic systems the term is sometimes applied to the switchboard itself, which is termed an 'automatic exchange.' *Preece*, Telephony, p. 56. **Telephone lock,** a device for the prepayment of telephone calls, in which the hook-switch must be unlocked by the insertion of the proper coin in a slot provided for that purpose, before communication with the central station can be obtained.—**Telephone theory,** a theory of audition, according to which complex vibrations are not analyzed in the cochlea but are translated into correspondingly complex nerve-impulses, just as in a telephone the sound-vibrations are translated by plate and magnet into corresponding electrical movements. *Baldwin*, Dict. of Philos. and Psychol., I. 448.—**Triple telephone,** a form of combined transmitter and receiver fitted to the head of the operator and having two earpieces and a mouthpiece.

Telephonic probe, relay. See ★*probe*, ★*relay*¹.

telephonograph (tel-ẹ̄-fō′nọ̄-gráf), *n.* [Gr. τῆλε, afar, + E. *phonograph.*] An apparatus devised by Valdemar Poulsen, of Copenhagen, for the recording and subsequent reproduction of musical tones or of speech transmitted through a telephone. It differs from other phonographic devices in that the record is made by the local transverse magnetization of a steel tape or wire which passes between two electromagnets placed in the electric circuit of the transmitter. These local regions of magnetization correspond to the mechanical impressions in the recording surface of the ordinary phonograph. When the tape or wire is passed again between the electromagnets in the same direction and at the same speed, it in turn induces currents in the circuit of which the electromagnets form a part and these currents produce movements of the telephonic disk. The sounds uttered by the disk in consequence of the motions are a faithful reproduction of those which actuated the disk in the process of recording and are free from the disturbances due to mechanical contact between the stylus and the indented surface of the cylinder or record-disk of the usual phonographic apparatus. The record, moreover, is free from deterioration by wear and may be utilized for reproduction almost indefinitely. A record may however be completely expunged by demagnetization of the tape or wire, which is then ready for further use. In a later and somewhat modified form the apparatus is known as the *telegraphone.* Also *magneto-phonograph.* *Smithsonian Rep.*, 1901, p. 308.

telephony, *n.*—**Light-telephony,** a system of telephonic transmission in which the rays of an arc-lamp are made to fluctuate by sending through the arc the undulatory current from a carbon transmitter. The light of the arc is focused upon a selenium-cell at the receiving-station, which may be at a distance of several kilometers. The resistance of this cell varies with the illumination received from the arc and an undulatory current corresponding with that of the transmitting circuit is thus sent through the receiving telephone.—**Multiplex telephony,** a system of telephony by which several messages are sent simultaneously in opposite directions over one wire. **Radio-telephony.** Same as *wireless* ★*telephony.*—**Wireless telephony** telephonic communication without the use of a conducting circuit or line between the transmitting- and receiving-stations. Wireless telephony, like wireless telegraphy, depends on the transmission of electric waves between aërial conductors, termed antennæ, which are mounted on masts or towers or otherwise suspended at a considerable height above the ground at the two stations. In telegraphy, however, the signals consist of interrupted groups of waves, while in telephony a sustained train of waves is maintained between the stations and the intensity of these is made to fluctuate continuously in consonance with the voice of the speaker at the transmitting-station. Ruhmer found that when an arc was placed in the oscillatory circuit at the transmitting-station a microphonic transmitter in a secondary circuit as shown in the figure produced fluctuations in the oscillatory circuit and antennæ which followed the voice and were sufficiently marked to affect the oscillations in the receiving antennæ. When a detector was placed in the ground circuit of the antennæ at the receiving-station (see Fig. 2 under *wireless* ★*telegraphy*), speech uttered in the transmitter at the other station could be heard in the telephone placed in shunt with the detector. In practice several arcs are sometimes placed in series in the oscillatory circuit. It is also possible to produce the fluctuations in the oscillatory circuit by speaking to the arc directly through a megaphone, as is done in the installations for wireless telephony in the United States navy (De Forest system). Fessenden produces the sustained train of waves by an alternater of about 80,000 cycles per second and impresses the fluctuations corresponding to speech upon this oscillatory current by the use of a microphonic transmitter and special form of relay, which greatly magnify the telephonic currents.

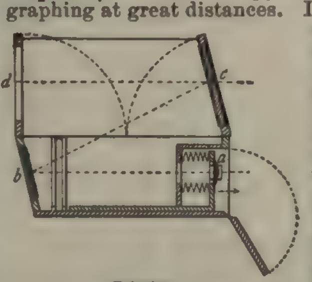


Wireless Telephony.

a, antennæ; *b*, battery; *t*, telephone; *c*, arc; *e*, earth.

telephot, *n.* Same as ★*telephote*, 2.

telephote, *n.* **2.** An apparatus for photographing at great distances. It consists of a camera with telescopic lens. Light passing through this is reflected from two plane mirrors before reaching the sensitive plate. The double reflection compensates for the focal length of the lens, reducing the camera to small dimensions. The instrument may be converted into a terrestrial or astronomical telescope. Also *telephot.* *Sci. Amer.*, June 27, 1903, p. 486.



Telephote.

a, objective; *b*, plane mirror; *c*, second mirror; *d*, photographic plate. The rays of light follow the dotted lines.

(From "Scientific American.")

telephoto (tel-ẹ̄-fō′tō), *a.* and *n.* [*telephoto*(*graphic*).] **I.** *a.* Of or pertaining to the process of photographing distant objects; telephotographic: as, a *telephoto* lens, an objective giving a large image of a distant object, in a camera of special design. See ★*telephote*, 2, and *telephotographic* ★*lens.*

II. *n.* A telephotographic lens or camera.

telephotograph, *n.* **2.** A photograph of a distant object taken with a telephotographic camera.

> Good *telephotographs* have been obtained at a distance of over forty miles, and those taken beyond artillery range (ten miles) are on a sufficiently large scale to be of practical use.
> *Army and Navy Jour.*, July 14, 1900, p. 1097.

telephotographer (tel″ẹ̄-fọ̄-tog′ra-fėr), *n.* One who takes pictures of distant objects with a telephotographic camera.

telephotographic (tel″ē-fō-tọ̄-graf′ik), *a.* [*telephotograph*(*y*) + *-ic.*] Of, pertaining to, or designed for use in telephotography, or the art of photographing distant objects by means of telescopic lenses: as, a *telephotographic* ★*lens* (which see); a *telephotographic* camera. See ★*telephote*, 2.

> This [treatise] gives full particulars of the theory of the *telephotographic* lens, and instructions for its use.
> *Geog. Jour.* (R. G. S.), XV. 676.

> The *telephotographic* combination consists of a quick-acting portrait lens, or an anastigmatic doublet of large aperture and relative intensity, varying in focus from 6 to 10 inches, fitted at one end of a tube, in which slides a smaller tube carrying a properly corrected negative system, which may vary in focus from 1 to 5 inches, but must be of shorter focus than the positive (usually about half); the shorter the focus the greater the magnifying power for a given extension of camera.
> *Encyc. Brit.*, XXXI. 697.

telephotography, *n.* **2.** The art of photographing distant objects by means of telescopic lenses and a camera specially designed for the purpose. See ★*telephote*, 2, and *telephotographic* ★*lens.*

> *Telephotography* is the art of taking, by a special and variable long focus telescopic lens, optically adjusted to the lens of a good photographic camera, photographs of objects a long distance off as if the operator were comparatively close to them. Consequently, an object five or ten miles away, which, by ordinary photography, would cover on the photograph a space an inch square, can be made to cover, by *telephotography*, a space sixteen, thirty-two, or sixty-four inches square, depending on the magnifying power of the lens and the size of the camera used. The advantage of this is apparent, for a telephotograph of an enemy's position gives a commanding officer a bird's-eye view of the ground, of the enemy's forces and their positions, of his trenches and gun emplacements, all accurately drawn to scale and on a sheet of a size convenient for study and reference. The range of such a lens is practically unlimited, and useful photographs are readily obtained at distances beyond gun range; moreover balloons can be utilized for obtaining views from above the surface of the earth.
> *Army and Navy Jour.*, July 14, 1900, p. 1097.

telephotoscopy (tel″ẹ̄-fọ̄-tos′kọ̄-pi), *n.* [Gr. τῆλε, afar, + φῶς (φωτ-), light, + -σκοπια, < σκοπεῖν, view.] Same as ★*teleëlectroscopy.*

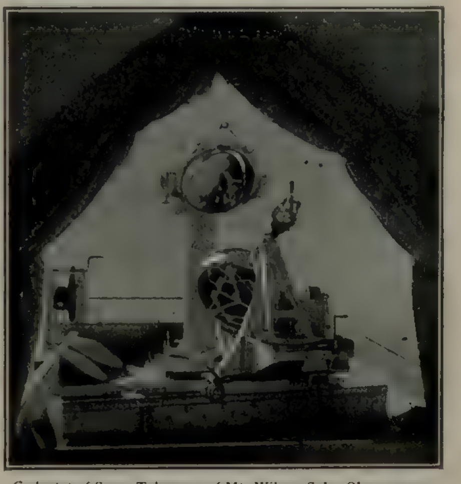
teleplastic, *a.* **2.** In *elect.*, noting a device for the production, at a distance, by electrical means, of the facsimile of a figure or object in relief.

telepositive (tel-ẹ̄-poz′i-tiv), *a.* [Gr. τῆλε, afar, + E. *positive.*] See the extract under ★*telenegative* and *telephotographic* ★*lens.* *Sci. Amer. Sup.*, Sept. 30, 1905, p. 24861.

telepost (tel′ẹ̄-pōst), *n.* [Gr. τῆλε, afar, + E. *post.*] A name given to a system of machine or automatic telegraphy invented by Delany in which messages are prepared for transmission by means of properly spaced perforations of tape. *Jour. Franklin Inst.*, March, 1908, p. 173.

telerythrin (tel-er′i-thrin), *n.* [Gr. τέλος, end, + ἐρυθρός, red, + *-in*².] A derivative of orsellic ether, itself obtained from the dyers' lichen, *Roccella tinctoria.* When dissolved in aqueous ammonia and exposed to the air, it assumes a dark wine-red color.

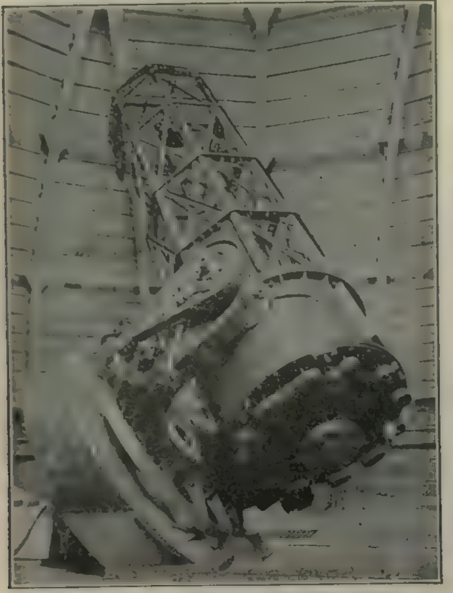
telescope, *n.*—**Amici's telescope,** a prismatic telescope of low power, consisting of two of Brewster's teinoscopes, with their planes of refraction perpendicular to each other.—**Astronomical telescope,** a telescope especially designed for astronomical use: the eyepiece inverts the image: opposed to *terrestrial telescope.*—**Dumb telescope,** the lensless tube belonging to the sextant, which gives a direct line of sight into the horizon-glass.—**Féry's thermo-electric telescope,** a device for determining the temperature of incandescent bodies. It consists of an observing-telescope with a thermo-electric junction in the eyepiece.—**Horizontal telescope,** a telescope mounted permanently in a horizontal position and into which the shifting celestial object is reflected by a system of plane mirrors which automatically counteract the diurnal motion of the celestial object and make it apparently remain stationary.—**Panoramic telescope,** a telescope which by an ingenious mechanism and combination of prisms enables the observer, without moving his eye, to turn his view horizontally in any direction and to see objects erect and magnified just as if he were looking through an ordinary field-glass.—**Photographic reflecting telescope,** a reflecting telescope specially arranged for stellar photography. Also called *photographic reflector.*—**Prismatic telescope,** a telescope in which long focus is combined with compactness of form by repeated total reflections of the beam between the objective and eyepiece by means of a system of prisms within the telescope tube. The prismatic system employed is usually that devised by Porro. See *Porro's* ★*prisms.*—**Pyrometric telescope,** an instrument for determining the temperature of incandescent or glowing bodies by measuring the length of the



Cœlostat of Snow Telescope of Mt. Wilson Solar Observatory: viewed from inside the canvas house.

In this particular form of horizontal telescope, the tube is replaced by a long, narrow canvas house, within which, near one end, is situated the concave mirror which forms the image; at the other end, outside, the system of mirrors called the cœlostat or heliostat, according to its mode of operation. In the illustration, the lower mirror (cœlostat proper) revolves by clockwork about an axis parallel to the axis of the earth, at a rate one half as fast as the earth revolves; as a result of this motion, the beam which the mirror reflects remains stationary. The upper mirror may be so shifted and adjusted as to intercept the stationary beam and reflect it into the concave mirror at the other end of the canvas house.

waves of light given off by them, or the amount of the polarizing effect, upon this light, of optical crystals.—**Reflecting telescope.** In both the Gregorian and the Cassegrainian forms (see *telescope*, 1) the observer looks toward the object just as with a refractor. In the Newtonian form, which is the most used, the small mirror is plane, and is set at an angle of 45°, so that the rays are reflected out at the side of the tube. Finally, in the front-view or Herschelian form the small mirror is dispensed with, the speculum being slightly tilted so as to throw the image to one side of the mouth of the tube. This saves the loss of light due to the second reflection, but involves some injury to the definition, unless, indeed, the speculum is now ground and polished with the axis or vertex of its paraboloidal figure at one edge, instead of at the center of the speculum as in the other forms; or unless the focal length of the instrument is very great as compared with its aperture, as in the case of the great horizontal reflecting telescope recently constructed at the Yerkes Observatory. Although the reflecting telescope is entirely free from chromatic aberration, nevertheless, as constructed in the past, it has failed to give as perfect definition, when used for visual observations, as the best refracting telescopes give. In astronomical photography and spectroscopy, however, the perfect achromatism of the reflecting telescope is of supreme importance; recently the most remarkable and perfect photographs of nebulæ and star-clusters which have yet been secured have been made with reflecting telescopes. It is certain that this type of telescope is only now being developed to the state of refinement which has already been attained in the case of the refractor. The speculum is perhaps easier and certainly much less costly to construct than an achromatic object-glass of the same aperture; hence, the largest telescopes ever made have been reflectors. At the head of the list stands the six-foot "leviathan" of Lord Rosse, erected in 1845, and still in use; it is of the Newtonian form. The five-foot silver-on-glass Cassegrainian reflector of Mr. Common, erected in 1889, stands next, and there are in existence a number of smaller instruments with apertures of three and four feet. Herschel's great telescope, erected in 1789, but long since dismantled, was 48 inches in diameter and 40 feet long. The magnifying power of the telescope depends upon the ratio between the focal length of the object-glass or speculum and that of the eyepiece. (See *eyepiece*.) It can therefore be altered at pleasure by merely exchanging one eyepiece for another. As a rule, the highest power practically available with the best object-glasses, and under the best circumstances, is from 75 to 100 to every inch of aperture. The illuminating power is proportional, other things being equal, to the area of the object-glass or the speculum; so that a telescope of 12 inches aperture ought to give four times as much light as one with a 6-inch lens; practically, however, the larger lenses, on account of the increase in thickness of the glass, do not reach their theoretical performance. A modern reflecting telescope of moderate size, with its silvered-glass mirrors or specula in good condition, is about equal in light-gathering power to a refractor of the same aperture. While in refracting instruments the difficulties due to imperfect achromatism, as well as the percentage of light lost in transmission, increase rapidly with increase of size of the objective, in the case of the reflector a large instrument is as perfectly achromatic as a small one, and the percentage of light lost by absorption and reflection does not increase with increase of aperture. This advantage of the reflector must become more and more important as larger and larger telescopes are made. With the present great improvements in glass-making, in optical work, and in the materials and methods of modern mechanical construction, it is difficult to assign a limit to the possible size of the modern reflecting telescope. In the new 60-inch reflector of the Carnegie Observatory, on Mt. Wilson, designed and constructed by Ritchey, and erected in 1908, all details of the optical work, telescope mounting, dome and building have been carried out with a degree of refinement and completeness never before attempted in either reflector or refractor.—**Submarine telescope.** Same as *water-telescope* (*a*) (which see, under *telescope*).—**Thermal telescope,** a reflecting telescope with a thermo-electric pile adjusted at its focus, devised by Joseph Henry, in 1845, for measuring the heat radiated from distant objects such as clouds and solar spots.—**Tower telescope,** a reflecting telescope the objective of which is fixed, light from any desired direction being reflected to it from a plane mirror or cœlostat mounted at the top of a vertical tower. *Science*, Jan. 31, 1908, p. 167.



Five-foot Reflecting Telescope of Mt. Wilson Solar Observatory.

The characteristic features are: the rigid skeleton steel tube supporting the mirror which reflects back the converging beam of light; the counterpoising weights which float the large mirror; the massive steel fork which supports the telescope in such a way as to give it free play in declination; and the large, hollow steel drum which, floating in a tank of mercury, supports the greater part of the twenty odd tons of weight, thus relieving the right ascension axis and allowing the telescope to move with a free, smooth motion as it follows the diurnal motion of the stars. The massive base of the telescope, the axis, and the driving mechanism are beneath the floor of the dome.

telescope-boiler (tel′e-skōp-boi″ler), *n.* A boiler having a shell with telescopically arranged sheets.

telescope-joint (tel′e-skōp-joint), *n.* A joint in which the external surface of one pipe or tube, or of a rod, is made to slide within the internal surface of another tube, as the tubes of a telescope move on one another.

telescope-sight, *n.* The line of collimation marked by cross-wires in the telescope is the line of sight. The telescope is mounted on a horizontal axis so as to provide the necessary elevation for the line of sight corresponding to the range. All recent naval guns are fitted with telescope-sights.

telescope-word (tel′e-skōp-wėrd), *n.* A word containing parts of two or more words 'telescoped' together, forming a humorous compound: for example, 'Shakonian,' composed of 'Shak(sperian)' and '(Bac)onian.' See ★*portmanteau-word*.

Telescopic pipe. See ★*pipe*¹.

telescriptor (tel′ẹ-skrip-tọr), *n.* [F. *telescripteur*; < Gr. τῆλε, afar, + L. *scriptor*, writer.] 1. A form of printing-telegraph with keyboard transmitter and an automatic machine receiver of the revolving type-wheel pattern.—2. An instrument devised for the automatic recording, at the receiving station, of telephone messages.

teleseism (tel′ẹ-sīsm), *n.* An earth tremor, as recorded on a seismograph, which has its origin in some disturbance remote from the recording station.

teleseme, *n.* 2. A range-finder, invented by a Dutch military officer, used in the Dutch army.

telesis (tel′ẹ-sis), *n.* [NL., < Gr. τελεσι-, a combining form of the verb τελεῖν, bring to completion, taken as the stem of an abstract noun *τέλεσις, completion.] Progress consciously planned and produced by intelligently directed effort. *L. F. Ward*, Outlines of Sociol., p. 181.—**Collective telesis,** adaptation of means to ends by society. *L. F. Ward*, Outlines of Sociol., p. 186.—**Individual telesis,** the conscious adaptation of conduct by an individual to the achievement of his own consciously apprehended ends. *L. F. Ward*, Outlines of Sociol., p. 190.—**Social telesis,** the intelligent direction of social activity towards the achievement of a desired and understood end. *L. F. Ward*, Outlines of Sociol., p. 190.

telesmeter (tẹ-les′me-tėr), *n.* [Irreg. *teles*(*cope*) + (*tele*)*meter*.] A special form of telemeter which has a micrometer in the telescope to measure the angular distance between the fixed marks on the rod at the distant station.

telethermogram (tel-ẹ-thėr′mọ-gram), *n.* [Gr. τῆλε, afar, + E. *thermogram*.] A record of variations in temperature made automatically by a telethermograph.

teletype (tel′ẹ-tīp), *n.* [*tele*(*graph*) + *type*.] A type-printing telegraph.

teletypic (tel-ẹ-tip′ik), *a.* [*teletyp*(*e*) + *-ic*.] Of or pertaining to teletypes or printing-telegraphs. *Sci. Amer.*, Sept. 17, 1904, p. 193.

teletypograph (tel-ẹ-tī′pọ-gråf), *n.* A form of synchronous machine telegraph, devised by Tavernier, in which the message is recorded at the receiving station by perforating a tape. This perforated tape operates an automatic type-setting machine by which means the message is prepared for printing.

teleutosorus (tẹ-lū-tọ-sō′rus), *n.*; pl. *teleutosori* (-rī). [NL., < Gr. τελευτή, completion, + σωρός, a heap.] A single fertile hyphal mass producing teliospores or teleutospores in uredineal fungi.

> The nearest approach to a specific term analogous to æcidium is *teleutosorus*, and to a collective term analogous to uredo is teleutostage. *Bot. Gazette*, XXXIX. 219.

teleutosporic (tẹ-lū-tọ-spor′ik), *a.* Pertaining to or characterized by teleutospores.

> Seven species of rusts were successfully cultivated and the connection between the æcidial and *teleutosporic* generations established. *Science*, Feb. 20, 1903, p. 307.

telial (tē′li-al), *a.* [*teli*(*um*) + *-al*¹.] Of or pertaining to a telium or teleutosorus.

telics (tel′iks), *n.* [Plural of *telic*. See *-ics*.] A division of sociology which deals with consciously planned and directed progress. *L. F. Ward*, Outlines of Sociol., p. 180.—**Individual telics,** the study or science of the conscious adaptation of individual conduct to the achievement of individual ends. Compare *individual* ★*telesis*. *L. F. Ward*, Outlines of Sociol., p. 190.—**Social telics,** a division of social science concerned with social telesis (see *social* ★*telesis*). *L. F. Ward*, Outlines of Sociol., p. 190.

telini-fly (te-lē′nẹ-flī), *n.* An East Indian and Chinese cantharid beetle, *Mylabris cichorii*.

teliochordon (tē″li-ō-kôr′don), *n.* [Gr. τέλειος, perfect, + χορδή, chord.] A form of enharmonic harpsichord or pianoforte, invented by Clagget of Dublin in 1788, in which each digital of the keyboard was capable of producing any one of three slightly different tones at will.

teliospore (tel′i-ọ-spōr), *n.* [Gr. τέλειος, finished, + σπορά, seed (spore).] Same as *teleutospore*.

telium (tē′li-um), *n.*; pl. *telia* (-ạ̈). [NL. *telium*, < Gr. τέλειον, neuter of τέλειος, complete, perfect.] The name given by Arthur to the teleutosorus of uredineal fungi.

teller, *n.* 3. One of the successive strokes on a church bell rung to tell the sex and age of a person who has just died. [Eng. dial.]

> In our villages it is the practice, at the moment of death, to call up the sexton who then goes to the church. . . . First of all he rings what are called the *Tellers*; then after a pause he continues to toll slowly on his great bell. [Newcastle-upon-Tyne.] *N. and Q.*, 10th ser., I. 350.

telltale, *n.*—**Rudder-telltale.** Same as ★*helm-indicator*.

telluradiometer (tel″ū-rā-di-om′e-tėr), *n.* [L. *tellus* (*tellur-*), earth, + NL. *radius*, ray, + Gr. μέτρον, measure.] An instrument that measures the radiation of heat from the ground or the equivalent surface of a black-bulb thermometer; specifically, the Dawson telluradiometer, which is essentially a sunshine-recorder.

tellurhydric (tel-ụr-hī′drik), *a.* [*tellur*(*ic*) + *hydr*(*ogen*) + *-ic*.] Noting an acid, telluretted hydrogen, H_2Te, which behaves as a feebly acid substance, precipitating sundry metals as tellurides from solutions of their salts when the gas is passed through such solutions. Also called *hydrotelluric acid*.

Telluric climate, line. See ★*climate*, ★*line*².

telluride, *n.* 2. An ore of a precious metal (gold or silver) which contains tellurium as a constituent in notable proportion, the presence of this element entailing certain changes in the usual course of metallurgical treatment.

tellurion, *n.*—**Orthogonal tellurion** (or **tellurium**), an apparatus for exhibiting the mathematical relations of the earth, in which the principles of orthogonal projection are applied. *Nature*, Sept. 14, 1905, p. 493.

tellurism, *n.* 2. A supposed relation of soil to disease.

tellurist (tel′ụ-rist), *n.* [*tellur*(*ism*) + *-ist*.] 1. A believer in tellurism as a vital principle spread throughout nature and circulating in all bodies. See *tellurism*, 1.—2. One who has a disease of supposed telluric (soil) origin.

tellurium, *n.* 2. [NL.] Same as *tellurion*.—**Radioactive tellurium.** Same as *Marckwald's* ★*rods*.—**Tellurium dioxid,** a white solid substance produced by burning tellurium in the air or by ignition of the nitrate. It is fusible and volatile without decomposition, and has feebly basic properties, forming salts with some acids, but in the main behaves as an acid oxid, forming salts with the stronger bases. Its formula is TeO_2.—**Tellurium sulphoxid.** See ★*sulphoxid*.—**Tellurium tetrachlorid,** a white substance obtained by the action of chlorin in excess on gently heated tellurium. It melts at 224° C., is decomposed by water, and forms double salts with a number of metallic chlorids.—**Tellurium trioxid,** an orange-yellow crystalline substance produced by moderate heating of crystallized telluric acid. At a higher temperature it is decomposed into oxygen and tellurium dioxid. Its formula is TeO_3.—**White tellurium,** an ore of white or yellowish-white color, in foliated crystals, found at Nagy-Ag in Transylvania; a telluride of gold and silver, containing in small proportion antimony and lead, perhaps only as impurities. It may be only a variety of sylvanite (which see). Also called *müllerine*.

tellursulphur (tel′ụr-sul-fėr), *n.* An orange-red variety of sulphur from Japan, containing a small amount of tellurium.

telmatological (tel″ma-tọ-loj′i-kal), *a.* [*telmatolog*(*y*) + *-ical*.] Of or pertaining to telmatology or the study of swamps.

telmatology (tel-ma̤-tol′ọ-ji), *n.* [Gr. τέλμα (τελματ-), swamp, + *-ology*.] The scientific study of the organic contents and the formation of post-glacial swamp-deposits, as peat-bogs.

> A brief review of the methods for collecting, preserving and examining the plant-remains in recent deposits,

as these methods are now generally employed by paleobotanists, with a few additions from the writer's experience in the study of *telmatology*.
Amer. Nat., Nov., 1903, p. 785.

Telmatotherium beds. See ★*bed*1.

teloblast (tel′ọ-blȧst), *n.* [Gr. τέλος, end, + βλαστος, germ.] In *embryol.*, one of the large cells situated at the posterior growing end of the body in certain annelids and arthropods and budding forth anteriorly a row of cells which proliferates to form one of the definitive series of organs such as the nerve-chain, nephridia, and mesoblastic somites. *Whitman*, 1887.

teloblastic (tel-ọ-blas′tik), *a.* [*teloblast* + *-ic*.] Of or pertaining to teloblasts.

telodendrion (tel-ọ-den′dri-ọn), *n.*; pl. *telodendria* (-ạ̈). [Gr. τέλος, end, + δενδρίον, dim. of δένδρον, tree.] In *neurol.*, the ultimate brush-like or tree-like termination of the axon of a nerve-cell.

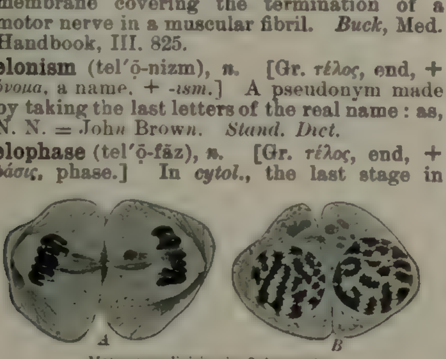
Telodynamic transmission, a system of transmitting power over considerable distances by means of endless wire ropes over pulleys, originating with C. F. Hirn in Germany. The basal idea was to run light wire cables at a linear velocity so great that the strain in pounds should be light. Speeds of 100 to 130 feet per second have been used. When the distance between sheaves is over 1,000 feet intermediate or supporting sheaves are introduced at about 400 feet intervals. In very long transmissions, to diminish cable weight and lateral pull on the bearings, a relay pair of transmitting sheaves is introduced. Two pulleys side by side and forming one on a common axis receive one cable from one direction and send the power forward by a second.

telokinesis (tel″ọ-ki-nē′sis), *n.* [Gr. τέλος, end, + κίνησις, motion.] The closing phases of karyokinesis, or mitosis: same as ★*telophase*.

telolemma (tel-ọ-lem′ạ̈), *n.*; pl. *telolemmata* (-ạ-tạ̈). [Gr. τέλος, end, + λέμμα, husk.] The membrane covering the termination of a motor nerve in a muscular fibril. *Buck*, Med. Handbook, III. 825.

telonism (tel′ọ-nizm), *n.* [Gr. τέλος, end, + ὄνομα, a name, + *-ism*.] A pseudonym made by taking the last letters of the real name: as, N. N. = John Brown. *Stand. Dict.*

telophase (tel′ọ-fāz), *n.* [Gr. τέλος, end, + φάσις, phase.] In *cytol.*, the last stage in karyokinesis, or mitosis, just preceding the reconstitution of the nuclei in the daughter-cells that have resulted from the division of the mother-cell. *Amer. Nat.*, May, 1904, p. 369.



Maturation-division in *Salamandra*.
A, telophase; *B*, ensuing pause.
(From Wilson's "The Cell.")

Telosporidia (tel-ọ-spọ-rid′i-ạ̈), *n. pl.* [NL., < Gr. τέλος, end, + NL. *sporidium* (which see).] A group of sporozoans in which the reproductive phase of the life-cycle is distinct from, and follows after, the trophic phase.

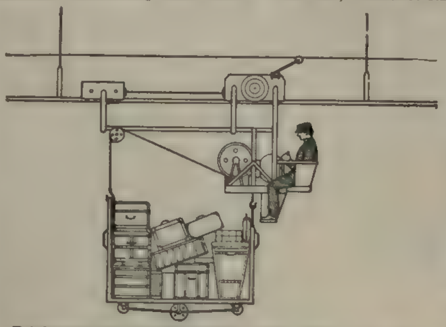
Telotremata (tel-ọ-trē′mạ-tạ̈), *n. pl.* [NL., < Gr. τέλος, end, accomplishment, + τρῆμα, a hole.] In Beecher's classification, an order of articulate brachiopods in which the pedicle-opening is shared by both valves in nepionic and neanic stages, confined to the ventral valve in later stages, and usually more or less inclosed by deltidial plates in ephebic (adult) stages. The order contains the superfamilies *Rhynchonellacea*, *Terebratulacea*, and *Spiriferacea*, the genera of which are distributed throughout all formations from the Cambrian to recent age. Also *Teleotremata*.

telotrematous (tel-ọ-trē′mạ-tus), *a.* Pertaining to or having the characters of the *Telotremata*.

telpher, *a.* **II.** *n.* The motor employed in hauling the carriers of a telpherage system.

> It is the preparation of the load for the horse's services which runs up transportation cost. Even though the price of the horse should be pitted against that of the *telpher*, advantage would be in favor of the latter on account of the greatly accelerated speed of movement.
> *Jour. Franklin Inst.*, Oct., 1904, p. 267.

telpherage, *n.* Telpherage lines are formed of steel cables suspended by brackets from poles or buildings and by various devices in crossing streams, turning corners, etc. Such lines may pass through or over buildings, under or over bridges, railroads, streams, or streets, and surmount considerable grades. A telpherage system may include single or double tracks, sidings, crossovers, branch lines, loops, and switches, or any other arrangements required by the business in which it is to be used. To supply current to the telphers, one or, usually, two wires are suspended over each track, every telpher taking its current by means of a trolley. The telphers may run alone, every one carrying a load suspended beneath it, or may have one or more trailers carrying a part of the load or other loads, and two or more telphers may, with their trailers, be made up into a train. The load, whatever its character, is suspended under the telpher or trailer on a platform, or in a bucket, car, or cage, or it may be carried in a sling or net or by means of barrel-hooks. Nearly all telpherage systems now include an electric or mechanical hoist with each telpher, so that the load can be lifted from the ground to the elevated trackway, and may then be transported to its destination and again lowered to the ground, or to a wagon or freight-car, or to the hold of a vessel. The operation of a telpherage line may be almost completely automatic and managed from one station, or it may be controlled by an operator, called a *telpherman*, who rides with the load as it travels on the line. The automatic lines may be controlled from either end of the line, the movement of one electric switch causing the hoist on the telpher to lift the load to the trackway, and also causing the telpher to proceed to its destination with the load, and, in the case of freight in bulk, to dump it and return empty to the starting-point. Automatic lines also employ carriers that may be loaded by hand, hoisted to the trackway, despatched to any point on the line or branch line, and lowered to the car, floor, or storage-place, ready to be unloaded by hand.



Telpherage line, showing telpher, trolley, trailer, and load, the operation being controlled by a telpherman.

telpher-carrier (tel′fėr-kar″i-ėr), *n.* A car or other vehicle used to transport the loads in a telpherage system. See *telpherage* and ★*telpherage*.

telpher-line (tel′fėr-līn), *n.* A line or route for transport by ★telpherage (which see).

telpherman (tel′fėr-mạn), *n.* The operator in charge of the machinery of a telpherage system.

> With a machine and an assistant, a *telpherman* can convey 250 tons per day over a distance of 1,000 feet.
> *Jour. Franklin Inst.*, Oct., 1904, p. 266.

telpher-railway (tel′fėr-rāl″wā), *n.* A line or way for the transfer of material in suspended cars. See ★*telpherage*.

telpher-road (tel′fėr-rōd), *n.* Same as *telpher-way*.

Telugu, *n.* **2.** One who speaks the Telugu language. The Telugus number some 20,000,000, and are one of the most important of the half-civilized Dravidian tribes of southern India. They occupy a considerable stretch of country north and northwest of Madras. Also called *Telingas*.

telum (tē′lum), *n.*; pl. *tela* (-lạ̈). [NL., < L. *telum*, dart.] Meinert's name for the chief piercing organ of the dipterous moth; the hypopharynx.

> Meanwhile the hypopharynx, the largest of all the trophi (omnium trophorum maximus), constitutes the chief piercing organ (*telum*) of Diptera.
> *A. S. Packard*, Text-book of Entom., p. 78.

tembe (tem′be), *n.* [E. African.] A village built in the form of a large rectangular court surrounded and inclosed by a continuous row of mud huts which open upon it.

> In most of the new villages there is no protecting wall round the huts. But the old villages are what are called *tembes*: they have two mud walls, some 6 feet apart; these are divided into rooms, and have a mud roof all the way round.
> *Geog. Jour.* (R. G. S.), XI. 623.

temblor (tem-blōr′), *n.* [Sp.] A trembling; specifically, an earthquake (*temblor de tierra*).

temibility (tem-i-bil′ị-ti), *n.* [Irreg. < It. *temere* (L. *timere*), to fear.] The impressibility of the criminal disposition by fear.

> Garofalo's new term and principle of '*temibility*' is perhaps of great service. He would thus designate the quantum of evil feared that is sufficient to restrain criminal impulsion.
> *G. S. Hall*, Adolescence, I. 408.

Temnospondyli (tem-nọ-spon′di-lī), *n. pl.* [NL., < Gr. τέμνειν, cut, + σπόνδυλος, a vertebra.] A suborder of stegocephalian *Amphibia* in which the vertebræ are composed of several pieces, usually of the rachitomous type, sometimes embolomerous: occurring in rocks from the Carboniferous and the Lower Trias. The basioccipital region is usually, and the carpus and tarsus are always, ossified. The teeth have radially infolded walls.

temnospondylous (tem-nọ-spon′di-lus), *a.* [NL. *Temnospondyl*(*i*) + *-ous*.] **1.** Pertaining to or having the characters of the suborder *Temnospondyli*.—**2.** Having the vertebræ composed of several pieces, in a manner comparable to that of some of the ganoid fishes.

temp. An abbreviation (*b*) of *temperature*; (*c*) of *temporal*; (*d*) of *temporary*.

temper, *v. t.* **11.** In *leather-manuf.*, to apply to (hides) a process in which the hides, after they are practically finished, are dampened, covered in piles, and allowed to stand and season, the drier hides absorbing moisture from the damper ones, and vice versa. *Modern Amer. Tanning*, p. 163.

temper, *n.* **10.** A metal or alloy added to another to produce certain physical properties; specifically, (*a*) an alloy of one part of copper and two of tin to be added to pure tin to produce a fine grade of pewter; (*b*) an alloy containing arsenic with lead sometimes added to the molten metal to give hardness to shot. *Thorpe*, Dict. of Applied Chem., III. 805.—**Carbon temper**, a term used to indicate the proportions of carbon in steel. The more carbon steel has the harder will it become when suddenly cooled from a cherry-red heat.

temperament, *n.*—**Unequal temperament**, in *music*, any form of temperament not based on equal semitones.

temperature, *n.*—**Corpuscular temperature.** See ★*corpuscular*.—**Critical temperature.** (*a*) See *critical point* (*b*), under *critical*. (*b*) In *phenol.*, the temperature below which the germination of the seed and the growth of the plant do not take place.—**Critical temperature of solution.** See ★*solution*.—**Cryohydric temperature.** See ★*cryohydric*.—**Cumulative temperature**, the sum total of the day-degrees of growing-temperatures counted above 42° F. as the point at which the growth of plants may be supposed to begin. The summation begins with the first of January, the first of December, or the date of sowing the seed, according to special crop or plant.—**Effective temperatures**, in *phenol.*, the temperatures at which vegetative processes proceed at an appreciable rate; specifically, all temperatures above 43° F.—**Eutectic temperature.** Same as *eutectic* ★*point*.—**Hering's theory of temperature-sensations** or **of the temperature-sense.** See ★*sensation*.—**Inversion of temperature**, increase, instead of decrease, of temperature with altitude above the ground.—**Optimum temperature**, in *phenology*, the temperature of the air or soil most advantageous to the development of any specific seed or plant; it varies with the plant and the phase of development.—**Potential temperature**, the temperature of a mass of gas under a given standard condition as to pressure and volume. For any other pressure and volume the potential temperature is calculated by the adiabatic formula.—**Pump-handle type of temperature**, a temperature showing rapid oscillations of rise and fall through several degrees. *Buck*, Med. Handbook, II. 413.—**Scale of absolute temperatures.** See *thermometric* ★*scale*.—**Sensible temperature**, the temperature recorded by the wet-bulb thermometer, which is assumed to be the temperature felt by the nerves of the skin. *M. W. Harrington*.—**Temperature coefficient, constant.** See ★*coefficient*, ★*constant*.—**Temperature correction**, the numerical quantity added to or subtracted from any physical measurement or instrumental reading to correct the same for the influence of temperature.—**Temperature gradient.** See ★*gradient*.—**Temperature of condensation**, in *meteor.*, the temperature to which the atmospheric vapor must be cooled in order to saturate any given volume and begin the process of precipitation and the formation of haze, fog, dew, or frost; the dew-point.—**Temperature sense**, a general name for the senses of warmth and cold. *W. Wundt* (trans.), Human and Animal Psychol., p. 111.—**Temperature wind-rose.** See ★*wind-rose*.—**Thermodynamic scale of temperatures.** See *thermometric* ★*scale*.

temperature-curve, *n.* **2.** A curve showing the variations of body temperature at definite intervals in the course of a fever.

temperature-spot (tem′pėr-ạ̈-tụ̄r-spot″), *n.* A general name for the cutaneous 'spots' or unit-areas sensitive to warmth and cold. *E. B. Titchener*, Exper. Psychol., I. i. 54.

tempering-machine (tem′pėr-ing-mạ-shēn″), *n.* A heating-machine having reels which support trays on which needles and other small steel articles are placed to be tempered, or a furnace with a spiral conveyer or a tumbling-barrel. The aim is to expose the steel pens, screws, buttons, saw-teeth, or other objects to the action of heat and the mechanical action of hot sand or other cleaning material in some form of agitator.

tempering-pit (tem′pėr-ing-pit″), *n.* The circular pit or box in which a tempering-wheel works.

tempering-tank (tem′pėr-ing-tangk″), *n.* In a bakery, a steam-heated tank for warming or tempering the water used in making dough. It measures and delivers any desired quantity of water at any required temperature through a pipe to the mixing-machine.

tempering-vat (tem'pėr-ing-vat″), *n.* A tank for holding milk or cream while it is being tempered to bring it to the right temperature for churning or other treatment: used in creameries. It consists of two tanks, one within the other, the outer containing water which is heated by steam-pipes or cooled by ice and the inner holding the milk or cream. It is provided with thermometers for indicating temperatures in both tanks, and with gages, draining- and emptying-cocks, etc.

temper-lime (tem'pėr-līm), *n.* Slaked lime added in small proportion to the juice of the sugar-cane prior to its evaporation, in order to neutralize any acidity and thus prevent the formation of uncrystallizable sugar, and also to aid in the clarification. *Sadtler*, Handbook of Indust. Chem., p. 129.

tempête (toṅ-pāt'), *n.* [F., lit. 'tempest': see *tempest.*] 1. A recent form of quadrille or country-dance.—2. The music for this dance, which is in duple rhythm.

temple¹, *n.*—**Temple money**, brass, copper, and bronze tokens and medals resembling coins, cast in China and Japan, with magical devices and inscriptions: employed as amulets.

temple³, *n.*—**Trough-and-roller temple**, in *weaving*, a self-acting temple consisting of a semicircular iron trough or tube which extends across the cloth in the loom so as to keep it at full width: an old form of temple for light- and medium-weight fabrics. *T. W. Fox*, Mechanism of Weaving, p. 462.

temple-mound (tem'pl-mound), *n.* A variety of flat-topped or truncated mound, usually with a graded way to the top, and often with terraced sides, found in the eastern United States. Some of them are supposed to have been the sites of rude temples, but their use is not definitely known. *Keane*, Ethnology, p. 369.

templet, *n.* 6. In *ship-building*, a skeleton framework made of thin strips of wood (or occasionally of thin sheet-metal) used to form the outline of any part, as of a plate or bar which is to be fitted to a particular place in the structure. The templet is formed and marked from the parts already erected in place; it is then taken and laid flat on the plate or bar to be used, and the outlines and rivet-holes are transferred to the plate or bar, which can then be sheared, punched, and curved so as to fit the place into which it is to go.

templet (tem'plet), *v. t.* To make or fit by a templet. Also *template.*

> The outside or over-lapping plates are then worked, and are *templated* from the place they are intended to occupy on the ship. *Encyc. Brit.*, XXXII. 597.

tempo¹, *n.* 1. More general directions are *tempo moderato, ordinario*, or *commodo*, at a moderate, ordinary, or convenient pace (though *tempo ordinario* originally meant simply in common or quadruple rhythm), and also *tempo giusto*, in strict time or rhythm.

temporal². I. *a.*—**Temporal crest.** See ★*crest.*—**Temporal shield**, in *herpet.*, a good-sized horny plate, lying just back of the eye.—**Temporal sign.** See ★*sign.*

II. *n.* 2. In *ichth.*: (*a*) Same as *hyomandibular.* (*b*) Same as ★*pterotic. Starks*, Synonymy of the Fish Skeleton, p. 510. (*c*) Same as ★*sphenotic*, 2. *Starks*, Synonymy of the Fish Skeleton, p. 509.

temporalism (tem'pọ-ra̤l-izm), *n.* [*temporal* + *-ism.*] The theory or system of the temporal power of the papacy.

temporalist (tem'pọ-ra̤l-ist), *n.* [*temporal* + *-ist.*] An adherent of the theory or system of the temporal power of the papacy. *Outlook*, Nov. 18, 1899, p. 663.

temporofrontal (tem″pọ-rō-fron'ta̤l), *a.* Relating to both the temporal and the frontal bones or regions.

> In the Homo above alluded to the *temporo-frontal* suture is 20 mm. long, and the sphenoido-frontal 11 mm. *Rep. Brit. Ass'n Advancement of Sci.*, 1902, p. 652.

temulentic (tem-ụ-len'tik), *a.* [NL. (*Lolium*) *temulent*(*um*) + *-ic.*] Pertaining to temuline.—**Temulentic acid**, an acid obtained from the alkaloid temuline.

temuline (tem'ụ-lin), *n.* [(*Lolium*) *temul*(*entum*) + *-ine*².] A narcotic poisonous alkaloid, $C_7H_{12}ON_2$, contained in *Lolium temulentum*: sometimes found in flour, because of the growth of the parent plant in wheat-fields.

ten. An abbreviation (*b*) of *tenor.*

tenalgia (te-nal'ji-a̤), *n.* [NL., < Gr. *τέν*(*ων*), tendon, + *ἄλγος*, pain.] Pain in a tendon.

tenancy, *n.*—**Cottier tenancy.** See ★*cottier.*

tenant¹, *n.*—**Cottier tenant.** See ★*cottier.*

ten-a-penny (ten'a̤-pen″i), *n.* A soldiers' nickname for the pompom gun.

> A Ballade of *Ten-a-penny*. . . . Alas! for a tune on the gay Pom-pom. *J. H. M. A.*, in War's Brighter Side, xxi.

To give (something) **ten-a-penny**, to fire a pompom at it.

> A fellow Pom-pom in the Opposing Army . . . catching the Field-battery crossing a Donga gave it *Ten-a-penny* for two Minutes to the Confusion of all concerned. *R. Kipling*, in War's Brighter Side, xii.

tench²† (tench), *n.* [A corruption of '*tent*(*iary*), an abbreviation of *penitentiary.*] A penitentiary. [Australia.]

> Prisoners' barracks, sir—us calls it *Tench*. *Caroline Leakey*, The Broad Arrow, II. 32, quoted in [E. E. Morris, Austral English.

Tendency theory, in *theol.*, the theory of the Tubingen school that the books of the New Testament, apparently artless productions, were put together for the purpose of upholding current opinions, and that they thus have a 'tendency.' See *Tübingen school*, under *school*¹.

tendential (ten-den'sha̤l), *a.* [L. *tendens*(*-t-*) + *-ial.* See *tendency.*] Having a tendency; of the nature of tendency; exhibiting a tendency or bias.

> It means greater suggestibility to the circle of ideas the subject is intent upon realizing, and deliverance, if not from the presence, at least from the power, of those other *tendential* ideas against which he has been struggling. *Amer. Jour. Relig. Psychol. and Education*, May, [1904, p. 75.

tendinitis (ten-di-nī'tis), *n.* [NL., < L. *tendo* (*tendin-*), tendon, + *-itis.*] Inflammation of a tendon.—**Tendinitis of the horse**, an inflammation of the tendons of horses, principally the flexor tendons, which results from strain or wrenching and produces great tenderness of the parts, with more or less severe lameness.

Tendinous ring of Arnold. Same as *annulus tendinosus.*—**Tendinous sensation.** See ★*sensation.*

tendon, *n.*—**Tendon-grafting**, an operation for joining the tendon of a paralyzed muscle to one of a normal muscle, which is thus made to perform the work of its weakened fellow.—**Tendon sensation.** See ★*sensation.*

tendon-sense (ten'do̤n-sens), *n.* In *psychol.*, one of the kinesthetic senses, endowed in all probability with but one sense quality, that of strain. *E. C. Sanford*, Exper. Psychol., p. 25

tendosynovitis (ten-dọ-sin-ọ-vī'tis), *n.* [NL., < L. *tendo* (*tendin-*), tendon, + NL. *synovia* + *-itis.*] Same as ★*tenosynovitis.*

tendovaginal (ten-dọ-vaj'i-na̤l), *a.* [L *tendo* (*tendin-*), tendon, + *vagina*, sheath, + *-al*¹.] Relating to a tendon and its enveloping sheath.

tendovaginitis (ten-dọ-vaj-i-nī'tis), *n.* [NL., < L. *tendo* (*tendin-*), tendon, + *vagina*, sheath, + *-itis.*] Inflammation of the sheath of a tendon.

tendril-climber, *n.* According to H. Schenck (followed by Schimper), tendril-climbers include all lianas which are supported by irritable organs curling around the support. They are divisible, therefore, into *leaf-climbers, leaf tendril-climbers, branch-climbers, hook-climbers, watchspring climbers*, and *stem tendril-climbers.*—**Branch-climber.** See ★*branch-climber.*—**Hook-climber.** See *hook-climber.*—**Leaf-climber.** See ★*leaf-climber.*—**Leaf tendril-climber**, a liana in which the supporting organ is a leaf or part of a leaf modified to a curling filament, as in the common pea, vetches, etc.—**Stem tendril-climber**, one of a large class of lianas with climbing organs which often closely resemble those of leaf tendril-climbers, but are shown to be axial by their position, also by the presence of rudimentary leaves, as in the grape-vine.—**Watchspring climber.** See ★*climber*¹.

tendrons de veau (toṅ-drôṅ' dẹ vō'). [F., 'gristle of veal': see *tendron* and *veal.*] The gristles from the breast of veal stewed in stock: served as an entrée.

tenebrionid (tẹ-neb'ri-ọ-nid), *n.* and *a.* I. *n.* One of the coleopterous family *Tenebrionidæ.*

II. *a.* Having the characters of or belonging to the family *Tenebrionidæ.*

Tenebrosi (ten-e-brō'sē), *n. pl.* [It., pl. of *tenebroso*, < L. *tenebrosus*, dark: see *tenebrous.*] A school of realistic painters in Italy in the seventeenth century who indulged in excessive effects of light and shade. The center of the movement was in Naples and the chief masters were Ribera and Caravaggio.

tenectomy (tẹ-nek'tọ-mi), *n.* [Gr. *τέν*(*ων*), tendon, + *ἐκτομή*, excision.] Excision of a portion of a tendon. *Lancet*, June 18, 1904, p. 1727.

teneramente (ten-ā-rä-män'tā̤), *adv.* [It., < *tenero*, tender.] In *music*, with tenderness: compare *dolcemente.*

tenial (tē'ni-a̤l), *a.* [*tænia* + *-al*¹.] Relating to a tænia in any sense, but especially to one of the bands of white nerve-matter in the brain which are so designated. *Buck*, Med. Handbook, II. 165.

tenicide, *n.* See *tænicide.*

tenifuge, *n.* See *tænifuge.*

Tenn. An abbreviation of *Tennessee.*

tennis-net (ten'is-net), *n.* A light cotton netting, used as a ball-stop or boundary in the game of lawn-tennis.

tenon, *n.* 2. A portion of a block of stone from which a work of sculpture is cut, allowed to remain as a temporary or permanent support.

tenonostosis (ten″on-os-tō'sis), *n.* [NL., prop. **tenontosteosis*, < Gr. *τένων*, tendon, + *ὀστέον*, bone, + *-osis.*] Same as ★*tenostosis.*

tenontagra (ten-on-tag'ra̤), *n.* [NL., < Gr. *τένων* (*τενοντ-*), tendon, + *ἄγρα*, a taking (seizure).] Gout in the tendons.

tenontitis (ten-on-tī'tis), *n.* [NL., < Gr. *τένων* (*τενοντ-*), tendon, + *-itis.*] Inflammation of a tendon; tendinitis.

tenontophyma (ten″on-tọ-fī'ma̤), *n.*; pl. *tenontophymata* (-ma̤-ta̤). [NL., < Gr. *τένων* (*τενοντ-*), tendon, + *φῦμα*, a tumor.] A tumor springing from a tendon.

tenoplasty (ten'ọ-plas-ti), *n.* [Gr. *τένων*, tendon, + *πλάσσειν*, form, mold.] Plastic surgery of the tendons.

Tenore buffo, a tenor singer in comic opera.

tenostosis (ten-os-tō'sis), *n.* [Gr. *τένων*, tendon, + *ὀστέον*, bone, + *-osis.*] Ossification of a tendon.

tenosynovitis (ten-ọ-sin-ọ-vī'tis), *n.* [Gr. *τένων*, tendon, + NL. *synovia* + *-itis.*] Inflammation of a tendon with its enveloping sheath.

tenotomist (tẹ-not'ọ-mist), *n.* [*tenotom*(*y*) + *-ist.*] One who performs tenotomy.

Tensile strain, the deformation caused in any material by a stress which tends to separate the particles or elements which compose it by a pull in the direction of their length.—**Tensile strength**, the resistance offered by any material to a stress or pull in the direction of the length of the piece, or to one which tends to cause it to fail by pulling apart.—**Tensile stress**, the effort or pull exerted on a bar or structure which tends to make it fail by pulling apart.—**Ultimate tensile strength.** See ★*strength.*

tensimeter (ten-sim'e-tėr), *n.* An instrument for measuring the vapor tension of the water vapor from a salt containing water of crystallization.

tension, *n.* 8. In *phytogeog.*, same as ★*tension-line.*—**Center of tension.** See ★*center*¹.—**Solution tension**, the tension or pressure by virtue of which the particles of a dissolving substance are driven into solution. When the solution tension equals the osmotic pressure, equilibrium is established, the dissolving substance ceases to diminish, and the concentration of the solution becomes constant.—**Tension rupture.** See ★*rupture.*

tension-beam (ten'sho̤n-bēm), *n.* A beam or roller in a loom, designed to keep the warp-threads taut.

tension-brace (ten'sho̤n-brās), *n.* A term incorrectly used to describe a tension-member such as a tie-rod or bar intended to offer resistance to a tension stress. A brace is properly a compression-member used as a stiffening element to resist a tendency to deform.

tension-carriage (ten'sho̤n-kar″ā̤j), *n.* A small four-wheeled car which travels on a short piece of track and carries a pulley having a hollow face to receive and support a traveling endless wire-rope cable. Such a cable, used in a cable-road or elevator or as the traveling cable of a wire-rope cableway, wire-rope tramway, or transporter, must be kept at a certain tension and is carried round the pulley of the tension-carriage. Where the carriage moves upon a horizontal track, a weight, suspended in a well at the end of the track by a rope attached to the car and passing over a pulley at the top of the well, serves to maintain the required tension by drawing the carriage along the track, the carriage moving forward or backward on its track and raising or lowering the weight under variations in the strain upon the cable caused by changes in the load. Where the carriage moves upon a vertical track its own weight maintains the required tension on the cable.

tension-clip (ten'sho̤n-klip), *n.* A device which, by a stress of hauling or pulling, is caused to grip a moving element, while a release of the tension causes the grip also to release: used in cable-railways or continuous wire-rope elevators. The usual principle is that of an oblique pull on the clip, which causes it to cant sidewise and bring a side pressure against the moving element sufficient to cause friction and prevent slipping when the effort comes on.

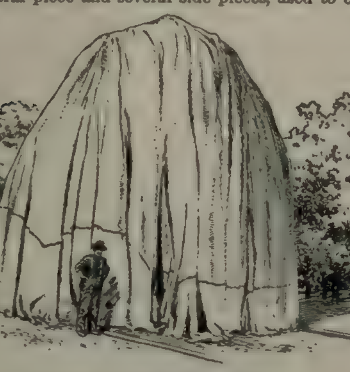
tension-fault (ten'sho̤n-fâlt), *n.* A fault produced by the pulling apart of the sides of a fissure in the earth's crust. As the fissure is almost always inclined, the upper side slips down on the lower. It is a normal or gravity-fault.

tension-line (ten′shọn-līn), *n.* In *phytogeog.*, the neutral border between two competing types of vegetation. Same as ★*ecotone.* Also called *line of tension.* *C. MacMillan.*

tent[1], *n.* **5.** The web of a colony of tent-caterpillars.—**6.** A tent-shaped cover.

> When the parts to be treated are all covered, the diluted acid is placed under the *tent*, the cyanide of potassium is dropped in, and the *tent* immediately closed. The gas is exceedingly poisonous, and should not be inhaled. *E. G. Lodeman*, The Spraying of Plants, p. 149.

Sheet-tent, a large octagonal sheet of duck, consisting of a central piece and several side pieces, used to cover citrus trees for fumigation with hydrocyanic-acid gas against scale-insects. *Yearbook U. S. Dept. Agr.*, 1896, p. 229.—**Tent of meeting**, a Jewish tabernacle.

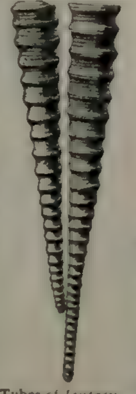


Sheet-tent in position for fumigation.

tentacle, *n.*—**Primary tentacle**, in some hydromedusans, the tentacle at the base of a radial canal. *Biol. Bulletin*, Jan., 1904, p. 89.

Tentacular canal. (*b*) See ★*canal*[1].

Tentaculites (ten-tak-ụ̄-lī′tēz), *n.* [NL., < L. *tentaculum*, tentacle, + *-ites.*] A genus of small elongated conic shells of circular section, the outer surfaces of which are marked by strong regular transverse ridges and by fine longitudinal striæ on the spaces between the ridges. They are confined to the Paleozoic and are extremely abundant in many Silurian and Devonian formations. They have usually been regarded as the shells of pelagic *Pteropoda*, but many authorities consider them as annelidan tubes.



Tubes of *Tentaculites ornatus.*

tentaculoid (ten-tak′ū-loid), *a.* [NL. *tentaculum*, a feeler, + *-oid.*] Relating to the peculiar processes which protrude through the umbo-like structures of the gelatinous investment of diatoms.

tentadura (tän-tä-dö′rä), *n.* [Sp. *tentadura*, < *tentar*, try, test: see *tempt.*] An assay made to ascertain the proportion of amalgam in an amalgamating heap; an assay made by concentrating the metallic portion of a mineral which remains after the earthy portions have been washed out. *Phillips and Bauerman*, Elements of Metallurgy, p. 743.

tentage, *n.* **2.** The number or supply of tents.

tent-caterpillar, *n.*—**Apple-tree tent-caterpillar**, the larva of an American lasiocampid moth, *Malacosoma americana.* Also called *tent-caterpillar of the orchard.* See *tent-caterpillar.*

tentering-frame (ten′tėr-ing-frām″), *n.* Same as *tenter*[2], 1.

tenth, *n.*—**Saladin's tenth**, a tax laid in England and France, in 1188, by Pope Innocent III. for the crusade of Richard I. and Philip Augustus against Saladin, Sultan of Egypt, then going to besiege Jerusalem. Gibbon considers it the foundation of the ecclesiastical tithing system. *Wharton.*

tenth-meter (tenth′mē″tėr), *n.* In *phys.*, a unit of length equal to 10^{-10} meters, or one ten-millionth of a meter.

tenth-normal (tenth′nôr″mạl), *a.* In *analyt. chem.*, said of a solution or of the strength of a solution prepared by diluting one volume of normal strength to make ten volumes. Also written $\frac{N}{10}$. See ★*normal*, 5 (*b*).

> *Tenth-normal* nitrous acid was prepared by adding an excess of pure silver nitrite to a known amount of N/10 hydrochloric acid and filtering off the silver chloride.
> *Amer. Chem. Jour.*, March, 1904, p. 197.

tentillum (ten-til′um), *n.*; pl. *tentilla* (-ä). [NL., < L. *tent*(*aculum*) + *-illum.*] One of the fine, lateral tentacles on the dactylozoöids of some siphonophorans.

tenting[2] (ten′ting), *n.* The process of stretching, or holding to a desired width, as cloth in the process of drying.

tentorial, *n.*—**Tentorial plane**, a straight line drawn through the tentorium, or division between the cerebrum and cerebellum.

tenuit (ten′ụ̄-it), *n.* [L., he (she) held.] In *common law*, a term defining the tenure in an action for waste done after the termination of the tenancy.

tenure, *n.*—**Horn tenure**, in *feudal law*, tenure by cornage. It was the duty of the vassal to wind a horn upon the approach of an enemy to give notice thereof.—**Survey tenure**, in India (Bombay Presidency), a tenure of land by which occupation is preceded by a survey. Each field is measured and assessed according to the quality of the soil and the crop. This assessment holds good without any modification for a term of thirty years; it is in fact a rent charge liable to change once in thirty years. In the Northwestern Provinces and the Punjab a somewhat similar tenure prevails. *Encyc. Brit.*, XII. 771.

tenurial (te-nū′ri-ạl), *a.* [*tenur*(*e*) + *-ial.*] Having the nature of, or pertaining to, a tenure or holding of property.

tenurially (te-nū′ri-ạl-i), *adv.* In a tenurial manner; as regards tenure.

ten-wheeler (ten′hwē″lėr), *n.* An American type of locomotive engine having six driving-wheels and four supporting-wheels in the truck. The three drivers on each side are the same as in the Mogul type, but the extra two wheels in the truck make possible an engine with a longer boiler and greater steam-making surface, and which is somewhat safer as regards tendency to become derailed.

teocote (tā-ọ̄-kō′tạ̄), *n.* [Nahuatl *teocotl*, sacred pine, < *teotl*, god, + *ocotl*, pine.] A lofty pine (*Pinus Teocote*), with spreading ascending branches, indigenous to the mountains of Mexico. The leaves, 3 in a sheath, are from 12 to 20 centimeters long, rigid, compressed-triangular in cross-section, with scabrous edges and a sharp apex. The cones are from 4 to 8 centimeters in length and from 2 to 2.5 centimeters in diameter. This tree was highly esteemed by the ancient Aztecs as the source of an aromatic incense, which could be used only by the nobles and dignitaries.

tepejilote (tā-pä-hē-lō′tạ̄), *n.* [Nahuatl *tepetl*, mountain, + *xilotl*, ear of green corn.] The unexpanded flower-spikes of several species of palms of the genus *Nunnezharia.* Some of the species have been in cultivation by the natives for centuries; they use the flower-spikes for food.

tepetate (tā-pā-tä′tạ̄), *n.* [Nahuatl *tepetl*, mountain, + *tlatatl*, mud.] A material existing in enormous quantities (from 5 to 500 feet thick) over the greater portion of the surface of Mexico, and supposed to be consolidated volcanic mud. It is also found less extensively in Central and South America.

tepidamente (tep″i-dä-män′te), *adv.* [It.] In *music*, in a lukewarm, listless manner.

Ter. An abbreviation (*a*) [*l. c.*] of *terrace*; (*b*) of *territory.*

teraconic (ter-a-kon′ik), *a.* [*ter*(*ebate*) + *acon*(*ite*) + *-ic.*] Noting an acid, a colorless compound, $\mathrm{HOCOC(CH_2COOH):C(CH_3)_2}$, prepared by the action of sodium on ethyl terebate. It forms lustrous prisms or large triclinic crystals, and melts and decomposes at 161–163° C.

teracrylic (ter-a-kril′ik), *a.* [*ter*(*ebate*) (?) + *acrylic.*] Noting an acid, a colorless liquid, $C_7H_{12}O_2$, prepared by the distillation of terpenylic acid. It has an odor of valeric and capric acids, and boils at 218° C.

teraglin (ter′ạ-glin), *n.* [Said to be aboriginal Australian.] A fish of New South Wales, *Otolithus atelodus.* Sometimes called *jewfish.* *E. E. Morris*, Austral English.

terat. An abbreviation of *teratology.*

teratism (ter′ạ-tizm), *n.* [Gr. *τέρας* (*τερατ-*), monster, + *-ism.*] Monstrosity.

teratogenesis (ter″ạ-tọ̄-jen′e-sis), *n.* [Gr. *τέρας* (*τερατ-*), a monster, + *γένεσις*, production.] The production of monsters.

teratol. An abbreviation of *teratology.*

teratosis (ter-ạ-tō′sis), *n.* [NL., < Gr. *τέρας* (*τερατ-*), monster, + *-osis.*] Same as ★*teratism.*

terbia (tėr′bi-ạ̈), *n.* [NL., < *terbium.*] Terbium oxid, the earth originally called *erbia.* As obtained by ignition it has a dark-orange color, probably due to the presence of a little of a higher oxid; after heating in hydrogen it is white. It is very doubtful whether it has been obtained free from admixture with other oxids of the same group presenting properties which have been referred to mosandrium, philippium, and the Zα and Zβ of De Boisbaudran. Terbia is strongly basic; its salts are colorless and give a spark-spectrum but no absorption-spectrum.

terbic (tėr′bik), *a.* [*terb*(*ium*) + *-ic.*] Containing terbium as a constituent: as, a *terbic* salt.

terbine (tėr′bin), *n.* [*terbia* + *-ine*[2].] An early form of the name of the rare earth terbia.

terchlorid (tėr-klō′rid), *n.* [*ter-* + *chlorid.*] A compound containing three atoms of chlorin in combination, as the terchlorid of antimony ($SbCl_3$) (also called *butter of antimony*).

terdiurnal (tėr-dī-ėr′nạl), *a.* [*ter-* + *diurnal.*] Happening three times daily.

> Professor Hann has shown that at the earth's surface three regular periodic variations are established by observation, viz., the diurnal, semi-diurnal, and *terdiurnal.* *Encyc. Brit.*, XXX. 719.

terebenic (ter-ẹ̄-ben′ik), *a.* Same as *terebic.*

terebenthene (ter-ẹ̄-ben′thēn), *n.* [Also *terebentine* (It. *terebentina*), < *tereb*(*inth*) + *-ent* (with *-ent* as in *turpentine*) + *-ene.*] Same as *levopinene.* See ★*pinene.*

terebentic (ter-ẹ̄-ben′tik), *a.* [*terebent*([*h*]*ene*) + *-ic.*] Pertaining to terebenthene.—**Terebentic acid**, a colorless crystalline compound, $C_9H_{14}O_5$, prepared by the action of lead oxid on turpentine.

terebentilic (ter″ẹ̄-ben-til′ik), *a.* [*terebent*(*ic*) + *-il* + *-ic.*] Noting an acid, a colorless compound, $C_8H_{10}O_2$, prepared by passing the vapor of terpin over soda-lime at 400° C. It crystallizes in small needles, sublimes in plates, melts at 90° C., and boils at 250° C.

terebilenic (ter″ẹ̄-bi-len′ik), *a.* Noting an acid, a colorless compound, $(CH_3)_2$- $\mathrm{(CH_3)_2\text{-}CC(COOH):CHCOO}$, prepared by the action of water on *a*-chlorterebinic acid at 140° C. It is the anhydrid of diaterebilic acid, and is deposited from alcohol in lustrous transparent trimetric crystals which melt at 162–163° C., and from water it yields prisms melting at 168° C. It may be sublimed.

terebilic (ter-ẹ̄-bil′ik), *a.* Same as *terebic.*

terebinthic (ter-ẹ̄-bin′thik), *a.* [*terebinth* + *-ic.*] Of or pertaining to terebenthene.

Terebratella (ter″ẹ̄-brạ-tel′ạ̈), *n.* [NL. See *Terebratula.*] A genus of telotrematous terebratuloid brachiopods of the subfamily *Magellaninæ*, represented by species ranging through Jurassic to recent formations.

Terebratulina (ter″ẹ̄-brat-ụ̄-lī′nạ̈), *n.* [NL., < *Terebratul*(*a*) + *-ina*[1].] A subgeneric division, of doubtful value, of the genus *Terebratula*, having shells with striate surface and the brachidium consisting of a small annulus. It is represented by species ranging from Jurassic to recent time.

terebratuloid (ter-ẹ̄-brat′ụ̄-loid), *a.* [*terebratula* + *-oid.*] Having the aspect or characters of the brachiopod genus *Terebratula.*

terecamphene (ter″ẹ̄-kam-fēn′), *n.* [*tere*(*binth*) + *camphene.*] See ★*camphene*, 1.

terella (te-rel′ạ̈), *n.* [NL., dim. of L. *terra*, earth.] A magnetized globe of steel, or a spherical lodestone, with poles diametrically opposite each other so as to represent in miniature the distribution of terrestrial magnetism.

terephthalic (ter-ef-thal′ik), *a.* Noting an acid, a colorless compound, $C_6H_4(\overset{1}{C}O\overset{4}{O}H)_2$, prepared by the oxidation of various paradisubstitution derivatives of benzene. It crystallizes in needles and sublimes without melting. Also called *paraphthalic acid.*

tergiversant (tėr′ji-vėr-sạnt), *a.* Tergiversating; shifty; evasive.

terlina (ter-lē′nä), *n.* [It.] A billon coin of Louis XII. of France, struck at Asti.

terlinguaite (tėr-lin′gwạ-īt), *n.* [*Terlingua* + *-ite*[2].] An oxychlorid of mercury, Hg_2ClO, occurring in yellow to green or brown monoclinic crystals: found with other mercury minerals at Terlingua, Texas.

term, *n.*—**At term**, at the end: noting specifically the birth of a child at the period of the normal termination of pregnancy. *Amer. Nat.*, April, 1904, p. 304.—**Disjunctive term**, a term formed by a combination of terms united by a conjunction equivalent to 'or.'—**General term.** (*b*) In *math.*, a term which by substitution of successive numbers for a letter it contains will give successive terms of a series.—**Principal term of a set M**, any term of M which is the limit of some fundamental set in M.—**Probatory term**, the time within which the parties to a suit are required to take their evidence.—**Term for years**, in *law*, an estate of fixed period in realty. It is commonly created by deed and is a chattel real.—**Term of a determinant.** See ★*determinant.*

termen (tėr'men), *n.*; pl. *termina* (-mi-nä). [NL., < L. *termen*, a collateral form of *terminus*, end: see *terminus*.] In *entom.*, the outer edge of the wing between the apex and the anal or inner angle. *A. S. Packard*, Text-book of Entom., p. 122.

terminal. I. *a.*—**Terminal artery, curvature.** See ★*artery*, ★*curvature*.—**Terminal velocity.** (*b*) See *critical* ★*velocity*.

II. *n.* **4.** A terminus, as of a railroad. —**Primary terminals.** See ★*primary*.

terminalis (tėr-mi-nā'lis), *a.* and *n.* [NL.: see *terminal*.] In *gram.*, noting the case which expresses direction toward. Also called *transitional*.

terminated (tėr'mi-nā-ted), *p. a.* Having a terminus or end; ended; specifically, in *mineral.*, having the extremity completed by one or more crystalline faces: said of a crystal. See *termination*, 9.

termination, *n.* **10.** In *ins. law*, the end of the voyage of a vessel, namely, when it has been safely moored at the dock of its destination for twenty-four hours. The risk on the cargo is not ended by this fact.

terminative, *a.* **2.** In *gram.*, noting direction toward, as a case.

> Besides a general locative some of the most frequently occurring are inessive, superessive, introessive, ablative, and *terminative*. Besides these, comitatives, similatives, partitives, and suffixes expressing similar ideas, are found. *Amer. Anthropologist*, Jan.–March, 1903, p. 13.

terminize (tėr'mi-nīz), *v. t.*; pret. and pp. *terminized*, ppr. *terminizing*. [L. *termin*(*us*), term, + *-ize*.] To supply with terms or terminology, as a science; form the special nomenclature of. [Rare.]

> The fact that yachting has entered France by way of England accounts for the adoption of so many English words, a condition that is paralleled in the *terminizing* of sports, such as football and bicycling, which crossed the Channel southward.
> *Army and Navy Jour.*, Aug. 19, 1899, p. 1221.

termite, *n.*—**Neoteinic termite,** one of the reserve individuals in a termite colony which may be substituted for the royal pair at any time and carry on their functions, although retaining the juvenile condition in certain respects. *Cambridge Nat. Hist.*, V. 362.

termitid (tėr'mi-tid), *n.* and *a.* **I.** *n.* A member of the isopterous family *Termitidæ*.

II. *a.* Having the characters of or belonging to the family *Termitidæ*.

termitophagous (tėr-mi-tof'a-gus), *a.* [NL. *termites*, termite, + Gr. *-φαγος*, < *φαγεῖν*, eat.] Eating or feeding on termites, or white ants.

ternary. I. *a.* **2.** In *math.*, having three variables.—**3.** In *old chem.*, applied by Dalton to substances consisting of three atoms—either A + 2 B or 2 A + B.—**Ternary alloy,** an alloy of three elements: used especially for alloy steels. —**Ternary symmetry.** See ★*symmetry*, 6.—**Ternary system.** See ★*system*.

II. *n.* **2.** A trinity.

> The infinite goodness of the Almighty *Ternarie*.
> *Dr. John Dee*, Pref. to Euclid.

ternstrœmiaceous (tėrn"strem-i-ā'shius), *a.* [NL. *Ternstrœmiace*(*æ*) + *-ous*.] Belonging or pertaining to the *Ternstrœmiaceæ* (properly the *Theaceæ*); theaceous.

terpan (tėr'pan), *n.* [*terp*(*entine*) + *-an*.] Same as ★*cineol*.

terpanol (tėr'pa-nol), *n.* [*terpan* + *-ol*.] Same as *menthol*.

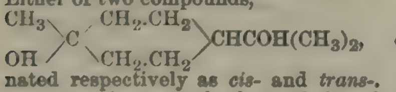
terpentic (tėr-pen'tik), *a.* [*terpent*(*ine*) + *-ic*.] Same as ★*terpenylic*.

terpenylic (tėr-pe-nil'ik), *a.* [*terpen*(*tine*) + *-yl* + *-ic*.] Pertaining to turpentine.—**Terpenylic acid,** a colorless compound, $(CH_3)_2CHCHCH(COOH)O.COCH_2$, prepared by the oxidation of oil of turpentine by means of potassium bichromate and sulphuric acid. It is deposited in large triclinic crystals or in plates, melts at 90° C., and sublimes at 130–140° C. It is the anhydrid of diaterpenic acid.

terpilene (tėr'pi-lēn), *n.* Same as ★*terpinene*.

terpilenol (tėr-pil'ẹ-nol), *n.* Same as ★*terpineol* or ★*menthenol*.

terpin (tėr'pin), *n.* [*terp*(*entine*) + *-in*^{2}.] Either of two compounds,



$$\begin{array}{l}\mathrm{CH_3}\\\mathrm{OH}\end{array}\!\!\Big\rangle\mathrm{C}\Big\langle\!\!\begin{array}{l}\mathrm{CH_2.CH_2}\\\mathrm{CH_2.CH_2}\end{array}\!\!\Big\rangle\mathrm{CHCOH(CH_3)_2},$$

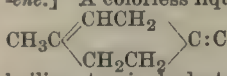
designated respectively as *cis-* and *trans-*. They are space isomers, the latter being the more important. It is prepared from transcineol-hydrobromide, and crystallizes in highly lustrous short prisms or plates melting at 156–158° C. and boiling at 263–265° C. Also called *terpin hydrate*.

terpinene (tėr'pi-nēn), *n.* [*terpin* + *-ene*.] A volatile liquid compound, $C_{10}H_{16}$, of cymol odor, contained in cardamom-oil and marjoram-oil.

terpineol (tėr-pin'ẹ-ol), *n.* [*terpin* + *-e-* + *-ol*.] **1.** A levorotatory, viscid liquid, $C_{10}H_{18}O$, prepared by the dehydration of terpin hydrate. It solidifies at −50° C., melts at 33° C., and boils at 218° C.—**2.** The term formerly used to designate a mixture of isomeric alcohols, $C_{10}H_{17}OH$.

terpinol (tėr'pi-nol), *n.* [*terpin* + *-ol*.] A trade-name of a mixture of terpineol and three terpins. It is an oily liquid used medicinally as a bronchial stimulant and also as an antiseptic and deodorizer.

terpinolene (tėr-pin'ọ-lēn), *n.* [*terpinol* + *-ene*.] A colorless liquid,



$$\mathrm{CH_3C}\Big\langle\!\!\begin{array}{l}\mathrm{CHCH_2}\\\mathrm{CH_2CH_2}\end{array}\!\!\Big\rangle\mathrm{C{:}C(CH_3)_2},$$

prepared by boiling terpin hydrate, terpilenol, or cineol with dilute sulphuric acid. It boils at 183–185° C.

terr. An abbreviation (*a*) of *terrace*; (*b*) of *territory*.

terra, *n.*—**Terra catechu.** Same as *catechu*.—**Terræ absorbentes,** in *old chem.*, a name applied to lime and magnesia (and later to baryta and strontia when these analogous substances were discovered) to distinguish them from earths proper, such as alumina, the former having the property of taking up water or slaking. In place of this term ('absorbent earths') that of 'alkaline earths' came later into use.—**Terra foliata tartari,** an early chemical name (no longer in use) for potassium acetate.—**Terra mercurialis.** See ★*terra pinguis*.—**Terra miraculosa,** an early name for bole.—**Terra muriatica,** an early name for magnesia as obtained from sea-water.—**Terra pinguis,** a name given by Becher, in the seventeenth century, to one of three essential principles which he called 'earths' and assumed to be present in various proportions in all substances—terra mercurialis, terra vitrea, and terra pinguis. This last was looked upon as the essence of combustibility, the 'phlogiston' of the next century, and was supposed to escape or be lost when a substance burned.—**Terra rossa.** [It., 'red earth.'] A residual deposit formed by the weathering and partial solution of various rocks, especially limestone, as in southern Europe.—**Terra sigillata,** a peculiar clay of the island of Lemnos, supposed to possess medicinal properties, made into tablets to be eaten, or fashioned into vessels which usually bear a stamped or impressed design. See *Lemnian earth*.—**Terra vitrea.** See ★*terra pinguis*.

terrace^1, *n.*—**Alluvial terrace,** in *geol.*, a terrace along the sides of the valley of a main stream, formed by the alluvial fans, often confluent, of its tributaries. It is constructional, as contrasted with other terraces which are carved out.—**Built terrace,** a terrace formed offshore by the outwash of beach sand and mud through the combined action of currents, tide, and undertow. Abandoned shore-lines, such as those of Lake Bonneville, Utah, show many terraces of this type. More commonly known as *wave-built terrace*.—**Cut terrace,** a bench or terrace worn in a slope by former wave-action, in contrast to a built terrace, which is formed of detritus laid upon a slope. —**Geyserite terrace,** a step-like deposit of tufaceous opaline silica from the waters of hot springs or geysers. See *geyserite*.—**Glacial terrace,** a deposit of drift washed into a space between a valley-side and a melting glacier or ice-mass, and thus retaining the form of a bench after the ice disappears.—**Kame terrace,** a terrace of glacial sands formed between a valley glacier and the valley-walls.

> The manner in which the roughnesses of topography were brought about is also similar to the manner in which the roughnesses of kame topography are often produced. In both cases it was deposited about ice, or against rough faces of ice, or in hollows or re-entrants in the edge of the ice. Since these rude terraces have much in common with kames, both in the matter of topography, constitution and genesis, they might appropriately be designated *kame terraces*. A *kame terrace*, therefore, is a terrace of glacial sand and gravel, deposited between a valley ice lobe (generally stagnant) and the bounding rock slope of the valley.
> *R. D. Salisbury*, in Geol. Surv. New Jersey, 1893, p. 156.

Land-slip terrace. See ★*land-slip*.—**River terrace,** a bench or portion of an ancient flood-plain remaining on a valley-side when a stream has eroded the valley-floor to a lower level. *Geikie*, Text-book of Geol., p. 507.—**Shore terrace,** in *phys. geog.*, a terrace formed on the border of a sea or lake by waves, and now revealed by the withdrawal of the water.—**Slender terrace,** a local term for one of the wave-cut terraces in the upper Ohio basin, of somewhat irregular distribution, of moderate relief, and evidently produced by the temporary ponding of the river waters. *W. G. Tight*, U. S. Geol. Surv., Prof. Paper 13, p. 88.—**Stream terrace,** in *phys. geog.*, a bench, or portion of an ancient flood-plain, remaining on a valley-side when a stream has eroded the valley-floor to a lower level.—**Terrace epoch.** See ★*epoch*.—**Terrace of construction.** Same as *alluvial* ★*terrace*.—**Terrace period,** a name applied by Dana to the last epoch of Quaternary time, characterized by a moderate elevation of land with the extensive formation of river-terraces subsequent to his 'Champlain' period of depression.—**Wave-cut terrace,** a terrace formed by the erosive action of waves. *R. D. Salisbury*, in Geol. Surv. New Jersey, 1892, p. 128.

terrace-garden (ter'ās-gär-dn), *n.* A garden arranged in various levels, or terraces, as are many in Italy.

terraciform (te-ras'i-fôrm), *a.* [*terrace*^{1} + *-form*.] Having the outline of a terrace or of a series of terraces.

> Along the rivers of the Middle Atlantic slope the formation is sometimes fashioned into terraces; and some of its best developments in the District of Columbia (from which the name is taken) are *terraciform*.
> *Smithsonian Rep.*, 1890, p. 72.

terracing (ter'ạ-sing), *n.* A terrace; terraces collectively.

> With but two exceptions, Santa Catalina is devoid of any evident *terracing* from one end to the other, and in this respect contrasts greatly to the adjacent land areas.
> *Geog. Jour.* (R. G. S.), XI. 73.

Terrain cure. See ★*cure*.

terral (te-räl'), *n.* [Sp. *terral*, < *tierra* (< L. *terra*), land.] A dry land-wind blowing from the Spanish peninsula outward in all directions toward the ocean; a cool, strong descending wind in clear weather.

terrapin-bug (ter'ạ-pin-bug), *n.* Same as *cabbage-bug*.

terrazzo (te-rät'sō), *n.* [It., terrace, balcony: see *terrace*^{1}.] A trade-name for a kind of concrete pavement made of broken stone and hydraulic cement.

> Teak and maple are found to be the best wood for the floors. Wood has been superseded by *terrazzo*, but this in practice proves to be unsatisfactory, owing to its liability to crack when used for hospital purposes.
> *Encyc. Brit.*, XXIX. 340.

terre de Lorraine (tãr dẹ lo-rān'), *n.* A variety of potters' clay found in Lorraine, of which Lunéville was once the capital. See *Lunéville* ★*pottery*.

terrene^1, *n.* **2.** The surface of the earth.

terricole, *a.* **2.** In *zoöl.*, living upon or in the ground; terricolous. *Proc. Zool. Soc. London*, 1899, p. 715.

terrier^1, *n.*—**Airedale terrier,** a variety of terrier somewhat similar to the Irish terrier, but larger, with a rougher coat and darker in color.—**Bedlington terrier,** a moderate-sized breed, having a straight, rather long muzzle; large, fine ears fringed with silky hair and lying close to the head; short, arched body; and long, straight legs. The coat is hard and bluish, liver, or sandy-colored. —**Boston terrier,** a breed of dogs supposed to be a cross between the English bulldog and terrier. It originated in Boston, Massachusetts.—**Irish terrier,** a breed with a long flat head, narrow between the ears, and a moderately long body clothed in straight, wiry hair of a red, yellow, or gray color. It stands from 14 to 18 inches high and weighs from 20 to 24 pounds. It is active and intelligent. —**Yorkshire terrier,** a short-legged, long-bodied dog, clothed in silky hair so long that it sometimes reaches the ground; the color is golden tan on the head and bluish or silvery on the body.

terrigene (ter'i-jēn), *a.* [L. *terrigena*, one born of the earth, < *terra*, earth, + *-genus*, -born.] Same as *terrigenous*.

terrigenous, *a.* **2.** In *geol.*, derived from the land: said of sediments on the sea-bottom.

terrometal (ter'ọ-met-al), *n.* [Irreg. < L. *terra*, earth, + *metallum*, metal.] A composition of several clays possessing, when baked, peculiar hardness: introduced by Mr. Peake, a potter of Burslem, England. It is principally employed for making tiles. *E. H. Knight.*

terrometallic (ter"ọ-me-tal'ik), *a.* Pertaining to or consisting of terrometal.

terror, *n.*—**Day terrors.** See ★*day*^{1}.

tersulphate (tėr-sul'fāt), *n.* [L. *ter*, thrice, + E. *sulphate*.] A salt containing three combining units of the radical of sulphuric acid, as tersulphate of iron or ferric sulphate ($Fe_2(SO_4)_3$).

tersulphid (tėr-sul'fid), *n.* [L. *ter*, thrice, + E. *sulphid*.] A compound of a relatively electropositive element or radical with three atoms of sulphur, as, for instance, tersulphid of antimony (Sb_2S_3).

tersulphuret (tėr-sul'fụ-ret), *n.* Same as ★*tersulphid*.

tertia (tėr'shiạ̈), *n.* [L. *tertia* (sc. *pars*), a third part.] One of three divisions; a third: for a special use, see the extracts.

> A foot regiment was composed of equal numbers of pikemen and shot-men . . . [they] were formed in solid square battalions ten deep, called *tertias*, the pikes in the centre, and the musketeers on either flank.
> *Sir C. R. Markham*, Life of the Great Lord Fairfax, vii.

> The King [Charles I.] rode to every brigade of horse, and to all the *tertias* of foot, and spoke to them with great courage and cheerfulness.
> *J. H. Shorthouse*, John Inglesant, viii.

teruelite (tā-rö-el'īt), *n.* [*Teruel* (see def.) + *-ite*^{2}.] A variety of dolomite occurring in dark-colored crystals, often resembling octahedrons, found at Teruel, Spain.

tervalence (tėr'vạ-lens), *n.* [L. *ter*, thrice, + E. *valence*.] In *chem.*, combining power equivalent to that of three univalent or monad atoms of hydrogen. Also, but less correctly, *trivalence*.

tervalent (tėr′vā̤-le̤nt), *a.* [L. *ter*, thrice, + *valens* (*valent-*), having power.] In *chem.*, having combining power equivalent to that of three univalent or monad atoms of hydrogen. Nitrogen is tervalent in ammonia (NH_3). Also, but less correctly, *trivalent.* *Athenæum*, Jan. 3, 1903, p. 22.

terzdecimole (terts′dets-i-mō″le), *n.* [G., < *terz*, third (< L. *tertius*, third), + *decimole*, decimole.] In *music*, a group of thirteen notes to be performed in the time of eight, twelve, or sixteen. Compare *decimole.*

terzflöte (terts′flė-te̤), *n.* [G., < *terz*, third, + *flöte*, flute.] 1. A flute whose normal pitch is a third above that of the usual form.—2. In *organ-building*, same as *tierce*, 5 (*b*). Also called *third-flute.*

teschemacherite (tesh′e̤-mäċh-ėr-īt), *n.* [Named after E. F. *Teschemacher*, who discovered it.] Acid ammonium carbonate, HNH_4CO_3, occurring in white or yellowish crystalline masses: found in guano deposits.

Tesla coil, a form of transformer for the production of oscillatory currents of high frequency and high voltage. See ★*transformer.*—**Tesla discharge.** See ★*discharge.*

tessaraglot (tes′a-ra̤-glot), *a.* [Gr. τέσσαρες, four, + γλῶττα (Attic form of γλῶσσα), tongue.] Written or printed in four languages; speaking four languages.

> It was a *tessaraglot* grammar, a strange old book, printed somewhere in Holland, which pretended to be an easy guide to the acquirement of the French, Italian, Low Dutch, and English tongues. *Borrow*, Lavengro, xiv.

tessellate, *a.* 2. Having the appearance of a mosaic pavement; made up of elements of such forms and arrangement as to produce the appearance of a mosaic pavement, as in the case of spicules of sponges and spines of echinoids which have their distal ends enlarged, flattened, of polygonal form, and closely arranged.

II. *n.* Something having a tessellated appearance.—**Variegated tessellate,** an American hesperiid butterfly, *Hesperia montivaga*, occurring in Florida, Mexico, and the Rocky Mountains.

tessera, *n.* 5. In *zoöl.*, a small, squarish plate of bone such as those forming the carapace of armadillos and glyptodons.

tesseral, *a.* 3. In *math.*, pertaining to or dividing into quadrilaterals.—**Tesseral function.** See ★*function.*

test^1, *n.* 6. There is a distinction between a 'test' and a 'reaction,' though these terms are often used indiscriminately. A test is a trial of any substance by placing it under determinate conditions and observing its behavior. A reaction is a trial of the mutual effects upon each other of the substance in question and some other known substance. Thus an observation of the specific gravity or the melting-point of lead may be used as a test for that metal if an unknown specimen is supposed to be lead, but this involves no reaction. An observation of the effects of heating lead in contact with the air, or of bringing it into contact with nitric acid, considers the reaction in each such case, and may of course be resorted to as a test in reference to a substance suspected to be lead. **Acetylation test.** See ★*acetylation.*—**Acid-test,** in *dairying*, a method of ascertaining the proportion of acid in milk by means of an alkaline solution slowly added to the milk until it becomes pink. The proportion of solution added defines the acidity of the milk.—**Agglutination test.** See ★*agglutination.*—**Babcock test,** in *dairying*, the process of finding the proportion of fat in milk by the aid of chemical reagents in connection with the Babcock milk-tester.—**Bakers' sponge test,** a mode of determining the bread-making value of flour by observation of the quantity of water taken up by a sample and the volume of the sponge or dough produced.—**Becchi test,** an alcoholic solution of silver nitrate. Heated with pure olive-oil, it produces no coloration, but if cotton-seed oil is present as an adulterant a reddish-brown color appears.—**Blavier's test,** in *elect.*, a test in which the location of a fault in a line or cable is determined by comparing the resistance as measured from one end when the other end is insulated with the resistance when the other end is grounded.—**Böttger's test,** a (bismuth) reduction-test for glucose and similar reducing agents.—**Brandes's test for quinine,** chlorin water followed by liquid ammonia, each in limited quantity, the result being a bright-green color if quinine is present.—**Cold test.** See ★*cold.*—**Control-test,** an experiment, devised and performed for the purpose of checking the results of a scientific investigation, in which some crucial factor is varied in such a way as to test the validity of the interpretations made. See *control-experiment.*—**Eggertz carbon test,** a method of determining the combined carbon in iron and steel by means of the intensity of the brown color produced by the hydrocarbon formed when the metal is dissolved in nitric acid, as compared with that of a standard solution of known composition, or a series of them.—**Elaidin test.** See ★*elaidin.*—**Eschka's test,** a delicate test for metallic mercury. The mercury is volatilized and the vapor condensed upon a surface of gold-foil, which it whitens.—**Fehling's test,** a (copper) reduction-test for glucose and similar reducing agents.—**Flame-test,** the application to the detection of particular substances, as lithium, barium, etc., of the colors which these give to a flame, usually that of a Bunsen gas-lamp.—**Fleitmann's test,** a modification of Marsh's test for arsenic, substituting for dilute sulphuric acid a strong aqueous solution of caustic potash or soda.—**Fresenius and Babo's test for arsenic,** a test consisting in heating arsenic sulphid with potassium cyanide and sodium carbonate in a current of carbon-dioxid gas, thus obtaining a mirror-like deposit of metallic arsenic in the colder part of the glass tube used.—**Gellé's test,** a method of determining the presence or absence of disease of the middle ear by conveying the vibrations of a tuning-fork directly to the drum-membrane, excluding bone conduction.—**Gmelin's test,** a test for the coloring-matter of bile when occurring in urine. The urine is cautiously poured upon nitric acid containing nitrogen tetroxid, so as to form a separate layer. If bile-pigments are present there appears at the surface of contact of the two liquids a play of colors—violet, blue, green, etc.—**Griess's test,** the addition, in succession, of dilute hydrochloric acid, sulphanilic acid, and α-naphthylamine hydrochlorate to a solution supposed to contain nitrous acid or a nitrite. If nitrous acid or a nitrite is present an intense rose-red color results. This test is frequently used in the sanitary examination of drinking-water.—**Günzburg's test,** a test for free hydrochloric acid, used in the analysis of the contents of the stomach. If a few drops of the contents (filtered) are slowly evaporated with a few drops of Günzburg's reagent (2 grams of phloroglucin and 1 gram of vanillin dissolved in 30 cubic centimeters of absolute alcohol), a more or less intense red color develops in the presence of hydrochloric acid in the free state.—**Halphen's test,** a test used to determine the presence or absence of cotton-seed oil in lard.—**Heller's test.** (*a*) The cold nitric-acid test used in testing for albumin in the urine. If albumin is present a milky turbidity develops at the zone of contact between the two fluids. (*b*) A test for blood in the urine. On boiling with caustic alkali, the resultant precipitate of phosphates will present a red color.—**Hemin test,** a test for blood pigment based upon the formation of crystals of hemin. See ★*hemin.*—**Henner's test,** a test for formaldehyde. The liquid to be examined is mixed with very dilute carbolic acid and superimposed upon concentrated sulphuric acid. In the presence of formaldehyde a rose-violet ring develops at the zone of contact.—**Holmgren's test,** a test of color-blindness devised by A. F. Holmgren of Upsala in 1876. It is based upon the similarity, to the color-blind eye, of various-colored worsteds which to those of normal vision appear to differ greatly in color. See ★*color-blindness.*—**Hydrostatic test,** a test to determine whether, in the case of a dead infant, life was extinguished before or after birth. The lungs are removed from the body and placed in water; if they float it is an evidence that the child has breathed and that it was therefore born alive.—**Kelling's test,** a test for lactic acid. An almost colorless solution of ferric chlorid turns a bright yellow in the presence of lactic acid.—**Kongo-red test,** a test to determine the presence of acids in the free state in the contents of the stomach, as contrasted with acids in combination with albumins or acid salts. Free acids cause a solution of Kongo red to turn blue.— —**Livache's test,** a means of estimating the comparative value of samples of linseed-oil or other drying-oils, and detecting adulteration in such materials, which consists in moistening finely divided metallic lead with the oil to be tested, exposing it to the air, and determining from day to day the gain in weight due to the absorption of oxygen. On this absorption the 'drying' of the oil depends.—**Loop test,** in *elect.*, a test for locating a fault in a cable or line, in which a metallic return is employed. **Maddox test,** a test for heterophoria by means of the Maddox rods.—**Mallein test,** a test employed for diagnosing glanders in horses. An injection of mallein under the skin is followed, in glandered horses, by a characteristic rise and subsequent fall of body temperature.—**Marsh's test,** a method proposed by Marsh, in 1836, for the detection of arsenic in minute quantity, as in cases of poisoning by compounds of this element. Pure zinc and pure dilute sulphuric acid are brought together in a flask, the hydrogen gas thus produced being carried through a drying-tube and thence to a small jet, where the gas is ignited. If now arsenious oxid or any soluble compound of arsenic is added to the contents of the flask and a piece of white porcelain is brought down upon the flame, a spot of brown or black color, consisting of metallic arsenic, is formed upon the surface of the porcelain. By moving the latter other spots may be obtained. These deposits may be further identified as arsenic by the application to them of other tests.—**Maumené's test.** (*a*) For fatty oils, mixture, in definite proportion by volume, with concentrated sulphuric acid, and observation of the rise of temperature which results: this varies in the case of oils from different sources. (*b*) For glucose, as in urine, a strip of white woolen cloth steeped in a 1:3 solution of stannous chlorid in water and dried. Such a test strip, dipped into the suspected liquid and then heated to 130° C., turns brown if glucose is present.—**Murexide test,** a test for uric acid depending upon the formation of murexide.—**Nessler test,** the reaction obtained by adding the Nessler solution to any liquid containing ammonia or one of its salts. If the quantity of the latter is considerable, a brownish-orange precipitate is formed; but if mere traces of ammonia are present, the liquid remains apparently clear and is colored to an extent dependent on the minute amount of ammonia. Much use is made of this test in connection with the sanitary examination of drinking-water.—**Nylander's test,** a reduction-test for glucose with Almen's solution.—**Open test,** the determination of the flash-point of a hydrocarbon oil, such as ordinary kerosene, by heating it in an uncovered vessel and noting the lowest temperature at which vapor is given off that will flash or catch fire on momentary application of a light.—**Otto test,** a test for strychnine which consists in the development of a beautiful but transient violet color produced in the action of various oxidizing agents by means of concentrated sulphuric acid and bichromate of potash. It is probably the best form of this color-test.—**Over-lap test,** in *elect.*, a test in which the location of a fault in a line or cable is determined by comparing the resistances as measured from each end separately, when the other end is insulated, with the resistance of the whole line or cable when intact.—**Ozone test,** the reaction of potassium iodide with ozone, which has been much used to detect the latter in the atmosphere. It cannot be depended upon for this purpose, since potassium iodide is also decomposed by other substances, as by nitrous acid, which undoubtedly occurs in the air as a result of electrical discharges. Hydrogen dioxid has in all probability often been confounded with ozone, the existence of which in the air under natural conditions cannot be considered as fully established.—**Pettenkofer's test,** a delicate reaction for the detection of the characteristic acids of bile. A minute quantity of cane-sugar is added to the liquid to be examined, and then concentrated sulphuric acid in gradually increased amount, with moderate rise of temperature. If biliary acid is present a rich crimson or cherry-red color is developed.—**Reichert-Meissl test,** a slightly modified form of the Reichert test for volatile fatty acids.—**Reichert test,** a process for determining the proportion of volatile fatty acids obtainable from a particular fat or oil, as from butter. This affords the means of distinguishing butter from oleomargarin.—**Reichl test,** a test for glycerol (glycerin) consisting in heating to about 120° C. a mixture of the suspected substance with phenol and strong sulphuric acid, cooling, and adding ammonia. In the presence of glycerol a fine carmine-red color is produced.—**Rinné's test,** a method of determining whether the cause of deafness is in the middle ear or in the labyrinth, by noting whether bone conduction or air conduction is the better.—**Robiquet's test,** a test for morphine which depends on the production of an indigo-blue color by contact of this alkaloid with a solution of ferric chlorid.—**Sachs's test,** a method of detecting starch by the use of a solution containing free iodine. The color produced varies from blue to black, depending on the quantity of material present.—**Schwabach's test,** application of a vibrating tuning-fork to the skull, in order to distinguish between middle-ear disease and disease of the labyrinth, the sound being heard longer in the former case than in the latter.—**Sedimentation test,** the addition of the blood serum of a person ill of a fever to a pure culture of bacteria. If the bacteria are the same as those to the action of which the person's illness is due, the addition of the blood serum will cause them to become bunched together or agglutinated. *Jour. Trop. Med.*, Jan. 15, 1903, p. 25.—**Teichmann's test,** a test for blood, depending upon the fact that a minute quantity of blood mixed with glacial acetic acid and a trace of sodium chlorid and allowed to evaporate at ordinary temperature upon a slip of glass develops microscopic crystals of hemin, or hematin hydrochlorate (the so-called *Teichmann crystals*), of easily recognizable form.—**Test case.** See ★*case*^{1}.—**Töpfer's test,** a test for free hydrochloric acid in the contents of the stomach. The reagent is an 0.5 per cent. alcoholic solution of dimethylamino-azobenzol; a few drops of this added to a solution of the acid in the free state gives rise to a cherry-red color.—**Trommer's test,** in *chem.*, one of the forms in which the reduction of cuprous oxid is employed as a test for glucose in urine. One or two drops of a solution of cupric sulphate are added to the suspected liquid, then a little of a solution of sodium carbonate, and finally the liquid is heated to the boiling-point. A yellow, orange, or red precipitate of cuprous oxid is formed if glucose is present in any considerable amount.—**Valenta's test,** a method proposed by Valenta for distinguishing certain fixed oils from each other by their different degrees of solubility in glacial acetic acid. The results are not sufficiently uniform and consistent to give the test much general value, but in some special cases it may be used with advantage.—**Villavecchia test,** a test for the detection of sesame-oil as an adulterant of olive-oil. A sample of the oil under examination is agitated with a very small quantity of a weak alcoholic solution of furfural and with hydrochloric acid, the production of a red color indicating the presence of sesame-oil.—**Von Kobell's test,** a test for bismuth consisting in heating the suspected substance on a piece of charcoal by a blowpipe flame, having added a mixture of equal parts of potassium iodide and sulphur. If bismuth is present a scarlet-red deposit makes its appearance on the charcoal outside of the part heated.—**Warren's sulphur-chlorid test,** a test used to distinguish certain drying-oils and to detect their adulteration. It consists in mixing with the oil of sulphur chlorid and carbon disulphid, and observation of the amount and solubility of the 'vulcanized' products formed.—**Weber's test.** (*a*) A method for determining the seat of trouble in deafness, based upon the fact that bone conduction is better on the affected side when the disease is in the middle ear. (*b*) A test for the presence of blood in the intestinal discharges, determined by the production of a blue-violet color on treatment with guaiac and turpentine.—**Widal test** or **reaction,** in *bacteriol.*, a reaction used in diagnosing typhoid fever, depending upon the fact that serum from the blood of a typhoid patient will usually cause the motile typhoid bacilli to become agglutinated or clumped. See *serum* ★*diagnosis.*—**Worsted test,** the employment of skeins of wool of various colors in testing for color-blindness. See ★*color-blindness.*—**Zeisel test,** in *chem.*, a method of ascertaining the presence of, and quantitatively determining, the methoxyl group—$O.CH_3$—in volatile oils or essences. It consists in heating with hydriodic acid the substance to be examined, volatilizing the methyl iodide formed, and determining the amount of iodine therein as silver iodide.

Testamentary capacity, cause. See ★*capacity*, ★*cause.*

testatum, *n.* 2. In *common law*, a writ issued out of the court of one county to the sheriff of another, reciting a previous unsatisfied writ, saying "it is testified that the defendant lurks or wanders in your bailiwick." The previous writ and its citation are now generally dispensed with. *Blackstone*, Com., III. 283. In Great Britain it was abolished in 1852.

test-bar (test′bär), *n.* A sample bar of form and size convenient to be used in testing-machines to determine the physical properties of the material from which it was taken. In cast metals, such as steel or cast-iron, the test-bar is often a small ingot cast in a special mold from the ladleful that furnished the articles to be sampled. From completed structures or members, the test-bars are cut. The specifications for an important work always describe the method of getting the sample or test-bars, the nature of the tests to which they are to be subjected, and the limits of results of such tests within which the work will be accepted, and outside of which it will be rejected. When the importance of the work justifies it, a modern requirement is for a test of the full-sized member with sufficient frequency, and not of the test-bars only.

test-board (test′bōrd), *n.* In *telephony*, a special switchboard to which the terminals of all lines entering an exchange are attached and from which connections to the operating switchboard are made.

test-boiler (test′boi″lėr), *n.* 1. A form of steam-boiler so designed and installed in its setting that it may be used as a testing-device to determine the evaporative capacity of different fuels, the efficiency of furnace types, the effects of changes in the rate of combustion, and the value of steam-making devices and apparatus of various sorts. Most experimental laboratories of institutions for the education of engineers are equipped with such an experimental boiler.—2. A boiler capable of withstanding a high internal pressure so that pressure from it may be used to test the strength of other boilers.—3. A boiler specially constructed to test some principle or claim.

test-cock (test′kok), *n.* 1. A cock or valve through which a sample of a fluid may be drawn from a vessel or chamber for examination or test.—2. On steam-boilers, a try-cock or gage-cock by which the level of the water in the boiler may be observed.

tester[1], *n.*—**Geneva tester**, a form of germinator for testing the vitality of seed, first used at the Agricultural Experiment Station at Geneva, N. Y. It consists of an oblong pan with a copper or glass cover, containing a cloth with numerous pockets for as many samples, each being kept moist by a flap falling into water. *Yearbook U. S. Dept. Agr.*, 1894, p. 404.—**Saybolt tester**, an apparatus, with open oil-cup, for determining the flash-point of kerosene or other mineral oils.—**Tagliabue tester**, an open-cup apparatus for testing the flash-point of illuminating oils. It was of simple construction, but has been pretty generally superseded by more accurate instruments.

test-furnace (test′fėr″nās), *n.* A reverberatory refining-furnace, for silver-bearing alloys, in which the baser metals are eliminated by oxidizing or by volatilization, leaving the precious metals behind in the hearth or cupel.

test-hole (test′hōl), *n.* A hole, as in a furnace, through which a test specimen or sample may be drawn or inspected.
